ADVERTISEMENT.

The Proprietors take this opportunity of explaining the circumstances under which they find themselves reluctantly obliged to close the Work at its present stage. At the commencement of the undertaking the Editor arranged with them to complete it in *Four Volumes*; but when the present or fourth volume was printed, he informed them for the first time, to their surprise, that his materials had proved so much more voluminous than he anticipated, that the descriptions of the remaining plants would fill *more than two additional volumes* of the same extent. They are compelled to add, that the circulation of the Work has hitherto been too limited to afford them any prospect of reimbursement of the large additional expense which would be incurred if they proceeded to complete the Work; an expense which they had not originally contemplated. As, however, the Work has been compiled upon the *Natural System*, the description of that division of the science which is contained in the four published volumes is complete, and the volumes are consequently not, in this respect, rendered imperfect by the absence of the remaining two, since they contain a complete account of the *Dichlamydeous* plants. In justice to the Editor they feel bound to add, that he has spared no labour to render the Work as comprehensive and perfect as possible; and they are confident that no publication has hitherto appeared in this country which contains nearly so large a compass of valuable information upon that division of Botany of which it treats. They can only account for the confined circulation which the present Work has hitherto met with in the altered taste of the day for treatises of a less recondite and extensive nature.

The Proprietors would be ready to complete the Work if they could hope for

sufficient encouragement from the Public to induce them to proceed in this unusually expensive undertaking.

At the end of this volume new title-pages for the four volumes are added, in accordance with their contents, as a "*General History of the Dichlamydeous Plants*."

Kew, February, 1838.

a simple fluted pitcher; when found they are strung by the heads, and by the natives put round the necks of their children to prevent evil. The nuts only of *Nelicus* go to compose, and are dressed in the same manner and fill the upper end.

Var. (S. glaberrima) (Wall. cat. no. 4415.) spike compound, downy. ♄. S. Native of Silhet.

Acute-leaved Symplocos. Tree or shrub.

22 S. RACEMOSA (Roxb. fl. ind. 2. p. 528.) leaves oblong-acuminate, serrulated; racemes axillary, generally simple; nut 3-celled. ♄. S. Native of Burdwan and Midnapore, in Bengal. *The Sanscrit name of the tree is Sirees and Lodhra, and the Bengalee one Lodh.* — Myrtus Race. obs. 4. p. 26. Leaves 2-4 inches long. Flowers yellow. The bark of this tree is a superb strong dyers' drug in Calcutta, and is met with in the markets of that town for a trifling price. It seems to be used as a mordant only in dye with Munjeet (a species of *Rubia*), in which the bark called *Lodh* is an ingredient. The shopkeepers of cloth take *Lodh* and the bark of *Bera Hur* (*Terminalia Chebula*), of each one chatak, in two ounces, pound them together, and wet them with water, and steep the cloth in it; then dry it. Take one chatak of alum, dissolve it in water, and boil it; put the cloth into this solution, and let it boil for an hour, then wash and dry it. Then take *Hil* (*Morinda tinctoria*) one chatak, Dhawra flowers (*Grislea tomentosa*) one chatak, Munjeet half a seer (nearly a pound), separately rein them with lukewarm water, and boil it. Then put in the cloth and let it boil for 30 minutes. *Dhawr*, the red powder used by the natives during the Hooley holidays, is made about Khyrpoor of the bark of this tree.

Racemose-flowered Symplocos. Tree 20 feet.

23 S. CAUDATA (Wall. cat. no. 4413.) leaves lanceolate, or elliptic-lanceolate, tapering to both ends, long-acuminated, obsolutely denticulated; racemes simple, axillary, downy; calyx downy. ♄. S. Native of Silhet.

Tail-leaved Symplocos. Shrub or tree.

24 S. LUCIDA (Wall. cat. no. 4414.) leaves smooth, shining on both surfaces, somewhat elliptic, or elliptic-lanceolate, entire at the base, and serrated from below the middle, acuminated; racemes downy, branched. ♄. S. Native of the East Indies.

Sharp-leaved Symplocos. Shrub or tree.

25 S. PYRIFOLIA (Wall. cat. no. 4442.) leaves elliptic or oblong, acuminated, shining, coriaceous, quite, or denticulated towards the tops; racemes simple, downy; glabrous, twice the length of the petioles. ♄. S. Native of Silhet.

Pear-leaved Symplocos. Shrub or tree.

26 S. PIRIFOLIA (Wall. cat. no. 4416.) leaves oblong or elliptic, acuminated, denticulated, shining, smooth; racemes simple or branched at the base, downy. ♄. S. Native of the East Indies. — Myrtus laurina, Herb. madr. Eugenia laurina, Rottl. herb.

Laurel-like Symplocos. Shrub or tree.

27 S. HAMILTONIANA (Wall. cat. no. 4420.) leaves elliptic-lanceolate or oblong, sparingly denticulated; racemes simple, downy. ♄. S. Native of the East Indies. Dentella racemosa, Hamilt. herb.

Hamilton's Symplocos. Shrub or tree.

28 S. ACUMINATA (Wall. cat. no. 4420.) leaves oblong, coriaceous, still, quite entire, or repand, obtuse; racemes long, downy, simple, or branched at the base. ♄. S. Native of the Burman empire, at Martaban.

Long Symplocos. Shrub or tree.

29 S. ROXBURGII (Wall. cat. no. 4413.) leaves elliptical, acuminated, sparingly denticulated; spikes compound. ♄. S. Native of the East Indies, at Amherst and Tavoy.

Many-flowered Symplocos. Shrub or tree.

30 S. CRATÆGOIDES (Wall. cat. no. 4424.) leaves ovate-lanceolate, quite entire, sibling-obovate, glabrous, tapering to the base, shining; spikes simple; lobes of calyx rounded, ciliated, obtuse. ♄. S. Native of the East Indies, on the Neelgherry mountains.

Blunt-leaved Symplocos. Shrub or tree.

31 S. LAWSONIANA (Wall. cat. no. 4425.) leaves oblong-elliptic, or elliptic-lanceolate, acuminated, thinly-coriaceous; racemes axillary and lateral, simple, and compound. ♄. S. Native of Nepaul, on Sheopoor.

Many-branched Symplocos. Shrub or tree.

32 S. RAMOSISSIMA (Wall. cat. no. 4422.) leaves ovate-acuminate, lanceolate, tapering to both ends, long-acuminated, nearly quite entire; racemes compound, downy. ♄. S. Native of Penang.

Gland-leaved Symplocos. Shrub or tree.

33 S. GLANDULIFERA (Wall. cat. no. 4418.) branches, racemes, petioles, and nerves of leaves on the under surface clothed with rusty hairy; leaves elliptic, acuminated, quite entire; spikes compound. ♄. S. Native of Penang.

Cloved Symplocos. Shrub or tree.

Sect. III. PAIDIA (meaning Unknown to me). Corolla 5-parted. Stamens disposed in a triple series. Ovarium inferior.

Species native of Nipaul and China.

34 S. SERICA (Ker. bot. reg. 710.) leaves elliptic-oblong, attenuated at both ends, remotely serrated, downy on both surfaces and wrinkled; racemes compound, terminal, and axillary; calyx somewhat 5-cleft. ♄. G. Native of Nipaul and China. Flowers white. (fig. 1.)

FIG. 1

Silken Symplocos. Fl. Mag. Cl. 1812. Shrub 3 feet.

35 S. CHINENSIS (Hamilt. mss. ex D. Don, prod. fl. nep. p. 113.) leaves ovate, acuminated, villous beneath as well as on the branches; panicles racemose, terminal, villous; calycine segments roundish, membranous. ♄. G. Native of Nipaul, in the Great Valley, near the town of Thankot. S. paniculata, Wall. Polura odorata, Hamilt. mss. Flowers white, fragrant. This shrub hardly belongs to *Symplocos*, and has the habit of *Prunus Mahaleb*.

Heath-like Symplocos. Tree or shrub.

Cult. The species of *Symplocos* grow well in a mixture of loam, sand, and peat; and cuttings of them strike readily if made under a hand-glass; those of the tropical kinds in heat.

Order CXII. STYRACINEÆ (this order only contains the genus *Styrax*). *Styracineæ*, part. Richard, anal. des fruit. 1808. *Styracineæ*, part. Rich. in H. B. et Kunth, nov. gen. et sp. 3. p. 296. *Guttiferæ* part. Juss. gen. 256.

Calyx permanent, campanulate, 5-toothed (C. P. e.). Corolla monopetalous, 5-cleft, rotate; deeply 5-cleft, but usually 5-cleft, valvate in estivation. Stamens 10, exserted; filaments connate-perigynous at the base, adnate to the tube of the corolla; anthers linear, 2-celled, dehiscing longitudinally inside. Ovarium superior, 3-celled, warty-pubescent, erect. Style 1. Stigma obsolescently 3-lobed. Drupe nearly dry, coriaceous, 1-celled, 1-3-seeded or not. Testa of seed double; inner one ribbed, outer spongy. Embryo inverted, with

FIG. 2.

1 S. OFFICINA'LE (Lin. spec. 635.) leaves ovate, clothed with hoary villi beneath, shining and green above; racemes simple and axillary, 5-6-flowered, shorter than the leaves. ♄. H. Native of Italy and the Levant. Cav. diss. 6. p. 238. t. 188. f. 2. Woodv. med. bot. 197. t. 71. Church at Stev. med. bot. 1. t. 47. Andr. bot. rep. 631. Lodd. bot. cab. 928. Plench, icon. 341. Mill. fig. 260. Lob. icon. 151. Leaves about 2 inches long. Flowers white. Drupe ovate, globose.

The *S. officinale* is chiefly remarkable for producing the very powerful and fragrant balsam called storax. It is a native of Syria and the Levant, and is not uncommon all over Greece and the Peloponnesus, being known by the name of λευγοράλαι in modern Greek. It is naturalized in hedges in some parts of Italy, particularly about Tivoli. The finest tree of this species in Britain is in the Apothecaries' Garden at Chelsea.

The best storax comes from Asiatic Turkey, and is obtained in a fluid state, from incisions made in the bark of the trunk or branches of the storax-tree. It is brought from Turkey; but is so adulterated that it is very fafrl)(I (MM with in a pure state. Storax is bitter and pungent to the taste, and has a strong fragrant odour. Two sorts of balsam are found in the markets—storax in the tear, and common storax in larger masses; this has been called "storax in the lump," "red storax," and the separate tears, "storax in the tear." The former is very rarely in separate tears, but in masses, composed of white and pale reddish tears, or having a uniform reddish-yellow or brownish appearance, being unctuous to the touch, soft, like wax, and free from visible impurities. This is the *στυραξ καλαμιτης* of the ancient Greeks. According to Galen it was formerly brought from Pamphylia, in hollow canes or reeds, whence it was called *Styrax calamita*. It is preferred to the common storax, in larger masses, which are lighter, less compact than the preceding, and have a large admixture of woody matter, like saw dust. Although the impurities of this kind of storax render it less valuable, it is not less useful, and when purified, its medical qualities are no less potent. Storax should be chosen of a reddish brown colour, rather softish, unctuous to the touch, yet brittle and friable, and of a pleasant sweet smell. On account of its yielding a pleasant odour of Benzoic acid, when ignited, it is much used in Roman Catholic countries for incense. Spirits dissolve it entirely; it consists principally of resin, with a small portion of Benzoic acid. The directions of the London Pharmacopœia for purifying storax are:—

"Dissolve Balsam of storax in rectified spirit and strain it; then distil off the spirit by a gentle heat until the balsam acquires a proper consistence." It may not be improper here to observe, that storax of the Pharmacopœia ought not to be confounded with storax of commerce, which is a liquid balsam, obtained from *Liquidambar styraciflua*.

Storax is stimulating and expectorant, and was formerly prescribed for asthma and chronic affections of the windpipe; for cholera, &c. It is so far discarded from practice as hardly ever to be used, and is justly designated by Dr. Thomson, as "an article in the list of Materia Medica."

..xx. Fl. July. Clt. 1597. Tree 12 t.. 15 feet.

** *Species natives of North America.*

2 S. GRANDIFO'LIUM (Ait. hort. kew. 2. p. 75.) leaves broad, obovate, acuminated, green above, but clothed with hoary tomentum beneath; lower peduncles solitary, 1-flowered. ♄. H. Native of South Carolina. Lodd. bot. cab. t. 1018. Wats. dendr. brit. t. 129. S. officinale, Walt. fl. car. 140. S. grandiflorum, Michx. fl. bor. amer. 2. p. 41. Flowers white.

Benzoin, Radermacher, in act. Soc. batav. 3. p. 44. 1 Laurus Benzoin Houtt. in act. harlem. vol. 21. p. 265. t. 7. | Benjamin or Benzoin, Marsden, Sumatra, p. 123. Luban is the Bengalese name of the resin. Leaves a hand long. Corolla white, downy outside; segments linear. —Tho Garcias, Grim and Sylvias were acquainted with the reaHrw from which Benzoin is collected, their description a uv MI imperfect that succeeding botanists have fallen into many ron concern- ing it; and it is remarkable that, although this dr tg was always imported from the East Indies, most of the later writers on the Materia Medica have conceived it to be collected fr wn a species of *Laivrmt,* ii <n this erroneous supposition, 'ley have given the trivial name Benzoin. Linnæus Mant. p. 297., seems to think that the drug is furnish cd by the *Croton Benzoe,* an I af'U r w i ; .plementmn PUataran, p. *4* Ji, 1 «ante plant again under the name of Terminalia Benzoin. Jjcqi n. that il was called by the French, Bienjoint, may have occasioned the mistake, from the similar sound of the word. Mr. Dryander, however, in the year 1787, clearly proved it to be a species of *Styrax.* i The tree is deemed in Sumatra to be of sufficien ; age in 6 years, or when the trun *k* it about 7 or 8 inches in dia- meter, to afford the Benzoin. The bark is then cut through longitudinally or somewhat obliquely, at the origin of the prin- cipal lower branches, from which the drug exudes in a liquid state, and by exposure to the sun l *nd* sir i soon concretes, when it is scraped on. 1 imd to »ui The trees are not found to retain the effects of these annual incisions longer than 10 or 12 years. The quantity each tree yields never exceeds 3 pounds. The Benzoin which issues first from the wounded bark is the purest, being soft, extremely fragrant, and very white; that which is less esteemed is of a brownish colour, very hard, and mixed with various impu- rities. In Arabia, Persia, and other parts of the East, the co »rser sort is consumed in fumigating and perfuming temples, and in destroying insects. The Benzoin which we find here in the •hop* i« in large brittle masses, compos -.-d partly of white, partly of yellowish or light brown; that wh • h is clearest and contains the most white matter, it accounted the best. This resin has very little taste, impressing on the palate only a slight sweet- ness: its smell, especially when rubbed or heated, is extremely fragrant aml agreeable. It totally dis «J»ii in rectified spirit, the impurities excepted, into a deep yellow-red liquor, ami in this state discovers a degree of warmth and r, 1 pungency at well as sweetness. I impa l>y d digestion, to water al to, a considtr- able share of its fragrance, and a slight (magcacy : t the filtered liquor, gently exhaled, leaves not a res (K.iin or mucilaginous extract, but a crystalline matter, seemingly of a salin nature, amounting to one-tenth of an eighth of the weight of Benzoin. Exposed to the ftre io prop seels, it yields a quant ity of white saline concrete, called Flores : ; . [. / . . , ttl "III ii'nil:' Ml« tn.l., and grateful odour, soluble in rectified spirit, and in water by the assistance of heat.

As the trees which afford Sto TM' and Benzoin, are species of the same genus, tt eir products are very similar in their ex- ternal appearance, and not widely different in their sensible qualities; it is therefo rew nonable to awppoer thai they are ana- logo us in th if madjctnal effects. Benzoin, however, though T»rrl\ in | !• • \ t • l :II I •llt!]>lr »' i!r tu» IMtII ltri|UriiiI% pre- scrib •d a* a pit^nral. and is recntamended I or inveterate cought, asthmaa, obstntctiona of the lungs, and all phthisical complaints, avnttended by nnscn fr % er ; tt baa also noMl used aa a cosmetic, and in il e way of famigation for the i resolution :i di'I'ii'. t' mours. Native of the Isle of France.—Burm. afr. t. 84. f. 2. Uranehe* rufrwewt. Leaves coriaceous, glabr ,u«, ,d •"«••' '"'"' 1-1 '* r " Mnall, WVM(«.

Grey-barked Iron-wood. l*n*<'(> 10 feet.

3 S. sirinem (Blum. bijdr. 675.) l •vn oWong. MICWMIMI

at both ends, shining; flowers crowded into axillary racemes. ȳ. S. Native of Java, in the province of Buitenzorg, in woods oa M Mount Sulin, where it is called *Njads.*

A*i«mf In -wood. Tree 80 feet.

4 S.? xvoosum (Rœm. et Schultes, syst. 4. p. 501.) leaves oblong, acuminated, glabrous; flowers in axillary fascicles; fruit wrinkled, acuminated. ȳ. S. Native of Jamaica, on the htgbrr rm.un ains. Chrysophýllum rugósum, Swartz, prod. p. 49. fl. ind. occ. 1. p. 484. Willd. berl. mag. 3. p. 60. Leaves l**tf»\ p» er beneath. *atutk* to-ctrft, 5 of ll e segments obtuse and 5 very short. Fruit size •f a Afb* -, yellowish brown. Seeds ovate-oblong, compressed.

M *rinkled-fruited* Iron-wood. Tree.

5 S.? Cantoxia'nse (Lour. coch. p. 122.) leaves palmate, glabrous, on long petioles; peduncles solitary, axillary, many- l «rb«< Bow err MM »|aHbr Shrub climbing. Calyx a small, lanceolate, decidu Corolla 5-cleft. Nectarium acutely 5-cleft. Stamens obtuse. ... . ry roundish, 4 d, 1-seeded. Root a large round tube, tapering at the ase. i ! his is certa nly rnrf a r*jnalaa), nor does it appear to belong to the order.

Canton Iron-wood. Shrub cl.

6 S.? ATHOVIARNS (Willd. enum. suppl. p.) 1 j Utw. late, acute, smooth, pale beneath, approximate; flowers «•>! •« all, racemose, axillary. ȳ. G. Native? An erect, branched I shrub, with greyish white branches; petioles blackish, brown. Flowers white. Perhaps the same as S. stroviréns, Lam., or probably S. nigricans, Dum. Cours.

Dark-green Iron-wood. Shrub '. 11> III I et.

7 S. Guadalupe'nse (Spreng. syst. 1. p. 666.) unarmed; ate-oblong, blunish, coriaceous, quite glabrous, parallelly veined beneath; peduncles solitary, 1-flowered axillary. ȳ. S. Native of Guadaloupe.

Guadaloupe Iron-wood. Tree or shrub.

8 S. tomentósum (Roxb. cor. 1. p. t. 28.) leaves oblong, Mn J ulated, downy; flowers in ax latjr f»- cicles; berry 1-5- seeded. ȳ. S. Native of the East Indies, '« tW top* « .....wan Bark ash-coloured. Leaves smooth in the adult state, but clothed with rust-coloured down while young, 3-5 inches long. Flowers small, dull white. Berry ovate, size of an olive. Seg •M of enroll* an ish. S. Wightiánum, Wall. no. 4154. appears •> W only a gUbtMM »•(• ety of *S. tomentósum.*

Tomentose Iron-wood. Clt. 1818. Tree 8 to 10 feet.

9 S. oaxvoisóicum (Wall. in Roxb. fl. ind. 2. p. 548.) leaves obovate-elliptic, i>m«r or acutitu ated, tapering downwards, smooth, crowded at the tops of the branches; flowers globular, in numerous axillary and lateral, crowded fascicles; segments of corolla obtuse; ovarium densely bearded. ȳ. S. Native of Silhet. Branches angular. Leaves 6-12 inches long. Flowers small, pea-green. Stigma truncate. S. régium, Wall. cat. no. 415. (a native of Pegu) does not appear to differ from this.

Great-leaved ! Iron-wood. Tree large.

10 S. Wallichia'num; branches, petioles, . «l Ml midrib of leaves clothed with rusty villi while young; leaves , ellip- tic-oblong, or oblong-obovate, acuminated, on short petioles, largr rr""il. ◁ * :. the tops of the branches. ȳ. S. Native of Penang- •Vl .- • om, Wall. cat. no. 4158. of Rœm. et Schultes.

Wallich's Iron-wood. Tree.

b«t M S. rravósum (Wall. cat. no. 4159.) branches, petioles, and midrib of ' vouag leaves, calyxes, and pedicels clothed lit* rusty villi; flowers ra *tbet kr ge, in crowded, close, axillary lateral fascicles; leaves large, oblong with a short acumen, on tK ort thick petioles, rusty Uii_ut' ȳ. S. Native of the tUnmrw rai, .t l . -, on the banks of the Saloon river.

Nerved Iron-wood. Tree.

• • *Afwtdtkrmbt.*

12 S. ARMA'TUM ('Rolh. w»*. *if**** P 67.) prickly, about equal in length to the petioles; scales ... both ends, downy beneath, tomentose while young; pedicels •Ml; ary and lateral, crowded. ♄. S. Native of the East Indies. Very like *S. tomentosa* in the leaves and flowers. '4 1(1 1 The flowers are scattered without order.

Arm Iron-wood. 1'ee.

13 S.? DECA'NDRUM (Lin. mant. p. 48. Willd. spec. 1. p. 1091. rrol. mag. p- 55.) spinose; leaves elliptic, deciduous, glabrous; flowers in axillary fascicles; stamens 10, fertile, length of nrriafy. ♄. S. Native of South America. Spines axillary, solitary. Cor ...sel-shaped, with concave segments. Segments of nectary or abortive stamens serrated. Anthers sagittate. Berry black, 3-5-celled.

Decandrous Iron-wood. Tree.

Cult. For cu ...tion see *Sersalisia*, p. 27.

Silvery-leaved Star Apple. Fl.? Clt. 1758. Tree totm.

8 C. MICROCA'RPUM (Swartz. prod. 1. p. 49. fl. ind. occ. 1. p. 482.) leaves ovate, acute, glabrous above, and downy beneath; fruit oblong, oblique, 1-seeded. ½. S. Native of His paMtOa, on the banks of rivers. Distinguished from *C. glabrum*, in the higher stature, in the leaves being downy and paler beneath. Corolla with a white tube, silky outside; with concave, obtuse segments. Fruit size of a gooseberry, fixed obliquely to the pedicel, of a very sweet, delicious taste.

Small-fruited Star Apple. Tree.

9 C. MACROPHY'LLUM (G. Don, in hort. trans. 5. p. 458. Loud. hort. brit. p. 69.) leaves large, oblong-lanceolate, clo •>w«l with rusty silky down beneath. ½. S. Native of Sierra Leone. Leaves long and large. Fruit large.

Long-leaved Star Apple. Clt. 1824. Tree 50 to 60 feet.

10 C. OBOVA'TUM (G. Don, in hort. trans. 5. p. 458.) leaves obovate, tapering to the base, and acuminated at the apex, shining Baal i.c • • l afc<n • t '•"' clothed with silvery silky white tomentum beneath. ½. S. Native of Sierra Leone. A small branchy tree.

Obovate-leaved Star Apple. Tree 10 to 12 feet.

11 C. A'RBIDUM; leaves elliptic-oblong, coriaceous, acuminated, shining above, but clothed with white down beneath; fruit roundish-ovate, pointed, 5-seeded. ½. S. Native of the African island of St. 1 ' <• 1 M W whitish. • Perhaps a species of *Nyctericistus*.

White-leaved Star Apple. Tree 50 to 60 feet.

12 C. HUMBOLDTIA'NUM (Roem. et Schultes, syst. 4. p. 813.) leaves •.*»**. acavaaaajaa% an> i'»i«i.i'l> nil i .-, • iki ; «u'« ——— Willd. of South America. Humb. et Bonpl. C herb. This species <• a«tka«<* to Kunth.

Humboldt's Star Apple. Tree.

14 C. MICRINO (H. B. et Kunth. nov. leaves obovate, blunti ir JU at iW UM ^Uaraaii •••» ••(tW < me colour on both surfaces. ½. S. Native of the province of Bracamoros, near Cavico and Matara, where it is called *Michino* by the natives. Branches terete, glaWow- ' .*** l Leaves approximate, 2-3 inches long. Fruit , ..m «a*ai«^ whitish and clammy inside; very grateful, edible.

Mo lav haj \p,.lr. 1 r.. to< . >« U I. M

15 C. ? STOCKSII (Swartz. prod. p. 49 occ. 1. p. 484.) leaves oblong, acuminated, glab both surfaces; fruit nearly globose, wrinkled, acuminated. ½. S. Native of the west of *Jamaica*, on the mountains. Leaves large, r.-M MI ^aarfaaaaav Mat* dulated, i » < f 1J« <»» *•!•. ' .* "" * |"' leaves rusty. Corolla with a very short tube: and ovate, obtuse segments, furnished with 5 m» secondary ones, between the others. Fruit size of a nut, yellowish brown; containing many oblong, compressed seeds. This is certainly not a species of *Chrysophyllum*, from the corollas being furnished with scales inside, as in *Bumelia*, of which probably it is a species. It differs from other species genus, in the leaves, flowers, and fruit.

Wrinkled-fruited Star Apple. Tree.

16 C.? MACROCOUS (Aubl. guian. 1. p. 232. t. 91.) leaves glabrous on both surfaces, ov •W-oaaaHg. arwaMM*t4; (an i shaped, yellow, glabrous, and smooth. ½. S. Native of Guiana. Lam. diet. 1. p. 552. • pyri «a». . f» Willd. spec. 1054. Bark greyish yellow. Wo J bar white. Leaves pale green. Fruit by twos or fours, the whole length of the branches; having a fleshy, yellowish, thick rind, covering a nut, which is mtwli excavated on one side, edible. Perhaps this, with *Bumelia* im m ria, and *C. regiense*, will for •• ta the genus named *Fitellaria* >tlt 111 Gaertn.

Mocoroco Star Apple. Tree 50 feet.

17 C. POMIFE'RUM (Bert. ex Spreng. syst. 1. p. 667.) leaves oblong, attenuated at both ends, and quite glabrous on both surfaces, opaque, finely and parallelly veined, cor •d i •Mow p**!1* cels very short, sub-aggregate; fruit apple-shaped. ½. S. Native of Jamaica.

Apple-fruited Star Apple. Tree. naiiaf ft win J Btaf At>i4*

18 C. SERICIFO'LIUM (Poir. suppl. 2. p. 16.) leaves coriaceous, glabrous on both surfaces, obovate: with distant, alternate nerves; flowers sessile, fasciculate. ½. S. Native of Cayenne. me* and Italy, by presses or mills. The fruit is gathered, when at the utmost maturity, in November, when it begins to redden. They are put under tbe mill at soon a* ^athered ; and care i* taken that the mi|]-«tonea are set • • such a distance, that they do not crush the nut <• the olives. The p ing the stone, and con- i|> cox i itui 11 *a* lhe oil in its cell , being thus prepared, is put into bags iml tnotl made of rushes, and separately pressed ; and thus is obtained, in COtMtdcniblr quanliiy, a gieei nnjiau-til uil, *ml* semi-transparent, and of a greenish, from ila «« \cellritcr, i» called Virgin oil. I IK? marc remaining after the fir»l ptt'Murc u limkrn to pirces, ta nxxa* leiK-d mtli *m* ter, and returned to the press, upon whic), ibm Bowi out a mixture of oil and water, which spontaneously separates fn from the rest. This oil, though inferior to the former, is of good quality, am) fit for the table. The marc is again broken to piece*, snaked in water, a»d fllwSIIUil in Urge cisterm, and la aframsubmitted to the press, by which is obtained a third oil, that is valuable to the soap- •oiler and other manuUcturm. The Spauu h Olives, instead of being gathered, are beaten down, so that il e ripe and unripe ones are mixed ; and to these are addVil tuch M have fall. n of themselves, and are, therefore, more or lr*« decayed. All new are thrown together in 4 hemp, and aoon fi-rtn. nt. The olives in this state are ground •od pressed, and iha« ia rtt oduced, with little trouble, a large quantity of oil, t » rank and diiaj. reeable flavour. It is possible wal the SpsnianU derive the process from the Moors. We •Ml tlic uiwimil--. l'^KtlinJacksos's Hiatcir> <! M r.Mo.. descend to particulars. The best oil I cornea li om Provence ; but that which we have in 4 and Fltw< nce. When this country is generally from Lucc recently drawn, virgin oil has a bland, almost mucilaginous taste, wit' a ilttft.t. but »reeable flavour ; it fre. »r« at «boul 36 or 38° Fahr., and this disposition to freeze, renders it improper *tar* bunp*. The uil i» wim titrw* adulterated w»th t)« *Pickled Olives* i aiv peepa*' •*vatn)W steeping them in « ll. , to which quicklime, or any alkaline substance, is sometimes added, to shorten the operatio •Ai AAer* wards t*»jr (art aosked m pure water, and then taken out and bottled in aalt ami «.. without au artmiaiic. SOTUSDITÓLIA (Pers. ench. 2. p. 605.) leaves • nit 9-3 pairs of roundish-ovate, bluntly serrated, almost sessile leaflets, which are -anuw at tl.« t> se; petioles channelled; flowers with petals,)*>lygani' us; peduncles axillary. ♄. '1. Native of Calab i la aud the Levant, &c. Fráxinus rotundifólia. Mb hort. kc*. l n. 445. Vahl, enum. 1. p. 49. Willd. spec. 4. 6 1105. <ittl baunt. |. 145. t. 2. f. 1. F. mannifera. "M—l'luk. aim. l U. f 4. t lauh. hist. 1. p. 177. f. f. Branchn ami buda l>M>» l Leaflets -ather small, ajlabroua. Flo*tn pur)'. ash. l The flowers come out in IM •!»»«. before the leaves, like the other species of the genus, as well as of *Fráxinus*. l The lower parts of the mountains of Calabria abound with this. tlvr manna-.' ash, which grows spontaneously and with- out any culture, except that the woodmen cut down all the at^ong atrma |li,. grow above the thick< «* uf a »t> 's leg. Towards the end of July the gatherer • of manna make a lori- zontil |fa>li, inclining upwards, in the bole of l' t)>r iri e. l\s ihr liquor never oozes out the first day, another cut is given on the sec ml, mi11 tlun ilir woodmni fix U** i talk of a maple leaf in the upper wound, and the end of the leaf in the lower DM, ao as to fi HI a cuj to receive the gum as it distils from each gash. The season conti <t>r« about a mot th. l r men) have only 3 carlines (1s. 1½*d.*) for every rotolo; which quantity, con- taining 55½ ounces, is sold for 24½ carlini, or somewh >t inort than 10s.; if it be in tubular pieces the price rises one third. The tubular pieces are called manna in cannoli, and these re- ltuUr in! es are produced by applying to the incision thin straw, or •mall bits of shrub, upon which the manna runs as it oozes out. The trees succeed best in an eastern exposure, in order to *..rm the juices in the morning, and tu rna|NMk t)n»*r » l which the tu at has sweated out in the evening.

/ i.n.t *ir.ii·d* l l .»·· Tit· Ash or Manna Ash. \ \ \pril. Cl. 1697. Tree 16 to 20 feet.

3 O. AMERICA'NA (Pursh, fl. amer. sept. 1. p. 9. N«u. gen. •mcr. 1. p. 6.) leaves with 2-3 pairs of oblong or ovate- •CWMIM.. d, shining, serrated leaflets, glaucous b oMtk, ihr mid one rathrf c«fiJ. te; flowers with petals, disposed in terminal panicles. ♄. II S, . ive of North America, in Maryland and Virginia, but rare. *i*. Americana, Lin. spec. 1510.? Br »(H lt! 4 brownish grey. Buds brown. Leaflets 3-5 inches long and 2 l>mad, 1 aler beneath, and having the larger veins rather villous. Samara narrow, obtuse, mucronate.

American Flowering Ash. 11, April, l May. Cl• l»fO. Tree 30 to 40 feet.

4 O. FLORIBU'NDA (G. Don, in Loud. hort. tint. p. l 2.) leaves with 2-3 pairs of elliptic-oblong, acuminated, serrated, glabrous, •ull,«l lra flets, and an odd one; panicles term >«l, compound, thyrsoid; petals linear, clavate (ex Wall.), oval- oblong, obtuse (ex D. Don); samara linear, or narrow-spatulate,

Lwddar, in the l.«« t li..li< s. Fráxinus Moorcroftiana, Wall. cat. no. 2834.

Moorcroft's Flowering Ash. Tree.

r O. UNORNI'LLA; leaves pinnate, on long petioles; leaflets 5-7, oil long petiolules, membranous, ovate-oblong, long-acu- minated, serrated; peduncles panicled, axillary. ♄. H. Na- tive of Silhet, on the Pundua mountains. Fráxinus urophýllus, Wall. cat. no. 2835. l lowers much smaller than those of *O.* (l • -'...«,/„.

Tail-leaved Flowering Ash. Tree.

8 O. STRIA'TA (Sweet, hort. brit. p. 256.) leaves with • {Mir* of leaflets, villous b- r.i-.illi .4 as well as the petioles; leaflets ob- long, petiolulate, acute, toothed; buds green; branches striated. ♄.]i. Native of North America. Fráxinus striáta, Bosc. ex Spreng. syst. 1. p. 95.

Striated Flowering Ash. Fl. April, May. Clt. 1818. Tree 30 feet.

Cult. The species of thi- genus art- rai«d from seeds, like tfco*. of *Frá* '•**, aud »nay bv increased by budding at , grafting M il»c *tommm* aait.

*Ovn** CX1.VIII COLUMELLIEÆ (this order contains plants agreeing with *Columéllia* in im (-ifUtll characters). D. Don, in edinb. phil. jo urn. oW. I M i ,

Calyx l ur *tmmyfn»A,* |in• • • » !, adnate to the *m* arium. Corolla inserted ft ilkr upprr part ui the tube of the M 1 |x, rotate or funnel-shaped; limb spreading, 5-lobed; lobes equal, 1 , convolutely imbricate in æstivation. S imrajl, n serted in the thickened part of IM tbrwO, oppo*ite the a >«ln calyx; fl amrau abort, dilatnl ; |»41cn rr.nwn s. Ovarium in- ferior, or half inferior, 2-celled, many-ovulate. Style declinate, scate l on a fleshy disk. S fl.i capitate, convex mi top. Capule 2-celled, woo fy. ^-t«li1.1, < l,.».lv rombi&rd « with hi l- of the calyx, dehiscing *t top t>) a r*«w-like chink, there- fore the valves are bi6d at tb* ape» ; d issepiment contrary to the . OW|Wf Miult of th» prdu»ctr; .ill. MM) -seeded. Albu- tiM-n fl fleshy or wanting.—Trees or shrubs. Leaves opposite, ¡ petiolate, entire. Flowers terminal, y rlkm, o) white, very like those of the species of *Jasminum*. Peduncles bibracteate?

This order corresponds with *Jasmineæ* in the structure and æstivation of its corolla, in it« bilorvlat ovanttm. anii erect ovula, and it agrees both with it and *Syringa* in the struc- ture and dehiscence of its capsule. A itrrtjiai i> on of the

l

calyx and corolla of *Mtnodira,* with tboae specie* of *Jasminum* wherein the number of tegmrou are itulrirr initiate, will dtvplay more <-Warty tbe intimate ol' '-in>t between the** two familie*. It differ*, however, *-*«• ntially from *Jatmtnracra-* by having an adherent i»»tium, by the pretence of a prnyynuus disk, by the undivided stigma, and lastly by having an inferior capsule with polyipermotui cells. The imbricate antivation of the corolla, and adherent ovarium, with erect uvula, tbe p w w w of a perigynous diik, and a capsule with polyiprrmou* cells, are characters sufficiently numerous and important to pr* > it* ever being confounded with *O&tmt,* and to establish as an osculant group between thai family ami JarauMurr«r. It appears alto to be Dearly related to //a/riiijcr<r, a small group forming the connecting link between */Ut*.r* and Air*, ila group is principally distingimhed fn>m *CvlmmiUi** by tbe indefinite number ol' it* stamina, and iu umple sligM.

|? J. LATIFÒLIUM (Roxb. fl. ind. 1. p. 93.) IH a (. smooth; IMTM cordate-oblong, powfctd. »mo<.ih ; cofjmU I»KI. il ^ a.K [1] calycine segments 5-7, subulate; segments of corolla 10-12, linear, cuspidate; berries kidney-shaped. ♄. S. Native of the Circar mountains. Flowers large, white, fragrant.

Broad-leaved Jasmine. Fl. June, July. Clt. 1817. Shrub IH J RETICULA'TUM (Wall. cat. no. 2869.) leaves reolate, acuminated, tapering at the state; flowers terminj , capitate, or corymbose; young branches and calyx s dowoy; segments of calyx 5, subulate; corolli » rT a loaf labr, and S l linear segments. ♄. S. Native of the P aiaai •.. ...a >.n..i. S».rt« .n.»d 10 / -r^*"r1M and *J. latifòlium.* Ilradaof Aowen brartrstar.

Reticulate-l »>rd J«»rnn*r. Shrwb.

!'• J. ARBORA'SCENS (Roxb. fl. ind. 1. p. N.) arborescent; leaves opposite and 3 in a whorl, ovate, downy; flowers in marowa, corymb-formed; calycine segments 5-6, subulate, incurved, villous; segments of corolla 10-12, l n ar, acute. ♄. S. Native of the more elevated pwta of Bmf«l Nyctánthes grandiflòra, Loar. corh. fl. V 4 bt villous. Panicles trirbiMma Mat. Plawan lavaav white, and very fragrant. Very r nearly allied to *J. latifòlium.*

Arborescent Jasmine. Clt. 1824. Shrub.

jo J ANGUSTIFÒLIUM (Vahl, enum. 1. p. 29.) twining, polished; leaves ovate or oblong, smooth, of a shining deep green; flowers generally by threes; calycine segments acute; segments of corolla 5-9, lanceolate; berries single, ovate. ♄. S. Native of the Coromandel coast. J. viminèum, Willd. spec. 1. a. M. Nyctánthes trifiòra, Borm. ind. 4. t. 2. J. trifiòrum, Pers. ench. 1. p. 7. Nyctánthes viminea, Retz. obs. 5. p. 9. Nyc. angustifòlia, Lin. spec. 8. Mogòrium trifiòrum, Lam. ill. t. 6.—Rheed. n> l. 6. p. 93. t. 53. Flowers large, white, with a faint tinge of red, star-sh g a peculiar but very pleasant fragrance. Stigma lanceolate. This species, being constantly covered with I--I, hai Uimhf, bright shining deep green, sometimes as small as those of box, renders it always beautiful, and particularly well adapted for screening windows, covering arbours, &c. in warm climates.

Narrow-leaved Jasmine. Fl. year. Clt. 1816. Shrub tw.

21 J. TRIFÒLIATUM (Roxb. fl. ind. 1. p. 96.) climbing, glabrous; leaves nearly sessile, ovate-oblong, smooth; flowers from 3-5 together, on t ifjrtl ' ' ' ' ' [; ' >> T I I segments 7-8, subulate, one-sixth the length of the very long slender tube of the corolla; segments of corolla 7-8, lanceolate; three times shorter than the ; berries ovate. ♄. S. Native of the Malay Archipelago.

Tube-flowered Jasmine. Shrub cl.

22 J. CUSPIDÀTUM (Willd. act. soc. Berol. 4. p. 1*f.) climbing, glabrous; leaves ovate-lanceolate, attenuated, mucronate; petioles axillary, 1-flowered; peduncles axillary, 1-flowered; flowers pedicellate. ♄. ◡. S. Native of the East Indies. Calyx 5-toothed. Corolla white. Very nearly allied to *J. Sámbac.*

Cuspidate-leaved Jasmine. Shrub cl.

23 J. GUINÉENSE; leaves simple, ovate, acuminate, glabrous; petioles terminal, trichotomous, compound, pilose; calyx campanulate, with subulate segments. Segments of corolla ♄. ◡. S. Native of Guinea, at Cape Coast, common among bushes. Flowers white, very fragrant. Calyx tube short, limb 5-cleft. Corolla usually 6-cleft, with linear-lanceolate segments.

Guinea Jasmine. Shrub cl.

24 J. TRICHÓTOMUM (Heyne, ex Roth, nov. spec. p. 6.) leaves ovate-lanceolate, glabrous above, and clothed with rusty tomentum beneath; corymbs terminal, trichotomous, compound, pilose; calyx campanulate, about equal in length to the erect segments. ♄. ◡. S. Native of the East Indies. Calyx 6-8-cleft. Corolla usually 6-cleft, with linear-lanceolate segments.

Trichotomous Jasmine. Shrub tw.

25 J. UNDULÀTUM (Willd. spec. p. 6.) leaves ovate-lanceolate, glabrous, shining; petioles 5-6 times longer than the superior joint; calyx campanulate, with very short teeth. ♄. ◡. S. Native of New Holland, within the tropic. Lindl. bot. reg. t. 1296. Panicles terminal, trichotomous, corymbose. Flowers white. Corolla 6-parted, with ovate segments.

Undulate-leaved Jasmine. Fl. Nov. Clt. 1820. Shrub cl.

26 J. ACUMINÀTUM (R. Br. prod. p. 521.) leaves ovate, acuminated, glabrous; petioles 5-6 times longer than the superior joint; calyx campanulate, with very short teeth. ♄. ◡. S. Native of New Holland, within the tropic. Lindl. bot. reg. t. 1296. Panicles terminal, trichotomous, corymbose. Flowers white. Corolla 6-parted, with ovate segments.

Acuminate-leaved Jasmine. Fl. Nov. Clt. 1820. Shrub cl.

27 J. MULTIFLÒRUM (R. Br. prod. p. 521.) leaves ovate, acuminated, downy, very soft beneath; peduncles terminate, trichotomous; teeth of calyx very short. ♄. ◡. G. Native of New Holland, within the tropic.

Soft Jasmine. Shrub cl.

28 J. ANGUSTIFÒLIUM (Blum. bijdr. p. 679.) [illegible] with glandular hairs; leaves alternate; floral ones [illegible] opposite, oval, acute, triple-nerved, shining, of the consistence of parchment; pedunc[illegible] axillary and terminal, crowded, 3-5-flowered; pedicels long; calyx tubular, obsolete 5-toothed. ♄. ◡. S. Native [illegible] in the mountain[illegible] of Java, in woods [illegible]

Narrow-leaved Jasmine. Fl. year. Shrub cl.

29 J. SIMPLICIFÒLIUM (Forst. prod. 3. no. [illegible]. Vahl, enum. 1. p. 27. Willd. spec. 1. p. 39.) shrubby, spreading, glabrous; leaves ovate-oblong, polished; flowers from 3 to many, terminal; calyx campanulate, with a 5-toothed border; segments of corolla from 6-5, linear, acute, equalling the tube in length. ♄. ◡. S. Native of the Friendly Islands, [illegible] Eastern Archipelago. Sims, bot. mag. t. 980. J. australe, Pers. ench. 1. p. 8. Flowers terminal, fragrant, in a decussate panicle, having its ramification trifid. Bracteas small, subulate. Corollas white, fragrant.

Simple-leaved Jasmine. Fl. June, July. Clt. 1808. Sh. cl.

30 J. LAEVE (Wall. cat. no. 2859.) branches, calyxes, and young leaves downy; leaves ovate, acuminated, almost glabrous in the adult state; corymbs terminal, trichotomous; bracteas [illegible] ovate; calyx with nine teeth subulate; calyx 7-toothed; segments of corolla 7, lanceolate, acute.

Smooth Jasmine. Shrub cl.

31 J. GLANDULÒSUM (Wall. cat. no. 2849.) glabrous; leaves ovate-lanceolate, acuminated; calyx tubular, 5-toothed; segments of corolla [illegible], lanceolate-linear, acuminated; bracteas setaceous; peduncles axillary, 3-flowered; flowers pedicellate. ♄. ◡. G. Native of Nipaul, on Shrubby mountains.

Glandular Jasmine. Shrub cl.

32 J. ORTÒSEPALUM (Burm. ind. 4. t. 3. f. 2.) [illegible], mucronate, glabrous; peduncles axillary, 1-flowered. ♄. ◡. S. Native of Java. Flowers yellow, [illegible]

Oblong-leaved Jasmine. Shrub cl.

33 J. ACUMINÀTUM (R. Br. prod. p. 521.) leaves ovate, acuminated, glabrous; petioles 5-6 times longer than the superior joint; calyx campanulate, with very short teeth. ♄. ◡. S. Native of New Holland, within the tropic. Lindl. bot. reg. t. 1296. Panicles terminal, trichotomous, corymbose. Flowers white. Corolla 6-parted, with ovate segments.

Acuminate-leaved Jasmine. Fl. Nov. Clt. 1820. Shrub cl.

34 J. MULTIFLÒRUM (R. Br. prod. p. 521.) leaves ovate, acuminated, downy, very soft beneath; peduncles terminate, trichotomous; teeth of calyx very short. ♄. ◡. G. Native of New Holland, within the tropic.

Soft Jasmine. Shrub cl.

35 J. ANGUSTIFÒLIUM (Blum. bijdr. p. 679.) [illegible] with glandular hairs; leaves alternate; floral ones [illegible] opposite, oval, acute, triple-nerved, shining, of the consistence of parchment; pedunc[illegible] axillary and terminal, crowded, 3-5-flowered; pedicels long; calyx tubular, obsolete 5-toothed. ♄. ◡. S. Native [illegible] in the mountain[illegible] of Java, in woods [illegible]

Narrow-leaved Jasmine. Fl. year. Shrub cl.

36 J. SIMPLICIFÒLIUM (Forst. prod. 3. no. [illegible]. Vahl, enum. 1. p. 27. Willd. spec. 1. p. 39.) shrubby, spreading, glabrous; leaves ovate-oblong, polished; flowers from 3 to many, terminal; calyx campanulate, with a 5-toothed border; segments of corolla from 6-5, linear, acute, equalling the tube in length. ♄. ◡. S. Native of the Friendly Islands, [illegible] Eastern Archipelago. Sims, bot. mag. t. 980. J. australe, Pers. ench. 1. p. 8. Flowers terminal, fragrant, in a decussate panicle, having its ramification trifid. Bracteas small, subulate. Corollas white, fragrant.

Simple-leaved Jasmine. Fl. June, July. Clt. 1808. Sh. cl.

37 J. LAEVE (Wall. cat. no. 2859.) branches, calyxes, and young leaves downy; leaves ovate, acuminated, almost glabrous in the adult state; corymbs terminal, trichotomous; bracteas [illegible] ovate; calyx with nine teeth subulate; calyx 7-toothed; segments of corolla 7, lanceolate, acute.

Smooth Jasmine. Shrub cl.

40 J. VOLI'BILB (Jacq. hort. schcvtinr. 3. I. 321, fragrn. I. 44. f, *t.)* twining, glabrous; leaves ovate, or ovate-lanceolate, glabrous; panicle terminal; CJK\ 4-S-tootlied; corolla *.-S-cleft, *h*.'*. *O.* Native of the Cape of Good Hope. Peduncle* many-flowered. Berries blue.

*Twi*t*g* Jasmine. Shrub lw.

|1 J. ▷▷ I ill. cat. 2860.) brandies villou*; leaves broad-ovate, acuminated, *otiu what cordate at the base, downy on tnHh surfaces, but especially beneath and on the nerves abort; priiolea short, villoun ; corymb* terminal, villou*, iricbototnous ; ealvx with a short tube, and tuliutate teeth ; segnx I ilia G-8, liw.ir-lancvolaie. acuminated. 4 A. villosa (Blum. bijdr. p. 1038.) leaves almost sessile, elliptic-oblong, acuminated at both ends, remotely ribbed, rilltx. beneath; cymes effuse, terminal. ☽. S. Native of Java, on the calcareous mountains of Kuripan.

Villous Alstonia. Fl. Nov. Shrub.

5 A. sessilis (Blum. bijdr. p. 1037.) leaves sessile, lanceolate, acuminated at both ends, lined transversely, clothed with silky hairs beneath; cymes crowded, terminal; throat of corolla bearded; segments obtuse, about equal in length to the tube. ☽. S. Native of Java, on the calcareous mountains of Kuripan.

Sessile-leaved Alstonia. Fl. Nov. Shrub or tree.

6 A. scholaris (R. Br. in Wall. cat. no. 1648.) leaves in a whorl, oblong, short-acuminated, downy beneath; peduncles numerous, at the tops of the branches, trichotomously corymbose at the top. ☽. S. Native of Penang. Follicles linear, very long. A. coauta, Ham. Br. in Wall. cat. no. 1649, does not appear to differ from *A. marrvfrMyUa,* Hamilt. in tb« Trans. Linn. Soc. being glabrous, narrower, and the veins more distinct.

Large-leaved Alstonia. Tree.

7 A. cuneata (Wall. cat. no. 1645.) leaves obovate, retuse, rusty beneath; cymes terminal, many-flowered. ☽. S. Native of Sirmore. Flowers white, collected by Dr. Govan. Follicle* linear. Peduncles 3-flowered.

Cuneate-leaved Alstonia. Shrub or tree.

8 A. scholaris (D. Don, prod. fl. nep. p. 131.) leaves 3-5 in a whorl, lanceolate, acuminated, feather-nerved, velvety beneath, cymes terminal, many-flowered; throat of corolla downy; segments of the limb oblong, obtuse, twice shorter than the tube. ☽. S. Native of Nipaul.

Scholar Alstonia. Tree or shrub.

9 A. venenata (D. Don, prod. fl. nep. p. 131.) leaves opposite, elliptic, acuminated, glabrous, shining, rather coriaceous; cymes terminal, pedunculate, trichotomous; throat of corolla bearded; segments of the limb oblong, obtuse, about twice shorter than the tube. ☽. S. Native of Nipaul.

Venomous Alstonia. Shrub or tree.

10 A. costata (R. Br. l. c. p. 77.) leaves opposite, elliptic-oblong, acuminated, ribbed; cymes effuse; segments of the corolla lanceolate, longer than the tube. ☽. S. Native of the islands of Otaheite and Ulaietea, between the ranges of the mountain, where it is called *Attaid.* Flowers white.

Ribbed-leaved Alstonia. Tree.

11 A. undulata (Labill. sert. cal. p. 11. t. 28.) leaves in whorls, elliptic-oblong, obtuse, ribbed, attenuated at the base; cymes numerous, length of leaves, but the fruit bearing ones are much longer; segments of corolla oblong, obtuse, pilose; follicles very long. ☽. G. Native of New Caledonia.

Undulated-leaved Alstonia. Shrub 8 feet.

12 A. verticillosa (R. Br. l. c.) leaves in whorls, lanceolate, acuminated, attenuated at the base; cymes dichotomous, tricose tube, and a pilose throat.

Feathered Alstonia. Shrub 8 feet.

13 A. [illegible] leaves in whorls, lanceolate, acuminated, attenuated at the base; cymes dichotomous, widened upwards, beardless; tube cylindrical, throat bearded; segments of the limb ovate, acuminated, about equal in length to the tube. ☽. S. Native of the East Indies. Flowers white.

Pale-flowered Alitunm. Tree.

Culture, &c. See *Strojlfntkmt,* p. *Hi,* for culture and propagation.

Tribe II.

GELSEMIEÆ. Fruit of 2 joined follicles, which are at length separable, 2-valved, 2-celled; valves 1-celled, with inflexed, seminiferous edges, which constitute the dissepiment. Seeds flat, winged. This tribe seems to be Gentianeæ with *Apocyneæ,* through *Crawfurdia.*

XXVII. GELSEMIUM (from Gelsemino, an Italian name of the Jessamine.) Michx. fl. amer. bor. 1. p. 120.—Cor. Hum. Juss. gen. 131.

Lin. syst. *Pentandria Monogynia.* Calyx small, 5-cleft. Corolla large, funnel-shaped; with a 5-cleft, almost equal limb. Stigma trifid. Capsule ovate-oblong, rather compressed, 2-celled, composed of 2 joined follicles, which are separable, furrowed in the middle; 2-valved; valves keeled, with inflexed edges, which constitute the dissepiment. Seeds numerous, flat, imbricate, membranous at the apex, fixed to the middle of the valves.—An evergreen, lactescent, climbing shrub. Leaves opposite, furnished with stipules. Flowers axillary and terminal, yellow.

1 G. sempervirens (Mich. fl. bor. amer. 1. p. 120.) leaves lanceolate, shining; fascicles axillary, few-flowered. ☽. G. Native of North America, in the vicinity of rivers, from Virginia to Florida. Pursh. fl. sept. amer. 1. p. 184. G. sempervirens, Pers. ench. 1. p. 267. Bignonia sempervirens, Lin. spec. p. 869. Jacq. coll. 3. p. 258. Anisomeles sempervirens, Mart. Mill. dict. no. 3.—Catesb. car. I. p. 13.—Plukn. phyt. t. 112. f. 5. Flowers sweet-scented, yellow. Called, in America, *Carolina Jessamine.*

Shining Gelsemium, or Carolina Jessamine. Fl. June, July. Cult. 1640. Shrub climbing.

Cult. A pretty climbing shrub, of easy culture. The best soil for it is a mixture of loam and peat. Cuttings strike root readily under a hand-glass.

WWII *VI*ECTANEIA (meaning unknown.) Pet. Th. gen. 55. Rœm. coll. p. 203.

Lin. syst. *Pentandria Monogynia.* Calyx urceolate, 5-cleft, or 5-toothed. Corolla with a short ventricose tube. Anthers sessile, sagittate. Ovarium solitary. Style short; stigma capitate. Capsule follicular, very long, sub-tetragonal, 2-celled, probably composed of 2 joined follicles; with introflexed, seminiferous edges. Seeds compressed, winged, fixed to the edges of the valves by short funicles. Albumen thin. Embryo straight.

2 P. [illegible] (Rœm. et Schultz, syst. 4. p. 420.) ☽. G. Native of Madagascar.

Petit Thouar's Plectaneia. Shrub twining.

Cult. For culture and propagation see *Echites,* p. 81.

Tribe V.

TABERNÆMONTANEÆ. Fruit of 2 follicles, rarely solitary by abortion. Seeds neither tufted nor winged, usually nestling in the pulp of the fruit, usually albuminous.

XXIX. TABERNÆMONTANA (so named by Plumier, in honour of James Theodore, surnamed Tabernæmontanus, from Berg-Zabern, the place where he was born. *Hort.* published

Kraeutcrbucb, 1589, and Figwea of Plants„*1*VJO, in an oblong ouarto form. He w.» p«jr..enui to the Elector Palatine. «MI died in MM.) Plato, gen. SO. LIB. gen. no. 301. Juaa. 145.

...Gaud. mem. ed. 2. vol. 2. p. 67. Copa vesta, Blanco, mem. ed. 2. vol. 2. p. 67. Flowers size and colour of those of *Lithospermum officinale*. Pollicles longer than those of *C. thevetia*.

Zone. Cultivated. Fl. Aug. Ch. 1778. Pl. (1) 10 feet.

Cult. &c. *alstonia* is a very elegant and delicate shrub, of easy culture: and is increased readily by cuttings or seeds. As it possibly, being annual, is only to be preserved by sowing the seeds in a pot full of light rich earth, and plunging it into a hot-bed.

Tribe V.

ALYXIEÆ (the tribe agrees with *Nerieæ* in the fruit being drupaceous). Ovules double. Fruit drupaceous. Albumen even, terminated or fleshy.

XXXIX. ALYXIA (from *a*[illegible], *alyxis*, watery, *chief*; glossy appearance of the shrubs). Banks, herb. ex R. Br. prod. p. 469. Cunningh. in hot. mag. no. 3012. Gynopogon Forst. char. gen. p. 36. t. 18.

Ids. exot. *Pentandria Monogynia*. Calyx 5-parted. Corolla salver-shaped, with 4 naked throats. Stamens inclosed. Ovaria 2, connected. Styles side-adherent. Stigma obtuse. Drupes 2, pedicellate, one of which is usually abortive, simple, containing a semibivalve 1-seeded putamen. Seed semiquadrate. Albumen ruminated fleshy. Radicle erect, straight, or curved. Shrubs, glabrous, or obscurely tomentose. Leaves verticillate, 3–4-cornate, opposite, connate, conjugate, or alternate. Flowers axillary or terminal, sometimes spicate, rarely corymbose. Habit and structure of flowers as in other Apocyneous plants, but differs in the albumen being ruminated, and easily separated into lobes.

* *Leaves verticillate.*

1 A. acuminata (Cunningh. in hot. mag. no. 3313. *Gynopogon virgatus*, Forst. prodr. n. 117. gen. p. 36. t. 18.) flowers axillary, pedunculate, peltate; peduncles 1–3-flowered; calyx bracteate; leaves 3–4 in a whorl, petiolate, long-lanceolate, glabrous, with revolute edges, glaucous beneath; with midrib sulcated, parallel veins; petiolus only half the length of the leaves; drupes oblong, membranaceous, 2-seeded, abortive. ♄ ♄. Native of New Holland, on the shore within the tropic at Endeavour River and Moreton Island.

Egg-leaved Alyxia. Shrub.

2 A. spicata (R. Br. prodr. p. 470.) spikes axillary, flowers verticillate, sessile, subcoriaceous; leaves 3–4 in a whorl, ovate-lanceolate; petioles shorter than the peduncles; with a simple base; ♄ ♄. Native of New Holland, on the east coast, within the tropic (R. Br.). Endeavour River (A. Cunningh.).

Spike-flowered Alyxia. Shrub.

3 A. tetrastigma (R. Br. prodr. p. 470.) spikes axillary, flowers verticillate, sessile, subcoriaceous; leaves 4 in a whorl, oblong; petioles longer than the peduncles; with a glandular base; ♄ ♄. Native of New Holland, within the tropic Lizard Island. A. Cunningh.

Tetragonal Alyxia. Shrub.

4 A. tetragona (Forst. ex Schultes, syst. 4. p. 472.) peduncles axillary, pedunculate, much shorter than the leaves; calyx bracteate; leaves 3–4 in a whorl, lanceolate, acuminate-serrated, smooth, attenuated at the base, sessile; stipules capitate, bearded (see Spicæ p. 36. t. 18. f. 2). ♄ ♄. Native of the Society and Friendly Islands. Gynopogon verticillatus, Forst. prodr. n. 117. gen. p. 36. t. 18. Banks, herb. ex R. Br. A. ramiflora, Roxburgh. A. [illegible] Lour. cochin. 1. p. 84.

Three-leaved Alyxia. Shrub.

5 A. triphylla (R. Br. prodr. p. 470.) spikes axillary, 3-flowered; calyx bracteate; leaves 3 in a whorl, ovate or subcordate; petioles short. ♄ ♄. Native of New South Wales, on the north coast.

Blue-leaved Alyxia. Shrub.

6 A. caerulea (Gaud. in Freyc. voy. pl. bot. p. 421. t. 67.) pedunculos terminal, usually by threes, 10-flowered; calyx bracteate; leaves 3 in a whorl, oblong, rather coriaceous, terminating in a rounded, emarginate, short petiole; stipules ciliated. ♄ ♄. Native of the Marianne Islands, on the mountains of Guaf.

Laurel-like Alyxia. Shrub.

7 A. laurifolia (Gaud. in Freyc. voy. pl. bot. p. 421.) peduncles axillary, solitary, 2–3-flowered; leaves 3 in a whorl, elliptic-oblong, acute at both ends, coriaceous; stalk short, furrowed. ♄ ♄. Native of the Sandwich Islands.

Olive-leaved-fruited Alyxia. Shrub.

8 A. [illegible] (Gaud. in Freyc. voy. pl. bot. p. 421.) peduncles axillary, solitary, 2–3-flowered, exceeding the petioles; leaves 3 in a whorl, elliptic, subacuminate, running into the petioles at the base; drupes olive-shaped, ripening into the petioles at the base. ♄ ♄. Native of the Marianne Islands, on mountains from Guaham village.

Farrer's Alyxia. Shrub.

9 A. erythrocarpa (Banks ex Schultes, syst. 4. p. 440.) flowers almost sessile, solitary, terminal, solitary or twin; leaves 3–5 in a whorl, obovate, or wedge-oblong, blunt, attenuated at the base, shining, veinless beneath; drupes berry-shaped, ovate-globose. ♄ ♄. Native of Norfolk Island, in the inland parts of woods. Wall. cat. 1650. Ludlow, Forst. herb. Banks, Br. pl. mscr. t. 119. A. Farrer, Cunningh. 1827. Gynopogon Alyxia, Forst. prodr. no. 116.

Gynopogon Alyxia. Ch. f. Shrub.

10 A. [illegible] (Cunningh. in hot. mag. t. 3011.) leaves verticillate, axillary, or terminal; leaves 3–4 in a whorl, lanceolate-oblong, elliptic, or rhomboid, obtuse-mucronate, shining, veiny beneath; supported by a short, petiole-like base; branches straight, somewhat, verticillate. ♄ ♄. Native of Norfolk Island, in dry shady woods.

Duplicate-like Alyxia. Ch. 1831. Shrub.

11 A. [illegible] (R. Br. prod. p. 470.) flowers [illegible], terminal; leaves 4 or 5 in a whorl, broad-elliptic or [illegible], obtuse, attenuated at the narrower end; [illegible] angular; the orifices and margins rather [illegible] ♄ ♄. Native of the south-east coast of New South Wales. Lodd. bot. cab. 1811. Cunningh. in hot. mag. 3318. A. Richardsiæ, Sweet.

Lily-flowered Alyxia. Shrub.

12 A. [illegible] (Cunningh. mss. 1828, and Cunningh. in hot. mag. 3313.) leaves [illegible] ♄ ♄. Native of Moreton Bay, [illegible] Island. A. Cunningh.

Rosemary-leaved Alyxia. Fl. April, July. Ch. 1820. Shrub. 4 to 6 feet.

** *Leaves opposite.*

13 A. [illegible] (Hook. ms. in Bennett voy. Pl. bot. p. 89.) leaves opposite, ovate, obtuse, rather membranous, shining on both surfaces, obscurely and parallelly veined; peduncles axillary, solitary, 3-flowered, one half shorter than the leaves; flowers yellow-tinted, [illegible] ♄ ♄. Native of the Sandwich Islands.

Fascicled-fruited Alyxia. Shrub.

14 A. [illegible] (Banks ex Schultes, syst. 4. p. 440.) peduncles axillary, 3-flowered, longer than the petioles; leaves opposite, oval, oblong-elliptic, bluntly mucronated, shining, with parallel veins; fascicles clustering. ♄ ♄. Native of the Society Islands. Gynopogon verticillatus, Forst. prodr. no. 116.

Glowing Alyxia. Shrub ♂.

15 A. [illegible] (R. Br. prod. p. 470.) flowers usually twin, interpetiolar; leaves opposite, oval or obovate, smooth on both surfaces, terminating in a callous point; stipules small, bearded. ♄ ♄. Native of New South Wales, on the east and south coasts; also of the island of Bass's Straits, as also in the northern regions of Van Diemen's Land.

Bay-leaved Alyxia. Shrub.

13 *A. obovata* (Wall. cat. no. 1669.) peduncles axillary, 3-flowered; leaves opposite, or 3 in a whirl, obovate-elliptic, tapering much to the base. ♄. S. Native of Chapedong.

Smooth-crested Alyxia. Shrub.

14 *A. stellata* (Wall. cat. no. 1667.) leaves opposite, oblong, coriaceous, shining above, glaucous beneath; corymbs axillary, many-flowered; throat of corolla crowned. ♄. S. Native of the Straits of Malacca.

Glaucescent Alyxia. Shrub.

Cult. For culture and propagation see *Tabernæmontana*, p. 97.

XL. CERBERA (so named from Cerberus, on account of its poisonous qualities). Lin. gen. no. 294. Juss. 143. H. B. et Kunth, nov. gen. amer. 3. p. 122. Illust. hujus. p. 103. — Alstœm. Vouru. nut. 454. Jacq. amer. 48. Thevetia, Juss. in ann. mus. 15. p. 241.

Gen. char. *Pentandria, Monogynia.* Calyx 5-parted; segments persistent. Corolla funnel-shaped; tube pitcher-inside at top; throat 5-toothed; teeth opposite the antheræ; limb 5-cleft; segments oblique, or unequal-sided. Anthers seated on the top of the tube, sessile, included, acute, adhering to the stigma. Ovarium didymous, girded by 2 hypogynous scales or glands, bifloriferous, didymous; stigma dentoid; having the margin crenulated below, but convex and evaginate above. *Drupes* two, one of them usually abortive, containing a fibry 2-celled nut. *Seeds* usually solitary. — Lactescent trees or shrubs. *Leaves* scattered, quite entire. *Peduncles* extra-axillary at the tops of the branches. *Flowers* showy yellow or white.

1 C. Thevetia (Jacq. amer. 48. t. 24. ed. pict. t. 41.) leaves linear, with subrevolute edges, almost sessile, glabrous; peduncles generally 1-flowered; calycine segments ovate, lanceolate, acute, ½ lower shorter than the tube of the corolla. ♄. S. Native of New Granada, in hot places; Mexico, Cuba, Martinique, &c. Lin. spec. 305. Lam. ill. t. 170. f. 2. Hook. bot. mag. 1209.—Plum. nov. t. 18.—Pluk. alm. p. 233. t. 207. f. 2. Jacq. hort. vind. 445. f. 2. Axils of leaves furnished with some scarious scales. Corolla yellow. Drupe half orbicular, truncate at top, 2-celled, size of a bean; cells hippuric.

Thevet's Cerbera. Fl. June, July. Cb. 1733. Tree 18 ft.

2 C. ahouai (H. B. et Kunth, nov. gen. amer. 3. p. 122.) leaves lanceolate-linear, acute, veiny, glabrous, with revolute edges; nerves and veins pilose beneath; flowers crowded at the tops of the branches, on short peduncles, sometimes 2 on a single peduncle; calycine segments oblong-lanceolate, acutish, ½ more shorter than the tube of the corolla. ♄. S. Native of New Spain, in temperate places, near the town of Tasco. *Leaves* 4½ inches long. *Segments* of corolla doubtfully obovate. *Drupe* glabrous, size of an apple. Corollas yellow.

Thevetia-like Cerbera. Fl. April, July. Cb. 1800. Tree 12 ft.

3 C. Peruviana (Pers. euch. 1. p. 287.) leaves linear-lanceolate, crowded, glabrous; peduncles short, few-flowered. ♄. S. Native of Peru, in woods. C. Thevetia, Ruiz et Pav. fl. per. 2. p. 27. t. 135. f. b. C. Thevetia β, Pair. suppl. 4. p. 231.? According to Cav. dissert. p. 108, this differs from *Thevetia* in the stamens being tetragonal, not round, in the peduncles being few-flowered, not 1-flowered. Corollas yellow, with wedge-shaped, oblique, truncate segments, and a villous throat; having 5 tubulate teeth, closing the tube.

Peruvian Cerbera. Tree 18 feet.

4 C. Ahouai (Lin. spec. 1. p. 303.) leaves ovate-acute, glabrous; peduncles terminal, short, few-flowered; calycine segments reflexed; segments of corolla undulated. ♄. S. Native of Brazil. Cav. hist. exag. 137. Aubl. rip. 121. Lam. ill. 2. p. 192. t. 170. f. 1. C. Thevetia. Lin. hort. cliff. p. 72. Vor. ic.

Alstœm. Iter. amœn. p. 66. Corollas pale yellow. The wood is very hard; and the fruit is a deadly poison. The Indians are said to put small arrows into the empty nuts, using them, and feathers, to shoot their bows when they dance.

Ahouai Cerbera. Fl. June, July. Cb. 1739. Tree 10 or 20 feet.

5 C. ovata (Cav. icon. 3. p. 55. t. 270.) leaves oblong-obovate, green above, rather downy beneath and yellowish; flowers terminal, usually 3 together; calycine segments ovate, acute, reflexed; segments of corolla ovate-oval. ♄. S. Native of New Spain. Corolla yellow. *Fruit* nearly globose, size of a walnut, compressed, slightly truncate.

Ovate-leaved Cerbera. Shrub 5 to 6 feet.

6 C. cordifolia (H. B. et Kunth, nov. gen. amer. 3. p. 121.) leaves oblong-cuneate, rounded at the apex, pubescent above and downy beneath; peduncles subdichotomous, few-flowered; calycine segments oblong, acute, hardly shorter than the tube of the corolla; segments of corolla distinctly obovate. ♄. S. Native of Mexico, on the western declivities of the mountains, between Zumpango and Mescala. *Leaves* 3 inches long, and 2 inch broad at top, with some scales on their axils. *Peduncles* hairy. *Corollas* yellow?

Wedge-leaved Cerbera. Fl. April. Tree

7 C. myrtifolia (H. B. et Kunth, nov. gen. amer. 3. p. 122.) leaves oblong-lanceolate, acuminated, with subrevolute edges, glabrous and shining above, but hairy beneath; flowers racemose; calycine segments ovate, acuminated, ½ more shorter than the tube of the corolla; segments of corolla rounded. ♄. S. Native of New Granada, at the mouth of the river Sinu, and near Carthagena. *Leaves* 3-4 inches long. *Corollas* white, about the size of those of *Vinca rosea*, both downy outside. *Ovaria* girded by 2 combined glands. *Drupes* roundish, fleshy, 2-lobed, 4-celled; cells 1-seeded.

Shining Cerbera. Fl. March. Shrub.

4 *Doubtful species.*

8 C. alexandra (Willd. mss. ex Roem. et Schultes, syst. 4. p. 708.) leaves lanceolate, obtuse, roughish. ♄. S. Native of South America. Humb. et Bonpl.

Garlic-scented Cerbera. Shrub or tree.

9 C. cuneata (Willd. l. c.) leaves elliptic-obovate, tapering into the petiole, glabrous, paralelly veined beneath. ♄. S. Native of [ ]

Cuneate-leaved Cerbera. Shrub or tree.

Cult. For culture and propagation see *Tabernæmontana*, p. 97.

XLI. TANGHINIA (*Tanghin* or *Tanghin* is the Malegasse name of *T. venenifera*, the juice of which is the ordeal water of this island). Pet. Th. gen. nov. p. 10. Poir. suppl. 5. p. 185. Beaucm. Hook. bot. misc. 3. p. 270. t. 110.—*Cerbera* species of authors. *Cerbera venenifera*, Gærtn. fruct. 2. p. 44. t. 90.

Gen. char. *Pentandria, Monogynia.* Calyx 5-cleft; segments spreading, deciduous. Corolla salver-shaped, longer than the calyx; with a pentagonal, dilated throat; limb spreading; segments marcescent. Stamens 5, inserted into the dilated part of the tube of the corolla; anthers thick, fourcornered, hidden by an ovate filament-terminated inflated collar or scales, which rise from the throat, having an unilateral tubercle under each anther. *Ovarium* solitary, 4-lobed, girded by a hypogynous ring; style capitate, 2-lobed, inclosed in the throat formed by the anthers. *Drupe* ovate, containing a fibrous nut, which is acute at both ends. *Integument* of seed membranous. Albumen none, ex Pet. Th.; cotyledons 2, foliaceous, flaccid. Corculum flat, slender, somewhat ovulate, ex figure in Pet. Th.; none, ex Pet. Th. *Embryo* superior, terete. *Habit.* Trees, with the habit of *Mangifera*. *Leaves* alternate, lanceolate-

mate at the tops of the branches coriaceous. Flowers disposed

Shining-leaved Rauwolfia. PL Juiw. Sap I Clt. 1752. Tree 12 feet.

4 J Brazilie'nsis (Spreng. syst. 1. p. 834.) leaves 3 in a whorl, elliptic-oblong, having the veins and nerves downy beneath; peduncles 1-flowered, axillary, thick, and rc, as well the calyxes, silky. ♄. S. Native of Brazil.

Brazilian Rauwolfia. Shrub.

5 R. r«xvitiòsa (Bert. ex Spreng. syst. 1. p. 834.) leaves 3 in a whorl, oblong-lanceolate, rather unequal; [xtliin, lr» |. flowered, capillary, axillary, shorter than the leaves. I . S. Native of Brazil.

SmmttJL

6 R. canescens (Lin. syst. 250.) leaves 4 in a whorl, obovate, acuminated, downy; corymbs few-flowered. ♄. S. Native of Jamaica and other West Indian islands. R. subpubescens, Lin. spec. 303. ?. hirsùta, Jacq. amer. p. 47. ed. pict. p. 259. f. 17.—Plum. gen. 9. icon. 226. f. 2.—Pluk. phyt. 266. f. 2. Branches rather tomentose. Leaves more tomentose beneath than hairy. Calyx-segments lanceolate. Segments of corolla nearly square, sub-emarginate. Drupes dark red. Flowers small, red.?

dmncent ltau«r>|fia. Fl. June. Clt. 1739. Shrub 2 to 8 feet.

7 H. tomentòsa (Lin. spec. 303.) leaves 4 in a whorl, oblong, attenuated at both ends, tomentose; corymbs few-flowered. ♄. x "•»»•« on rocks and walls, of Carthagena, in South America. Jacq. inwr, i8. obs. ,?. I. *35.* Flowers small, white. Calycine segments ovate. Fruit at length nearly black.

Tomentose Rauwolfia. !'" 1 Fl. April, Oct. Clt. 1823. -limb 3 to 4 feet.

* * *Species natives of the East Indies.*

8 R. Sumatra'na (Jack, mal. misc. 1. no. v. p. tf. ex Roxb. fl. ind. t. p. 649 Blum. bijdr. p. 1034.) leaves 3-4 in a whorl, cuneate-oblong, or obovate, glabrous; umbels or corymbs terminal, pedunculate, few-flowered; mouth of corolla shut by 5 fascicles of \1ll1. tj . 8. Native of Java and Sumalr , frequent in the neighbourhood of Bencoolen. This shrub resembles the *Manggalaut*, or *Vaughinia Mánghas*, in habit and foliage. Leaves 6 inches long. I Flowers 11111*11, white. ScgHWfM' of corolla roundish. Sn•ma peltate. This species resembles *R. nitida*, but is sufficiently distinguished by its inflorescence. The wood, being light, is employed by the Sumatrans, for scabbards to their swords, and krises.

Sumatra Rauwolfia. Tree 12 to 15 feet.

* * * *f >i^ncies native of Africa.*

9 R. vomitòria (Afz. rem. guin. ex Spreng.) leaves 4 in a whorl, oblong-lanceolate, on long petioles; branches tetragonal; flowers axillary, umbellate. ♄. S. Native of Guinea.

Vomit Rauwolfia. Shrub.

Spines always in pairs at the divisions of the branches, and at every other pair of leaves, often forked. Peduncles terminal, usually twin. Flowers milky-white, jasmine-like. Berry size of a [illegible], when ripe of a shining black. The *Carandas* makes exceedingly strong fences; the number and the strength of their thorns render them almost impassable. The fruit, just before ripe, is employed to make tarts and preserves of various kinds, also to pickle, and by most people reckoned superior for these uses to every other fruit in the country, not even the mango excepted. They are universally eaten by the natives, when ripe, [illegible] tolerably pleasant [illegible] taste even of an European.

Carandas Carissa. [illegible] Clt. 1790. Tree 15 to [illegible]

5 C. DIFFU'SA (Roxb. fl. ind. 2. p. 524.) shrub diffuse, spiny, with dichotomous branches; leaves almost sessile, roundish-ovate, cordate, mucronate, polished; corymbs terminal, rarely axillary, many-flowered; cells of berry 2-seeded. ♄. S. Native of the East Indies, in the Ganjan district, and from thence northward to the mouth of the Hoogly. Spines as in *Carándas*, [illegible] Mucrone of leaves recurved. simple bifid or [illegible] Flowers pure white. Berries [illegible] when ripe, size of a French bean.

Diffuse Carissa. Shrub [illegible]

6 C. [illegible] VALLA (Wall. cat. no. 1679.) leaves ovate, acuminated, glabrous, shining; spines terminal and axillary, corymbose. [illegible] flowers terminal. S. Native of the East Indies. C. mitis, Herb. Hey [illegible] hardly of Vahl. Leaves [illegible] *red* Carissa. Shrub or tree.

7 C. VILLÒSA (Roxb. fl. ind. 2. p. 525.) shrub downy, tender villous; leaves from broad-lanceolate to oblong, acute, soft [illegible] downy while young; flowers terminal, by threes or sevens; cells of fruit 2-seeded. ♄. S. Native of the East Indies. C. hirsúta, Heyne ex Roth. spec. 128. Branchlets dichotomous. Spines strong and very sharp, less frequently compound than in the 2 preceding species. Corolla small, white, with a curved tube and linear-lanceolate, acute segments. Berries round, the size of a pea, blackish purple. Bark of the woody part of the plant

Villous Carissa. Shrub.

8 C. SALICINA (Lam. dict. 1. p. 554.) shrub spiny; leaves lanceolate-oblong, mucronate, veiny, narrower towards the petioles; flowers in sub-corymbose fascicles. ♄. S. Native of the East Indies. Spines strong, straight, simple. Perhaps only a variety of *C. Carándas*, with narrower leaves.

Willowy-leaved Carissa. Shrub or small tree.

[illegible] (Lin. syst. 251. mant. 559.) shrub spiny; [illegible] veiny, shining; peduncles termino[illegible] [illegible] covered; segments of corolla lanceolate; cells of berry [illegible] seeded. ♄. S. Native of the East Indies [illegible] 2. Lodd. bot. cab. 162. Thunb. jap. [illegible] Branches dichotomous. Spines 2 at each ramification, [illegible] the one above the branch and the other below it, red at top and shining, as in *C. Carándas*. Leaves small. Teeth of calyx subulate. Corolla white, [illegible] segments. Berry black, size of a pea.

Spiny Carissa. [illegible] Aug. Dec. Clt. 1809. Tree.

10 C. AXILLA'RIS (Roxb. fl. ind. 2. p. 526.) shrub armed [illegible] with simple, opposite, recurved spines; leaves oblong, on short petioles; corymbs pedunculate, axillary, many-flowered. ♄. S. Native of the Moluccas. Flowers white.

Axillary-flowered Carissa. Shrub.

11 C. INA'RMIS (Vahl, symb. 3. p. 43.) shrub without spines; leaves ovate, cordate, [illegible] peduncles terminal, [illegible] tern; calycine segments [illegible] ♄. S. Native of the East Indies. Like *C. spinosa*, [illegible] differs in the leaves being 3 times the size, in the flowers [illegible] larger, and in [illegible] spines.

[illegible] Shrub.

* * * *Species natives of Africa and the islands.*

12 C. ARDUINA (Lam. dict. 1. p. 555.) shrub spiny; leaves cordate-ovate, mucronate, nearly sessile; flowers terminal, corymbose; cells of berry 1-seeded. ♄. G. Native of the Cape of Good Hope. Arduina bispinósa, Lin. mant. p. 557. Lodd. bot. cab. t. 357. Lycium cordátum, Mill. dict. no. 10. Lodd. bot. cab. t. 500. Spines twin, simple, but usually bifid; in this last case the clefts point downwards and the other upwards. [illegible] leaves dark green [illegible] of box. Flowers white, small, sweet-scented. Berry red.

Arduina's Carissa. Fl. March, Aug. Clt. 1787. 3 to 5 feet.

13 C. EDU'LIS (Vahl. symb. 1. p. 22.) shrub spiny; branches villous at top; leaves ovate, acute, veinless; almost sessile; peduncles terminal, twin, or sometimes by threes; calycine segments subulate, ciliated; segments of corolla lanceolate-linear; cells of berry 1-seeded. ♄. S. Native of Arabia Felix, and C. Abyssinia. Antúra, Forsk. descr. p. 63. Antúra Hadiensis, Gmel. syst. veg 403. Spines strong, red at top. Berries edible.

Edible-berried Carissa. Shrub.

14 C. Xylópicron (Pet. Th. "Hi. *O\H.* pi. ial. au*ir. p. **. and 80.) ihrub, apiny; Inut ovate, acuminated, ftlalit ous, 3-5-nerved; peduncles lateral, spiny, 1-2-flowered ◁; bra., ches forming a pyramidal cyme. ♄. S. Native of the I.land of Bo »»bon, ab.ut St. Denis. Branches bifurcate. Segmer; 1i of corolla 1>c11 e. Berry midd: • • . . : .tale-oblong, aurculrni, an inch lon R, attenuated at IIK-BIR-X, with a bipartite i-Lcrtita, .on- taining IX-I 5 seeds.

, _ , Xylopicron «» *BUttr~woodtd* Cariaaa. Fl. *iv\y,* Nov. I Clt. 18*0. TrrrJfOfrer

15 C. CORIA'CEA (W dl. cat. no. 1681.) «pi<y; leave. elliptic. coriac ou», *»it: revolu to edge*, obttiae, tniiernnatr, v'*'''''''. shinin 4 above. I ,fl Sativo of IIK-Mauritius I. xylópicron, Telfair, but hardly of I L Th. Uavea Cor t\ incl..•* team Cori ved Carissa. Shrub.

1« C. MADA GASCARIE'NSIS (Pet. Th. l. c. p. SO.)ahrubapinv; leaves ovate-ro UIKIKII ; flowers small; fruit round. ♄. S. jfa- tive of Madagascar. Very like *C. xylópicron,* but '•mailer lit all its p i n t; and tin fruit ro md, not obloof.

Madmgm car Carissa. Tree 4|].

17 C. ABYSSI'NICA (R. Br. in S .It. trav. ap|» nd.) this species has not yet been described. ♄. S. Native of Abyssi,ta.

Abyzinian Carissa. Shrub or *am.*

Cult. S v *StrophitMii,*,, p. »&.* for culture and projMgah on.

LXI. III M'KKIA (na< ned by Rox >,uR|, after Will,«. Hunter, M.D., of the Bengal medical establishment; an emi- nent botanist, and author of various papers in the Asiatic Re- searches, of tl e History of Pegu, &c.). Roxb. fl. ind. 2. p. 531.

7 T. atootA : branrhes tetngonal, procumbrttt. but erect ; pedicels solitary ; corolla >.tmkWd. «labro«> afterwards of inner corona clavate, outer one terete, obtuse. ½. S. Native of the Cape of Good Hope. Stapèlia rugòsa, Jacq. stap. t. 21. Willd. enum. p. 284. Corolla 3 inches broad, pale green beneath, but marked above with dark purple and blood-coloured dots. Bottom of corolla orbicular, tumid, ex Willd. Orbicle spurious, depressed, surrounded by 5 crenatures, ex Jacq. l. c.

Wrinkled-flowered Tridentea. Shrub dec.

8 T. PANICULATA (Haw.) corollas flat, transversely nittOWi

hairy; segments of exterior corona, or ligulæ, obtuse, obsolete tridentate; horns subulate, connivent: outer branches of inner corona ovate, obtuse. ♄. S. Native of the Cape of Good Hope. Stapelia pannosa, Jacq. stap. t. 61. Corolla of a livid green colour outside, glabrous, brownish purple, and hoary with violaceous papillæ inside; hairs white.

Panicled Tromotriche. Fl. June, Sept. Cb. 1805. Shrub.

Cult. For culture and propagation *see Stapelia*, p. 117.

VIII. TROMOTRICHE (τρομος, *tremos*, tremor; θριξ τριχος, *thrix, trichos*, a hair; in reference to the cilia of the corolla being tremulous.) Haw. syn. p. 36.—Stapeliæ species of authors.

Lev. xvii. *Pentandria, Digynia.* Corolla smooth, revolute, ciliated with tremulous spatulate hairs. Segments of exterior corona, or ligulæ, connate at the base, horizontal, cuneate-rhomboid and serrated; those of the inner corona unequally bifid; inner branch recurved, longer and slenderer than the other, gradually thickened to the apex, where it appears like a stigma.—Habit almost of the first section of *Stapelia*; but the branches are naked, and very glaucous, or rather pruinose, erectly decumbent; the teeth distant, thick, horizontal, or a little recurved.

1 T. NEVOSA (Haw. syn. p. 36.) branches tetragonal, glaucous, erect; corolla glabrous; but the segments are ciliated with spatulate glands, acute, and revolute; ligulæ quadrate, obcuneated and retuse at top; outer branch of inner corona tooth-formed, acute. ♄. S. Native of the Cape of Good Hope, in Karro, under bushes. *Stapelia revoluta*, Mass. stap. p. 12. t. 10. Sims, bot. mag. 774. Branches floriferous at top. Pedicels solitary. Corolla pale, violaceous, ex Willd., greenish yellow outside, and purplish inside, ex Mass; dirty dark red, with a pale circle at the base of the lobes, ex Haw. suppl. pl. succ. p. 11.

Revolute-flowered Tromotriche. Fl. Ju. Sept. Cb. 1790. Shrub 1 foot.

2 T. GLAUCA (Haw. syn. p. 37.) branches tetragonal, very glaucous; corolla glabrous; segments ovate, acute, revolute, fringed with clavate glands; ligulæ bi-tridentate at apex. ♄. S. Native of the Cape of Good Hope. *Stapelia glauca*, Jacq. stap. t. 10. Willd. enum. p. 279. Very like *T. revoluta*, in the mode of growth, colour, form, and corolla; but differs from it in the segments of the exterior corona being tridentate, ex Willd. Branches sometimes hexagonal, ex Jacq. Pedicels aggregate at the tops of the branches. Corolla livid green outside, and striated; blood-coloured inside; with a white bottom; ex Jacq. Lobes of outer corona obtuse, and a little emarginate at the apex; therefore the plants of Jacquin and Haworth are probably distinct.

Glaucous Tromotriche. Fl. Jun-Nov. Cb. 1793. Sh. 1 to 2 feet.

3 T. PATENS (Haw. syn. p. 37.) branches bluntly tetragonal, erect, with recurved teeth; corolla with flat, ovate, pilose, or downy segments, the down appearing like powder; ligulæ serrated at top. ♄. S. Native of the Cape of Good Hope in the dry regions of Namaqua Land, among heaths. *Stapelia patens*, Mass. stap. p. 24. t. 41. Corolla blackish, lower path white with spreading hairs, ex Willd. *Stapelia papillosa*. Flowers small, solitary, twin, or tern, towards the tops of the branches, purplish, ex Mass. Perhaps a species of *Piaranthus*.

Prostrate-flowered Tromotriche. Fl. Ju. July. Cb. 1795. Shrub 1½ foot.

4 T. CILIATA; branches tetragonal, glaucous? corolla glabrous; segments ovate-acuminated, bent, obliquely ciliated with clavate white or purple glands; ligulæ bidentate, acute. ♄. S. Native of the Cape of Good Hope. *Stapelia obliqua* Willd. enum. suppl. p. 18. Corolla dirty yellow, marked with confluent, violaceous spots. Exterior corona greenish yellow, dotted at top, and furnished with a mark at the base.

Oblique-flowered Tromotriche. Fl. Ju. Sept. Cb. 1803. Shrub 1½ foot.

5 T. FUSCATA (Haw. suppl. pl. succ. p. 10.) branches tetragonal, erectish, glaucous-green; corolla glabrous; leaflets of outer corona 2-3-toothed; shorter branches of inner corona obtuse. ♄. S. Native of the Cape of Good Hope. T. glauca, *β* Haw. syn. p. 37. *Stapelia fuscata*, Jacq. stap. t. 55. Flowers brownish purple. Corolla pale at bottom, striated transversely with red; ciliated at top with clavate, white-coloured glands. Ligulæ dark brown.

Brownish-flowered Tromotriche. Fl. Ju. Nov. Cb. 1818. Shrub ½ to 1 foot.

Cult. For culture and propagation see *Stapelia*, p. 117.

IX. ORBEA (from orbis, an orb; the orb in the centre of the flower is very large and elevated.) Haw. syn. p. 38.—Stapeliæ species of authors.

Lev. xvii. *Pentandria, Digynia.* Corolla 5-cleft, starry, the whole of the inside corrugated, furnished with a large, elevated orb in the centre. Segments of outer corona, or ligulæ, long, spreading, bi or tridentate at the apex; those of the inner corona unequally bifid; the inner branch recurved, longer than the outer one, style-formed, clavate, and stigma-formed at the apex.—Habit of the species of *Podanthes*; but the branches are more robust, and less ribbed; and, when old, become decumbent and creeping: the teeth straighter, and horizontal, not ascending.

1 O. MACULATA (Haw. syn. 37.) corolla smooth, ciliated; ligulæ tridentate; orb convex, downy, ex Haw. ♄. S. Native of the Cape of Good Hope. Stapelia maculata, Jacq. stap. t. 31. Willd. enum. p. 283. Sims, bot. mag. 1855. Stap. nigra, Donn. hort. cant. Segments of corolla ovate, acute, dirty yellow, red at the apex and edges, almost covered by confluent, rubbed, large spots. Orb waved, elevated, but small for the size of the flower. Ligulæ 3-toothed at top, brownish grey, pale at top, and marked by a large, distinct, brown spot, ex Haw.

Spotted-flowered Orbea. Fl. Ju. Sept. Cb. 1804. Shrub 1 foot.

2 O. SENTA (Haw. syn. p. 38.) corolla glabrous, with ovate, acuminated, wrinkled segments, an elevated, papillose orb, and bifid ligulæ. ♄. S. Native of the Cape of Good Hope. Stapelia senta, Mass. stap. p. 23. t. 38. Flowers drooping, of an obscure violaceous colour, wrinkled with transverse yellow stripes, and a yellow orb, beset with brown papillæ. Very nearly allied to *O. variegata*; but differs in the form of the teeth of the branches, and in the flowers being twice the size, in the acuminated segments, in the elevated, papillose orb, &c.

Mixed Orbea. Fl. Ju. Sept. Cb. 1806. Shrub 1 foot.

3 O. VARIEGATA (Haw. syn. p. 38.) corolla glabrous, 5-nerved on both sides; segments roundish elliptic; ligulæ tridentate, middle tooth small; branches spotted with brown. ♄. S. Native of the Cape of Good Hope. *Stapelia variegata*, Linn. et Schultes, syst. v. p. 37. Larger than *O. variegata*. Corolline segments sulphur-coloured, less spotted than in *O. lutea*; but having brown spots on both surfaces in certain places; and the fimbriæ and exterior corona, are more deeply cleft than in *O. lutea*. Ligulæ yellow, having a blood-coloured spot at the base, but with the rest brownish dots at the apex.

Five-nerved-flowered Orbea. Fl. Ju. Sept. Cb. 1806. Shrub 1 foot.

4 O. LUTEA (Haw. syn. p. 39.) corolla glabrous; orb large; ligulæ emarginate; branches thick, green. ♄. S. Native of

the Cape of Good Hope. Supelia Irinilc*. Jaoq. »up t. 61. Corolla c irty yellow, covered t with <Urk rufooa dota; orb pUr~colotircU ; ligubr yellow ; with • Urftr tU-cp brown mark M the lute, an<l dotted tt tbe ape*.

6 T. CARNÒSA (Wall. Met no. 1 9. Wight, cat. no. 1537. contrib. ind. bot. p. 49.) twining, glabrous; stems and branches slender; leaves fleshy, ovate, or subcordate, mucronate, shining, pale beneath; peduncles flexuous, bearing at the flexures many filifor of corona fleshy, nearly orbic... ces ascending; stigma convex; follicles glabrous, usually solitary by abortion. ◠. S. Native of the Burmese empire, at Amherst; and of Ceylon, at Colombo; and of ibc |rt ovince of Tanjore, in sandy places. Leaves 1-2 inches long, and 6-9 lines broad. Flowers purple inside.

Fleshy Tylophora. Shrub tw.

7 T. TENUÍSSIMA (Wight and Arnott, contrib. ind. bot. p. 49.) twini glabrous; branches slender; leaves oblong-lanceolate, somewhat cordate at the base, cuspidate, veinless, with subrevolute edges; peduncles flexuous, bearing many filiform pedicels a flowers small; leaflets of corona ovate-oblong; pollen masses ascending; stigma convex; follicles diverging, glabrou . . 8. Native of the peninsula of India, Wight; Bengal, xb. Wight, cat. no. 1538. Asclépias tenuíssima, Roxb. d. 2. p. 41. mus. ind. or. t. 1383. Leaves 2-3 inches broad. There is a variety of this, having the leaves twice the length and much narrower in proportion.

Very slender Tylophora. Shrub tw.

8 T. PAUCIFLÒRA (Wight and Arnott, l. c.) twining, glabrous; branches slender; leaves on longish petioles, broadly ovate, from the base, or somewhat cordate, gradually attenuated to the apex, rather waved on the edges; peduncles shorter than the leaves, flexuous, bearing filiform, twin, or tern pedicels at the flexures; flowers small; segments of calyx and corolla obtuse; leaflets of corona broad-elliptic, obtuse; pollen masses ascending; stig glabr ;ma ron»r\ ; f.i'.l , > tirou*. *h* . '. .* \ative of the East Indies, at Courtallum, Wight; northern provinces of Bengal, Royle; Wight, cat. no. 1539. This species is easily distinguished from the rest by the almost triangular form of the leaves.

Few-flowered Tylophora. Shr tb ti*.

• r. man • a (Wight, contrib. ind. bot. p. 49.) twining, sh broad-ovate, acuminated; peduncles about equal in length to the leaves, flexuous, bearing sessile umbels at the flexures; pedicels filiform; flowers small; segments of corolla ovate, obtuse, undulated; leaflets of corona ovate, somewhat acuminated, obtuse; pollen masses transverse; stigma obtuse; follicles slender. ½. ◠. S. Native of Nipaul, at Chandaghiry '• »«xl Sank,*. Gymnèma hirsùtum, Wall. tent. fl. nep. p. 50. ascl. no. 46. Leaves 3-5 inches long, and I *t'3* broad.

Hairy Tylophora. Shrub tw.

10 T. ITALÍSSIMA (Wall. ascl. no. 47. Wight, cat. no. 1540. contrib. ind. bot. p. 49.) twi ves oval, or cordate-ovate, acuminated, mucronate; peduncles twice or thrice longer than the leaves, flexuous, bearing sessile umbels at the flexures; pedicels filiform; flowers small; segments of coroll ovate, obtuse, undulated; leaflets of corona truncate at apex or roundish; pollen masses transverse; stigma obtuse; follicles downy. ½. ◠. S. Native of the East Indies, on the Neelgherry mountains, and on those of Dindygul. Perhaps this is too nearly allied to the preceding differ ntly in the size of the leaves. Leaves 1-2 inches long, and

Very soft Tylophora. Shrub tw.

11 T. MOLLISSÍMA (Hamilt. herb. no. 739. Wall. ascl. no. 120. ex Wight and Arnott, contrib. ind. bot. p. 50.) twining, downy; leaves round or roundish-ovate; peduncles shorter th

fa * rMM <(OMI,\ • 1* U bw ^, frtwn »li fnnr,,,T " .>'»'fH I (,,,..,1 •1i

tt e leaves; pedicels long, filiform, u«u«l! disposed in 2 fascicles near the top of the peduncle; flowers rather large, glabrous; leaflets of corona fleshy, short, adnate to the middle of the gynostegium; pollen masses transverse; stigma obtuse. ½. ◠. S. Native of the East Indies, in elevated fields, east of Camroo and at Dongtala, and Hebora. Leaves about 2 inches broad.

Round-leaved Tylophora. Shrub tw.

12 T. FASCICULÀTA (Hamilt. herb. no. 738. Wall. ascl. no. 55. Wight and Arnott, l. c.) erect or twin rut • little; leaves approximate, ovate, bluntish, rather fleshy, decreasing towards the tops of the branches; peduncles erect, flexuous, bearing 2-3 few-flowered fascicles at the flexures; leaflets of corona oblong-ovate, bluntish; pollen masses transverse; stig apiculated. ½. ◠. S. Native of the East Indies. The corpuscles of the stigma in this species alone are herbaceous, and slightly united, but loose and divaricate at both ends. Leaves 1-2 inches long and 1 broad.

Var. α, parviflòra (Wight and Arnott, l. c.) twining a little at top; flowers minute. ½. ◠. S. Native of the woods of Mithila, at Sukanagur. T. fasciculàta. Herb. Ham no. 738 Wall no. 55.

Var. β, macrántha (Wight and Arnott, l. c.) root fascicled; stems woody, erect; fascicles approximate; flowers rather large; segments of corolla ligulate. ½. S. Native at Neelgherry.—Wight, cat. no. 1541. Wall. ascl. no. 51. without a name.

Fascicled-flowered Tylophora. Shrub tw. or erect.

13 T. LONGIFÒLIA (Wight, contrib. ind. bot. p. 50.) twining, glabrous; leaves oblong-lanceolate, acute, rather cor ate at the base; panicles shorter than the leaves, many-flowered, composed of flexuous branches, bearing a small umbel of flowers at each flexure; segments of corolla obtuse; leaflets of corona almost one half shorter than the gynostegium, broadly elliptic, obtuse; pollen masses transverse; stigma convex. ½. ◠. S. Native of Silhet.—Wall. ascl. no. 48. without a name. Leaves 6-8 inches long, and 1½ broad.

Long-leaved Tylophora. Shrub tw.

lt T. EXILIS (Colebr. in Lin. trans. 12. p. 358. ' lt. Wight and Arnott, contrib. ind. bot. p. 50.) twining, glabrous; leaves ovate-lanceolate, acuminated; panicles rather large, twice or thrice longer than the leaves; having the branches flexuous, bearing umbellate pedicels at the flexures; segments of corolla acutish; leaflets of corona broad-elliptic, very obtuse, shorter than the gynostegium; pollen masses transverse; stigma apiculated. ½. ◠. S. Native of Silhet. Pergulària exilis, Spreng. syst. 1. p. 844.—Wall. ascl. no. 51. unnamed. Leaves 2-3 inches long and I bnMd. Very nearly allied to the preceding species.

Thin Tylophora. Fl. June, July. Cl. 1823. Shrub tw.

15 T. HICRA'NTHA (Nouv. ann. mus. 3. p. 377.) glabrous; leaves narrow or ovate-lanceolate, acute, rounded at the base, petiolate; cymes shorter than the leaves; calycine segments led, with membranous edges, shorter than the corolla; segments of corolla longish, obtuse; follicles acuminated, glaucous. ½. ◠. S. Native of the island of Timor.

Small-flowered Tylophora. Shrub tw.

16 T. VILLÒSA (Blum. bijdr. p. 1061.) corollas bearded; umbels usually twin; leaves elliptic-oblong, acute, a little cordate at the base, hairy on both surfaces; branches sarmentose, villous. ½. ◠. S. Native of the west side of Java, on the mountains, where it is called *Areg Katak*.

Villous Tylophora. Fl. year. Pl. tw.

17 T. CRISPÍNEA (Blum. bijdr. p. 1061.) corollas glabrous; corymbs trichotomous; pedicels subumbellate; leaves ovate-oblong, acuminated, rather cordate at the base, smooth. l ½. ◠. S. Native of Java, at the foot of Mount Salak.

CutMt-Ukt Tylophor*. Fl. year. PI. tw.

18 1 11 (Blum, bijdr. p. 10M.) coroUaa glabroui; panklet axillary; pedterU tubumbellatc; leave* lanceoUu, acuminated, «imeiimf» cordate at ihe baae, 3-nerved, glaafOwa ; follicle* very acute, fe. *\ 8 Native on the wni coaat of Java, at the bottom of nvuwuin*.

XXXI. PERGULARIA (*from pergula*, an arbour, in reference to the plants, fit for covering arbours). R. Br. in mem. wer... p. 51. Blum. bijdr. p. 1053. Pergulária species, Lin.

LIN. SYST. *Pentándria, Monogynia*. Corolla salver-shaped, with *n ltrcr* olace tube. Staminiferous corona 5-leaved; leaflets compressed, undivided at top, and furnished each with a little segment inside. Anthers terminated by a membrane; pollen masses erect, fixed by the base. Stigma mutic. Follicles ventricose, smooth. Seeds comose.—Twining plants, with membranous leaves; interpetiolar cymes, of yellowish, sweet-scented flowers, for which they are cultivated in China and the East Indies. Throat of corolla usually hairy.

i r ODORATISSIMA (Roxb. and Smith, icon. pict. p. 16.) leaves cordate, acuminated, soft, downy; umbels shorter than the leaves; calycine segments shorter than the tube of the corolla; segments of corolla short, obtuse. ♄. ◠. S. Native of China, Cochinchina, and Sumatra, where it is called *West coast creeper* by the English. Andr. bot. rep. t. 185. Pergulária minor, Sims, bot. mag. 755. Perg. tomentósa, Lin. mant. 53. Cynánchum odoratíssimum, Lour. coch. p. 164. Flos Sámicus, Rumph. amb. 6. p. 58. t. 26. f. 1. The Malay name of the shrub is *Tankí* or *Tonkin*. Bark corky; young branches downy. Leaves rather downy while young, 4 inches long and 3 broad. Flowers middle-sized, greenish yellow, exceedingly fragrant. Seeds surrounded by a membranous rind, and ending in a long tuft of hairs.

Sweet-scented Pergularia. Fl. Ju. Jul. Clt. 1784. Sh. tw.

2 P. ACUMINATA (Blum. bijdr. p. 1056.) leaves ovate, or oval-

oblong, acuminated, rounded at the base: having the margins and veins downy; cymes pedunculate, twin; calycine segments obtuse, shorter than the tube of the corolla. ♄. ◠. S. Native of Java, Sumatra, Madura, &c., by the sea side. It differs from *P. odoratissima* in the leaves never being cordate.

Approaching Pergularia. Fl. year. Shrub tw.

3 P. minor (Andr. bot. rep. 184.) leaves cordate, obtuse; with an acumen, downy while young; umbels shorter than the leaves; calycine segments about equal in length to the tube of the corolla ◠. S. Native of the East Indies. Curt. bot. mag. 755. f Tratt. tab. 718. P. odoratissima, var. Smith, icon. pict. 3. p. 10. I his is probably only a small variety of the first species, the leaves are rounder, with a more slender recurved acumen; and the corollas orange-coloured or yellow, but also very fragrant; M d the segments of the corolla are blunter and shorter. I eaves 1½ inch broad. Mid the H M m length.

Smaller Pergularia. Fl. May, Aug. Clt. 1790. Shrub tw.

» P. parvifl'ora (Blum. bijdr. p. 1056.) leaves subcordate- acute, downy on the margins and veins beneath; umbels pedunculate; calycine segments obtuse, shorter than the tube of the corolla. ◠. S. Native of Java, about Surabaya, in calcareous soil.

Small-flowered Pergularia. Fl. May, July. Shrub tw.

5 P. villo'sa (Blum. bijdr. p. 1057.) leaves subcordate-oval, acute, very soft beneath; umbellules simple; segments of calyx shorter than the tube of the corolla. ♄. ◠. S. Native of Java, on mount Parang, in the province of Tjanjor.

Villous Pergularia. Fl. July. Shrub tw.

6 P. pallida; branches downy; leaves oblong-cordate, acuminated, downy; umbels simple or compound, on short peduncles, many-flowered; corona length of tube, but the calycine segments are shorter; segments of corolla narrow, with revolute edges; tube glabrous inside. ♄. ◠. S. Native of the East Indies, at Gongachora and Munghir; and Penang. Asclèpias (Mil: da, Roxb. fl. ind. 2. p. 48. P. limbàta, Wall. ascl. no. 6i. r viridis, herb. young shoots beset with small recurved hairs. Leaves 4 inches long, and 1-2 broad. Petioles, pedicels, and peduncles villous. The flowers are pale yellow, and not fragrant, or in a very slight degree. The length and narrowness of the segments of the corolla, and want of fragrance, seem to be the most obvious marks by which this can be distinguished from *P. odoratissima*.

Pale-yellow-flowered Pergularia. Shrub tw.

7 P. sanguinola'ta (Lindl. in bort. trans. 6. p. 72. Sims, bot. mag. 2532.) leaves ovate-lanceolate, quite glabrous; cymes many-flowered, shorter than the leaves; segments of corolla acuminated, obtuse. ♄. ◠. S. Native of Sierra Leone. Plant trailing, full of blood-coloured juice. Corollas greenish yellow.

Bloody-juiced Pergularia. Fl. Jul. Aug. Clt. 1822. Sh. tw.

8 P. purpu'rea (Vahl. symb. 3. p. 44. Willd. spec. 1. p. 1248.) leaves cordate, acuminated, glabrous; umbels proliferous, shorter than the leaves; corolla with a villous throat, and narrow segments. ♄. ◠. S. Native of the East Indies and China. Asclèpias cordàta, Burm. ind. p. 72. t. 27. f. 2. Branches rather villous. Pedicels and calyx downy. Flowers purple?

Purple-flowered Pergularia. Shrub tw.

9 P.? Japo'nica (Thunb. b. i.t> 111 • Willil. I e.) leaves cordate, glabrous; umbels simple; calycine segments shorter than the tube of the corolla; segments of corolla obtuse, spreadingly reflexed. ♄. ◠. S. Native of Japan. ii. SIMM |Ul> rous. Leaflets of corona 5, subulate, erect, compressed, each furnished with a tooth outside. Stigma ending in a long thread. Perhaps a distinct genus, from the stigma terminating in a thread.

Ja Pergularia. Shrub tw.

10 P.? indi'ca (Thunb. pr M). p, JP. II. cap. 2. p. 151. act. nov. petrop. t. 14.) stem herbaceous, filiform, twining; leaves ovate, acuminated, glabrous; pedicels capillary, aggregate; root large, succulent, size of a human head. ♄. ♃. ◠. S. Native of the Cape of Good Hope, in Karroo. Plant glabrous, with alternate branches. Leaves green above and pale beneath. Corolla an inch long. The root is eaten by the Hottentots. Perhaps a species of *Ceropégia*.

Edible-rooted Pergularia. Pl. tw.

N. B. What is *Pergulària lùcida* •ml *P.* **£*> *tifblia*, Fisch. hort. gorenki?

Cult. The greater number of the species of this genus are much valued for the fragrance of their flowers, and are wrll jilaj.t. .1 ; •• . i|(up rilWi of trrlln work, in •tovn of ion- servatories. They grow well in a mixture of loam, peat, and •t»d ; •*»>' cuttings strike roqt rr«.ii'\ in l.. at, under a hand-glass.

XXXII. DISCHI'DIA (from δις, *dis*, twice, and σχιζω, *schizo*, to cut: in reference to the bifid leaflets of the corona). R. Br. in wern. soc. mem. 1. p. 32. prod. 461. Blum. bijdr. p. 1059.

Lin. syst. *Pentándria*, *Digynia*. Corolla urceolate, 5-cleft. Staminiferous corona 5-leaved; leaflets bifid: segments subulate, spreading, recurved at apex. Anthers terminated by a membrane; pollen masses erect, fixed by the base. Stigma mutic. Follicles smooth. Seeds comose.—Herbs hanging, perennial, lactescent, besprinkled with white mealiness. Natives of the East Indies, especially of the Moluccas; and of New Holland, parasitical on trees. Stems rooting at the joints. Leaves opposite, roundish, thick, fleshy. Flowers small, subumbellate, usually white.

] D. Bengale'nsis (Colebr. in Lin. trans. 12. p. 337. t. 15. Hook. bot. mag. 2916.) plant yellowish green, glabrous, fleshy; leaves oblong-lanceolate, 2-edged, flat; umbels few-flowered, from alternate axils, on short peduncles; corollas small, urceolate. ♄. S. Native of Silhet, on trees. D. lanceolàta Wall. ascl. no. K. 1 Of.

Bengal Dischidia. 1 Fl. Sept. Clt. 1818. Pl. creep.

2 D. cuneifo'lia (Wall. l. c.) leaves cuneated, subretuscly cull-i date, mu as well as the branches, scurfy. ♄. S. Native of the Burmese empire, on the banks of the river cb •tMUMtail M dM liic »Ml air •• •• V11 u n on trees. Nearly allied to *D. Bengalénsis*.

Cuneate-leaved Dischidia. Shrub creep.

3 D. Rafflesia'na (Wall. pl. rar. asiat. 2. p. 35. t. 184.) leaves roundish-ovate; ascidia or reservoirs crowded, pendulous, petiolate, oblong-ovate, angular, obtuse, large; lobes of corona oblong, obtuse, incurved; follicles smooth. ♄. S. Native of Singapore; also of Malacca and Salangohr, upon trees. A fleshy, pale green, glaucous plant. Umbels axillary. Corollas pale yellow.

Raffles's Dischidia. Shrub creep.

4 D. clava'ta (Wall. l. c. p. 36.) leaves roundish-ovate; ascidia or reservoirs crowded, pendulous, almost sessile, cylindrically clavate, arched, marginate, bluntly cuspidate; lobes of MaoHMPOTM corona oblong, obtuse, incurved; follicles downy. ♄. S. Native of the Burmese empire, on the banks of the river Aitram, in Martaban, near Assamee, on trees. Habit AIM! MM4V 4 of growth that of *D. Rafflesiana*, but the reservoirs are of a different form.

Clavate Dischidia. Shrub creep.

5 D. rumula'ria (R. Br. prod. p. 461. Blum. bijdr. 1059.) fleshy; stem roughish; leaves roundish-ovate, mucronulate, convex on both surfaces, scaly beneath; umbellules on short peduncles; segments of corona subulate. ♄. S. Native of the East Indies, Java, and the Moluccas; also of New Holland, at Endeavour River, creeping upon trees. Col-

Elegant Gymnema. Shrub tw.

10 G. TINOSPORA (Spreng. syst. I. p. 144.) twining, glabrous; leaves cordate, acuminated to oval; umbels or corymbs often twin, at first shorter than the petioles, and at length spirally elongated; glands of filaments one half shorter than the stamens; follicles cylindrical, spoon-shaped; stigma simple, oval, mutic, crowning the tube of the corolla, and therefore exceeding the stamens. ♄. ◠. S. Native of Pegu. Wight, and Arnott, contrib. ind. bat. p. 8. Asclépias tingens, Ham. ex Roxb. fl. ind. 2. p. 53. cor. 3. p. 34. t. 239. Asclépias montàna, Roxb. fl. ind. 2. p. 45. mus. ind. or. t. 618. Periploca montàna, Roth. in herb. Wight. Solenostèma Bidària, Ham. herb. Tylóphora Ariádnes, Ham. herb. Leaves 3-6 inches long, and 2-4 broad. Umbels compound at length. Flowers largish, numerous, pale yellow. Calyx 5-cleft to the base. Corolla having the tube as long as the column of fructification, furnished inside the rim with 5 double pilose ridges, which are ciliated with brown hairs. Cordate divisions of the corona covering the stamens. Style simple. Follicles ovate-lanceolate, smooth and fleshy, 4 inches long, and one in diameter.

Dr. Hamilton, late Buchanan, informed Dr. Roxburgh, that from the leaves of this plant the Burmese prepare a green dye.

Staining Gymnema. Shrub tw. Fl. July. Ht 12 ft.

§ 3. *Corolla without any pilose lines inside. Filaments usually furnished with a fleshy appendage.—The plants referred to this section ought to form distinct genera; they differ widely from the rest of the genus, in being compressed and spatulate; the pollen masses differ also from the retinacula are thickened, and sometimes very long.*

11 G. VIRIDULUM (Wall. tent. fl. nep. p. 50. t. 38.) leaves oval or ovate-oblong, acuminated, glabrous, glaucous beneath, and minutely reticulated with fuscous veins; common peduncles sometimes shorter and sometimes longer than the leaves; umbels compound, many-flowered; flowers subcapitate, on short pedicels. ♄. ◠. G. Native of Nipaul. G. columnàre, Wall. cat. no. 73. a. A large, much-branched shrub. Corollas yellow, urceolate, valvate in æstivation.

Nipaul Gymnema. Shrub tw.

12 G. COLUMNÀRE (Wall. ascl. no. 73. b. Wight and Arnott, contrib. ind. bot. p. 40.) leaves subcordate at the base, linear-oblong, acuminated, glabrous, pale glaucous beneath, and reticulated with fuscous veins; umbels compound, about equal in length to the leaves, many-flowered; flowers almost sessile. ♄. ◠. S. Native of Nipaul? Very like *G. Nipalénse*, and differs chiefly in the figure of the leaves.

Columnar Gymnema. Shrub tw.

13 G. SAGITTÀTUM (Wall. tent. fl. nep. p. 50. ascl. no. lit. and no. 83.?) leaves oval or oblong-ovate, attenuated to the apex, glabrous, whitish glaucous beneath, with the veins of the same colour; peduncles slender, about equal to the leaves; cymes compound, loose, with filiform branches; pedicels distant along an elevated spiral line; flowers small, usually caducous; follicles slender, glabrous. ♄. ◠. S. Native of Silhet. Anthers subsagittate. Cymes puberulous. Corolla subcampanulate, Wall. l. c.

Sagittate-anthered Gymnema. Shrub tw.

14 G. WALLICHII (Wight, contrib. ind. bot. p. 46.) oval, short-acuminated, glabrous, paler beneath, with the veins of the same colour; cymes raceme-formed; pedicels disposed along an elevated spiral line; corolla ventricose, pilose inside; gynostegium furnished with 5 fleshy leaflets at the base. ♄. ◠. S. Native of Singapore. Wall. ascl. no. 135. named. The large fleshy glands or leaflets at the base of the gynostegium or column of fructification, render this a very doubtful species of *Gymnema*, but the three preceding species have them also, but not so conspicuous.

Wallich's Gymnema. Shrub tw.

15 G. FINLAYSONIÀNUM (Wight, l. c.) twining, glabrous; leaves cordate, ovate, acuminated, glaucous beneath and reticulated with brown veins; umbels dense, many-flowered, longer than the petioles; corolla subcampanulate, glabrous; gynostegium short, naked at the base; retinacula elevated and spirally twisted in the middle. ♄. ◠. East Indies.

Finlayson's Gymnema. Shrub tw.

16 G. TRINERVE (R. Br. prod. p. 462.) stem erect; leaves oblong-lanceolate, 3-nerved, downy; umbels sessile; corymbs naked. ♄. S. Native of New Holland, within the tropic, on the sea shore. Perhaps the gynostegium is naked at the base.

Three-nerved-leaved Gymnema. Shrub.

17 G. ATTENUÀTUM (Wall. tent. fl. nep. p. 50.) twining, smooth; leaves lanceolate, very much attenuated; corymbs slender, flexuous, rather longer than the leaves; corolla somewhat rotate, with a naked throat; pollen masses divaricate, almost horizontal, ovate; corpuscles bidentate at the apex. ♄. ◠. S. Native of Silhet. Perhaps a species of *Tylóphora*.

Attenuated-leaved Gymnema. Shrub tw.

Cult. For culture and propagation see *Pergulària*, p. 135.

XXXVIII. SARCOLOBUS (from σὰρξ, *sarx*, flesh, and λοβὸς, *lobos*, a pod; the follicles are fleshy.) R. Br. in mem. wern. soc. 1. p. 34.

LIN. SYST. *Pentándria, Digýnia.* Corolla rotate, 5-parted; throat naked. Staminiferous corona wanting. Anthers terminated by a membrane; pollen masses erect, fixed by the Stigma mutic. Follicles ventricose, fleshy or coriaceous, sometimes solitary by abortion. Seeds marginate, scabrous.—Twining, glabrous shrubs. Leaves opposite, broadish, firm. Umbels or corymbs interpetiolar, many-flowered. Follicles solitary by abortion.

1 S. BATAVUM (Roem. et Schultes, syst. 6. p. 58. ex R. Br. l. c.) glabrous; leaves broadish; umbels many-flowered; corolla rotate, with a naked throat; follicles fleshy. ♄. ◠. S. Native of Java, near Batavia; and of Princes Island, where it was collected by Sir Joseph Banks. Follicles ventricose.

Banks's Sarcolobus. Shrub tw.

2 S. GLOBOSUS (Wall. asiat. res. 12. p. 377. t. 4.) leaves ovate-oblong; cymes bifid; corolla rotate, with a very short tube, villous inside; follicles large, fleshy, globose, blunt or retuse at both ends, muricated. ♄. ◠. S. Native of the south of Bengal, in sandy places, on the shores of the Hoogly; Rangoon; and on the banks of the river Salwen.

Globose-fruited Sarcolobus. Shrub tw.

3 S. CARINÀTUS (Wall. l. c. p. 378. t. 5.) leaves ovate-oblong, rather fleshy; peduncles few-flowered; corolla with a very short tube, glabrous inside; follicles oblong, smooth, keeled below. ♄. ◠. S. Native along with the preceding species.

Keeled-fruited Sarcolobus. Shrub tw.

Cult. For culture and propagation see *Pergulària*, p. 135.

Tribe III.

GONOLOBEÆ. Pollen masses 10, fixed by pairs to the retinacula of the stigma, transverse (f. 17. g. h.) adhering by the outer extremity (f. 17. h.), dehiscing transversely in respect to the cells, hidden by the stigmas. Staminiferous corona undivided (f. 17. d.), lobed. Anthers terminated by a membrane.

XXXIX. GONOLOBUS (from γωνὶα, *gonia*, an angle, and λοβὸς, *lobos*, a pod; in reference to the ribbed fruit.) Rich.? in Michx. fl. bor. amer. 1. p. 119. R. Br. in wern. soc. trans. 1. p. 33.—Cynanchum species of Lin. and Jacq.

LIN. SYST. *Pentándria, Digýnia.* Corolla sub-rotate, 5-parted (f. 17. a.). Staminiferous corona saucer-shaped (f. 17. d.),

lobed. \nthers dehiscing transversely, te mitnatrd by a mna- brane; pollen masses fixed by the outer extremities, in respect to the cells (f. 17. A.), covered by the stigma. Stigma flattish-depressed, 5 ed (f. 17. e.). Follicles ventri ieoa*. a !<•' le ribbed. Seeds comose.—Twining, suffruticose plants, natives of America, ptnioak ely within the tropics. i Leaves opposite, broadish. U mln 1- interpetiolar, pedunculate.

1 G. MARITIMUS (R. Br. l. c.) leaves cordilf, hairy, tomentose beneath; umbels sessile; calycine segments lanceolate, acute; segments of corolla ovate, acute, hairy inside; tube very short. ♄. ◠. S. Native of Tierra Bomba. Lindl. bot. reg. 931. Cynánchum nu' timum, i n. mant. 14. Ja< amer. p. 85. t. 56. pict. t. 82. [1] nilla dark purplr, rt I.ui. Ktrm h. Corolla greenish, ex bot. reg.

Sea-side Gonolobus. Fl. lunr, Ju' y. Clt. 1826. Shrul '.*. 2 G. SUBERÒSUS (R. 19 C. WALLICHII (Wight, l. c.) twining, glabrous; leaves ovate-oblong-ovate, acuminated, cordate at the base, auricled; auricles a little incurved; corymbs shorter than the leaves, many-flowered; pedicels equal in length to the peduncles, or exceeding them; corona equal to the corolla, somewhat [illegible] site, longer, and bifid; [illegible] their apexes; stigma [illegible] mutic. ♄. ◠. S. Native of the East Indies, at Jeutaga and Chuna-Poonjee. Very closely allied to *C. paniflorum*.

Wallich's Cynanchum. Shrub t[illegible]

20 C. CALLIALA'TUM (Hamilt. h[illegible]ght, and rtb.no. 767. « Aroott, coot' # bur. wilti a tyiTuH WIKi r ilijn tin IM-u-ilr* . I" '. • •c anthrr>, bilwl *l \ . ive on the banks of the Ganges, and at Columala. Wall. ascl. no. 83. C. auriculàtum, Hamilt. herb. no. 768. Wall. ascl. no. 85. P ri|>Uxa luiM- cata, Herb. madr. Wall. ascl. no. 75. b. c. JII. lium. Stir ' • tijj.

Beautiful-winged-podded Cy[illegible] twining, smoothish; leaves of the older b randIM COTT ately auricled at the base: of the young floriferous branches, oval, cuspidate, cordate at the base, or emarginate, glaucous beneath; umbels about equal in length to the petioles; pedicels longer than the peduncles; corona shorter than the corolla, with a crenately 10-lobed, truncate border; the alternate lobes rather the smallest; stigma apiculated, bifid; follicles flattish on one side, with the angles marginately winged. ♄. ◠. S. Native of Coromandel. Wight, cat. no. 1552. Asclepias truncata, Roxb. in herb. Banks. The winged follicles, and truncate corona, will readily distinguish it from all other species of this section.

Winged-follicled Cynanchum. Shrub twining.

22 C. OVALIFÒLIUM (Wight, l. c.) twining, glabrous; leaves oblong-oval, acuminated; cymes many-flowered; peduncles longer than the petioles; corona about equal in length to the corolla, 10-cleft; stigma apiculated, somewhat emarginate. ♄. ◠. S. Native of Penang. Cynanchum, Wall. ascl. no. 82. The oval leaves, •md c ymose inflorescl liei, r< adily distinguish this species.

Oval-le rrrf Cynanrhitm.

t.1 l i, UM! ANGUSTIFÒLIUM (Wi Arnott, l. c.) [illegible] i ir f l M ; leaves linear-lanceolate, cuspidate, more or less cordate at the base; umbels short, many-flowered; corona 10-lobed, the lobes opposite the anthers, broadly linear-oval, about equal in length to the corolla; the alternate ones very short, and inconspicuous, all truncate and emarginate; stigma apiculated, somewhat emarginate. ♄. ◠. S. Native of Coromandel. Wight, cat. no. 1553. [illegible] es 3-5 inches long, and 4-6 lines broad.

Narrow-leaved Cynanchum. Shrub twining.

. Gynostegium or column of fructification stipitate. Vf* *Corona tubular, inserted at the base of the stipe of the gynostegium, 5-cleft, without any segments or inner carinæ inside. To this section, remarkable for the elongation of the torus or stipe of the gynostegium, belong [illegible] from the Cape of Good Hope.*

in succession doing the same. Pedicels many, 1-flowered from the above-mentioned tuberosity, sufficiently long to raise the flowers above the water, afterwards they drop into the water, and there ripen their seeds. Flowers pure white, about an inch in diameter. Corona triple: the exterior one consisting of white ramose filaments, crowning the mouth of the tube, as in *Nerium*; the middle one of 5 beautiful yellow glandular bodies, which nearly fill the mouth of the tube, standing alternately with the filaments; and the interior one of 5 hairy yellow bodies, surrounding the base of the ovarium. Seeds compressed, scabrous.

Crested-flowered Buckbean. Pl. floating.

Cult. The species are all elegant aquatic plants. The first species is of the most easy culture, requiring only to be planted or thrown into a pond, where it will grow freely; the second, being only • bof pWI. Mi l require to be grown in a pot filled with peat earth, and the pot placed in a deep pan of water: it will require protection from severe frost in winter, by placing it in a g 'i'"l>"ii»r ttr ftan^ but should it become plentiful, it may be planted in a natural or artificial bog in the open air, where it will probably endure our winters. The third species, W 111)1 «w?«rf a Wftrm mMMfj a cistern or Ittb of ««ir_f ... . .tove.

II. VILLARSIA (named in honour of D. Villars, a celebrated French botanist; author of Histoire des Plantes du Dauphiné, 3 vols. 8vo. Grenoble, 1786-1788 &c.) Vent. chois. no. 9. p. 2. R. Br. prod. p. 436. R. Br. et Kunth, nov. gen. amer. 3. p. 187. Waldschmidia Wigg. Nymphoides, Tourn. hist. t. 67. Menyánthes species, Lin. and others. Lam. ill. t. 100. f. 2.

Linn. syst. ... ia, *Monogynia*. Calyx 5-parted. Corolla subrotate, with a spreading limb; segments with a flat disk, bearded or squamulose at the base, with ascending margins. Stigma 2-lobed; lobes toothed. Nectariferous glands 5. Capsule 1-celled, 2-valved, or valveless. Seeds girded by a membranous margin, or naked, fixed to the edges of the valves in a double row.—Floating aquatic plants or marsh herbs. Leaves alternate, rarely opposite, entire, ... Flowers axillary, or seated on the petioles, subumbellate, or in terminal panicles. Corolla usually yellow; margins of segments fringed or entire.

Iditinar, and *Sc* it is distinguished by
the dehiscens.. the seeds;
from the second in the flowers being regular, d in h
being equal in length; and being
kneed, in the capsule being 1-celled, and in the seeds being
fixed to the edges of the valves. It also comes near to *Apocyneæ*,
bu inguished from that order in the estivation of
the co *Swirtia perennis* the embryo is in the umbilical
region of the seed, contrary to the assertion of Dr. Gaertner.

The species are chiefly natives of cool and mountainous re-
gions of Europe, Asia, and America. They are mostly dwarf,
herbaceous plants, with deep blue, yellow, or white flowers, the
former . - «<•» no most of

Gcntokn Chirata, Wall. pi. asiat. rar, 3. p. 33. t. -'52. Gcntiana cherayta, Fleming, asiat. res. 2. p. 16. Roxb. fl. iiid. 2. p. 71. Swfcrtta pttrpflrea, Royle, herb. Swcrtia chirata, Hnmilt. TOSS. Flowers greenisii yellow. Segments of calyx about equal in length to the corolla. The whole of the dried herb of this plant is in general use among the natives of Hindustan, nml the mountainous countries bordering upon it to the north. It is called in the Sanscrit *Chiruta, Chtratatiktu. Cheraiaim,* &c, and in the Bengalee *Chireta* mid *Chirayta.* Dr. Wailich thinks thst it contains a larger proportion and greater intensity of bitter principle than any other ftpede* of *Gentiana,* and that the introduction of it into our pharmaropceta would be attended with much public benefit. A weak ir.tii-iion or it, made with cold spring or rain inter, .should be used in small r|tiantuics, repeated several times daily, for gome weeks, when it may advantageously lie left off for a short time, and then resumed again. A decoction or infusion, made with .lit r, Dr. i'l i'in in cays is object to liable, on account of the head-ache it generally produces. The dried herb of the *Chirata* H met With in every bazaar in IImdosian, being a medicine in the highest repute with both the Hindu and Euro pan practitioners. It contains all (he stomachic, tonic, febrifugal and .intarihritic virtues which ar. tl to *Aslhriua lutea,* but in a ureater degree. The efficacy of *Ckirita,* when combined with Caranga nut, the *(iuUami'ma Itomlucel/a,* in curinjf intermittent*, hat alnadv been mentioned under that name, ill vol. 11. It equally power I'ul in exciting and strengthen lug the action of I n*cb, and obviating flatulency, acidity, and redundancy of phlegm, in dyspepsia and gout. For restoring the tone and activity of the moving fibre in general debility, and in that kind o icy which is i terminate in dropsy. lii *i.'/iiriiytii* will be found one of the most ustt\il and efficaCHMM remedies which eta be cmplojul. Infusions of the plant are the best way of administering it. Spirituous tinctures tt re also prepared with the addition of cardamom seeds or orange pee). The most useful purpose to which the tincture can be applied, H that of being added to the infusion to render it mcM agreeable-

3 L. ALVTUS (Mart. 1. c. p. 95. t. 174.) stem tetragonal; with the angles a little winged; leaves sessile, ovate, obtuse, marinate ; flowers racemose ; calycine segments ovate-roundish ; corolla from a slender tube to ventricose : with ovate segments. 1/. S. Native of Brazil, in alpine pastures, near Villa Rica, Sahara, and on the range of mountains called Serra de St. Antonio, in the mine provinces. L. specibsus, Schlecht, in Linnaea, 1. p. 198. Racemes sometimes simple, and sometimes crowded, coarctate. Flowers drooping. Corolla 1| to 2 inches long, pale violet.

Winged-stemmed Lisianthus. PI. 1J to 2 feet.

4 L. AMPLISSIMUS (Mart. 1. c. p. 96. t. 175.) stem tetragonal; having the angles a little winged ; leaves sessile, ovate, acute, a little margined; flowers racemose; calycine segments ovate; corollas very large, campanulate, with ovate-orbicular segments. If.. S. Native of Brazil, in alpine pastures, near Villa Rica, Villa do Principe, and elsewhere, in the mine provinces. Racemes twin, 2-flowered, with a flower in the fork. Corolla large, purple or blue. The roots are very bitter, and are used in decoction as a febrifuge, lihe those of *L. pendulus,* by the inhabitants of the mine provinces of Brazil.

Very large-Rowered Lisianthus. PI. *2* feet.

5 L. CGERULE'SCENS (Aubl. guian. 1. p. 207. t. 82. Mart. I. c. p. 100. t. 178. f. *2.)* stem tetragonal, leafless a long way at the top : leaves narrow-lanceolate: lower ones ovate, acute, few ; flowers bifidly racemose or solitary, drooping; calycine segments ovate, acute; corolla funnel-shaped; with a short, gibbous tube: and ovate, acute, erectish segments. ©. S. Native of Brazil, in the province of St. Paul, in moist fields ; and of Guiana, in humid meadows. Leaves small. Corolla small, blue, a nail in length.

Bluish-flowered Lisianthus. PL J to 1 foot.

6 L. PRATE'NSIS (H. B. et Kunthfnov. gen. amer. 3. p. 180.) stem simple, tetragonal ; angles a little winged ; leaves linear, obtuse, sessile, remote; flowers few, terminal; calycine segments ovate, obtuse ; corolla funnel-shaped, with ovate, acute segments. ©. S. Native of grassy places, near Esmeraldo, on the Orinoco. Flowers unequally pedicellate. Corolla blue. Nearly allied to *L. ccerulescens,* Aubl.

Meadow Lisianthus. Fl. May. PL 1 to ljfoot.

7 L. PURPURA'SCENS (Aubl. guian. 1. p. 205. t. 81.) stem branched, obsoletely tetragonal; leaves sessile, ovate, acuminated ; racemes terminal, dichotomous, on long peduncles ; calycine segments roundish, obtuse; corolla campanulately funnel-shaped : with roundish-ovate, acutish segments. ©. S. Native of the Missions of the Orinoco, in inundated places, between St. Fernando de Atabapo, and the falls of Maypure; and of Guiana. Lam. ill. t. 107. f. 2. H. B. et Kunth, nov. gen. amer. *3.* p. 182. Flowers solitary, remote, secund, at length drooping. Corolla purplish, 9 lines long. Stamens equal to the corolla in length, or a little exserted. Leaves reticulately veined.

Publish-flowered Lisianthus. Fl. May. PL 1 foot.

§ 2. *Flowers scarlet,*

8 L. PULCHE'RRIMUS (Mart. 1. c. p. 97. t. 176.) stem sub-tetragonal, finely winged; leaves sessile, ovate, acuminated; or broad-elliptic, revolute, with membranous margins; panicles terminal, dichotomous ; calycine segments ovate, acute; corollas large, campanulately funnel-shaped, from a slender tube. 7/ . G. Native of Brazil, in the mine provinces, especially near Villa Rica, Sabura, -Tepanhoa, Villa do Principe, Tejuco, &c. Corolla large, nearly 3 inches long, scarlet. Peduncles twin, dichotomous ; with a flower in each fork.

Very fair Lisianthus. PL 3 *feet.*

9 Li E'LEGANS (Mart. 1. c. p. 98. t. 177.) stem sub-tetragonal; leaves sessile, ovate, short-acuminated, with sub-revoluteedges; racemes on long peduncles; flowers drooping; calycine segments ovate, acute ; corolla funnel-shaped, from an elongated tube : with ovate-acute segments. %. G. Native of Brazil, in the mine provinces, in alpine pastures, especially near Villa Rica, Pires, Villa do Principe, and on mount Itambe, &c. Peduncles 2-3-flowered. Corolla 1| inch long, fine scarlet.

Var> a, *robusta* (Mart. 1. c.) stem 2-3-feet, branched, leafy; flowers large, red, more remote.

Var. /3, *simplex* (Mart. 1. c.) stem almost simple, leafy at bottom, and elongated at top into an almost 1-flowered pedicel ; flowers smaller.—Lis. pedunculatus, Schlecht, in Linnaea, 1. p. 199.

Elegant Lisianthus. PL 1 to 2 feet.

10 L. ANGUSTIFOLIUS (Mart. 1. c. p. 99. t. 178. f. 1.) stem tetragonal ; angles slightly winged; leaves sessile, narrow-linear-lanceolate, acute, with revolute edges; flowers drooping, usually solitary ; calycine segments ovate, short-acuminated ; corolla funnel-shaped, with a slender tube, and narrow, ovate, acute, erectish segments. ©. S. Native of Brazil, in the mine provinces, in elevated fields, near St. Domingo, &c. Corolla fine scarlet, an inch and more long.

Narrow-leaved Lisianthus. PL 1 to 11 foot.

§ 3. *Flowers yellow, or greenish yellow, or altogether green,*

11 L. INFLA'TUS (Mart. 1. c. p. 94. t. 173.) leaves ovate-oblong, acute, on short petioles; stems terete; racemes terminal, few-flowered, sub-secund, drooping ; calycine segments ovate, obtuse, apiculated; corolla with a narrow base, and a ventricosely campanulate top : with ovate, obtuse, spreading segments. ©. S. Native of Brazil, in subalpine fields, near Villa Rica, Sabura, and elsewhere, in the mine provinces. Racemes twin, 2-4-flowered, with or without a flower in the fork. Flowers pendulous. Corolla more than an inch long, pale greenish.

/w/L/ed-flowered Lisianthus. Fl. Feb. March. PL 2 to %\ feet.

12 L. KU'NTHII ; stem branched, terete; leaves lanceolate-linear, nearly sessile ; racemes terminal, simple ; calycine segments roundish, obtuse, concave; corolla funnel-shaped : with ovate, acute segments. Q. S. Native of grassy places, at the foot of mount Duida, near Esmeralda, in the missions of the Orinoco. L. angustifolius, H. B. et Kunth, nov. gen. amer. 3. p. 181. Leaves 1-nerved, obsoletely veined. Flowers solitary, or twin, secund, lower ones remote. Calyx quadrifid. ? Corolla green.

Kunth's Lisianthus. FL May. PL 1 *to 2* feet.

13 L. BIFIDUS (H. B. et Kunth, nov. gen. amer. 3. p. 181.) stem simple, obsoletely tetragonal; leaves nearly sessile, lanceolate, acute; racemes terminal, bifid ; calycine segments roundish-elliptic, obtuse ; corolla funnel-shaped : with ovate-obtuse segments. ©. S. Native *of* New Granada, near the mine of Santanna. L. racemdsus, Willd. herb, ex Roem. et Schultes, syst. 4. p. *788.* Leaves remote. Flowers solitary, secund. Corollas green. Stamens exserted.

Bifid-racemed Lisianthus. Fl. June. PL 1 to 2 feet.

14 L. MACROPHY'LLA (Willd. herb, ex Rcem. et Schultes, syst. 4. p. 788. H. B. et Kunth, nov. gen. 3. p. 183.) shrubby; branches tetragonal; leaves ovate, acute, on short petioles ; corymbs terminal, paniculately disposed ; calycine segments roundish ; corolla funnel-shaped: with ovate, obtuse segments. *2. S. Native of New Granada, on the declivity of Panama de Ahnaguer, between Pansitara and the river Ruiz. Stem articulated, rather hairy, having 2 of the sides convex, and the other 2 furrowed. Floriferous branches sub-fastigiate. Leaves reticulately veined ; having the nerves and veins hairy on the under side. Corollas yellow. Leaves 7-8 inches long.

Long-leaved Lisianthus. FL Nov. Shrub 6 feet.

15 L. TRIFIDUS (H. B. et Kunth, nov. *gen.* amer. *'i.* p. 182.)

stem branched, tetragonal: having the angles winged ; leaves on short petioles, ovate, acute; racemes terminal, trifid; calycine segments oblong, obtuse*, corolla funnel-shaped : with roundish obtuse segments. ©. S. Native of New Granada, between Mariquita and the mine of Santanna. Leaves quintuple-nerved, and reticulately veined, 3 inches long. Petioles connate at the base. Flowers secund, solitary, hardly an inch long. Corolla greenish. Branches of racemes fastigiate.

Trifid-racemed Lisianthus. Fl. June. PL 1 foot.

16 L. GLA'BER (Mutis, in Lin. suppl. 134. Smith, icon. 1. p. 29. t. 29.) shrubby; branches tetragonal; leaves elliptic or ovate-lanceolate, acute; corymbs terminal and axillary, few-flowered, involucrated by 2 or 3 leaves. J? . S. Native of Peru ; and New Granada, at Santa Fe de Bogota. H. B. et Kunth, nov. gen. amer. 3. p. 183. L. corymb6sus, Ruiz, et Pav. fl. per. 2. p. 14. t. 124. Corolla campanulately funnel-shaped, yellow.

Glabrous Lisianthus.- Shrub.

17 L. ALA'TUS (Aubl. guian. 1. p. 204. t. 80.) stem tetragonal ; angles winged; leaves oblong, acuminated, nearly sessile; cymes terminal, racemose, dichotomous, loose ; calycine segments yellowish; genitals exserted. ©. S. Native of Cayenne and Guiana, in waste places. Lam. diet. 3. p. 661, exclusive of />. *chelo?'iotdes,* Lin. Stem articulated. Leaves obliquely nerved. Pedicels each furnished with a gland-like body and a scale-like bractea. Corolla white, with a furrowed tube ; segments of the limb marked with a green spot on both sides at apex. Plant bitter like the rest.

Wing-stemmed Lisianthus. Fl. July, Aug. Clt. 1824. PL 2-3 feet.

18 L. CHELONOIDES (Lin. suppl. 134, exclusive of the syn. of Aubl. syst. 197.) stem terete; leaves oval-oblong, rather connate at the base, bluntish ; panicle terminal, dichotomously branched, racemose; racemes long; calyx globose. ©.? S. Native of Surinam and Cayenne. Flowers alternate, remote, secund. Corolla greenish yellow, with a sub-recurved tube. Plant bitter, and purgative. Stem sub-tetragonal at the base, becoming gradually terete to the top. Lower leaves connate; upper ones only sessile.

Chelone-like Lisianthus. PL 2 to 3 feet.

1!) L. GRANDIFLORUS (Aubl. guian. 1. p. 201. t. 79.) stem simple, tetragonal at the base, and terete at apex; leaves ovate, acuminated, connate at the base, beset with short hairs on both surfaces, but especially on the margins and middle nerve; panicle dichotomous; corolla with an undulated limb, and re-rlexed, roundish, sinuated segments. ©. G. Native of Guiana, and Cayenne, in humid places. Desf. in Lam. diet. 3. p. 661. Leaves rather large. Flowers large, solitary, greenish-yellow. 1 hree of the stamens are exserted.

Great-flowered Lisianthus. FL July, Aug. Clt. 1818. PL 2 to 3 feet.

20 L. LONGIFL6RUS (Willd. herb, ex Rcem. et Schultes, syst. 4. p. 787.) leaves lanceolate, rugosely nerved beneath, scabrous on both surfaces. ©.? S. Native of South America, Humb. et Bonp. Kunth knows nothing of this plant.

Long-flowered Lisianthus. PL

21 L. FRIGIDUS (Swartz. prod. p. 40. fl. ind. occ. 1. p. 352.) stem tetragonal; leaves petiolate, ovate, acuminated; panicles terminal, trichotomous; corollas ventricose : with roundish obcordate segments. 7£.S. Native of St. Dominica, on mount Soufriere; and of Guadaloupe. L. acuminatus, Desf. in Lam. diet. 3. p. 660.? Flowers yellow, erect. Segments of calyx obtuse.

Frigid Lisianthus. PL 2 to 3 feet.

22 L. FISTULOSUS (Poir. suppl. 3. p. 564.) stem terete, striated, fistular; leaves sessile, ovate, acute, 3-nerved; corymbs dichotomous, many-flowered; calycine segments very blunt; segments of corolla short, obtuse ; stamens length of corolla. 0. S. Native of Cayenne. Leaves 2-3 inches long. Flowers on short pedicels. Corolla yellow, an inch long, with a sub-inflated throat. Capsule ovate.

Fistular-stemmed Lisianthus. PL 1 to 2 feet.

23 L. LATIFOLIUS (Swartz, prod. p. 40. fl. ind. occ. 1. p. 348.) branches obsoletely tetragonal; leaves petiolate, lanceolate-ovate, acuminated; peduncles simple, trichotomous; calycine segments acute, unequal; segments of corolla erect, lanceolate, acute. J? . S. Native of Jamaica, on high mountains. Corolla yellow, an inch long. Very like *L. exsertus,* but differs in the stamens being inclosed. Corymbs hardly longer than the leaves.

Broad-leaved Lisianthus. FL July, Sept. Clt. 1821. Shrub 5 to 6 feet.

24 L. .UMBELLAVUS (Swartz. prod. p. 40. fl. ind. occ. 1. p. 350.) branches tetragonal; leaves petiolate, long, obovate, sub-acuminated ; peduncles terminal and axillary, a little compressed, bearing each an umbel of 20-30 pedicellate flowers ; calycine segments lanceolate; segments of corolla short, obtuse, erect; stamens sub-exserted. F? . S. Native of the west of Jamaica, on hills. Leaves a foot long. Corolla ^ an inch long, yellow. ? Capsule ovate.

Umbellate-flowered Lisianthus. FL July, Aug. Clt. 1822. Shrub 6 to 7 feet.

25 L. visedsus (Ruiz, et Pav. fl. per. 2. p. 14. t. 125.) stem obsoletely tetragonal, furrowed, branched at top ; leaves oblong, on short petioles, very veiny ; corymbs ample, terminal, clammy ; calycine segments concave ; segments of corolla roundish, cordate, spreading. F? . S. Native of Peru, in high places, at Munna. Leaves entire, and sub-sinuated, obtuse, shining. Bracteas ovate, recurved. Corolla greenish yellow. Capsule 3 inches long.

Clammy Lisianthus. Shrub.

26 L. REVOLU'TUS (Ruiz, et Pav. fl. per. 2. p. 14. t. 127.) stem branched, tetragonal, striated ; leaves lanceolate, petiolate, with revolute margins, beset with recurved pili on the nerves beneath ; corymbs terminal and axillary, bearing each 4-6 1-flowered pedicels. T?. S. Native of Peru, on cold mountains of Munna. Lower leaves approximate ; superior ones remote, ovate-oblong, 4-5 inches long. Bracteas lanceolate. Corolla yellowish-red.

Revolute-lesived Lisianthus. Shrub 6 feet.

27 L. PARVIFOLIUS (Desf. in Lam. diet. 3. p. 660. ill. 476.) stem filiform, tetragonal; leaves linear, sessile, mucronate, adpressed to the stem ; corymbs terminal, few-flowered; calyx cleft even to the middle, with sub-carinated segments; corolla 3 times longer than the calyx. ©.? S. Native of South America.? Root fibry. Stem yellowish.

Small-leaved Lisianthus. PL 1 foot.

28 L. ACUTA'NGULUS (Ruiz, et Pav. 2. p. 14. t. 122. f. a.) stem fistular, tetragonal; angles acute; leaves distant, connivent at the base; lower ones cordate, upper ones ovate ; peduncles dichotomous, panicled ; calycine segments ovate; corolla subringent: with an incurved tube, and roundish, revolute segments. %. ? S. Native of Peru, in the mountains of Panatahua. Pedicles short, thick, 1-flowered. Calyx short. Stem dichotomous. Corollas yellow. Capsules pendulous.

Acute-angled-stemmed Lisianthus. Fl. July. Aug. Clt. 1820. PL 6 feet.

29 L. OVA'LIS (Ruiz, et Pav. fl. per. 2. p. 13.) stem twiggy, terete, fistular, branched at top; peduncles axillary and terminal, corymbose, dichotomous ; pedicles secund; leaves ovate, veinless, on short petioles. *2 • S. Native of Peru, in groves. Corollas greenish yellow. Capsule pendulous.

Oi?aMeaved Lisianthus. Shrub 10 to 12 feet.

30 L. CAMPANULA'CEUS (Lam. diet. 3. p. 660. ill. p. 476. no. 21()1.) stem slender, simple, obsoletely tetragonal; leaves ovate

acute, petiolate, with 2 oblique nerves; peduncles solitary or twin, long, bracteolate under the flower; calyx turbinate ; corolla with a short tube, a ventricose sub-campanulate, inflexed limb; and ovate, obtuse, rather irregular segments. ©. S. Native of South America. Leaves 12-20 lines long, and 5-6 broad. Bracteas minute. Corolla yellow. ?

Campanulate-flowered Lisianthus. PI. 1 to lj foot.

31 L. NIGRE'SCENS (Cham, et Schlecht, in Linnaea, 6. p. *388.)* stem and branches terete; leaves of the sterile branches half stem-clasping, ovate, with rounded, stem-clasping auricles, which are lanceolate at the base, acuminated, pale green above, but paler beneath; panicle large, loose-flowered ; calycine segments narrow-lanceolate, acuminated ; corolla almost funnel-shaped ; with elliptic-acuminated segments* ©. G. Native of Mexico, in woods, at Papantla. Leaves 6 inches long, and 2 inches broad. Corolla blackish in the dried state, but probably greenish yellow in the recent state. Capsule elliptic.

Blackish-flowered Lisianthus. PI. 1 to 2 feet.

32 L. SAPONARIOIDES (Cham, et Schlecht. 1. c. p. 389.) stem branched, nearly terete at bottom, but obsoletely tetragonal at top ; leaves nearly sessile, ovate-lanceolate, acuminated, with rather scabrous edges ; inflorescence a compound cyme. % G. Native *of* Mexico, at Papantla, on the edges of woods. Leaves 5 inches long. Calycine segments lanceolate, acuminated. Corolla white, salver-shaped; with ovate, acuminated segments. Capsule elliptic or ovate.

Saponaria-like Lisianthus. PL 1 to *2 feet 1*

if Species not sufficiently known; *and probably not belonging to the genus.*

33 L. CARINATUS (Desr. in Lam. diet. 3. p. 659. ill. t. 107. f. 3.) glabrous ; stem branched ; branches tetragonal ; leaves roundish-ovate, sessile, 3-nerved; calyx prismatic, having the segments keeled upwards ; corolla with a slender tube, and ovate, spreading segments. 1? . S. Native of Madagascar. Leaves sub-connate. Flowers erect, pedicellate, terminal and axillary. Corolla 3 times longer than the calyx. Capsule ovate-oblong.

Keeled-calyxed Lisianthus. Shrub.

34 L. TRINE'RVIS (Desr. in Lam. diet. 3. p. 659. ill. p. 476.) downy ; stem sub-tetragonal; leaves ovate, mucronate, on short petioles; flowers in loose terminal, trichotomous panicles, pedicellate ; calyx deeply divided, with keeled segments ; limb of corolla parted nearly to the base into narrow segments. %. S. Native of Madagascar. Leaves beset with short hairs on both surfaces ; bracteas short, lanceolate, acute. Capsule ovate.

Three-nerved-\eaved Lisianthus. PI. 1J foot.

35 L. TUBIFLORUS (Pet. Th. in Willd. mss. ex Roem. et Schultes, syst. 4. p. 788.) glabrous ; stem terete ; leaves ovate, acuminated, petiolate, 3-nerved; umbels terminal, few-flowered; calyx ventricose, contracted at top; tube of corolla 6 inches long ; limb wide: with ovate, acuminated segments. ^ • ? S. Native of Madagascar. Superior leaves lanceolate, 4 inches long, longer than the internodes.

Tube-flowered Lisianthus. Shrub.?

*Cult** Most of the species of *Lisianthus* are very handsome when in blossom. A mixture of loam, sand, and peat is a good soil for them ; and cuttings of the shrubby and perennial species strike root readily in sand, under a hand-glass. The annual kinds require the same as that recommended for *E'xacum,* p. 213.

XL. IRLBA'CHIA (named by Martius, in honour of Gabriel, Count de Bray, of the dynasty of Irlbach, ambassador from the King of Bavaria to the Court *of* Spain.) Mart. nov. gen. bras. 2. p. 101.

LIN. SYST. *Pentdndria, Monogynia-* Calyx campanulate, 5-cleft ; segments erect, with membranous margins. Corolla funnel-shaped, equal, deciduous; limb 5-cleft; throat naked. Anthers revolute when dry. Stigma bifid; segments cylindrical, not bi-lamellate. Capsule 2-celled, 2-valved, many-seeded ; margins of valves placentiferous. bent inwards.—An erect, glabrous herb. Stems tetragonal, fistular. Leaves opposite, decussate, petiolate, triple or quintuple-nerved. Flowers alternate, disposed in dichotomous panicles. This genus differs from *Lisianthus* in the regular corolla, and structure of the stigma.

1 I. E'LEGANS (Mart. 1. c. p. 102. t. 179.) leaves lanceolate, acuminated; rachis of panicle geniculately bent. ©. S. Native of Brazil, in the province of Rio Negro, near Ega, in moist, sylvan meadows. Corolla blue, a nail in length. Racemes long, twin, with a flower in the fork between them.

Elegant Irlbachia. PI. 1| to 2 feet.

Cult. For culture and propagation see *E'xacum,* p. 213.

XLI. SYMBOLA'NTHUS (from *avfipoXov, symbolon,* a ring; in reference to the ring at the base of the filaments.) Lisianthus species, Ruiz, et Pav. and H. B. et Kunth.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted, pentagonal ; segments with membranous margins. Corolla salver-shaped, with a cylindrical tube, 3 times longer than the calyx ; and a 5-parted limb; segments with crenulately fringed edges. Stamens inserted in the tube, hardly exserted ; anthers sagittate, at length convolute, having a short, ring-formed, crenulated, membrane at the base of the filaments. Ovarium ovate, compressed, 1-celled, 2-valved; placentas 2, parietal, bilamellate, bearing seeds on the back. Stigma 2-lobed ; lobes linear-oblong, flat, blunt. Capsule ovate.—Glabrous, branched shrubs ; branches tetragonal. Leaves opposite, decussate, on short petioles, with a prominent middle nerve, obsoletely veined ; petioles round at the base. Flowers axillary, solitary, or 2-3 terminal, rose-coloured.

1 S. KU'NTHII ; leaves oblong, acute ; flowers pedicellate, axillary ones solitary, and terminal ones 2-3 together; corolla salver-shaped, with fringed segments. I? . S. Native of New Granada, on mountains between Honda and Mariquita. Lisianthus anomalus, H. B. et Kunth, nov. gen. amer. 3. p. 184. Branches sub-dichotomous. Leaves 2^ inches long. Flowers size of the following species. Bracteas oblong, sub-spathaceous.

Kunth's Symbolanthus. Shrub 5 to 6 feet.

2 S. PAVONII ; leaves ovate-lanceolate; flowers pedicellate, axillary, solitary ; calyx pentagonal ; corolla sub-ringent. ^ . S. Native of Peru, on the mountains. Lisianthus calygonus, Ruiz, et Pav. fl. per. 2. t. 126. Leaves 2-3 inches long. Pedicels curved, furnished with 3 ovate, concave, acuminated, bracteas each. The 3. outer segments of the calyx are lanceolate, and 2 inner, sub-sagittate, all with membranous, fringed edges. Corolla rub-ringent, rose-coloured, large, with acuminated, reflexed segments.

Pavon's Symbolanthus. Shrub 5 to 6 feet.

Cult. For culture and propagation see *Tachia,* p. 197.

XLII. EU'STOMA (from *evtrrofxoQ,* a beautiful mouth; in reference to the fair corollas). Sal. par. lond. t. 34.—Lisianthus species of authors.

LIN. SYST, *Pentdndria, Monogynia.* Calyx deeply 5-cleft, having the backs of the segments more or less winged. Corolla with a funnel-shaped tube, which is contracted a little at the apex ; and a deeply 5-cleft limb, which is longer than the tube, and is variegated below the middle above. Stamens 5, inserted near the middle of the tube, and a little longer than it; filaments erect, linear-lanceolate ; anthers rather sagittate. Ovarium

oblong, 1-celled, ex Sal. and 2-celled, ex Nutt. succulent; with short, stipitate placentas. Style short, erect; stigma large, deeply 2-lobed. Seeds scrobiculate.—Annual herbs, with the habit "of *Pneumondnthe.* Leaves glaucous, oblong, opposite, decussate, perfoliate. Corymbs few-flowered, dichotomous, terminal. Flowers blue. The plants have glaucous, perfoliate leaves, not unlike those of LobePs Catchfly, the *Silene Armeria.*

1 E. SILENIFOLIA (Sal. par. t. 34.) stems terete ; leaves obovate-lanceolate ; segments of calyx winged on the back. ©. H. Native of Providence, and of North America, on the sandy banks of the great salt river of the Arkansas ; and at sources of the Canadian river. Lisianthus glaucifolius, Lam. diet. 660. Jacq. col. 1. p. 64. icon. rar. 1. t. *SS.* Nutt. in amer. phil. trans, vol. 5. n. s. p. 177. Corolla purple: anthers yellow.

Catchjly-leaved Eustoma. Fl. July. Clt. 1804. PI. 1-2 foot.

2 E. EXALTA'TA (Sal. 1. c.) stem slightly tetragonal; leaves spatulate or oblong-lanceolate ; calycine segments winged on the back. ©. Ş. Native of St. Domingo and Vera Cruz. Lisianthus exaltatus, Lam. 3. p. 662. ill. p. 478. Gentiana exaltata, Lin. spec. 231. Lam. diet. *2.* p. *636.* Erythrae'a Plumieri, H. B. et Kunth. nov. gen. amer. 3. p. 176.—Plum, spec. 3. Burm. amer. icon. t. 81. f. 1. Leaves 3-nerved. Segments of corolla crenated. Fruit full of clammy seeds. This species differs from the preceding, in having a more angular stem, and a greater number of flowers ; in the wings of the calyx being broader, and in the filaments being inserted a little higher up.

Var. (3, albijlora; herb more glaucous than the species : and the flowers white and more expanded. ©. F. Native of Mexico, at Papantla, on the banks of rivulets. Cham, et Schlecht, in Linnaea, 6. p. 387.

Tall Eustoma. PI. 2 to 3 feet.

Cult. The seeds of the species of *Eustoma* require to be reared on a hot-bed, and otherwise treated like other tender annuals.

• *Tribe* II.

EXACIE'iE (the plants contained in this section agree with *E'xacum,* in having a 2-celled capsule.) Capsule 2-celled; margins of valves bent into the central placenta, which is at length free, and bears the seeds.

XLIII. SEBiE^A (named in memory of Alb. Seba, an apothecary of Amsterdam, author of Locupletissimi rerum naturalium thesauri descriptio,4 vol. fol. Amsterdam, 1734—1765.) Solander mss. R. Br. prod. p. 451. E'xacum species of Lin. and others.

LIN.SYST. *Tetra-Pentdndria, Monogynia.* Calyx 4-5-parted ; segments keeled or winged on the back. Corolla 4-5-cleft, salver-shaped, marcescent. Stamens 4-5, exserted ; anthers dehiscing lengthwise : when old, recurved, with a callous apex. Stigmas *2.* Capsule 2-celled, 2-valved ; valves with inflexed edges inserted into the central placenta, which is at length free.—Erect annual glabrous herbs, with tetragonal stems and branches; opposite, decussate, sessile leaves; and usually terminal, corymbose panicles of flowers.

1 S. CORDA'TA (R. Br. prod. p. 452.) stem dichotomous, tetragonal; leaves sessile, cordate ; flowers 5-cleft in the forks, on short pedicels, or in corymbs ; stamens inclosed; segments of calyx cordate, furnished each with a keel on the back. ©,G. Native of the Cape of Good Hope. E'xacum cordatum, Lin. syst. 155. suppl. 124. Cham, et Schlecht in Linnaea, 194. Gentiana exacoides, Lin. spec. p. E'xacum grandiflorum, Gaertn. fruct. 2. p. 158. t. 114.—Burm. afr. t. 74. f. 5. Corolla yellow, with a cylindrical tube and obovate segments. Habit of *Erythree"a Centaurium.* In all the varieties the stamens are said to be inclosed in the throat of the corolla.

Var. a, *macrdntha* (Cham, et Schlecht in Linnaea, 1. p. 191.) keels of the calyx, which is large, broadly winged, smooth, or scabrous; corollas large, an inch long: more than twice longer than the calyx.

Var. /3, intermedia (Cham, et Schlecht, 1. c.) keels of calyx with narrow, smooth, almost evanescent wings ; corolla smaller, half an inch long, twice as long as the calyx.

Var. y, *micrdntha* (Cham, et Schlecht. 1. c. p. 192.) keels of calyx winged, nerved, having the nerves ending in teeth ; corolla minute, 4 lines long, not quite twice the length of the calyx.—Plukn. aim. p. 94. t. 275. f. 4.

CWtfte-leaved Sebsea. Fl. July, Aug. Clt. 1815. PI. \ to f foot.

2 S. SULPHU'REA (Cham, et Schlecht. in Linnaea, 1. p. 192.) stem dichotomously and corymbosely branched, sub-tetragonal ; leaves sessile, broad, ovate, acute, 1-nerved; calyx nearly globose, with acute segments, which are winged by a narrow keel on the back; flowers 5-cleft; stamens exserted. 0. G. Native of the Cape of Good Hope, on the top of the Table Mountain. S. tabularis, Ecklon, mss. Leaves 3 lines long and two broad. Corolla sulphur coloured, with elliptic, acute segments. Calyx much shorter than the tube of the corolla.

Sulphur-coloured flowered Sebaea. PI. ^ foot.

3 S. CRASSUUEFOLIA (Cham, et Schlecht, 1. c. p. 193.) stem corymbosely branched ; angles winged ; branches straight; leaves cordate, roundish, acute, sessile, 3-5-nerved ; flowers quinquefid ; calyx ovoid, with acute, sharply keeled segments ; stamens exserted. ©. G. Native of the Cape of Good Hope, at Plettenbergsbay Poort. Stem naked at the base. Branches floriferous at top. Leaves 4-5-lines broad, and 3 lines long, with the margins and apexes inflexed. Flowers crowded, yellow.

Crassula-leaved Sebsea, PI. 1 to 1^ foot.

4 S. CAPITA'TA (Cham, et Schlecht, 1. c.) stem crowded with leaves at bottom, the rest naked and simple, terminated by a coarctate panicle ; leaves sessile, ovate, attenuated at the base, 3-nerved ; flowers quadrifid; calyx ovate, with keeled segments; stamens exserted. ©.G. Native of the Cape of Good Hope, on the top of the Table Mountain. Leaves with revolute edges. The superior part of the stem often furnished with one or two pairs of minute, stem-clasping leaves. Corolla yellow, much longer than the calyx, with obtuse segments.

Capitate-Cowered Sebsea. PI, \ foot.

5 S. AU'REA (R. Br. prod. p. 452.) stem dichotomous, slightly tetragonal; leaves sessile, cordate, ovate, 3-nerved; panicle corymbose, terminal; flowers quadrifid : calycine segments with winged keels; stamens inclosed. ©. H. Native of the Cape of Good Hope. Gentiana afirea, Thunb. E'xacum aiireum, Lin. syst. 155. suppl. 123. Lam. ill. t. 80. f. 2. E'xacum sessile, Lin.—Plukn. phyt. t. 275. f. 3. Corolla golden yellow, with lanceolate, acute segments. Habit of *Erythrcea Centaurium.*

Var. /3; flowers pale yellow. Cham, in Linnaea, 6. p. 646.

<7o/efen-flowered Sebaea. Fl. Ju. Aug. Clt. 1824. PI. \ foot.

6 S. A'LBENS (R. Br. 1. c.) stem tetragonal, dichotomously branched, fastigiate ; leaves cordate, decurrent, 3-nerved; flowers 5-cleft, terminal; calycine segments keeled on the back ; stamens exserted. ©. G. Native of the Cape of Good Hope. E'xacum albens, Lin. syst. 155. suppl. 123. E'xacum pedunculatum, Lin. Gentiana albens, Thunb. Corolla whitish; tube longer than the calyx ; and the limb length of the tube.—Burm, afr. p. 207. t. 74. f. 4.

JF/ii/e-flowered Sebaea. Fl. Aug. Clt. 1820. PI. \ foot.

7 S. OVATA (R_f Br. prod. p. 452.) stem branched, dichntn.

mous ; leaves sessile, ovate, 3-nerved ; flowers quinquefid; segments of calyx acuminated, with simple keels *on the* back, about equal to the segments of corolla in length. ©. G. Native of Van Diemen's Land, and of New South Wales. E'xacum ovatum, Labill. nov. holl. 1. p. 38. t. 52. Corolla red.?

Ovate-leaved Sebsea. Fl. Aug. Clt. 1820. PI. ± foot.

8 S. AMBIGUA (Cham, in Linnsea, 6. p. 346.) stem fastigiately cymose, dichotomous ; leaves broad-ovate, rather fleshy ; flowers quadrifid ; stamens exserted ; calyx obconical, with diaphanous, obtuse, rounded, toothed segments. ©. G. Native of the Cape of Good Hope.

Far. a, *gracilis* (Cham. 1. c.) outer branches of cyme evolute.

Far. /3, *crdssa* (Cham. 1. c.) outer branches of cyme contracted ; flowers glomerate.

Ambiguous Sebaea. PL \ foot.

9 S. PUSILLA (Ecklon, mss. Cham, in Linnaea, 6. p. 346.) flowers quinquefid ; stamens inclosed; calyx cylindrical, with narrow-lanceolate, keeled, acute segments, which are shorter than the tube of the corolla. ©. G. Native of the Cape of Good Hope. This species comes nearest to *S. ovata;* but differs from it in the tube *of* the corolla, being longer in the inclosed stamens, and whole habit.

Small Sebaea. PI. small.

Cult. These are elegant plants while in blossom. They should be treated like other tender annuals, by being reared on a hot bed, and afterwards planted out into a warm, sheltered border, about the end of May.

XLIV. E'XACUM (from *ex,* out; and *ago, to* drive ; expels poison.) Spreng. gen. 1. p. 8.—E'xacum species, Lin. gen. 141. Juss. gen. 142.—Centaurium, Plukn. mant. t. 343. f. 3.

LIN. SYST. *Tetrandria, Monogynia.* Calyx campanulate, 4-cleft; segments winged on the back. Corolla salver-shaped, or sub-rotate, with a globose or ventricose tube, and a 4-cleft limb. Stamens 4, declinate; filaments terete; anthers long, somewhat tetragonal, emarginate at the base, erect, dehiscing by 2 pores at the apex. Style filiform, declinate, flexuous ; stigma undivided, clavate, furnished with minutely papillose furrows on all sides. Capsule globose, crustaceous, 2-celled, with a septicidal dehiscence; placentas 2, adnate to a double dissepiment, thick. Seeds very minute, scrobiculate.—Erect, branched, annual herbs. Leaves opposite, decussate, sessile, 3-5-nerved. Flowers terminal and axillary.

1 E. SE'SSILE (Lin. spec. 163.) stem erect, tetragonal, simple, dichotomous at top ; flowers solitary, from the forks of the stem, and tops of the branches ; leaves sessile, ovate-cordate, obtuse, fleshy; capsule drooping. ©. S. Native of the East Indies. Flowers larger than the leaves.

Sessile-fioweved Exacum. PI | foot. ?

2 E. PUNCTA'TUM (Lin. syst. 155. suppl. 124.) leaves nearly sessile, oblong, 3-nerved, dotted like *Hypericum;* stamens exserted. ©. S. Native of the East Indies. Corolla bluish. Stamens yellow.

Dotted-lewed Exacum. PI. \ to 1 foot.

3 E. BI'COLOR (Roxb. fl. ind. 1. p. 413.) erect; stem and branches tetragonal : angles a little winged; leaves sessile, ovate, 5-nerved ; flowers axillary, solitary, on short pedicels ; anthers erect. ©. S. Native of Cuttack, in the East Indies. Root almost simple. Leaves variable in size ; floral ones small and narrow. Corollas large, white, having the segments tipped with blue.

Tivo-coloured-fLowered Exacum. PI. 1 to 2 feet.

4 E. TERAGONUM (Roxb. 1. c. Wall. pi. rar. asiat. 3. p. 47. t. 276) stem simple, erect, tetragonal; leaves sessile, ovate-lanceolate, 5-nerved; flowers numerous, terminal; stamens and style declinate. ©. S. Native of Bengal, where it is called Koochuri; Silhet, Nipaul, Kamaon, &c. E. Chulesium, Ham. herb. Leaves 2-4 inches long. Flowers large, of a most beautiful blue colour. Calycine segments dagger-shaped. Segments of corolla acute. Anthers linear. This is a most elegant, robust plant.

Tetragonal-stemmed Exacum. Fl. July, Sept. Clt. 1820. PI. 3 to 4 *feet.*

5 E. STYLOSUM (Wall. cat. no. 4355.) glabrous; stem tetragonal ; leaves ovate-lanceolate, acute, 3-nerved ; peduncles axillary and terminal, corymbose ; style longer than the stamens ; segments of corolla obtuse. 0. S. Native of the East Indies, about Prome.

Long-styled Exacum. PI. 2 to 3 feet.

6 E. TE'RES (Wall, in Roxb. fl. ind. 1. p. 414.) stem and branches terete; leaves lanceolate, acuminated, tapering at the base, nearly sessile, 3-nerved ; peduncles opposite, 3-flowered, forming a terminal corymb ; segments of corolla lanceolate, acuminated. ©. S. Native of Silhet, and Lower Nipaul. Leaves 3-4 inches long, and -| an inch broad in the middle. Flowers dark blue, large. Habit of the preceding.

jfere/e-stemmed Exacum. PI. 2 feet.

7 E. ZEYLA'NICUM (Roxb. fl. ind. 1. p. 414.) erect; stem and branches tetragonal: angles slightly winged : leaves nearly sessile, ovate-lanceolate, acuminated, 3-nerved; racemes terminal and axillary, forming an expanded, terminal, corymb-formed panicle ; flowers pentamerous ; calyx with 5 broad, membranous wings, with subulate points. ©. H. Native of Ceylon, and the Neelgherries. Chirdnia trinerva, Lin. fl. zeyl. p. 90. Willd. spec. 1. p. 1065.—Burm. zeyl. p. 145. t. 67. Leaves 1-3 inches long. Peduncles and pedicels tetragonal. Segments of calyx furnished with a broad, membranous wing on the back of each. Tube of corolla gibbous. Limb of corolla of 5 obovate, mucronate, beautiful, violet-coloured divisions. Anthers linear, straight, and hard, with 2 pores at the apex, and also opening on the sides.

Ceylon Exacum. PI. 1 to 2 feet.

8 E. GRANDIFLORUM (Wall. cat. no. 4358.) stem tetragonal ; leaves ovate-lanceolate to lanceolate, acute, 3-5-nerved ; peduncles axillary and terminal, trichotomous, or 3-flowered, corymbose. 0. S. Native of the East Indies, at Courtallum. Flowers large ; segments of corolla ovate-oblong, acute.

Great-flowered Exacum. PI. 1 to 2 feet.

9 E. PEDUNCULA'TUM (Lin. spec. 163. Vahl, symb. 1. p. 15.) erect; stem |with 1-2 pairs of opposite branches, then dichotomous, slightly tetragonal; leaves nearly sessile, oblong-lanceolate, obtuse, 3-nerved; segments of calyx membranously winged on the back ; stamens exserted ; style declinate. ©. S. Native of Ceylon. E. carinatum, Roxb. fl. ind. 1. p. 415. Sebcea carinata, Spreng. syst. 1. p. 426. Root branched. Flowers terminal, numerous, pretty large, yellow, collected in dichotomous corymbs, with a single, long, pedicellate flower in each fork. Filaments inserted on a membranous rim, round the inside of the mouth of the tube. Anthers erect, opening at the sides, yellow. Perhaps a species of *Sebcea.*

Peduncled Exacum. PI. \ foot.

10 E. PTERA'NTHUM (Wall. cat. no. 4360.) stem and branches tetragonal; leaves elliptic-oblong, tapering to both ends, 3-5-nerved ; flowers pedicellate, dichotomously cymose: with a flower in each fork; alternate wings of calyx the largest. 0. H. Native of Tavoy.

Wing-flowered Exacum. PI. 1 foot.

11 E. HAMILTONII; stem 4-winged; leaves elliptic-oblonor, acute, 5-nerved ; flowers terminal, corymbose; segments of calyx ovate, acuminated, each furnished with a membranous wing on the back. ©. G. Native of Nipaul, where it is called

Kashwa-swa. E. tetragdnum, D. Don, prod. fl. nep. p. 128, but not of Roxb. Stamens exserted. Flowers large, yellow.

Hamilton's Exacum. PI. 1 to 2 feet.

12 E. SULCA^TUM (Roxb. fl. ind. 1. p. 415.) erect, branched, furrowed on the opposite sides of the stem and branches ; leaves nearly sessile, lanceolate, fleshy, 3-nerved; flowers terminal, numerous, trichotomously corymbose ; segments furnished each with a keel on the back ; stamens erect; stigma bifid; capsule globular. £ . S. Native of Bengal. Sebae'a sulcata; Spreng. syst. 1. p. 426. E. dichotomum, Herb. madr. E. stellatum, Hamilt. herb. Root fibrous. Leaves from 1 to 2 inches long. Flowers bright blue, those on the forks solitary, and on long pedicels. Peduncles 4-sided. Bracteas ovate, recurved. Anthers ovate-oblong, connivent. This appears to be intermediate between *Sebce'a* and *E'xacum,* from the bifid stigma.

Furrowed-stemmed Exacum. PL -J- to 1 foot.

Cult. All the species of this genus are very showy when in blossom. The seeds should be reared on a hot bed, like those of other tender annuals; and about the end of May the plants may be planted out in the open border, in a warm, sheltered situation; and some of the larger, showy kinds may be planted in pots, and otherwise treated like Balsams.

XLV. MICROCA'LE (from *jjmcpoQ, micros,* small, and KCIOG, *kalos,* pretty ; plants small and very pretty). Link.—E'xacum species, Smith.—Gentiana species, Lin.

LIN. SYST. *Tetrtindria Monogynia.* Calyx divided about half way into 4 equal acute segments, permanent. Corolla with a swelling tube, length of calyx; and a 4-parted, spreading limb; segments equal, imbricate in the bud. Stamens 4, inclosed, filiform, erect; anthers roundish-oblong. Ovarium oval. Style filiform, inclining a little, as long as the limb. Stigma capitate, undivided. Capsule filling the tube of the corolla, which gradually enlarges with it; elliptic, compressed, imperfectly 2-celled. Seeds small, rough, atlached to a fixed or finally separated double placenta. — Herbaceous, glabrous, intensely bitter plants. Leaves simple, entire, and are, as well as the branches or flower-stalks, opposite. Flowers terminal, yellow, or rose coloured.

1 M. FILIFORME (Link. 1. c.) stem dichotomous from the bottom, filiform ; leaves chiefly radical, lanceolate, or spatulate, 1-nerved, sessile; flowers terminal, on long pedicels. ©. H. Native of Europe, in sandy, turfy bogs ; in England, in Hampshire, Devonshire, Cornwall, Dorsetshire, and Sussex, in rotten, marshy, sandy, turfy ground; in Ireland, in Dursey Island, Cork; in Chili, about Conception. Gentiana filiformis, Lin. spec. *335.* With. 263. Oed. fl. dan. 324. Ehrh. phyt. 43. E'xacum filiforme, Smith, fl. brit. 182. engl. bot. t. 235. Hook, fl. lond. fasc. 2. p. 91. t. 8.—Vaill par. p. *32. U* 6. f. 3. Root fibrous. Leaves an inch long. Corollas small, yellow.

Filiform Microcale. Fl. Ju. July. England. PI. | foot.

2 M. PULCHE'LLUM ; leaves lanceolate ? ; sessile ; panicle corymbose ; pedicels filiform; calycine segments subulate. ©. H. Native of New Jersey, on the sea coast. E'xacum pulchéllum, Pursh, fl. amer. sept. 1. p. 100. Sabbatia pulchella, Spreng. syst. 1. p. 581. Flowers rose coloured. Plant resembling very much the preceding.

Neat Microcale. Fl. May. Cult. 1826. Pl.-J- foot.

3 M. PUSILLUM ; stem much branched, dichotomous; leaves oblong, 3-nerved; peduncles short, crowded; segments of corolla connivent. ©. H. Native of Europe, in inundated places. Gentiana pusilla, Lam. diet. 2. p. 645. Chironia inaperta, Willd. E'xacum pusillum, D. C. fl. franc, no. Spreng. syst. 1. p. 425.—Vaill. par. t. 6. f. 2.

Small Microcale. PI. £ foot.

Cult. Sow the seed in a moist situation, in peat earth, or in pots, which should be kept moist, by being placed in pans of water.

Tribe III.

DESFONTAINIE^iE. Calyx 4-5-parted ; segments nearly equal, obtuse, cartilaginous, nerved, imbricate in aestivation. Corolla tubular, cartilaginous, 5-nerved ; nerves running through the axis of the segments; limb 4-5-lobed: lobes very veiny, roundish, retuse, with ciliated edges, imbricate in aestivation. Stamens 4-5, inclosed, glabrous, combined with the tube of the corolla nearly their whole length, free at apex, thick convex on one side and flat on the other; anthers erect, innate 2-celled : cells linear, parallel, separated by narrow intervals, inserted in a large fleshy connective (continuation of the filaments), which is shorter than them, dehiscing longitudinally. Ovarium globose, 1-celled; ovula very numerous, horizontal, without order, adnate to septiform placentas. Style filiform, glabrous ; stigma capitate. Berry globose, 1-celled, many-seeded. Placentas 4-5, parietal, hence the berry appears many-celled ; free from the inner margin; thickened, trigonal, having reflexed, seminiferous sides. Column none. Seeds numerous, disposed without order, erect, obovate, ventricose, angular; furnished with an umbilicus at the base, a dark brown dilated chalaza at apex, and a prominent, callous raphe on the inner side. Outer testa coriaceous, fulvous, full of pellucid dots: inner one membranous, paler, adhering to the nucleus. Albumen copious, fleshy, white. Embryo very minute, roundish, milk coloured, erect in the umbilical end of the seed, with very short cotyledons, and a thick, very blunt radical.— Evergreen shrubs, natives of South America, having a very bitter taste. Leaves opposite, petiolate, spinosely toothed: petioles articulated with the branches. Flowers terminal, solitary, pedunculate; peduncles bibracteate. Corollas scarlet, with a yellow limb. Berries white.

Some groups of plants exist in whose external features there is nothing that can lead to a knowledge of their affinities ; and among these may be ranked the remarkable genus under consideration. From observing the similarity in the disposition of the veins of the calyx and corolla, and the consistence of these organs, as well as the nervation and dentation of the leaves, I was led to conclude that it might be allied to *Theophrdsta;* but a closer examination did not confirm that conjecture ; although from remarking the nature of the albumen, and the structure and position of the embryo, I was afterwards induced to compare it with the *Gentianece,* to which family I am now fully persuaded it must be referred, notwithstanding its toothed leaves, and the greater number of its placentae.—D. Don, in edinb. phil. journ. July, 1Sept. 1831.

XLVI. DESFONTAINIA (for derivation see Fontanesia, p. 51. of the present volume.) Ruiz, et Pav. fl. per. syst. 1 . p. 59. fl. per. 2. p. 47. t. 186. gen. t. 5. Humb. et Bonpl. pi. sequin. 1. p. 157. t. 45. H. B. et Kunth. nov. gen. amer. 7. \u 274. syn. 4. p. 267. D. Don, in edin. phil. journ. July, Sept. 1831.—Linkia Pers. ench. 1. p. 219.

LIN. SYST. ***Telra-Pentdndria Monogynia.*** **Character the** same as that of the tribe.

1 D. SPINOSA (Ruiz, et Pav. 1. c.) calycine segments Ungulate, and are, as well as the leaves, glabrous. T? . G. Native of Peru, in forests, atChurupallana,Tarma, and betwixt Munna and Pozuzo, Ruiz, et Pav.; and on the Andes of Quindiu, and in Parama de Almaguer, Humb. et Bonpl. D. splendens, Humb. et Bonpl. pi. aequin. amer. 1. p. 157. t. 45. H. B. et Kunth. nov. gen. 7. p. 274. Linkia Peruviana, Pers. ench. 1. p. 219. An erect, much branched, evergreen, glabrous shrub. Leaves elliptic-oblong, coriaceous, glabrous, shining above, cuneated

and quite entire at the base, with spiny-toothed margins; teeth large, 7-14 in number. Calyx glabrous, hardly shorter than the peduncles. Corolla 4 times longer than the calyx. Berries white, size of cherries.

Spt7iy-toothed leaved Desfontainia. Shrub 10 feet.

2 D. PARVIFÒLIA (D. Don, in edinb. phil. journ. July, Sept. 1831.) ribs of leaves pilose beneath; calycine segments oval, ciliated. f? . G. Native of Peru, on the mountains at Munna, Ruiz. D. spinòsa, Ruiz, herb, but not of fl. per. A much branched,compact,evergreen shrub, with quadrangular branches; angles prominent. Leaves cuneated, 5-7-toothed, rarely tricuspidate, shining above ; teeth spiny. Bracteas connate at the base, having the edges and ribs pilose. Lobes *of* corolla ciliated. Stigma furnished with 4 tubercles, pruinose.

Small-leaved Desfontainia. Shrub 5-10 feet.

Cult. The species of *Desfontàinia* are shrubs worth cultivating in every collection, for the elegance of their foliage, as well as the brilliancy *of* their flowers. We would recommend them to be grown in pots filled with a mixture of peat, loam, and sand,, if they ever should be introduced to our gardens. Young cuttings will probably strike root in sand under a bell-glass.

XLVII. PALLA'DIA (meaning unknown to us.) Lam. ill. t. 285.-—Blackwèllia, Ga?rtn. fruct. 2. t. 117.

LIN. SYST. *Octandria, Monogynia.* Calyx funnel-shaped, coloured ; with a short tube, and 4 obovate segments. Corolla funnel-shaped ; tube long, with 8 plaits; limb in 8 oblong segments. Stamens 8, united to the tube of the corolla for more than half its length, permanent: anthers unknown. Ovaria *2* ; style simple, compressed, situated between the ovaria, and parallel to them, and connected with their base; its edges finely-toothed; stigmas 2, spreading. Capsules 2, club-shaped, prismatic, erect, parallel, close together, membranous, stiff, obscurely angular at one side, and marked with a deep furrow on the other, each of 1 -cell, and 2 finally spiral valves. Seeds numerous, minute, roundish, rather angular ; placentas spongy, as long as the capsule, to the edges of whose valves, at the furrowed side, it is attached, being marked there by a similar furrow ; while its other side is convex, and its whole surface rough with minute tubercles.

] P. ANTARCTICA (Lam. 1. c. Smith, in Rees' cycl.) Native at Cape Horn. ?

Antarctic Palladia. PI. small.

Cult. For culture and propagation see *Gentiàna,* p. 183.

ORDER CLVIII. BIGNONIA^CEiE. R.#Br. prod. p. 470. H. B. et Kunth. nov. gen. amer. 3. p. 132. D. Don, in edinb. phil. journ. july, sept. 1823.—Bignoniae,sect. II. Juss. gen. *139.* edit. Usteri, p. 154.

Calyx divided or entire, sometimes spathaceous. Corolla uionopetalous, hypogynous, usually irregular, with a 4-5-lobed limb. Stamens 5 ; filaments unequal, 4 of which usually bear anthers, and sometimes only 2 of them, seldom all fer« tile, therefore there are either 1 or 3 of them sterile; anthers 2-celled ; cells equal in insertion, usually divaricate. Ovarium girded by a glandular disk, 2-celled, or falsely 4-celled, many-seeded. Style 1 ; stigma bilamellate. Capsule 2-valved, 2-celled, sometimes falsely 4-celled ; dissepiment parallel or contrary, at length free, bearing the seeds at the com- . with the valves. Seeds transversely foliaceous, compe 1 Albumen none. Embryo straight, foliaceous; with a centrifugal radicle.—Trees or shrubs often twining or climbing. Leaves opposite, rarely alternate, usually compound, rarely simple, exstipulate. Inflorescence terminal and axillary, somewhat panicled.

This is readily distinguished from the allied orders, in the fruit, structure, and placentation of the seeds. The showy, trumpet-shaped flowers of all the species render them objects, of admiration. The greater number of them are tropical. *Tecoma* is a hardy, climbing shrub, of great beauty when in blossom; and the species of *Jacardnda* are resplendent with blue or purple flowers, and elegant supra-decomposed leaves, which emulate those of *Acacia.* The wood is said to resist the attack of worms. Nothing is known of their qualities.

Among the numerous tribes of vegetables which people the regions of equinoxial America, the *Bignoniacece* hold a distinguished rank, whether as regarded for the beauty of their flowers, and the diversity of their forms, which give to the vegetation peculiar features, or as objects highly deserving the attention and investigation of the botanist. Perhaps in no tribe of plants, does the form of vegetation assume such variety as in this family. In the beautiful genus *Jacardnda* are contained the loftiest trees to be met with either in this or any of the neighbouring orders. These splendid trees, which are entirely wanting in the ancient continents, form one of the brightest ornaments of the forests of tropical America. The genus *Bigndnia,* as constituted by Linnaeus, contained an assemblage of plants, which, generically considered, were widely different from each other. To Jussieu we are indebted for having set us an example worthy of imitation, by his judicious division of this overgrown genus. It is the great advantage which a natural system possesses over all artificial methods in the studying of vegetables, that it teaches us to examine and group them according to their respective affinities; and to give to the different parts their relative importance, in characterizing genera. Willdenow, and almost all those botanists who have followed the Linnaean artificial method of classification, have left the genus *Bigndnia* untouched, without even adopting the important divisions proposed by M. de Jussieu.

Synopsis of the genera.

TRIBE I.

BIGNONIE^. Capsule 2-valved, 2-celled. sometimes falsely 4-celled. Dissepiment parallel or contrary to the valves, at length free, bearing the seeds at the commissures with the valves. Seeds transverse, compressed, winged on the margins.

§ 1. *Stamens* 4, *didymous, with the rudiment of a sterile one.*

1 BIGNÒNIA. Calyx 5-toothed. Corolla with a short tube, a campanulate throat, and a 5-lobed limb. Stamens 4, didynamous, with a fifth sterile one. Lobes of anthers divaricate. Capsule silique-formed ; dissepiment parallel.

2 SPATHÒDEA. Calyx spathaceous, cleft on one side, and toothed or entire on the other. Corolla funnel-shaped, with a 5-lobed, somewhat bilabiate limb. Stamens 4, didynamous, with a fifth sterile one. Lobes of anthers divaricate. Capsule

silique-formed, falcate, falsely 4-celled; dissepiment contrary, corky.

3 TE'COMA. Calyx 5-toothed. Corolla with a short tube, a campanulate throat, and a 5-lobed sub-bilabiate limb. Stamens 4, didynamous, with a fifth sterile filament. Lobes of anthers divaricate. Capsule silique-formed; dissepiment contrary.

4 JACARA'NDA. Calyx 5-toothed, rarely entire. Corolla with a short tube, a campanulate throat, and a 5-lobed, bilabiate limb. Stamens 4, didynamous, with the rudiment of a fifth; anthers usually 1-lobed, rarely 2-lobed. Capsule broad, compressed; dissepiment contrary; valves woody.

5 AMPHILOPHIUM. Calyx with a double limb; inner one bilabiate; outer one undulately curled. Corolla sub-coriaceous; with a short tube, a large ventricose throat, and a bilabiate limb; upper lip galeate, bidentate; lower one tridentate. Stamens 4, didynamous; with the rudiment of a fifth. Lobes of anthers divaricate. Capsule ovate, rather ligneous; dissepiment parallel. ?

6 ZEYHE'RIA. Calyx spathaceous, closed, at length bipartite. Corolla with a short tube, and a 5-lobed, somewhat bilabiate limb. ? Stamens 4, didynamous, with the rudiment of a fifth. Capsule echinated, orbicular, compressed; dissepiment contrary.

7 FREDERICIA. Calyx coloured, pentagonal, 5-toothed. Corolla salver-shaped, with a cylindrical tube, and a spreading, 5-6-cleft, equal border. Stamens 4, didynamous, with the rudiment of a fifth. Capsule oblong, compressed, acutish; dissepiment contrary.

8 FERDINANDU'SIA. Calyx 4-toothed. Corolla funnel-shaped, 4-parted; segments bifid, bearded. ? Stamens 4, didynamous, with the rudiment of a fifth. Capsule compressed, elliptic, 2-celled, 4-valved; dissepiment contrary. ?

9 STENOLOBIUM. Calyx 5-toothed, small. Corolla with a narrow tube, a dilated, campanulate throat, and a 5-lobed, bilabiate limb. Stamens 4, didynamous, with the rudiment of a fifth; lobes of anthers linear, divaricate. Capsule linear, silique-formed; dissepiment parallel.

10 DELOSTOMA. Calyx 3-lobed, coriaceous. Corolla funnel-shaped, with a dilated throat, and a spreading, bilabiate limb. Stamens 4, didynamous, with the rudiment of a fifth. Lobes of anthers parallel. Capsule lanceolate, compressed; valves coriaceous; dissepiment parallel.

11 ASTIA'NTHUS. Calyx tubular, 5-toothed. Corolla with a short tube, a campanulate throat, and a 5-lobed, bilabiate limb. Stamens 4, didynamous, with the rudiment of a fifth. Lobes of anthers confluent. Capsule silique-formed; dissepiment parallel. Seeds winged, and pappose.

12 CHILOPSIS. Calyx ventricose, membranous, cleft even to the base on the lower side; limb oblique, tridentate. Corolla with a short tube, a campanulate throat, and a 5-lobed, bilabiate limb. Stamens 4, didynamous, with the rudiment of a fifth. Lobes of anthers equal, divaricate. Capsule short, silique-formed; dissepiment contrary.

13 OXE^RA. Calyx 4-parted. Corolla with a short tube, a dilated throat, and a 4-cleft, nearly equal limb. Stamens 4, didynamous, 2 of which are sessile. Ovarium 4-lobed, seated on a glandular disk. Fruit unknown. Probably a genus of *Cyrtandracece.*

§ 2. *Stamens* 5, *all fertile.*

14 PLATYCA'RPUM. Calyx 5-parted. Corolla with a short tube, a funnel-shaped throat, and a 5-lobed, nearly equal limb. Stamens 5, equal, fertile. Capsule didymous, ligneous, compressed; dissepiment contrary; cells 2-seeded.

15 CALOSA'NTHES. Calyx entire. Corolla with a short tube, a campanulate throat, and a 5-cleft, curled, bilabiate limb. Stamens 5, all fertile, the exterior pair the longest. Capsule silique-formed, compressed; dissepiment contrary.

§ 3. *Stamens* 4, *didynamous, without the rudiment of the sterile one.*

16 MILLINGT6NIA. Calyx slightly 5-parted. Corolla with a long, slender tube; a funnel-shaped, 4-parted limb; the upper segment broadest, and nearly half 2-cleft. Stamens 4, didynamous, without any rudiment of a fifth. Capsule silique-formed, slender; dissepiment parallel.

17 ARGY'LIA. Calyx 5-cleft. Corolla with a short tube, a campanulate throat, and a 5-lobed, somewhat bilabiate limb. Stamens 4, didynamous, without any rudiment of a fifth. Anthers bearded; lobes equal, divaricate. Capsule silique-formed, compressed; dissepiment parallel.

18 iNCARviLLEA. Calyx tri-bracteate, 10-cleft; the 5 outer segments subulate; the 5 inner shorter and bifid. Corolla with a short tube, a ventricose throat, and a 5-lobed, bilabiate limb. Capsule silique-formed, 6-ribbed; dissepiment bilamellate, contrary.

19 WIGHTIA. Calyx 4-toothed. Corolla funnel-shaped; limb 4-cleft, upper segment 2-lobed. Stamens 4, didynamous, without any rudiment of a fifth. Hypogynous disk wanting. Stigma clavate, undivided. Capsule silique-formed; dissepiment parallel. Seeds imbricated lengthwise.

§ 4. *Stamens* 5, 2 *of which fertile, and* 3 *sterile.*

20 CATA'LPA. Calyx 2-parted. Corolla with a short tube, a ventricose, campanulate throat, and an unequal, 4-lobed limb. Stamens 5, 2 fertile, and 3 sterile. Capsule silique-formed; dissepiment parallel.

21 SCHREBE'RA. Calyx tubular, bilabiate; lips nearly equal, emarginate. Corolla salver-shaped, with a cylindrical tube, and a spreading, 5-6-7-cleft border. Stamens, 2 fertile, and 3 sterile. Capsule pear-shaped, woody; dissepiment parallel.

TRIBE II.

TOURRETIE'JE. Capsule 1-celled, 2-valved; valves placentiferous in the middle. Placentas 2, large and fleshy. Seeds imbricated, horizontal, flattened, girded by a membranous margin.

22 TOURRE'TTIA. Calyx bilabiate; upper lip acuminated; lower one 4-notched. Corolla with the tube equal in length to the calyx, and a unilabia'e limb; upper lip drawn out into a

hollow ; lower lip wanting. Stamens 4, didynamous. Capsule ovate, or oblong, echinated, 2-celled; dissepiment prismatic, central, seminiferous.

23 ECCREMOCA'RPUS. Calyx membranous, 5-cleft, coloured. Corolla tubular, with an equal throat, and a 5-lobed, equal limb. Stamens 4, didynamous, with the rudiment of a fifth ; anthers versatile; cells parallel, combined ; wings of seeds repandly sinuated, nerved.

24 CALA'MPELIS. Calyx semi-5-cleft. Corolla with a tubular base, a ventricose throat, and a contracted, 5-lobed limb. Stamens 4, didynamous, without any rudiment of a sterile one. Lobes of anthers obtuse, divaricate, distinct at apex. Wings of seeds repandly sinuated, emarginate at the base.

TRIBE III.

CRESCENTIE'ZE. Fruit a large, melon-shaped, 1-celled berry ; with a solid rind, pulpy inside. Seeds nestling in the pulp.

25 CRESCE'NTIA. Calyx bipartite or bilabiate. Corolla large, campanulate, with a short tube, a ventricose throat, and an erect, 5-lobed, cleft, unequal limb. Stamens 4, didynamous, with the rudiment of a fifth. Berry large, many-seeded.

26 TAN^CIUM. Calyx cylindrical, truncate. Corolla with a very short tube, a large, ventricose throat, and a nearly equal, 5-lobed limb. Stamens 4, didynamous ; with the rudiment of a fifth. Berry large, corticate.

27 TRIPINNA'RIA. Calyx cup-shaped, 5-crenate. Corolla sub-campanulate ; tube longer than the calyx ; throat widened ; limb 5-cleft, spreading; upper segment the largest. Stigma bifid, acute. Berry large, fleshy. Seeds compressed.

Tribe I.

BIGNONIE^NiE (this tribe contains genera agreeing with the genus *Bignčnia* in important characters.) Capsule 2-celled, 2-valved, sometimes falsely 4-celled. Dissepiment parallel or contrary to the valves. Seeds transverse, compressed, winged on the edges.

§ 1. *Stamens* 4, *didynamous, with the rudiment of a sterile one,*

I. BIGNO'NIA (so named by Tournefort, in compliment to the Abbé Bignon, Librarian to Louis IV.) Tourn. inst. *72.* Juss. 139. Gaertn. fruct. t. 52. H. B. et Kunth, nov. gen. amer. 3. p. 132. D. Don, in edinb. phil. journ.—Bignónia species of Lin. and others.

LIN. SYST. *Didynamia, Angiosperma.* Calyx campanulate, 5-toothed, rarely entire. Corolla with a short tube, a campanulate throat, and a 5-lobed, bilabiate limb. Stamens 4, didynamous, that is, *2* long, and 2 short, with the rudiment of a fifth. Lobes of anthers divaricate. Stigma bilamellate. Capsule silique-formed, 2-celled; having the dissepiment parallel with the valves ; seeds disposed in 2 rows, imbricate, transverse, with membranous wings.—Usually scandent shrubs, furnished with tendrils ; rarely erect trees or shrubs. Leaves opposite, simple, conjugate, ternate, digitate or pinnate. Flowers axillary and terminal, usually panicled. Corollas trumpet-shaped, white, yellow, orange-coloured, purple, violaceous, or rose-coloured.

§ *2, Leaves simple.*

1 B. V.M.NVLIS (H. B. et K«nth, nov.gen. 3. p. 132.) arboreous; L«« 2TMPle, usually bv threes, linear, narrowed at terminal, glabrous. h s! Native of Mexico, on the western declivities of mountains, betwixt Mescala and Estola, at the altitude of 360 hexapods. A tall tree, with a dense, pyramidal head. Leaves 8-10 inches long, and 5 lines broad. Calyx 5-toothed ; teeth acute. Corolla yellow, campanulately funnel-shaped ; limb downy outside, with undulated margins.

Twiggy Trumpet-flower. Tree tall.

2 B. ? TOMENTÒSA (Thunb. jap. 252.) arboreous ; leaves simple, cordate, tomentose, opposite ; flowers in axillary panicles. Pj . H. Native of Japan. Too-vulgo Kiri, Kaempf. amcen. 859. t. 860. Incarvillea tomentósa, Spreng. syst. 2. p. 836. Lower leaves cordate ; upper ones ovate-acute, 5-nerved, downy above, and tomentose beneath, as well as the peduncles and pedicels. Panicles at first trichotomous, then dichotomous. Perhaps a species of *Catdlpa.*

Tomentose Trumpet-flower. Fl. ? Clt. 1820. Tree.

3 B. ? TENUISILIQUA (Vahl. eclog. 2. p. 43.) climbing; leaves simple, lanceolate, acuminated, glabrous, opposite ; panicles terminal; corolla glabrous. P? . ^. S. Native of South America. Branches beset with white dots. Leaves 2-3 inches long, and 1 broad. Capsule or follicle 1^ foot long.

Slender-podded Trumpet-flower. Shrub cl.

4 B. FLORIBI/NDA ; leaves opposite, simple, ovate-roundish, acuminated, sub-cordate, 3-nerved, petiolate ; flowers crowded, panicled. Pj. S. Native of Maranham, in low, bushy places. Flowers very showy, flesh-coloured, in great profusion.

Bundle-flowered Trumpet-flower. Shrub straggling.

5 B. PA'LLIDA (Lindl. bot. reg. 965.) erect, glabrous; leaves simple; opposite, oblong, obtuse, rather cordate at the base; flowers axillary, usually solitary; pedicels and calyxes lepidoted ; calyx turbinate, irregularly 5-toothed. *V?* . S. Native of St. Vincent. Branches terete. Corolla 2 inches long, funnel-shaped : with a yellow tube, and a pale lilac limb; lobes crenately ciliated.

/W<?-flowered Trumpet-flower. Fl. July. Clt. 1823. Shrub 6 feet.

6 B. ? OBTUSIFÒLIA (Lam. diet. 1. p. 418.) leaves alternate, simple, ovate-oblong, obtuse ; corymbs small, terminal; calyx 4-lobed, unequal; corolla tubular: with a 4-lobed, unequal, reflexed limb. P? . S. Native of Brazil. Leaves tapering into the petioles. Flowers large. This differs from all the rest, in the leaves being alternate, and in the corolla and calyx being 4-lobed.

Blunt-leaved Trumpet-flower. Shrub.

7 B. ? ILLICIFÒLIA (Pers. ench. 2. p. 170.) leaves nearly opposite, ovate, mucronate, coriaceous, glabrous : with revolute margins. P? • $. Native of Madagascar, Commers. There is also a variety of this, with emarginate leaves.

Holly-leaved Trumpet-flower. Shrub.

§ 3. *Leaves conjugate, that is, one pair of leaflets at the top of each petiole, which is extended into a tendril.*

8 B. U'NGUIS (Lin. spec. 869.) scandent, glabrous; branches terete?; leaves conjugate; leaflets ovate, acuminated; tendrils bent, tripartite ; peduncles axillary, 1-flowered. *2. w. S. Native of Barbadoes, St. Domingo, &c. Mill. diet. no. 5.—Tourn. inst. 164.—Sloane, jam. 90. hist. 1. p. 208.—Plum. amer. 80. p. 94.—Plukn. aim. 109. t. 163. f. 2. Flowers yellow. Follicles long.

Claw Trumpet-flower. Fl. ? Clt. 1759. Shrub cl.

9 B. UNCINA'TA (Meyer, prim, esseq. p. 210.) scandent, glabrous; leaves conjugate; leaflets oval, drawn out into a cuspidate point; tendrils trifid ; peduncles axillary. 1-flowered ; calyx bilabiate. P2 . ^. S. Native of about the Essequibo. Spathddea uncinàta, Spreng. syst. 2. p. 835. Leaflets *2* inches long, and 1\ broad, glabrous, shining above, having the veins red beneath. Peduncles short, rising from 2 ovate-acute brae-

teas. Corolla an inch long, yellow. Capsule a span long, Seeds 2-lobed, acute, acuminated at both ends by a wing. Very nearly allied to *Bignonia unguis-catL*

Hooked Trumpet-flower. Shrub cl.

10 B. STAMINEA (Lam. diet. 1. p. 416. Willd. spec. 3. p. 293.) scandent; leaves conjugate; leaflets ovate-oblong ; tendrils simple, convolute; peduncles axillary, 1-flowered; stamens and style exserted. *h*c . w. S. Native of St. Domingo.—Plum, spec. 5. icon. t. 56. f. 2. Flowers yellowish purple, scentless. Fruit hard, ovate. It differs from the rest, in the stamens being longer than the corolla, in the style being very long, and clavate.

Long-stamened Trumpet-flower. Fl. ? Clt. 1825. Shrub cl.

11 B. CAPREOLATA (Lin. spec. 870. hort. cliff. 317.) scandent; leaves conjugate; leaflets cordate-oblong: lower ones simple ; tendrils small, trifid: lobes bifurcate; peduncles axillary, 1-flowered, crowded. ^ • v^- H. Native of North America, in the more southern parts. Sims, bot. mag. 864.—Breyn. icon. 33. t. 25.—Duham. arb. 1. p. 104. t. 40.—Bocc. sic. 31. t. 15. f. 3i.—Zan. hist. 74. f. 2. ed. 2d 49. t. 33. Calyx entire. Corollas reddish yellow. Follicles flattened, a foot long.

Tendrilled Trumpet-flower. Fl. June, July. Clt. 1710. Shrub cl.

12 B. LONGIFLORA (Cav. icon. 6. p. 58. t. 581.) scandent; branches terete; leaves conjugate; leaflets lanceolate, glabrous, shining ; tendrils simple : peduncles terminal, twice trifid ; corolla funnel-shaped: upper lip erect, deeply emarginate ; lower lip tripartite. *h* . w. S. Native of Guayaquil. Corolla 3 inches long, scarlet, copper-coloured inside.

Long-Jlowered Trumpet-flower. Shrub cl.

13 B. CHAMBERLAYNII (Sims, bot. mag. 2148.) branches terete, glabrous; leaves conjugate; leaflets ovate, acuminated, glabrous, shining above ; tendrils strong, simple ; racemes axillary, 6-8-flowercd. J? . ^. S. Native of Brazil. B. aequinoxialis, /3, Chamberlaynii, Ker. bot. reg. t. 741. Calyx cupulate, entire, or obsoletely 5-toothed. Corolla funnel-shaped, yellow; segments obtuse.

Chamber layne's Trumpet-flower. Fl. April, Oct. Clt. 1820. Shrub cl.

14 B. ^EQUINOXIALIS (Lin. spec. 869. Meyer, esseq. p. 210.) scandent; branches terete, glabrous; leaves glabrous, conjugate ; leaflets oblong-lanceolate ; tendrils simple, axillary; peduncles 2-flowered : terminal ones racemose; follicles linear. *h* . w. S. Native of Cayenne, and the island of Arrowabisch. —Plun^pec. 5. icon. 55. f. 1.—Sabb. hort. 2. t. 85. Mill, diet, no!^^ Flowers yellow. Calyx 5-toothed. Anthers hairy, and peduncles 5. Vahl, 1. c.

Equinoxial Trumpet-flower. Fl. April, Oct. Clt. 1768. Shrub cl.

15 B. ALLIACEA (Swartz, prod. p. 91. fl. ind. occ. 2. p. 1039. Lam. diet. 1. p. 421.) branches tetragonal; leaves conjugate; leaflets elliptic, coriaceous ; tendrils simple ; peduncles axillary, 5-flowered ; calyx 5-toothed. J? . ^. S. Native of Guiana and Cayenne, and the West Indies. Barrel, aequin. 23. Aubl. guian. 2. p. 659. Leaflets large, acute at both ends, smelling of garlic. Flowers large, white. The garlic scent of this species is sufficient to distinguish it from all others, hence its trivial name, and its name in French, *liane a Vail.*

Garlic-scented Trumpet-flower. Fl. ? Clt. 1790. Shrub cl.

16 B. RIGESCENS (Jacq. schoenbr. 2. p. 44. t. 210.) scandent; leaves conjugate f leaflets elliptic, retuse; flowers racemose; peduncles 3-flowered ; tendrils simple, short; calyx 5-toothed. *2 . ^. S. Native of the Spanish Main, at Caraccas, Willd. spec. 3. p. 294. Leaflets ovate, stiffish, ex Jacq. Corollas white, with a tinge of red, yellow inside; tube incurved; segments of the limb obcordate. Branches terete.

Stiffish-leaved Trumpet-flower. Fl. Ju. July. Clt. 1823. Shrub cl.

17 B. SALICIFOLIA (H. B. et Kunth, nov. gen. amer. 3. p. 133.) scandent; branches terete, sulcate, glabrous ; branchlets hairy ; leaves conjugate; leaflets lanceolate, acute at both ends, quite glabrous, shining; tendrils simple ; peduncles axillary, *3-6*-flowered, downy. ^ • vy $• Native on the banks of the Orinoco, near Carichana, and of Trinidad. Leaflets membranous, 3 inches long. Calyx quite entire. Corollas funnel-shaped, 1^ inch long, copper-coloured ; with a white limb.

Willow-leaved Trumpet-flower. Clt. 1824. Shrub cl.

18 B. CHRYSOLEUCA (H. B. et Kunth, nov. gen. amer. 3. p. 134.) scandent; branches tetragonal, sulcately striated, glabrous ; leaves conjugate; leaflets oblong, acuminated, glabrous, rounded at the base, shining; tendrils undivided; peduncles 3-5-flowered. P? . ^. S. Native on the banks of the river Magdalena. betwixt Rio Viego, and Bogorgne. Leaflets 5-6-inches long, and 2 broad. Common petioles puberulous. Calyx quite entire. Corolla glabrous, yellow, with a white limb, 1£ inch long.

Yellow and White-Lowered Trumpet-flower. Fl. Ju. July. Clt. 1824. Shrub cl.

19 B. LACTIFLORA (Vahl, symb. 3. p. 80. t. *66.)* scandent, glabrous ; leaves conjugate ; leaflets cordate, ovate, glabrous; tendrils trifid; racemes leafy at bottom; limb of calyx quite entire. I?. y. S. Native of the Island of Santa Cruz. Branches striated. Leaflets 2 inches long. Racemes twin ; with a petiolate bractea at the base of each pedicel. Corolla 1^- inch long, milk white, villously tomentose on the outside. Follicles lanceolate, 2 inches long, acute at both ends.

Milk-Jlowered Trumpet-flower. Fl. Ju. July. Clt. 1823. Shrub cl.

20 B. CRUCIGERA (Lin. spec. 869.) scandent, glabrous ; leaves conjugate, lower ones ternate; leaflets ovate-cordate, acuminated ; racemes axillary ; stem muricated ; tendrils simple. Tj. ^. G. Native of Virginia, Mexico, &c. Lin. hort. cliff. 317. Mill, diet. no. 12.—Grov. virg. p. 73.—Plum. icon. 48. t. 58.—Morr. hist. 3. p. 672. sect. 15. t. 3. f. 16. Leaflets large. Flowers yellow, whitish beneath. A transverse section of the stem represents a cross, hence the trivial name. Follicles a foot long.

Cross-bearing Trumpet-flower. Fl.? Clt. 1759. Shrub cl.

21 B. GRANDIFOLIA (Jacq. schoenbr. 3. p. 19. t. 287.) scandent; petioles and branches scabrous ; leaves conjugate; leaflets oblong or ovate, acute at both ends; tendrils simple; corymb terminal, trifid ; peduncles 3-flowered, scabrous. T? . w. S. Native of the Spanish Main, about Caraccas, Willd. spec. 3 p. 296. Ker. bot. reg. 418. Hook. bot. mag. 3011. Leaflets large, a foot long. Calyx bluntly 4-toothed. Corollas yellow, *2* inches long.

Great-leaved Trumpet-flower. Fl. April, July. Clt. 1816. Shrub cl.

22 B. LATIFOLIA (Rich, in act. soc. hist. nat. par. 1. p. 11.) scandent, glabrous; leaves conjugate; leaflets ovate, nerved, membranous; tendrils ? spikes or racemes lateral; calyx inflated, f? . w. S. Native of Cayenne. Flowers crowded, large, yellow.

Broad-leaved Trumpet-flower. Fl. ? Clt. 1823. Shrub cl.

23 B. PUBESCENS (Lin. spec. p. 870.) leaves conjugate, cirrhose ; leaflets cordate-ovate, downy beneath, *h* . ^. S. Native of Campeche. Flowers yellow.

Downy Trumpet-flower. Fl. June, July. Clt. 1759. Shrub cl.

24 B. AFFINE ; leaves binate, cirrhose ? ; leaflets ovate-lanceolate, cordate at the base, downy beneath ; racemes terminal, compound. T? . *KJ.* S. Native of Maranham. Flowers middle-sized, yellow. Nearly allied to *B. pubescens.*

Allied Trumpet-flower. Shrub cl.

25 B. PICTA (H. B. et Kunth, nov. gen. amer. 3. p. \$A)

erect; branches compressed, striated, glabrous ; leaves conjugate ; leaflets ovate, obtuse, roundish at the base, rather coriaceous, glabrous, shining; panicles terminal, few-flowered ; corollas glabrous. *2 . S. Native of the province of Guayana, between the town of Angostura and Farrera. Leaflets about 4 inches long, and %\ broad. Calyx quite entire. Corolla funnel-shaped, white, striped with red ; throat yellow.

Painted-dowered Trumpet-flower. Clt. 1823. Shrub 4 feet.

26 B. MAGNOLI;EF6LIA (H. B. et Kunth, nov. gen. amer. 3. p. 136.) creeping; leaves conjugate; leaflets elliptic, short-acuminated, rounded at the base, glabrous, shining; panicles terminal, simple : corollas glabrous. Pj . S. Native of the Missions of Orinoco, in woods near Javita, on the banks of the rivers Tuamini and Temi. Leaflets coriaceous, reticulately veined. Panicles spike-formed, nearly a foot long. Corolla white, with a yellow throat.

Magnolia-leaved Trumpet-flower. Shrub creeping.

27 B. SPECTA'BILIS (Vahl, symb. 3. p. 80.) scandent, glabrous; leaves conjugate; leaflets ovate-oblong, acuminated, obtuse ; tendrils simple ; flowers racemose, glabrous ; calyx quite entire. ^ . w. S. Native of the Island of Santa Cruz. Willd. spec. 3. p. 294. Racemes terminal, short, having the 2 lower pedicels 3-flowered, and the rest 1-flowered. Bracteas setaceous. Corolla 3 inches long, rather coriaceous, glabrous, purple ; segments obovate. Anthers glabrous. Stigma oblong.

Showy Trumpet-flower. Clt- 1820. Shrub cl.

28 B. ELONGA'TA (Vahl, eel. 2. p. 45. t. 16.) scandent; leaves conjugate; leaflets oval, tomentose beneath ; racemes very long, terminal ; peduncles dichotomous ; tendrils strong, simple ? J?. *yj.* S. Native of South America. Leaflets membranous, 3 inches long, ending in a blunt acumen, clothed with yellowish tomentum beneath. Calyx truncate, entire. Corolla purple ?, 1\ inch long, clothed with fine tomentum, as well as the calyxes.

Elongated-racemed Trumpet-flower. Fl. ? Clt. 1820. Shrub climbing.

29 B. CORYMBIFERA (Vahl, eclog. 2. p. 45. t. 17.) leaves conjugate, without tendrils ; leaflets sub-cordate, ovate, acuminated, glabrous; corymbs axillary and terminal ; calyx quite entire. T? . S. Native of South America. Corymbs trichotomous. Corollas an inch long, downy.

Corymb-bearing Trumpet-flower. Shrub.

30 B. LAURIFOLIA (Vahl, eclog. 2. p. 44.) leaves conjugate ; leaflets oblong, glabrous; racemes terminal; branches dichotomous ; corollas clothed with soft tomentum outside. J? . S. Native of Cayenne. Tendrils none.

Laurel-leaved Trumpet-flower. Fl. ? Clt. 1804. Shrub.

31 B. MOLLISSIMA (H. B. et Kunth, nov. gen. amer. 3. p. 133.) scandent; branches terete, striated, downy; leaves conjugate; leaflets ovate, acute, cordate, clothed with soft hairs above, and fuscescent tomentum beneath ; tendrils undivided; panicles axillary ; corollas downy ouside. ^ • *v* S. Native of the province of Caraccas, in the valleys of Aragua, where it is called *Vejuco* by the natives. Leaflets 2-3 inches long, and \\ to 2 broad. Branches of panicle dichotomous, downy. Calyx 5-toothed. Corollas somewhat funnel-shaped. Follicles 7 inches long, downy.

Very soft Trumpet-flower. Clt. 1820. Shrub cl.

32 B. DIVERSIFOLIA (H. B. et Kunth, nov. gen. amer. 3. p. 133.) scandent; branches quadrangular, striated, glabrous; leaves conjugate and simple ; leaflets roundish-ovate, acuminated, sub-cordate, glabrous, shining ; tendrils undivided; panicles terminal; corollas glabrous. ^ • S. Native of Mexico, near Campeche. Leaflets reticulately veined, and somewhat 5-nerved, membranous, 2| inches long, and 1J broad. Partial petioles downy inside. Calyx 5-toothed. Corollas campanulately funnel-shaped.

Diverse-leaved Trumpet-flower. Clt. 1825. Shrub cl.

33 B. FLORIBU'NDA (H. B. et Kunth, nov. gen. amer. 3. p. 134.) scandent; branches tetragonal, striated, warted ; leaves conjugate ; leaflets oblong-elliptic, acuminated, acute at the base, glabrous, shining ; tendrils undivided ; panicles axillary ; corollas downy outside. P? . y. S. Native of Mexico, near Campeche. Branches beset with white warts and fine powder. Leaflets %\ inches long, and 15-16 lines broad. Panicle powdery, with opposite branches, and dichotomous branchlets. Calyx obsoletely 5-toothed. Corolla funnel-shaped, 8 lines long.

Bundle-flowered Trumpet-flower. Clt. 1824. Shrub cl.

34 B. OBLIQUA (H. B. et Kunth, nov. gen. amer. 3. p. 135.) scandent; branches terete, striated, powdery ; leaves conjugate; leaflets ovate-oblong, obtuse, retuse, obliquely cordate at the base, coriaceous, glabrous, shining; tendrils undivided; peduncles axillary, dichotomous ; corollas glabrous. \^ . w. S. Native of the province of Caraccas, in Isle de las Aves, situated in the lake Tacarigua. Leaflets 3 inches long, and from 18 to 20 lines broad. Calyx quite entire, or irregularly 5-toothed. Corollas funnel-shaped, red.

Oblique-leaved Trumpet-flower. Shrub cl.

35 B. GLABRA'TA (H. B. et Kunth, nov. gen. amer. 3. p. 135.) scandent; brandies terete, warted, glabrous ; leaves conjugate ; leaflets ovate, obtuse, retuse, rounded at the base, rather coriaceous, glabrous, shining ; tendrils undivided ; inflorescence unknown. ^ • *KJ- &•* Native of the Spanish Main, near Cumana, where it is called *Vejuco bianco* by the natives. Capsule 7 inches long. It only differs from the preceding, in the form of the leaves.

Glabrous Trumpet-flower. Shrub cl.

36 B. HONDE'NSIS (H. B. et Kunth, nov. gen. amer. 3. p. 135.) scandent; branches terete, furrowed, glabrous; leaves conjugate; leaflets elliptic-ovate, acuminated, rounded at the base, rather coriaceous, glabrous, shining; tendrils and inflorescence unknown. ^ . w. S. Native of New Granada, near Honda, at the altitude of 130 hexapods. Branches whitish. Leaflets 5-6 inches long, and 3 inches broad. Follicles 12-Hi inches long.

Honda Trumpet-flower. Shrub cl.

37 B. TILLEFOLIA (H. B. et Kunth, 1. c. p. 136.) branches terete, striated, downy ; leaves conjugate; leaflets roundish, acuminated, cordate, membranous, glabrous, downy on the veins beneath; tendrils unknown ; spikes terminal; corollas tomentose outside. Jj . ^. S. Native on the banks of the Orinoco. Leaflets 3 inches long. Spikes 5-6-flowered, tomentose. Calyx obsoletely 5-toothed. Corolla funnel-shaped, with a curved tube, widened upwards. Ovarium oblong, clothed with silky tomentum.

Lime-tree-leaved Trumpet-flower. Shrub cl.

38 B. VILLOSA (Vahl, eclog. 2. p. 44.) leaves conjugate ; leaflets ovate, clothed with very soft villi; tendrils filiform. ^ . ^*j.* S. Native of the Island of St. Martha. Leaflets glabrous above, except the midrib, 2 inches long, acuminated. Calyx truncate, quite entire. Corolla 3 inches long, glabrous, purple. Perhaps the same as *B. pubescens,* Lin. ; but the leaflets in that plant are cordate, and the flowers yellow.

Villous Trumpet-flower. Shrub cl.

39 B. PYRAMIDA'TA (Rich, in soc. hist. nat. par. no 1. Pers. ench. 2. p. 171.) scandent, glabrous; leaves conjugate ; leaflets rather coriaceous ; panicles terminal, rather pyramidal, many-flowered, composed of cymose corymbs. T? . ^. S. Native of Cayenne.

Pyramida l-pan\c\ed Trumpet-flower. Shrub cl.

40 B. CA'NDICANS (Rich. 1. c.) scandent; leaves conjugate ; leaflets roundish-ovate, clothed with white tomentum beneath •

panicles very loose, small-flowered. J?. ^. S. Native of Cayenne.

Whitish-\eaved Trumpet-flower. Shrub cl.

41 B. LONGISILIQUA (Bert, ex Spreng. syst. 2. p. 330.) scandent, cirrhiferous; leaves conjugate ; leaflets deeply cordate, acuminated, membranous, glabrous; racemes terminal, simple; calyx 5-toothed, and are, as well as the corollas, glabrous. ^ . ^. S. Native of New Granada, on the banks of the river Magdalena.

Long-podded Trumpet-flower. Shrub tw.

42 B. SELLOI (Spreng. syst. 2.p. 831.) scandent, cirrhiferous; leaves conjugate; leaflets oblong, sub-cordate, acute, glabrous, shining; panicles opposite, horizontal, many-flowered ; calyxes and corollas glabrous. h_c . ^. S. Native of Brazil.

Sello's Trumpet-flower. Shrub tw.

§ 2. *Lower leaves ternate; upper ones conjugate, furnished with tendrils.*

43 B. ECHINA'TA (Jacq. amer. 183. t. 176. f. 52. Gaertn. fruct. 1. p. 240. t. 52.) branches nodose, angular; petioles of lower leaves dichotomous: branches trifoliate; upper leaves ternate and conjugate ; leaflets ovate, acuminated ; tendrils simple ; corymbs axillary. h_c . vjf. S. Native of Carthagena and Guiana, in sandy places. Aubl. guian. 2. p. 648. t. 264. Lam. diet. 1. p. 415. Jacaranda echinata, Spreng. syst. 2. p. 834. Corolla flesh-coloured, an inch long. Follicles 5 inches long, elliptic, muricated.

Echinated-yodded Trumpet-flower. Clt. 1804. Shrub cl.

44 B. MICROCA'LYX (Meyer, prim, esseq. p. 211.) lower leaves ternate: superior ones conjugate ; leaflets oval, obtuse ; flowers racemose; calyx 5-toothed, very short. f? . $_{KJ}$. S. Native about Essequibo, climbing on the highest trees. Branches nodose at the insertion of the leaves ; nodi compressed. Tendrils none. Racemes axillary, few-flowered. Corollas 3 inches long* purple, elegantly striped inside ; segments obtuse. Lobes of stigma obtuse, crenulated. This species is closely allied to *Bign. echinata,* and *Bign. heterophylla.*

Small-calyxed Trumpet-flower. Shrub cl.

45 B. CHERE^RE (Aubl. guian. 2. p. 644. t. 260.) lower leaves ternate; upper ones conjugate, cirrhose; leaflets ovate, acuminated, sometimes sub-cordate, glabrous ; cymes axillary. J? . $_{yj}$. S. Native of Guiana, in woods, on the banks of rivers. B. heterophylla, Willd. spec. 3. p. 298. B. Kerere, Lam. diet. 1. p. 420. Branches angular. Corollas 2 inches long, yellow. Follicles ovate, hard, compressed.

Cherere Trumpet-flower. Fl. ? Clt. 1824. Shrub cl.

46 B. VENU'STA (Ker, bot. reg. t. 249.) scandent; branches angular, glabrous ; lower leaves ternate ; superior ones conjugate ; leaflets oblong-ovate, acuminated, oblique at the base; petioles villous inside ; corymbs terminal, many-flowered. ^ • ^,. S. Native of Brazil. Calyx villous, short, 5-toothed. Corolla clavately funnel-shaped, with a spreading border, villous inside, crimson.

Lovely Trumpet-flower. Fl. Sept. Dec. Clt. 1816. Shrub climbing.

47 B. INCARNA'TA (Aubl. guian. 2. p. 645. t. 261.) scandent; leaves large ; lower ones ternate ; upper ones binate; tendrils simple ; leaflets ovate, acuminated ; corymbs axillary. T? . $_{yJ}$. S. Native of Guiana, in woods, on the banks of the river Sinemari. Shrub sarmentose. Flowers numerous, rose-coloured. Fruit long, flat.

Flesh-coloured-flowered Trumpet-flower. Shrub cl.

§ 3. *Leaves ternate or trifoliate, destitute of tendrils.*

48 B. TRIPHY'LLA (Lin. spec. 870. Mill. diet. no. 14.) leaves ternate, glabrous; leaflets ovate, acuminated; stem shrubby, erect. Tj . S. Native of the Island of Vera Cruz. Flowers white, in terminal panicles.

Three-leaved Trumpet-flower. Clt. 1733. Shrub erect.

49 B. MOLLIS (Vahl, eclog. 2. p. 46. icon. pi. amer. t. 10.) scandent; leaves trifoliate; leaflets ovate, sub-cordate, downy on both surfaces; panicles terminal, many-flowered; flowers small. J?. $_{v}$. S. Native of Cayenne. B. tomentdsa, Rich, in act. soc. hist. nat. par. 1. p. 11. Branches beset with rufous hairs. Leaflets 5 inches long, obtuse, with a short acumen. Calyx clothed with brownish down, obsoletely 5-toothed. Corolla downy.

Soft Trumpet-flower. Clt. 1818. Shrub cl.

50 B. PILULIFERA (Rich, in act. soc. hist. nat. par. 1. p. 11.) scandent; leaves trifoliate ; leaflets obovate, with a short acumen ; panicles brachiate, composed of compound piluliferous racemes. T? . S. Native of Cayenne. Flowers small.

Pill-bearing Trumpet-flower. Shrub cl.

51 B. CARICHANE'NSIS (H. B. et Kunth, nov. gen. amer. 3. p. 137.) erect; branches terete, striated, glabrous; leaves simple and ternate ; leaflets oblong, obtuse, glabrous, shining, white beneath ; panicles terminal, sessile ; flowers pentandrous ; corollas glabrous. 1/ . S. Native on the banks of the Orinoco, betwixt Encaramada and Carichana. Branchlets rather downy. Branches of panicle dichotomous, hairy. Calyx obsoletely 5-toothed, smoothish. Corolla having the tube widened above, oblique, much longer than the calyx; segments roundish ovate, the 2 upper ones rather the largest. The 2 longer stamens exserted ; filaments all pilose at the base. Anthers sagittately bifid, with diverging lobes. Perhaps a new genus.

Carichana Trumpet-flower. Shrub erect.

52 B. VERRUCOSA (H. B. et Kunth, 1. c. p. 137.) erect?; branches terete, striated, warted, glabrous ; leaves ternate ; leaflets oblong, narrowed at top, obtuse, acutish at the base, glabrous, shining ; panicles terminal, sessile; corollas glabrous. T? . S. Native on the banks of the Orinoco, near the town of Caicaro. Leaflets *9* inches long, and 5 lines broad. Petioles downy. Branches of panicle dichotomous, downy. Calyx downy, 5-toothed. Corolla funnel-shaped, red. Follicles 3 inches long, glabrous.

Jfiarted-branched Trumpet-flower. Shrub erect.

53 B. APURE'NSIS (H. B. et Kunth, 1. c. p. 138.) scandent; branches terete, a little striated, glabrous; leaves ternate ; leaflets elliptic-oblong, short-acuminated, acutish at the base, glabrous, downy on the veins beneath ; spikes terminal, sessile; corollas glabrous. J? . $_{w}$. S. Native on the shady banks of the river Apures, near El Diamante. Branches white. Flowers pedicellate, 2 inches long. Calyx irregularly 3-4 or 5-toothed. Corolla funnel-shaped, yellow, with roundish, spreading, nearly equal lobes. Filaments hairy at the base; the sterile one not seen.

Apures Trumpet-flower. Clt. 1824. Shrub cl.

54 B. UMBROSA (H. B. et Kunth, 1. c. p. 138.) scandent?; branches compressed, striated, clothed with fine, downy hairs; leaves ternate ; leaflets ovate-oblong, acuminated, cordate, glabrous, shining.; flowers panicled ; corollas downy outside. *2. $_{w}$. ? S. Native of New Andalusia, in valleys, about Caripe. Leaflets 5 inches long, and %\ broad. Petioles downy. Branches of panicle dichotomous, downy. Calyx almost quite entire. Flowers sweet-scented. Stamens with glabrous filaments, and ciliately fringed anthers.

Shaded Trumpet-flower. Shrub cl. ?

55 B. RIPARIA (H. B. et Kunth, I.e. p. 138.) scandent; branches terete, striated, clothed with fine downy tomentum; leaves ternate; leaflets obovate-roundish, acuminated, cordate, beset with soft hairs on the veins beneath; panicles axillary, pedunculate ; corollas downy outside. J? . ^. ? S. Native of New Granada, near Mompox, on the banks of the river Magda-

lena. Petioles downy. Bracteas linear, tomentose. Calyx tomentose, almost quite entire. Corolla funnel-shaped, white. The sterile filament has not been seen.

River-side Trumpet-flower. Shrub cl. ?

56 B. LITTORA'LIS (H. B. et Kunth, 1. c. p. 139.) scandent, cirrhose ; branches terete, glabrous; branchlets hairy ; leaves ternate ; leaflets roundish-ovate, acuminated, clothed with soft hairs oh both surfaces ; panicles axillary ; corollas downy outside. *?. ^. ? S. Native of Mexico, about Acapulco. Petioles tomentose. Branches of panicle dichotomous, tomentose. Calyx downy, obsoletely 5-toothed. Corolla funnel-shaped, red. The sterile filament has not been seen.

Seashore Trumpet-flower. Clt. 1824. Shrub cl. ?

57 B. H^MA'NTHA (Bert, ex Spreng. syst. 2. p. *832.)* erect; leaves ternate ; leaflets elliptic, retuse, coriaceous, quite glabrous ; peduncles short, axillary, few-flowered. J?. S. Native of Porto Rico.

Blood-flowered Trumpet-flower. Shrub erect.

§ 4. *Leaves digitate, destitute of tendrils.*

oS B. LEPIDO'TA (H. B. et Kunth, nov. gen. amer. 3. p. *139.)* arboreous ; leaves quinate ; leaflets lanceolate-oblong, obtuse ; with revolute edges, coriaceous, glabrous, covered with small, scale-like dots beneath ; peduncles axillary, usually 3-flowered ; corollas glabrous. J?. S. Native of Cuba, between Havannah and Regla. Branches angular, dichotomous. Peduncles clothed with rusty powder. Calyx irregularly "5-6-toothed, lepidoted outside. Corolla *2* inches long, funnel-shaped, rose-coloured ; with a curved tube, and roundish, undulated lobes.

Scaly-dotted Trumpet-flower. Tree.

59 B. FLUVIA'TILIS (Aubl. guian. *2.* p. *655.* t. 267. H. B. et Kunth, 1. c. p. 139. Meyer, esseq. 211.) arboreous; leaves quinate ; leaflets ovate-oblong, acuminated, coriaceous, glabrous, shining; corymbs axillary, somewhat dichotomous; corollas downy outside. J?. S. Native of Guiana, on the banks of rivers, but always so near their mouths that the water is salt, Aublet; in humid places, on the banks of the Orinoco, near Carichana. Branches terete, warted. Petioles puberulous. Calyx irregularly 3-5-cleft, clothed with white tomentum, ex Kunth, 4-5-toothed, ex Aubl. Corolla funnel-shaped, white. Follicles oblong, compressed, obtuse. Meyer's plant differs from that of Aublet, in the peduncles being few-flowered and terminal, in the calyxes being sub-quinquefid, and in the flowers being fasciculately racemose. Corolla 2 inches long. Lobes of stigma roundish, white.

River Trumpet-flower. Clt. 1824. Tree tall.

60 B. ÆSCULIFO'LIA (H. B. et Kunth, nov. gen. amer. *3.* p. 140.) arboreous ; leaflets 7, obovate-oblong, short-acuminated, narrowed at the base, membranous, downy above, clothed with canescent tomentum beneath ; panicles terminal, sub-corymbose ; corollas downy outside. J?. S. Native of Mexico, in hot valleys, between Acapulco and Mescalo. A very tall tree. Calyx 5-toothed. Corolla sub-campanulate, orange-coloured; with a very short tube; a ventricose throat, which is plicate, longitudinally inside ; the 2 upper segments of the limb erect, smaller; the *3* lower ones reflexed, bearded, marked by a yellow spot.

Horse-chestnut-leaved Trumpet-flower. Tree tall.

61 B. LEUCO'XYLON (Lin. spec. p. 870.) arboreous; leaves quinate; leaflets ovate-lanceolate, acuminated, glabrous ; flowers terminal', solitary or twin. *?. S. Native of Jamaica, on the banks of rivers. Andr. bot' rep' p. 43. t' 43. Swartz, obs p. 233—Brown, jam. 263.-Pluk. aim. 215'. t. 200. rl-Sloane, jam. p. 154. hist. 2. p. 62' Leaves with 5-7-8 leaflets. Calyx bilabiate ; upper lip rounded ; ower lip bifid ; with ovate, sharp teeth. Corolla rose-coloured; with a long, narrow tube, swelling a little at top; limb bilabiate; upper lip the shortest; all the segments rounded and waved, and somewhat villous. Follicles long, Swartz, pendulous. The wood is very hard and white. The flowers are white, not unlike those of *Stramonium,* rising before the leaves, several together, from the ends of the shoots. Pods square, Sloane.

White-wooded Trumpet-flower. Fl. June, July. Clt. 1759. Tree.

62 B. CHRYSA'NTHA (Jacq. schcenbr. 2. p. 45. t. 211.) arboreous ; leaflets 5, ovate, acuminated, tomentose ; flowers terminal, crowded. >?. S. Native at Caraccas. Leaflets on long pedicels, 5 inches long. Calyx tubuJarly-campanulate, 5-toothed. Corollas 2 inches long, yellow. Flowers copious at the tops of the branches; peduncles 1-2-flowered.

Yellow-flowered Trumpet-flower. Fl. May. Clt. 1823. Tree 12-26 feet.

63 B. HIRSU'TA (Lam. diet. 1. p. 222. Willd. spec. 3. p. 299.) arboreous ; leaves quinate ; leaflets obovate, emarginate, downy beneath ; panicles terminal ; corollas curved, clothed with rufescent, yellowish hairs outside. *fy* . S. Native *of* the East Indies. Leaflets nearly 3 inches long. Flowers small, yellow-red. Calyx nearly truncate, furnished with 4 very short teeth. Stamens exserted.

Hairy Trumpet-flower. Tree.

64 B. ANTISYPHILITICA (Mart, reise. bras, ex Linnaea, 5. p. *38.)* arboreous ; lower leaves bipinnate ; superior ones digitately quinate; leaflets ovate, long-acuminated, glabrous ; panicles dichotomous ; capsule linear, flat. ^. S. Native of Brazil, in the province of Rio Negro. Flowers green. Calyx inflated.

Antisiphylitic Trumpet-flower. Tree.

65 B. MEGAPOTA'MICA (Spreng. syst. add. p. 237.) leaves quinate, glabrous; leaflets petiolate, obovate-oblong, quite entire ; peduncles bifid, axillary, cymose ; calyx 5-toothed ; corolla downy. J?. S. Native of Brazil, about Rio Grande.

Rio Grande Trumpet-flower. Shrub or tree.

66 B. ORBICULA'TA (Jacq. amer. 184. t. 180. f. 79.) scandent; leaves quinate; leaflets oblong, acuminated, glabrous; racemes axillary. J?. ^. S. Native of Carthagena, in woods. Jacaranda orbiculata, Spreng. syst. 2. p. 834. Leaflets on long petioles There is a tendril on the upper leaves, in place of a terminal leaflet. Flowers middle-sized, sweet-scented, yellowish, with a paler limb. Follicles large, orbicular, compressed, flat, shining, nearly like those of *Jacaranda Bahamensis.* This is perhaps a species of *Jacaranda.*

Orbicular-podded Trumpet-flower. Shrub cl.

§ 5. *Leaves abruptly pinnate, or bipinnate, furnished with tendrils.*

67 B. CHI'CA (Humb. et Bonpl. pi. aequin. 1. p. 107. t. 31. H. B. et Kunth, nov. gen. 3. p. 142.) scandent; leaves abruptly bi-pinnate; leaflets conjugate, elliptic-ovate, acuminated, deeply cordate, glabrous; panicles axillary, pendulous. J?. w. S. Native on the banks of the Orinoco, and Cassiquiares, near Maypures; Esmeralda; and Mandavaca. Bark clunky. Branches terete, green, dotted with brown. Leaves 8-10 inches long, abruptly bi-pinnate ; pinnae 2 pair; leaflets conjugate. Tendrils simple, from the tops of the general and partial petioles. Branches of panicle dichotomous. Calyx almost quite entire, fleshy. Corolla funnel-shaped, violaceous ; limb with nearly equal, rounded segments. Follicles 2 inches long, compressed, £ an inch broad.

Chica Trumpet-flower. Clt. 1819. Shrub cl.

68 B. CLE'MATIS (H. B. et Kunth, nov. gen. amer. 3. p. 141.) scandent; leaves conjugately pinnate, with an odd one; leaflets 2 pairs, ovate, narrowed at top, acute, cordate at the base, glabrous; flowers panicled. I?. ^. S. Native of Llanos de

Caraccas, betwixt the town of Calabozo, and the river Guarico. Habit of *Clematis vitdlba.* Branches quadrangular, glabrous. Leaves 7-8 inches long ; leaflets 2 inches long, and 1 broad. Tendrils petiolar, trifid at apex. Panicles axillary; downy. Calyx obsoletely 5-toothed, cleft lengthwise, tomentose. Corollas white, yellowish inside ; lobes nearly equal, roundish, red.

Virgin-bower-like Trumpet-flower. Clt. 1820. Shrub cl.

69 B. JASMINIFŌLIA (H. B. et Kunth, nov. gen. amer. 3. p. 141.) scandent; leaves conjugately bipinnate, with 2-3 pair of pinnae, and an odd one ; leaflets 3-4 pair, with an odd one, ovate, obtuse, rounded at the base, the terminal one twice as long as the lateral ones, ovate-lanceolate. ^ . w. S. Native on the banks of the rivers Orinoco and Atabapo, near San Fernando. Branches quadrangular. Leaflets rather coriaceous, 5-8 lines long, lower ones sometimes ternate. Stipulas ? twin, dimidiate, roundish-ovate. Follicles compressed, 7 inches long. This is a very elegant species.

Jasmine-leaved Trumpet-flower. Clt. 1826. Shrub cl.

70 B. TTRNA'TA ; scandent; leaves ternate; divisions pinnate ; leaflets oblong, acute, coriaceous; panicles terminal. J? . w. S. Native of Maranham, among bushes, but rare. Flowers pale red.

TernateAe&ved Trumpet-flower. Shrub cl.

71 B. BĪJUGA (Vahl. symb. 2. p. 68.) glabrous; scandent? ; leaves abruptly pinnate; with only 2 pair of elliptic, acuminated, obtuse, shining leaflets ; petioles margined ; racemes terminal; peduncles" articulated, compressed ; pedicels filiform ; calyx with an almost entire border. ^ • S. Native of Madagascar. Branches alternate, compressed. Leaves rarely conjugate. Leaflets petiolate.

T?vo-}aired-\eaved Trumpet-flower. Clt. 1822. Shrub cl. ?

§ 6. *Leaves impari-pinnate, destitute of tendrils.*

\ 72 B. RACEMŌSA (Lam. diet. 1, p. 424.) glabrous, scandent; leaves impari-pinnate ; leaflets 5-7, ovate, acute ; common petioles winged ; racemes simple, loose, longer than the leaves ; calyx short, almost truncate ; corolla tubular, with a very short, nearly equal limb. ^ . w. S. Native of Madagascar. Leaflets fining, almost an inch long. Calyx truncate.

Var. /3 ; leaflets more numerous, ovate-lanceolate J?. S. Native of Madagascar. Leaflets 9-11. Flowers smaller, disposed in racemes, which are hardly the length of the leaves.

Racemose-flowered Trumpet-flower. Shrub cl. ?

73 B. COMPRE'SSA (Lam. diet. 1. p. 424.) glabrous, scandent?; branches alternately nodo>e and compressed ; leaves impari-pinnate ; leaflets 3 to 7, oval-oblong, obtuse, coriaceous ; common petioles margined ; ultimate branches compressed; calyx almost truncate, with 5 very minute teeth. i?. w. S. Native of the East Indies. Leaves on the compressed branches very rnmute, and simple. Flowers small, few, nearly sessile, at the tops of the branches.

Compressed-hmnched Trumpet-flower. Shrub cl. ?

74 B. MACROSTA'CHYA (Wall. cat. no. 6505.) young branches and rachi of leaves downy; leaves impari-pinnate; leaflets 9, coriaceous, obovate-oblong, acuminated, the lower ones smaller and rounder: having small, subulate stipels at the base of the petiolules ; racemes long, terminal, simple ; corolla downy outside ; bracteas long, linear, one to each pedicel. 1?. S. Native of the East Indies, on the banks of the Saluen river, and on rocks at Kogun.

Long-spiked Trumpet-flowe/. Tree.

75 B. FIMBRIATA (Wall. oat. no. 6500.) erect? ; leaves impari-pinnate ; leaflets hair^, ovate-lanceolate, long-acuminated ; panicles terminal, trichotomous, beset with glandular hairs, as well as the calyxes, which are 5-lobed ; corolla funnel-shaped, with lacerately-fringed segments ; capsule long. ^ • S. Native of the Burmese Empire, at Moalmeyne.

Fringed-flowered Trumpet-flower. Shrub or tree.

76 B. MULTIJUGA (Wall. pi. rar. asiat. 1. p. 81. t. 95. t. 96.) arboreous ; leaves impari-pinnate, with many pairs of leaflets ; leaflets dimidiately ovate-cordate, acuminated, quite entire ; panicles large, terminal; capsule flat, lanceolate, membranaceously winged. f? . S. Native of Silhet and Penang. A large tree, with thick, dotted branches, long leaves, and large leaflets. Flowers large, 3 inches long, by threes, dirty yellow, purplish inside, of a saponaceous odour. Panicle 4 feet long, erect. Calyx pentagonal,*divided into 5, acute, cuspidate teeth. Corolla campanulate, densely villous outside. Wings of seed drawn out at both ends.

Many-paired-leaved Trumpet-flower. Clt. 1827. Tree.

77 B. ADENOPHY'LLA (Wall. cat. no. 6503.) branches downy ; leaves impari-pinnate, downy beneath, as well as the rachi ; leaflets obovate-oblong, mucronate, sessile ; the terminal one the largest, becoming gradually smaller to the base; the lowest pair close to the stem, and rounder, distant from the others; panicles terminal, clothed with rusty down ; calyx large, campanulate, thickly clothed with rusty down ; lobes triangular, acute; corolla large, thickly clothed with woolly tomentum outside, but glabrous inside, with rounded lobes. ^ . S. Native of the Burmese Empire, on mount Taong-Dong, banks of the Irrawaddi; Prome ; Segaen. Peduncles and pedicels thick. Bracteas ovate-acuminated, deciduous. Pods long, terete, ribbed, and curved, tomentose.

Gland-leaved Trumpet-flower. Tree.

78 B. TELFAIRI*: (Bojer, mss. ex Hook. bot. mag. 2976.) arboreous; leaves impari-pinnate, with 6-9 pair of ovate-oblong, acuminated, shining leaflets; panicles terminal, loose ; capsules terete, acuminated, fleshy ; seeds broadly winged. ^ • $• Native of Madagascar, in the temperate regions of the mountains of Angove. Flowers horizontal, drooping, large, of a most delicate rose-colour. Calyx campanulate, with acute, green teeth, edged with red. Lobes of corolla rounded, crenately fringed.

Telfair's Trumpet-flower. Tree 20 feet.

79 B. COLE'I (Bojer, mss. ex Hook. bot. mag. 2817.) leaves 3 in a whorl, impari-pinnate; leaflets 5, elliptic, quite entire ; flowers rising from the main stem, in clusters, on short pedicels ; capsules oblong, acuminated, warted. I? . S. Native of the Mauritius, and Timor. B. ramifldra, Nov. ann. mus. 3. p. 381. Calyx angular, 5-toothed, coloured ; teeth obtuse. Corolla with a cylindrical tube, swollen upwards, thrice as long as the calyx, reddish, veined with yellow; segments of the limb roundish, waved, reddish purple. Anthers 1-celled, the other cell bein^r abortive.

Lady Cole's Trumpet-flower. Tr *e.

§ 7. *Leaves decompound.*

80 B. VARIA'BILIS (Jacq. hort. schcenbr. 2. p. 45. t. 212.) scandent, glabrous; branches tetragonal; lower leaves biternate; superior ones conjugate, divisions ternate ; tendrils trifid, terminating the common petioles, as in the rest of the species ; racemes simple, short, many-flowered, terminal; calyx 5-toothed. J?. ^. S. Native of Caraccas. Leaflets oblong, acuminated, glabrous. Corollas 3 inches long, with a greenish yellow tube, having the limb at first of the same colour ; but this afterwards becomes white.

Variable Trumpet-flower. Clt. 1819. Shrub cl.

81 B. A'LBA (Aubl. guian. 2. p. 653. t. 266.) scandent ; glabrous: leaves composed of 3 pinnate divisions, each division composed of 5 ovate-acuminated, petiolate leaflets ; corymbs axillary, dichotomous, many-flowered. ^ • y $• Native of Guiana, on the banks of the river Sinemari, Lam. diet. 1. p. 420. Willd. spec. 3. p. 505. Jacarānda ālba, Spreng. syst. 2. p. 831. Petioles and branchlets nodose. Flowers white. Fruit ovate-oblong, rugged.

White-flowered Trumpet-flower. Clt. 1823. Shrub cl.

8«'"B AM^NA (Wall. pi. asiat. rar. *2.* p. 78. t. 183.) leaves tripinnate : each pinnae furnished with 3 to 9 lanceolate, acuminated, quite entire, smooth leaflets ; panicle terminal, trichotomous'; calyx bluntly 3-lobed ; limb of corolla puberulous outside. ' J? . S. Native of the Mauritius. Bign. amàra, Loud, hort'. brit. p. 483. Branches cylindrical, dotted. Flowers very fragrant, pale yellow, orange-coloured inside, drooping, subcorymbose. Capsule cylindrical, slender, spiral. Leaves and leaflets on long, angular stalks.

Pleasing Trumpet-flower. Clt. 1828. Tree.

83 B. GHÓRTA (Hamilt. herb, ex Wall. cat. no. 6510.) glabrous : leaves impari-bipinnate; common rachi jointed : partial ones winged, as also jointed ; leaflets ovate, acuminated, attenuated at the base, sessile, the odd one the largest; panicles terminating the branches ; lobes of calyx slight, mucronate ; corolla glabrous. T? . S. Native of the East Indies. Flowers middle-sized. Leaves puberulous in the young state. Leaves with 3 pair of pinnae, the pinnae furnished with 2-3 pairs of leaflets.

Ghorta Trumpet-flower. Tree or shrub.

Cult. All the species of this genus are truly splendid while in blossom, and the greater number of them climbers ; they are therefore desirable plants to train up rafters and pillars, in stoves, as they grow and flower freely. A mixture of loam and peat suits them best; and cuttings taken from young shoots strike root readily, under a hand-glass, in heat, either in mould or sand.

II. SPATHODEA (from *(nra$r}, spathe,* a spathe, in reference to the form of the calyx.) Beauv. fl. d'ow. 1. t. 29. R. Br. prod. p. 471. H. B. et Kunth, nov. gen. amer. *3.* p. 146.—Bignònia species, Lin. Roxb. and others.

LIN. SYST. *Didyndmia, Angiospérmia.* Calyx spathaceous, cleft on one side, and toothed or entire on the other side. Corolla funnel-shaped, with a 5-lobed, rather unequal, subbilabiate limb. Stamens 4, didynamous, that is, 2 long, and 2 short, with the addition of a fifth sterile filament. Cells of anthers divaricate, hanging by their connective. Stigma bilamellate. Capsule silique-formed, falcate, falsely 4-celled ; dissepiment contrary, corky. Seeds furnished with membranous wings, transverse. — Erect shrubs or trees, rarely climbing shrubs. Leavet opposite, rarely alternate, simple, conjugate, but usually impari-pinnate. Leaflets entire. Flowers somewhat panicled, orange-coloured, yellow, or purple.

§ 1. *Leaves simple.*

IS.? ALTERNIFÓLIA (R. Br. prod. p. 472.) leaves alternate, simple, somewhat ovate, entire, coriaceous, glabrous ; stem arborescent. T? . S. Native of New Holland, within the tropic, Bauer.

Alternate-leaved Spathodea. Tree.

2 S. ? COMOSA ; tender parts very downy ; leaves opposite, simple, cordate ; corymbs terminal, short, leafy ; calyx 5-cleft; corolla with a long, slender tube, and bilabiate border. T? . S. Native of Moluccas. Bignonia comdsa, Roxb. fl. ind. 3. p.-103.

Tufted Spathodea. Tree.

§ 2. *Leaves conjugate, tendrilled.*

3 S. LAURIFOLIA (H. B. et Kunth, nov. gen. amer. 3. p. 146.) scandent; branches compressed, a little striated, glabrous; leaves conjugate ; tendrils simple ; leaflets ovate, obtuse, coriaceous, glabrous ; peduncles terminal, few-flowered ; calyx cleft on one side, and entire on the other. *? . ^ S. Native of New Aulalusia, in woods, near Bordones and Cumana. Leaves 3± inches long, and 2 broad. Peduncles dichotomous, 3-7-flowered Corollas orange-coloured.

Laurel-leaved Spathodea. Shrub cl.

4 S. ORINOCF/NSIS (H. B. et Kunth, 1. c. p. 147.) scandent • branches terete, furrowed, glabrous ; leaves conjugate ; tendrils simple ? ; leaflets oblong, acute, coriaceous, glabrous; calyx cleft on one side, and entire on the other. ^ . ^. S. Native on the banks of the Orinoco, near Carichana. Leaflets 4 inches long. Inflorescence and colour of flowers unknown.

Orinoco Spathodea. Shrub cl.

5 S. OBOVA^TA (H. B. et Kunth, 1. c.) scandent; branches terete, striated, downy; leaves conjugate; tendrils simple?; leaflets obovate, acuminated, glabrous; axillary peduncles 1-flowered, and the terminal ones 3-flowered; calyx irregularly 3-5-cleft. F? . *KJ.* S. Native of New Granada, near Turbaco. Bign. obovàta, Spreng. syst. 2. p. 330. Petioles puberulous. Leaflets 4 inches long, and *2*\ broad. Corollas about 2 inches long, violaceous. This plant, from the form of the calyx, probably does not belong to the genus,

(Jbovate-leaved Spathodea. Shrub cl.

6 S. UNCA^TA (Spreng. syst. 2. p. 835.) scandent, glabrous; branches terete; leaves conjugate, undulated ; tendrils longer than the petioles, trifid at apex, hooked ; calyx spathaceous, bilabiate ; flowers lateral, umbellate, aggregate. J? • ^» §• Native of Guiana, and the West Indies. Bignòniu uncàta, Andr. bot. rep. t. .530. Sims, bot. mag. t. 1511.—Pluk. aim. p. 109. t. 163. f. 2. ? Flowers yellow. Perhaps a species of *Bignònia.*

Hooked Spathodea. Fl. Sept. Clt. 1804. Shrub cl.

§ 3. *Leaves impari-pinnate,*

7 S. HETEROPHY'LLA (R. Br. prod. p. 472.) arboreous; leaves glabrous, pinnate and ternate, or simple ; leaflets lanceolate-linear, entire ; flowers racemose. J?. S. . Native of New Holland, within the tropic.

Various-leaved Spathodea. Tree.

8 S. GLANDULOSA (Blum, bijdr. p. 762.) arboreous; leaves impari-pinnate and ternate; leaflets ovate-oblong, acuminated, glabrous, furnished with many glands beneath at the base; panicles axillary and terminal, straight. F? . S. Native of Java, on the mountains of Parang, and at the foot of Mount Tjerimai.

Glandular-leafietted Spathodea. Fl. year. Tree 15 to 25 feet.

9 S. ADENA'NTHA ; leaves ternate, ve'rticillate, or impari-pinnate; leaflets ovate-oblong, acuminated, serrated; racemes terminal. h_c . S. Native of Guinea. Bignònia glandulòsa, Sebum, pi. guin. p. 274. Limb of calyx obsoletely 4-toothed. Corolla pale purple ; segments roundish, scattered with glands outside.

Gland-flowered Spathodea. Tree 30 feet.

10 S. RHEE'DII (Spreng. syst. 2. p. *'835,)* arboreous; leaves downy, impari-pinnate; leaflets *3-7* pairs, roundish, downy ; racemes terminal, erect; calyx spathaceous; corolla much curved, slender. b- S. Native on the coast of Coromandel and Malabar. Bignònia spathàcea, Lin. suppl. 283. Retz. obs. 5. p. 5. Roxb. cor. 2. t. 144. fl. ind. 3. p. 103. Bign. falcata, Kon. mss.—Rheed. 6. p. *53.* t. 29. Shoots covered with whitish down. Racemes length of leaves. Flowers white, pretty large. Limb spreading. Fruit about a foot long, pendulous, twisted in various forms. This tree is called *Woody* by the Telingas; *Will-padri* by the Tamuls.

Rheede's Spathodea. Clt. 1794. Tree.

11 S. cRisPA.(Wall. cat. no. *6515.)* arboreous ; leaves villous, while young, pinnate; leaflets 6-7, oblong; racemes solitary, terminal, bearing a few flowers on long pedicels; calyx spathaceous ; corolla salver-shaped, having the segments of the border nearly equal, and much curled. J? . S. Native of Mysore, where it was collected by Dr.. Buchanan. Bign. atrovirens' Roth. herb. madr. S. atrovirens, Spreng. syst. 2. p. 835* Leaves 6-10 inches long. Leaflets simple, very rarely ternate'

3 T. DIGITA'TA (H. B. et Kunth, nov. gen. amer. 3. p. 142. arboreous; branches terete, glabrous; leaves digitate; leaflets obovate-oblong, quite entire, acute, glabrous. ♄. S. Native of New Andalusia, near Santa Cruz. Bark white. Leaflets 7 on each leaf, middle leaflet the largest. Capsule terete. Perhaps belonging to a distinct genus.

Digitate-leaved Tecoma. Clt. 1818. Tree 30 to 40 feet.

4 T. PENTAPHY'LLA (Juss. gen. 139.) arboreous; leaves digitate, quinate; leaflets obovate-lanceolate, quite entire, acute. ♄. S. Native of the West Indies and Brazil, if Guari-pariba, Marcgr. bras. 103. t. 118. Bignonia pentaphylla, Linn. spec. p. 870, hort. cliff. 297. Schlecht. in Linnæa, 6. p. 759. Swartz, obs. 253. Flowers 4-5 together, at the ends of the branches, pale blue, sweet scented. Corolla 2 inches long. Leaves pale green, whitish beneath, beset with minute glabrous dots, as well as the calyxes and pedicels. Leaflets on longish petioles. Calyx bilabiate; upper lip subtridentate, a little longer than the lower one, which is entire or bifid. Capsule 4-5 lines long, and 2 lines broad.

Five-leaved Tecoma. Tree 25 feet.

5 T. SERRATIFO'LIA; arboreous; leaves digitate; leaflets 4-5, ovate, attenuated, serrated, glabrous; pedicels terminal, crowded, 1-flowered; calyx bilabiate. ♄. S. Natives of Trinidad, where it is called *Poay* by the Spaniards. Bignonia serratifolia, Vahl. eclog. 2. p. 40. Lateral leaflets smaller than the middle one, all unequally serrated from the middle. Peduncles clothed with farinaceous tomentum, sometimes 2-flowered. Corolla yellow, 3 inches long.

Serrated-leaved Tecoma. Clt. 1822. Tree.

§ 3. *Erect trees and shrubs, with impari-pinnate leaves.*

6 T. AZADIRACHTA (H. B. et Kunth, nov. gen. amer. 3. p. 142.) arboreous; branches quadrangular, glabrous; leaflets 3-4 pair, oblong, obtuse, serrated, glabrous; panicles simple, terminal. ♄. S. Native of the eastern declivities of the Andes of Peru, near Sondorilla, on the banks of the river Guancabamba, where it is called *Frexno* by the natives. Branches brown. Leaves 5 inches long; leaflets small. Panicles composed of simple racemes. Flowers flesh-coloured. Capsule compressed, 4 inches long.

Azadira-leaved Tecoma. Tree 10 to 15 feet.

7 T. ROSEIFO'LIA (H. B. et Kunth, l. c. p. 143.) arboreous; branches terete, striated a little, glabrous; leaflets usually 2 pair, oblong, obtuse, serrated, glabrous; racemes terminal, simple. ♄. S. Native of Quito near Chillo. Leaves usually impari-pinnate, rarely ternate or simple. Leaflets 1 inch long. Corollas yellow. Capsule as in the preceding species.

Rose-leaved Tecoma. Tree.

8 T. SAMBUCIFO'LIA (H. B. et Kunth, l. c. p. 143.) arboreous; branches a little compressed, glabrous; leaves usually 2-3 pair, oblong, acuminated, serrated, glabrous; panicles terminal, simple. ♄. S. Native of the Andes of Peru, near Montan. Leaves usually impari-pinnate, intermixed also with ternate and simple ones. Leaflets 1½ inch long. Panicle composed of simple racemes. Flowers yellow. Capsule 4 inches long, warted.

Elder-leaved Tecoma. Clt. 1824. Tree 10 feet.

9 T. SAMBUCUS (Juss. gen. 139.) arboreous; branches somewhat tetragonal, glabrous; leaflets ovate-lanceolate, acuminated, serrated, glabrous; racemes terminal, simple. ♄. S. Native of various parts of South America and the West Indies, Mexico, &c. Hook. bot. mag. 3191.—Bignonia stans, Lin. spec. 871.—Plum. spec. 3. icon. 54.—Sloan. hist. 2. p. 63. Leaflets 4-5 pair. Terminal leaflets 3 inches long, the rest shorter. Fl. were yellow.

Lav. fl. incisa; leaflets more deeply cut. ♄. S. Native of South America. Bignonia incisa, Colv. cat. Tecoma incisa, Sweet, hort. brit. p. 139.

Standing Tecoma. Fl. Aug. Clt. 1730. Tree 10 to 12 feet.

10 T. SORBIFO'LIA (H. B. et Kunth, l. c. p. 144.) arboreous; branches tetragonal, glabrous; leaflets usually 2 pair, oblong, acuminated, serrated, clothed with white tomentum; panicles terminal, simple. ♄. S. Native near the town of Quito. Terminal leaflets about 4 inches long, lateral ones 2 inches long. Branches of panicle simple, downy. Flowers unknown, but probably yellow. Capsule narrowed, 7-8 inches long, warted.

Service-leaved Tecoma. Clt.? Tree or shrub.

11 T. MOLLIS (H. B. et Kunth, l. c.) arboreous; branches compressedly tetragonal, downy; leaflets 4 pairs, oblong, acuminated, almost quite entire, clothed with soft down-like hairs, on both surfaces; panicles terminal, simple. ♄. S. Native of Mexico, near Guanaxuato. Terminal leaflets 3 inches long; lateral ones 2½. Branches of panicle simple, downy. Corollas yellow.

Soft Tecoma. Clt. 1824. Tree or shrub.

12 T. ? AFRICA'NA; arboreous; leaflets 2 pair, obovate, coarsely toothed, wrinkled; racemes terminal, simple, 6-7-flowered. ♄. S. Native of Senegal. Bignonia Africana, Lam. dict. 1. p. 424. Leaves scabrous above. Terminal leaflet petiolate, lateral ones sessile. Calyx cup-shaped, unequally 4-cleft. Corollas 2 inches long, 4-cleft. Perhaps a distinct genus.

African Tecoma. Tree tall.

13 T. ? FULVA; arboreous; branches tetragonal; leaflets many pairs, cuneate, serrated, small, villous; racemes axillary. ♄. S. Native of South America. Bignonia fulva, Cav. icon. 6. p. 58. t. 580. Stem of a fuscous-violaceous colour. Common petioles winged. Corollas yellowish.

Fulvous-flowered Tecoma. Shrub 5 to 6 feet.

14 T. SUAVEOLENS; arboreous; leaflets 3 pair, oval, serrulated, glabrous; panicles terminal, thin; first divisions brachiate; corolla woolly; calyx villous, with a 4-cleft limb; upper division furnished with 2 minute points. ♄. S. Native of Bengal, and of the southern parts of the Coromandel coast. Bignonia suaveolens, Roxb. fl. ind. 3. p. 104. Bign. foetiflora, Hamilt. herb. Bign. grandiflora, Kon. Bign. cheiroides, Kön. *Patali* is the Sanscrit name of the tree, see Asiat. res. p. 221. *Parul* is the Bengalese name; and *Parul* is the Hindostanee name. Bark ash-coloured, rather scabrous. Leaflets ending in narrow, blunt ish points; the outer ones the largest, 6 inches long, and 3 broad. Panicle composed of a few spreading branches; the first and second series thereof opposite; the upper ones dichotomous, with 3 solitary, pedicellate flower in each fork; all are thickly beset with glandular, viscid hairs. Flowers large, of a dark, dull crimson colour, exquisitely fragrant. Corolla with an ample woolly throat, convex beneath, flat, and plaited above; the upper division of the border shortest; having the margins of all curled. Ovarium oblong-clavate, on a glandular receptacle.

Sweet-scented-flowered Tecoma. Tree.

§ 4. *Climbing shrubs; with impari-pinnate leaves.*

15 T. AUSTRA'LIS (R. Br. prod. p. 471.) scandent, glabrous; leaflets 5, elliptic, glabrous in the adult state, entire; panicle terminal; capsule oblong. ♄ ◡ G. Native of New Holland, within the tropic, and of New South Wales. Bignonia Pandorea, Vent. malm. t. 45. Andr. bot. rep. t. 86. Sims. bot. mag. 655. Panicle composed of simple racemes; also the racemes are often axillary. Flowers pale red, with a dark purple, bearded throat.

Southern Tecoma. Fl. April, July. Clt. 1793.

16 T. MONOSTYLA; scandent, glabrous; branches angular; leaflets 5, lanceolate, subserrated, blunt ish, mucronate, dotted beneath; panicles terminal; corolla with a bearded throat. ♄ ◡ G. Native of New Holland. Bignonia monostylis, Link. enum. 2. p. 150. Bign. pandorea minor, hort. angl. Serratures of leaves few, blunt ish. Corolla subventricose, 8 lines long, of

reddish-white colour. Leaves and flowers smaller than in *T. capensis*. *T. australis*. Upper lip of corolla emarginate.

Smaller-flowered Tecoma. Fl. April, July. Cl.? Shrub cl.

12 T. leucoxylon; leaves impari-pinnate, glabrous, shining; leaflets 5, oblong-lanceolate, bluntly acuminated, entire, paler beneath; panicles terminal, trichotomous. ☽. G. Native of New Holland, in Moreton Bay. Bignonia jasminoides, Cunningh. in Lond. hort. brit. p. 382. Branches terete, glabrous, green. Calyx crenately 5-toothed. Corolla funnel-shaped, downy inside and outside, and a little bearded in the throat, of a pale blush colour, almost white, with a dark purple throat. Segments of corolla rounded, rather unequal. The fifth or sterile filament very short, bearded at top; all the rest bearded at the base.

Jasmine-like Tecoma. Fl. July, Aug. Cl. 1820. Shrub cl.

13 T. jasminoides; leaves impari-pinnate, very variable; lower ones smallest, with 11 sessile, ovate-roundish, unequal-sided, deeply crenated leaflets; the terminal leaflets the largest, ovate-oblong, and bluntly acuminated, having the common petiole winged, and articulated at the pairs of leaflets; the leaves become, as they ascend the stems, gradually larger, the leaflets more entire; the ultimate ones are therefore the largest, with only 3 leaflets, which are ovate-oblong, blunt, and repandly crenate, having the terminal leaflet twice the size of the lateral ones. ♄. ☽. F. Native of New Holland. The petioles have always narrow wings, and the leaves are dark green, glabrous, and shining.

Diverse-leaved Tecoma. Fl.? Cl. 1820.? Shrub cl.

14 T. Capénsis (Lindl. bot. reg. 1117.) scandent, glabrous; branches terete; leaflets 9, ovate, serrated, bearded in the axils of the veins beneath; racemes terminal on long peduncles; calyx 5-toothed; limb of corolla 4-parted; segments nearly equal, obtuse, the upper one emarginate. ♄. ☽. G. Native of the Cape of Good Hope. Bignonia Capensis, Thunb. prod. p. 165.; Ait. hort. kew. 4. p. 56. Flowers middle-sized, of an orange-scarlet colour, 2 inches long.

Cape Tecoma. Fl. July, Sept. Cl. 1783. Shrub cl.

20 T. capénsis (Sweet, hort. brit. p. 184.) slightly scandent, glabrous; leaflets 7-9, ovate, acuminated, coarsely serrated, attenuated at the base; panicles terminal, pendulous; calycine segments lanceolate, length of the tube of the corolla. ♄. ☽. G. Native of China and Japan. Bignonia grandiflora, Thunb. jap. 257. Blum. bijdr. 728. Bign. Chinénsis, Lam. dict. 1. p. 471. Bjonjo, Kæmpf. amœn. p. 876. Banks, icon. Kæmpf. t. 21. Incarvillea grandiflora, Spreng. syst. 2. p. 836. *Tang-tsoo-fa* of the Chinese. Branches rooting. Young shoots spotted with dark purple. Leaves 6-10 inches long; petioles margined. Flowers pendulous, forming terminal, cross-armed panicles, large, of a tawny orange colour on the outside, and of a tolerably bright reddish orange inside, with brighter streaks. Nectary a glandular, crenated ring. Anterior lobe of stigma recurved.

Great-flowered Tecoma. Fl. July, Aug. Cl. 1800. Shrub climbing.

21 T. radicans (Juss. gen. p. 132.) scandent, glabrous; branches rough, radicant; leaflets 9, ovate, acuminated, coarsely serrated; racemes terminal, corymbose, on long peduncles; tube of corolla 6 times longer than the calyx. ♄. ☽. H. Native of Carolina, Florida, and Virginia. Bignonia radicans, Lin. spec. 871. hort. cliff. 317. ups. 17. Catesb. carol. 73. Mill. icon. t. 65. Dahoon. arb. 1. p. [illegible]. t. 1. Sabb. hort. 2. t. 84. Du Roi, harbk. 1. p. 18[illegible]. Wangenh. amer. 65. t. 26. f. 52. Willd. arb. 47. Curt. bot. mag. 435.—Riv. mon. p. 101.—Mor. hist. 3. p. 612. s. 15. t. 3. f. 1.—Cent. cap. 192. t. 103. This is a beautiful hardy climber, fixing itself to trees or walls, by roots, like ivy. The flowers are produced at the ends of the shoots, in large bunches; and have long swelling tubes, shaped somewhat like a trumpet, whence this species as well as the species of *Bignonia*, have the name of Trumpet-flower. The corolla is large, scarlet orange-coloured.

Less, or minor, Bowery smaller, scarlet. ♄. ☽. H. Native of Carolina. There is a remarkable difference between the leaves and the species, in the shape and size of the leaves, as well as in the colour and size of the flowers.

Rooting Tecoma. Fl. Aug. Cl. 1640. fl. 1724. Shrub cl.

§ 5. *Leaves decompound.*

22 T. ? xylocárpa; arborescent; leaves bi-tripinnate; leaflets from obliquely oblong to semicordate; panicles terminal; segments of the limb of the corolla round, and curled; capsules long, linear, crooked, ligneous, tuberculed. ♄. S. Native of Senegal, in the East Indies. Bignonia xylocarpa, Hoch. fl. sen. 2. p. 108. Bark ash-coloured, rather spongy, and considerably corked. Leaves 1-4 feet long. Common petioles scabrous. Branches of panicle opposite or four, 2-3 or more times dichotomous, slightly downy, with 3 single flowers in each fork. Bracteas ovate-oblong. Flowers large, white, with a tinge of yellow, delightfully fragrant. Capsule 2 feet long; dissepiment contrary.

Woody-fruited Tecoma. Tree 30 to 40 feet.

Cult. All the species of this genus are elegant plants well worth the cultivator's care. *T. radicans* is a hardy climbing shrub, well fitted for decorating a wall, or front of a house. The other species require the same treatment as that recommended for the species of *Bignonia*, see p. 222.

IV. JACARA'NDA (the name of *J. Brasiliana* in Brazil; Juss. gen. p. 138 ed. Usteri, p. 155. R. B. et Kunth, nov. gen. 3. p. 145. Humb. et Bonpl. pl. æquin. 1. p. 59. D. Don, in edinb. phil. journ. 1823.—Bignonia species of some authors.

Lin. syst. *Didynámia, Angiospérmia.* Calyx campanulate, 5-toothed; rarely tubular, truncate, entire. Corolla tubular, at the base, very much dilated above, campanulate; ventricose beneath; limb bilabiate, 5-lobed. Stamens 4, didynamous; with a fifth longer, sterile filament, which is villously bearded at top. Anthers 1-lobed in most of the species, with an obsolete rudiment of another lobe; rarely 2-lobed (as in *Jacaranda ovata*, Pers.), with the lobes equal and diverging. Stigma bilamellate. Capsule broad, compressed, 2-celled; valves thick, ligneous; dissepiment contrary to the valves, placentiferous on both sides. Seeds flat, transverse, with foliaceously-winged edges; outer testa coriaceous, rugosely plicate.—Trees natives of South America, with the habit of the fine-leaved species of *Acacia*. Leaves opposite, bipinnate. Flowers showy, panicled, terminal, rarely lateral, blue, violaceous, or yellow.

§ 1. *Anthers 1-lobed. Leaves abruptly bi-pinnate.*

1 J. acutifólia (Humb. et Bonpl. pl. æquin. 1. p. 59. t. 17.; nov. gen. 3. p. 145.) leaves bipinnate, usually with 5-6 pair of alternate pinnæ; leaflets 9-12 pairs, linear-lanceolate, acuminated, glabrous; corolla silky, with a straight tube. ♄. S. Native of Peru, near San Felipe; and on the banks of the river Guancabamba. Bark grey, chinky. Leaflets opposite or alternate. Panicle terminal, large, pyramidal, many-flowered. Calyx campanulate, 5-toothed; teeth ovate, acute. Corolla large, violaceous; with a campanulate throat, ventricose beneath. Capsule oval, acuminate.

Acute-leaved Jacaranda. Tree 10 feet.

2 J. ovalifólia (Humb. et Bonpl. pl. æquin. 1. p. 62. t. 18.; Kunth, nov. gen. 3. p. 146.) leaves bipinnate; with many pairs

alternate or opposite pinnæ (about 16 pairs); leaflets many-pairs alternate oropposite, oval-oblong, obtuse, downy; corolla glabrous, having an arched tube, which is three times shorter than the throat. ♄. S. Native on the banks of the Orinoco, in shady places, near Carichana, where it is called *Arbol del ruido*. Bark grey, wrinkled. Leaves a foot long. Leaflets contiguous. Panicle large, many-flowered, diffuse, axillary lateral. Calyx small, campanulate, 5-toothed; teeth acute. Corolla violaceous, glabrous, larger than those of *J. ovalifolia*; throat much dilated. Ovarium ovate, 2-edged.

Obtuse-leaved Jacaranda. Tree 30 feet.

3 *J. acutifolia* (D. Don, in hort. trin. t. 631.) leaves bipinnate, with many pairs of opposite pinnæ (14-24 pair), each pinna bearing 10-18 pair of trapezoid-oval oblong, mucronate, downy leaflets, the odd or terminal leaflet lanceolate, and longer than the lateral ones; corollas silky, having the tube a little arched, and 3 times shorter than the throat. ♄. S. Native of Brazil. *J. ovalifolia*, R. Br. in bot. mag. t. 2827. Bark grey, incloses from cicatrices at bottom. Leaves beset with scattered, shining dots. Leaves 1½ foot long. Panicles large, terminal, naked, erectly pyramidal. Flowers showy, drooping, blue. Calyx villous, 5-toothed. Ovarium ovate-oblong, acuminated.

Mimosa-leaved Jacaranda. Fl. April, May. Clt. 1818. Tree 6 to 10 feet.

4 *J. mimosifolia* (D. Don, in edinb. phil. journ. 1828.) leaves bipinnate, with many pairs of opposite pinnæ (9-18 pair), each pinna bearing from 6 to 15 pair of contiguous trapezoid-oval, mucronate, glabrous, coriaceous leaflets; the odd or terminal one elliptic-rhomboid, acute, larger; corolla glabrous, with an arched tube about equal in length to the throat. ♄. S. Native in woods, at the river Essequibo. *J. rhombifolia*, Meyer, prim. esseq. p. 215. Bignonia Sicilifolia, Anderson, cat. hort. St. Vincent, in trans. soc. arts, &c. vol. 25. p. 200. Branches elongated, with broad cicatrices occasioned by the falling of the leaves. Leaves 1 to 1½ foot, shining above, and glaucous beneath. Panicles lateral and terminal. Calyx campanulate, 5-toothed. Corolla large, violaceous, with a narrow cylindrical tube, and a wide, campanulate throat. Ovarium elliptic.

Fern-leaved Jacaranda. Fl. ? Clt. 1800. Tree 25 to 40 feet.

5 *J. Caroba* (D. Don, in edinb. phil. journ. 1823.) leaves bipinnate, with 4-5 pairs of opposite pinnæ, each pinna bearing 3-6 pair of elliptic or emarginated, obtuse, coriaceous, glabrous leaflets; calyx tubular, truncate; corollas velvety. ♄. S. Native of Guiana, in woods. Bignonia, Caroba, Aubl. guian. 2. p. 650. t. 265. and 262. *J. procera*, Spreng. syst. 2. p. 831. Bignonia procera, Willd. spec. 3. p. 397. Pers. ench. 2. p. 179. Bark thick, grey, wrinkled. Leaves 1½ to 2 feet long. Panicle large, terminal. Calyx truncate, entire, with a short cleft on both sides of the mouth. Corolla blue, size of those of *Digitalis ambigua*, with a dilated, ventricose, bearded throat. Capsule oval, obtuse.

Cocoa Jacaranda. Clt. 1793. Tree 60 to 80 feet.

6 *J. Bahamensis* (Sims, bot. mag. under no. 2397.) leaves bipinnate; pinnæ alternate; leaflets opposite or alternate, acute at each end; calyx truncate; corollas glabrous. ♄. S. Native of the Bahama Islands, particularly of the Island of Providence, near the town of Nassau, Carolby. Bignonia corollata, Lam. spec. 572. Mill. dict. no. 12. Willd. spec. 3. p. 397.—Catesb. car. 1. p. 42. t. 42. Panicle terminal. Flowers blue. Pinnæ conjugate.

Bahama-island Jacaranda. Fl. July, Aug. Clt. 1794. Tree.

7 *J. Brasiliana* (Lam. dict. 1. p. 420.) leaves bipinnate; leaflets oblong, acute; panicles lateral; fruit short, with crenated edges. ♄. S. Native of Brazil. Bignonia Brasiliana, Willd. spec. 3. p. 397. Jacaranda II. Pis. bras. p. 105. Flowers yellow. This species will be easily distinguished from the rest, by its yellow flowers. We know nothing of the anthers.

Brazilian Jacaranda. Clt. 1820. Tree 20 to 30 feet.

§ 2. *Anthers* 2-lobed. *Lobes equal. Leaves* bipari-bipinnate.

8 *J. rosæfolia* (R. Br. in bot. mag. under no. 2822. in bot. reg. 1163.) leaves bipinnate, with 3-5 pairs of pinnæ and an odd one; leaflets ovate or elliptic, acute or acuminated, unequal, tomentose in the young state, and beneath in the adult state; corollas silky; branches downy. ♄. S. Native of Brazil, Sir George Staunton, and Sello. *J. puberula*, Lodd. cat.? Bark grey. Leaves a span long. Panicles small, terminal, tomentose; pedunculs 1-3-flowered. Calyx campanulate, 5-toothed; teeth ovate, acute. Corolla violaceous or blue; with a widened throat. Capsule oval-orbicular.

Tomentose Jacaranda. Fl. ? Clt. 1824. Tree 20 to 30 feet.

Obs. Jacarandæ is a genus composed of elegant trees, having much the habit of the fine-leaved *Acaciæ*; bearing large, usually terminal panicles of showy blue, or violaceous flowers, and on that account are worth cultivating in every collection of stove plants. They grow freely in a mixture of loam, peat, and sand, or any light rich soil; and cuttings half ripened, strike root readily, if planted in sand, with a hand-glass placed over them; but the leaves of these cuttings should not be shortened, or cut in any way. If the trees are kept dry in winter, it will check their growth, and throw them into flower.

V. AMPHILO'PHIUM (*from* ἀμφὶ, *around*, and λόφος, *a crest*; *alluding to the lobe of the corolla being crested on all sides*.) H. B. et Kunth, nov. gen. amer. 3. p. 148.—Bignoniæ species, Lin.

Lin. syst. *Didynamia, Angiospermia*. Calyx campanulate, with a double limb; inner one bilabiate; outer one spreading, undistinctly 4-lobed. Corolla somewhat coriaceous, with a short tube, a large ventricose throat, which is subgately compressed in front; limb bilabiate; upper lip large, helmet-shaped, bidentate; lower one straight tridentate, about equal in length to the superior one. Stamens 4, didynamous, that is, 2 long, and 2 short, with the rudiment of a fifth. Lobes of anthers coherent at top, divaricate. Stigma bilamellate. Capsule ovate, rather ligneous, 2-celled, 2-valved. Seeds imbricate, membranaceously-winged, transverse.—Climbing, carinose shrubs; with opposite, conjugate leaves, and terminal panicles of rose-coloured or red flowers.

1 *A. paniculatum* (H. B. et Kunth, l. c. p. 149.) leaves conjugate; leaflets ovate-roundish, acuminated, subcordate, finely lepidoted on both surfaces, clothed with down-like hairs on the middle nerve beneath, and on the inside of the petioles; tendrils trifid. ♄. ⟋. S. Native of New Andalusia, near the monastery of Caripe, and on mount Cocollar. Bignonia paniculata, Lin. spec. 869. Jacq. amer. 132. t. 110. Vahl. symb. 3. p. 80.—Plum. spec. 8. icon. 58. t. 11. Panicle compound of 3-flowered pedunculs. Corollas rather fleshy, rose-coloured. Jacquin's plant has the lower leaves ternate.

Var. β. scalle; leaflets orbicular, acuminated, corniate, clothed with adpressed, rufescent, stellate, branched tomentum beneath. ♄. ⟋. S. Native near Vera Cruz. *A. scalle*, Cham. et Schlecht. in Linnæa, 5. p. 120. Branches tetragonal, tomentose.

Panicled Amphilophium. Fl. ? Clt. 1738. Shrub climbing.

2 *A. Martium* (H. B. et Kunth, nov. gen. amer. 3. p. 149. t. 219.) leaves conjugate; leaflets ovate-roundish, acuminated, cordate, finely lepidoted on both surfaces; petioles glabrous; tendrils unguiculate, trifid at top. ♄. ⟋. S. Native of New Granada, near Marquita, in temperate places. Branches somewhat 6-angled, glabrous, white; branchlets green, beset with powdery atoms. Branches of panicle few-flowered. Corollas

downy, rose-coloured. Very nearly allied to the preceding species.

Mart.'s Amphilophium. Shrub cl.

3 *A. microphyllum* (H. B. et Kunth, l. c. p. 160.) leaves conjugate; leaflets ovate-roundish, acuminated, cordate, hairy and shining above, and clothed with fugacious tomentum beneath as well as the petioles; tendrils? ♄. ♀. S. Native of *New Granada*, near Turbaco. Hairs and tomentum stellate. Branches sulcately angular. Panicles axillary and terminal, clothed with fugacious tomentum. Branches dichotomous. Corollas red.

Large-leaved Amphilophium. Shrub cl.

4 *A. paniculatum* (Spreng. syst. 2. p. 836.) leaves ternately bipinnate, downy; leaflets oblong, obtuse, sessile, almost quite entire; flowers axillary, opposite, peduncled. ♄. ♀. S. Native of Brazil.

Downy Amphilophium. Shrub tw.

Cult. For culture and propagation see the climbing species of *Bignonia*, p. 224.

VI. ZEYHERIA (named in honour of M. Zeyher, director of the Botanic Garden at Baden; and author of several botanical papers.) Mart. nov. gen. bras. 2. p. 65. t. 159.

Lin. syst. *Didynamia. Angiosperma.* Calyx spathaceous, closed, at length bipartite. Corolla tubular; tube nearly equal; limb 5-lobed, hardly bilabiate. Stamens 4, didynamous, with the rudiment of a fifth sterile one. Stigma bilamellate. Capsule echinated, orbicular, compressed, having the dissepiment contrary to the valves. Seeds with membranous wings, imbricated.—A small tree, or large shrub; branches opposite. Leaves opposite, digitate. Flowers terminal, particularly corymbose; bracteas twin, naked, axillary.

1 *Z. montana* (Mart. nov. gen. brasc. 2. p. 66. t. 159.) leaves digitate; leaflets 5, lanceolate, clothed with fulvous, farinaceous, stellate tomentum beneath, as well as outer branches and inflorescence. ♄. S. Native of Brazil, in the province of St. Paul. Spathella ovate, Spreng. syst. add. p. 237. Corolla 1 to 1½ inch long, clothed with golden, lepidoted tomentum outside; segments ciliated, the 3 superior ones narrower and shorter.

Mountain Zeyheria. Shrub 7 feet.

Cult. For culture and propagation, see *Jacaranda*, p. 226.

VII. FREDERICIA (named in compliment to Frederick William III. King of Bavaria, a great promoter of the sciences.) Mart. in nov. act. bonn. 10. p. 1. t. A. and B.

Lin. syst. *Didynamia, Angiosperma.* Calyx tubularly campanulate, pentagonal, coloured; with 5 short teeth. Corolla salver-shaped; with a cylindrical tube, and a spreading bottom; limb 5-6-cleft; segments spreading, roundish. Stamens 4, didynamous, with the rudiment of a fifth sterile one; filaments bearded at the base; lobes of anthers divaricate. Stigma bilamellate. Capsule compressed, oblong, acutish, almost as broad as long; dissepiment contrary to the valves. Seeds transverse, with membranous margins.—Branched, rambling shrubs. Leaves ternate; leaflets quite entire. Flowers terminal, panicled, bracteate. Inflorescence scarlet.

1 *F. speciosa* (Mart. l. c. p. 9. t. A.) leaflets oblong, acuminated, flattish, bearded in the axils of the veins beneath; panicle pyramidal, spreading; calyx and corolla 5-cleft. ♄. ♀. S. Native of Brazil, in the provinces of St. Paul and Rio Janeiro, in woods. Branches terete, striated, glabrous. Panicle large, having the rachis and peduncles tetragonal, purplish scarlet, and clothed with fine villi. Corollas scarlet, or reddish yellow. There are varieties of this species, having the corolla more or less red or yellow, with a pubescent or downy throat.

Showy Fredericia. Shrub cl.

2 *F. Gardneri* (Mart. l. c. p. 11. t. B.) leaflets ovate-oblong, acute at the base, and short-acuminated at the apex, usually conplicate, quite glabrous on both surfaces; panicle compact; calyx, but particularly the corolla, for the most part 6-cleft. ♄. ♀. S. Native of Brazil, in the interior parts of the province of Bahia, in woods. Branches terete, glabrous, often rough from warts. Rachis, peduncles, and pedicels tetragonal, scarlet, and downy. Corolla yellow, downy outside, as in the first species.

Gardner's Fredericia. Shrub cl.

Cult. For culture and propagation see *Bignonia*, p. 222.

VIII. FERDINANDUSA (named in honour of Ferdinand, hereditary prince of Austria.) Pohl, bot. zeit. 1827. col. 70. p. 553. pl. bras. 2. p. 5.

Lin. syst. *Didynamia, Angiosperma.* Calyx 4-toothed. Corolla funnel-shaped, 4-parted; segments unequal, bifid, bearded at apex. Stamens 4, didynamous; rudiment of a 5th not seen. Anthers inverted at the base and apex; cells parallel or combined; pollen spherical, yellow. Ovarium globous at apex, 4-cleft. Style elongated. Stigma bipartite. Capsule large, elliptic, acute, 2-celled, 4-valved. Seeds unknown.—Erect, middle-sized trees. Leaves large, opposite, coriaceous, blackish or yellowish green, shining, quite entire, ovate, on short petioles; bracteas small. Flowers terminal and axillary, corymbose, scarlet or whitish-green. Stamens and stigma exserted. Throat of corolla naked. This genus is nearly allied to *Fredericia* and *Zeyheria*, Mart.

1 *F. externa* (Pohl, bras. 2. p. 9. t. 109.) leaves ovate-elliptic, obtuse at the apex; bracteas roundish, trifid. ♄. S. Native of Brazil, in the province of *Goyaz*, in boggy places. Leaves dark green above, and yellowish green beneath. Corollas whitish green.

Elliptic-leaved Ferdinandusa. Tree 12 feet.

2 *F. ovalis* (Pohl, pl. bras. 2. p. 10. t. 110.) leaves oval, marginated, acutish at the apex; bracteas roundish, quite entire, acute, half stem-clasping, ciliated at their confluence. ♄. S. Native of Brazil, in the province of Goyaz, near to the town of the same name, at Serra de Manoel Gomez. Corollas dark red or scarlet. Leaves dark green above, and yellowish beneath.

Oval-leaved Ferdinandusa. Tree 10 to 12 feet.

3 *F. discolor* (Pohl, pl. bras. 2. p. 12. t. 108.) leaves ovate-elliptic, emarginate, acute; bracteas lanceolate, quite entire, scarious. ♄. S. Native of Brazil, in the province of Minas Geraes, on Serra de Spinosa; and of the province of Goyaz, at Cara de Telha, and St. Cruz. Corollas scarlet, 2 inches long. Leaves greenish yellow.

Showy Ferdinandusa. Tree 9 feet.

Cult. For culture and propagation see *Jacaranda*, p. 226. The species are extremely elegant when in blossom.

IX. STENOLOBIUM (from στενος, *stenos*, narrow, and λοβος, *lobos*, a pod; in reference to the narrow, linear, siliquose capsule. D. Don, in edinb. phil. journ. 1823.

Lin. syst. *Didynamia, Angiosperma.* Calyx small, campanulate, 5-toothed, equal. Corolla with a narrow tube; dilated, inflated, campanulate throat; and a 5-lobed, equal, bilabiate limb. Stamens 4, didynamous, thus 2 long, and 2 short, with a very short rudiment of a fifth; lobes of anthers linear, slightly divaricate. Stigma bilamellate. Capsule narrow, linear, siliquose, compressed, 2-celled; dissepiment parallel with the

valves. Seeds flat, transverse, with membranous margin.—A frondose, erect tree. Leaves opposite, simple, very like those of the sweet chestnut, elliptic, coriaceous, acute, feather-nerved, petiolate, with serrated edges, clothed with copious mealy tomentum beneath. 5-7 inches long, and 2-3 broad, glabrous above. Flowers terminal, numerous, spicately panicled, reddish purple, size of those of *Incarvillea*. Style slender, shorter than the stamens. Capsule 8 inches long.

1 S. CATANTHOIDES (D. Don, l. c.) ♄. G. Native of Peru, in woods, at Huayapé. Bignonia spicata, Pav. mss. in herb. Lamb.

Chestnut-leaved Smallobium. Tree erect.

Cult. For culture and propagation see *Jacaranda*, p. 226.

X. DELOSTOMA (from δηλος, *delos*, manifest; and στομα, *stoma*, a mouth; in allusion to the wide mouth of the flower.) D. Don, in edinb. phil. journ. 1830.—Bignonia species of Pav.

Lin. syst. *Didynamia, Angiosperma.* Calyx campanulate, 5-toothed, coriaceous. Corolla funnel-shaped, with a dilated throat, and a spreading, bilabiate limb; lower lip 3-lobed; upper lip shorter, and 2-lobed; lobes broad, roundish, flat. Stamens 4, didynamous, that is, 2 long and 2 short; with the addition of a short fifth sterile, glabrous one. Lobes of anthers parallel, equal. Stigma broad, bilamellate. Capsule lanceolate, compressed, 2-celled; valves coriaceous, rather fleshy; dissepiment parallel with the valves. Seeds flat, transverse, with broad, membranous edges.—Frondose trees, natives of Peru. Leaves simple, opposite, elliptic, petiolate, bluntly acuminated. Flowers terminal, spicately racemose, large, rose-coloured. The campanulate, 5-lobed calyx, the figure of a corolla; the parallel lobes of the anthers; and the structure and form of the capsule, are the marks which particularly characterize this genus.

1 D. MACRANTHUM (D. Don, l. c.) leaves elliptic-oblong, toothed, downy beneath. ♄. S. Native of Peru. Bignonia glaucescens, Pav. mss. in herb. Lamb. Flowers rose-coloured.

Feather-leaved Delostoma. Tree.

2 D. SERICANTHUM (D. Don, l. c.) leaves elliptic, quite entire, tomentose beneath. ♄. S. Native of Peru. Bignonia amplifolia, Pav. mss. in herb. Lamb.

Entire-leaved Delostoma. Tree.

Cult. For culture and propagation see *Jacaranda*, p. 226.

XI. ASTIANTHUS (from αστριος, *astrios*, beautiful; and ανθος, *anthos*, a flower; in allusion to the brilliant flowers.) D. Don, in edinb. phil. journ. 1830.

Lin. syst. *Didynamia, Angiosperma.* Calyx tubular; limb equal, 5-toothed. Corolla tubular at the base, but with a dilated, campanulate, veiny throat; limb 5-cleft, bilabiate; lower lip 3-lobed, the middle lobe large; the superior lip 2-lobed, and reflexed. Stamens 4, didynamous; with a shorter, glabrous rudiment of a fifth sterile one. Stigma bilamellate. Anthers naked; lobes equal, confluent. Capsule very long, elliptic, 2-celled. Dissepiment parallel with the valves; thick, placentiferous on both sides. Seeds transverse, compressed; with winged margin, and pappose from numerous villi.—An erect, branched, frondose shrub, native of Mexico. Branches terete, glabrous. Leaves simple, tern, elongated, broad-linear, coriaceous, quite entire, glabrous, 6-10 inches long, 1-nerved, attenuated at both ends. Flowers terminal, numerous, panicled. Corolla larger than that of *Digitalis purpurea*, reddish purple. Lobes of the limb of the corolla broad, round, with curled and crisped edges. This genus is distinguished from *Bignonia*, in the confluent lobes of the anthers, by its seeds being furnished with a villous pappus, and by its habit. It differs from *Tecoma*, and by the characters above enumerated, in having a parallel

and not a transverse dissepiment; and from *Spathodea*, with some species of which it agrees in habit, but is readily distinguished by the structure of its capsule, in having seeds furnished with a villous pappus, and lastly, in the lobes of the anthers being confluent.

1 A. TOMENTOSUS (D. Don, l. c.) ♄. S. Native of Mexico. *Long-leaved* Astianthus. Shrub.

Cult. For culture and propagation see *Jacaranda*, p. 226.

XII. CHILOPSIS (from χειλος, *cheilos*, a lip; and οψις, *opsis*, resemblance; on account of the calyx being furnished with a distinct lip.) D. Don, in edinb. phil. journ. 1833.—Bignonia species, Cav.

Lin. syst. *Didynamia, Angiosperma.* Calyx membranous, oblong, tubulous, cleft on the lower side, even to the base; limb oblique, truncate on the upper side. Corolla with a tubular base, and a dilated campanulate throat; limb 5-lobed, bilabiate; lobes oval-roundish, with curled, crenated edges; lower lobe large, oblong. Stamens 4, didynamous; beside the rudiment of a fifth sterile, glabrous one. Stigma bilamellate. Anthers naked; lobes equal, divaricate. Capsule short, ellipsoidal, 2-celled; dissepiment contrary, placentiferous. Seeds transverse, with membranous margins.—An erect, branched shrub, native of Mexico, with terete, downy branches. Leaves alternate, linear, flat, elongated, 3-5 inches long, glabrous, coriaceous, attenuated at both ends. Racemes terminal, short, dense, tomentose; pedicels short, furnished with 2 linear-lanceolate bracteoles each. Lobes of stigma replicate. Corolla dark purple, size of those of *Cheiri*. This is a well-marked genus, readily distinguished from *Spathodea*, in the structure of its capsule, and by having simple, alternate leaves.

1 C. SAUVEOLENS (D. Don, l. c.) ♄. S. Native of Mexico. Bignonia linearis, Cav. icon. 3. t. 269.

Willow-leaved Chilopsis. Fl. ♀ Cit. 1825. Shrub 10 feet.

Cult. For culture and propagation see *Jacaranda*, p. 226.

XIII. OXERA (from οξυρος, *oxeros*, tumid; in allusion to the swollen throat of the corolla.) Labill. nov. vel. 2. t. 28.—Oncinia, Spreng. gen. 1. p. 24.

Lin. syst. *Diandria, Monogynia.* Calyx 4-parted, scarious. Corolla tubular at the base and dilated at the throat; limb 4-cleft, nearly equal. Stamens 4, 2 of which are fertile. Anthers 2-celled, exserted. Ovarium 4-lobed, seated on a glandular disk. Ovula numerous, fixed to fleshy, central placentæ. Style central, incurved; stigma bifid. Fruit probably baccate.—A shrub, about 6 feet high, with pale, sulphur-coloured, varied branches. Leaves opposite, ovate-oblong, exstipulate. Racemes axillary. Flowers pendulous, sub-umbellate. Fertile stamens, and style exserted. Peduncles twice trichotomous, bracteate. Flowers large.

1 O. PULCHELLA (Labill. l. c.) ♄. G. Native of New Caledonia.

Neat-leaved Oxera. Shrub 6 feet.

Cult. For culture and propagation see *Jacaranda*, p. 226.

XIV. PLATYCARPUM (from πλατυς, *platys*, broad; and καρπος, *carpos*, a fruit; in reference to the broad compressed fruit.) Humb. et Bonpl. pl. æquin. 2. p. 81. H. B. et Kunth, nov. gen. amer. 3. p. 151.

Lin. syst. *Pentandria, Monogynia.* Calyx 5-parted, equal. Corolla with a short tube, a funnel-shaped throat, and a 5-cleft, equal limb. Stamens 5, equal. Stigma bilamellate. Capsule didymous, ligneous, compressed, 2-celled, 2-valved; dissepiment contrary to the valves, and adnate to them; cells 2-seeded. Seeds membranaceously winged.—A large tree; with opposite, simple entire leaves; and terminal panicles of pale red flowers.

1 P. Orinoco'nse (Humb. et Bonpl. pl. æquin. 2. p. 81. t. 104.). ♄. S. Native on the banks of the Orinoco, near Santee. Sterculia Orinocénsis, Spreng. syst. 1. p. 922. A tree, with a dense head. Bark thin, smoothish; wood white. Branchlets clothed with rusty tomentum at top. Leaves petiolate, obovate-oblong, obtuse, 3-6 inches long, white beneath, and clothed with rusty down on the nerves and veins. Petioles pilose. Branches of panicle filiformi-pilose.

Orinoco Flaxy-carpus. Tree 25 to 40 feet.

Cult. For culture and propagation see *Jacaranda*, p. 226.

XV. CALOSA'NTHES (from καλος, *calos*, beautiful; and ανθος, *anthos*, a flower; in reference to the beauty of the flowers.) Bignónia species of Roxb. Blum. bijdr. 760.

Lin. syst. *Pentándria*, *Monogynia*. Calyx entire, coriaceous, tubular, campanulate. Corolla with a short tube, a campanulate throat, and a bilabiate border; upper lip 2-cleft; under lip 3-cleft; segments wrinkled. Stamens 5, all antheriferous; the exterior pair the longest, bending in under the upper lip, very woolly at the base; anthers double, each part oblong, bursting on the under side. Hypogynous disk, a somewhat pentagonal, fleshy body. Style length of stamens, hollow its whole length, having a funnel-shaped mouth, opening between the membranous, orbicular lobes of the stigma. Capsule silique-formed, large, compressed transversely, a little curved, having the convexity upwards; dissepiment contrary to the valves. Seeds numerous, surrounded by a delicate, semi-circular, membranous wing.—A large tree, with opposite, supra-decompound leaves, and terminal, secund racemes of flowers.

1 C. Indica (Blum. bijdr. 761.) ♄. S. Native of the coast of Coromandel and Malabar, in forests, among the mountains; and of Java, where it is called *Pamparas*. Bignónia Indica, Lin. Willd. spec. 3. p. 306. Roxb. fl. ind. 3. p. 110. Bignónia pentándra, Lour. coch. 400. Spathodoa Indica, Pers. syn. 1. p. 175. Palego-Pajoneli, Rheed. mal. 1. t. 47 and 44. *Shyonaka* and *Mandooka-puna*, are two of its Sanscrit names; *Shyona* is its Hindostanee name; *Fanga mara* is the Tamul name; and *Pampena*, the Telinga name. Tree large. Leaves opposite, decussate, 4-5 feet long. Leaflets obliquely cordate, smooth, pointed. Peduncles and pedicels scabrous. Racemes terminal, secund, erect, stiff; lower two thirds naked and scabrous, somewhat quadrangular; upper third part imbricated on one side by very large, fleshy, dark red flowers; with scarcely any bracteas. Capsule long, linear.

Indian Calosanthes. Fl. ? Clt. 1775. Tree 40 to 50 feet.

Cult. For culture and propagation see *Jacaranda*, p. 226.

XVI. MILLINGTO'NIA (named in honour of Thomas Millington, an English botanist, who has written on vegetable physiology.) Lin. suppl. 291. Juss. gen. 133. Willd. spec. 3. p. 382. Bignónia suberósa, Roxb.

Lin. syst. *Didynámia*, *Angiospérmia*. Calyx small, slightly 5-parted; with nearly equal divisions. Corolla funnel-shaped; tube from 2 to 3 inches long, slender and cylindrical; limb 4-parted; the upper division broadest, and nearly half 2-cleft. Stamens 4, didynamous, exserted, without any rudiment of a sterile filament: anthers sparred. Ovarium oblong. Style as long as the corolla; stigma bilamellate. Capsule sleader, linear, pretty smooth, 2-celled, thin, pointed, about a foot long, and 3 inches broad, and one line thick; dissepiment parallel with the valves. Seeds numerous, round, surrounded by a remarkably fine pellucid membrane. Embryo with 2 emarginate, reniform cotyledons.—A large tree. Bark deeply cracked, and spongy. Leaves opposite, supra-decompound; leaflets subcordate, ovate. Petioles terminal. Wood white, firm, and close-grained.

1 M. horténsis (Lin. suppl. 291. Willd. spec. 3. p. 382.) ♄. S. Native of the East Indies, but in what particular place is unknown. Bignónia suberósa, Roxb. fl. ind. 3. p. 114. Leaves about 2 feet long. Leaflets acuminated, 1-3 inches long. Panicle cross-armed; ramifications horizontal, the first trichotomous, then dichotomous, with generally a simple flower in the fork. Bracteas minute. Flowers numerous, large, pale white, delightfully fragrant.

Garden Millingtonia. Fl. ? Clt. 1820. Tree 50 to 60 feet.

Cult. For culture and propagation see *Jacaranda*, p. 226.

XVII. ARGYLIA (this beautiful genus is dedicated to the memory of Archibald, Duke of Argyle, a nobleman distinguished for his patriotic virtues, and love of science, and more especially of botany. His fine garden at Whitton Park, in Middlesex, was justly celebrated towards the middle of the last century. It contained a very extensive collection of plants, particularly of ornamental and useful American trees, many of which he himself first introduced to this country.) D. Don, in edinb. phil. journ. 1823, and 1829, July.

Lin. syst. *Didynámia*, *Angiospérmia*. Calyx 5-parted. Corolla with a tubular base, and a ventricose throat; limb nearly equal, 5-lobed, imbricate in æstivation. Stamens 4, didynamous, that is, 2 long, and 2 short, without any rudiment of a sterile one. Anthers beardless, 2-parted; lobes obtuse, divaricate, distinct at apex, dehiscing by a longitudinal chink. Stigma bilamellate, prunose. Capsule silique-formed, 2-celled, 2-valved, many-seeded, torulose; valves crustaceous, navicular. Seeds transverse, wingless, reniform, 2-lobed at apex, with an obtuse margin, concave and striated on one side, and convex and tuberculed on the other; outer testa coriaceous. Embryo conforming to the cavity of the seed.—Perennial, green herbs. Roots thick, divided, fleshy, fusiform. Stem erect, terete, branched, viscid, downy, fleshy. Leaves alternate, remote, petitately digitate, petiolate; leaflets deeply bi-tripinnatifid, unequal, disposed in a circle, minutely downy and viscid. Peduncle a continuation of the stem, fleshy. Flowers terminal, racemose, numerous; pedicels short, alternate, each furnished with a bracteæ at the base. Corollas large, yellow? size of those of *Catálpa syringæfólia*, showy, marked with numerous red dots in the throat.

1 A. canéscens (D. Don, in edinb. phil. journ. 1829, July.) clothed with hoary down; segments of the leaves linear, channelled: tube of corolla exceeding the calyx. ♃. G. Native of Chili, about Coquimbo, Caldelengh. The herb is more slender, the down more copious, short, and canescent, than in *A. radiata*; and the flowers are smaller, but also yellow.

Canescent Argylia. Pl. 1 foot.

2 A. radiáta (D. Don, in edinb. phil. journ. no. 5. p. 1828. and July 1829.) glabrous; segments of the leaves flat, dilated at apex; tube of corolla twice longer than the calyx. ♃. G. Native of Peru. Bignónia radiáta, Lin. spec. 871. Willd. spec. 3. p. 301.—Feuill. per. 1. p. 734. t. 22. Corolla large, yellow, dotted with red in the throat. The plant, in the general description, is said to be clothed with minute viscid down.

Ray-leaved Argylia. Pl. 1 foot.

Cult. The species of *Argylia* are extremely splendid while in blossom. They will thrive best in a light rich soil, such as a mixture of loam, peat, and sand. Cuttings will strike root in sand, under a hand-glass, if kept free from damp.

XVIII. INCARVILLEA (named after P. Incarville, a Chinese Jesuit, who first sent specimens of it to Bernard de Jussieu, in the year 1742; and seeds of many other plants, as, for instance, the Chinese Aster, so common in our gardens.) Juss. gen. 156. ed. Usteri, p. 154. Lam. dict. 3. p. 233. ill. t. 527. Bunge, in mem. acad. petersb. 2. p. 120.

Lin. syst. *Didynamia, Angiospermia.* Calyx tubiracteate, pentagonal, 10-cleft; the 5 outer segments subulate, elongated, and glabrous, thickened; the inner ones shorter and bifid. Corolla bilabiate; segments nearly equal. Stamens 4, didynamous; filaments glandularly thickened at apex; anthers bisetose, 2-celled; cells horizontal, opposite, dehiscing at bottom. Stigma bilamellate. Capsule silique-formed, 6-ribbed, falcate, dehiscing laterally; dissepiment bilamellate, contrary to the fissures. Seeds numerous, winged, Bunge, l. c. Calyx 5-cleft, tribracteate. Corolla with a tubular base, a ventricose throat, and an unequal, 5-lobed limb. Stamens didynamous; anthers 2-lobed. Stigma bilamellate. Capsule silique-formed, compressed, long, narrow, 2-celled, 2-valved; dissepiment opposite the valves, many-seeded. Seeds winged.—A Chinese herb; with alternate, striated branches; alternate, pinnately jagged leaves; and loose, spicate racemes of flowers. Corolla like that of *Digitalis*; and the capsule like that of *Catálpa*, or *Fraxinus Orientalis*. The rudiment of a sterile filament not seen, ex Juss. l. c.

1 I. Sinénsis (Lam. dict. 3. p. 233.) ♃. G. Native of China, on *way sides*, near Pekin, and from that to the north, even to the limits of the empire. *J. Chinénsis*, Bunge, mem. acad. petersb. 2. p. 120. Campsis adrepens, Lour. coch. 378. Stem 1-2 feet high, herbaceous, erect. Leaves bipinnatifid; leaflets cut; lobes linear. Racemes terminal, loose. Flowers nearly sessile. Corollas large, scarlet, deciduous. Capsule 2 inches long and more. The figure of Lam. expresses the upper part of the plant well, ex Bunge, l. c. Stem branched, erected, a foot high. Leaves like those of *Chelidónium hybridum*, pinnately jagged, petiolate, glabrous. Flowers like those of *Digitalis*, loosely spiked, terminal, purple, ex Willd. spec. 3. p. 289. The plant of Jussieu is probably distinct from that of Bunge.

Chinese Incarvillea. Pl. 1 to 2 feet.

Cult. This is a most elegant plant when in blossom. Should it ever be introduced to our gardens, we would recommend its being treated as a greenhouse plant. A mixture of loam, peat, and sand, or any light rich soil, will suit it; and cuttings will probably be easily rooted.

XIX. WIGHTIA (named after Richard Wight, F.L.S. 01 the East India Company's Medical Service; lately in charge of the botanical establishment at Madras.) Wall. pl. rar. asiat. 1. p. 71. t. 81.

Lin. syst. *Didynamia, Angiospermia.* Calyx 4-toothed. Corolla funnel-shaped; limb 4-cleft; upper segment 2-lobed. Stamens 4, didynamous, without any hypogynous disk, or sterile filament. Stigma clavate, undivided. Capsule follicular, 2-valved; dissepiment parallel with the valves, placentiferous on both sides, at length free. Seeds imbricated lengthwise, winged at both ends. Radicle inferior.—A large, twining shrub. Leaves opposite, simple, and are, as well as the peduncles, covered with minute, stellate, deciduous down. Racemes large, axillary; peduncles dichotomous. This genus differs from all other Bignoniaceous plants, in the complete absence of a hypogynous disk, and sterile filament; and in the margins of the valves being bent inwards, so much so as to form the dissepiment; in the seeds being erect; and in the radicle being inferior.

1 W. arborea (Wall. l. c.) ♄. ⁂. S. Native of Nipaul, on Shoopore and Sumbaugh. Flowers rose-coloured, scentless, an inch long.

Great Wightia. Shrub cl.

Cult. For culture and propagation see *Bignonia*, p. 222.

XX. CATALPA (the Indian name of the first species.) Juss. gen. 156. ed. Usteri, p. 155. Spreng. gen. 1. p. 24. Sims, bot. mag. 1094. Schkuhr. handb. t. 175.—Bignonia species, Lin. and others.

Lin. syst. *Diandria, Monogynia.* Calyx 2-parted. Corolla campanulate, with a ventricose tube, and an unequal, 4-lobed limb. Stamens 5, 2 of which are fertile, and the other 3 sterile. Stigma bilamellate. Capsule silique-formed, long, cylindrical, 2-valved; dissepiment opposite the valves. Seeds membranously margined, and pappose at base and apex.—Trees with simple leaves, opposite, or disposed 3 in a whorl. Flowers terminal, panicled.

1 C. syringifòlia (Sims, bot. mag. 1094.) leaves cordate, flat, 3 in a whorl. ♄. H. Native of North America, on the banks of the Ohio, Mississippi, and Delaware, &c. in gravelly soil; it is found in considerable quantities in the forests of Wabash, Illinois territory, where the wood is even split for palings. Schkuhr, handb. t. 175. Bignonia Catálpa, Lin. spec. 868. Willd. spec. 3. p. 282. Waugh. amer. p. 58. t. 39. f. 45. Catálpa bignonioides, Walt. fl. car. p. 64. Catálpa cordifòlia, Nutt. gen. amer. 1. p. 10.—Duham. arb. 1. p. 104. t. 41.—Catesb. car. 1. p. 49. t. 29.—Schmidt, arb. 1. t. 14. Lin. hort. cliff. 317. Branches strong. Leaves large, deciduous. Panicles large, branchy, terminal. Corollas white, speckled with purple and yellow. This tree has a good effect when it stands in the middle of large openings, where it can freely send forth its side branches, and show itself to advantage; but it always requires a sheltered situation. The leaves, however, come out very late. The branches dye wool a kind of cinnamon colour. This tree appears to have been introduced by the aborigines, hence its name of Catawba, derived from the Indians residing on Catawba river.

Syringa-leaved Catalpa. Fl. July, Aug. Clt. 1726. Tree 20 to 40 feet.

2 C. ovàta; leaves ovate-cordate, 3 in a whorl. ♄. H. Native of Japan and China. Bignonia Catálpa, Thunb. fl. jap. 255. Azusa Fisagi Kaempf. amoen. 841. t. 842. *Azusa* is the Japanese name of the tree. Thunberg remarks that the Japanese lay the leaves on parts of the body affected with pain, supposing them to be beneficial to the nerves; and that a decoction of the pods is esteemed serviceable in asthma.

Ovate-leaved Catalpa. Tree.

3 C. longissima (Juss. gen. ed. Usteri, p. 155.) leaves oblong, or ovate-lanceolate, acuminated, 3 in a whorl, undulated. ♄. S. Native of the West Indies. Bignonia longissima, Swartz. prod. 91. fl. ind. occ. 2. p. 1037. Ait. hort. kew. 2. p. 447. B. longisiliqua, Jacq. amer. 188. t. 176. f. 78. Bignonia Quércus, Lam. dict. 1. p. 412.—Plum. spec. 5. icon. 97. Corolla whitish, undulately crenulated; upper segment emarginate. Capsule very long and slender. Seeds woolly.

Very-long-capsuled Catalpa. Clt. 1777. Tree 30 to 40 feet.

4 C. cassinoides (Spreng. syst. 1. p. 70.) leaves opposite, ovate or elliptic, coriaceous, glabrous; racemes terminal, few-flowered. ♄. S. Native of Brazil, near Rio Janeiro. Bignonia cassinoides, Vahl. symb. 2. p. 58. Lam. dict. 1. p. 418. Leaves 2 inches long, many-nerved, terminated by a small acumen. Corollas large, 2 inches long, glabrous.

Cassine-like Catalpa. Shrub or tree.

5 C. HinstfTA (Spreng. syst. 1. p. 70.) leaves opposite; oblong, attenuated at both ends, hairy ; flowers axillary, almost sessile ; segments of corolla entire. \ . S. Native of Brazil.

Hairy Catalpa. Shrub or tree.

6 C. MICROMY'LLA (Spreng. syst. 1. p. 70.) leaves opposite, obovate, obtuse; peduncles terminal, usually 3-flowered. .V} . S. Native of St. Domingo. Bigndnia microphy lla, Lam. diet. 1. p. 418.—Plum. spec. 5. icon. *55.* f. 2. Shrub size of *Prunus spinbsa.* Leaves sessile. Flowers large, white; limb undulat. 1.

Small-leaved Catalpa. Clt. 1820. Tree 10 to 20 feet.

Cult. The *C. syringcefblia* is an elegant flowering tree, very proper for large shrubberies. It thrives well in common garden soil; and is generally increased by seed, or slips of the root. For the culture and propagation of the rest of the species, see *Jacardnda,* p. 226.

XXI. SCHREBE[N]RA (named in honour of J. C. D. Von Schreber, Author of an edition of Linnaeus's Genera plantarum, 2 vols. 8vo. 1788, and several other botanical works.) Roxb. cor. 2. t. 101. fl. ind. 1. p. 109.

LIN. SYST. *Didndria, Monogynia.* Calyx tubular, bilabiate ; lips nearly equal, emarginate, and sometimes there is a tooth in each fissure, which separates the lips. Corolla salver-shaped, with a cylindrical tube, and a spreading, 5-6-7-cleft border; segments cuneate, and truncate. Stamens 2 ; anthers oblong, hid within the tube of the corolla. Stigma bifid, acute. Capsule large, pear-shaped, woody, 2-celled, 2-valved, scabrous, opening from the apex ; dissepiment parallel with the valves. ? Seeds 4 in each cell, oval, compressed, with a long, membranous wing.—A large timber tree. Leaves opposite, impari- pinnate. Leaflets 7-9 in number, oblique, ovate or cordate, entire, 3-4 inches long. Panicles terminal, thin, trichotomous. Flowers rather small, white and brown, variegated, very fragrant during the night.

1 S. SWEITENIOIDES (Roxb. 1. c.) ^ • S. Native of the East Indies, on the Raja-mundri, Circar, Balaghata mountains, &c. *Mucaadi* is the Telinga name of the tree, and *Mogalinga-marum* of the Tamuls. Trunk erect. Bark scabrous. Branches narrow, spreading in every direction, so as to form a large, beautiful shady head. The wood of this tree is of a grey colour, very close-grained, heavy and durable. It is used for a great variety of purposes, for which it is suitable, being less liable to warp than most other woods.

Ala hog any-like Schrebera. Tree large.

Cult. For culture and propagation see *Jacardnda,* p. 226.

Tribe II.

TOURRETIE'JE (this tribe contains plants agreeing with Tourrétia in important characters.) D# Don, in edinb. phil. journ. 1829. July. Bignoniaceae, sect. 2. R. Br.

Capsule 1-celled, 2-valved ; valves bearing placentas in the middle. Placentas 2, large, fleshy. Seeds horizontal, obovate, imbricate, flattened, surrounded by a wing, which is emarginate at the base.

XXII. TOURRE'TIA (so named by Dombey, after Marc Antoine-Louis Claret la Tourrette, a friend of Rousseau, author of Chloris Lugdunensis, and Botanicae Scholae Veterinariae, Ludg. praelectiones.) Domb. ex Juss. gen. ed. Usteri, p. 155. Juss. gen. 139. Schreb. gen. no. 1009. Lam. ill. 527. —Dombeya, Lher. t. 17.

LIN. SYST. *Didynamia, Angiosperma.* Calyx bilabiate ; upper lip, acuminated ; lower one broader, four notched. Corolla tubular, contracted in the middle ; tube length of calyx ; limb unilabiate; upper lip drawn out into a hollow ; lower lip wanting, but in place of it there are 2 teeth. Stamens 4, didynamous, lying in the hollow of the upper lip of the corolla. Anthers 2-lobed. Hypogynous disk urceolate. Stigma bifid. Capsule ovate or oblong, ligneo-coriaceous, echinated with hooked spines, 2-celled, 2-valved at apex; dissepiment prismatic, central, seminiferous, continuous with the middle of the valves, rising into a wing on both sides, which divides each cell into 2 parts, hence the capsule appears to be 4-celled. Seeds few, girded by a membranous margin, emarginate, and crenulated at the base.—A climbing herb : with tetragonal, dichotomous branches. Leaves opposite, conjugately ternate; furnished with a branched tendril from the top of the common petiole; and also having a ciliary crown surrounding the stem in the axils of the leaves. Flowers disposed in terminal racemes, each flow[7]er furnished with a narrow bractea. Corollas of a dusky violet colour.

1 T. LAPPA'CEA (Willd. spec. 3. p. 263.) 0 . ^ . H. Native of Peru. Dombeya lappacea, Lherb. stirp. nov. 1. p. 33 t. 17. Stem fistular. First leaves ternate, having the lateral leaflets bipartite ; the rest of the leaves conjugate ; ternate or biternate.

Burdock Tourretia. Fl. June, Aug. Clt. 1788. Shrub cl.

Cult. For culture and propagation see *Caldmpclis,* p. *232.*

XXIII. ECCREMOCA'RPUS (from *eKKpe$_{HV}$s, ekkremes,* pendant; and *KaprroQ, karpos,* a fruit; fruit pendulous.) Ruiz. et Pav. gen. fl. per. p. 90. t. 18. syst. 157. Humb. et Bonpl. pi. aequin. 1. p. 229. t. 65. H. B. et Kunth, nov. gen. 3. p. 150.

LIN. SYST. *Didynamia, Angiosperma.* Calyx large, membranous, 5-cleft, coloured. Corolla tubular ; throat equal ; limb 5-lobed, equal. Stamens 4, didynamous, with the rudiment of a fifth sterile one; anthers linear, inserted by the middle, versatile ; cells parallel, almost connate. Stigma 2-lobed. Capsule ovate, somewhat tetragonal, 1-celled, 2-valved ; placentas 2, large, fleshy, adnate to the middle of the valves. Seeds imbricate, horizontal, surrounded by a membranous wing.—Scandent sub-shrubs. Leaves opposite, abruptly bi-tripinnate, terminated by a branched tendril. Peduncles opposite the leaves, many-flowered. Corollas green or yellow.

1 E. LONGIFLORUS (Humb. et Bonpl. pi. aequin. 1. p. 229. t. *65.* Kunth. nov. gen. 3$_{\%}$ p. 150.) leaves abruptly tripinnate; leaflets oval, entire, rarely* bifid or trifid. Tj . $_{w}$. G. Native of Peru, in forests, near the mount Saraguru. Stem furrowed, glabrous at bottom, but clothed with rusty tomentum at the nodi above. Leaflets sessile. Peduncles pendulous, 3-4-flovvered. Calyx campanulate, 5-cleft, loose, red. Corolla a little arched, 3-4 times longer than the calyx, yellow, with a green limb. Capsule slightly tetragonal.

Long-flowered Eccremocarpus. Fl. July, Aug. Clt. 1825. Shrub cl.

2 E. VIRIDIS (Ruiz, et Pav. fl. per. syst. p. 157.) leaves bipinnate, with 2 pairs of pinnae ; leaflets ovate, quite entire. ^ • ^. G. Native of Peru, in forests. Calyx tubular, membranous, 5-cleft. Capsule pedicellate. Corolla green.

GVmi-flowered Eccremocarpus. Shrub cl.

Cult. The species of this genus are extremely handsome when in blossom. They should be treated in the same manner as recommended for the species of *Calampelis.*

XXIV. CALA'MPELIS (from KaXoc, *kalos,* beautiful; and a/iTreXie, *ampelis,* a vine.) D. Don, in edinb. phil. journ. July 1829. Sweet, fl. gard. n. s. t. 13.—Eccremocarpus species, Ruiz, et Pav.

LIN. SYST. *Didynamia, Angiosperma.* Calyx campanulate, half 5-cleft (f. 22. a.). Corolla with a ventricose throat, a tubular base (f. 22. <?.), and a contracted, 5-lobed mouth (f. 22. /.). Stamens 4, didynamous (f. *22. d.),* without any rudiment of a sterile one ; anthers bipartite (f. 22. 6.); lobes obtuse, divari-

cate, distinct at apex. Stigma bipartite (fl. 22. e.), hispid at top. Capsule 1-celled, 2-valved; valves placentiferous in the middle. Placentas 2, large, fleshy. Seeds obovate, horizontal, imbricate, flattened, surrounded by a broad, regularly sinuated wing, which is emarginate at the base; outer testa black, crustaceous, wrinkled, and a little scrobiculate.—A suffruticose, scandent plant. Leaves opposite, petiolate, abruptly bipinnate, terminated by a spiral, compound tendril. Leaflets coarsely serrated. Flowers racemose, secund. Racemes opposite the leaves, pedunculate, secund, many-flowered. Calyx short, green. Corolla scarlet, or deep orange red. Capsule large, muri[illegible]ait

1 C. scandens (Sweet, fl. gard. n. s. t. 20.) ♄. ♀. G. Native of Chili. Eccremocarpus scaber, Ruiz. et Pav. syst. fl. per. 167. Lindl. bot. reg. 939. Leaves with 2 pairs of pinnæ; leaflets alternate, obliquely cordate, ovate, serrated or entire. Stems angular, thickly clothed with short, stiff, pellucid hairs, when young, but afterwards smooth. Leaves, racemes, and corollas clothed with glandular hairs.

FIG. 22.

Scabrous Calampelis. Fl. July, Aug. Clr. 1824. Shrub climbing.

Cult. This beautiful, climbing plant is generally raised from seeds in spring, in a hot bed; and when the plants are of sufficient size, they are potted singly in separate pots. They answer well to be trained in a conservatory; or to be planted out in the open ground, against a wall or house, with a south exposure, along with *Cobæa scandens*, where, if the summer prove warm, it will make a showy appearance.

Tribe III.

CRESCENTIÆ Æ. (the plants contained in this section agree with *Crescentia*, in having a large, baccate fruit.) Fruit a large melon or gourd-shaped, 1-celled berry; with a corticate, solid rind; filled with pulp and seeds inside.

XXV. CRESCENTIA (named by Linnæus after Pietro Crescentio, an Italian writer on agriculture, in the thirteenth century.) Lin. gen. 762. Schreb. gen. no. 1021. Juss. gen. 127. edit. Usteri. p. 142. Gærtn. fruct. suppl. 1. p. 225. t. 223. H. B. et Kunth, nov. gen. 3. p. 157.—Cujete, Plum. gen. p. 23. t. 16. icon. 109.

Lin. syst. *Didynamia, Angiospermia.* Calyx bipartite, equal, deciduous. Corolla large, sub-campanulate; tube very short; throat large, ventricose, incurved; limb erect, 5-cleft, unequal; lobes toothed or curled. Stamens 4, didynamous; with the rudiment of a 5th; anthers 2-lobed. Stigma bilamellate. Berry large, form of a gourd, 1-celled, pulpy inside; rind solid. Seeds nestling in the pulp.—Large, spreading trees. Leaves alternate, solitary or in fascicles, simple, ternate or pinnate. Flowers solitary, rising from the trunk or branches.

1 C. Cujete (Lin. spec. 873. Jacq. amer. 175. t. 111. ed. piet. p. 86. & 167.) leaves oblong, acute or obtuse, cuneate at the base, in fascicles. ♄. S. Native throughout equinoxial America.—Plum. gen. 23. t. 109.—Comm. hort. 1. p. 187. t. 71. Branches horizontal. Flowers scattered over the older branches, and even in the trunk itself, solitary, pedicellate, sometimes all green, but most often variegated with green, purple, red, and yellow; they do not wither, but become putrid, and in that state exhale a nauseous and intolerable smell. The form and size of the fruit are variable; from spherical to bottle-shaped, and from 2 inches to a foot in diameter. These, however, if they are no more than varieties, are very constant. The fruit is covered with a thin skin, of a greenish yellow colour when ripe; under this is a hard, thin, woody shell, inclosing a pale yellowish soft pulp, of a tart, unsavoury flavour, surrounding a great number of flat seeds. These shells, cleansed of their pulp, and deprived of their outer skin, and dried, are used by the inhabitants of tropical America, for drinking cups; those of the long, small-fruited kind, are formed into spoons and ladles; those which are round are cut through the middle, and used as cups for chocolate and coffee; in short, these shells are converted into a variety of domestic furniture. They are frequently large enough to hold a gallon of fluid; they serve to boil water in, as they bear the fire well. The thicker parts are frequently used as button moulds in the West Indies. The Caribs engrave the outside with a number of grotesque figures, which they sometimes colour black or red. The pulp is sometimes eaten by the negroes, but is not looked upon as being either agreeable or wholesome; it is, however, much used by way of poultice; and a syrup made of it is in much request among the natives, in disorders of the breast, in contusions and inward bruises. The wood being very tough and flexible, is very fit for the coach-makerj and is frequently used for making saddles, stools, and other furniture. The leaves and branches are eaten by cattle in times of scarcity, as is also the pulp of the fruit. The tree is called *Tutuma* in some parts of America.

Var. β; leaves narrow; fruit smaller, globose or ovate. Plum. gen. 23.

Var. γ, *Cujete minima, fructu duro.* Plum. gen. 23. The smallest Calabash tree, with a hard fruit.

Cujete or Common Calabash Tree. [illegible] Clt. 1690. Tree 20 to 30 feet

2 C. cucurbitina (Lin. syst. p. 565. mant. 250. Swartz ob*. 234.) leaves oblong, rather coriaceous, solitary; fruit ovate, acuminated. ♄. S. Native of Jamaica, in dry rocky places, and about Campeachy. C. latifolia, Mill. dict. no. 2. C. Cujete, var. 2, Lin. spec. 873.—Plum. gen. 23. icon. 509. Brown, jam. 206.—Pluk. alm. 124. t. 171. f. 2.—Sloan. jam. 206. hist. 2. p. 172. Branches erect. Pedicels 2-3, terminating, one-flowered, shorter than the leaves. Corollas size of those of the preceding, dusky; the base of the tube and throat is white. The fruit varies in size; the shell is so thin as to be unfit for any purpose; the seeds are also much thinner; and the pulp a deeper yellow than that of the preceding.

Gourd-like Calabash-tree. Fl. ? Clt. 1733. Tree [illegible] feet.

3 C. acuminata (H. B. et Kunth, nov. gen. amer. 3. p. 157.) leaves oblong-lanceolate, acuminated, cuneately narrowed at the base, in fascicles. ♄. S. Native of the Island of Cuba, near Havannah and Los Guines. Branches elongated, white. Flowers size of those of the two preceding. Fruit globose, 3-4 inches in diameter. It differs from *C. Cujete* in the leaves being narrower, acuminated, and less [illegible]inn.

Acuminated-leaved Calabash tree. [illegible] 1822. Tree.

4 C. aculeata (H. B. et Kunth, l. c. p. 158.) branches [illegible]ly; leaves ternate or simple, twin; common petiole furnished with a narrow wing above. ♄. S. Native of Mexico near Campeachy.—Hern. mex. 290. Branches terete; warts. Leaves ovate-oblong, obtuse, running into the petioles at the base. Prickles nearly opposite, subulate at top, and thickened at the base. Flowers solitary or twin on the tops of the branches. Corolla as in the genus, greenish. Fruit oblong, ribbed.

Prickly Calabash tree. Tree.

5 C. ELATA (H. B. et Kunth, l. c. p. 155.) unarmed; leaves 3 together, all ternate; or the middle one of the three is ternate, and the lateral ones simple; common petioles broadly winged. ♄. S. Native of Mexico, in very hot places, near Acapulco. There are prickle-like tubercles, which rise from the same point as the leaves. Leaves 3, from the axil of each tubercle; middle leaf ternate, on a long petiole; lateral ones simple and smaller, and sessile. Simple leaves obovate-oblong, coriaceous; leaflets of the ternate ones oblong, obtuse, scutish at the base. Flowers scattered, size of those of *Cobæa scandens*, on short pedicels, pale red, reticulately veined. Fruit globose, 4-6 inches in diameter, ex. Bampl.

Winged-petioled Calabash tree. Tree 20 to 30 feet.

Cult. The species of *Crescentia* grow well in a mixture of loam, peat, and sand; and ripened cuttings will strike root in sand, under a hand-glass, in heat. The trees require to be so large before they come to a flowering state, that it is not likely they will ever be brought to blossom in this country.

XXVI. TANAECIUM (from τανηκες, *tanaekes*, long; stems elongated.) Schreb. gen. no. 1022, and p. 834. Swartz, prod. p. 91. fl. ind. occ. 2. p. 1049. Crescentia species of authors. Tanaecium species, Spreng. gen. 8. p. 506.

LIN. SYST. *Didynamia, Angiosperma.* Calyx tubular, truncate, entire. Corolla with a long, cylindrical tube, a wide throat, and an erectly spreading, 5-cleft, nearly equal limb; the 2 upper segments approximating, less divided, nearly upright; the 3 lower spreading, a little reflexed. Stamens 4, nearly equal in length, with the rudiment of a fifth; anthers 2-lobed. Stigma 2-lobed. Berry large, pedicellate, globular or oblong, 2-celled. Seeds oblong, angular, nestling in the pulp.—Climbing shrubs, natives of Brazil. Leaves alternate, simple, or binate, ternate, glabrous.

1 T. PARVIFLORUM (Swartz, prod. 92. fl. ind. occ. 2. p. 1053.) leaves ovate, coriaceous; stem climbing. Grubby, radicanl. Ij. S. Native of Jamaica and Caraccas. Swartz. sehoenbr. 1. p. 61. t. 115.—Brown, jam. 262. Leaves shining. This plant sustains itself by the help of the neighbouring trees, or is found spreading on the ground, if it does not meet with support.

Parviflorous Tanaecium. Fl. ? Clt. ? Shrub climbing.

2 T. JAROBA (Swartz, prod. 92. fl. ind. occ. 2. p. 1050.) lower leaves ternate: superior ones twin; tendrils from the tops of the petioles, between the leafletfi; stem scandent. ♄. S. Native of Jamaica, most common between St Elizabeth's and Westmoreland.—Willdenow, jam. 207. Swartz. ist. 2. p. 1*.—Jaroba Marcg. bras. 25. Pis. bras. 173. Flowers white. This species climbs to the tops of the loftiest trees, and overtops their tops.

Jaroba Tanaecium (Swartz, prod. 92. fl. ind. occ. 2. p. 1050.) cl.

Cult. For culture and propagation see *Bignonia*, p. 222.

XXVII. TRIPINNA'RIA (so named, from the leaves of one of the species being tripinnate.) Spreng. gen. 2. p. 842. S. Tripinnata, Lour. cochin. 391.

LIN. SYST. *Didynamia, Angiosperma. Calyx* unequally 5-cleft, or 5 crenate, campanulate or cup-shaped. Corolla funnel-shaped, or sub-campanulate, with a widened throat, and a 5-cleft spreading limb; segments ovate, undulated, villous, upper one the largest. Stamens 4, didynamous, about equal in length to the corolla, with the rudiment of a fifth. Stigma bifid, acute or bilamellate. Berry large, fleshy, 1-celled, filled with pulp. Seeds oblong, compressed, nestling in the pulp.—Large trees, with pinnate or tripinnate, alternate leaves. Flowers racemose terminal.

1 T. ASIA'TICA (Spreng. syst. 2. p. 842.) leaves tripinnate, acuminated; racemes terminal. ♄. G. Native of Cochinchina, in woods on the mountains. Tripinna tripinnaria, Lour. cochi. p. 391. A large tree, with spreading branches. Leaves glabrous. Flowers yellowish, disposed in terminal corymbose racemes.

Asiatic Tripinnaria. Tree large.

2 T. AFRICA'NA (Spreng. syst. 2. p. 842.) leaves pinnate; leaflets oblong, serrated; flowers lateral from the trunk. ♄. S. Native of Mozambique. Crescentia pinnata, Jacq. coll. 3. p. 293. t. 18. Tanaecium pinnatum, Willd. spec. 3. p. 312. A large tree. Calyx unequally 5-cleft. Corolla funnel-shaped, purple inside; having the tube dilated above; segments of the limb ovate, acute. Stamens 4, didynamous, with the rudiment of a fifth. Berry size of a man's head.

African Tripinnaria. Clt. 1824. Tree large.

Cult. For culture and propagation see *Crescentia*, above.

ORDER CLIX. PEDALINEÆ. (this order contains plants agreeing with the genus *Pedalium* in important characters.) R. Br. prod, p. 512.—Sesameæ, Kunth, syn. 3. p. 251. Martyniaceæ?, Link, handb. 1. p. 504.

Calyx divided into 5 nearly equal parts (f. 23. a.). Corolla monopetalous, hypogynous, irregular, having the throat ventricose, and the limb bilabiate. Stamens 4, didynamous, inclosed; with the rudiment of a fifth (f. 23. b.). Ovarium girded by a glandular disk at bottom, of many spurious, 1-2-seeded cells. Style simple; stigma undivided. Fruit dry, pericarpous, dry, usually muricated fig. 23. c., with GI several cells formed by the splitting of 2 placentas, and the divergence of their lobes as in the ovarium. Seeds pendulous, erect or horizontal, with a papery testa. Albumen none. Embryo straight.—Herbaceous plants; with opposite leaves; and axillary, bilobracteate flowers.

This order differs from *Bignoniaceæ*, in the seeds being usually definite and wingless; in the woody, 2-4-lobed placentas, which spread and divide variously inside the pericarpum, so as to produce a 4-8-celled fruit, out of a 1-celled ovarium.

The leaves of *Sesamum* are emollient; its seeds contain an abundance of fixed oil, as tasteless as that of olive oil, for which it might be substituted, and which is expressed in Egypt in large quantities. The fresh leaf of *Pedalium murex*, when agitated in water, renders it mucilaginous, in which state it is prescribed by the Indian doctors, in cases of dysuria, &c.

Synopsis of the genera.

1 SESAMUM. Capsule oblong, compressed, tetragonal, 4-celled, 2-valved; dissepiment contrary to the valves, bipartite. Seeds numerous, imbricated in one row in each cell.

2 MARTYNIA. Drupe oblong, beaked at apex, the anterior horn solid, obscurely-toothed, containing a 4-celled nut; cells few-seeded.

3 CRANIOLA'RIA. Drupe ovate, containing a 4-celled, woody nut, which is furnished with 2 short horns at apex. Seeds 4 in each cell, but often solitary.

4 JOSAWNSIA. Drupe bifid. Drupes prickly, containing a 4-5-celled nut; cells 1-seeded. Seeds erect.

5 PEDA'LIUM. Drupe ovate, 4-cornered (f. 23. c.), the corners furnished each with a thorn towards the base (f. 23. d. e.), containing a 2-celled, 4-winged, corky nut. Seeds pendulous, 2 in each cell.

I. SESAMUM (from Σησαμον, *Sesamon*, of Theophrastus and Dioscorides; from Semps'am, the Egyptian name of one of the species.) Lin. gen. no. 782. Schreb. gen. no. 1046. Gaertn. fruct. 2. p. 122. t. 110. Juss. gen. 135. Lam. ill. t. 528. —Digitalis species, Tourn.

Lin. syst. *Didynamia, Angiospermia*. Calyx 5-parted; the upper segment the smallest. Corolla with a short tube, and a campanulate throat; limb quinquefid, somewhat bilabiate; the lower segment the longest. Stamens 4, didynamous, inclosed, with the rudiment of a fifth sterile one. Stigma bilamellate. Capsule oblong, compressedly tetragonal, 4-celled, 2-valved; dissepiment contrary to the valves, bipartible. Seeds numerous, disposed in one series, somewhat imbricated, ovate, a little compressed, wingless, erect.—Annual herbs, with opposite and alternate leaves. Flowers axillary, solitary. Peduncles bigibbular: glands bracteate. Corollas white, pale red or yellow.

1 S. INDICUM (Lin. spec. 884.) downy; lower leaves ovate, 3-lobed; superior ones lanceolate, undivided; stem erect, branched. ⊙. S. Native of the East Indies, common. Sims, bot. mag. 1788. S. trifoliatum, Mill. dict. no. 2.—Rumph. amb. 5. t. 204. f. 76. f. 1.—Pluk. phyt. t. 109. f. 4. Stem scabrous. Leaves on long petioles, downy on both surfaces, glaucous beneath. Flowers white, tinged with red. In the plant found by Martius in Brazil, the rudiment of a fifth filament is wanting. This species was first introduced to Jamaica by the Jews, and is now cultivated in the West Indies. It is called *Jungle*, or oil plant. The seeds are frequently used in broth, by many of the Europeans; but the Jews make them chiefly into cakes. Many of the Oriental nations look upon the seeds as a very wholesome food, and express an oil from them, not unlike, or inferior to, the oil of almonds. A decoction of the leaves and buds, is looked upon as a good resolutive, and frequently ordered in inflammations of the eyes, where no fomentations become requisite.

Var. β. casa (Blum. bijdr. 775.) flowers rose-coloured. ⊙. H. Native of Java, on the mountains.

Indian Oily-grain, or Oil-seed. Fl. July. Clt. 1731. Pl. 1½ to 2 feet.

2 S. ORIENTALE (Lin. spec. 883.) leaves ovate-oblong, eniire. ⊙. S. Native of the East Indies, and is now cultivated in South America. Lin. hort. cliff. 318. fl. zeyl. 318. Willd. spec. 3. p. 338. Gaertn. fruct. 2. p. 122. t. 110. Thunb. ja Loeur. cochin. 382. S. veterum, Bauh. pin. 27. Riv. mon. t. 114.—Burm. zeyl. 37. t. 28. f. 1. Schia-ela, Rheed. mal. 9. p. 105. t. 54. Corolla dirty white, or pale red. Plant rather hairy. This species is frequently cultivated in the Levant, and also in Africa, as a pulse; the seeds have been introduced into Carolina, by the African negroes. An oil is expressed from them, which will keep many years, without acquiring any rancid smell or taste, but in two years becomes quite mild, so that, when the warm taste of the seed which is in the oil when first drawn is worn off, it is used as a salad oil, and for all the purposes of sweet oil. They are also used by the negroes for food; they parch them over the fire, then mix them with water, and stew other ingredients with them. A pudding is made from them in the same manner as from millet or rice, called *Benny*, or *Bonny*, in Carolina. In Japan, where they have no butter, they use the oil for frying fish, and in dressing other dishes; as a varnish; and medicinally, as a resolvent and emollient. In China and Cochinchina, they are used for the same purposes.

Eastern Oily-grain, or Oil-seed. Fl. July. Clt. 1731. Pl. 1½ to 2 feet.

3 S. LATIFOLIUM (Retz. obs. 6. p. 21. no. 56.) leaves lanceolate, on long petioles; corollas hispid on the outside. ⊙. S. Native of the East Indies, in forests, at Nidrapore. Stem a little branched. Leaves alternate, having the margins and nerves beneath scattered with short hairs. Calyx and capsule hispid. Corolla deep yellow.

Yellow-flowered Oil-seed. Pl. 1 to 2 feet.

4 S. RADIATUM (Schum. pl. guin. p. 274.) hairy; leaves usually 3 in a whorl, on short petioles: lower ones roundish-ovate, deeply toothed: upper ones ovate-oblong, quite entire; bracteas setaceous, solitary. ⊙. S. Native of Guinea. Stem slightly tetragonal. Flowers purple.

Radiate Oil-seed. Pl. 2 feet.

5 S. LACINIATUM (Klein, Willd. spec. 2. p. 339.) leaves all bipartite and jagged; stem prostrate, hispid. ⊙. S. Native of the East Indies, near Hydrabad. Branches ascending at top. Leaves on short petioles, scabrous on both surfaces. Margins of the teeth of the calyx hispid. Capsule obtuse at both ends. Sesamum prostratum, Retz. obs. 4. p. 28, is a very doubtful plant, or probably a synonyme of *Trewia Asiatica*.

Jagged-leaved Indian Oil-seed. Pl. prostrate.

Cult. The species of Sesamum are grown in our gardens only as botanical curosities. The seeds of them require to be reared on a hot-bed frame in early spring, and otherwise treated like other tender annuals, by planting them out in the open border, in a warm, sheltered situation, about the end of May.

II. MARTYNIA (so named by Houston, in honour of John Martyn, F.R.S., professor of botany at Cambridge; author of Historia Plantarum rariorum, and several other works; editor of Virgil's Georgics and Eclogues, born Sept. 1699, died 1768.) Houston, rel. t. 10. Lin. gen. no. 753. Schreb. gen. no. 1010. Mart. t. 42. Juss. gen. 140. ed. Usteri, 156. Gaertn. fruct. 2. p. 131. t. 110. Glox. obs. 1. 1-2.—Proboscidea, Juss. Schmidel. icon. t. 12.

Lin. syst. Didynamia, Angiospermia. Calyx 5-cleft, nearly equal, bracteate at the base. Corolla sub-campanulate; limb 5-lobed, unequal. Stamens 4, didynamous, 2 of them sometimes sterile, with always the rudiment of a fifth. Stigma bilamellate. Drupe or capsule oblong, bicornute at apex; the anterior horn sulcately toothed, containing a 4-celled, woody nut; cells few-seeded. Seeds ovate, a little compressed, wingless, pendulous? Radicle superior.—*Herbs with opposite, rarely alternate leaves.* Flowers spicate, axillary and terminal.

1 M. ANNUA (Lin. syst. 550. spec. 862. Swartz, obs. 250.) stem branched; leaves alternate, lobed, cordate at the base; stamens 4, all fertile. ⊙. H. Native of Mexico, in high plains; and on the banks of the Mississippi. Sabb. hort. t. 91. Gaertn. fruct. 2. p. 131. t. 110. M. proboscidea, Glox. in obs. p. 14. Ait. hort. kew. 2. p. 339. Mill. dict. t. 236. Sims, bot. mag. 1056. M. alternifolia, Lam. dict. 2. p. 112. Proboscidea Jussieui, Schmidt, icon. 10. t. 12-15. Med. bot. beob. 1783. p. 20. M. Louisiana, Mill. dict. no. 2. This is a large annual, villous, viscid plant. Corollas with a yellowish white tube, variegated with green, yellow, and violet spots and lines; limb wide, pale violet, marked with saffron-coloured and violet dots and lines. The lobes of stigma close when touched, according to Torra.

Var. β. triloba; leaves oblong-deltoid, irregularly cordate at the base, 3-lobed: middle lobe long, sinuated, undulated, and finely denticulated. ⊙. H. Native near Vera Cruz. M. triloba, Cham. et Schlecht. in Linnæa, 5. p. 124. Smaller than the species.

Annual Martynia. Fl. July, Aug. Clt. 1728. Pl. 1 to 2 feet.

2 M. LOUISIANA (Lin. syst. p. 559.) stem simple; leaves opposite, roundish, repand; flowers axillary, solitary, on short pedicels; tube of corolla gibbously flattened at the base; stamens 4, all fertile. ⊙. G. Native of the Cape of Good Hope. Ait. hort. kew. 2. p. 339. Mœnch. icon. 7. Willd. spec. 3. p.

265. Martynia Capénsis, Glox. obs. p. 13. Stem erect, scabrous. Leaves 3-nerved. In place of bracteas at the base of the peduncles, there is a pedicellate gland. Tube of corolla very long. Corollas purplish.

Long-flowered Martynia. Fl. July, Aug. Clt. 1731. Pl. 2 feet.

3 M. DIANDRA (Glox. obs. p. 14. t. 1. Jacq. schœnbr. 3. p. 21. t. 289.) stem branched; leaves opposite, ic ate at the base; stamens 4, 2 of them sterile. ⊙. G. Native of Mexico, at Vera Cruz; and near Campeche. Andr. bot. rep. 675. M. angulosa, Lam. dict. 2. p. 112. Martynia reliq. Houst. p. 5. t. 10. M. fragrans, Lin. spec. ed. 1. syst. d. 10.—Martyn. rem. 42. t. 42. Erbert. act. t. 1. f. 5, pliil. trans. 38. no. 487. p. 3. Stem reddish, branches villous and viscid. Flowers thyrsoid, in the forks of the stem, drooping. Corolla with a white tube, tinged with purple, and spotted with red and yellow; limb pale red, with a shining purple spot at each segment; upper lip reflexed.

Diandrous Martynia. Fl. July, Aug. Clt. 17 !, 1*l. 2 f:

4 M. LUTEA (Lindl. bot. reg. t. 934.) stem branched, clothed with glandular down; leaves opposite, cordate-orbicular, toothed, clothed with glandular down, beaks much longer than the pericarp. ⊙. H. Native of Brazil. Calyx involucrated by 2 bracteas. Corolla large, funnel-shaped, orange-yellow, clothed with blood-colour inside.

Yellow-flowered Martynia. Fl. Aug. Clt. 1825. Pl. 1 to 2 feet.

5 M. ZANQUEBARICA (Loar. coch. 386.) stem procumbent; leaves pinnatifid, pilose; flowers axillary, solitary; beaks of capsule second. ♄. S. Native of Zanzibar. Leaves petiolate, pilose. Flowers pale purple. Calyx pilose, with lanceolate, nearly equal, deciduous, expanded segments. Corolla ringent, with a large, roundish, gibbous tube, and a short limb; upper lip trifid, obtuse, the middle segment emarginate; the lower lip ovate, longer, entire. Fruit bivalvate on both sides, 4-beaked, 4-celled, 1-seeded, 2-valved.

Zanzibar Martynia. Shrub procumbent.

Cult. The seeds of the species should be reared on a hot-bed, as other tender annuals; and when transplanted into other pots, they should be kept in the hot-house or green-h until the seed is ripened. A light rich soil suits them best.

III. CRANIOLA'RIA (from *κρανιον, kranion*, a skull; some resemblance in cap • Uj.) Lin. gen no. 868. JnsSsgeti. ed. Usteri, p. 156. H. B. et Kunth, nov. get). • oer. 2. :. 153.—Martynia species of authors.

Lin. syst. *Didynamia, Angiospermia.* Calyx campanulate, spath-formed, 3-toothed, cleft on one side, bracteate at the base. Corolla funnel-shaped, w till aver; long tube, a campanulate throat, and a bilabiate limb; upper lip bifid; lower one trifid; the middle lobe the broadest. Stamens 4, didynamous, with the rudiment of a fifth. Stigma bilamellate. Drupe ovate, acute, containing a 4-celled, woody nut, which is furnished with 2 short horns at apex. Seeds 4 in each cell, or often solitary, ovate, a little compressed, wingless.—Villous, clammy herbs. Leaves opposite, 5-lobed. Flowers racem rsose from the forks of the branches, or axils of the leaves, or tops of the ! nches. Corollas white, with a painted throat.

1 C. ANNUA (Lin. mant. 417. syst. 417. Jacq. amer. 173. t. 110. Noes, et Mart. in n-t. bonn, 11, p. <JS.) stemi annual, branched; leaves cordate, palmate, toothed ! tufee -• corolla longer than the calyx, which is bibracteate. Q. G. Viitiv. of the tropical parts of America. Martynia craniolaria, Swartz, obs. 230. Glox. obs. p. 14. Willd. spec. 3. p. 262. Martynia spathacea, Lam. dict. 2. p. 712.—Erbr. piet. t. 1. f. 2. Corolla white. The natives of Venezuela prepare from the dried roots of this plant a bitter and cooling drink.

Annual Craniolaria. Fl. July, Aug. Clt. 1733. Pl. 1 to 2 feet.

2 C. UNIBRACTEATA (Nees, in. Mart. nov. act. bonn. 11. p. 67.) stem perennial, branched; leaves cordate, rather angular, toothed; tube of corolla length of calyx, which is unibracteate. 2*. S. Native of Brasil, about Cachuera, and at Rio das Contas. Holoregmia viscida, Mart. in bot. zeit. 1831. 1. p. 300. bras. reise. 2. band. p. 339 and 341. Martynia sparbasea, Sprang. syst. add. p. 338. Leaves a hand broad. Flowers disposed in long, simple racemes from the tops of the branches. Corolla pale sulphur-coloured, having the bottom painted with purple dots. Plant canescent.

Unibracteate Craniolaria. Pl. 4 to 5 feet.

Cult. The seeds and plants of *C. diversa* should be treated in the same manner as those of the species of *Martynia*. *Craniolaria unibracteata* should be treated like other common perennial stove plants; and it may either be increased by seeds or cuttings.

IV. JOSEPHI'NIA (named in honour of the Empress Josephine, a great patron of botany and gardening.) Vent. malm. **p. 67. t. 67.** R. Br. prod. p. 520. Blum. bijdr. 770.

Lin. syst. *Didynamia, Angiospermia.* Calyx 5-parted, equal, corolla with a short tube, a large campanulate throat, and a 5-lobed, spreading, bilabiate limb; upper lip semi-bifid; lower one trifid; the middle segment the longest. Stamens 4, didynamous, with the rudiment of a fifth; anthers free. Stigma bifid; the segments emarginate, or semi-bifid; therefore the stigma is commonly called 4-cleft. Drupe dry, prickly, falsely 4-8-celled, opening at top, by 2-4 holes; cells 1-seeded; seeds erect. Radicle anterior.—Diffuse herbs. Leaves opposite, entire. Peduncles axillary. Flowers purplish.

1 J. LUPULINA (Vent. malm ii. p. 67, t- 67. mem. de l'Inst. sc. phys. 1806. 1. sem. p. 71.) ovarium 4-5-celled; leaves lanceolate-el site, downy beneath, as well as the stem; calyx equal. ♃. G. Native of New Holland, on the west coast. Hamulin. Leaves ovate-cordate, ex Vent. Flowers pale pink, dotted, like those of *Catalpa syringæfolia*, ex Vent.

Lupulus's Josephinia. Fl. Clt. Pl. 2 to 3 feet.

2 J. CHAMPIONA (Blum. bijdr. prod. p. 520.) ovarium 3-celled; leaves lanceolate, acuminated, downy beneath; stem glabrous; upper segments of calyx one half shorter than the rest; lower segment of corolla more than twice the length of the rest. ♃. S. Native of New Holland, within the tropic. Flowers purplish.

Great-flowered Josephinia. Shrub?

3 J. CELEBICA (Blum. bijdr. 770.) ovarium 3-celled; leaves oblong-lanceolate, downy; peduncles shorter than the petioles; **drupes tomentow**; calyx equal. ♄. S. Native of the Celebes, in woods.

Celebes Josephinia. pi. Aa g. Sept. Shrub.

Cult. For alturc and pro; agation, see *Martynia*, above.

V. PEDA'LIUM (from πηδαλιον, *pedalion*, the rudder of a ship; in reference to the dilated angles of the fruit.) Lin. gen. no. 794. Schreb. gen. no. 1065. Roxb. in coll. hafn. 2. p. 255. Gærtn. fruct. 1. p. 276. t. 58. Juss. gen. 140. ed. Usteri, p. 206.—Mürex. Lin, fl. v. syl. 440.

Li; syst. *Didynamia, Angiospermia.* Calyx 5-parted (f. 23. a.); the upper segment very short; and the lowest longest. Corolla with a 3-cornered tube, a widened campanulate throat, flat beneath, and a 5-lobed, sub-bilabiate limb. Stamens 4, didynamous, with the rudiment of a fifth (f. 23. b.); filaments pilose at the base. Anthers twin, crucate, terminated by a gland. Stigma bifid, revolute. Drupe dry, ovate-conical (f. 23. c.), 4-cornered, the corners thorny on the angles (f. 23. c. d.), containing a 2-celled, 4-winged, corky nut; cells 2-seeded; seeds pendulous, arillate, one above the other: there is an empty cell

below the fertile ones.—A trichotomous herb, with the habit of *Martynia*. Leaves opposite. Flowers axillary, solitary. Fruit like those of *Trapa*.

1 P. murex (Lin. spec. 892.) ☉. S. Native of the East Indies, Ceylon, Malabar, Coromandel, &c. near the sea. Lars';. Ill. t. 538. Murex, Lin. fl. zeyl. 440. Burm. ind. 159. t. 44. f. 2.—Herm. zeyl. p. 42. Circu-Mullu, or Kakri-toli. Rheed. mal. 10. p. 143. t. 72. A pretty large, succulent, branched plant. Root deep orange-coloured, branched. Stem hardly any. Branches 1-2 feet. Leaves obovate, obtuse, regularly toothed, trun•;Lle, pretty smooth, 3-nerved, 2-3 inches long, and 1½ to 2 inches broad; petioles glandular. Flowers pretty large, yellow, on short pedicels, erect; on each side of their insertion is a small, roundish, brown gland.

FIG. 23.

Drupe netant, armed with 4 sharp spines, one on each co'net, at the base. The whole plant has an odour of musk. Of' the same genus is the *Planta Euphratica affinis*, Pluk. t. 373. f. 2. The sterile filament is terminated by an orange-coloured head. This plant, when fresh, has the singular property of rendering water or milk mucilaginous, without altering the taste, or colour, or smell of the liquid. This effect goes off in the course of 8 or 12 hours, leaving the liquid in its former state. Butter-milk is often sold in the markets of India; and in order to make a greater profit on their merchandize, they dilute it with water, and then thicken the whole by turning it round a few times with a few fresh leafy branches, which makes the adulterated butter-milk seem rich, and of the best sort.

Cult.—4-fruited Pedalium. Fl. Aug. Sept. Clt. 1778. i>L 1 to 2 feet.

Cult. For culture and propagation see *Martynia*, p. 235.

Order CLX. COBEACEÆ (this order only contains the genus *Cobæa*.) D. Don, in edinb. phil. journ. 1824. vol. 10. p. 5.

Calyx leafy, 5-cleft, equal (*f.* 24. *a.*) Corolla inferior, campanulate, regular, 5-lobed (*f.* 24. *b.*), imbricate in æstivation. Stamens 5, unequal (*f.* 24. *b.*), rising from the base of the corolla; anthers 2-celled, compressed. Ovarium superior, 3-celled, surrounded by a fleshy, annular, hypogynous disk; ovula several, ascending. Style simple; stigma trifid (*f.* 24. *b.*). Fruit capsular, 3-celled, 3-valved; with a septicidal dehiscence; placenta very large, 3-cornered in the axis, its angles touching the line of dehiscence of the pericarpium. Seeds flat, winged, imbricated in a double row; their integument mucilaginous. Albumen fleshy. Embryo straight. Cotyledons foliaceous, radicle inferior.—Climbing shrubs. Leaves alternate, abruptly pinnate; the common petiole lengthened into a tendril. Flowers axillary, solitary. This order is readily distinguished from *Bignoniaceæ* and *Pedaliaceæ*, the two foregoing orders, in the flowers being regular and pentandrous, in the presence of albumen to the seeds, &c.; and from *Polemoniaceæ* it is readily distinguished, by habit alone, and by the winged seeds.

1. COBÆA (named in honour of B. Cobo, a Spanish botanist.) Cav. icon. 1. p. 11. t. 16-17. and vol. 5. p. 69. t. 500. Pers. syn. 1. p. 185. H. B. et Kunth, nov. gen. amer. 3. p. 151.

Lin. syst. Pentandria, Monogynia. Character the same as that of the order. Calyx permanent, covering the capsule; segments large, orbicular.

1 C. scandens (Cav. l. c.) leaflets 3 pairs, elliptic, mucronate, marginate, and slightly ciliated: lower pair close to the stem, and sub-auriculate on one side at the base; tendrils Wartfilied; ca broad, r ycine segments oundish, mucronulate; stamens about equal in length, hardly longer than the corolla. ♆. ◡ G. Native of Mexico, in various parts. Sims, boi. mag. 851. Calyx glaucous, 5-winged, before expansion. Flow ers large, campanulate, with a short tube of a dark, dirty purple colour. ♪ (fig. 24. Lobes of corolla rather spreading, broad, short, roundish, imbricate, ciliated.

FIG. 24.

Climbing Cobæa. Fl. May, Oct. Clt. 1792. Shrub cl

2 C. tenuis (D. Don, in edinb. phil. jo nr. \/ l. 10. p. 4.) leaflets 3 pairs, oblong-lanceolate, acute; lower pair close to the stem; tendrils branched at top; calycine segments lanceolate, tapering to the apex; stamens twice the length of the corolla. ♆. ◡ G. Native of Guayaquil. Flowers yellowish, about half the size of those of *C. scandens*.

Yellow-flowered Cobæa. Shrub cl.

Cult. The *C. scandens* is a great favourite with most gardeners; it is a quick-growing, and profuse-flowering climber. It is well adopted for a large conservatory or greenhouse. It grows also well in the open air, in summer, trained against a south wall, or against a house, where it will flower in abundance. The plant is best raised from seeds, which ripen in abundance; but it may also be raised from cuttings, which latter mode is almost needless.

Order CLXI. ARAGOACEÆ (this order only contains the genus *Aragoa*.) Genera Bignoniaceis affinia. H. B. et Kunth, nov. gen. amer. 3. p. 154.

Calyx deeply 5-parted (*f.* 25. *a.*) Corolla tubular, salver-shaped (*f.* 25. *b.*); limb 5-parted; the lobes convolutely imbricate in æstivation; at length spreading. Stamens 4 (*f.* 25. *c.*), inserted in the sinuses between the lobes of the corolla, exserted; anthers cordate (*f.* 25. *c.*), the cells confluent, opening by a continuous line. Style filiform (*f.* 25. *c.*); stigma capitate, minutely papillose. Capsule 2-celled, 2-valved (*f.* 25. *g.*); valves cloven; dissepiment parallel with the valves. Seeds 4-5 in each cell, compressed, with a membranous border. Albumen copious, fleshy. Embryo erect; with plano-convex, obtuse, fleshy, cotyledons, furnished with 3 nerves; and a bi iHIT 1 radicle, much shorter than the cotyledons.—Much branched shrubs, natives of the mountains, near the city of Santa Fe de Bogota, in New Granada; with opposite branches. Leaves small, coriaceous, imbricated in 2 rows. Flowers axillary, solitary, nearly sessile, small, white.

This order is nearly related to the *Polemoniacea:*; but differs HT it, m its undivided stigma, in the confluent cells of the hers and bilocuhr ovarium; and from *Scrophtilarmece,* in its Regular flowers, ibliaceous embryo, and convolute aestivation of sshe corolla,

§£1. AB.AGCTA (named in honour of Francisco Arago, member Academy of Paris; the celebrated astronomer.) H. B, et gfcntb, nov. gen. amer. 1. p. 154. t. 216-217.

^JLIK. SYST. *Telrandria, Monogynia.* Character the same as !%; of the order.

FIG. 25.

iR A. CUPRE'SSINA (H. B. et jiKunth, nov. gen. amer. 3. p. [56. t. 216.) branches downy; Jeaves scale-formed, ovate-del- .:id, glabrous, closely adpressed, vith rather woolly edges; throat }(corolla villous. h_t ,*G.* Native If Santa Fe de Bogota. A. (serina, H. B. et Kunth, 1. e. 16. *b.* Segments of corolla jjbovate, ciliated. Margins of nents of the calyx ci- iiit.d. Antliers cordate, reni- form. Filaments villous at the >ase.

Cypress-like Aragoa. Shrub.

2 A. ABIETJNA (H. B. et Kunth, nov. gen. amer. 3. p. 156.) branches glabrous; leaves ^Jtnear, spreading, ciliated a little; corolla glabrous. T;. G. ^^•'ative along with the preceding. Branches 3--1 in a whorl.

FiT'llke Arogoa. Shrub.

| *Cult. Aragoa* is a genus of beautiful and singular shrubs. Should either of them ever be introduced to our gardens, we tould recommend their being treated as greenhouse plants; to V planted in pots, well drained with sherds, in a mixture of (at and sand.

jORDER CLXIL POLEMONIACEJE (the plants contained , * this order agree in important characters with the genus *Polc- •Jonium.)* Juss. gen, p, 130. ed. Usteri, p. 1,52. I>. Don, in dinb. phil. journ. H. B. ct Kunth, nov. gen. amer. 3. p. 160.

Calyx tubular (f. 26. *a.,* f. 27. «.)> 5-cleft (f. 27. a.}, or 5- ootlied (f. 2(i. *a.).* Corolla rotate (f. 26. 6.), or salver-shaped f. 26. *d.),* or often funnel-shaped (f, 29. *b.);* limb 5-lobed (f. *27. d.,* f. 29. *b.),* imbricate or twisted in aestivation. Stamens 5 (f. 26. c, f. 27. &., f. 29. c,), inserted sometimes beneath, and sometimes above the middle of the tube; anthers sagittate (f. 29. c), incumbent, 2-cellcd. Ovarium simple, 3-celled (f. 28. /".), entire; ovala numerous, rarely definite. StyJe very long f. 23, (/.); stigma 3-lobed (f. 87. c, f. 29. <?,) : lobes linear, c&jbtuse. Capsule 3-celled (f. 28./.), 3-valved, oblong, trigonal, rarely globose ; valves opposite to the margins, septiferous inside in the middle, usually membranous, rarely tlnckish, and crustabous, as in the genus *CAnttta;* placenta trigonal, central, applied o the angles of the dissepiments. Seeds convex, angular, naked ; or compressed and girded by a membrane; testa simple, membranous, the surface roocilaginous. Albumen fleshy, conforming; to the seed. Embryo straight, large ; with flat, orbicular or oval, somewhat foliaceoui cotyledons; and a thickisb, obtusp, straight, inferior radicle, which is generally shorter than the cotyledons.—Beautiful herbs or shrubs, usually branched. Leaves usually alternate, more rarely opposite, ex stipulate, undivided, pinnatifid, or pinnate. Flowers terminal, numerous; or axillary, and nearly solitary, in most of the species bracteate. Corollas showy, blue, red, or white.

This order is characterized by a regular, 5-lobed corolla j a triple stigma; a 3-celled, 8-va)ved capsule, with septiferous valves ; seeds numerous, or definite, attached to a *3*-sided, central placenta, covered by a thin, mucilaginous integument, and furnished with a fleshy albumen ; and, lastly, by a straight embryo, with somewhat foltaceous cotyledons. The most nearly allied order to it is *Conrohulucea,* which, however, is readily distinguished from it, by having a simpU or double stigma; by the septa instead of proceeding from the centre of the valves, being directed to their margins; and the seeds having no central placenta, being attached to the bottom of the cells. The seeds are very different, being covered by a thin, very fragrant, mucilaginous albumen; with a curved embryo, having large, foliaceous, plaited, and wrinkled, emarginate cotyledons. The *Polemonicwece,* through the genus *Cdntua,* bas some affinity likewise with *Bignoniacetf,*- but that order has an irregular corolla; a bilamellate stigma ; a very different capsule ; transverse seeds, destitute of albumen; and lastly, a foliaceous embryo, with a curved radicle. Externally the *Piumbaginece,* have some resemblance to the *PolemoniacitF,* through *Phlox* and *Plumbago;* but the former order has 4 or 5 stigmas, and a simple ovarium attached to the bottom of the calyx.

Synopsis of Ote genera,

1 POLEMQJCIUM. Calyx campanulate, 5-cleft (f. 26. a.) Co-1 rolb rotate (f, 26. 6.) ; limb erect. Stamens inserted in the throat (f. 26. c), bearded at the base; cells of capsule many-seeded.

2 DIAPE'NSIA. Calyx 5-parted, coriaceous, tri-bracteatf at the base. Corolla Batver-ihaped ; tube short. Stamens inserted in the recesses of the corolla, nearly sessile. Stigma obsoletely 8-lobed. Cells of capsule many-seeded.

3 PHLOX. Calyx deeply 5-ck-ft (f. 27. «.), connivent. Corolla salver-shaped (f. 27. *d.)* ; tube elongated; lirtib twisted in {Estivation ; with cuneated segments. Stamens inserted above the middle of the tube. Cells of capsule 1-seeded.

4 HCGE'LIA. Calyx tubularly campanulate ; segments somewhat spinosc, linear. Corolla funnel-shaped ; tube abort, exscrted; segments of the limb oblong. Stamens inserted at i\n throat. Cells of capsule many-seeded.

5 LINVNTHUS. Calyx tubular; with *5* strong green nerves, which are drawn out into subulate, recurved teeth at the apex Corolla funnel-shaped ; tube short; segments of limb oboi ate, crenulated at apex. Stamens inclosed. Cells *uf* capsule many-seeded,

6 LisPTosir-HON. Calyx tubularly-campanulate ; lobes linear, subulate. Corolla funnel-shaped ; tube very long, slender ; limb caiitpaiuihite ; with oval, obtuse lobes. Stamens inserted at the throat. Cells of capsule many-seeded.

Prettiest Greek-Valerian. Fl. July, Aug. Clt. 1827. Pl. ½ foot.

7 P. RICHARDSONII (Graham, in edinb. phil. journ. dec. 1827. bot. mag. 2800.) stems pilose, angular, branched at the base, leafy; leaves pinnate; leaflets ovate-roundish, mucronulate, downy beneath; flowers nutant; calyx villous, viscid, with ovate, pointed segments; segments of corolla obtuse, crenulated; root very long, somewhat fusiform. ♃. H. Native of North America, in deep sandy soil, about the Great Bear Lake, Richardson; and of Siberia. P. speciósum, Fisch. mss. P. cœrúleum, var. nana, Hook. in Lin. trans. 14. p. 377. Root yellow. Stem purplish at the base. Flowers in terminal corymbs; but drooping. Corolla with a yellow tube, and a pale purple limb, marked with deeper veins. P. speciósum, Fisch. mss. from the islands of St. Lawrence and St. Paul; and P. lanátum, Fisch. mss. from Kamtschatka, is a variety of the same, with more downy stems.

Richardson's Greek-Valerian. Fl. July, Oct. Clt. 1826. Pl. ½ foot.

8 P. HUMILE (Warmkiold, mss. ex Graham, edinb. phil. journ. June 1820.) stems diffuse, branched; leaves pinnate, slightly downy, rather fleshy; leaflets roundish-cordate; calyx hairy, with obtuse segments; segments of corolla obtuse. ♃. H. Native of North America. Drummond. Root fibrous. Stems angular, reddish. Leaflets about 10 pairs; those of the cauline leaves oblong-ovate, the terminal one obovate in both. Flowers paniculately corymbose, somewhat drooping, nearly inodorous; peduncles generally 2-flowered, sometimes drooping. Peduncles, pedicels, calyxes, and stem clothed with glandular down. Corolla with blue limb, having deeper veins, indistinctly crenated. Hooker considers this plant the same as *P. Richardsonii*.

Musky-scented Greek-Valerian. Fl. May, June. Clt. 1827. Pl. 3 to 4 inches.

9 P. VISCÓSUM (Rudolf, Georgi, besch. des. russ. reichs, 3. p. 271. Sweet, fl. gard. t. 266.) stem pilose, angular, erect; leaves with many pairs of leaflets, which are ovate-bluntish, pilose on both surfaces; flowers a little panicled, drooping; segments of corolla roundish, crenulated. ♃. H. Native of Siberia, Kamtschatka, &c. P. lanátum, Fisch. mss. P. húmile, Roem. et Schultes, syst. 4. p. 792. Lindl. bot. reg. 1304. Pol. cœrúleum, β, Gmel. sib. 4. p. 105. no. 60. Stem leafy. Calyxes villous and viscid; with ovate-bluntish segments. Corollas blue. Perhaps only a variety of *P. Richardsonii*.

Viscid Greek-Valerian. Fl. July, Oct. Clt. 1826. Pl. ½ foot.

10 P. MEXICÁNUM (Cerv. in Lagasc. gen. et spec. nov. diagn. p. 10. no. 140. Ker. bot. reg. 242.) plant viscid, and clothed with glandular down on every part; leaves pinnate, downy; leaflets lanceolate; outer ones combined, usually forming a 3-lobed, terminal leaflet; flowers drooping; calyx clothed with clammy villi. ♃. H. Native of Mexico. P. ciliátum, P. barsifólium, P. pimpinelloídes, Willd. mss. ex Roem. et Schultes, syst. 4. p. 793. Flowers corymbose, pale blue. Plant very pale green. Mr. Nuttall found this, or a nearly allied species at Flat-Head river, in which the leaflets are somewhat rhomboid-ovate, acutish; and the calycine segments oblong, acute. Mr. James also found it on the banks of the Canadian river; but the flowers in his plant are said to be smaller.

FIG. 26.

Mexican Greek-Valerian. Fl. April, May. Clt. 1817. Pl. 1 foot.

11 P. ? CILIÁTUM (Willd. mss. ex Roem. et Schultes, syst. 4. p. 792.) leaves pinnatifid, hairy, ciliated; segments of corolla ciliately toothed. ♃. H. Native of Pennsylvania, Muhlenburgh. Leaves sessile, with acute segments. Flowers terminal, racemose. Calycine segments linear, ciliated, acute, length of corolla. Perhaps a species of *Ruiocia*.

Ciliated-leaved Greek-Valerian. Pl.

12 P. REPTANS (Lin. spec. 230.) root creeping; stems leafy, glabrous; leaves pinnate; leaflets 7, ovate, acute, glabrous; flowers nutant; segments of corolla crenate. ♃. H. Native of North America, from Pennsylvania to Carolina, on the sides of rich hills. Mill. fig. t. 209. Sims, bot. mag. 1587. Leaflets 7 to 11 in number. Flowers in a loose, panicled corymb. Flowers blue, and sometimes white.

Creeping Greek-Valerian. Fl. April, May. Clt. 1758. Pl. ½ foot.

Cult. The species of Greek-Valerian are all handsome, hardy, border flowers, of easy culture. They grow in any common garden soil; and are readily increased by dividing of the root, or by seed.

II. DIAPENSIA (the ancient Greek name for the Saxifr.)

Lin. gen. no. 194. fl. lapp. 1. Juss. gen. 134. edit. Usteri, p. 141. D. Don, in Sweet, fl. gard. n. s. t. 251.

LIN. SYST. *Pentándria, Monogýnia.* Calyx 5-parted, coriaceous, tribracteate at the base. Corolla salver-shaped; tube short, wide; limb flat, 5-cleft. Stamens 5, inserted in the sinuses of the corolla nearly sessile; anthers linear, obtuse, inserted by their bases, dehiscing lengthwise. Stigma obsoletely 3-lobed. Cells of capsule many-seeded. Seeds roundish. — Small, tufted, North American herbs. Leaves alternate, crowded at the roots, coriaceous, quite entire. Peduncles scapeformed, 1-flowered. This genus is said to be nearly allied to *Phlox*, but is easily distinguished from that genus, in the 5-cleft corolla, in the concrete lobes of the stigma, in the many-seeded cells of the capsule, in the alternate leaves and inflorescence.

1 D. LAPPÓNICA (Lin. fl. lap. no. 88. t. 1. f. 1. spec. p. 294. leaves linear-spatulate, coriaceous, glabrous, with callous, revolute edges; peduncles usually 1-flowered, erect; anthers oblique, mutic. ♃. F. Native of the mountains of Norway and Lapland, among stones covered with moss; and New Hampshire, on the highest mountains, among moss; also of the Rocky mountains. Sweet, brit. fl. gard. n. s. t. 251. Wahl. fl. lapp. p. 58. t. 2. (Ed. fl. dan. t. 47. Sims, bot. mag. t. 1108. D. obtusifólia, Sal. par. lond. t. 104. Pursh, fl. amer. sept. 1. p. 147. Corollas salver-shaped, with obtuse segments, pure white.

Lapland Diapensia. Fl. Feb. March. Clt. 1801. Pl. 1 inch.

2 D. CUNEIFÓLIA (Sal. par. lond. t. 104. Pursh, fl. amer. sept. 1. p. 148.) leaves lanceolate-cuneated, downy below; anthers horizontal, beaked at the base. ♃. F. Native of North Carolina, on high mountains; plentiful on pine barrens of New Jersey, near the sea coast. In the island called Grand Cayman we have seen this plant, or a nearly allied species, growing near the sea, along with *Jacquinea lucáris*, and *Heliotropium gnaphaloides*. D. Americana, Herb. Banks. Pyxidanthera barbulata, Michx. fl. bor. amer. 1. p. 132. t. 17. Calyx ciliated? Flowers small, white. Leaves bearded inside at the base. Stems trailing.

Wedge-leaved Diapensia. Fl. July. Clt. 1806. Pl. 1 to 2 inches.

Cult. The species of *Dasystoma* are small, tufted, evergreen, alpine plants, difficult of culture. They should be grown in small pots, well-drained with sherds, in a mixture of sand and peat, and placed among other alpine plants. They require to be protected from frost and wet in winter, by placing them in a frame. They may be increased by dividing at the roots.

III. PHLOX (*from* φλοξ, *phlox*, flame; in reference to the bright colour of the flowers.) Lin. gen. no. 214. Schreb. gen. 344. Juss. gen. 130. edit. Usteri. 152. Gaertn. fruct. 1. p. 199. t. 42. Lam. ill. 103. Nutt. gen. amer. 1. p. 143. Ly-grandria, Dill. eth. 148.

Lin. syst. *Pentandria*, *Monogynia*. Calyx deeply 5-cleft (f. 27. *a*.), sub-cylindrical or sub-prismatic; segments acute, connivent. Corolla salver-shaped (f. 27. *d*.), with a narrow, sub-cylindrical tube, which is a little curved, and longer than the calyx; limb spreading, twisted in æstivation, as in *Apocyneæ*; segments obtuse. Stamens 5, unequal (f. 27. *b*.), 3 longer, and 2 shorter, inserted in the tube above the middle; filaments filiform; anthers sagittate, elevated to the orifice of the tube of the corolla. Capsule roundish; valves membranous; cells 1 seeded. Seeds oblong, convex outside. Albumen large. Radicle twice longer than the cotyledons.—Herbaceous, perennial, rarely subfruticose plants, with opposite, simple leaves: but the floral ones are sometimes alternate, sessile. Flowers terminal, panicled or corymbose, lilac, rose-coloured or red, blue, or white.

§ 1. *Leaves broad. Plants without any barren stems.*

1 P. PANICULA'TA (Lin. spec. 216. Ait. hort. kew. 1. p. 205.) erect, glabrous; leaves lanceolate, gradually narrowed, flat, with rough edges; corymbs panicled; segments of corolla roundish, of the calyx awned. ♃. H. Native of Virginia and Lower Carolina, in rich moist meadows. Mill. fig. 2. t. 295. f. 2.—Dill. eth. f. 106. f. 205. Flowers purple.

Var. β. alba; flowers white, with a tinge of red. ♃. H. [illegible] of North America, Lyon. A more robust filaol than the type, and probably a distinct species.

[illegible]-cicled-flowered Phlox. Fl. Aug. Sept. Clt. 1732. Pl. excelsa 4 feet.

[illegible] P. VIRIDULA'TA (Ait. hort. kew. 1. p. 205.) erect, glabrous; [illegible] oblong-lanceolate, somewhat undulated, with scabrous [illegible]; corymbs panicled; segments of corolla obovate, somewhat retuse; of the calyxes awned. ♃. H. Native of Virginia and Carolina, in high mountains and meadows. P. paniculata, Michx. fl. amer. 1. p. 144. Flowers purple. A beautiful plant, resembling the preceding; and the flowers of the same colour.

Undulated-leaved Phlox. Fl. July, Aug. Clt. 1759. Pl. 4 to 5 feet.

3 P. PYRAMIDA'LIS (Smith, exot. bot. 2. p. 55. t. 87.) erect, glabrous; stem scabrous, spotted; leaves cordate-oblong, acuminated; panicle fastigiate, pyramidal; segments of corolla obcordately truncate; calycine teeth erect, lanceolate, acute, glabrous, with scabrous edges. ♃. H. Native from Pennsylvania to Carolina, in mountain meadows. Lodd. bot. cab. 349. Redout. fl. gard. 253. P. Carolina, Walt. fl. car. 296. Flowers pale flesh-coloured, or lilac.

Var. β. pendulifora (Hort.) flowers rather pendulous.

Var. γ. corymbosa (Hort.) flowers densely corymbose.

Pyramidal-flowered Phlox. Fl. Jn. Aug. Clt. 1800. Pl. 2 to 3 feet.

4 P. [illegible] (Michx. fl. amer. bor. 1. p. 143.) erect, glabrous; stem smooth; leaves lanceolate; flowers fastigiately corymbose; segments of corolla nearly orbicular; teeth of calyx lanceolate, hardly acuminated. ♃. H. Native of Carolina, in shady places, among Sphagnum. Flowers large, purple. Perhaps only a variety of *P. pyramidalis*.

Broad-leaved Phlox. Fl. Jn. Aug. Clt. 1812. Pl. 2 feet.

5 P. STRIA'TA (Ell. fl. carol. 2. p. 49. Sweet, fl. gard. n. s. t. 18.) stems smooth, slightly tetragonal; leaves oblong-cordate, acuminated, with scabrous edges; corymbs panicled, pyramidal; pedicels and calyxes downy; calycine segments long-awned; corolla with a downy tube, and obovate, rounded, distinct segments. ♃. H. Native of Carolina. Corollas of a bright purplish lilac colour.

Cordate-leaved Phlox. Fl. July, Aug. Clt. 1827. Pl. 2 to 3 feet.

6 P. CORYMBO'SA (Hortul. ex Sweet, fl. gard. n. s. t. 114.) stem erect, downy, branched at top, rather tetragonal; leaves oblong-lanceolate, undulated, downy beneath, with scabrous edges; corymbs panicled; calycine teeth subulate; segments of corolla roundish-obovate, imbricate. ♃. H. Native of North America. Stems more or less purple. Branches of corymb many-flowered. Corollas purplish lilac, with a white star at the base. Tube of corolla downy.

Corymbose-flowered Phlox. Fl. [illegible] Clt. [illegible] 3 to 4 feet.

7 P. MACULA'TA (Lin. spec. 216.) erect; stem scabrous, spotted; leaves oblong-lanceolate, glabrous, with rough edges; panicle oblong, crowded with flowers; segments of corolla roundish; teeth of calyx acute, reflexed. ♃. H. Native from New England to Carolina, in wet meadows. Pursh, fl. 1. p. 149. Jacq. hort. vind. 2. p. 58. t. 127. Gaertn. fruct. p. 299. Flowers purplish, violet or purple. Stem marked with brown spots.

Spotted-stemmed Phlox. Fl. July, Aug. Clt. 1740. Pl. 3 feet.

8 P. OBCORDA'TA (Sweet, fl. gard. t. 224.) stems erect, branched at top, rather scabrous; leaves acuminated, glabrous, with scabrous edges; lower ones linear; middle oblong-lanceolate; superior ones cordate-ovate; branches corymbose, many-flowered, somewhat fastigiate; teeth of calyx ovate, shortly acuminated, erect; segments of corolla emarginately obovate. ♃. H. Native of North America. Phlox bimaculata, Hort. Flowers of a bright red lilac colour, sweet-scented. Branches of corymb forming a thyrsoid raceme. Nearly allied to *P. glaberrima* and *P. maculata*.

Sweet-scented Phlox. Fl. Aug. Clt. [illegible] Pl. 2 feet.

9 P. REFLE'XA (Hortul. Sweet, fl. gard. t. 232.) stems downy, scabrous, spotted; leaves reflexed, glabrous, shining above: lower ones narrow-lanceolate: superior ones cordate, acute; flowers crowded, panicled, with many-flowered branches; teeth of calyx lanceolate, mucronate, spreading; tube of corolla glabrous, curved; segments of the limb roundish-obovate, imbricated at the base. ♃. H. A hybrid production. Flowers dark purple, in close, crowded panicles, sweet-scented.

Reflexed-leaved Phlox. Fl. July, Sept. Clt. [illegible] Pl. 2 or 3 feet.

10 P. [illegible]'RRA (Sweet, fl. gard. t. 248.) stem glabrous at bottom, and downy at top; leaves oblong-lanceolate, acute, scabrous above, with undulated, denticulately scabrous edges; flowers in loose panicles; calyxes pilose; teeth of calyx subulate, straight; tube of corolla curved, villous; segments of corolla obovate, spreading, slightly emarginate. ♃. H. Native of North America. Phlox Americana. Hortul. Flowers pale lilac, fragrant.

Scabrous Phlox. Fl. Aug. Clt. [illegible] Pl. 3 to 4 feet.

11 P. [illegible]'RSA (Pursh, fl. amer. sept. 2. p. 732. Sims, bot. mag. 1850.) erect, downy; stem angular; leaves ovate-

lanceolate, acuminated, narrowed below, somewhat petiolate, downy beneath; floral leaves subcordate; corymbs subpaniculed; corolla with roundish segments, and a downy tube; calycine segments awned. ♃. H. Native of Georgia and South Carolina on the mountains. Flowers variegated with pale and deep purple. P. decussata, Lyon, mss.

Decussated-leaved Phlox. Fl. Oct. Nov. Clt. 1812. Pl. 3 to 4 feet.

13 P. PANICULÀTA (Sweet, hort. brit. ed. 2d. p. 328. fl. gard. n. s. t. 46.) stem rather flexuous, obsolescely quadrangular, clothed with rough pubescence, spotted; leaves oblong-lanceolate, acuminated, nearly sessile, glabrous and shining above, having the margins and nerves scabrous beneath; corymbs many-flowered, panicled, drooping before expansion; calyxes downy, with lanceolate, mucronate segments; segments of corolla roundish, imbricate. ♃. H. Native of North America. Flowers of a rosy purple colour, sweet-scented; tube smooth, a little recurved.

Pendulous-flowered Phlox. Fl. Aug. Oct. Clt. 1823. Pl. 3 to 4 feet.

14 P. CAROLÍNA (Lin. spec. 216.) erect; stem downy, scabrous; leaves ovate-lanceolate, acuminated, glabrous, except the margins and nerves, which are scabrous beneath; corymbs panicled, subfastigiate, with many-flowered branches; segments of corolla roundish; teeth of calyx glabrous, lanceolate, erect; segments of corolla roundly obovate. ♃. H. Native of Lower Carolina, in wet meadows; and on the mountains of Virginia. Sims, bot. mag. 1544. Mart. cent. t. 10. Sweet, fl. gard. 190. Flowers beautiful, pale purple, the size of those of *P. suaveolens*; tube of corolla smooth. P. Carolina, Pursh, fl. amer. supt. 1. p. 149, is probably P. triflòra, Michx.

Carolina Phlox. Fl. July, Sept. Clt. 1725. Pl. 2 to 3 feet.

14 P. TRIFLÒRA (Michx. fl. bor. amer. 1. p. 143.) erect; stem obsolescely tetragonal, rather downy; leaves lanceolate, glabrous; branches of corymb usually 3-flowered; teeth of calyx linear; segments of corolla roundly obcordate, slightly undulated, at length reflexed. ♃. H. Native of Virginia, on the mountains. Sweet, fl. gard. 49. P. cærnea, Sims, bot. mag. t. 2155. Lodd. bot. cab. 711. Flowers in loose spreading corymbs, pale lilac. Segments of calyx nearly as long as the tube of the corolla.

Three-flowered Phlox. Fl. July, Sept. Clt. 1816. Pl. 1 to 2 feet.

15 P. SUBULÀTA (Pursh, fl. amer. supt. 2. p. 730.) erect, quite glabrous; stems terete, spotted, smooth; leaves ovate-oblong, rather fleshy, shining and dark green above, pale beneath; corymbs fastigiate; lower branches elongated, nearly naked; segments of corolla broad-obovate, rather retuse; calycine teeth lanceolate, mucronate. ♃. H. Native of South Carolina. P. suffruticosa, Hort. Nearly allied to *P. Carolina*; but the flowers are large, long, and of a beautiful purple colour.

Shining-leaved Phlox. Fl. July, Aug. Clt. 1800. Pl. 2 feet.

16 P. SUFFRUTICÒSA (Vent. malm. 2. p. 197.) erect, glabrous; stem glabrous, trifid at top, and suffruticose at the base; leaves lanceolate, shining on both surfaces, and acute at both ends, almost sessile; corymbs crowded with flowers. ♃. H. Native of North America. Willd. enum. 1. p. 200. Pois. encycl. suppl. 4. p. 297. Mordaunt Delaury, herb. amat. 3. t. 4. Ker. bot. reg. 68. Stem much branched, ex Vent. Corolla deep purplish violet, with deeper lines at the base; segments of the limb roundish-obovate.

Suffruticose Phlox. Fl. July, Sept. Clt. 1790. Pl. 2 feet.

17 P. OLIVERIÀNA (Lin. spec. 217. Sweet, fl. gard. n. s. t. 36.) plant tufted; stems erect, glabrous; leaves linear-lanceolate, sessile: corymbs terminal, trifid, sub-fastigiate; fascicles 3-4-flowered; segments of corolla roundish; teeth of calyx acuminated, spreading, mucronate. ♃. H. Native of Lower Carolina, in wet meadows; and on the mountains of Virginia. Pursh, fl. 1. p. 149.—Dill. elth. t. 165. f. 202.—Bot. Mag. 18. t. 6.—Kerner, oek. plant. t. 155. Flowers of a reddish lilac, dying off blush.

Quite glabrous Phlox. Fl. Jn. Aug. Clt. 1753. Pl. 1½ to 2 feet.

18 P. VARIEGÀTA (Penny, in Young, hort. eqc. p. 35. Lond. hort. brit. p. 136.) stem roughish, obscurely spotted; leaves lanceolate, acuminated, quite glabrous on both surfaces, shining, with scabrous edges: upper leaves the broadest; racemes panicled; segments of corolla rounded; tube very long, 3 times longer than the calyx; calycine teeth lanceolate, acute, erectish. ♃. H. Native of North America. P. longiflòra, Sweet, brit. fl. gard. n. s. t. 31. Stem bluntly tetragonal. Flowers pure white, fragrant. Very nearly allied to *P. suaveolens*.

Late-flowering Phlox. Fl. Aug. Oct. Clt. 1808. Pl. 2 to 3 ft.

19 P. SUAVEÒLENS (Lehm. sem. hort. hamb. 1826. p. 17. sem. boon. 14. p. 814. t. 46.) stems erect, obscurely tetragonal, glabrous; leaves lanceolate, acuminated, scabrous, but glabrous beneath; flowers disposed in large corymbose panicles, which are, as well as the calyxes, downy; bracteas ciliated; teeth of calyx subulate, margined with red, ciliated; segments of corolla obovate; stigma bifid. ♃. H. Native of North America. P. scàbra, Sweet, fl. gard. 3. t. 248. Stem pale purple above, marked with dark purple spots at the axils of the leaves. Leaves rather undulated; lower ones attenuated at the base; upper ones subcordate. Limb of corolla violaceous, each segment marked by an obcordate, white spot at the base.

Suksdan's Phlox. Fl. Aug. Clt. 1826. Pl. 2 to 3 feet.

20 P. GLABERRÌMA (Ait. hort. kew. 1. p. 206.) erect; stem quite glabrous, without spots; leaves ovate-lanceolate, smooth; racemes panicled; segments of corolla roundish; calycine teeth lanceolate, acute, erectish. ♃. H. Native from Canada to Virginia, in meadows. P. maculàta, γ, candida, Michx. fl. bor. 1. p. 143. Flowers white, sweet-scented. There is a variety of this species, having the leaves edged with white, or pale yellow.

Smooth-stemmed-flowered Phlox. Fl. July, Aug. Clt. 1760. Pl. 1 to 2 feet.

21 P. DRUMMÒNDI (Hook. bot. mag. t. 3441.) annual; stems erect, simple at bottom, but a little branched at top, beset with spreading hairs, as well as the edges of the leaves, calyxes, bracteas, &c.; leaves ovate-lanceolate, half stem-clasping, all mucronate and downy, lower ones opposite, upper ones alternate; panicle trichotomously corymbose; flowers on very short pedicels; calycine segments linear-subulate, mucronate, a little reflexed; tube of corolla much [illegible] hairy, 3 times longer than the calyx; segments of corolla [illegible]-ovate, cuneate, obtuse, entire. ☉. H. Native of Mexico, in the Texas. D. Don, in Sweet, fl. gard. n. s. t. 316. Flowers of a beautiful purple, with a darker eye. Lower leaves always opposite; upper ones nearly ovate.

Drummond's Phlox. Fl. Aug. Sept. Clt. 1835. Pl. 1 foot.

§ 2. *Leaves broad. Plants with herbaceous stems.*

22 P. OVÀTA (Lin. spec. 217.) erect, glabrous; radical leaves ovate, acute, rather fleshy, cauline ones ovate-oblong; corymbs subfastigiate: segments of corolla undulated, retuse; teeth of calyx linear, acute. *H.* H. Native of North America. Willd. spec. 1. p. 842. Pursh, fl. 1. p. 150.—Plukn. mant. p. 122. t. 343. f. 4. Flowers beautiful, reddish purple.

Var. β, Listoniana (Hort.) radical leaves ovate; cauline ones lanceolate. ♃. H. Native of North America. P. ovàta, Curt. bot. mag. t. 352.

Ovate-leaved Phlox. Fl. May, July; β, July, Aug. Clt. 1759; β, 1816. Pl. 1 to 1½ foot.

23 P. RÉPTANS (Michx. fl. amer. bor. 1. p. 144. Vent. malm.

t. 316.) plant creeping, viscid-villous, downy; radical leaves obovately-spatulate; caniine leaves lanceolate; corymbs divaricate, few-flowered; segments of corolla obovate; teeth of calyx linear, reflexed. ♃. H. Native of Virginia and Carolina, on high mountains. Phlox acuminata, Curt. bot. mag. 562. Flowers blue, with a purple centre, very handsome.

Var. β, crassifolia (D. Don, in Sweet, fl. gard. n. s. t. 293.) leaves thicker; flowers deeper coloured. ♃. H. Native of North America. Phlox crassifolia, Lodd. bot. cab. 1390. Flowers rose-coloured. Branches simple. Leaves and petioles minutely fringed with soft hairs on the midrib and edges. Calycine segments white, lanceolate, acuminated, erect, connivent, with scarious edges. Tube of corolla deep purple, clothed with glandular hairs, twice as long as the calycine segments; limb purple, with rounded, slightly crenulated segments.

Creeping Phlox. Fl. June, Sept. Clt. 1800. Pl. ½ foot.

24 P. STRAMINEA (Lin. spec. 217.) decumbent, downy; leaves oval-lanceolate, superior ones alternate; branchlets divaricate, loose, few-flowered; segments of corolla somewhat obcordate; teeth of calyx linear-subulate. ♃. H. Native from Pennsylvania to Virginia, on the mountains, and on the banks of the Missouri. Curt. bot. mag. 169. Mill. fig. t. 205. f. 1. Flowers purplish blue. Caryxles dichotomous.

Discolorate Phlox. Fl. May, July. Clt. 1746. Pl. ½ to 1 foot.

25 P. CANADENSIS (*Hort. ex* Sweet, fl. gard. t. 221.) erect; stems rather downy; lower leaves ovate; superior ones broad-lanceolate, opposite and alternate; branches downy, few-flowered, compact; teeth of calyx subulate-linear; segments of corolla broad, obcordate; tube a little curved, ascending, much longer than the calyx. ♃. H. Native of Canada. Flowers blue, tinged with lilac, disposed in a terminal, corymbose panicle. This plant is very nearly related to *P. divaricata*.

FIG. 31.

Canadian Phlox. Fl. April, May. Clt. 1825. Pl. 1 foot.

§ 3. *Leaves linear-lanceolate, linear, or subulate.*

26 P. AMŒNA (Michx. fl. bor. amer. 1. p. 146.) weak, erect, clothed with viscid down; leaves linear-lanceolate; panicle loose, fastigiate; pedicels generally twin; segments of corolla obcval; tube curved, downy; calycine teeth very long, subulate. ♃. F. Native from Pennsylvania to Carolina, in sandy fields; and of the Rocky mountains, in the valley of the Loup Fork. ex Torrey. Pursh, fl. 1. p. 150. Lodd. bot. cab. 1731. P. pilosa, Sims, bot. mag. 1507.? Flowers usually red, but sometimes white.

Var. α, virens (Pursh, fl. 1. p. 150.) corollas reddish purple.

Var. β. albiflora (Pursh, fl. c.) corolla whitish rose-coloured.

Awned-calyxed Phlox. Fl. April. Clt. 1823. Pl. procumbent.

27 P. RIGIDA (Michx. fl. bor. amer. 1. p. 145.) humble, decumbent, downy; leaves linear-lanceolate, short, roughish, upper ones furnished with nearly sessile fascicles of flowers; segments of corolla roundish, obtuse; tube straight, glabrous; calycine teeth subulately acuminated. ♃. H. Native of Carolina, in sandy fields; and on the mountains of Georgia. Lodd. bot. cab. 1341.—Pluk. phyt. t. 98. f. 1. Flowers usually pur-

Var. β, *ovata* (Sims, bot. mag. 1508.) this is probably nothing more than a luxuriant garden production of the species. ♃. H.

Pilose Phlox. Fl. Ju. July. Clt. 1769. Pl. ½ to 1 foot.

28 P. PILOSA (Lehm. cat. hort. hamb. 1829. Sweet, fl. gard. n. s. t. 7.) stems procumbent, branched; branches ascending, clothed with hair-like down, as well as the peduncles and calyxes; leaves lanceolate, acute, attenuated at the base, smoothish, ciliated on the edges; calycine segments linear, acute; segments of corolla cuneately obcordate, with a hairy, erect tube, twice longer than the calyx. ♃. H. Native of North America. Flowers disposed in terminal, few-flowered panicles, composed of 1-2-flowered peduncles. Corollas bluish purple. In habit this species is intermediate between *P. subulata* and *P. pilosa*.

Procumbent Phlox. Fl. May, Clt. 1827. Pl. procumbent.

29 P. SUBULOSA (Pursh, fl. amer. sept. 1. p. 149.) erect, branched, frutescent, glabrous; leaves linear, acuminated, pungent, dilated and somewhat ciliated at the base, with callous edges; upper leaves alternate; flowers cymose; calycine segments broad from the base, membranous, acuminated, about equal in height to the tube of the corolla; segments of corolla cuneate-oblong, entire. ♄. F. Native of North America, on the plains of the Columbia. Dougl. in hot. reg. 1551. Branches of corymb 3-flowered. Corollas flesh-coloured.

Showy Phlox. Fl. May, June. Clt. 1825. Shrub ½ to 1 foot.

30 P. SPECIOSA (Lin. spec. 217.) plant tufted, whitish from down; leaves linear, pungent, ciliated; corymbs few-flowered; peduncles trifid; teeth of calyx subulate, hardly shorter than the tube of the corolla; segments of corolla cuneately obcordate. ♃. H. Native from New Jersey to Carolina, on dry sandy hills and rocks. Curt. bot. mag. 411. Jacq. fragm. t. 44. f. 4.—Pluken. phyt. t. 98. f. 2. Flowers pink-coloured, with a handsome purple star in the centre. Calyx villous.

Subulate-leaved Phlox. Fl. April, June. Clt. 1780. Pl. ½ ft.

31 P. HOODII (Richards. in Frankl. journ. append. ed. 2d. p. 9. t. 78.) plant humble, moss-stemmed: leaves subulate, with woolly edges; flowers sessile, solitary; segments of the limb obovate. ♃. H. Native of the west coast of America, about Carlton House: and of the Rocky Mountains, in the valley of the Loup Fork. This is a singular and beautiful species.

Hood's Phlox. Pl. dwarf, tufted.

32 P. EXSERTA (Nutt. journ. acad. nat. sc. phil. 7. p. 41.) plant diffuse, procumbent; leaves subulate, ciliated, short, with reflexed edges; flowers solitary, on short pedicels; calycine segments spatulose; segments of corolla cuneated, entire. ♃. H. Native of the Rocky mountains, at Flat Head river, on the sides of dry hills. General habit of *P. subulata*. Stems downy. Leaves ending in pungent points. Flowers terminating the branches solitary, pale violet or white.

Tufted Phlox. Pl. tufted.

33 P. CESPITOSA (Nutt. journ. acad. phil. 7. p. 41.) plant somewhat tufted, many-stemmed: leaves subulate, very long, and very narrow, glabrous; stems few-flowered, very short, puberulous, irregularly trichotomous; peduncles filiform, elongated; calycine segments acuminated; segments of corolla oblong-cuneated, entire. ♃. H. Native of the Rocky mountains, in valleys, flowering most part of the summer. Stems almost a span high, many from the same root. Flowers apparently white. Very nearly allied to *P. Hoodii*.

Long-leaved Phlox. Fl. summer. Pl. ½ foot.

34 P. LONGIFOLIA (Nutt. l. c. p. 42. t. 6. f. 2.) plant densely tufted, small; leaves closely imbricated, oblong-lanceolate, copiously ciliated, very short; flowers sessile, hardly exserted; segments of corolla cuneated, entire. ♃. H. Native of Alpine situations, at the sources of the Missouri. Root large, descend-

ing. The whole plant depressed to the appearance of a hoary *Bryum,* no part of it hardly rising to the height of | an inch from the ground. Leaves all hoary, lanuginose at the edges, ending in acute points. Flowers large, white, with a yellow spot towards the orifice.

Moss-like Phlox. PI. tufted, \ inch.

35 P. HE'NTZII (Nutt. 1. c. p. 110.) plant tufted, downy ; leaves linear or lanceolate, ciliated, pungent; flowers corymbose, glomerate, few-flowered ; segments of corolla cuneated, obtuse, entire ; teeth of calyx acute, shortish. %. H. Native of the United States in the southern pine barrens. Habit of P. *subulata,* but producing short, leafy stems, the summits of which only are floriferous.

Hentzius's Phlox. PI. | foot

36 P. NIVA'LIS (Sweet, fl. gard. 185.) plant suffruticose, much branched, procumbent; branches ascending, crowded, downy, usually 3-flowered; leaves linear, in fascicles, cuspidate, ciliated, recurved ; pedicels and calyxes villous ; tube of corolla twice as long as the calycine segments, which are linear, and sharp-pointed: segments of corolla obcordate, plicately lined. 1/. H. Native of North Carolina. Phlox nivea, Lodd. bot. cab. 780. Flowers snow-white.

Snowy-flowered Phlox. Fl. April, May. Clt. 1820. PI. procumbent.

37 P. SETA'CEA (Lin. spec. 217.) tufted, downy; leaves in fascicles, subulate, pungent, ciliated ; peduncles few, terminal, subumbellate ; segments of corolla cuneated, emarginate ; teeth of calyx subulate, 3 times shorter than the tube of the corolla. %. H. Native from Virginiato Carolina, on rocks and barren sandy hills. Curt. bot. mag. 415. Pursh, 1. p. 151.—Plukn. phyt. t. *98.* f. 2. Flowers pale rose-coloured, with a purple star in the centre. Calyx hairy.

Setaceous-tewed Phlox. Fl. April, July. Clt. 1786. PI. procumbent.

38 P. SIBI'RICA (Lin. amcen. acad. 2. p. 342. spec. 217.) tufted ; stems numerous, from the same centre, pale green ; leaves linear, villous ; pedicels 2-4, hairy from the axils of the upper leaves ; segments of corolla cuneated, entire, and are, as well as the calyxes, the length of the tube of the corolla. 1/ . H. Native of Siberia, at the Lena.—Gmel. sib. 4. p. 81. t. 46. f. 2. Flowers purplish, as also white, with 10 purple stripes. Calyx cylindrical, hairy, ex Gmel. Segments of corolla from 4 to 6, often emarginate.

Siberian Phlox. PL \ to \ foot.

N.B.—*The following names occur in garden catalogues; but these, in most instances, are synonymous with some of the above, or are names given to hybrids or I rifling varieties.*

1 P. excelsa, Penny. 2 P. Wheeleriana, Sweet, a hybrid. 3 P. Shepherdii, Sweet, a hybrid. 4 P. disticha, Sabine. 5 P. involucrata, Nutt. 6 P. laeta, Penny. 7 P. elata, Penny. 8 P. Virginica, Lodd. 9 P. intermedia, Lodd. cat. 10 P. acutifdlia, Sweet.

Cult. Phlox is a genus of elegant border flowers ; the most of them thrive in common garden earth, but prefer a rich loamy soil. Those species belonging to the third section of the genus, being tender, more dwarf kinds, will require to be protected under frames in winter, if severe ; and it is therefore safest to have a plant or two of all these dwarfer kinds in pots. The larger kinds are easily increased by dividing at the root; and cuttings of the dwarf kinds strike root freely if planted under a hand-glass.

IV. HIPGELIA (named' by Bentham, in honour of Baron Charles de Hugel, of Vienna.) Benth. in bot. reg. under no. 1622., but not of Rchb., which is *Didiscus.*

LIN. SYST. *Pentdndria, Monogynia.* Calyx tubularly campanulate, half 5-cleft, with the recesses hardly membranous; segments rather unequal, linear, stiff, somewhat spinose. Corolla funnel-shaped, with a short exserted tube, a 5-parted limb, and oblong, quite entire segments. Stamens inserted at the throat; anthers linear, sagittate. Cells of capsule many-seeded.—Annual or perennial herbs, clothed more or less with white woolliness. Leaves alternate, linear, entire or pinnatifid. Flowers disposed in dense, corymbose heads ; with the calyxes and bracteas imbricate, immersed in dense wool. *Hugelia* differs from *Gilia* in the anthers and habit.

1 H. DENSIFOLIA (Benth. 1. c.) plant humble : stem smoothish; leaves numerous, nearly all pinnatifid, glabrous, with *2-3* acerose segments on each side; tube of corolla longer than the calyx ; stamens about equal in length to the corolla. ©. ? H. Native of California, Douglas. Corollas blue.

Dense-leaved Hugelia. PI. \ foot. ?

2 H. ELONGATA (Benth. 1. c.) branches elongated, divaricate or procumbent, tomentose ; leaves short, simple, or furnished with 1-2 segments on each side, all clothed with white tomentum, or at length hardly glabrous; tube of corolla exserted; stamens exceeding the corolla. ©. ? H. Native of California, Douglas. Flowers deep blue.

Elongated Hugelia. PI. 1 foot. ?

3 H. VIRGATA (Benth. 1. c.) plant erect ; leaves elongated, simple or pinnatifid, clothed with loose white wool; tube of corolla longer than the calyx ; stamens shorter than the corolla. ©.? H. Native of California, Douglas. Flowers deep blue.

Twiggy Hugelia. PI. \ foot. ?

4 H. LUTEA (Benth. 1. c.) erect; lower leaves elongated, simple, glabrous : superior ones short, pinnatifid, clothed with white wool; corymbs small; tube of corolla shorter than the calyx ; stamens equal in length to the corolla. ©. ? H. Native of California, Douglas. Flowers yellow.

reWow-flowered Hugelia. PI. \ foot. ?

Cult. For culture and propagation see *Gilia,* p. 245.

V. LINA'NTHUS (from \ivov, *linon,* flax ; and avSoc, *anthos,* a flower ; from the resemblance of the flowers to several species of *Linum)* Benth. in bot. reg, under no. 1622.

LIN. SYST. *Pentdndria, Monogynia.* Calyx tubular, membranous ; with 5 strong, green nerves, which are drawn out into subulate, recurved teeth at the apex. Corolla funnel-shaped; with a short tube, a 5-cleft limb, and obovate segments, which are crenulated at the apex. Stamens inclosed in the tube ; anthers filiform, hardly sagittate at the base. Cells of capsule many-seeded. This is a very distinct genus, from the calyx, anthers, and habit.

1 L. DICHOTOMUS (Benth. 1. c.) Q. H. Native of California. Douglas. A glabrous, annual herb. Leaves opposite, sessile, palmate, with *3-5* linear-subulate segments. Flowers solitary in the forks, almost sessile, bractless, but numerous and approximate towards the tops of the branches. Corolla size, colour, and form of *Linum sujfrutiedsum.*

Dichotomous Linianthus. PI.

Cult. For culture and propagation see *Gilia,* p. 245.

VI. LEPTOSITHON (from *XETTTOQ, leptos,* slender; and *a«f>wv, siphon,* a tube ; the tube of the corolla is long and slender.) Benth. in bot. reg. under no. 1622.

LIN. SYST. *Pentdndria, Monogynia.* Calyx tubularly campanulate, equal, semi-5-cleft ; lobes linear-subulate, acute; sinuses membranous. Corolla funnel-shaped ; with a very long, very slender tube, and a campanulate 5-cleft limb, with oval, obtuse, quite entire lobes. Stamens inserted at the throat of the corolla ; anthers oblong, sagittate at the base. Cells of capsule many-seeded.— Annual herbs, glabrous at the base, and downy at top. Leaves opposite, sessile, palmately cut; with linear or subulate segments. Flowers disposed in dense corymbose heads,

with the axis rather woolly. Bracteas imbricate, conforming to the leaves; with ciliately-hairy segments. This genus differs from *Gilia*, sect. *Dactylophyllum*, in the form of the corolla.

1 L. GRANDIFLO'RUS (Benth. l. c.) plant nearly simple; leaves 7-11 cleft; segments subulate, straight, with revolute margins; tube of corolla hardly twice longer than the limb; filaments very short. ☉. H. Native of California, Douglas. Corolla blue, with a golden yellow or purple bottom.

Great-flowered Leptosiphon. Pl. ½ root.

2 L. ANDROSA'CEUS (Benth. l. c. hort. lions- n. & l. t. 18. f. 1. bot. reg. 1710.) leaves 5-7-cleft; segments oblong-linear; tube of corolla 2-3 times longer than the limb; stamens 3 times shorter than the limb of the corolla. ☉. H. Native of California, Douglas. A bushy... pilose herb. I corolla smaller, and more intensely coloured than the preceding, from white to pale blue or pink: the tube usually red. The multitude• of flowers gives the plant a very gay appearance.

Androsace-like Leptosiphon. Fl. June, July. Clt. 1833. ½ foot.

3 L. LU'TEUS (Benth. in bot. reg. under no. 1622.) leaves 5-7-cleft; segments oblong-linear; tube of corolla about 4 times longer than the limb; stamens about 3 times shorter than the limb of the corolla; style scarcely equal in length to the corolla. ☉. H. Native of California, Douglas. Corolla yellow, having the throat deeper coloured.

Var. β; corollas paler.

Yellow-flowered Leptosiphon. Pl. I foot.

4 L. PARVIFLO'RUS (Benth. l. c.) leaves 5-7-cleft; segments oblong-linear; tube of corolla 4 times longer than the limb; stamens hardly one-half shorter than the limb of the corolla; style a little exserted. ☉. H. Native of California, Douglas. Corolla pale yellow, with a deep yellow bottom.

Small-flowered Leptosiphon. Pl. ½ foot.

5 L. DENSIFLO'RUS (Benth. l. c. bot. trans. n. s. 1. t. 18. f. 2. bot. reg. 1725.) leaves 9-11-cleft; segments subulate, erect, with revolute margins; tube of corolla shorter than the limb. ☉. H. Native of California, Douglas. Habit of *androsaceus*, only it is greyer in appearance, being more glandular. The corollas in this are, however, 3 times larger, with a short, thick tube, instead of a long, slender one; its colour varies from purple to blue and white, but are not produced in the same profusion as those of *L. androsaceus*. From the short tube of the corolla, this plant probably belongs to *Gilia*, sect. *Dactylophyllum*, Benth.

Dense-flowered Leptosiphon. n. Jfuiv, Nov. Clt. 1833. Pl. ½ foot.

Cult. All the species of this genus are very gay when in blossom, and are therefore worth cultivating in every garden. The seeds of them only require to be sown in the open ground, in April; and if sown in large patches, the plants, when in blossom, will have, according to the size of the patch or bed, a gayer appearance.

VII. FENZLIA (so called by Bentham, in honour of Dr. Fenzl, of Vienna, now publishing a monograph of *Alsineæ*.) Benth. in bot. reg. under no. 1622.

Lin. syst. Pentandria, Monogynia. Calyx tubularly-campanulate, deeply 5-cleft, with membranous sinuses, and linear, acutish, erect segments. Corolla somewhat funnel-shaped, with a short tube, and a 5-parted limb; segments of the limb obovate, notched. Anthers ovate-sagittate, a little exserted from the tube. Cells of capsule many-seeded.

1 F. DIANTHIFLO'RA (Benth. l. c.) ☉. H. Native of California, Douglas. A small, annual, nearly simple herb, about 2-3 inches in height, glabrous or downy. Leaves opposite, linear, quite entire. Flowers 1-3 together, pedunculate. Corolla nearly an inch long, purplish, with a yellow bottom.

Pink-flowered Fenzlia. Pl. 2 to 3 inches.

Cult. For culture and propagation, see *Leptosiphon*, above.

VIII. GILIA (named after Philippe Salvador Gilio, a Spanish botanist.) Ruiz et Pav. fl. per. 3. p. 17. t. 223. Benth in bot. reg. under no. 1622. IjKitnopjes, Sm. exot. bot. 1. p. 23. I 13

Lin. syst. Pentandria, Monogynia. Calyx campanulate, 5-cleft (f. 28 *a*.), with the margins and recesses membranous. Corolla funnel-shaped, or sub-campanulate (f. 28. *b*.); limb 5-parted; segments obovate, (f. 28. *c*.). Stamens inserted at the tube of the corolla, or hardly within the tube; anthers ovate-roundish. Capsule oblong, subrigonal; valves membranous; cells many-seeded. Seeds angular. Albumen sparing. Radicle shorter than the cotyledons.—Usually annual, rarely biennial herbs. Leaves alternate, pinnate, with entire or cut segments, in the sections *Ipomopsis* and *Eugilia*; but in the section *Dactylophyllum*, the leaves are opposite, palmately cut, with entire, subulate segments;

SECT. I. DACTYLOPHYLLUM (from δακτυλον, *dactylos*, a finger; and φυλλον, *phyllon*, a leaf; in reference to the palmately-cut leaves.) Benth. in bot. reg. under no. 1622. Lower leaves opposite, all sessile, and palmately cut. Flowers solitary, on long peduncles. Corolla with a very short tube, and spreading limb. Perhaps a proper genus? Benth. l. c.

1 G. LINIFLO'RA (Benth. l. c.) lower leaves opposite, all sessile, and palmately cut; corolla 3 times longer than the calyx. ☉. H. Native of California, Douglas. Flowers white?, form and size of those of *Linum tenuifolium*.

Flax-flowered Gilia. Pl. *t*

2 G. PHARNACEOIDES (Benth. l. c.) lower leaves opposite, all sessile, and palmately cut; corolla twice longer than the calyx. ☉. H. Native of California, Douglas. This species differs from the preceding, in the flowers being one half smaller.

Pharnaceum-like Gilia. Pl. *I*

3 G. PUSILLA (Benth. l. c.) lower leaves opposite, all sessile, and palmately cut; corolla hardly exceeding the calyx. ☉. H. Native of Chili, Bertero. Habit of *Arenaria tenuifolia*. It differs from *G. pharnaceoides*, in the flowers being one half smaller, and in the corollas being less spreading.

SECT. II. IPOMO'PSIS (from εψ, ips, to strike forcibly; and οψις, *opsis*, sight; brilliancy of flowers.) Benth. in bot. reg. under no. 1622. Ipomopsis, Michx. and other authors. Leaves alternate, pinnate or pinnatifid. Flowers solitary, or somewhat glomerate. Tube of corolla elongated, much exserted beyond the calyx.

4 G. CORONOPIFO'LIA (Pers. ench. 1. p. 187.) stem erect, tall, panicled at top, and clothed with glandular down; leaves pectinately pinnate; leaflets linear, acuminated; tube of corolla 5 times longer than the calyx; limb of corolla spreading, with oblong or ovate, acute, flat segments. ☄. H. Native of Carolina; and on the banks of the Canadian river. Lindl. bot. reg. 1691. Sweet, fl. gard. n. s. t. 289. Ipomopsis picta, Hort. gall. Ipomopsis elegans, Michx. fl. bor. amer. 1. p. 141. Smith, exot. bot. 1. p. 23. t. 13. Ipomopsis coronopifolia, Nutt. gen. amer. 1. p. 134. Cantua coronopifolia, Willd. spec. 2. p. 879. Andr. bot. rep. 415. Pursh, 1. p. 147. Cantua pinnatifida, Lam. ill. 1. p. 479. C. elegans, Poir. dict. suppl. 2. p. 80. Polemonium ruberum, Lin. spec. 1. p. 251. Ipomœa rubra, Lin. syst. 171. Cantua thyrsoidea, Juss. ann. mus. 3. p. 119.—Dill. elth. 2. p. 321. t. 241. f. 312. Stem clothed with fine glands, mixed with downiness. Corollas scarlet, blotched with white.

Buckhorn-leaved Gilia. Fl. A tig. Sept. Clt. 1726. Pl. 3 to 5 feet.

J(3. AGGREGA'TA (D. Don, in e-flinl). phil.journ. 1822. Sweet, fl. gard. n. s. t. 21 B.) stem erect, tall, glabrous, panicled at top; leaves pectinately pinnate, and are, as well as the bracteas, covered with cobwebby (1 villi; leaflets or sepmt-nii linear, mucronate; flowers fascicled at the extremities of the *h* anches, drooping a hule; tube of the corolla fi times Iongi-r than the caly •. segments o fthe limit ovate-lanceolate, acuminated, clannetted. 0. LI. Native of ihe north-west coast of \mei ica, particularly towar< Is the sources of the Columbia, and on the Can-ulian rh er. Ipomopiis •elegant, Lintll. bot. leg. 1281, Gi)i:t puichella, Doitgl. rn s. Cántua aggregáta, Pursh, ar,ier. I. p. 1*7. I pper leaves undivided. Calyx • lotlicd with ^landinV hairs. Cor ilia an inch Ion g. scarlet; limb at first <Tect, at length recurved. Stamens a little exsei; ed. Segmen ;s of corolla spotted.

Aggregate-flowered Gilia. Fl. Aug. Sept. Clt. 1827. Pl. 2 feet.

6 G. FLOKIDAVA; p]ant glab rout; leaves pinna)e, capillary; flowers dispo od in loose racL'nn ; corolla tubular, narrowed at bottom; limb 4 times shorter ih^n tlie tube; cai yx short, vitli setaceous segments. ^. F. Siitive of i lorida. Cántua floridàna, Nutt. in jou rn. acini. phil. 2. p. 110. Very lik- *G. coronopifólia*, but is a more slen icr plant.

Florida Gilia. Pl. 2 to 3 feet.

7 G. SESSILIS; stem dwarf, branched, clothed with glandular down j I aves pinnatifid; segments cuneated, with pointed teeii ; bracteas ovate-lane olate, mucronate, longer than the caly *K*; corol):i with a filiform tube, elmilile ilie length of the calyx; flowers fascicled. G- H. Native of Mexico. Gilia pinnatifida, Sesse • t Moeino, in lierb. Lamb. Stamens inclosed. *Sesse's* Gilia. Pl. ½ foot.

8 G. TENUIFLO'RA (Benth. I. c.) stem erect, tall, clammy, nearly *as* ked, and I panicled at top; lawei glabross, bipinnate; flow frs usually solitary; a orymbs loose, on long peduui les; corolla 4 times longer than the calyx. *Q.* H. Native of < alifornia, Douglas. Flowers blue.

Thin-flowered Gilia. Pl. 3 ;o *i* feet,

9 G. SGIKLORA i jil.iiH quit* glabrous; leaves scattered, finely pinaiifid; btcm much bra ched, panicled a i top; flowers disposed in loose terminal, panicled, •.ledunculatc corymbs; lube of corolla vi ry long. ⊙. H. Native on ilie banks of tlie Canadian river. Cántua longifl6ra, I orrcy, in aon. ly- p. 221. Corolla salver-shaped, having t le tube an inch long. \ rL•lL^a^k-able species, having n f such the appear :mce of a *Phlox,* It differs from •\\\ ntlk-r spei ies, in the salver-sluiped col olla.

Long-flowered Gilia. Pl. 2 to 3 fee

10 G. AMENA'RIA (Benth. I. c.) stem humble, dummy, nearly naked; leaves pil natifid; lubes ovate; flow what glomerate; corollas 8 times longer tban tlie calyx. ©. II Native of California, Dougl:i s. Flowers blue.

Sand Gilia. **Pl. dwarf.** *fa*

II (4. CHASSALA'RIA O'UA ^Bentli, 1. c.) stem erect, clammy, nearly naked, ami piiiiit- ed at top; leaves pinnatilid, rather woolly, but at length **glabrou** segments oblong-lanceolate, entire or cut; flowers nearly **olitary, di** varicately panicled; corollas twice lon**ger** tiian the caly s. *Q,* H. **Native** i of Chili, Cuming. Fir. wers yel l.iwish?

Thick-leaved Gilia. Pl. I to 2 **Eeet** *I*

Sect i. **111.** EUOI'HA (from eu, well, Mr. Bentham) *Gilia*; this section ia roiis. dered to contain the true species of the ge .ms.) Benih. I. c. Leaves alternate, pinnatifi -\ or pinnate, i flowers almost solitary, h nt usually glomerate. **Tui** e of corolla rather -horter than i he calyx.

12 G. PARVIFLO'RA (Sprcng. syst. 1. p. 626.) stem much branched, and n, as well as the calyxes, clothed with glandular down; leaves pinnatifid, lower ones bipinnate; segments linear; Hoi-. ers solitary, lerminal, panicled; corolla about twice the length oi the calyx. ⊙. H. Native of North-west America. Gilia inconspicua, Do; gl. in bot. mag. 2853. Ipomopsis inconBpicu;i, Smith, exot. bot. 1. t. 14. Cántua parviflora, Pursh. amer. 2, suppl. p. 730. Corolla small, blue; tube nearly white.

Inconspicuous Gilia. Fl. Sept. Nov. Clt. 1793. Pl. ½ to 1 foot.

13 G. TRICOLOR (Benth, 1, cliort. tran s. 1. t. 18. f. 3. bot. reg. t. 1794.) stem erect, glabrous, leafy; leaves bipinnate; leaflets or segment-i linear-su bulatc; corymbs S-6-i lowered, virgately panicled; coi olla about 3 times longer than the calyx. ⊙. H. Native of Cnlitbvr. ia, Douglas. Sweet, fl. gard. n. s. t. 264. The peduncles form a large and rather di nse panicle. Corolla with an orange y 'How tube iind centre, and tl e light purple or whi- e of the margin sepa rated by a circle of deep purple. Not[1] ing can be pret tier than this, and other species, when thickly covering a bed a few feet in length and breadth.

Three-coloured-flowered Gilia. Fl. June, Sept. Clt. 1833. Pl. I foot.

14 G. LACTEA'TA (Ruiz, et Pav. fl. per. 2. p. 17. t. 123. f. *b* Pers. **ench. 1. p. 187.) do** ny; stem erect; leaves pinnatifid; segments narrow-oblong, sinuated; peduncles axillary, solitary, 1-3- **•flowered**; rorolla tubular, hardly l onger than the calyx; calj cine segments subulate. ⊙. H. Native of Chili, Peru, California, tvc., •n sandy hills. Cántua breviflòra, Juss. ann. mus. 5. **|i. 1 1 '.K** Thómia mul **jifida, Dumb,** herb. Corollas **pui|** lish, with lanceolate segments.

Jagged-l aved Gili Fl. July. Clt. 1831. Pl. ½ to 1 foot.

15 G. **!iat \>\ pit matt'.** ILTICAU'LIS (Benth, 1. c.) stem erect, smoothish; leaves somew smoothish; segments linear; corymbs 3-10-flowere!, uu very long jiedui^ es, scarcely panicled; corollas h •vtlly twiee Iwigrr than the calyx. Oi, II- x ative of California, Douglas. Coro Has blue.

Many-stemmed Gilia. Pl. 1 foot.

lij <• ACHILLEIFO'LIA (Benth, 1. *c.*\ stem erect, smoothish; lea^ es twice or tliriLf pinnate; Bl gments or leaflets linear-subulate; toryinlis capr te, many-flowered, on very long ptdunci. s; caly Ld rather woolly. corollas twice longer than the calyx; stamens shorter than tlie corolla, • . 11 Native of California, Doug]. Lindl. bot. reg. I68t' Sweet, fl. gard. n. B. t. 28o. Hi rb branched, pak- green, glabrous. Bases of lea. es ciliated 1. Corollas purplish 1;! ue. This species resembles *G. capitata.*

Milfoil-leaved G lia. Fl. Aug. Dec. Clt. 1833. Pl. 1 foot.

17 G. CATITA'TA (Dl ug. in bot. mag. 2698. bot. reg. 11 70.) plant glabrous, i erect; leaves bipinmuifid; segmen is lim-ar. cul ; flowers sessile, disposed in dense heatla, similar to those oi' *J-* ense, on long peduncles; corolla longer than the calyx; stamens shorter than the corolki ⊙. H. Native of No ith-west America. Flowers blue.

Capitate-flowered Gilia. II. Jnn. Sept. Clt. la2ti. 1'l. 1 to 2 feet.

Cult. All the species of *Gilia* are elegant, hardy annuals, of easy culture, the seeds only requiring to be sown in the

open border in spring. The larger the quantity of each grown together, the more showy they appear.

IX. ÆGOCHLOA (from αἴξ, αἰγός, *aix, aigos*, a goat; and χλόα, *chloa*, a green herb; from the fetid smell of some of the species.) Benth. in bot. reg. under no. 1622.—Gilia species, Dougl.

Lin. syst. *Pentándria, Monogýnia.* Calyx tubular or campanulate, membranous at the base, 5-cleft at the apex; segments unequal, stiff, entire or multifid, spinose. Corolla somewhat salver-shaped; tube about equal in length to the calyx; limb 5-parted; segments oblong, entire. Stamens inserted in the upper part of the tube inside; anthers ovate-roundish. Cells of capsule many-seeded.—Herbs usually clammy and fetid. Leaves pinnate; segments or leaflets cut, very acute.

1 Æ. INTERMÉDIA (Benth. l. c.) plant erect, branched; leaves glabrous, pinnate; leaflets or segments linear-subulate, very acute, cut, divaricate, rather spinose; calyx woolly, having the teeth for the most part multifid; corolla rather shorter than the calyx; stamens exserted. ☉ H. Native of California and North-west America, Douglas.

Intermediate Ægochloa. Pl. 1 foot.

2 Æ. COTYLEDÓNIA (Benth. l. c.) plant erect, strict; leaves glabrous, bipinnate; segments linear-subulate, very acute, those of the upper and floral leaves spinose; bracteas villous; calycine teeth nearly entire; corolla equal in length to the calyx; stamens exserted. ☉. H. Native of California, Douglas.

Cotula-leaved Ægochloa. Pl. 1 foot.

3 Æ. CYNOSURÓIDES (Benth. l. c.) plant clothed with soft down; stem branched; leaves pinnate; leaflets deeply pinnatifid; lobes divaricate, rather spinose; calyxes and bracteas membranous at the base, glabrous, deeply pinnatifid, and villous at the apex; corolla about twice longer than the calyx; stamens exserted from the tube. ☉. H. Native of California, Dougl.

Dissay Ægochloa. Pl. 1 foot.?

4 Æ. PUNGÉNS (Benth. l. c.) plant erect, much branched, clothed with clammy down; leaves pinnate; leaflets entire or cut, the lobes lanceolate-linear, very acute and spinose; bracteas ciliately hairy, dilated at the base; calycine segments lanceolate, nearly entire; corolla longer than the calyx; stamens inclosed. ☉. H. Native of California, Douglas; and of the west coast of America, in moist ground, in mountain valleys, near the sources of the Multnomack river, one of the southern branches of the Columbia. Gilia pungens, Dougl. in bot. mag. t. 2977. Gilia squarrosa, Hook. et Arn. in Beech. voy. p. bot. p. 115. Holtzia squarrosa, Eschscholz, in mem. acad. petersb. 10. p. 233, and in Linnæa, 1823, p. 147. Flowers glomerate, terminal. Calyx longer than the corolla, ex Hooker. Tube of corolla swelling upwards, almost white; limb spreading, pale blue; segments ovate.

Pungent Ægochloa. Fl. July. Clt. 1833. Pl. 1½ foot.

5 Æ. ERYNGIOÍDES (Benth. l. c.) plant smoothish; leaves linear, opposite, floral ones pinnatifid, spiny; flowers glomerate; calyx multifid. ☉. H. Native of Chili. Gilia eryngioides, Bot. reg. 1835. t. p. 122. Gilia microcalyx, Lehm. cat. sem. hort. hamb. 1832? Nearly allied to the preceding; but differs, in the smoothness of the plant, and in the leaves, calyx and corolla.

Eryngium-like Ægochloa. Pl. 1 foot.?

6 Æ. ATRACTYLIOÍDES (Benth. l. c.) plant very clammy; leaves pinnatifid; rachis dilated; segments subulate, divaricate, spinose; floral leaves ovate, imbricated, spiny-toothed, clasping the flowers; calycine teeth subulate, entire. ☉. H. Native of California, Douglas. Habit of *Atractylis humilis*.

Atractylis-like Ægochloa. Pl. 1 foot.

7 Æ.? TORREÝI; plant erect, simple, or a little branched, stiff, glabrous; leaves sessile, digitate, alternate, imbricate; segments 3-6, pungent; flowers axillary in the upper part of the stem, solitary, sessile; segments of corolla obovate, obtuse. ☉. H. Native of the Rocky mountains, in the valleys of Loup river. Gilia pungens, Torrey, in ann. lyc. 2. p. 220. Leaves sessile, digitate, appearing as if in clusters. Corolla salver-shaped, with a long, slender tube. Stamens inclosed. Cells of capsule many-seeded. Seeds angular. This has a very distinct habit from the other species.

Torrey's Ægochloa. Pl. 1 foot.

Cult. The species of *Ægochloa* require the same treatment as those of *Gilia*. They are singular, but by no means showy plants.

X. COLLOMÍA (from κόλλα, *colla*, glue; in reference to the seeds being enveloped in a kind of gluey, sticking substance.) Nutt. gen. amer. 1. p. 126. Dougl. in bot. reg. 1160. and 1174. Gilia species, Hook.

Lin. syst. *Pentándria, Monogýnia.* Calyx campanulate, 5-cleft, or somewhat 5-parted; lobes lanceolate or linear, equal, entire. Corolla salver-shaped; with a slender, exserted tube; and a spreading, 5-parted limb; segments oblong, entire. Stamens inserted towards the middle of the tube; anthers ovate-roundish. Cells of capsule 1-2-seeded.—Annual herbs. Leaves alternate, the lower ones rarely opposite, quite entire, or deeply toothed, rarely pinnatifid. Flowers disposed in dense heads, propped by broad ovate, quite entire bracteas.

1 C. HETERODÓXA (Hook. bot. mag. 2893. Lindl. bot. reg. 1547.) plant prostrate, branched, clothed with glandular down; lower leaves pinnatifid and cut; superior ones cuneated, pinnatifid or cut; bracteas or involucral leaves, oblong, acute, quite entire. ☉. H. Native of North-west America. Flowers crowded, shorter than the involucral leaves. Corolla red, with a white centre.

Various-leaved Collomia. Fl. Ju. Aug. Clt. 1836. Pl. ½ to ¾ foot.

2 C. COCCÍNEA (Lehm. del. sem. hort. hamb. 1832. Benth. bot. reg. 1622.) plant erect, branched, beset with glandular down; leaves lanceolate-linear; upper ones ovate-lanceolate, quite entire, or deeply 2-4-toothed at the apex; calyx semi-5-cleft, with broad-lanceolate, obtuse segments; corolla more than twice longer than the calyx; cells of capsule 1-seeded. ☉. H. Native of Chili, about Conception and Talcahuana. C. Cavanillésii, Hook. et Arn. p. 37. Phlox lineàris, Cav. icon. 6. p. 17. t. 527. Phlox bilòba, Ruiz et Pav. fl. per. 2. p. 17. C. laterítia, D. Don, in Sweet, fl. gard. t. 206. This species resembles *C. linearis*; but from which it is distinguished by its deep red flowers, and by the leaves being frequently divided at the apex into 2-3 sharp segments, of unequal size.

Scarlet-flowered Collomia. Fl. Ju. Oct. Clt. 1832. Pl. 1 to 1½ foot.

3 C. LINEÁRIS (Nutt. gen. amer. 1. p. 126. Lindl. bot. reg. 1166.) plant erect, branched, clothed with glandular hairs; leaves ovate-lanceolate, quite entire, opaque, uniform, superior ones downy beneath; calyx cup-shaped, 5-parted; corolla more than twice longer than the calyx; cells of capsule 1-seeded. ☉. H. Native of North America, from Lake Winepeg to the Western Ocean; and at the sources of the Arkansas. Hook. bot. mag. 2863. Heads of flowers involucrated like the rest. Corolla with a rufous tube, and a rose-coloured limb. Segments of calyx 3-veined.

Linear-leaved Collomia. Pl. Ju. Oct. Clt. 1826. Pl. 1 foot.

4 C. GRANDIFLÓRA (Dougl. in bot. reg. t. 1174. Hook. bot.

mag. 2894.) plant erect, branched, rather downy at top ; leaves oblong-lanceolate, entire, shining, ciliated with glands ; calyx 5-cleft, villous, glandular ; corolla ventricose ; limb spreading ; cells of capsule 1-seeded. ©. H. Native of North-west America, in the country bordering on the river Columbia; and as far eastward as the Rocky mountains. Stem purple. Heads of flowers hemispherical, pruinose, clammy. Corollas like those of *C. linearis,* of a peculiar reddish yellow, or nankeen colour.

Great-flowered Collomia. Fl. Ju. Oct. Clt. 1826. PL 1| to 2 feet.

5 C. GILIOIDES (Benth. in bot. reg. under no. 1622.) leaves pinnate; leaflets linear, entire ; calyx deeply 5-cleft; stamens inclosed; cells of capsule 1-seeded. ©. H. Native of California, Douglas. Corollas very like those of *C. grdcilis.*

Gilia-like Collomia. PL 1 foot.

6 C. GLUTINO'SA (Benth. 1. c.) procumbent; leaves deeply pinnatifid, almost pinnate ; segments oblong-linear, entire, or a little cut; calyx nearly 5-parted; stamens longer than the corolla; cells of capsule 1-seeded. 0. H. Native of California, Douglas. Corollas like those of *C., grdciUs.*

Clammy Collomia. PL procumbent.

7 C. NAVARRE[N]TIA ; leaves pinnately multifid ; segments linear-subulate ; flowers capitate, involucrated by numerous bracteas; stem downy, simple, or a little branched. ©. H. Native of Chili. Navarrètia involucràta, Ruiz, et Pav. fl. per. 2. p. 8. Segments of calyx furnished with 3 pungent teeth. Stamens exserted. Stigma bifid. Capsule 2-celled, few-seeded, ex Ruiz, et Pav. 1. c. Corolla purple.

Navarretia Collomia. PL \ to 1 foot.

8 C. GRA'CILIS (Benth. 1. c.) plant erect, branched, clothed with glandular down; leaves lanceolate-oblong, obtuse; calyx 5-parted ; calycine segments long, subulate ; stamens inclosed ; cells of capsule 1-seeded. ©. H. Native of the north-west coast of America, on the banks of the Spokan river; and on high ground, near Flat Head river, on light soils ; and California, Douglas; Chili, Cuming ; &c. Gilia grdcilis, Doug, in bot. mag, 2924. Lower leaves opposite. Flowers crowded at the extremities of the branches, at length elongated into racemes. Calyx clothed with black glands. Corolla small, with a yellow tube, rose-coloured limb, and oval segments.

Slender Collomia. Fl. Ju., Oct. Clt. 1826. PL 1 foot.

9 C. CAVANILLESIA'NA ; suffruticose ; leaves pinnate ; leaflets long, linear, entire; peduncles axillary, solitary, usually 5-flowered; corolla 3 times. longer than the calyx, which is 5-cleft; cells of capsule 1-seeded. *? . G. Native of Monte Video and Buenos Ayres. Phlox pinnàta, Cav. icon. 6. p. 17. t. 528. f. 1. Poir. diet, suppl. 4. p. 397. Cántua glomeriflora, Juss. ann. mus. 3. p. 119. Rccm. et Schultes, syst. 4. p. 368. Flowers disposed in heads, small, cream-coloured.

Cavanilles's Collomia. PL 1 to 2 feet.

Cult. All the species are of the most easy culture, the seeds only requiring to be sown in the open border in spring. Some of the kinds are rather showy.

XI. CALDA'SIA (named after J.Caldas, a botanist of Santa Fe de Bogota.) Willd. hort. berol. 1. p. 71. t. 71. enum. 1.p.202. H. B. et Kunth, nov. gen. amer. 3. p. 166. D. Don, in edinb. phil. journ. Bonplàndia, Cav. icon. 6. p. 21. t. 532.

LIN. SYST. *Pentdndria, Monogyma.* Calyx tubular, 5-toothed, equal to the corolla in length. Corolla somewhat funnel-shaped, unequal; limb 5-lobed ; lobes cuneated, emarginate. Stamens 5, equal, inserted in the middle of the tube, declinate, exserted. Capsule oblong, trigonal; valves membranous; cells 1-seeded. Seeds oblong, somewhat trigonal, convex outside, mucilaginous. Albumen sparing. Radicle hardly shorter than the cotyledons.—A much branched, annual, erect herb, clothed with glandular hairs. Leaves alternate, simple, elliptic-acuminated, serrated. Flowers axillary, twin, pedicellate, bractless. Corolla of a violet-blue colour, or purple.

1 C. HETEROPHY'LLA (Willd. 1. c.) ©. S. Native of New Spain, gathered by Humboldt and Bonpland, in the Botanic Garden of Mexico. Bonplàndia geminiflora, Cav. 1. c. Pers. ench. 1. p. 187. Roem. et Schultes, syst. 4. p. 370. Leaves lanceolate. Corolla an inch long; with linear segments, red filaments, and yellow anthers.

Various-leaved Caldasia. FL Ju. Aug. Clt. 1813. PL \\ foot.

Cult. This plant requires the treatment of other tender annuals; that is, the seeds should be sown on a hot-bed, in spring, and the plants, when of sufficient size, should be planted in separate pots, and placed in the greenhouse during summer.

XII. LCESELIA (so named, by Linnaeus, after John Loesel, author of Flora Prussica, 1654, published at Gottsched, with additions, in 1703.) Lin. gen. 767. Schreb. gen. no. 1029. Gaertn. fruct. 1. p. 295. t. 62. Juss. gen. p. 135. Lam. ill. *527.* Royèna, Houston, in phil. trans.—Cántua species, Willd. Hoitzia, Juss. gen. ed. Usteri, p. 152. Cav. icon. 4. p. 44. t. *366,* H. B. et Kunth, nov. gen. amer. 3. p. 162.

LIN. SYST. *Pentdndria, Monogynia.* Calyx tubular, dry, 5-cleft (f. 29. a.), with pungent segments, furnished with 5 lanceolate, pungently mucronate bracteas outside (f. 29. /.). Corolla funnel-shaped (f. 29. &.), 3 times longer than the calyx; tube a little curved ; limb 5-lobed ; lobes broadly obovate, entire. Stamens equal, exserted (f. 29. c). Capsule trigonal; cells few-seeded; valves membranously crustaceous. Seeds compressed, nearly orbicular, girded by a very narrow membrane. Albumen sparing. Radicle about equal in length to the cotyledons.—Stiff, branched shrubs, natives of Mexico ; branches terete, downy or villous. Leaves alternate, ovate or lanceolate, mucronate, hairy, sharply serrated, reticulately veined, cuneated at the base, on very short petioles. Flowers solitary or twin, axillary, pedicellate, large, showy, scarlet or violaceous.

1 L. CILIA'TA (Lin. spec. 875.) leaves ovate-lanceolate, acutely serrated ; corymbs many-flowered ; stamens, 4 of which are exserted, and the fifth short, seated on the middle ot the segment; bracteas roundish-ovate, cordate, ciliately toothed. T? . G. Native of Vera Cruz. Lam. ill. 527. Gaertn. frucr. 1. p. 295. t. 62. f. 3. Stem quadrangular, branched. Flowers yellow. Bracteas imbricated. Cells of capsule 2-seeded.

C?7iatec/-bractead Loeselia. Shrub 4 to 6 feet.

2 L. COCCINEA ; leaves nearly sessile, ovate ; flowers axillary, solitary, on short peduncles ; bracteas lanceolate, subserrated, veiny, hairy. T?. G. Native of Mexico, plentiful near Guanaxuato, and elsewhere. ; it is also cultivated in the gardens. Hoitzia coccinea, Cav. icon. 4. p. 44. t. *365.* H. B. et Kunth, nov. gen. amer. 3. p. 162. Hoitzia Mexicàna, Lam. diet. 3. p. 134. Cántua Hoitzia, Willd. spec. 1. p. 878. Cántua coccinea, Poir. suppl. 2. p. 80. Bracteas villous. Leaves acutely mucronate, cuneated at the base, scabrous above, and hairy beneath ; serratures mucronately awned. Calycine segments lanceolate-subulate, 1-nerved. Corollas scarlet, glabrous; segments of the limb obovate, spreading*

FIG. 29.

Scarlet Lexelia. Fl.? Clt. 1824. Shrub 3 to 4 feet.

3 L. CRASSIFLÒRA; leaves nearly sessile, lanceolate, or oblong-lanceolate, sharply serrated: flowers usually solitary, on the tops of the branchlets; bracteas obovate, mucronately serrated, diaphanous, white, veined with green, smoothish. ♄. G. Native of Mexico, along with the preceding species. Hoitzia cœrùlea, Cav. icon. 4. p. 44. t. 368. H. B. et Kunth, nov. gen. 3. p. 163. Cántua cœrùlea, Poir. suppl. 2. p. 80. Stems diffuse. Branches clothed with hair-like down. Leaves acutely mucronate, obtuse at the base, scabrous above, and hairy on the veins beneath; serratures mucronately awned. Flowers usually solitary, but sometimes twin or turn, ex Bonpl. Calycine segments oblong, mucronate, 3-nerved in the middle. Corolla blue, glabrous, with obovate, spreading segments.

Blue-flowered Loxelia. Fl.? Clt. 1824. Shrub 1 to 2 feet.

4 L. ACARDIOÒDES; leaves ovate-lanceolate, petiolate, spiny-toothed; those of the branches nearly linear; flowers axillary, solitary, pedunculate; bracteas lanceolate, obsoletely denticulated. ♄. G. Native of Mexico, between Actopan and Salvaterra, where it is called by the natives, *Huitzitzilzin*; hence the generic name. Hoitzia glandulòsa, Cav. icon. 4. p. 45. t. 367. Cántua glandulòsa. Poir. suppl. 2. p. 80. Stem beset with glandular hairs. Calycine segments subulate. Bracteas beset with glandular pili on the back. Corolla red. Capsule ovate-oblong.

Glandular Loxelia. Fl.? Clt. 1825. Shrub 2 feet.

5 L. ARISTÀTA; leaves petiolate, ovate, doubly serrated; flowers numerous, crowded at the tops of the branches; bracteas ovate, dentately awned, diaphanous, reticulated with green veins, glabrous, outer ones corilate, remote, and smaller. ♄. G. Native of Mexico, between Lagura and Actopan, &c. Hoitzia aristàta, H. B. et Kunth, nov. gen. amer. 3. p. 164. Branches glabrous, but the branchlets are downy. Leaves acute, rounded at the base, scabrous above, and paler and hairy on the nerves and veins beneath; teeth mucronately awned. Calycine segments lanceolate, subulate at the apex, 1-nerved. Corolla violaceous; with spatulate, rounded, ciliated segments.

Awned Loxelia. Shrub.

6 L. CERVANTÌTA; branches clothed with glandular hairs; leaves nearly sessile, oblong or oblong-lanceolate, sharply serrulated; flowers twin, crowded at the tops of the branches; bracteas linear, 1-nerved, mucronate, acutely serrulated towards the top, and beset with glandular villi. ♄. G. Native of Mexico, with the preceding. Hoitzia Cervantèsii, H. B. et Kunth, nov. gen. amer. 3. p. 164. H. spicàta, Ruiz. et Schultes, syst. 4. p. 165. Shrub much branched. Leaves scabrous on the nerves and veins, on both surfaces; teeth mucronate. Calycine segments lanceolate, acutely mucronate, serrulated at apex, marked with 3 green nerves. Corolla violaceous; with obovate segments.

Cervantes' Loxelia. Shrub.

7 L. CONGLOMERÀTA; branches clothed with glandular villi; leaves on short petioles, ovate, sharply serrated: flowers solitary, crowded into heads at the tops of the branchlets; bracteas lanceolate, acutely serrulated, veiny, and clothed with glandular hairs. ♄. G. Native of Mexico. Hoitzia conglomeràta, H. B. et Kunth, nov. gen. 3. p. 165. H. capitàta, Willd. rel. in Roem. et Schultes, syst. 4. p. 370. Shrub canescent. Leaves acuminated, narrowed at the base, hairy on both surfaces; teeth mucronate. Calycine segments 5-toothed at top; teeth subulate. Corolla violaceous.

Conglomerate-flowered Loxelia. Shrub.

8 L. SERRATIFÒLIA (Schlecht. et Cham. in Linnæa, 6. p. 385, under Hoitzia.) stems erect, terete, compressed at the nodi, and are, as well as the bracteas, downy; cauline leaves connated, entire, ovate, acute, serrated, tapering into the petioles; serratures acuminated, paler beneath, with that part of the stem ciliated which runs from the middle of the nerves of the leaves; flowers nearly sessile, solitary, or loosely approximate, each involucrated by 4-5 bracteas; teeth of bracteas cuspidate; stamens equal in length to the corolla. ♄. G. Native of Mexico, in meadows, about Misantla and Colipa. Habit of *Lobelia*. Flowers small, purple, or bluish purple.

Nettle-leaved Loxelia. Shrub.

9 L. INVOLUCRÀTA; plant clothed with minute, glandular pubescence; leaves petiolate, ovate, acute, doubly toothed, and fringed on the margins; bracteas about as long as the flowers; flowers in fascicles. ♄. G. Native of Mexico. Phlòx involucràta, Sesse et Moc. in herb. Lamb. Calyx with membranous, acuminated segments. Stem nearly glabrous, slender.

Involucrated Loxelia. Shrub 2 to 3 feet.

Cult. The species of *Loxelia* are extremely elegant shrubs, particularly while in blossom. A mixture of loam, peat, and sand, is the best soil for them; and cuttings will strike root in sand, under a hand-glass.

XIII. CA'NTUA (Cantu is the Peruvian name of one of the species.) Juss. gen. ed. Usteri, p. 152. ann. mus. 3. p. 117. Lam. ill. t. 106. f. 1. H. B. et Kunth, nov. gen. amer. 3. p. 161. D. Don, in edinb. phil. journ. Periphragmos, Ruiz. et Pav. fl. per. 2. p. 17.

Lin. syst. *Pentàndria, Monogynia.* Calyx tubular, 5-toothed, usually cleft to the middle on both sides. Corolla funnel-shaped, 3 times longer than the calyx; tube curved a little; limb 5-lobed; lobes obcordate, convolute in æstivation. Stamens inserted in the tube near the base, exserted. Capsule oblong, trigonal, with 3 deep furrows opposite the dissepiments; valves coriaceously crustaceous; cells many-seeded; seeds oval, compressed, girded by an oblong, membranous wing. Albumen sparing. Radicle shorter than the cotyledons.—Erect, branched shrubs, natives of Peru, with the habit of *Lycium*. Leaves alternate, petiolate, elliptic, acuminated, or cuneate-oblong, quite entire, or serrated, or rarely pinnatifidly sinuated, downy on both surfaces while young, but always on the under surface. Flowers terminal, corymbose, rarely almost solitary, as in *C. ovàta*, white or purple; in *C. bazifòlia*, large and showy.

1 C. PYRIFÒLIA (Juss. ann. mus. 3. p. 117. t. 7.) leaves elliptic, acuminated, quite entire; corymbs dense-flowered; peduncles downy; stamens twice as long as the corolla, which is curved. ♄. G. Native of Peru, near Loxa, where it is called *Tara* by the natives. Lam. ill. t. 106. f. 1. H. B. et Kunth, nov. gen. amer. 3. p. 161. Periphragmos flexuòsus, Ruiz. et Pav. fl. per. 2. p. 17. t. 181. Cántua flexuòsa, Pers. ench. 1. p. 187. Cántua Peruviana, Gmel. syst. 1. p. 347. Cántua buxifòlia, Willd. herb. in Roem. et Schultes, syst. 4. p. 369. Leaves fascicled. Corolla white. Calyx 5-5-toothed, ex Ruiz. et Pav. The saliva becomes yellow by chewing the leaves of this species.

Pear-leaved Cantua. Shrub 5 to 6 feet.

2 C. PYRIFÒLIA (D. Don, in edinb. phil. journ. 1823.) leaves ovate-lanceolate, bluntly acuminated, serrated; corymbs few-flowered; peduncles glabrous; stamens shorter than the corolla, which is curved. ♄. G. Native of Peru. Periphragmos species, nova Pavon mss. Habit of the preceding; but differs in characters indicated above, and in the larger flowers, in the longer capsules, and much larger seeds.

Tea-leaved Cantua. Shrub 5 to 6 feet.

3 C. BUXIFÒLIA (Juss. ann. mus. 3. p. 118.) leaves oblong, sinuately pinnatifid, acuminated; corymbs many-flowered; peduncles clothed with glandular hairs; stamens much exceeding the corolla, which is salver-shaped. ♄. G. Native of Peru, where it is called *Pysio* by the natives; and on the Andes, near Nabon. H. B. et Kunth, nov. gen. 3. p. 161. Branches

clothed wiili clammy, glandular hair (('orolhis white.

Rio Grande Cantua. Shrub.

Cult. All the species are showy, and worth cultivating. See *Lavelia*, p. 248, for culture and propagation.

ORDER CLXI1I. UVDIlOLE.VCI-.r, (this order comprehends it^rfi'ii, irtantchai *nsHydrblea.)* D. Don, in edinb. phil. journ. July 1832. Choisy. in mem. soc. pin- gen. 6, p. IOC. Hydroleffi, R. Br. cong, p. 32.—Convolvulaceæ, part. Juss. gen.

C;Jyx 5-cleft; segments equal, usually distiiit't even to the base, frequently spathaceous (lately dilated at top, permanent. Corolla ii]onopf;talous, usually campanulas, 5-Iobed at top. Stamens inserted in the corolla, alternating with its lobes, sometimes included, and sometimes exserted. Styles 2, exceeding the stamens; stigmas thick or **capitate. Ovarium 2-celled; many-seeded.** Capsule 2-celled, localicidal-2-valved; dissepiments fixed to the middle of the valves; placentas 2 in each cell, fixed to the middle of the dissepiment, sometimes spongy and combined, sometimes laminaform and separated. **Seeds** very numerous, sessile on the placentas. **Albumen** *thin.* Embryo straight.—**Annual, herbaceous, or shrubby** plants. Stems straight or diffuse, glabrous **or** downy, also very hispid, rarely exceeding 2 feet in height; with **alternate** branchlets. Leaves alternate, simple, entire, or usually toothed, more **or** less crowded, usually petiolate. Flowers corymbose or spicate, sometimes also disposed in the manner of *Heliotropium.*

This order is often combined with *Convolvulaceæ*, but is more closely allied to *Scrophularineæ* and *Solaneæ*; but it differs from these orders, in the regular corolla, 5 stamens, and straight embryo.

Sepals of the genera.

1 HYDROLEA. Calyx 5-sepalled. Corolla rotately campanulate. Stamens inserted in the tube of the corolla. Stigmas depressedly capitate. Capsule 2-celled; placentas spongy, terete.

3 HYDROI.]., Calyx 5-cleft. Corolla rotate. Stamens insuTted in the lobes of the corolla. Capsule 2-celled, dehiscing at top ; receptacles or placentas fleshy.

3 NAMA. Calyx 5-sepalled. Corolla tubularly funnel-shaped. Stamens nearly inclosed. Stigmas bluntish. Capsule 2-celled ; placentas 4, laminaform, at first joined by twos, afterwards free.

4 WIGA'KDIA. Calyx 5-sepalled. Corolla funnel-shaped. Stamens exserted. Stigmas depressedly capitate. Capsule 2-celled; placentas like those of *Nama.*

5 (ODON. Calyx 10-lS-parted. Corolla tubular; limb 10-12-cleft. Stamens 10-12. Stigmas simple. Capsule 2-celled, dehiscing at top; dissepiment double, with seminiferous edges.

I. II\IDRO'LEA (from ὕδωρ, *hydor*, water; and ἐλαία, *elaia*, an olive; in reference to the habitats of the species, and their oiliness,) Lin. gen. no. 318. Gaertn. frutt. 1. p. 268, t. 55. Juss. gen. 134. Stëris, Lin. gen. edit. Reich. 342. Nama species, Lin. Sagonea, Aubl. guian. 1. p. 285. t. 111. Reichëlia, Schreb. gen. no. -'"12.

LIN. SYST. *Pentandria Digynia.* Calyx permanent, of 5 sepals. Corolla rotately cantpanulate. SILIVH; tube of the corolla. Styles 2 ; stigmas depressedly capitate. Capsule 2-celled; dissepiment placentiferous in the middle; placentas terete, spongy.—Annual or perennial plants, either unarmed or spiny. Flowers panicled or corymbose, axillary or terminal.

§ 1. *Plants unarmed.*

1 H. ZEVLA'XICA (Vahl, symb. 2. p. 46.) branched; leaves lanceolate, attenuated at both ends, glabrous; panicles axillary, branched, K nfy ; sepals lanceolate-linear, clothed with viscid down at the base. (). S. Native of the East Indies. Nama zeylanica, Lin. spec. p. 327. fl. zeyl. 117. 49. t. 2. Stëris Javàna, Lin. mant. p. 54. - syst. p. 264. Stëris aquática, Burm. ini). p. 73. t. 39, f. 3. Stem a little compressed, glabrous. Leaves 1-2 iiichis l<ni(T. Peduncles usually opposite the leaves, downy, viscid. Corollas blue, *;i* liule longer than the calyx.

Var. β; leaves finely ciliated above. ⊙. S. Native of Jav. about Bantam. Hydrolea Javánica, Blum. bijdr. p. 725.

Var. y ; stem lowny a' top; flowers on short peduncles. O- H, Native of Mexico. Stëris villósa, Pav. mss. in herb. Deless.

Var. δ; plant quite glabrous; flowers on short peduncles; peduncles in the forks; sepals quite glabrous. ⊙. S. Native about Rio Janiero. Evólvulus, no. 1365, Burchell, mss.

Ceylon Hydrolea. Pl. 1 foot.?

2 H. INCANA (Laur. coch. p. 172.) simple; leaves linear-

lanceolate, nearly sessil••, glabrous; pedm icles 1-3-flowered; sepals acute, quite glabrous, ☉. G. Native of China, about Canton, in humid places. (•'lowers Li[1],. Very nearly allied to the preceding; but the leaves are longer and broader, and the peduncles axillary, 1-3-flowered, twin and tern, 1-flowered. Capsule wrinkled, ovate.

Unarmed Hydrolea•. Pl. 1 foot.

3 H. corymbosa (Ell. carol. 1. p. 336.) branched; leave* ovate-lanceolate, sessile, smoothish; flowers terminal corymbosely approximate; sepals acute, lanceolate, hispid; corolla 3 times higher than the calyx. 4- I"- Native of Carolina, in sterile, stagnate places, at St. Stephen*; a;v of Georgia, in like situations. Branchlets hairy. >. eaves rather downy on the veins and edges, reflexed. Corolla azure blue, veined with yellow, marked by 5 white spots at the base, mu;h longer than the calyx. Capsule globose, glabrous.

Corymbose-flowered Hydrolea. Pl• 2 feet.

§ 2. *Spiny shrubs.*

4. quadrivalvis (Walt. fl. carol. 1. p. 109—110.) leaves lanceolate, very acute, attenuated at both ends; flowers 1-3 together, axillary, almost sessile; sepals ovate-lanceolate; capsule glabrous. ☌. F. Native of South Carolina, in stagnate places. Hydrolea Carolinian, Michx. fl. bor. amer. 1. p. 177. Stem somewhat compressed, hispid from long, rarely spreading, white hairs. Leaves 1-3 inches long, quite glabrous, or hardly hispid on the middle nerves. Spines straight, axillary, acutish. Peduncles and sepals hispid. Corolla blue, a little longer than the calyx.

Var. β; unarmed; flowers commonly trigynous. ~*a*, S. Native of Guiana, on the banks of rivulets. Sagœa palustris, Aubl. guian. 1. p. 285. t. 111. Reichelia palustris, Schreb. gen. no. 512. Willd. spec. 1. p. 1002. Stem glabrous, *we* hardly downy. Leaves 3-4 inches long, rough in•ng, glabr- im dots. Flowers axillary, 3-6 together.

Four-valved capsuled Hydrolea.- n. July, Aflg. Clt. 1824. Pl. 1 to 2 feet.

5 H. ovata (Nutt. in amer. phi), trans, n. s. 5, p. 186. ex Choisy, in mem. soc. phys. gen. 6. [>, 109. t, 1.,: eaves ovate, acute at both ends, petiolulate; ^.>wers corymtjosts, somewhat dichotomously disposed; sepals lanceolate; capsule downy. *If.*. F. Native of the Arkansas territory, on the edges of ponds. The whole plant downy, branching only at <*hc* time of fiowcring. Stem a little compressed, clothed with grey, velvety down. Leaves deciduous, soft, downy on the nerves beneath i. I .V inch long, those of the radica I shoots almost linear. Spmes long, acute, terete, d iwny. Flovfer^ bright blue, er<i te branch tbe summits of the fastigi s. Sepals airy. CW] those of //. .*ijHTiosa.* Styles

Ovate-leaved Hydrolea. I[1]!, 1 to 2 feet.

6 H. strigosa (Lin. spec. p. 828. Aubl. guian. 1. p. 281. t. 110.) leaves ovate-lanceolate, acute, attenuated at both ends, nearly sessile; flowers terminal, sub-corymbose; sepals linear-lanceolate; capsule glabrous. ♄. S. Native of South America, by the sides of rivulets. Andr. bot. rep. 566. Hydrolea trigyna, Swartz, fl. ind. occ. 1. p. 558. Cav. icon. 6. p. 19. t. 529. f. 1. Plant downy and clammy. Spines axillary, spreading, villous. Peduncles 5-6-flowered, villous. Sepals joined at the base, villous and ciliated. Corollas blue, exceeding the calyx.

Var. β; styles 3; stamens, sepals, and lobes of corolla, 6; cells of capsule 3.

Spiny Hydrolea. Fl. Ju. July. Clt. 1791. Shrub 1 to 2 feet.

7 H. ciliata (Herit. mss. brit. ex Miller. Choisy, in mem. soc. phys. gen. 6. p. 110.) leaves lanceolate, acute, attenuated at both ends, nearly sessile, quite glabrous; flowers terminal, few;

sepals linear-lanceolate; capsule glabrous. ♄. S. Native of New Spain; and of Guinea, ex Schum. pl. guin. p. 161. Stems terete, glabrous; branches ascending. Spines axillary, stiff, horison) al, very acute, glabrous. Peduncles few, at the t branches, 1-flowered, villous. Sepals downy. Corolla blue, a

Glabrous i Hydrolea. Shrub) to 2 feet.

Cult. All the species of *Hydrolea* fi odsome wh< in blossom. Tbe i hrubby and perennial species grow well in a mixture of loam and peat; and cuttings of them will i"oot, if planted in sand, with a hand-glass over tbem The annual kinds require the t eat merit • rider *i*

III, NAWIA (from »*ifi£t*[1]*Jiama,* a stream or spring of water; habitat of plants.) Lin. gen. no. 31[7]. . Sehrel Gartis fruct. t. 44. Juss. gen. p. 151.—Nama and Hydrolea gpecics, WiHd, *wd* Ku;<; et Pav.

Lin. syst. *Pentandria, Digy* x permanent, of 5 Corolla tubularly funnel-shaped. Stamens sub-inclosed. Styles 2; stigmas bluntish. Capsule 2-celled, loculicidal-2-va sepiment placentiferous in the middle; placentas 4, laminiform at first combined by pairs, afterwards free.

1 N, U»&V).A[1]IA (H. 15. et K«ntl , nov. gen. amer. 3. p . 130. Choisy, in mem. acad. phys. 6. p. 112. t. 2. f. 1.) herbaceous; leaves lanceolate-linear, sessile, with undulately curled edges; flowers terminal or axillary, 3-5 in a fascicle, on short pedicels; corolla hardly exceeding the calyx. ☌. S. Native among rubbish, new ^^ xico, Laredo, Matamoros, &c. Hydrolea congesta, \Vi!kl. m8«. in R um. et Schultes, syst. 6. p. 192. Hydrolea ruptcola, Moc. e) Sesse, fl. mex. ined. Hyd. radiata, Moc. et *tc, t* mex. ioed. with a Sgun Stem multifid at the base, ascending, clothed with cinereous down. Leaves obtuse, sometimes obovate-lanceolate, downy. Sepals dow •iy. Cor olla violaceous, glabrous inside, downy outs ;de,

Var. β, ma (Choisy, in mem. soc. phys. gen. 6. p. 112.) leaves obovate-lanceolate, sessile, with sub-undulated edges; floK ther, on 3-5 to long | edicels; corolla twice longer than the calyx.

Undulated-leaved Nama. Pl. 1 foot.

2 N. Jamaicensis (Lin. spec. p. 327.) herbaceous; leaves obovate-sub-spatulate, attenuated into the petioles at the base, and a little decurrent; flowers 1-3, axillary, on short pedicels; corolla hardly exceeding the calyx. ☉. S. Native of Jamaica, St. Domingo, and Mexico. Brown, jam. 155. t. 18. f. 2. Hydrolea decurrens, Moc. et Sesse, fl. mex. ined. Stem diffuse, prostrate, hairy. Leaves hairy. Pedicels hispid. Sepals hairy. Valves of capsule keeled.

Jamaica Nama. Pl. prostrate.

3 N. ruderosa (Ruiz et Par. fl. per. 3. p. 72. t. 244. f. 4.) herbaceous; leaves oblong-spatulate, tapering into the petioles;

floriferous branches dichotomous; flowers solitary, and nearly sessile in the forks; corolla shorter than the calyx. ©. S. Native of Peru, near Huanaco ; and of Mexico. Nama tetrandra, Pav. mss. Stems branched, reddish, clothed with clammy down. Leaves downy and ciliated. Floriferous branches fastigiate. Sepals linear-spatulate. Capsule ovate, villous.

Far. (3; leaves long-lanceolate ; flowers few. ©. H.

Dichotomous Naraa. PI. 1 foot.

4 N. ORIGANIFOLIA (H. B. et Kunth, nov. gen. amer. 3. p. 130. t. 218.) woody; leaves oblong-lanceolate, very obtuse, tapering into short petioles; flowers 2-4 together, terminal, or in the axils of the superior leaves, pedunculate ; corolla a little higher than the calyx. f?. S. Native of St. Jago, in valleys. Nama subincana, Willd. mss. ex Rcem. et Schultes, syst. 6. p. 189. Hydr61ea tenella, Moc. etSesse, fl. mex. ined. icon. Root thick, twisted. Stems tufted, clothed with greyish down, as well as the leaves and pedicels. Sepals spatulate, downy. Corolla white, downy outside.

Marjoram-leaved Nama. PI. J foot.

5 N. RuricoLA (Bonpl. herb, ex Choisy, in mem. phys. gen. 6. p. 114.) suffruticose; leaves ovate, obtuse, petiolate ; flowers few, terminal, pedicellate ; corolla exceeding the calyx. T?. S. Native along with the preceding. Stem slender, having the epidermis separating at the base, clothed with grey down. Leaves clothed with velvety down ; petioles villous. Flowers intermixed with leaves. Pedicels villous. Sepals sub-spatulate, downy. Capsule small, smoothish.

Rock Nama. Shrub.

6 N. LONGIFLORA (Choisy, in mem. soc. phys. 6. p. 114.) suffruticose ; leaves ovate-lanceolate, acute at both ends, clothed with silky, hoary down beneath, on short petioles ; flowers disposed in loose, few-flowered, leafy cymes ; corollas twice longer than the calyx. T? . G. Native of Mexico. Nama sericea, Bonpl. herb. Willd. mss. Rcem. et Schultes, syst. 6. p. 189. Hydrolea violacea, Moc. et Sesse, fl. mex.. icon. ined. Stem villous. Leaves ciliated, downy and blackish above; petioles villous. Peduncles villous. Sepals spatulate, clothed with silky down. Corolla of a bluish violet colour. Stigmas acutish.

Long-flowered Nama. Shrub dwarf,

N.B.—Nama evolvuloides, and N. convolvuloides, Willd. mss. in Rcem. et Schultes, syst. 6. p. 189, is *Evolvulus alsinoides.*

Cult, For culture and propagation see *Hydrblea,* p. 250.

IV. WIGA'NDIA (named by Kunth, in memory of John Wigand, author of Verae Historiae de succino Prussico, et de herbis in Borussia nascentibus, Jen. 1590.) H. B. et Kunth, nov. gen. amer. 3. p. 126. Choisy, in mem. soc. gen. 6. p. 115.—Hydrdlea species, Ruiz et Pav. Willd. and Lam.

LIN. SYST. *Pent&ndria, Digynia.* Calyx permanent, of 5 sepals. Corolla funnel-shaped. Stamens exserted. Styles 2; stigmas depressedly capitate. Capsule 2-celled, loculicidal-2-valved ; dissepiment placentiferous in the I *[1] , placentas 4, laminiform, at first combined by twos, but at length free.—Usually suffruticose herbs, very hispid and unarmed. Leaves alternate, entire. Spikes terminal, panicled, secund. Flowers sessile, bractless, violaceous, white or yellow.

1 W. URENS (Ruiz et Pav. fl. per. 3. p. 21. t. 243.) plant very hispid; leaves ovate-cordate, doubly serrated, acutish, pilose on both surfaces: spikes unilateral, scorpioid; sepals linear-lanceolate, very acute, clothed with hispid tomentum on both surfaces; capsule hispid or smoothish. i/.S. Native of Peru, among broken rocks. Stem angular. Flowers dense, disposed in 2 rows. Corolla pale violet.

Stinging Wigandia. PI. 3 to 4 feet.

2 W. KU'NTHII (Choisy, in mem. phys. gen. 6. p. 116.) plant very hispid; leaves ovate-cordate, doubly crenated, pilose on both surfaces obtuse ; panicles terminal, branched; sepals linear-lanceolate, acutish, clothed with hoary tomentum ; capsule densely clothed with hoary hairs. %. A. Native of Mexico, near Tasco. Wig. urens, H. B. et Kunth, nov. gen. amer. 3. p. 127, but not of Ruiz et Pav. Hydrolea auriculata, Moc. et Sesse, fl. mex. icon. ined. Hydrolea urens, Willd. herb. no. 5459. Leaves clothed with rusty tomentum above, as well as the petioles. Corolla pale violet, clothed with silky hairs outside.

Kuntlis Wigandia. Shrub 6 feet.

3 W. CARACASSA'NA (H. B. et Kunth, nov. gen. amer. 3. p. 128.) plant hairy; leaves elliptic-cordate, doubly crenated: teeth acutish, and are, as well as the tips of the leaves, clothed with hairy tomentum on both surfaces; spikes secund, revolute at the apex; sepals linear-lanceolate, clothed with hoary tomentum; capsule hardly clothed with hoary down. *?. S. Native near Caraccas. Hydrolea mollis, Willd. rel. in Rcem. et Schultes, syst. 6. p. 190. Very nearly allied to the preceding. Leaves longer and acuter, clothed with rusty tomentum above, as well as the petioles. Corolla villous outside, violaceous.

Caraccas Wigandia. Shrub 12 feet.

4 W. CRISPA (H. B. et Kunth, nov. gen. amer. 3. p. 129.) plant very hairy ; leaves ovate-cordate, acutish, irregularly and doubly serrated, pilose on both surfaces : teeth acute; spikes panicled, secund, revolute at top, very hispid; sepals linear-lanceolate, very hispid; corolla showy. ^ . S. Native of Quito, near Alausi; and on the banks of the river Pozuzo. Hydrolea cnspa, Ruiz et Pav. fl. per. 3. p. 22. t. 244. f. a. Nicotiana urens, Plum. amer. p. 204. t. 211< Wigandia pruritiva, Spreng. syst. 1. p. 865. Leaves long and broad, hoary, tomentose. Corolla large, yellow, ex Humb., campanulate, hoary from down outside.

Curled-\ewe& Wigandia. Shrub 2 to 3 feet.

5 W. MACROFHY'LLA (Cham, in Linnaea, 6. p. 382.) stinging; stem branched ; spikes scorpioid, thin, bractless; flowers sessile, subalar, on short pedicels. ^ • S. Native of Mexico. Plant 6 feet high. Flowers blue.

Large-leaved Wigandia. Shrub 6 feet.

6 W. HERBA'CEA (Choisy, in mem. soc. phys. 6. p. 117.) plant villous; leaves lanceolate, entire, acute at both ends, attenuated into the short petioles ; flowers disposed in loose, corymbose panicles ; sepals linear-lanceolate. %. ? S. Native of Monte-Video. Leaves 1-2 inches long. Sepals acute. Capsule glabrous. Hydrolea Megapotamica, Herb. Kunth, ex Otto.

Herbaceous Wigandia. PI. 1 to 2 feet.

\ *A species hardly known.*

7 W. SCORPIOIDES (Choisy, in mem. soc. phys. 6. p. 117.) plant downy; leaves ovate-cordate, toothed, acutish, clothed with white tomentum beneath ; spikes loosely panicled, revolute ; sepals acutish, downy. *If.,* G. Native of Mexico. Hydrolea scorpioides, Moc. et Sesse, fl. mex. icon. ined. Leaves petiolate. Panicles terminal. Flowers superior. Corolla violaceous, with a short tube, and a spreading, 5-cleft limb.

Scorpion-like Wigandia. PL?

Cult. The species are all very pretty when in flower. A mixture of loam, peat, and sand, is the best soil for them ; and young cuttings will strike root readily in sand, under a hand-glass, in a little bottom heat.

V. CORDON (from *KWSW, kodon,* a bell; shape of corolla.) Lin. gen. edit. Reich, no. 563. Schreb. gen. 715. Juss. gen. 424. Gaertn. fruct. 2. p. 88. t. 95. D. Don, in edinb. phil. journ. July 1833.

LIN. SYST. *Decdndria, Monogynia.* Calyx 10-12-parted; segments subulate, erect; alternate ones smaller. Corolla tubular, longer than the calyx, torulose at the base, and furnished

with as many ribs as there are lobes of the limb; limb 10-12-cleft; lobes oblong, obtuse, keeled, imbricate in æstivation; alternate ones smaller. Stamens 10-12, alternating with the lobes of the corolla, rising from an equal number of compressedly tetragonal arches, which are inserted in the bottom of the corolla; filaments subulate, glabrous. Anthers adnate by their middle, incumbent, 2-celled; cells combined at the extremities; pollen mealy. Scale semi-bifid, pilose at the base; stigma simple, obtuse. Capsule ovate-acuminated, 2-celled, 2-valved, dehiscing at top. Dissepiment double, with revolute, seminiferous edges. Seeds numerous, angular, papillose; testa simple, cartilaginous. Albumen copious, horny. Embryo erect, slender, a little arched, with very short cotyledons, and a long, filiform, obtuse radicle, looking to the hylum. This genus agrees with *Hydroleaceæ*, although the stamens, and the divisions of the calyx and corolla, are double in number, the symmetry of the flower is preserved; but this mere increase of parts is of little importance, when the number of points of agreement are taken into account. In *Codon*, and some of the *Hydroleaceæ*, particularly in *Wigandia*, the leaves have lobed margins, and are clothed with bristly points, which in the former genus are developed into prickles. The stamens and pistilla entirely agree in both genera: but the albumen is more copious, and the stigmata less developed in *Codon*, whose affinities, however, to the *Hydroleaceæ*, may be considered as completely established.

1 C. Royéni (Lin. syst. nat. ed. 13. p. 292. Thunb. prod. p. 86. Willd. spec. 2. p. 340. Andr. bot. rep. t. 325.) ☉. F. Native of the Cape of Good Hope. Codon aculeátum, Gærtn. fruct. 2. p. 85. An annual herb, furnished with copious white, straight, subulate prickles. Root fusiform? Stem erect, branched, terete, flexuous, robust. Leaves alternate, petiolate, ovate-oblong, a little attenuated towards the apex, but obtuse, thickish, fleshy, and ribbed beneath, with recurved, sub-repand edges. Flowers large, solitary, pedunculate, extra-axillary, somewhat racemose at the top of the stem, usually bracteate by two narrower leaves at the base. Corolla white, variegated with purple.

Royen's Codon. Fl. Sept. Ch. 1601. Pl. 1 to 1½ foot.

Cult. This is a singular plant, the seeds of which should be sown in a pot, in rich, light earth, and the pot placed in a frame: and when the plants are of sufficient size, they may be moved into separate, small pots, and shifted into other larger ones by degrees, as they grow. They may afterwards be placed among other greenhouse plants.

ORDER CLXIV. CONVOLVULA'CEÆ (this order contains plants agreeing with the genus *Convólvulus* in important characters.) Juss. gen. p. 132. edit. Usteri. p. 148. R. Br. prod. p. 481. H. B. et Kunth, nov. gen. amer. 3. p. 94. Choisy, in mem. soc. phys. gen. 6. p. 383.

Calyx of 5 sepals (except in *Wilsónia*, which is gamosepalous and 5-toothed;) sepals permanent, equal or unequal, disposed in one, two, or three series, often enlarged round the fruit. Corolla monopetalous, hypogynous, regular, tubular, campanulate or funnel-shaped; having the limb sometimes of 5 plaits, and sometimes of 5 lobes, which are twisted in æstivation. Stamens 5, opposite the sepals, and therefore alternating with the lobes or plaits of the corolla, inserted more or less towards the bottom of the corolla; filaments usually unequal, dilated at the base, sometimes villous, naked, or furnished with scales, usually inclosed, rarely exserted; anthers long, usually sagittate, and adnate at the base, often twisted afterwards. Nectarium or hypogynous disk annular, surrounding the ovarium in most of the species, more or less showy. Ovarium usually simple, 2-4-celled, rarely almost 1-celled, or altogether 1-celled: sometimes the ovarium is double or quadruple; in each cell there is 1 or 2 erect ovula. Style usually simple, entire, or more or less deeply cleft; rarely two. Stigmas acute, flattened or globose; in those with the simple style, 2-lobed. Fruit a capsule or a dry berry, 1-4-celled; cells 1-2-seeded. Capsule usually dehiscing valvately, rarely transversely. Seeds usually rounded on one side, and flattened on the other, inserted by the base, glabrous or villous: having the testa usually black and hard. Albumen mucilaginous. Cotyledons foliaceous, corrugated, except in the genus *Maripa*, in which they are thick and straight. Radicle incurved, inferior.—Stems herbaceous, suffruticose, frutescose, also arborescous; sometimes erect, sometimes creeping, but for the most part twining. Leaves alternate, simple, entire or lobed, sessile or petiolate. Peduncles axillary or terminal, 1- or many-flowered. Pedicels articulated to the peduncles, usually bibracteate; bracteas more or less, approximating the flower, sometimes also involving the flower. Roots simple or tuberous, edible or medicinal. Juice milky, purgative, often filling the stem.

Nearly the whole of the *Convolvulaceæ* are twining plants, with showy flowers, expanding under the influence of sunshine. A few are shrubs, but the greater part are herbaceous, and very many annual. All parts of the world produce them. *Cuscúta* is a singular parasite, wholly destitute of leaves. The root of many is filled with a milky, acrid juice, which is very purgative. Scammony, jalap, and some other drugs, are the produce of *Convolvulaceæ*. The roots of *Ipomœ'a fúrida*, *scopária*, and *Quámoclit*, are stimulatory: that of *Ipomœ'a Batátas*, which is the sweet potato of America and South Europe; and that of *Ipomœ'a edúlis*, are wholesome articles of food.

Synopsis of the genera.

TRIBE I.

ARGYRE'IEÆ. Embryo cotyledonous. Carpels combined into a simple ovarium. Pericarp baccate, indehiscent.

1 RIVE'A. Ovarium 4-celled; cells 1-seeded.

2 MAXIVA. Ovarium 2-celled; cells 2-seeded. Cotyledons not plicate? Stigma furrowed.

3 ARGYRE'IA. Ovarium 2-celled: cells 2-seeded. Stigma 2-lobed; lobes capitate. Corolla campanulate.

4 BLEUXŒ'STRIA. Ovarium 2-celled; cells 2-seeded. Corolla urceolate. Calyx calyculate.

5 HUBER'TIA. Ovarium 2-celled; cells 2-seeded. Stigma hollow-flattened. Stamens exserted.

6 MOORCRO'FTIA. Ovarium 2-celled; cells 1-seeded.? Fruit 2-seeded.

TRIBE II.

CONVOLVE'LEÆ. Embryo cotyledonous. Carpella combined into a simple ovarium. Pericarp capsular, dehiscent.

§ 1. *Style simple, entire even to the stigma.*

7 QUA'MOCLIT. Ovarium 4-celled; cells 1-seeded. Corolla tubular. Genitals exserted.

ARt;[1]! (this tribe contains plants agreeing with the genus *Argyreia*, in having a baccate pericarp.) Choisy, in mem. soc. phys. genev. 6. p. 407. Embryo cotyledonous. Carpels cqn:! ined into a single ovarium. Pericarp baccate, indehiscent.

i. Rrvi A (this genus is dedicated by Choisy, to his friend Auguste de la Rive, a physician of Geneva.) Choisy, in mem. soc. phys. gen. 6. p. 407.—Convólvulus, Ipomœ'a, and Lettsomia, species of authors.

LIN. SYST. *Pentándria, Monogynia.* Sepals 5. Corolla tubular or tin el-shaped, showy. Style 1; stigma capitate or lamcHifbrni, 2-Jol d. Ovarium 4-celled, 4-ovulate. Capsule baccate.—Twining, suffruticose, very showy plants, the flowers of which exceed in size all other convolvulaceous plants.

1 I! TILLAEFÒLIA (Choisy, l. c. p. 407.) leaves cordate-rounal-isli ; p> *A* uncles usually 1-flowered, rarely 2-4-flowered ; sepals ovate-rou ndish, very blunt, equal ; corolla inflato-cylindrical, Philippine **Islands,** banks < of the Ganges, &c; also of the Isle of **Frai** ce, Cape of Good Hope. The same plant is said also to be found in **America, as in St. Doming** o, St. Vincent, and Peru. Convólvulus tiliaefòlius, De r. in Ijfiti dict. 3. p. 544. Ipomœ'a tilli folia, Ræm. et Schultes, syst. 4. p. 229. Ipomœ'a Gangética, Sw it, l)orr. brit. ed. 2. p. 283. 1; Roth. ex Rœm. et Schultes, syst. 4. p. 229. Convólvulus Gangéticus, Roxb. fl. ind. 2. p. 46. Convólvulus spectábilis, Brit. mus. Conv. grandiflòrus, Brit. mus. Lettsòmia microcályx, Wight. Convólvulus leucántha, and Ipomœ'a salicifólia, Herb. madr. Conv. marginàtus, Hamilt. herb. Ipomœ'a baccífera, Russell, herb. Stem dov ny or smoothish. Young branches vill. us. Leaves obtuse or acuminated, downy beneath, while young rather ton entose. Corolla tubular, 2-3 inches long, whil s silky • the angles. Sepals reniform, emarginate, increasing in size wit i the fruit] and covering it at all times, ex Roxb. Lobes of stigma i round.

Tilia-leaved Rivea. Fl. May, Aug. Clt. 1812. Shrub tw.

2 R. HYPOCRATERIFÒRMIS (Choisy, l. c. p. 408.) leaves cordate-rou ndish ; peduncles 1-flowered, sometimes axillary and solitary, sometimes disposed in a sptcate mam at the tops of the bra ;icbes; > epals ovate, obtuse, unequal ; limb of corolla salver-Bhaped; tul very narrow. Native of the East In. lies, in forests, over the southern parts of the Carnatic and Tanjore country, Trincomala, and Travancore. Convólvulus hypocrateriformis, Desr. in Lam. dict. 3. p. 561. Conv. candicans, Rœm. et Schultes, syst. 4. p. 302, but not of Roth. Lettsòmia uniflòra, Roxb. fl. ind. 2. p. 85. Ipomœ'a candicans, Koxb. herb. Argyrèia uniflora, Sweet, hort. brit. p. 289. Stem dov ny or villous. Leaves obtuse, rarely white and villous beneath. Peduncles villous, furnished with 2 bractras at or near

the top. Corolla pure white, 3-4 inches long; tube very long, and limb large. Lobes of stigma linear-oblong.

Salver-shaped-flowered Rivea. Fl.? Cli. 1817. Shrub tw.

3 R. PATA'TA (Choisy, l. c. p. 409. t. 3.) leaves orbicularly cordate, or reniform; peduncles elongated, spicately panicled or umbellate; sepals ovate-lanceolate, blantish: corolla tubular, very narrow. ♄. ◠. S. Native of the East Indies, as of Carnatic, Nipaul, Coromandel, Mungger, &c. Convólvulus candicans, Roxb. nov. spec. p. 106. Roem. et Schultes, syst. 4. p. 273, 790. Lettsomia ornàta, Roxb. fl. ind. 2. p. 86. Argyrèia ornàta, Sweet, hort. brit. p. 289. Conv. ornàtus, Roxb. mss. Wall. cat. no. 1369. Conv. tarita, Wall. cat. no. 2253. Stem white; branches silky. Leaves clothed with cinereous tomentum beneath, large. Bractæas villous. Corolla 3 inches long, purple. Berry cherry-shaped. Lobes of stigma linear-oblong. According to Roxb. l. c., the flowers are large, and pure white.

Adorned Rivea. Fl.? Cli. 1824. Shrub tw.

4 R. PUNA-NÒX (Choisy, l. c.) leaves cordate-roundish, or altogether roundish, sometimes villous beneath; peduncles shorter than the petioles, commonly 3-flowered; sepals ovate-cordate, obtuse; corolla very wide. ♄. ◠. S. Native of Bengal, in the forests of Midnapore. Lettsomia Bùm-nòx, Roxb. fl. ind. 2. p. 84. Argyrèia bùm-nòx, Sweet, hort. brit. p. 289. Clove-scented creeper, Asiat. res. 4. p. 237. Young branches hairy. Leaves acuminated or obtuse, sometimes emarginate; petioles villous. Peduncles 1-3-flowered. Corolla white, fragrant; lobes of stigma capitate. Berry 1-celled, 1-4-seeded. The flowers of this species are large, and pure white, expanding at sun-set, and perfuming the air to a considerable distance, with a fragrance resembling that of the finest cloves: in fact, it is the prince of convolvulaceous plants.

Broad-eight Rivea, or Midnapore Creeper. Fl. July, Oct. Cli. 1798. Shrub tw.

5 R.? HIRSU'TA (Choisy, l. c. p. 410.) leaves lanceolate, acuminated, glabrous above, and silky beneath; peduncles many-flowered, longer than the petiole, but not so long as the leaves; sepals ovate-obtuse, tomentose outside; corolla campanulate. ♄. ◠. S. Native of Tavoy and Amherst. Convólvulus obsètus, Wall. cat. no. 1416. Branches strigosely tomentose, from adpressed white hairs. Flowers umbellate. Corolla showy, silky and hairy outside, 3 inches long. Stigma capitate, 2-lobed.

Covered Rivea. Shrub tw.

Cult. The species of *Rivea* are strong, growing, extensive, twining plants, bearing very large and very showy flowers. They require a great deal of room to flower them. They may be trained up the rafters, or upon trellis-work, in a stove. A rich, light soil, or a mixture of loam and peat, is the best for them; and cuttings strike root readily in sand or mould, under a hand-glass, if placed in heat.

II. MARIPA (the Caribbean name of the tree.) Aubl. guian. 1. p. 230. t. 91. Lam. ill. t. 110. Choisy, in mem. soc. phys. genev. 6. p. 411.—Ehrètia species, Lam. and Poir.

Lin. syst. *Pentándria, Monogýnia.* Sepals 5, coriaceous, imbricate. Corolla campanulate, 5-lobed at top. Stamens 5, equal in height to the tube of the corolla. Style 1; stigma capitate, simple, furrowed. Ovarium 2-celled; cells 2-ovulate. Fruit baccate, coriaceously woody, 1-celled by abortion, and 1-seeded. Albumen wanting.? Cotyledons thick, ovate. ?—Trees and shrubs, natives of Guiana. Branches scandent, tendrilled at top. Leaves alternate, smooth. Flowers white, disposed in loose or thick panicles; bracteas scale-formed at the peduncles, which are villous.

1 M. SCANDENS (Aubl. l. c.) scandent, cirrhiferous; leaves ovate, petiolate, acuminated, glabrous; panicles loose, bracteate; calyx villous; corolla spreading; style elongated. ♄. ◠. S. Native of Guiana, on the banks of the river Sinemari. Ehrètia cirrhòsa, Lam. dict. 1. p. 527. Ehrètia scándens, Poir. suppl. 2. p. 590. Segments of corolla short, ovate-roundish, obtuse, crenulated.

Climbing Maripa. Shrub tw.

2 M. CARI'CEA (Meyer. prim. res. p. 115.) arborcous, erect; leaves oblong, glabrous; panicle strict; limb of corolla erect, exceeding the style. ♄. S. Native of Guiana, about the river Essequibo.

Erect Maripa. Tree.

3 M. VILLÒSA (Spreng. syst. 1. p. 648.) stem suffruticose, erect; leaves sessile, roundish, acutish, villous, ciliated; panicles strict, bracteate. ♄. S. Native of Brazil.

Villous Maripa. Shrub erect.

Cult. For culture and propagation see *Rivea*, above.

III. ARGYREIA (from ἀργυρος, *argyros*, silvery; in reference to the silvery undersides of the leaves.) Lour. coch. 1. 134. Choisy, in mem. soc. phys. gen. 5. p. 411.—Lettsómia species, Roxb. and Wall.—Convólvulus and Ipomœ'a, species of authors.

Lin. syst. *Pentándria, Monogýnia.* Sepals 5. Corolla campanulate. Style 1; stigma capitate, 2-lobed. Ovarium 2-celled; cells bi-ovulate. Capsule baccate.—Extensive, twining shrubs, with a showy aspect, for the most part silvery, but sometimes silky and tomentose.

SECT. I. PTYXA'NTHUS (from πτυξ, *ptyx*, a plait; and ανθος, *anthos*, a flower; in reference to the plicate corolla.) Corolla nearly entire, with 5 plaits at top. Stamens included.

1 A. SPECIO'SA (Sweet, hort. brit. p. 289. Choisy, in mem. soc. phys. 6. p. 411.) tomentose; leaves large, cordate, acute, glabrous above, or rarely villous, thickly nerved beneath, and clothed with silky, silvery down; peduncles about equal in length to the petioles, umbellately capitate; bracteas acute, unequal; sepals ovate, very blunt. ♄. ◠. S. Native of the East Indies, in forests and hedges in Hindostan, Java, and the Isle of France. Convólvulus nervòsus, Burm. ind. 28. t. 10. f. 1. Conv. speciòsus, Lin. suppl. p. 127, exclusive of the country. Smith, icon. ined. 17. Ipomœ'a speciòsa, Pers. euch. 1. p. 183. Sims, bot. mag. 2446. Lettsòmia nervòsa, Roxb. fl. ind. 2. p. 78. Samòdra stòjam, Rheed, mal. 11. p. 125. t. 61. Leaves 8-12 inches long, and 3-4 broad, dark green above. Corolla nearly 2 inches long, of a deep rose-colour, hairy in the plicæ outside.

Showy Argyreia. Fl. July, Aug. Cli. 1818. Shrub tw.

2 A. BRACTEA'TA (Choisy, in mem. soc. phys. gen. 6. p. 412.) clothed with silky hairs; leaves oblong-roundish, acute at apex, glabrous above, and clothed with silky, rufescent down beneath; peduncles exceeding the petioles a little, cymose, many-flowered; bracteas lanceolate, compassing the cyme; sepals ovate-lanceolate or elliptic, acutish. ♄. ◠. S. Native of the East Indies. Convólvulus pomàceus? Roxb. ex Wall. cat. no. 1415. Ipomœ'a bracteàta, Heyne, herb. Leaves 2-3 inches long, and 1-2 broad, clothed with silky, rufescent down beneath, with ciliated edges; petioles, bracteæ, and outside of sepals, villous.

Bracteate-flowered Argyreia. Shrub tw.

3 A. LESCHENAU'LTII (Choisy, mem. soc. phys. gen. 6. p. 413.) clothed with cinereous, silky down; leaves ovate-elliptic, acutish, beset with strigose hairs above, and silky tomentum beneath; peduncles shorter than the leaves, cymose, many-flowered; bracteas ovate or linear, intermixed with the flowers; sepals ovate, blantish, glabrous. ♄. ◠. S. Native of Mysore, and the Neelgherry mountains. Convólvulus Choisyànus, Wall. cat. no. 2259. 1. no. 2. Stem fistular. Leaves nerved, 2-3 inches long,

and 1-2 broad. Petioles and peduncles clothed with hoary tomentum. Corolla 18 lines long, hairy outside. Sepals rather hairy outside, with scarious edges.

Leschenault's Argyreia. Shrub tw.

4 •A. roxburgia (Choisy, l. c. p. 413.) clothed with cinereous tomentum; leaves ovate-elliptic, obtuse, clothed with cinereous, velvety down on both surfaces, but especially beneath; peduncles exceeding the petioles a little, cymose, many-flowered; bracteas linear-lanceolate, adpressed to the flowers; sepals ovate-lanceolate, obtuse, rather villous. ♄. ◠. S. Native of Mysore. Lettsòmia pomàcea, Roxb. fl. ind. 2. p. 53. Ipomœ'a Zeylánica, Gœrtn. fruct. 2. p. 482. t. 175. f. 1. Convolvulus Kottlevi. Spreng. syst. 4. p. 61. Lettsòmia strigòsa. lloxb, fl. ind. 2. p. 60. Ipomœ'a strigòsa, Roth. Convólvulus capinátus, VafaJ, symb. 3. p. 28.? Convólvulus Choisyánus, Wall. cat. Leaves sometimes sub-emarginate at apex. Petioles and peduncles villous. Bracteas sometimes cuneated. Flowers large, rose-coloured. Berry 4-seeded, size of a cherry, yellow. Peduncles dichotomous, 3-7-flowered.

Apple-fruited Argyreia. Shrub tw.

5 A. Nitidissima (Choisy, l.) clothed with rufescent hairs; leaves cordate-orbicular, or oblong, acuminated, sinuated, beset with strigose hairs on both surfaces; peduncles exceeding the petioles, umbellately many-flowered; bracteas ovate or linear, intermixed with the flowers; sepals • ovate-elliptic, obtuse, hairy outside. ♄. ◠. S. fv'ative of > Neelgherry mountains. Stem fistular. Leaves 3-4 inches long, scabrous and green above. Corolla 2-3 inches long, campanulately funnel-shaped, rose-coloured. Very nearly allied to the preceding species.

Neelgherry Argyreia. Shrub tw. ib fcw.

6 A. roxburghiana (Choisy, I, c.p. 'tlJ-O glabrous; leavt cordately-orbicular, sliort-acuminatied; peduncles usually en ceeding the leaves, dichotomously cymose; flowers l tose, intennwod with linear-lanceolate bracteas; sepals small, ovate-roundisl;,very obtuse, villous. ♄. ◠. S. Native of the East Indies, at Goalpara and Colomba. Ipomœ'a Kleiniana, Roem. et Schultes, syst. 4. p. 789. Ipomœ'a bractoàta, Willd. herb. Convólvulus Malabaricus, Hamilt. herb. mnlr. Wall. cat. no. i, I 1 1 4. <-'• nv. fastigiatus, Roxb. ex Wali. cat. no. 2258. Tops of branchlets rather villous. Leaves paler beneath. Petioles sometimes rather :, IIOUS. Peduncles a foot long. Corolla tubularly campanulate, hairy outside; tube coarctate at the base.

Poplar-leaved Argyreia. Shrub tw.

7 A. populifolia (Sweet, Hort. brit. p. 289. Choisy, l. c. p. 415.) leaves ovate-oblong, or ovate-elliptic, entire, or pandurately sinuated, sometimes somewhat 3-lobed, smooth above, but clothed with silvery, silky down beneath; peduncles exceeding the petioles, corymbosely many-flowered; bracteas none; sepals ovate, obtuse, clothed with hoary tomentum. *h* • '. S. Native of the East Indies Lettsòmia splèndens, Roxb. fl. ind. 2. p. 7^ Convolvulus splèndens, Horn. hort. hafn. suppl. p. 133. Ipomœ'a splèndens, Sims, bot. mag. t. 2628. Conv. splèndidus, Hamilt. herb. Sr.m clothed with hoary villi. Leave scuminated, 6 inches long; petioles hoary. Corolla tubularly campanulate, 1½ inch long, rather villous outside, pale red. Berry scarlet, size of a large pea.

Splendid Argyreia. Fl.Noy. Clt. 1820. Shrub tw.

8 A. splendens (Choisy, l. c. p. 415.) tomentose; leaves lanceolate, long-acuminated, glabrous and dark green above, but clothed with silvery tomentum beneath; peduncles not exceeding the petioles, brachiately and loosely many-flowered; bracteas almost wanting; sepals ovate, very obtuse, equal, villous. ♄. ◠. S. Native of the East Indies, at Quilon. Convólvulus fulgens, Wall. cat. no. 1394. Conv. argènteus, Heyne, herb. Leaves nerved beneath, 3-4 inches long, 2-15-lines broad. Pedicels villous. Corolla tubular, 1½ inch long, glabrous.

Fulgent Argyreia. Shrub twining.

9 A. fulgida (Choisy, l. c. p. 416.) smoothish; leaves ovate-oblong, acute and mucronate at the apex, glabrous above, clothed with cinereous down beneath; peduncles very short, shorter than the petioles, 3-4-flowered; sepals ovate-orbicular, very blunt, villous. ♄. ◠. S. Native of the East Indies, between Yandaboo and Paghanaew, on the road to Petaval Wellé. Convólvulus pállidus, Wall. cat. no. 1418. Branches clothed with cinereous, white wool at top. Corolla tubular, glabrous, hardly 5-8 lines long. Fruit black, acute, 2-celled.

Pale Argyreia. Shrub tw.

10 A. cuneata (Ker. bot. reg. 661.) smoothish; leaves obovate-cuneated emarginate, glabrous above, but beset with short, crowded hairs beneath, hardly petiolate; peduncles shorter than the leaves, 3-6-flowered; bracteas linear, very acute; sepals ovate, obtuse, equal, villous. ♄. ◠. S. Native of the East Indies. Convólvulus cuneiformis, Buch. drawc. mys. pl. Ipomœ'a atrosanguinea, Sims, bot. mag. 2170. Lettsòmia cuneata, Roxb. fl. ind. 2. p. 81. Conv. cuneàtus, and Conv. cymòsus, Herb. madr. Stem clothed with powdery down at top. Petioles villous. Peduncles and pedicels downy. Corolla large, of a beautiful deep bright purple colour. Berry smooth, yellowish outside.

Cuneate-leaved Argyreia. Fl. July, Aug. Clt. 1822. Shrub tw.

11 A. elliptica (Choisy, in mem. soc. phys. gen. p. 417.) smoothish or downy; leaves ovate or obovate-elliptic, usually villous; peduncles sometimes exceeding the leaves; flowers in loose, corymbose panicles; bracteas small, linear, caducous; sepals equal, very blunt. ♄. ◠. S. Native of the East Indies, as of Mysore, Ceylon, Tsoug Dong, and Lower Nipaul. Convólvulus ellipticus, Spreng. syst. 1. p. 615. Ipomœ'a elliptica, Roth. nov. spec. 113. Roem. et Schultes, syst. 4. p. 248. Convolv. laurifòlius, lioxb. (!. ind. 2. p. 50. and 573. Ipomœ'a lawrifolia, Sweet, hort. <rt. *brh.* p. 288. Convolv. pedunculàris, Wall. cat. no. 1117. Br nches and peduncles downy or villous. Bracteas and calys vtll ous. Corolla tubularly campanulate, an inch long, of a rose- colour. I Berry round, 4-seeded.

Elliptic]* roaved Argyreia. Shrub twining.

12 A. adnata (Choisy, l. c. p. 418.) stem downy; leaves roandish-cordi te, short-acuminated, glabrous above, rarely beset witli short ha rs, and clothed with silvery, silky down beneath; peduncle: stiff, about equal in length to the petioles; flowers loosely umbellate; bracteas lanceolate or linear, intermixed with the flowers; sepals lanceolate: exterior ones larger, with revolute margins, villous outside. ♄. ◠. S. Native of Silhet, and Chittagong; and in woods about Calcutta. Lettsòmia argèntea, Roxb. fl. ind. 2. p. 72. Convolv. argènteus, Herb. madr. Leaves 3-4 inches long, and the same broad. Bracteas silky. Flowers many, large, of a beautiful rich pink colour, glabrous, except the outside of the plicæ, which is villous. Berry 4-seeded.

Silvery Argyreia. Shrub tw.

13 A. venusta (Choisy, l. c. p. 419.) altogether like the preceding, except the leaves, which are not silky beneath, but clothed with wool-like down. ♄. ◠. S. Native of the East Indies, as of Goalpara, Rangoon, Pegu, Ava, Prome, Segaen. Convolv. Malabáricus, Wall. cat. no. 1414. Lettsòmia argèntea, Roxb., from Rangoon. Berry glabrous, black in the dried state, 4-seeded. Sepals stiff, glabrous, and bluntish.

Beautiful Argyreia. Shrub tw.

14 A. Roxburghii (Choisy, l. c. p. 419.) very nearly allied to the two preceding species; but the leaves are clothed with cinereous villi on both surfaces, but particularly beneath. ♄. ◠. S. Native of the East Indies, in woods and hedges. Ipomœ'a multiflòra, Roxb. fl. ind. 2. p. 59. Ipomœ'a Burmánica, Roem. mss. ex Wall. Ipomœ'a Roxburghii, Sweet, hort. brit. p. 288. Ipomœ'a amœna, Blum. bijdr. 718. Convólvulus Roxburghii, Wall. cat. no. 1415. Stems clothed with cinereous

villi. Bracteas and sepals villous outside. Corolla 2 inches long, rose-coloured; inside of the tube a bright red.

Hurlbergh's Argyreia. Fl. June, Aug. Clr. 1816. Shrub tw.

15 A. MALABÁRICA (Choisy, l. c. p. 420.) stem downy; leaves roundish-cordate, acute, glabrous, or furnished with a few scattered hairs on both surfaces; peduncles about equal to, or exceeding the leaves, many-flowered at the apex; sepals lanceolate, acute, exterior ones larger, and clothed with hoary villi, with revolute edges. ♄. ◠. S. Native of Coromandel, Malabar, Mysore, Cochinchina, Java. Convólvulus Malabáricus, Lin. spec. 221. Willd. spec. 1. p. 847. Ipomœ'a Malabárica, Roem. et Schultes, syst. 4. p. 235. Kamo-Kalengu, Rheed. mal. 11. p. 105. t. 51. Petioles villous. Leaves paler beneath, 3-4 inches long, and the same in breadth. Peduncles trifid, villous. Flowers rather small; the bottom of the bell deep purple; throat pink, with the edges paler, almost white, and slightly 10-lobed. Desrousseaux and Blum. say, that the peduncles are 1-3-flowered; the flowers cream-coloured, with a purple bottom.

Malabar Argyreia. Fl. Ju. Aug. Clr. 1822. Shrub tw.

16 A. AMŒNA (Choisy, l. c.) leaves ovate-roundish, somewhat cordate at the base, short-acuminated at the apex, clothed with woolly tomentum on both surfaces while young, but when old nearly glabrous; peduncles very short, umbellately many-flowered; bracteas linear-lanceolate, villous; sepals equal, linear-lanceolate, hairy outside. ♄. ◠. S. Native of Nipaul. Convólvulus amœnus, Wall. cat. no. 1420. Stem fistular, villously tomentose while young. Leaves 6 inches long, and about the same in breadth. Umbels 4-6-flowered. Corolla 2½ inches long, downy, glabrous.

Large-leaved Argyreia. Shrub twining.

17 A. WALLICHII (Choisy, l. c. 421.) leaves ovate or lanceolate, hardly cordate at the base, acuminated at the apex, glabrous and wrinkled above, nerved and clothed with white tomentum beneath; peduncles almost wanting, many-flowered; bracteas permanent, linear-lanceolate, rather villous; sepals linear-lanceolate; exterior ones the longest. ♄. ◠. S. Native of the Burman Empire, on mount Taoung Dong. Convólvulus erythrocárpus, Wall. cat. no. 1413. Petioles villous, 4-6 inches long. Leaves length of petioles. Flowers 3-4 in a fascicle, nearly sessile. Berry red.

Wallich's Argyreia. Shrub twining.

18 A. *l.* LANCIOLÁTA (Choisy, l. c.) clothed with cinereous, silky down; leaves linear-lanceolate, acute, glabrous above, and blackish, clothed with silky, silvery down beneath; flowers solitary, nearly sessile; sepals ovate-lanceolate, acute, clothed with silky hairs outside. ♄. ◠. S. Native of Martaban and Tavoy, in the East Indies. Convólvulus argyrophýllus, Wall. cat. no. 1393. Leaves 2½ inches long, and 3-5 lines broad. Corolla tubularly campanulate, an inch long, purple, hairy outside.

Lanceolate-leaved Argyreia. Shrub twining.

19 A. *l.* MOLLIS (Choisy, l. c.) stem glabrous, or hardly downy; leaves elliptic-lanceolate, hairy above, and blackish, but clothed with silvery-silky down beneath; peduncles equal in length to the petioles, many-flowered; flowers umbellate; bracteas involucrating the flowers, ovate-obtuse; sepals ovate-oblong, obtuse, hairy outside. ♄. ◠. S. Native of the Prince of Wales Island. Convólvulus mollis, Burm. ind. 44. t. 17. Convolv. sericeus, Lin. mant. p. 43. Convolv. gracilis, Sal. prod. 124. *f.* Ipomœ'a sericea, Blum. bijdr. p. 720. Lettsómia hispida, Hook. mss. Leaves 2-3 inches long. Peduncles hoary, 3-6-flowered. Corolla 2 inches long, purple, beset with long white hairs outside. Berry red. *Convólvulus Kátion*, and *C. Khasiana*, Herb. mss. *par.* is probably referrible to this species.

Soft Argyreia. Fl. *f.* Clr. *f.* Shrub tw.

20 A. MITIS (Choisy, l. c. p. 422.) clothed with silvery-silky villi; leaves ovate-elliptic, acute, silky on both surfaces, blackish above, and silvery beneath; peduncles very short, 2-3-flowered, but usually 1-flowered; bracteas small, linear-lanceolate; sepals acute, outer ones the longest. ♄. ◠. S. Native of the East Indies and Philippine Islands. Convólvulus nitidus, Desr. in Lam. dict. 2. p. 344. Leaves 3 inches long, and 2 broad, sometimes furnished with fascicles of smaller ones in the axils of the older ones. Petioles 1-2 inches long. Corolla inflated, tubular, 2 inches long, contracted at the base, clothed with silky hairs outside; limb spreading a little.

Shining Argyreia. Shrub twining.

21 A. GERRARDÍNA (Choisy, l. c. p. 423.) clothed with silvery down; leaves ovate-cordate, quite glabrous above, clothed with adpressed down beneath; peduncles shorter than the leaves, commonly 3-flowered; sepals clothed with silky-silvery down: outer ones ovate-orbicular; inner ones smaller, ovate-oblong. ♄. ◠. S. Native of the islands of Timor and Java. Ipomœ'a púlchra, Blum. bijdr. p. 716. Leaves acute, cordate at the base, 3-5 inches long, and 1-3 broad. Corolla tubularly funnel-shaped, fine red, silky outside; limb obtuse, 5-lobed.

Gerrard's Argyreia. Shrub twining.

22 A. CAPITÁTA (Choisy, l. c.) clothed with strigose hairs; leaves cordate-ovate, acuminated, hairy on both surfaces; hairs glandular at the base; peduncles exceeding the petiole; flowers capitate; bracteas ovate-lanceolate, involucrate, hairy, as well as the sepals, which are linear-lanceolate. ♄. ◠. S. Native of Silhet, Goalpara, Tavoy, Madras, &c. Convólvulus capitiflórus, Poir. ency. suppl. 3. p. 469. Convolv. capitátus, Vahl, symb. 3. p. 29. Ipomœ'a capitáta, Roem. et Schultes, syst. 4. p. 238. Lettsómia strigósa, Roxb. fl. ind. 2. p. 80. Ipomœ'a trichótoma, Blum. bijdr. p. 717. Convólvulus strigósus, Roxb. herb. Leaves 2-5 inches long, and 1-3 broad. Corolla 1-2 inches long, rose-coloured or purple, hairy outside. Berry red, 4-seeded, round.

Var. β, *conférta* (Choisy, l. c. p. 424.) peduncles very short, crowded on the tops of the branches, forming long, hairy spikes; bracteas and sepals smaller than in the species. ♄. ◠. S. Native of the Burman empire, on mount Taong Dong. Convólvulus hirsutíssimus, Wall. cat. no. 1400.

Capitate Argyreia. Fl. July, Aug. Clr. 1822. Shrub tw.

23 A. BARBIGÉRA (Choisy, l. c. p. 424.) clothed with adpressed hairs; leaves cordate, acuminated; clothed with strigose hairs on both surfaces, but particularly beneath; peduncles exceeding the petioles, stiff, many-flowered; flowers capitate; bracteas ovate, very blunt, surrounding the pedicels and flowers; sepals like the bracteas, but more strigose. ♄. ◠. S. Native of the Burman empire, at Prome. Convólvulus barbiger, Wall. cat. no. 1404. Lettsómia strigósa, Roxb. hort. beng., but hardly of fl. ind. Hairs on the petioles and peduncles spreading. Corolla purple, hairy outside. Leaves 2-3 inches long, and 1-2 broad.

Beard-bearing Argyreia. Shrub twining.

Sect. II. SEMIARGYREIA (from σεμι, *semi*, to cut; and ἀργος, *argos*, a flower; the corolla is 5-cleft.) Corolla 5-cleft, or 5-parted at the apex. Stamens exserted.

24 A. CETÓSA (Choisy, l. c. p. 425.) clothed with adpressed hairs; leaves cordate-ovate, or cordate-roundish, acuminated, quite glabrous above, and beset with adpressed strigæ beneath; peduncles exceeding the petioles, stiff, corymbosely many-flowered; bracteas compassing the flowers and pedicels, semiorbicular, very obtuse; sepals very strigose outside; ovate, orbicular, obtuse. ♄. ◠. S. Native of Sukamuur and Lower Nipaul, as well as of the island of Timor. Ipomœ'a strigósa, Roth. nov. spec. p. 113. Roem. et Schultes, syst. 4. p. 242. Lettsómia setósa, Roxb. fl. ind. 2. p. 80. Convólvulus strigósus, Spreng. syst. 1. p. 600. Convólvulus setósus, Roxb.

mss. Convolv. multiloruS, H, vne, herb. Conv. confértus, Ham. herb. Leaves 2-3 inches long, and 1 to 2½ broad; the older leaves sometimes 6 inches long, and as much broad. Corolla (i-'J in) pmk-ccionml, ^iothi •• with strigose hairs outside; lobes acute. Berry pea-formed, red. Flowers lessile on the branches of ti e peduncle.

Bristly Argyreia. Fl. July, Aug. Clt. 1818. *Shrub* tw.

23 A. HIRSUTISSIMA (Choisy, I c. p 426.) downy; iravt»s roundish, hardly-cordate, obtuse, furnished with a few hairs above, tomentose beneath; peduncles stiff, exceeding the petioles, immediately corymbose; bracteas ovate or ovate-roundish; sepals unequal: outer ones the largest, ovate-roundish, very blunt; inner ones shorter and narrower; corolla small. ½. ☉. S. Native of the Burman Empire, on Mount Taong Dong. Convólvulus rubicúndus, Wall. cat. tuj. i I 05. Leaves rather silvery beneath, an inch *U* g, and as much broad *I-* Pedui cles tomentose. Corolla 4-5 lines long, glabrous. ; jlky outside; lol es acute. Flowers disposed loosely.

Reddish-flowered Argyreia. Shrub twining.

26 A. ROSEOTÒSA (Choisy, I. <:.) clothed with down: louvres *QV.u* , obtuse at the base, blantish at the apex, and mucronulate, smoothish above, but clothed with cinereous tomentum beneath; peduncles very sh irt, capita** y many-flowered; bracteas ovate or ovate-orbicular, or ovate-lanceolate, repand; sepals linear-lanceolate: outer ones the largest. ½. ☉. S. Nati vc of Coiiviii Leaves '2 long, and ! to 1 *h* br«a< d J tube glabrous; limb acute, silky out :ide.

Var. β, cordata (Choisy, 1. c. }i. 487.) leaves dilated ai the base, and cordate, wi•!i a ratlier deep, vtry b unt recess. *h*-S. Native on the b iiks of the Irawadi , and Lower Nipaul. Convólvulus β cordàtus, Wall. HISS. Conv. vestitus, Wall. cat. !!<>. 1411. Berry pea-sha •'d.

Tomentose Argyreia. Shrub twining.

27 A. ARGENTEA (Choisy. i. c, p. 427.) clotiic(\ with hoary tomentum; leaves ovate-cordate, glabrous above. but doii ed with hoary t<; mentum beneath; pe incles exceeding the pt'Uo les a little; many-flowered; flowers capitate; bracteas involucrat ovate-orbicular, hoary; sepals ovate, ob *a»6*; corolla small. '; - S. Native of Coromandel, Orissa, Ceylon, Mysore, Taong Dong, Ava, &c. Lettsòmia aggregàta, *[loxb, il.* iod, 2, p. 76. Convolvulus Orixénsis, Rottler, and Klein, mss. Conv. canéscens-?, li;^th. nov. spec. t>. 107. Hu ni. et Schultes, •; sr. +. p. 274.? Conv. Heyni?, Spreng. syst. •;. 1. p, 0'19. Ipomœa !tnbricata, Roth, rtov. spec- p. 11>. I*!em et Schultes, syst- '• »• 249. Conv. iinbrkatus, Spreng syst. 1. p. $13; Conv. aggregatus, Bot. gard. Conv. canéscens, Spreng. Le;-.ves obtus• at top, soon times sub-emarginate, 2-3 inchei !'• ng, and about the same in breadth. Corolla can Lpanulate, IKW!: longer than the calyx, rod •, iobes acitEr, villons <J• outside, emarginate, ex Wall.

Aggregate-flowerttl Argyreia. Shrub not tw.

28 A. CYMOSA (Sweet, hort. brit. p. 289. Choisy, l. c. p. 428.) clotlied with pruinose down; leave a roun<Hsh*cord ate, or reoi-Jbrs ly-cordate, obtuse, terminated by a very short mucrone, glabrous on both surfaces, or clothed v\ ith pruinose down; peduncles eq il in lon^ili to tli leaves, as also exceeding them, leafy at top, and cymosely many-flowered; bracteas ovate-roun tish, obtns<, plicately recurved; outer sepals like the bracteas; inner sepals ovate-linear; corolla showy. Native of Malabar, on the mountains. Lettsòmia cymòsa, Roxb. fl. ind. 2. p. 82. Stems compressed. Leaves green, 1-2 inches long, and about the same in breadth. Corolla tubularly v funnel-shaped, villous outside, pale pink. Berry yello ded.

Cymose-flowered Argyreia. Ch. 1825. Shrub twining.

29 A. ACUTA (Lour. coch. p. 135.) frutescent; leaves ovate, subcordate, mucronate, clothed with silvery-silky down beneath, glabrous above; flowers numerous, disposed in loose, terminal panicles; bracteas oblong, obtuse, clothed with hoary, silky down outside; outer sepals largest, ovate, bluntish: all clothed with hoary tomentuni - outside; corolla white, showy. ½. ☉. S. Native of China. Argyrèia festiva, Wall. pl. asiat. rar. 1. p. 68. t. 76. Leaves 4-5 inches long, and 3 to 3½ broad. Panicle corymbos Corolla an inch long, campanulate, much higher than the caiyx; lol es lanceolate, obtuse, hairy, outside. Berry red.

Acute Argyreia. Shrub tw.

30 A. CUNEATA (Lour. coch. p. 134. Choisy, l. c. p. 429.) frutescen• r; leaves ovate, abt use, glabrous above, but clothed with silky down beneath; flowers disposed in loose, panicled Cory mbs; bracteas linear-lanceolate; flowers adpressed; sepals oblong-linear, outer ones the largest. ½. ☉. S. Native of Cochinchina, in hedges. Stem clothed with velvety down. Leaves 2-4 inches tong, and ! -g broad, sometimes mucronulate. Covolla « hite. Berry red.

Blunt-leaved Argyreia. Shrub twining.

vtlly known.

81 A. AKBOKSTA (f.onr. coch. p. l.^io. (Choisy, l. c. p. 430.) arl:. reous; leaves ovate, acute, wrinkled, entire, glabrous, re- (lex ed; racemes terminal; sepals inflated, red; corolla with a longish, filiform tube, and roundish segments. ½. G. Native of Cochinchina, in woods. Stem 8 feet high, with spreading branches. Corolla white or yellow. Berry 4-celled, 1-seeded.

Arborescent Argyreia. Shrub 8 feet.

('uit. *Argyreia* is a most splendid ge of plants, well worth the cultivator's care. The greater number of the species are robus[1], extensive twiner- or climbers, usually requiri more space to run than can well be spared for that purpose in any stove or hothou before they will flower; some of them, however, us *A. ennefólia*, being dwarfer plants, produce their elegant b)osi»oms in abundance. All the species grow well in ricli lighl soil, or a mixture of peat, loam, and sand; and cuttings root readily if planted in sand or mould, with a hand-glass placed over them, in a tiltk bottom !n.:;u.

IV. BLINK WO' RT HIA (named *U* , \w. *r* Mr. IMink - worth, who collected oume rous specimens of plants, around Rangoon, and transmitted them to Dr. Wallich.) Choisy, in mem. soc. phys. genev. 6, p. 450. t. 4.

Lin. BYSti *Pentándria, Monogynia.* Bracteas 3, forming an involucrum, and as if it were another calyx. Sepals 5. Corolla short, cylindrically urceolate. Style 1; stigma capitately 2-lobed. Berry 1-seeded.—A shrub, allied to *Argyreia*; but is distinguished from it, in the involucrum, corolla, and habit.

1 B. LYCIOIDES (Choisy, l. c.) stem terete, villous: leaves linear, obtuse, mucronulate, on very short petioles, glabrous above, and rather silky beneath; peduncles short, 1-flowered; sepals ovate-orbicu ☉. ! S. Native on the banks of the Irawaddy, &c. Convólvulus lycioides, Wall. cat. no. 1390. Leaves 6-9 lines long, and 1-3 broad. Corolla a little longer than the calyx, 5-toothed at apex, blackish in the dried state, and •; labrous. Berry girded by the calyx.

Lycium-like Blinkwortliia. Shrub tw.!

Cult. For culture and propagation see *Argyrèia*, above.

V. HUMBETRTI A (probably named after some individual of the name of Humbert.) Lam. dict. 2. p. 356, ill. t. 103. Choisy, conv. in. mem. soc. phys. gen. 6. p. 451.—Endlicher, Gmel. syst. veg. 1. p. 339. Juss. gen. p. 133.—Thouinia, Smith,

icon. ined. 1. p. 7. t. 7. Smithia, Gmel. syst. 1. p. 309.—Edrach, Flacourt, hist. stud. p. 137. t. 100.

Lin. syst. *Pentándria, Monogýnia.* Calyx of 5 sepals. Corolla 5-cleft. Stamens exserted, deflexed. Ovarium one; stigma hollow, emarginate. Capsule baccate, woody, 2-celled; cells 2-seeded.—A tall tree, native of Madagascar. Branchlets terete. Leaves obovate-lanceolate, quite entire, emarginate. Pedunicles 1-flowered, axillary, on the tops of the branches, shorter than the leaves, furnished with 2 little teeth in the middle of each. Flowers large, similar to those of other Convolvulaceous plants.

1 H. MADAGASCARIE'NSIS (Lam. dict. 2. p. 357.) ½. S. Native of Madagascar. Rudrachium *Madagascariense*, Juss. et Gmel. syst. 1. p. 339, exclusive of the syn. of Broce. Pers. ench. 1. p. 176. Thouinia spectábilis, Smith, icon. ined. 1. p. 7. t. 7. Smithia Thouinia, Gmel. syst. 1. p. 389. Humbértia arvitérnis, Commers.

Madagascar Humbertia. Tree tall.

Cult. For culture and propagation see *Argyréia*, p. 247.

VI. MOORCRO'FTIA (named after William Moorcroft, a gentleman in the service of the East India Company, who travelled in Nipaul, and in the neighbouring countries to the north.) Choisy, conv. in mem. soc. phys. gen. 6. p. 431.—Convólvulus species, Wall. Perhaps this genus is not distinct from *Erycíbe*.

Lin. syst. *Pentándria, Monogýnia.* Calyx of 5 sepals. Corolla unknown. Style one. Berry 1-seeded, 1-celled by abortion, very rarely 2-celled.—*M. Pinangiana*, from the baccate fruit, is nearly allied to *Argyréia*; but the habit and inflorescence are quite distinct.

1 M. ADPRE'SSA (Choisy, l. c.) stem hairy; leaves ovate or lanceolate, hairy on both surfaces; peduncles brachiately corymbose, exceeding the petioles a little, 5-8-flowered; sepals linear, recurved at apex. ½. S. Native of Penang. Convólvulus adpressus, Wall. cat. no. 1424. Leaves obtuse or acutish, 2-4 inches long, and 1-2 broad, pale beneath. Flowers hairy. Berry usually 1-celled, 1-seeded.

Adpressed Moorcroftia. Shrub.

2 M. PINANGIA'NA (Choisy, l. c. p. 432.) stem glabrous; leaves ovate-lanceolate, acuminated, quite glabrous on both surfaces; peduncles slender, much exceeding the petioles, loosely 4-8-flowered; sepals cuneate-ovate, stiff, small. ½. S. Native of Penang. Convólvulus Pinangiánus, Wall. cat. no. 1422. Leaves 2-3 inches long, and 1½ to 2 broad, whitish beneath the nerves, sometimes furnished with a few adpressed hairs. Outer sepals and corolla hairy outside. Berry 1-celled, 1-seeded.

Pinang Moorcroftia. Shrub *tw.*

Cult. For culture and propagation see *Argyréia*, p. 257.

Tribe II.

CONVOLVULEÆ (so called, because the genera contained in the section agree with *Convólulus* in the characters indicated below.) Choisy, in mem. soc. phys. gen. 6. p. 433. Embryo cotyledonous. Carpella combined into a single ovarium. Pericarp capsular, dehiscent.

VII. QUAMOCLIT (from *κωμος*, *kômos*, a kidney bean; and *κλιτος*, *klitos*, dwarf; because it resembles the kidney bean in its climbing stems, but is less tall.) Tourn. inst. 116. Moench. meth. Choisy, in mem. soc. phys. gen. 6. p. 435.—Convólvulus and Ipomœ'a, species of authors.—Calóa, Cav. icon. 5. p. 5. t. 426.—Mærostémma, Pers. ench. 1. p. 185.—Exogónium, Moc. et Sesse, ined.—Mina and Mercedia, La Lav. et Lexar.

Lin. syst. *Pentándria, Monogýnia.* Calyx of 5 sepals, which are usually mucronate on the back under the apices. Corolla tubularly cylindrical. Stamens exserted. Style one; stigma capitate, 2-lobed. Ovarium 4-celled; cells 1-seeded.—Twining herbs, mostly natives of America.

1 Q. PHŒNICEA (Choisy, in mem. soc. phys. gen. 6. p. 435.) leaves cordately reniform, with angularly toothed margins, sometimes 3-lobed; lobes acute, with dentately sinuated edges, glabrous on both surfaces; peduncles many-flowered, loosely spicate. ⊙. ◠. S. Native of the southern parts of the Coromandel Coast, Moluccas, &c. Ipomœ'a phœnicea, Roxb. Wall. fl. ind. 2. p. 92. Convólvulus phœniceus, Spreng. syst. 1. p. 596. Ipomœ'a angularis, Willd. act. acad. N. C. horol. 4. p. 197. Convólvulus angulátus, herb. Ham. Ipomœ'a coccinea. Andr. bot. rep. t. 449. Plant glabrous. Leaves paler beneath. Sepals awned. Flowers remote, of a beautiful bright crimson colour; tube 2 inches long. This is a very gaudy plant; no painter can do justice to the brightness of its flowers.

Crimson Quamoclit. Fl. June, Sept. Clt. 1806. Pl. tw.

2 Q. ANGULA'TA; leaves cordate, angular, somewhat 3-lobed, glabrous on both surfaces: upper ones entire, mucronate; peduncles many-flowered, racemose, usually dichotomous. ⊙. ◠. S. Native of the Isle of France and Bourbon. Ipomœ'a angulata, Lam. ill. no. 2116. Poir. dict. 6. p. 12. Ipomœ'a dentata, Willd. herb. Leaves large. Calycine segments narrow, acute. Corolla scarlet, with a long tube; lobes of limb ovate. Capsule 3-celled.

Angular-leaved Quamoclit. Pl. tw.

3 Q. RUIZIA'NA; leaves cordately sagittate, acuminated, and acute; peduncles usually 2-flowered. ⊙. ◠. S. Native of Peru, in elevated, stony places, about Lima. Ipomœ'a angulata, Ort. dec. 7. p. 8. Ruiz. et Pav. fl. per. 2. p. 11. t. 150. f. b. Ipomœ'a dubia, Roem. et Schultes, syst. 4. p. 216. Lea as entire; segments of calyx unequal, somewhat tubercled. Peduncles 1-3-5-flowered; bracteas ovate, dilated at top. Tube of corolla long, slender, of a reddish copper colour; limb short, spreading, scarlet, with revolute edges. Capsule 3-4-celled. Perhaps a variety of *Q. coccinea*.

Ruiz's Quamoclit. Pl. tw.

4 Q. COCCI'NEA; leaves cordate, acuminated, angular at the base; peduncles 3-6-flowered; calyxes warted, awned. ⊙. ◠. H. Native of St. Domingo, New Spain; and of Carolina, at the Mississippi. Ipomœ'a coccinea, Lin. hort. upsa. p. 39. spec. p. 163. Michx. fl. bor. amer. 1. p. 140. Curt. bot. mag. t. 221. St. Hil. 50. t. 6. Ipomœ'a stylósa, Comm. rar. t. 81. Conv. coccineus, Spreng. syst. 1. p. 599.—Plum. icon. 89. t. 103. Plant nearly glabrous. Leaves 3-4 inches long, and 2 broad. Tube of corolla long; limb small, pale scarlet. Capsule 3-4-celled.

Var. β, pubéscens (Cham. et Schlecht. in Linnæa, 5. p. 116.) leaves hastately-cordate, never 3-lobed; hind lobes angularly-toothed at the base, down dense, soft, adpressed. ⊙. ◠. H. Native of Mexico, near Hacienda de la Laguna.

Scarlet-flowered Quamoclit. Fl. June, Sept. Clt. 1718. Pl. tw.

5 Q. LUTE'OLA; leaves cordate, acuminated, rather angular, glabrous; peduncles at first dichotomous, then racemose. ⊙. ◠. H. Native of Guatimala. Ipomœ'a luteola, Jacq. icon. rar. 1. t. 53. coll. 2. p. 366. Willd. enum. 1. p. 207. Ipomœ'a coccinea, fl. Willd. spec. 1. p. 880. Conv. luteolus, Spreng. syst. 1. p. 599. Sepals lanceolate-linear. Corolla of an orange yellow colour; limb acute, short. Perhaps only a variety of *Q. coccinea*.

Yellow-flowered Quamoclit. Fl. Ju. Sept. Clt. 1759. Pl. twining.

6 Q. TRICA'RPEA; leaves cordate, bluntly acuminated, glabrous; flowers solitary; calyx rather hairy, bracteas; corolla

tubular; stigmas globose. ⊙. [1] r*. S. N;Hi ve of Cuba. Ipomœa leucántha, Desv. herb. ex Ham. prod. p. 25. Corolla white. Genitals exserted.

♃ Q. VITIFOLIA (Choisy, in mem. soc. gen. 6. p. 434.) leaves pinnatifid, even to the middle nerve; segments linear, parallel, acute; peduncles 1-flowered; sepals ovate-lanceolate. ⊙. ♃. S. Native of various parts of the East Indies; Isle of France; and North and South America. Ipomœa Quamoclit, Lin. spec. 237. Curt. bot. mag. t. 244. Lam. ill. t. 104. f. 1. Convolvulus pinnatus, Lam. dict. 2. p. 507. Convv. Quamoclit, Spreng. syst. 1. p. 591. Convv. pennatifolius, Sal. prod. p. 124. Flos cardinalis, Rumph. amb. 5. p. 421. t. 155. f. 2. Tsiuria-Cranti, Rheed. mal. 11. p. 123. t. 60. Camalata, Asiat. res. 4. p. 256.—Sabb. hort. 1. t. 315. Plant glabrous. Sepals acute. Corolla scarlet, an inch long; tube narrow; limb acute. Capsule usually 4-celled. The American plant is said to have the peduncles generally 2-flowered.

Var. β. albiflora; flowers white.

Common Quamoclit. Fl. July, Sept. Clt. 1629. Pl. tw.

Cult. The most of the species of *Quamoclit* are beautiful half hardy annual plants. They should be reared on a hot bed; and about the end of May they may be planted out in an open border, in a warm, sheltered situation, where they will flower freely, and ripen their seed. Some of the more tender kinds may be grown in pots, in the greenhouse, during summer. The perennial herbaceous and shrubby kinds should be treated in the manner recommended for *Ipomœa*, p. 262.

VIII. LEPTOCALLIS (from λεπτος, *leptos*, slender; and καλλος, *kallos*, beauty; the plants are slender, and very pretty.) Ipomœa species of Cav.

Lin. syst. Pentándria, Monogýnia. Calyx 5-parted. Corolla tubularly funnel-shaped, narrow. Stamens inclosed. Style 1; stigma globose, 2-lobed. Ovarium 4-celled? 4-valved; cells 1-seeded? Capsule roundish. Seeds angular.—Small erect plants, with quinate or ternate leaves, and flowers resembling those of *Quamoclit vulgaris* in shape; except that the stamens are inclosed.

1 L. QUINATA; glabrous; leaves quinate; leaflets linear; peduncles axillary, 1-flowered. ♃. G. Native of Mexico. Ipomœa muricata, Cav. icon. 4. p. 52. t. 378. f. 2. Ipomœa urmata, Roem. et Schultes, syst. 4. p. 214. Stems filiform, erect. Peduncles furnished with 2 scale-formed bracteæ under the calyx. Calyx laciniated?, with ovate, acuminated segments. Corolla of a reddish-violet colour, tubular, an inch long; segments of the limb ovate, acuminated. Filaments villous at the base.

Quinate-leaved Leptocallis. Pl. 1 to 1½ foot.

2 L. TERNATA; glabrous; leaves ternate; leaflets linear; peduncles axillary, 1-flowered. ♃. G. Native of Mexico, about Acapulco. Ipomœa muricata, Cav. icon. 6. p. 52. t. 378. f. 1. Stems filiform, erect. Calycine segments acuminated. Corolla tubular, purplish-violet, with ovate, obtuse segments. Stamens villous at the base.

Ternate-leaved Leptocallis. Pl. 1 to 1½ foot.

Cult. The species of *Leptocallis* are very elegant, slender, upright plants, with flowers similar to those of *Quamoclit*. They will do well in a mixture of loam, peat, and sand, or any rich light soil; and cuttings of them will readily strike under a hand-glass, in a little bottom heat.

IX. BATATAS (Batatas is Malay according to Rumphius, Mexican according to Nieremberg.) Rumph. amb. 5. p. 367. t. 130. Choisy, in mem. soc. phys. gen. 6. p. 424.—Ipomœa and Convólvulus species of authors.

Lin. syst. Pentándria, Monogýnia. Calyx of 5 sepals. Corolla campanulate. Stamens inclosed. Style one; stigma capitate, 2-lobed. Ovarium 4-celled; cells 1-seeded. Capsule 4-celled, or only 3-celled by abortion.—Creeping or twining herbs.

1 B. EDULIS (Choisy, in mem. soc. phys. gen. 6. p. 435.) stem creeping, rarely twining; leaves variable, usually angular, also lobed; peduncles equal in length to the petioles, or exceeding them, 3-4-flowered; sepals acuminately mucronate, rarely subtruncate, outer ones a little shorter. ♃. S. Native of the East Indies, and now cultivated every where within the tropics. Convólvulus Batátas, Michx. fl. bor. amer. 1. p. 138. Lin. amœn. acad. 6. p. 138. Roxb. in Wall. fl. ind. 2. p. 69. Ipomœa Batátas, Lam. dict. 6. p. 14, exclusive of the syn. of Feuille. Convólvulus Pudicus Orientális, &c. Moris. hist. 2. sect. 1. t. 3. f. 4. Convólvulus esculéntus, &c. Catesb. car. 2. p. 69. t. 60. Ipomœa Catesbæi, Meyer, prim. esseq. p. 115. Convv. esculéntus, Sal. prod. p. 123. Spreng. syst. 1. p. 607. Convv. edúlis, Thunb. jap. p. 84. Batátas, Rumph. amb. 5. p. 367. t. 130. Kappa-Kalénga, Rheed. mal. 7. p. 83. t. 50. Root tuberous, edible. Stems prostrate. Leaves cordate. Corolla an inch long, glabrous, white outside, and purple inside. The red-rooted sort is in general cultivated all over the warmer parts of Asia, and very deservedly esteemed one of the most palatable and nutritious roots; the white-rooted sort is more generally cultivated in other parts.

The Spanish or Sweet Potatoe is a native of both Indies, and was cultivated by Gerarde, in 1597. He calls the roots potatoes, potades, or potatoes, and says they are by some named skirrets of Peru. They flourished in his garden till winter, when they perished and rotted. Batatas were then sold at the exchange in London, and are still annually imported into England from Spain and Portugal. They were, in 1815, the common potatoes of our old English writers, the now common potatoe, *Solanum tuberosum*, Lin., being then little known. The tubers of the Batatas are sweet, tepid, and nourishing. They are very commonly cultivated in all tropical climates, where they eat not only the roots, but the young leaves and tender shoots, boiled. There are several varieties, differing in the size, figure, colour, and taste of the roots, as well as the form, hairiness, and smoothness of the leaves, and colour of the flowers. In warm climates this plant is cultivated in the same manner as we do the potatoe, but requires much more room, for the trailing stalks extend 4 or 5 feet every way, sending out large tubers, 40 or 50 to a plant. In the national garden at Paris, the plants are raised on a hot-bed, and, about the middle of May, transplanted into the open ground, where they are earthed up, and otherwise treated like the potatoe. In warm seasons they produce a tolerable crop. M. Thouin considers it a much lighter food than the potatoe, and equally nourishing. In England, Miller observes, the roots must be planted on a hot bed in spring; and if the plants are kept covered in bad weather with glasses, they will produce flowers, and many small tubers, from the joints; but if they are exposed to the open air, they seldom make much progress.

Ternate-leaved Batatas. Fl. July, Aug. Clt. 1824. Pl. tw.

15 B. HASTÁTA; glabrous; leaves sagittate, truncate behind, on long petioles; peduncles 2-flowered, length of leaves; sepals ovate, acute. ♃. ◠. S. Native of Mexico, in corn fields. Ipomœa glaucifólia, Lin. spec. 229. Willd. spec. 1. p. 864. Convólvulus glaucifólius, Spreng. syst. 1. p. 604.—Dill. elth. 105. t. 87. f. 101. Corolla small, purplish or flesh-coloured; with an inflated tube, and ovate, acute segments. Capsule 3-4-celled; cells 1-seeded.

Glaucous-leaved Batatas. Fl. May, July. Clt. 1732. Pl. tw.

16 B. *Loureiri*: stems procumbent; leaves cordate, palmate, on long petioles; corolla purple. ♃. ◠. S. Native of Cochinchina. Ipomœa tuberósa, Lour. coch. p. 138. Tubers oblong, edible, as in *B. edúlis*, to which they are much like in size, taste, and form.

Loureiro's Batatas. Pl. procumbent.

Cult. The species of *Batatas* are strong, free growing plants, of easy culture, only requiring plenty of room to spread. They are well adapted for trellis-work, or to run up pillars in stoves. They are all tuberous rooted plants; and, therefore, require to be kept dry when in a dormant state. Light rich soil answers them best. Young cuttings strike root readily under a hand-glass, in heat. They are all very showy when in blossom.

X. PHARBITIS (meaning unknown to us.) Choisy in mem. soc. phys. gen. 6. p. 438.—Convólvulus and Ipomœa species of authors.—Convolvulàceæ, Mœnch. meth. 432.

Lin. syst. *Pentándria Monogýnia.* Calyx of 5 sepals. Corolla campanulate, or campanulately funnel-shaped. Style one; stigma capitately granulate. Ovarium 3, rarely 4-celled; cells 2-seeded.—The species of this genus are readily distinguished from other convolvulaceous plants. They are mostly climbing American herbs, usually beset with retrograde hairs.

§ 1. *Leaves cordate, entire.*

1 P. HISPÍDA (Choisy in mem. soc. phys. 6. p. 438.) leaves cordate, acuminated, entire; auricles diverging; peduncles usually exceeding the leaves, 3-5-flowered, somewhat umbellate; sepals ovate-lanceolate, acute. ☉. ◠. H. Native of South America, Sandwich Islands, and probably cultivated in the East Indies. Convólvulus purpúreus, Lin. spec. p. 219. Herb. pict. t. 7. f. 2. Curt. bot. mag. t. 113. 1005. and 1652. H. 2?earcfo/-calyxed Pharbitis. Fl. Aug. Oct. Clt. 1729. PI. tw.

12 P. DILLE^NU; hairy; leaves cordate, entire, and 3-lobed; flowers solitary, almost sessile; calyxes oblong, pilose. ©. ^\ H. Native of ^Ethiopia. IpomoeVDillènii, Roem. et Schultes, syst. 4. p. 227. Conv. Dillènii, Desr. in Lam. diet. *3.* p. 544. —Dill. elth. 97. t. 81. f. 93. Stem beset with long hairs, as well as the petioles. Leaves rather villous. Corolla beautiful blue, with a white bottom, and a spreading, nearly entire limb.

Dillenius's Pharbitis. Fl. June, July. Clt. ? PI. tw.

13 P. SCA'BRA; leaves cordate, 3-lobed; peduncles 3-flowered, longer than the petioles; calyx tubercled; fruit nutant, ©. ^\ H. Native country unknown. Ipomce'a scàbra, Gmel. syst. Cav. descr.p. 101. Stem filiform. Flowers white. Capsule small, 3-celled.

Scabrous Pharbitis. Fl. June, Nov. Clt. 1823. PL tw.

14 P. VILLÓSA; very villous; leaves cordate, 3-lobed; lobes acuminated: lateral ones excavated outside: intermediate *one* elongated, attenuated at the base; peduncles 3-flowered, involucrated. ©. ^\ H. Native of Peru, in groves, and on the edges of fields. Ipomce'a villósa, Ruiz, et Pav. fl. per. 2. p. 12. t. 121. f. 1. Poir. diet. 6. p. 20. Conv. Ruizii, Spreng. syst. 1. p. 594. Corolla funnel-shaped, purplish, glabrous, with an entire, large, revolute limb. Stamens villous at the base. Stigma capitate, granular, 3-lobed.

Villous Pharbitis. PI. twining.

15 P. PUNCTA'TA; pilose; leaves cordate, entire, or 3-lobed; peduncles usually 3-flowered; calyx beset with long hairs and black tubercles; sepals acute, unequal. ©. *rs*. H. Native of India, Asia, Africa, and America. Ipomoe'a punctàta, Pers. ench. 1. p. 184. Conv. hederàceus, Lin. spec. 219. WiJld. spec. 1. p. 851.—Dill. eth. 99. t. 83. f. 96. Stems dark red. Corolla of a purplish-violet colour, middle sized; limb spreading, nearly entire.

Dotted-caiyxed Pharbitis. Fl. July, Nov. Clt. ? PI. tw.

Cult. Pharbitis is a genus of very showy, tender, annual, twining plants. They should be reared in a hot-bed; and when the plants are of sufficient size, they should be planted into other pots, and afterwards shifted from size to size of pots as they grow; and some of them may be tried in the open ground, in a warm sheltered situation. A light, rich soil, or a mixture of loam and decayed leaves suits them best.

XL CALONY'CTION (from *KCLXOQ, kalos,* beautiful; and rv£, *nyx,* night; the flowers are large and showy, and expand at night.) Choisy in mem. soc. phys. gen. 6. p. 441. Convólvulus and Ipomce'a species of authors.—Bóna nóx, Rafin.

LIN. SYST. *Pentándria, Monogýnia.* Sepals 5. Corolla very showy, funnel-shaped. Stamens exserted. Style one; stigma capitate, 2-lobed. Ovarium 2-celled, or somewhat 4-celled, from the rudiment of a dissepiment, 4-ovulate. Pedicels fleshy. —'Twining showy herbs, bearing flowers resembling those of *Datura.* Peduncles axillary, usually 1-flowered.

1 C. SPECIÓSUM (Choisy, 1. c.); sepals unequal, awned. *$* ,'r>. S. Native of most parts of America within the tropic. Ipo* mce'a bona-nóx. Lin. spec. p. 228. Sims, bot. mag. t 752. Pursh. fl. amer. 1. p. 145. Cav. icon. 3. p. 52. t. 300. Jacq. schoenbr. 1. p. 16. t. *36.* Argyrèia bona nóx. Sweet, hort. brit. p. 289. Conv. bona-nóx. Spreng. syst. 1. p. 600.—Sloane jam. p. *55.* hist. 1. p. 151. t. 96. f. 1.—Plukn. aim. 115. t. 276. f. 3. Leaves cordate, entire, acuminated, or hastately 3-5-lobed; peduncles racemose, 3-5-flowered. Corolla with a long cylindrical yellowish tube, and a white spreading limb; lobes rounded, mucronate.

Showy Calonyction. Fl. July, Oct. Clt. 1773. PI. tw.

2 C. ROXBU'RGHII; sepals unequal, awned; leaves cordate, entire, rarely Iobed, glabrous. *$* . ^. S. Native of the East Indies. Ipomce'a grandiflóra, Roxb. fl. ind. 2. p. *87.* but not of Lin. Ipomoc'a longiflóra, Wild. enum. 1. p. 207. Mundaválli, Rheed. mal. 11. p. 103. t. 50. Asiat. res. 4. p, 257.

Conv. muricàtus, Hasc. herb. Stem hardly prickly. Peduncles clavate, 2-4-flowered. Flowers very large, pure white, the border being from 4-6 inches in diameter, delightfully but faintly fragrant, opening at sun-set and drooping at day-light; tube very long, cylindrical.

Roxburgh's Calonyction. Fl. July, Oct. Clt. 1799.

3 C. ROXBU'RGII; sepals equal, long, acuminated; leaves cordate, acuminated, entire. ⊙. ◠. S. Native of Persia and the East Indies. Ipomœ'a muricàta, Jacq. schœnbr. 3. p. 40. t. 323. Roxb. fl. ind. 2. p. 59. Convólvulus muricàtus, Lin. mant. p. 44. Willd. enum. 1. p. 204. Ipomœ'a turbinàta, Lagasc. gen. et spec. nov. diegn. p. 10, no. 139. C. speciósum, var. β. muricàtum, Choisy, l. c.) I. bóna-nóx. β. purpurascens, Ker. bot. rep. 293. Stem and peduncles muricated from prickles. Flowers large, pale bluish-purple; lobes mucronate, tube widening a little towards the mouth, hairy inside, ex Roxb. Peduncles 2-3-flowered.

Muricated Calonyction. Fl. July, Oct. Clt. 1777. Pl. tw.

4 C. HEDERACE'UM (Bernh. bort. elfort, ex Link. enum. 1. p. 200. under *Ipomœ'a*) stem muricated; leaves cordate, acuminated, glabrous, 7-nerved; peduncles shorter than the petioles; sepals acuminated. ♄. ◠. S. Native country unknown. Corolla purple. Very like *C. muricàtum*, but smaller, and the leaves are 7-nerved instead of 9-nerved.

False-muricated Calonyction. Fl. July, Oct. Clt. 1820. Shrub tw.

5 C. A'STERUM (Choisy, l. c. p. 442.) sepals unequal, short-acuminated. ♂. ◠. S. Native of Silhet. Ctmvfilvii Jus ; Is H r, Wall. cat. no. 1388. Stem beset with red reflexed, spiny tubercles, particularly on the older branches. Leaves cordate, acuminated; hind lobes sometimes roundish-obtuse, and sometimes angularly toothed. Peduncles 1-flowered. Sepals adpressed to the base of the calyx. Corolla tubularly funnel-shaped, 3-6 inches long. Capsule glabrous, size of a cherry. Seeds angular, downy, especially on the angles.

Rough-stemmed Calonyction. Pl. tw.

6 C. TRACHOSPE'RMUM (Choisy, l. c.) sepals unequal, obtuse. ♃. ◠. S. Native of Java. Jpofncea tt chospe rana, BImit. bijdr. p. 710. Stem quite glabrous. Leaves hastatelj 3-5-lobed; middle lobe elliptic-oblong, attenuated :it both ends, very acute; lateral ones acute it itjit'X, ami L'liiica ted at the base. as nlsso b: d, quite glabrous. Peduncles 1-flowered. Sepals ovate; inner ones rarely mucronate at apex, Corolla tubular, much longer than the calyx, white.?

Hairy-seeded Calonyction. Pl. tw.

7 C. SMAXIFRÒXUS (Choisy, l. c.) sepals equal, acute. ♃. ◠. S. Native of the West Indies. Convólvulus grandiflorus, Lin. suppl. p. 136. Desr. in Lam. dic 3. And. bot. rep. t. 463, Convólvulus latifòrus, Desr. in Lam. dict. 3. p. 561. Ipomœ'a latifòra, Roem. et Schultes, syst. 4. p. 240. —Plum. cat. 1. mss. vol. 2. p. 52.—Tourn. p. 83. Leaves large, glabrous, cordate, acuminated. Corolla snow-white, with a long, cylindrical greenish tube; limb 5 inches in diameter, expanding at night, and fading at day-light. According to Roem. et Schultes, l. c. the 2 outer sepals are longer, and acute, and the 3 inner obtuse.

Great-flowered Calonyction. Fl. Aug. Oct. Clt.? Pl. tw.

8 C. FITZ'RITES; glabrous; peduncles winged, 2-flowered; pedicels clavate, divaricate; sepals large, elliptic-oblong, obtuse. ♂.? ◠. S. Native of Huayaquil. Leaves cordate, acuminated; auricles rounded. Peduncles longer than the leaves. Corolla downy, (v. s. in herb. Ruiz. et Pav.)

Winged-peduncled Calonyction. Pl. tw.

9 C. CLAVA'TUM; sepals wide, mucronate, nearly equal, membranous; stem and petioles pilose; leaves glabrous. ♂.? ◠. S. Native of Huayaquil. Convólvulus clavàtus, Ruiz. et Pav.

10 C. JACQUI'NII; sepals unequal, obtuse; leaves cordate, acute. ♄. ◠. S. Native of Martinico, on the banks of rivers. Convólvulus grandiflòrus, Jacq. vind. 3. p. 39. t. 69. Plant glabrous. Leaves large, cordate. Peduncles 1-flowered. Corolla pure white; tube widening to the top. brown, rather woolly.

Jacquin's Calonyction. Shrub tw.

Cult. The species of *Calonyction* are among the largest flowering convolvulaceous plants. A light rich soil is the best for them, or a mixture of loam, peat, and sand. They should be reared on a hot-bed, and when of sufficient size they should be planted in separate pots, and shifted from size to size as they grow. They succeed best when trained up trellis-work, or rafters in stoves.

XII. EXOGONIUM (from *ex*, *exo*, outwardly; and *γωνια*, *gonia*, an angle; in reference to the exserted stamens.) Choisy in mem. soc. phys. gen. 6. p. 445. but not of Moench and Sesse.—Convólvulus and Ipomœ'a species of authors.

Lin. syst. *Pentándria*, *Monogynia*. Calyx of 5 sepals. Corolla middle-sized, tubular. Stamens exserted. Style one; stigma capitate, 2-lobed. Ovarium 2-celled; cells 2-ovulate. —Climbing plants, natives of America.

1 E. BRACTEA'TUM (Choisy, l. c.) glabrous; leaves cordate; racemes elongated, many-flowered; flowers bracteate; bracteas large, cordately reniform, coloured. ♄. ◠. S. Native of New Spain, near La Vent a di Acaguisotla, at the altitude of 5000 hexapods. Ipomœ'a bractoàta, Cav. ic. 5. p. 51. t. 477. Ipomœ'a spicàta, H. B. et Kunth, nov. gen. 3. p. 112. Convolvulus obovallàtus, Sprengel syst. 1. p. 593 Ipomœ'a cinera, Willd. Branches angular, white, glabrous. Flowers pedicellate, distinct, reflexed. Corollas tubularly funnel-shaped, glabrous, yellowish-outside and purplish-red inside; the limb in the plant described by Cav. is entire and reflexed, but in the plant described by Kunth, the limb is plicately 5-cleft, and the segments mucronate. Seeds oblong, black, downy.

Bracteate-flowered Exogonium. Shrub tw.

2 E. FILIFÒRME (Choisy, l. c.) leaves oblong-cordate, obtuse, mucronate; peduncles racemose, filiformly. ♄. ◠. S. Native of Martinico and the Antilles, in woods. Ipomœ'a filiformis, Jacq. amer. p. 27. t. 19. pict. p. 20. t. 26. Willd. spec. 1. p. 883. Convólvulus filiformis, Desr. in Lam. dict. 3. p. 555. Plant quite glabrous. Racemes loose-flowered. Flowers purple, copious. Calyx small, acute. Corolla with a very long tube, and obtuse segments. Filaments 5, exceeding the corolla, alternating with 5 sterile ones, which are much shorter.

Filiform Exogonium. Fl. Sept. Oct. Clt. 1823. Sh. tw.

3 E. REPA'NDUM (Choisy, l. c.) leaves cordate, oblong, repand, acuminated; peduncles branched, cymose. ♄. ◠. S. Native of South America and Martinico. Ipomœ'a repánda, Jacq. amer. 28. t. 20. pict. t. 27. Sal. pat. t. 81. Convólvulus repándus, Desr. in Lam. dict. 3. p. 555. Plant quite glabrous. Stem terete. Lower leaves sometimes 3-lobed, all glaucous beneath. Peduncles length of leaves; partial ones often trichotomous. Flowers scarlet, 2 inches long. Calyx the same colour as the corolla, small, obtuse. Limb of corolla reflexed; segment narrow, obtuse.

Repand-leaved Exogonium. Fl. Feb. Nov. Clt. 1793, Shrub. tw.

Cult. All the species of this genus are elegant and singular. Light rich soil, or a mixture of loam and peat, or decayed leaves and loam suits them best. They are well adapted for

training up trellis-work, or pillars in stoves. Young cuttings strike root readily under a hand-glass, in heat.

XIII. LEPISTFMON (from *Xemg, lepis,* a scale ; and *(TTrfjjiijjy, stemon,* a stamen ; in reference to the stamens being furnished with 5 scales ; that is, one to each, which are arched over the ovarium.) Blum, bijdr. p. 722. Choisy, in mem. soc. phys. gen. 6. p. 443.—Convolvulus species of authors.

LIN. &YST. *Pentandria, Monogynia.* Calyx of 5 equal sepals. Corolla tubular, inflated at the base. Stamens 5, furnished each with a scale at the base, which is arched over the ovarium. Style one. Stigma capitate, 2-lobed. Ovarium 2-celled ; cells 1-seeded. Fruit capsular. — Climbing perennial herbaceous plants.

1 L. WALLICHII (Choisy, 1. c.) stem hairy; leaves cordate, acuminated : upper ones somewhat 3-lobed ; peduncles very short, umbellately many-flowered ; sepals oblong-lanceolate, acute. 1/. ^. S. Native of Silhet. Convolvulus ampullaceus, Vahl. mss. in herb. Juss. Conv. hispidus? Vahl. symb. 3. p. 29. Conv. binectariferus, Wall. in. Roxb. fl. ind. 2. p. 47. Conv. cephalanthus, Wall. cat. no. 1402. Leaves beset with adpressed hairs, pale beneath, 3-5 inches long, and nearly as much broad. Stem and petioles beset with spreading hairs. Sepals hairy outside. Corolla glabrous. Flowers rather small, pure white, 18 lines long, and the scales of the stamens acute and villous.

WallicKs Lepistemon. PI. tw.

2 L. FLAVE'SCENS (Blum, bijdr. p. 722.) plant pilose ; leaves cordate-ovate, quite entire, or 3-lobed; cymes pedunculate, axillary, dense-flowered, shorter than the petioles. %. ^\ S. Native of Java, among bushes on the mountains. Perhaps the same as the preceding species.

Yellowish Lepistemon. PL tw.

Cult. For culture and propagation see *Exogbnium* above.

XIV. IPOMG?A (from ii// i7roe, *ips ipos,* bind-weed; and *OJJLQIOC, omoios,* similar ; the genus is nearly allied to *Convolvulus,* or bind-weed.) Choisy in mem. soc. phys. gen. 6. p. 444.—Convolvulus and Ipomoea species of authors.

LIN. SYST. *Pentandria, Monogynia.* Calyx of *5* sepals. Corolla campanulate. Stamens inclosed. Style one; stigma 2-lobed : lobes capitate. Ovarium 2-celled ; cells 2-seeded. Capsule 2-celled ; cells 2-seeded.—Twining or creeping plants, usually natives within the tropics in both hemispheres.

SECT. I. ERPIPOMOZ'A (from tpTrw, *erpo,* to creep, and *Ipo-*nc£a;* the plants contained in this section creep along the ground.) Choisy, 1. c. Stems creeping.

1 I. RE'PTANS (Poir. diet, suppl. 3. p. 460.) stems smooth, striately furrowed, rooting below ; leaves sagittately-lanceolate : auricles acutish, sometimes entire and sometimes toothed; petioles glabrous; peduncles 1-5-flowered ; sepals ovate, acutish, or obtuse. %. S. Native of China; East Indies; Arabia, and Senegal. Convolvulus reptans, Lin. syst. veg. 171. spec. 225. Osb. itin. p. 196. Ipomoea reptans, /3. aquatica, Poir. diet. 6. p. 18. Ipomoea repens, Roth. nov. spec. p. 110. Convolvulus repens, Vahl. symb. 1. p. 17. Willd. spec. 1. p. 874. but not of Lin. Wall. fl. ind. 2. p. *68.*— Rumph. amb. 5. p. 419. t. 155. f. 1.—Rlieed. mal. 11. p. 107. t. *53.* Ipomsea sepiaria, Russ. herb. Conv. repens, Ham. herb. Conv. palustris, Ham. herb. Ipomoea aquatica, Forsk. descr. p. 44. There are varieties having from 1 *to* many-flowered peduncles ; the sepals acute or obtuse ; it is, therefore, not separated from **Ipomoea aquatica, Forsk.** (Conv. Adansonii, Desr.) but not of Blume.

Creeping Ipomoea. Fl. May, June. Clt. 1806. PI. creeping.

2 I. ACETOSJEFOLIA (Vahl. eclog. 1. p. 18.) glabrous; stems angular, creeping ; leaves oblong-lanceolate and hastate ; peduncles elongated, 1-flowered ; sepals oblong, glabrous; bracteas alternate, subulate. %. S. Native of tropical America, by the sea-side. Willd. spec. 1. p. 874. Conv. repens, Swartz. obs. p. 64. but not of Roth.—Plum. amer. 91. t. 105. Leaves 2 inches long, and a nail broad, obtuse, sometimes emarginate. Flowers white.

Sorrel-leaved Ipomoea. PI. creeping.

S I. PEVCA^PIUE (Sweet, hort. brit. 289.) leaves roundish, emarginate, or 2-lobed, veiny, thickish ; peduncles 1, or many-flowered ; sepals ovate-lanceolate, obtuse. %. S. Native of India; China; New Holland; Arabia; Island of Bourbon; Sandwich Islands ; and South America, in the sand, by the sea-side. Convolvulus pes-caprae, **Lin.** spec. 226. Wall, fl. ind. 2. p. 74. Conv. Brasiliensis, Lin. spec. 226. Willd. spec. 1.p. 877. Conv. maritimus, Desr. in Lam. diet. 3. p. 550. Conv. bilobatus, Wall. fl. ind. 2. p. 73. Conv. bauhiniaefolius, Sal. prod. 125. Ipomoe'a maritima, 11. Br. prod. 486. Ker, hot. *reg.* 319. IponWa orbicularis, Ell. sketch. 257. Ipomce'a Brasiliensis, Meyer, ess. 97. Ipomce' a biloba, Forsk, segypt. p. 44. Vittm. summ. 1. p. 440.—Rheed. mal. 11. p. 117. t. 57.—Herm. lugdb. 174. t. 175.—Rumph. amb. 5. p. 433. t. 159. f. 1. Leaves biglandular at the base, more or less 2-lobed. Peduncles 1-6-flowered. Flowers large, reddish-purple. Seeds downy.

GoatsfootAeaved Ipomoea. Fl. June, July. Ck. 1770. PI. creeping.

4 I. ROTUNDIFOLIA ; glabrous ; leaves roundish, retuse, mucronate; petioles shorter than the leaves; peduncles twice longer than the petioles, bifid, many-flowered. 1/ . S. Native of Guinea, in the sea-sand. Conv. rotundifolius, Sebum, pi. guin. p. 102. Root woody, creeping. Stems trailing, rooting, purplish. Petioles purplish, biglandular at top. Sepals ovate, obtuse, mucronate: outer ones rather wrinkled: inner ones twice the size, and somewhat diaphanous. Corolla campanulately funnel-shaped, purple ; limb flat, obsoletely 5-lobed. Filaments downy at the base. Seeds hairy. Allied to /. *pts-caprce.*

Round-leaved Ipomcea. PI. creeping.

5 I. LITTORALIS (Blum, bijdr. p. 713.) stems creeping; leaves roundish-cordate, emarginate, with a mucrone, a little angled, ciliated on the edges; peduncles 1-flowered; sepals cuspidate: outer ones shorter, erectly spreading. %. S. Native of Java and Nusakambanga, in the sand by the sea-shore. Corollas lilac, with a purplish bottom.

Sea-shore Ipomcea. PI. creeping.

6 I. RIPARIA; downy; stems prostrate, radicant ; leaver cordate, acute, on long petioles; umbels pedunculate, 4-5-flowered; calyx pilose. *I^.* S. Native of Guinea, on the banks of rivers. Corollas red.

River-side Ipomcea. PI. creeping.

7 I. CRASSIFOLIA (Cav. descrip. p. 100. Pers. ench. 1. p. 184.) stem decumbent, branched ; leaves reniform, emarginate, somewhat plicate ; peduncles axillary, usually 3-flowered, shorter than the petioles; *2* outer sepals fleshy, and shorter than the 3 inner. 1/. S. Native of Guayaquil. Nearly allied to *I.ph caprce.* Nerves of leaves white. Petioles biglandular at th base. Corollas white.

Thick-leaved Ipomoea. PI. creeping.

8 I. CARNOSA (R. Br. prod. p. 485.) plant prostrp'.e, glabrous,

leaves cordate, emarginate, fleshy, glaucous, hardly an inch long; peduncles 1-2-flowered; sepals equal. ♃. S. Native of New Holland, within the tropic. Convólvulus carnósus, Sprang. syst. 1. p. 609. Flowers not ?

Fig.-leaved Ipomœa. Pl. prostrate.

9 I. ficifólia (R. Br. prod. p. 486.) plant prostrate, rather villous; leaves subcordate, dentately cut: upper ones lanceolate; peduncles 1-flowered, glabrous, longer than the leaves; sepals equal, lanceolate, acuminated. ♃. S. Native of New Holland, within the tropic, by the sea-side. Convolvulus ficifolius, Sprang. syst. 1. p. 609.

Cut-leaved Ipomœa. Pl. prostrate.

10 I. cissoídes (R. Br. prod. p. 486.) plant creeping, tomentose; leaves nearly cordate, ovate-oblong, cut, rather silky; peduncles 1-2-flowered, villous, longer than the leaves; sepals glabrous, equal, oblong-lanceolate, acute. ♃. S. Native of New Holland, within the tropic. Convolvulus cissoides, Sprang. syst. 1. p. 609.

Gregan's Ipomœa. Pl. creeping.

11 I. spuria (Choisy in mem. soc. phys. gen. 6. p. 446.) stems creeping; leaves cordately reniform, glabrous, obtuse, mucronulate; peduncles usually not equalling the leaves in length; sepals ovate; outer ones shortest, and rugosely plicate. ♃. S. Native of Mysore and Malabar. Convólvulus rugósus, Roxb. in Willd. ann. act. berol. 4. p. 106. Roem. et Schultes, 4. p. 273, 303, and 790. Convol. flagelliformis, Wall. fl. ind. 2. p. 68. Conv. Beladámbo, Sprang. syst. 1. p. 608. Ipomœa repens, Lam. ill. no. 2134. Poir. dict. 6. p. 18. Ipomœa Beladámboe, Roem. et Schultes, syst. 4. p. 232. Conv. mollítus, Russ. herb. Beladámboe, Rheed mal. 11. p. 119. t. 58. Stems compressedly angular. Peduncles 3-8-flowered. Seeds black, glabrous. Flowers large, pure white.

Wrinkled Ipomœa. Pl. creeping.

12 I. sinuátifrons (Choisy, l. c.) creeping, glabrous; leaves reniform, with sinuately-toothed edges, emarginate; pedicels very short, 1-flowered, rarely 2-3-flowered; sepals small, ovate-roundish, ciliately jagged. ♃, S. Native of the East Indies; as of Bengal, Nopalry, Coromandel, and Island of Timor. Convólvulus reniformis, Wall. fl. ind. 2. p. 67. Conv. Gangéticus, Lin. amœn. acad. 4. p. 306. no. 121. Evólvulus emarginátus, Burm. fl. ind. 77. t. 20. f. 1. Evólvulus Gangéticus, Lin. spec. p. 391. Stem angular at top. Leaves 3-6 lines long. Corolla small, 5-cleft, yellow; lobes acute. Seeds glabrous, reddish.—In some soils this species is found of a dark purple or rusty colour.

Kidney-shaped leaved Ipomœa. Fl. Oct. Cl. 1825. Pl. creeping.

13 I. reniciófolia (Choisy, l. c. p. 447.) stems diffuse, hairy; leaves cordately reniform, obtuse at top, also emarginate, glabrous, with entire edges; peduncles axillary, solitary, twin or tern, 1-2-flowered; sepals linear-lanceolate, hairy. ☉. S. Native of Travancore. Convólvulus hirtus, Wall. cat. no. 2254. and probably of Lin. Stem diffusely creeping, beset with retrograde hairs, which rise from black glands. Leaves an inch long. Corolla tubular, exceeding the calyx, glabrous.

Dock-leaved Ipomœa. Pl. creeping.

14 I. incúrva; creeping; stems erect, carinatose; leaves broad, linear, emarginate, mucronate, subhastate: lobes linear, acute, curved in front; peduncles 1-flowered; sepals nearly equal, lanceolate. ♃. S. Native of Guinea. Conv. incúrvus, Schum. pl. guin. p. 92. Stem nearly a span high, with filiform creepers. Corolla white, larger than those of *C. arvénsis*; with a dark purple bottom, and a usually mucronate 5-cleft limb; lobes roundish. Capsule ovate-roundish, 4-valved, usually 1-seeded. Said to be related to *I. emarginata*, and *I. acetocæfolia*.

Incurved-leaved Ipomœa. Pl. creeping.

Sect. II. Orthomœa (from ὀρθος, *orthos*, straight; and *Ipomœa*; in reference to the species contained in this section being erect or diffuse, but never twining.)

* *Plants herbaceous.*

15 I. tridentáta (Roth. cat. 2. p. 19. Roem. arch. 3. p. 38.) stems diffuse, filiform; leaves sessile, oblong-linear, truncate at apex, and often tridentate, but auriculately toothed at the base; peduncles 1-flowered, exceeding the leaves; sepals ovate, awned. ☉. S. Native of the East Indies; at Pegu-new, Irrawaddi, Ceylon, &c. Convólvulus tridentátus, Lin. spec. ed. 1. p. 157. Wall. fl. ind. 2. p. 56. Conv. viscidus, Roxb. hort. beng. p. 14. Evólvulus tridentátus, Lin. spec. ed. 2. p. 392. Burm. ind. 77. t. 16. f. 3. Conv. Indicus, &c. Pluk. alm. 117. t. 276. f. 5. Conv. minor, &c. Pluk. mant. 117. t. 167. f. 5. Senders-Claudi, Rheed. mal. 11. p. 135. t. 65. Stem herbaceous, angular. Leaves hardly 3-4 lines broad, and an inch long, quite glabrous. Peduncles downy. Calyx whitish-yellow. Corollas small, yellow.

Tridentate-leaved Ipomœa. Fl. June, July. Cl. 1778. Pl. diffuse.

16 I. filicaulis (Blum. bijdr. p. 721.) stems diffuse, filiform; leaves linear, or linear-lanceolate, obtuse, mucronate, on short petioles, somewhat hastately denticulated at the base; peduncles 1-2-flowered, length of the leaves; sepals equal, ovate, or oblong, acuminated, acute. ☉. S. Native of the East Indies; as of Travancore, Ceylon, Penang, Rangoon, banks of the Irrawaddi, &c.; also of China, Japan, New Holland, Java, Timor; Africa, at the Cape of Good Hope, and in Guinea; and of America, in various parts. Convólvulus filicaúlis, Vahl. symb. 3. p. 24. Schum. pl. guin. p. 92. Conv. hastátus, Desr. in Lam. dict 3. p. 542. Conv. simplex, Pers. ench. 1. p. 178. Conv. médium, Lour. coch. p. 106. edit. Willd. 1. p. 130. Ait. hort. kew. 1. p. 328. Wall. fl. ind. 2. p. 56. but not of Lin. Conv. filiformis, Thunb. fl. cap. 2. p. 10. Conv. denticulatus, Desr. in Lam. dict. 3. p. 540. Sprang. syst. 1. p. 603. Conv. angustifólius, Desr. in Lam. dict 3. p. 547. Vahl. symb. 3. p. 25. Conv. Japónicus, Thunb. jap. p. 88.? Vahl. symb. 3. p. 25. Ipomœa denticulata, R. Br. prod. 1. p. 485. Ker. bot. reg. 317. I. angustifólia, Jacq. coll. 2. p. 367. icon. rar. t. 317. I. Japónica, Roem. et Schultes, syst. 4. p. 215.? Pers. ench. 1. p. 184. Tela-Neli, Rheed. mal. 11. p. 113. t. 55. Conv. linifólius, Wall. cat. no. 1289. Stem branched, angular. Leaves sometimes 2-3 lines broad, sometimes very narrow; hind lobes generally toothed. Pedicels elevate. Corolla pale yellow, or yellow. Seeds glabrous.

Var. β, (Schum. pl. guin. p. 92.) leaves narrow-linear; teeth of auricles subcutaneous. ☉. S. Native of Guinea.

Thread-stemmed Ipomœa. Fl. July, Aug. Cl. 1778. Pl. 1 foot, diffuse.

17 I. Chapperóni (R. Br. in Denh. append. p. 35.) glabrous, creeping; leaves sagittate, having the hind lobes entire, and acute; peduncles 1-flowered. ♃. F. Native of Bornou.

Chapperon's Ipomœa. Pl. creeping.

18 I. sidæfólia; glabrous, erectish; leaves linear-hastate, sessile, having the hind lobes bidentate; peduncles 1-flowered; stem furrowed. ♃. S. Native of Guinea, in fields; common among grass. Stem furrowed. Flowers small, yellow. Nearly allied to *I. filicaúlis*, and probably only a variety of it.

Sidastaic-leaved Ipomœa. Pl. ½ foot, nearly erect.

19 I. Arvensis; branched, glabrous, twiggy; leaves scale-formed; peduncles 2-flowered, spicate; sepals lanceolate, ob-

long, acuminated: the 2 outer ones rather the smallest. ♃. S. Native on the sandy banks of the Orinoco, near the cataract of Atures. Convólvulus Aturénsis, H. B. et Kunth, nov. gen. amer. 3. p. 96. Stem dichotomously branched; branches terete. Corolla white, glabrous, 3 times longer than the calyx. Capsule globose, covered by tin? i

Attire Ipjmnea. Fl. March. Pl. 1½ foot.

29 i. *c A* PILL-•ta; stem is near)-. simple, erect; leaves sessile, many-parted; segments capillary, glabrous; flowers axillary, solitary, pedunculate, longer than the leaves; calyx smoothish; sepals ovate, acute, concave, rugose on the back, unequal. ♃. S. Native of New Granada, in the temperate regions, betwixt Villa San Miguel and the river Putes, at the altitude of 800 hexapods. Convólvulus capillifolius, H. If, et Kunth, nov. gen. 3. p. 97. Root tuberous, milky, turnip-formed. Plant smoothish. Corollas funnel-shaped, purple, glabrous. Perhaps a species of *Leptocóllis*.

Capillary-leaved Ipomœa. Pl. l foot.

21 I. SERI'CEA (R. Br. prod. p. 487.) tomentose; stem flexuous at the apex; leaves lanceolate, acute, quite entire, obtuse at the base; peduncles usually 2-flowered; sepals ovate, acuminated. ♃.? S. Native of New Holland, within the tropic, on the sea shore. I. diántha, Roem. et Schultes, syst. 4. p. 254. Conv. flexuósus, Spreng. syst. 1. p. 612.

Two-flowered Ipomœa. Pl. erect.

22 I. ERE'CTA (R. Br. l. c.) tomentose, erect; leaves oblong-linear, obtuse, quite entire; peduncles usually *I-HOY,* ered; sepals acute; capsule G-valve<I. %• S. Native of New Holland, within the tropic, on the sea shore. Conv. erectus, Spreng. syst. 1. p. 612.

Erect Ipomœa. Pl. erect.

23 I. HETERO annual, asce smoothish; leave ire, obtuse, ndtng, times pinnatifid at the base, a ; peduncles 1-flowered, very short; sepals iid toothed at to] acuminated. ☉. S. Native of New Holland, with ropic, on the sea shore. Ipomœa polymórpha, Roem. et Schultes, syst. 4. 254. Convólvulus Brównii, Spreng. syst. 1. p. 6

Variable-leaved Ipomœa. Pl. ascending. 12.

24 I. COMPE'CTA; stems prostrate, diffuse; leaves cordate-sagittate, lanceolate, entire, acute; petioles scabrous; flowers nearly sessile, axillary, crowded; calyx hairy. ☉. S. Native of Guinea, common in fields. Corollas white.

Crowded-flowered Ipomœa. Pl. prostrate.

25 I. RUPE'STRIS; roots creeping; stem 3 inches high; leaves linear-lanceolate, or lanceolate, obtuse, thick, entire, glabrous, petiolate; peduncles terminal and axillary, elongated, 1-flowered. ♃. S. Native of Sierra Leone, and along the coast of Guinea, on the sea shore. Corollas large, pale red. J. Hamilton of *Calystégia soldanélla*.

Hit ible Ipomœa. Pl. ¼ foot.

26 I. OVALIFO'LIA (Choisy, l. c. p. 449.) stem erect or prostrate, suffruticose; leaves ovate-oblong, acute at the base, obtuse at the apex, and emarginate, on short petioles; peduncles 3-7-flowered; sepals unequal. ♄. S. Native of the East Indies and Sandwich Islands. Convólvulus ovalifolius, Vahl, eclog. 2. p. 16. Hook. et Arn. in Beech. voy. pt. bot. p. 90. [p. microphylla, Roth. nov. spec. p. 112. Conv. parvifolius, Spreng. syst. 1. p. 611.? Stems terete. Leaves an inch long, and 6 lines broad. Peduncles twice as long as the petioles. The 3 exterior sepals ovate, bluntish; the 2 interior smaller, linear, acute. Corolla glabrous.

Var. β, glábra (Choisy, l. c.) stem, leaves, calyxes, and peduncles, quite glabrous.

Var. β, pubéscens (Choisy, l. c.) *M* parts of ih< plw are ciliated with long hairs. ♄. S. Native of the Sandwich Islands, Guinea, and Angola.

Var. γ, tomentósa (Choisy, l. c.) every part of the plant of a yellow colour, from intricate, simple, adpressed hairs. ♄. S. Native of the Sandwich Islands, Guinea, and Angola.

Oval-leaved Ipomœa. Shrub erect.

* * *Shrubby or arborescent plants.*

27 I. ARBORE'SCENS; arborescent; leaves ovate-cordate, acute, clothed with hoary tomentum on both surfaces; peduncles many-flowered; calyx clothed with white wool outside; sepals oblong, obtuse, concave, unequal; outer ones the broadest; seeds woolly on the angles. ♄. S. Native of Mexico, on the western declivities of the mountains betwixt Acapulcia and Chilpancingo, at the altitude of 600 hexapods, where it is called *Guasanguate*. Convólvulus arboréscens, Willd. enum. 1. p. 204. Lactescent. Pedicels tomentose. Corolla glabrous, white, purple inside at the throat.

Arborescent Ipomœa. Tree large.

28 I. MACRA'NTHA; arborescent; leaves oblong-lanceolate, acuminated, rounded at the base, glabrous; flowers axillary, solitary, pedunculate; calyx clothed with white wool; sepals unequal, oblong, rounded at apex, concave; outer ones broadest. ♄. S. Native of Mexico, near Guanaxuato and Santa Rosa, at the altitude of 1100 feet. Convólvulus macránthus, H. B. et Kunth, nov. gen. 3. p. 95. Branches angular, clothed with white tomentum while young, as well as the peduncles. Corolla white, woolly outside.

Large-flowered Ipomœa. Tree.

29 I. SERPYLLIFO'LIA; leaves ovate-lanceolate, rounded at the apex, rather downy; axillary peduncles 1-flowered; terminal ones 2-flowered, exceeding the leaves; calyx smoothish; sepals ovate, acuminately-mucronate, rather concave, nearly equal, with incumbent edges. ♄. S. Native of New Spain, in temperate places, near Moran and Regla, at an altitude of 1950 hexapods, Convólvulus serpyllifólius, H. B. et Kunth, nov. gen. 3. p. 95. Bark corky. Stems tufted, procumbent, slender, nearly terete, glabrous; branchlets downy. Leaves 2 lines long. Flowers white, about the size of those of *Convolvulus majalis*, glabrous. Habit of *Evólvulus nummulárius*.

Wild Thyme-leaved Ipomœa. Shrub procumbent.

30 I. SUBERA'RIA; shrubby; leaves lanceolate-oblong, retuse at the apex, and mucronate, downy; peduncles axillary, usually 3-flowered, twice shorter than the leaves; calyx glabrous; sepals roundish, acute; the 2 outer ones rather the shortest. ♄. S. Native of Cuba, among rubbish near Havannah. Convólvulus ruderárius, H. B. et Kunth, nov. gen. 3. p. 96. Shrub [>rostrau-; brand) terete, downy when young. Leaves 2-3 lines long. Flowers a little larger than those of *I. serpyllifólia*. Corolla 3 times longer than the calyx.

Rubbish Ipomœa. Shrub prostrate.

31 I. FLORIBU'NDA; shrubby, clothed with hoary tomentum; leaves ovate-oblong, acuminately-mucronate, cordate; corymbs axillary, pedunculate, shorter than the leaves; calyx clothed with woolly tomentum; sepals oblong, bluntish, concave; the 3 outer ones the largest. ♄. S. Native on the banks of the river Amazon, on hills near Tomepen. Convólvulus floribúndus, H. B. et Kunth, nov. gen. 3. p. 96. t. 210. Shrub much branched; branches terete. Leaves on long petioles, 2 inches long. Corolla 4 times longer than the calyx, obsoletely 5-lobed, glabrous, blue, size of those of *Pálkia rósea*.

Bundle-flowered Ipomœa. Shrub 3-4 feet.

32 I. SUA'VIS (Cav. icon. 3. p. 26. t. 250.) sufl'ruticose; leaves

ovate, or oblong-lanceolate, sinuately-toothed, smoothish; flowers axillary, solitary, pedunculate, longer than the leaves; calyx glabrous, sepals unequal, linear, obtuse. ♄. S. Native of Mexico, near Guanaxuato. Convólvulus sibiri, H. B. et Kunth, nov. gen. amer. 3. p. 96. Corr. firmus, Spreng. syst. 1. p. 618. Corolla campanulate, pale violet, with a whitish tube and rounded segments.

Standing Ipomœa. Shrub erect.

53 I. PARVIFO'LIA (R. Br. l. c.) tomentose, suffruticose, erectish; leaves quite entire, oblong, blunt, pannosely tomentose; peduncles 1-flowered; sepals acuminated; the 2 inner ones one half smaller than the outer ones. ♄. S. Native of New Holland, within the tropic, on the sea shore. Convólvulus pannifer, Spreng. syst. 1. p. 612.

Chick-leaved Ipomœa. Shrub erect.

54 I. FILIFO'LIA (Hook. et Arn. in Beech. voy. pt. bot. p. 35. under *Convólvulus*) shrubby, much branched, diffuse; leaves very narrow-linear, terete; flowers axillary, solitary, on short peduncles; corolla campanulate. ♄. G. Native of Chili, at Coquimbo. Calyx 5-cleft; with linear teeth on the segments. Corolla blue, an inch broad.

Thread-leaved Ipomœa. Shrub diffuse.

Sect. III. STEROPHOPHO'RA (from *στροφεω*, *strophéo*, to turn or twist; and *Ipomœa*); in reference to the twining stems of the species). Choisy, in mem. soc. phys. gen. 6. p. 450. Stems twining.

§ 1. *Leaves entire, undivided, usually cordate. Capsules generally large. Anthers usually twisted.*

* *Stems angular or winged.*

55 I. TURPE'THUM (R. Br. prod. p. 485.) stems angular, glabrous, or a little downy; leaves cordate-ovate, acuminated, sometimes entire, sometimes angularly sinuated, or crenated; peduncles thick, 1-4-flowered, bracteate at apex; outer sepals the largest, ovate-roundish. ♃. ◌. S. Native of the East Indies, on the banks of the Hoogly and Ganges; New Holland; Timor; Otaheite; Friendly and Marianne Islands, &c. Ker. bot. reg. 279. Roth. nov. spec. p. 111. Convólvulus Turpéthum, Lin. spec. p. 221. Blackw. t. 397. Sims, bot. mag. t. 2003. Wall. fl. ind. 2. p. 57. Hook. bot. misc. 3. p. 297. Wight, ill. suppl. t. 86. Conv. Gaudichaúdii and Ríedlei, Choisy, mss.—Herm. hyðb. 177. t. 178. and 179. Conv. velutinus, Wall. cat. no. 1371.—Pluck. alm. t. 105. Root thick, purgative. Leaves nearly glabrous or downy. Corolla campanulate, twice longer than the calyx, white, size of those of *Calystégia sépium*. Capsule shaggy, size of a nut. The bark of the roots is employed by the natives of the East Indies as a purgative, which they use fresh rubbed up with milk. About 6 inches in length of the root they reckon a dose. Cattle do not eat the plant. The root being free from nauseous taste and smell, gives it a decided superiority over jalap, for which it might be substituted. *Turpéthum* is derived from its Arabic name *Turbéd*.

Turpéthum Ipomœa. Fl. March, June. Clt. 1752. Plant twining.

56 I. A'SPERA (Roem. et Schultes, syst. 4. p. 231.) stem 4-winged; leaves cordate-oblong, somewhat sagittate or ovate, mucronulate at apex; peduncles 2-3-flowered, bracteate at apex; sepals unequal: 2 outer ovate, villous outside: the 3 inner smaller, oblong. ♃. ◌. S. Native of Bengal, Ceylon, Java, &c. Convólvulus áspera, Lin. mant. p. 45. Vahl, symb. 3. p. 31. Peduncles and pedicels villous. Capsule large.

Two-edged-stemmed Ipomœa. Pl. tw.

57 I. TRIQUE'TRA (Roem. et Schultes, syst. 4. p. 231.) stem downy, triquetrous: leaves cordate, acute, rather villous: peduncles 2-3-flowered, bracteate; outer sepals bractea-formed, ovate, acute, mucronate: inner ones shorter, and rounded at the apex. ♃. ◌. S. Native of the Islands of Santa Cruz, St. Thomas, &c. Conv. triquetra, Vahl. symb. 3. p. 30. Willd. spec. 1. p. 838. Lateral pedicels 2-flowered, middle one 1-flowered. Bracteas ovate, coloured, downy.

Triquetrous-stemmed Ipomœa. Pl. tw.

58 I. HAMILTO'NII; stems a little winged; leaves scattered, recurved, petiolate, cordate-ovate, acuminated, veiny, concave; pedunicles usually 1-flowered, at first terete, afterwards 4-winged, and at length 3-angled; bracteas sessile, lanceolate, acuminated, a little coloured, nearly opposite; flowers large, yellow. ♃. ◌. S. Native of Tobago, near the town of Scarborough. Conv. alàtus, Hamilt. prod. p. 24. This species is said to come nearest *I. fascya*, and *Conv. fúnis*.

Hamilton's Ipomœa. Pl. tw.

* * *Stems terete.*

59 I. CAMPANULA'TA (Lin. spec. 228. Lour. coch. p. 112.) leaves cordate, acute; peduncles many-flowered, spicately branched; sepals equal, ovate-orbicular, glabrous. ♃. ◌. S. Native of the East Indies, Timor, Cochin-china, &c. Convólvulus campanulátus, Spreng. syst. 1. p. 608. Addámboe, Rheed. mal. 11. p. 115. t. 56. Stem reddish, glabrous, terete, densely branched, fistular. Leaves glabrous, reticulated with red-feathered nerves, 4-6 inches long, and 1-3 broad. Corolla large, yellow, ex Lour. Capsule large, globose, glabrous. Seeds clothed with silky villi.

Campanulate-flowered Ipomœa. Fl. Aug. Sept. Clt. 1800. Pl. tw.

60 I. SULPHU'REA; glabrous?; leaves cordately-sagittate, entire; peduncles 2-flowered, much longer than the petioles; sepals glabrous, obtuse, adpressed; filaments villous at the base; anthers twisted into a spire. ♃. ◌. S. Native of Mexico, on walls at St. Jose de Corral. Convólvulus sulphúreus, La Lave, et Lexarza, nov. veg. mex. fasc. 1. p. 17. Calyx yellowish. Corolla sulphur-coloured, campanulate, with a 5-plicate limb: each plica composed of 2 roundish crenatures. Capsule round, velvety, black.

Sulphur-coloured-flowered Ipomœa. Fl. Feb. Pl. tw.

61 I. PENTAPHY'LLA (Choisy, in mem. soc. phys. gen. 6. p. 451.) leaves sometimes saggittately-lanceolate, acute, with sinuated edges; sometimes linear, and sometimes ovate; sometimes ovate-lanceolate; often hardly cordate; sometimes obtuse at the apex, and mucronulate; peduncles 1-4-flowered, bracteate, sometimes numerous, approximate, appearing like a 5-flowered pedúncle; sepals ovate-orbicular; corolla 5-cleft. ♃. ◌. S. Native of the East Indies; at Prome; and Gorukpur; as well as of Timor. Convólvulus crispátulus, Wall. cat. no. 1403. Conv. reticulátus, Ham. herb. Stems terete, glabrous, branched. Leaves reticulately veined, 2-3 inches long, glabrous. Corolla 3 times longer than the calyx, deeply divided, silky outside, red.—This is a very variable plant in the leaves. Capsule large, size of a nut.

Petaled Ipomœa. Pl. tw.

62 I. BUPALINA (Choisy, in mem. soc. phys. gen. 6. p. 452.) leaves cordately sagittate, glabrous; peduncles many-flowered; corolla yellow, campanulate. ♃. ◌. S. Native of Cochinchina, in woods. Convólvulus bufalínus, Lour. coch. p. 109. ed. Willd. 1 p. 134. Stem woody, scandent, glabrous. Corolla large, campanulate. Capsule large, 2-celled, 2-seeded. Anthers filiform, spirally twisted.

Buffalo's Ipomcea. Shrub tw.

43 I. PELTA'TA (Choisy, 1. c. 6. p, 452.) leaves peltate ; peduncles long, many-flowered ; sepals ovate-elliptic, obtuse ; corolla yellow, campanulate. T?. ^. S. Native of Java, Amboyna, Society Islands, and Bourbon. Convolvulus peltatus, Lin. spec. p. 221. Forst. prod. p. 78. Ipomoe'a nymphiaefblia, Blum, bijdr. p. 719.—Rumph. amb. 5. p. 428. t. 157. Stem terete, black, glabrous. Leaves glabrous, 3-4 inches long, entire, furnished with rufous hairs in the axils of the petioles. Peduncles branched at the apex ; flowers spioate, on short pedicels. Corolla large, inflated. Anthers woolly. Stigma large. Capsule large.

Peltate-leaved Ipomcea. Shrub tw.

§ 2. *Leaves cordate, entire. Capsules and sepals middle-sized. Flowers capitately aggregate.*

44 I. PILEA'TA (Wall. fl. ind. 2. p. 94.) leaves cordate, acuminated ; peduncles hardly equal in length to the petioles; flowers 3-6, sessile, in a boat-shaped, perfoliate, involucrum ; bracteas obovate, hairy ; sepals rather unequal. ©. ^\ S. Native of the East Indies, China, &c. Convolvulus pileatus, Roxb. ex Wall. cat. no. 1376. Spreng. syst. 4. p. 61. Ipoince'a peltata, Heyne, herb. Stems villous, slender. Leaves lj inch long, often glabrous, but sometimes downy. Petioles and peduncles villous. Corolla rose-coloured, funnel-shaped. Seeds glabrous. Nearly allied to /. *involucrata.*

Cap Ipomoea. PI. tw.

45 I. INVOLUCRA'TA (Beauv. fl. d. ow. 2. p. 52. t. 89.) plant downy ; leaves cordate, quite entire, acutish : hind lobes rounded ; peduncles many-flowered : flowers surrounded by 2 large involucrum-formed perfoliate bracteas. ©. ^\ S. Native of Guinea, among bushes. Conv. involucratus, Spj^eng. syst. 1. p. 600. Pedicels short, unequal. Corolla large, red.

Involucrate-fiowered Ipomoea. Fl. Aug. Oct. Clt. 1822. PI. tw.

4(> I. PERFOLIA'TA ; leaves cordate, villously tomentose, having the hind lobes roundish and subacuminated ; flowers capitate, involucrated by one perfoliate leaf; sepals downy : the 3 outer ones lanceolate, and the 2 inner ones setaceous at the apices. 1/. ? ©. ? ^\ S. Native of Africa, at Aquapim. Conv. perfoliatus, Schum. pi. guin. p. 89. Stem filiform, pilose. Peduncles covered with retrograde villi. Corolla campanulate, plicate, red, with villous angles ; lobes of the limb emarginate. Stigmas villous.

Perfoliate Ipomoea. PI. tw.

47 I. BREVIFLO'RA (Meyer, prim, esseq. p. 100.) glabrous ; leaves sagittately-cordate ; peduncles shorter than the petioles ; flowers subumbellate, involucrated ; outer sepals plicately wrinkled, mucronate. ©. *rs*. S. Native about Essequibo, in humid plantations. Stems angular, scabrous from scattered rigid hairs. Corolla large, purple.

Short-flowered Ipomcea. PI. tw.

48 I. CAPITELLA'TA (Choisy, 1. c. p. 457.) stem pilose; leaves cordate, acuminated, pilose ; peduncles equal in length to the petioles ; bracteas unequal, obtuse, ovate-linear; flowers aggregate, umbellate; sepals linear-lanceolate, very acute. ©. ^. S. Native of the East Indies, at Mungger, &c. Ipomce'a tamnifolia, Burm. ind. p. 50. but not of Lin. Conv. capitellatus, Ham. herb, ex Wall. cat. no. 2250. Hairs on the stem glandular at the base. Peduncles hairy. Corolla violaceous, tubularly campanulate, villous outside. Seeds glabrous.

Headed-flowered Ipomcea. PI. tw.

49 1. TRICHOCE'PHALA ; stem and peduncles pilose ; leaves cordate, acuminated, sometimes a little angular ; heads of flowers involucrated by bracteas, 2 of which are larger than the others ; flowers crowded, sessile ; calycine segments linear, acute, ciliated with long fuscous hairs. %. ^. S. Native of Guayaquil, *(v. s.* in herb. Ruiz, et Pav.)

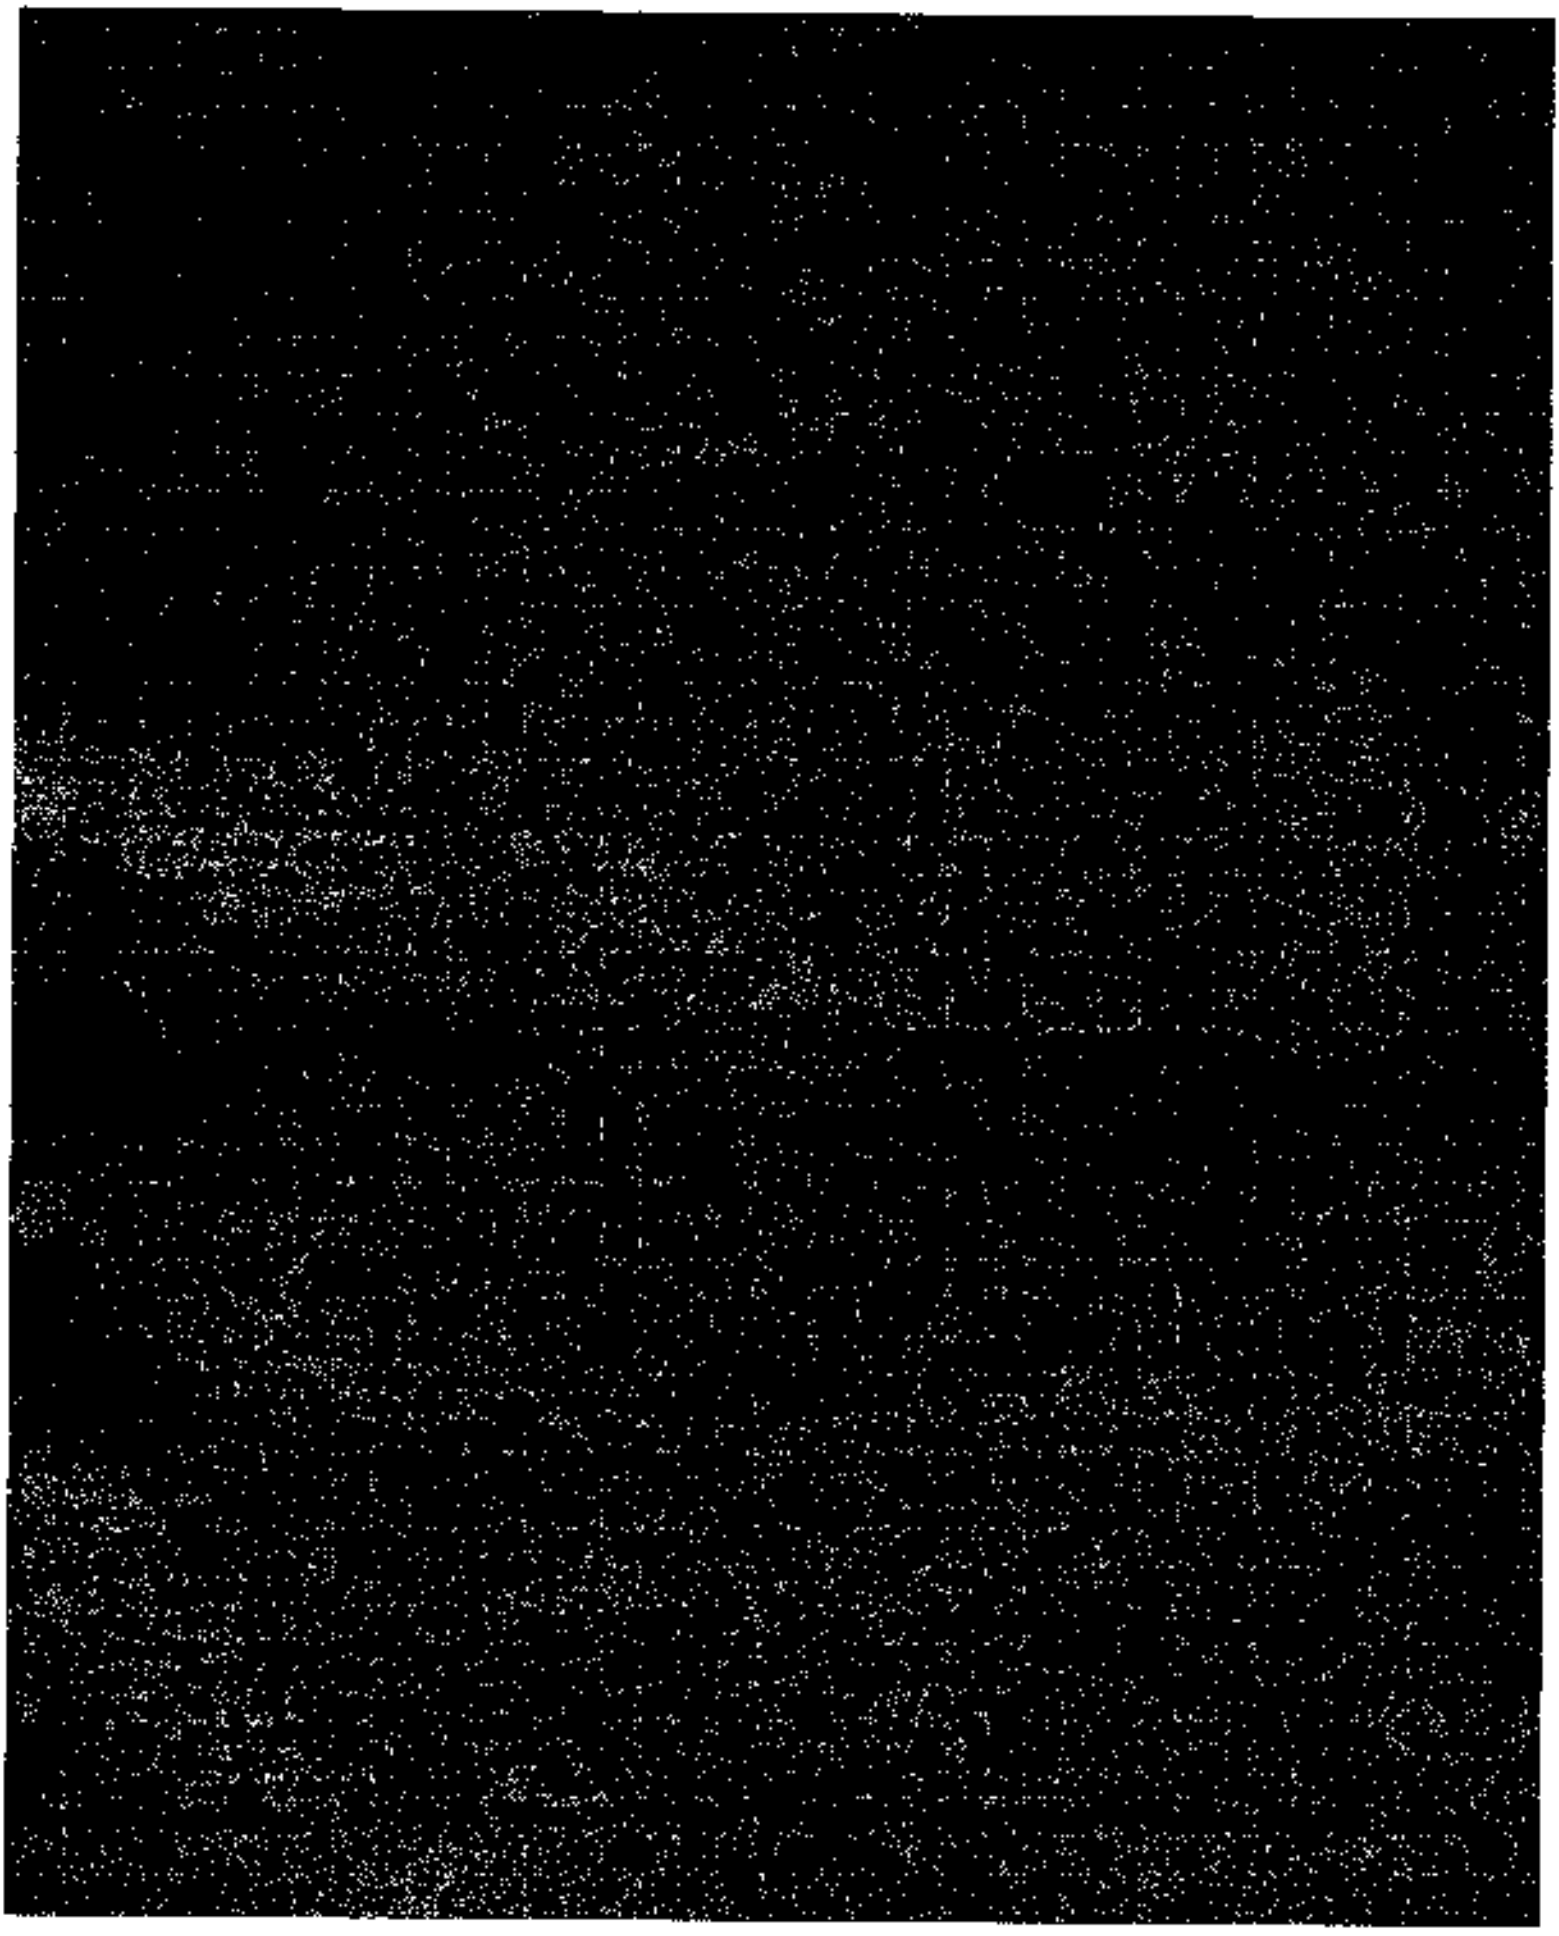
Hairy-headed Ipomcea. PL tw.

50 I. GUINEE'NSIS ; leaves cordate, acuminated, with a few scattered hairs above, but clothed with rusty hairs beneath on the veins ; petioles, peduncles, and calyx, hairy. 7/. ? ©. ? ^\ S. Native of Guinea. Conv. Guineensis, Schum. pi. guin. p. 90. Stems herbaceous, pilose. Flowers crowded into heads, which are involucrated by leaves. Peduncles length of leaves. Corollas blue, size of those of *Lysimachia, nummularia.* Lobes of stigma thick, recurved. Capsule size of a pea. Seeds naked. Said to he allied to /. *cilidtus.* Perhaps a species of *Jacquemontca.*

Guinea Ipomcea. PI. tw.

51 I. TAMNIFOLIA (Lin. spec. ed. 1. p. 885.) plant pilose; leaves cordate, acuminated ; peduncles axillary ; flowers aggregate, on the tops of the peduncles ; bracteas linear, hairy, involucrating ; sepals linear, subulate. ©. ^\ S. Native of Carolina, in hedges ; and on the banks of the Mississippi. Pursh. fl. amer. 1. p. 146. Conv. tamnifolius, Spreng. syst. 1. p. 602.—Dill. elth. p. 428. t. 318. f. 410. Corollas small, tubular, blue ; segments of the limb roundish, spreading ; capsule glabrous.

Tamnus-leaved Ipomce'a. Fl. July. Clt. 1732. PI. tw.



52 I. ATROPURPU'REA (Choisy, 1. c. p. 457.) stem hispid; leaves cordate, acuminated, hispid, very acute, petiolate ; peduncles thick, hardly half an inch long; bracteas 9-12, unequal, lanceolate, acute ; flowers capitate ; sepals lanceolate, very acute, hairy. ©. ^\ S. Native of Nipaul. Convolvulus atropurpureus, Wall. fl. ind. 2. p. 54. asiat. rar. 1. p. 38. t. 43. Ipomce'a sphaerocephala, D. Don. prod. fl. nep. p. 98. Hairs on the stem retrograde. Corolla oval, hispid before expansion, at length tubularly campanulate, 18 lines long, dark purple.

Dark-purple-fiowere& Ipomcea. PI. tw.

53 I. SESSILIFLO'RA (Roth. nov. spec. p. 117, Rcem. et Schultes, syst. 4. p. 243) stem beset with retrograde bristles ; leaves cordate, ovate-lanceolate, or sagittate ; flowers axillary, sometimes only 1-3 together, but sometimes 4-12 together, almost sessile, or on very short pedicels ; sepals acuminately subulate; corollas small; capsule usually villous. ©. ^. S. Native of the East Indies, in several parts ; as of Nipaul, Madras, Bengal, &c.; Coromandel, Tranquebar ; and of the Cape Verd Islands. Convolvulus sessiliflorus, Spreng. syst. 1. p. 599. Arrow-leaved Ipomœa. Fl. *Jr.* ne, Sept. Clt. 1819. Plant twining.

78 I. SEPTÒRA (Blum. bijdr. p. 714.) leaves cordate, or subhastately cordate, acuminated, entire, downy above, and rather villous beneath; peduncles 1-2-flowered, equal in length to the petioles; sepals linear-lanceolate, acuminated, setigerous; stem covered with retrograde hairs. ***it.*** ^. S. Native of Java, among bushes on the mountains. Flowers purplish. Perhaps a species of *Pharbitis*.

Bristly Ipomœa. Fl. Year. Pl. tw.

79 I. JALAPA (Schiede et Deppe, mss.) glabrous; stems angular; leaves membranous, perfectly glabrous, and even on both surfaces, cordate-sagittate, acuminated; hind lobes rounded, obtuse, quite entire; peduncles 2-flowered, longer than the petioles; sepals lanceolate, obtuse, rather unequal; tube of corolla long, narrow, twice as long as the limb, which is nearly entire and spreading. ♃. ☾. S. Native of Mexico, in the woods of Chiconquaco, from whence it is brought to Vera Cruz by the inhabitants of Jalapa. The plant is called *Purga* and *Larchachas* in Mexico. Convolvulus Jálapa, Houst. mss. in Miller, dict. ed. 8. IH>. 31. Lin. mant. 1. p. 43, but not of others. Ipot Wn Purga, Wenderoth. Ipomœa Schiedeana. /tif e. Stems purplish., Le.i\ i s often purplish beneath. Corolla long, tubular; tube ventricose above, constricted a little at'tlir tlirtfat; with a flat limb, and exserted genitals. Anthers oblong, emarginate at both ends. The leaves are said to be variable in shape by Miller, who reared some plants from seeds sent by Houston, in 1733, in the Apothecaries' Garden at Chelsea. The peduncles generally bear 2 flowers, one of the flowers always much earlier than the other. Houston and Miller seem to be the only authors who knew the plant which produces the true Jalap of the shops; as the plant generally described, cultivated, and known as such, is a very distinct species, and appears to be only a purple-flowered variety of *Ipomœa* wider-. rhiza of Michx. This plant is found principally in the neighbour! ood of Jalapa or Xalapa, hence the name. It abounds also on the eastern slope of the Cordillera of Anahuac; and in the same latitude is procured the *Vasilla* and *Sarsaparilla*. From 200,000 to 300,000 lbs. are annually exported from Vera Cruz. Although the root forms a well-known and valuable cathartic, which is perhaps more generally employed than any other of vegetable origin, it was not until lately that the genus to which it belongs was accurately ascertained. In its wild state, the plant delights in a dry sandy soil. The dried root of jalap is imported in thin, transverse slices, and in round masses; it is solid, hard, and heavy, of a dark grey colour. It has a sickly smell, and a sweetish, subacid, nauseous taste. Powdered it is

of a pale yellow brown colour. Jalap, when dear, is often adulterated with scammony, gamboge, bryony root, &c. Jalap is an active purgative, which can always be relied upon, and would be administered much more often were it not for the disagreeable effects produced by it, as nausea and griping. It is, notwithstanding, a safe medicine, and, combined with other purgatives, has been proved by Dr. Hamilton to be of eminent use in typhus, scarlatina, cynanche maligna, marasmus, chorea, and neuralgia. Added to the supertartrate of potass, it is called compound powder of jalap; and much good has been effected by a judicious and persevering use of this preparation in dropsical cases. The alcoholic extract, when good, is a more active preparation than the former, exerting its effects in doses of 10 or 12 grains. Jalap is best given in substance, in doses from 10 grains to half a drachm, combined with a drop or two of any essential oil. Mr. Hume, of Long-Acre, is said to have discovered a vegeto-alkaline principle in jalap, and proposes to call it jalapine.

Jalap Ipomœa. Fl.? Cl. 1755. Shrub tw.

* * *Peduncles many-flowered, umbellately-racemose, umbellate, corymbose, &c.*

80 I. SUPERBA (Choisy, l. c. p. 459.) glabrous; leaves cordate-ovate, or roundish-acuminated, smooth; peduncles many-flowered, leafy, umbellately racemose, equalling the petioles in length, or exceeding them; outer sepals shorter, all with white scarious edges; corolla whitish-yellow. ♄. ☾. S. Native of the Caribbee Islands, Mexico, and Ceylon. Also gathered in the gardens of Teneriffe, Cumana, and Calcutta; but is probably only indigenous to Ceylon. Conv. Violaceous-flowered Ipomœa. Fl. Aug. Sept. Clt. 1792. Pl. tw.

100 I. CONVOLVULÁCEA (Roth. nov. spec. p. 220.) leaves cordate; peduncles umbellate; stem creeping. ♃. ◠. S. Native of tropical America, Lin.; St. Domingo, and the East Indies, Heyne. Conv. corymbósus, Lin. spec. p. 225. Desr. in Lam. dict. 2. p. 455.—Plum. ed. Burm. t. 89. f. 2. mss. vol. 2. t. 50. Leaves like those of *Calystegia sépium*, 2-3 inches long, thin. Corolla white, spreading; star of limb of 5 white rays. Capsule carbonate, 1-celled, 2-3-seeded. Seeds roundish, brown.

Var. β; petioles stipulate at the base. ♃. ◠. S. Native of Cayenne, Bonpl.

Corymbose-flowered Ipomœa. Fl. Aug. Sept. Clt. 1828. Pl. creeping.

101 I. LAMI'NA (Blum. bijdr. p. 718.) leaves roundish-cordate, acuminated, quite entire, very soft on both surfaces; peduncles elongated, cymosely many-flowered; sepals lanceolate, acuminated, spreading: outer ones the largest. ♃. ◠. S. Native of the Moluccas. Corolla purple.

Pleasant Ipomœa. Fl. Nov. Pl. tw.

102 I. SUAVEOLÉNS (Roem. et Schultes, syst. 4. p. 256.) leaves cordate, glabrous; peduncles many-flowered; seeds rusty, silky. ☉. ♃. ◠. S. Native of Jamaica. Conv. multiflórus, Mill. dict. no. 15.—Plukn. phyt. t. 167. f. 1. Stems slender. Flowers racemose, on long peduncles. Corolla purple. Capsule trigonal, 3-celled; cells 1-seeded.—Perhaps a species of *Batatas*.

Many-flowered Ipomœa. Fl. June, July. Clt. ? Pl. tw.

103 I. *reticulata* (Cav. icon. 3. p. 5. t. 208) glabrous; leaves cordate, acuminated; flowers axillary, subumbellate; peduncles thicker than the stem; calyx fleshy, pentagonal; sepals keeled. ☉. ◠. S. Native country unknown. Conv. venústus, Spreng. syst. 1. p. 600. Calyx of a dark violet colour. Corolla with a 5-lobed, crenulated blue limb and a whitish tube, having the [illegible] angles spotted with red.

Three-colored-flowered Ipomœa. Fl. tw.

104 I. OSYRE'NSIS (Roth. nov. spec. p. 220. Roem. et Schultes, syst. 4. p. 259.) shrubby; leaves cordate-ovate, ab- tuse, undivided, glabrous above, but clothed with dense, silky tomentum beneath; flowers subcapitate, almost sessile, mixed with oblong-lanceolate bracteas; corolla oblong-campanulate, strigose outside; stem tomentose. ♄. ? ◠. ? S. Native of the East Indies, in Osyre, where it is called *Mala-Eridaliga*. Conv. Osyrénsis, Heyne. Stigma capitate, dilynous, tuberculed.

Osyre Ipomœa. Shrub twining.

105 I. RACEMÓSA (Poir. suppl. 4. p. 624.) stem terete, grey, downy; leaves ovate-cordate, obtuse, coriaceous, downy beneath; flowers racemosely panicled; peduncles hispid; bracteas downy, concave, lanceolate, involving the calyx and exceeding it; sepals lanceolate, acuminated, glabrous. ♄. ◠. S. Native of St. Domingo. Conv. racemósus, Spreng. syst. 1. p. 600. Leaves 2 inches long, clothed with white silky down beneath. Peduncles beset with numerous short hairs. Corolla white, with a think cylindrical tube, twice as long as the bracteas; limb short of 5 acute lobes.

Racemose-flowered Ipomœa. Shrub tw.

106 I. PSARIFÓLIA (Roem. et Schultes, syst. 4. p. 240.) plant clothed with rusty tomentum; stem terete; leaves ovate-cordate, acute; peduncles axillary, 4-flowered; sepals unequal: the 3 outer cordate, acuminated, and the 2 inner shorter and lanceolate. ♄. ◠. S. Native of South America. Conv. ferrugíneus, Vahl, eclog. 1. p. 17. Willd. spec. 1. p. 858. Petioles length of leaves. Leaves linear above. Peduncles length of petioles. Corolla unguicular, blue. Stigma thickened, ex Vahl.

Rusty Ipomœa. Shrub tw.

107 I. HETEROPHY'LLA; twining, rather downy; leaves lanceolately 3-lobed; lobes acute, entire; peduncles many-flowered; sepals equal, oblong, acute. ♃. ◠. S. Native of Guinea. Conv. diversifólius, Schum. pl. guin. p. 54. but not of Choisy. Stigma filiform, hairy. Leaves glaucous, as well as downy beneath. Peduncles naked, usually 2-flowered. Corolla campanulately funnel-shaped, size of *C. sepium*, white, with a violaceous throat; limb obsolutely 5-lobed. Seeds tuberculate.

Various-leaved Ipomœa. Pl. tw.

108 I. VENTRICÓSA (Bert. in Coll. hort. rip. p. 37. under *Convólvulus*) glabrous; leaves broad-cordate, acuminated, quite entire, glabrous; peduncles generally 4-flowered, bracteate; calyxes acute, coriaceous, ventricose. ☉. ◠. S. Native of Guadaloupe, in gardens; but originally introduced from the Island of St. Bartholomew. Corolla large, white, funnel-shaped, glabrous.

Ventricose-calyxed Ipomœa. Pl. twining.

109 I. HOOKE'RI; glabrous; leaves on long petioles, deeply cordate, acuminated; peduncles 3-4-flowered, thickened, and somewhat racemose; sepals small, erect, adpressed, linear-subulate, margined with white; corolla large, funnel-shaped, with a very short tube, and a 5-angled limb; having the angles mucronate. ♄. ◠. S. Native of Mexico, in the province of Guaxaxaca. Ipomœa túbro-cærúlea, Hook. bot. mag. t. 3097. Corolla white in the bud, with the limb of a rich lake-red, which when the flower is fully expanded, becomes of a fine purplish blue. Filaments hairy. Stigma capitate, 2-lobed. This is probably a species of *Rivea*.

Hooker's Ipomœa. Fl. July, Aug. Clt. 1830. Shrub tw.

* * * *Peduncles generally 3-flowered.*

110 I. OBSCU'RA (Ker. bot. reg. t. 239. Roem. et Schultes, syst. 4. p. 256.) stem herbaceous, interruptedly glabrous, and villous from hairs; leaves cordate, acuminated, glabrous; peduncles exceeding the petioles, 1-3-flowered; pedicels thickened, bracteate; sepals oblong-ovate, sometimes obtuse, sometimes acuminated. ☉. ◠. S. Native of the East Indies, everywhere. Ip. sinuatifólia, Burm. ind. p. 49. Ip. insúlana, Blum. bijdr. p. 716. Conv. obscúrus, Lin. spec. p. 220. Burm. ind. 44. Wall. fl. ind. 2. p. 52. Conv. gemíllus, Vahl, symb. 3. p. 27.—Dill. elth. 88. t. 83. f. 95. Conv. trigónus, Hum. herb. Ip. gemélla, Roth. nov. spec. 240. Bracteas lanceolate, acute, glabrous; calyx glabrous. Corolla campanulate, glabrous, 3-4 times longer than the calyx, yellow, with a purple throat; lobes emarginate. Seeds downy.

Var. β, glábra (Choisy, l. c. p. 464.) stem glabrous; pedicels equal; seeds sometimes clothed with grey down, and sometimes glabrous. ☉. ◠. S.

Obscure Ipomœa. Fl. June, Aug. Clt. 1752. Pl. tw.

111 I. TRIA'NGULA (Roem. et Schultes, syst. 4. p. 243.) glabrous; leaves cordate-lanceolate, attenuated, glabrous, obtuse; peduncles 3-flowered, shorter than the leaves; sepals obtuse. ☉. ? ◠. S. Native of the East Indies. Conv. triflórus, Vahl, symb. 3. p. 30. Leaves 2 inches long, rounded and mucronate at apex; hind lobes obtuse, very rarely angular. Pedicels bracteless, angular. Corolla 3 times longer than the calyx; lobes plane at apex.

Three-flowered Ipomœa. Pl. tw.

112 I. TRIFIDA (Forsk. egypt. p. 44.) glabrous; leaves cordate, acuminated, glabrous; peduncles axillary, 3-flowered. ☉. ◠. S. Native of Arabia, in Hadje. Gmel. syst. p. 342. Vitex. annua. l. p. 440. Corolla pale yellow; limb undivided, an inch in diameter.

Three-flowered Ipomœa. Pl. tw.

113 I. WEIMARNÆ (Roem. et Schultes, syst. 4. p. 243.)

pilose; leaves cordate, acute; peduncles axillary, usually 3-flowered, shorter than the leaves. ☉. ◠. S. Native of Bengal. I. Schultèsii, Wenm. in litt. Leaves ciliated. Sepals equal, 3 outer ones sagittately cordate, the 2 inner ones linear. Corolla small, white; segments ovate, acute. Capsule 3, rarely 4-seeded. Seeds clothed with brown hairs.

Wiesmann's Ipomœa. Pl. tw.

114 I. GLAUCESCE'NS; glabrous; leaves ovate, cordately hastate, glabrous, glaucescent beneath, having the hind lobes diverging; peduncles axillary, 2-3-flowered, shorter than the leaves; sepals oblong, obtuse, mucronulate under the apex, wrinkled, glabrous, nearly equal. ☉. ◠. S. Native of Quito, near Chillo, at the altitude of 1850 hexapods. Conv. glaucéscens, H. B. et Kunth, nov. gen. 3. p. 101. Stem angular. Leaves 2 inches long. Corolla funnel-shaped, glabrous, of a violaceous purple colour, size of those of *Conv. arvénsis*.

Glaucescent Ipomœa. Pl. tw.

115 I. MEYE'RI; leaves cordate, acuminated, smoothish; peduncles very short, 2-flowered; sepals linear-lanceolate, cuspidate, parted to the base, hairy. ♃. ◠. S. Native country unknown. Convólvulus Meyèri, Spreng. syst. 1. p. 597. Conv. cuspidátus, Willd. herb.

Meyer's Ipomœa. Pl. tw.

116 I. TRICHOCA'LYX; leaves cordate, acutely acuminated, mucronate, smoothish, somewhat ciliated; stem, petioles, and peduncles hairy; peduncles short, 3-flowered; calyx hairy; sepals ovate-acute, or ovate-lanceolate, acuminated.—Native of Guinea. Conv. trichocàlyx, Schum. pl. guin. p. 91. Stems herbaceous, hairy or glabrous. Lateral pedicels bracteate; middle one naked. Corolla like that of *C. arvénsis*, cream-coloured, with a purple bottom. Capsule globose. Seeds clothed with black tomentum. Limb of corolla flat, with 5 small incisures.—Nearly allied to *I. gemélla*.

Hairy-calyxed Ipomœa. Pl. tw,

117 I. ERIOCA'LYX (R. Br. l. c.) downy; leaves cordate, lanceolate, acuminated, entire; peduncles 2-3-flowered, very short; sepals acuminated, and are, as well as the capsules, pilose. ♃. ◠. S. Native of New Holland, within the tropic, on the sea shore. Conv. eriocárpus, Spreng. syst. 1. p. 598.

Woolly-fruited Ipomœa. Pl. tw.

118 I. PARASI'TICA; stem muricated with prickles; leaves roundish, deeply cordate, acuminated, downy on the veins on both surfaces, ciliated; peduncles 3-flowered, shorter than the leaves; sepals ovate-oblong, mucronate, smoothish, nearly equal. ♃. ◠. S. Native near Carnecas. Conv. parasíticus, H. B. et Kunth, nov. gen. amer. 3. p. 103. Conv. circumàtus, Willd. rel. ex Rœm. et Schultes, syst. 4. p. 302. Stems angular, beset with retrograde hairs and deciduous prickles. Leaves 2 inches long; hind lobes approximate. Peduncles and pedicels downy. Corolla funnel-shaped, much longer than the calyx, blue, covered with adpressed down towards the base. Seeds angular. Capsule glabrous. Perhaps a species of *Pharbítis*.

Parasitical Ipomœa. Pl. tw.

119 I. SCITU'LA; stem angular, beset with retrograde strigæ; leaves roundish-ovate, deeply cordate, acuminated, beset with strigose hairs beneath, ciliated; peduncles usually 3-flowered, twice as long as the leaves; sepals oblong, scutish, hispid, nearly equal. ♃. ◠. S. Native of New Spain, betwixt Aguasarca and the burning mount Jorullo, at the altitude of 550 hexapods. Conv. supérbus, H. B. et Kunth, nov. gen. amer. 3. p. 103. Conv. sanguíneus, Willd. rel. ex Rœm. et Schultes, syst. 4. p. 302. Leaves 2 inches long, beset with adpressed scattered hairs above; hind lobes approximate. Peduncles and pedicels beset with retrograde bristles. Corollas funnel-shaped, purple, downy outside, 3 lines longer than those of *I. purpúrea*. Perhaps a species of *Pharbítis*.

Superb Ipomœa. Pl. tw.

120 I. MÓLLIS; stem compressed, roughish; leaves roundish-ovate, cordate, acuminated, strigose above, and clothed with soft down beneath; peduncles 3-flowered, shorter than the leaves; sepals rather downy, oblong-lanceolate, subulately acuminated, nearly equal. ♃. ◠. S. Native of New Andalusia, near Cumanacoa. Conv. móllis, H. B. et Kunth, nov. gen. amer. 3. p. 104. Conv. cynanchifólius, Willd. rel. ex Rœm. et Schultes, syst. 4. p. 301. Leaves hardly 3 inches long; hind lobes diverging. Peduncles and pedicels rather downy. Corolla violaceous, downy outside. Perhaps a species of *Pharbítis*.

Soft Ipomœa. Shrub tw.

121 I. PETIOLA'RIS; stem angularly furrowed, muricated with prickles; leaves roundish-cordate, deeply cordate, acuminated, glabrous, on long petioles; peduncles 3-flowered, shorter than the leaves; sepals oblong, subulately-acuminated, glabrous, nearly equal. A. ◠. S. Native of Mexico, on the burning mount Jorullo, near the volcano, at the altitude of 600 hexapods. Conv. petiolàris, H. B. et Kunth, nov. gen. amer. 3. p. 105. Plant glabrous. Leaves 4 inches long; hind lobes approximate. Petioles 5 inches long. Corolla funnel-shaped, violaceous, glabrous.

Long-petioled Ipomœa. Pl. tw.

122 I. SILA'CEA (Flora, bijdr. p. 716.) leaves cordate, acuminated, with a mucrone, downy above, soft beneath; peduncles 2-3-flowered, about equal in length to the petioles; sepals acute, downy. ♃. ◠. S. Native of Java, about Batavia, in grassy bogs. Flowers lilac. Said to be allied to *I. gemélla*, Roth.

Lilac-flowered Ipomœa. Fl. Year. Pl. tw.

123 I. BATATI'LLA; branches terete, clothed with hoary tomentum; leaves ovate, obsoletely cordate, acuminated, downy above, but clothed with hoary tomentum beneath; peduncles terminal? and axillary, usually 3-flowered, shorter than the leaves; sepals roundish obtuse, downy; the 3 outer ones rather the smallest; seeds comose. ♄. ◠. S. Native near Carnaca, Carnecas, and in the valleys of Aragua, where it is called by the natives *Batatilla*. Conv. Batatilla, H. B. et Kunth, nov. gen. amer. 3. p. 106. Leaves 2 inches long. Petioles biglandular at apex. Corollas funnel-shaped, downy outside, of a violaceous rose-colour; lobes of limb emarginate. Capsule glabrous, 4-celled? 4-valved? Cells 1-seeded. Seeds size of the nuts of *Córylus nùcula*, black, trigonal.

Batatilla Ipomœa. Shrub tw. 6 feet high.

124 I. VERTICILLA'TA (Forsk. descr. p. 44.) decumbent, hairy; leaves cordate, blantish, with a short mucrone, the veins beset with a few hairs above in the young state; pedicels axillary, tern, from all the axils, reflexed, 1-flowered, angular; sepals ovate, acute, hispid, glabrous in the old state, but ciliated. ♃. ◠. S. Native of Arabia Felix. Vahl, symb. 3. p. 35. Willd. spec. 1. p. 883. Convólvulus Forskoèlii, Spreng. syst. 1. p. 599. Peduncles bracteate. Capsule size of a pea, glabrous. Seeds clothed with silky tomentum.

Whorled-flowered Ipomœa. Pl. decumbent.

§ 4. *Leaves cordate at the base, often 3-lobed, with toothed or repand edges; sometimes varying in the same plant, with entire, angular, or toothed edges. Flowers not crowded into heads. Capsules and sepals middle-sized.*

125 I. ACUTA'NGULA (Ruiz. et Pav. fl. per. 2. p. 11. t. 119. f. b.) leaves sagittately triangular, having the angles toothed behind, peduncles 3-5-flowered, length of leaves; stems terete. ☉. ◠. S. Native of Peru, in the woods of Chinchao and Pozuzo. Leaves on long petioles. Bracteas subulate at the divisions of the peduncle. Corolla funnel-shaped, scarlet; limb middle-sized, with a lobed margin. Perhaps a species of *Quamoclit*.

Acute angled-leaved Ipomœa. Pl. tw.

126 I. HEXAGONIFOLIA; leaves oblong, acute, sagittately cordate, sinuately repand towards the base, clothed with silky tomentum on both surfaces, hoary; peduncles axillary, 2-flowered, longer than the leaves; sepals ovate, acuminated, downy, nearly equal. ♃. ◯. S. Native near Truxillo, on the shores of the Pacific. Conv. Hermánniæ, Lher. stirp. nov. fasc. 4. p. 67. t. 33. Roiz. et Pav. fl. per. 2. p. 10. **ii, a** et Kunth, nov. gen. 3. p. 93. Willd. spec. 1. p. 862.

Hermann's Ipomœa. Pl. tw.

127 I. STIPULACEA (Sweet, hort. brit. p. 280. Choisy, in mem. soc. phys. gen. 6. p. 466.) smooth; leaves cordate-sagittate; auricles usually repand, glabrous; petioles bistipulate at the base; peduncles 2-6-flowered, equal in length to the petioles; sepals ovate, equal, concave. ♃. ◯. S. Native of Chittagong. Conv. stipulàceus, Wall. fl. ind. 2. p. 71. Stems teretc, creeping at base, and twining at apex. Leaves 2-3 inches long. Stipulas recurved, acute. Peduncles and pedicels elavate. Corollas showy, white, with obcordate lobes. Capsule globose. Seeds clothed with olive-coloured wool.

Stipulaceous Ipomœa. Fl. Aug. Sept. Clt. 1805. Pl. tw.

128 I. PURPURASCENS; glabrous; leaves ovate-oblong, much acuminated, hastately cordate, angularly toothed at the base; peduncles axillary, 1-flowered, longer than the leaves; sepals oblong, obtuse, glabrous, nearly equal. ☉. ◯. S. Native of Peru. Conv. pulchéllus, H. B. et Kunth, nov. gen 3. p. 161. Conv. paucifloras, Willd. rel. ex Roem. et Schultes, syst. 4. p. 802. Stems rather angular. Hind lobes of leaves diverging. Corolla funnel-shaped, glabrous, purple, size of those of *Conv. arvensis*. Capsule globose, glabrous.

Neat Ipomœa. Pl. tw.

129 I. SCITULA; hairy; leaves roundish-ovate, acuminated, deeply cordate, angularly toothed; peduncles 1-flowered, propped each by a cordate bractea or leaf: sepals oblong, acutely acuminated, glabrous: outer ones rather the smallest. ♃. ◯. G. Native of Mexico, on the lofty mount Jorullo, at the elevation of 480 hexapods. Conv. scitulus, H. B. et Kunth, nov. gen. 3. p. 163. Peduncles distant, solitary, on the axils of the upper leaves or bracteas. Corolla funnel-shaped, size of those of *Calystegia sepium*, glabrous, purple. Stigmas granular.

Propped Ipomœa. Pl. tw.

130 I. FASTIGIATA (Sweet, hort. brit. p. 288.) glabrous; leaves cordate, acuminated and marronulate, entire, sinuated, fiddle-shaped, or 3-lobed; peduncles exceeding the petioles, 3-12-flowered, cymose; sepals lanceolate, mucronately awned; outer ones the shortest. ♃. ◯. S. Native of the West India Islands, Guiana, and Bengal. I. platanifòlia, Roem. et Schultes, syst. 4. p. 220, exclusive of the syn. of Plukn. Ip. cymòsa, Meyer, ess. p. 99, but not of Roth. Conv. fastigiàtus, Wall. fl. ind. 2. p. 48. Conv. platanifòlius, Vahl, symb. 3. p. 26. Conv. Bonariénsis, Spreng. syst. 1. p. 600.—Feuill. per. 3. p. 16. t. 1. Stems terete. Stolons long, creeping along the earth. Leaves 2-3 inches long. Corolla showy, purple, glabrous. Capsule smooth. Seeds glabrous. Leaves, like the young branches, often tinged with purple, particularly the margins, veins, and nerves.

Var. β, stem angular; peduncles elongated, few or many-flowered; sepals short, or long-awned; also the leaves and veins are downy.

Fastigiate Ipomœa. Fl. Jo. Aug. Clt. 1816. Pl. tw.

131 I. PARTICELLATA (Choisy, in mem. soc. phys. 6. p. 467.) glabrous; leaves cordately hastate, quite glabrous: auricles obtuse, and laterally undentate; peduncles 1-flowered, shorter than the petioles; sepals ovate, obtuse, sometimes mucronulate. ♃. ◯. S. Native of the island of Rawak, and the Society Islands, &c. Conv. denticulàtus, Desr. in Lam. dict. 3. p. 549. Conv. lævigàtus, R. Br. herb. Stems terete. Leaves obtuse, mucronulate, 1-2 inches long. Corolla 1¼ inch long, glabrous, with a hardly spreading limb. This species varies with many-flowered peduncles, and in the auricles being rounded.

Denticulated-leaved Ipomœa. Pl. tw.

132 I. PENTAPHYLLA; glabrous; leaves cordate, entire, and 3-lobed, acuminated; peduncles many-flowered, shorter than the petioles; sepals ovate, acute, somewhat foliaceous; limb of corolla 5-lobed. ☉. ◯. S. Native of St. Vincent. Convólvulus pedibándus, Lindl. in bot. reg. t. 299. Corolla of a fine rose-colour; tube subcylindrical, inflated.

Blunt Ipomœa. Fl. Aug. Sept. Clt. 1822. Pl. tw.

133 I. MONTEVIDENSIS; leaves hastate, lanceolate, smoothish; auricles divaricate, emarginately angular; peduncles 2-flowered, exceeding the petioles; sepals scarious. ♃. ? ◯. S. Native of Monte Video. Convólvulus Montevidénsis, Spreng. syst. 1. p. 604.

Monte-Video Ipomœa. Pl. tw.

134 I. DEPPEANA; downy; leaves sagittate at the base, sinuately toothed on the margins, mucronate; peduncles 1-flowered, twice as long as the leaves, bibracteate near the apex; bracteas linear, obtuse; sepals unequal, obtuse. ♃. ? ◯. S. Native of Mexico. Conv. sinuàtus, N. B. in herb. Lamb. Flowers large, purple.

Deppe's leaved Ipomœa. *W.* tviirm g.

135 I. MARIANNENSIS (Choisy, l. c. p. 468.) glabrous; leaves cordate, acuminated, sometimes entire, sometimes 3-lobed and trifid: intermediate lobe dilated at the base; peduncles 3-4-flowered, exceeding the petioles; sepals lanceolate, very acute, ciliately hairy. ♃. ◯. S. Native of the Marianne Islands. Auricles of leaves entire or lobed. Corolla tubular, hardly 3 times longer than the calyx, glabrous. Capsule pilose. Root tuberous. Nearly allied to *I. trilòba*.

Marianne Island Ipomœa. Pl. tw.

136 I. PILOSA (Sweet, hort. brit. p. 289. Choisy, l. c.) hairy; leaves broadly cordate, entire, or a little 3-lobed, clothed with white wool beneath; peduncles exceeding the petioles, cymosely many-flowered; sepals linear, hairy. ☉. ◯. S. Native of Mysore, Bengal, at Patorghata. Conv. pilosus, Wall. fl. ind. 2. p. 55. Roxb. in act. n. e. berol. 4. p. 199. Conv. álbicans, Wall. no. 1401. Stems terete. Bracteas oblong-lanceolate. Corolla tubular, hardly twice as long as the calyx, glabrous, rose-coloured, or pink, expanding an inch. Capsule globose, glabrous. Seeds villous on the angles.

Pilose Ipomœa. Fl. July, Oct. Clt. 1815. Pl. tw.

137 I. ARBOREA (Hort. ex Lindl. bot. reg. 1794.) villous; leaves cordate-roundish, 3-lobed: lobes acute; peduncles many-flowered, longer than the petioles, having the bracteas and sepals diverging and acuminated; corolla campanulate, with a thickened tube; stamens glandular at the base. ♃. ◯. S. Native country unknown. Flowers densely aggregate. Bracteas length of sepals: sepals longer than the tube of the corolla. Corolla middle-sized, violaceous: lobes acute.

Miss's Ipomœa. Fl. April. Oct. Clt.? Pl. tw.

138 I. OCHRACEA (Roth, nov. spec. p. 110. Choisy, l. c. p. 469.) plant clothed with grey down; leaves cordate, acuminated, entire, or somewhat 3-lobed, clothed with grey villi beneath; peduncles much exceeding the petioles, loose, generally 2-flowered, sometimes dichotomously many-flowered; sepals coriaceous, obtuse, with sub-lacerated edges; corolla striated. ☉. ◯. S. Native of Tranquebar, Java, Manilla, banks of the Irawaddi, &c. Conv. gracilis, Burm. ind. 46. t. 21. f. 1. Conv. affinis, Wall. cat. no. 1383. Conv. subangulàris, Hunt. herb. Stem terete, villous, or smoothish. Leaves 1½ inch long, and 1¼ broad, glabrous, green on the upper surface, except the middle nerve. Corolla twice longer than the calyx, marked with converging black stripes; lobes acute, spreading.

TYvin-flowered Ipomoea. PI. tw.

139 I. CHRYSEIDES (Ker. bot. reg. t. 270.) stem twisted ; leaves oblong-cordate, subhastate, entire, or often angular, also 3-lobed, acuminated, glabrous; peduncles stiff, exceeding the petioles, 2-7-flowered ; sepals coriaceous, rayed with green, ovate refuse, mucronulate; corolla small, yellow. %. ^\ S. Native of the East Indies, as of Silhet, banks of the Irawaddi, Soaddi, Goalpara, Segaen, Coromandel, Bengal; China, and Timor. *IL.J.* dentata, Willd. herb, ex Roem. et Schultes, syst. 4. p. 789. ex Klein. Conv. chryseides, Spreng. syst. 1. p. 598. Conv. dentatus, Vahl, symb. 3. p. 25. Wall. fl. ind. 2. p. 62. cat. no. 1349. Conv. luteolus, Wight, herb. Conv. flavus, Ham. herb. Stem terete and striated, glabrous, downy at the insertion of the leaves. Leaves 12-24 lines long ; laterallobes dentately serrated. Petioles warted. Capsule 4-angled, glabro-s. P·eds red, downy, under a lens.

fi?\r. fj, tern villous ; hairs straight, much crowded at the base* of the petioles, as well as on the middle nerves of the leaves.

Golden-flowered Ipomcea. Fl. Ju. Oct. Clt. 1817. PI. tw.

140 I. WIGHTII (Choisy, in mem. soc. phys. gen. 6. p. 470.) villous; leaves cordate, acuminated: lower ones oblong, with sinuately toothed edges; younger ones 3-lobcd; all woolly and rusty above, and clothed with white tomentum beneath ; peduncles exceeding the petioles, 2-5-flowered ; sepals oblong-linear, awned, very acute, hairy. %. *rs*. S. Native of the Nellighery mountains. Conv. Wightii, Wall.pl. rar. asiat. 2. p. *55.* t. 171. Conv. gossypinus, Wall. cat. no. 1407. Conv. lanuginosus, Heyne, herb. Stem terete, beset with retrograde hairs, as well as the petioles. Leaves 1-3 inches long, and 1-2 broad. Bracteas like the sepals, but larger. Corolla campanulate, rose-coloured, glabrous. Capsule downy. Seeds glabrous. Nearly allied to *Ip. tricolor,* Desr.

Wight's Ipomoea. PI. tw.

141 I. SAGITTATA (Poir. diet. 4. p. 17.) glabrous ; leaves cordately sagittate; peduncles 1-flowered, shorter than the leaves, rarely 2-flowered ; sepals linear-elliptic, obtuse. *If.*. rN. S. Native on the banks of lakes, about the Calle, and the bastions of France, in Barbarv, ex Poiret; abundant about Castellon, in Valentia, in humid places, ex Cav. Poir, voy. in barb. 2. p. 122. edit. germ. 2. p. 160. t. 3. Lam. ill. t. 104. f. 2. Cav. icon. 2. p. 4. t. 107. descr. p. 98. Desf. fl. atl. 1. p. 177. Conv. Wheleri, Vahl, symb. 2. p. *SG.* Willd. spec. 1. p. 845, exclusive of the syn. of Plukn. aim. p. 113. t. 85. f. 3. Conv. Valentinus, Hort.—Tourn. inst. p. 82. Lower leaves cordate, 3 inches long, and 1 inch broad. Corolla large, of a reddish purple colour. Capsule globose. Seeds brown, angular.

***Sagittate-leaved* Ipomcea. PI. tw.**

142 I. LACUNOSA (Lin. spec. ed. 3d. 228.) glabrous ; leaves cordate, acuminated, angular at the base : lower ones obscurely repand; peduncles short, generally 1-flowered; calyx pilose; sepals lanceolate, acute, ciliated ; corolla tubular, short. 3/ ,*rs*. H. Native of Virginia, Carolina, and Florida; rather abundant on the banks of the Arkansas, ex Nutt. in amcr. phil. trans, n. s. *5.* p. 195. Michx. fl. bor. amervl. p. 140. Pursh, fl. amer. 1. p. 145. Conv. lacunosus, Spreng. syst. 1. p. 597.—Dill. elth. p. 103. t. 87. f. 102. Nearly allied to *Ip. coccinea;* but the peduncles are 1 or 2-flowered ; the corollas with a thicker wh!te tube; and purplish rim, not scarlet, ex Lin., and in the Arkansas plant white, ex Nutt., short, and somewhat campanulate. Nearly allied to /. *triloba,* ex Michx. Lobes of corolla, which is tubular, nearly straight, ending in small setaceous mucrones. Capsule globose, rather hairy.

Zacwnose-leaved Ipomcea. Fl. July, Aug. Clt. 1G40. PI. twining.

143 I. ARISTOLOCHIEFOLIA ; glabrous ; leaves ovate, much acuminated, having the hind lobes dentately angular and diverging ; peduncles 3-flowered, shorter than the leaves; sepals ovate-oblong, acute, glabrous, wrinkled at the base, nearly equal ; capsules ovate-conical. 1/. *rs*. G. Native of Caraccas, and La Venta de la Cumbre, in rather cold places. Conv. aristolochisefolius, H. B. et Kunth, nov. gen. amer. 3. p. 102. Stem angularly striated, rather scabrous ; branchlets downy. Leaves glabrous, but when young downy above, 2 inches long. Corolla funnel-shaped, glabrous, with a white tube, and a violaceous limb. Capsule glabrous.

***Aristolochia-leaved* Ipomcea. PI. tw.**

144 I. PANDURATA (Ker. bot. reg. 588.) downy ; leaves broad-cordate, entire or lobed, panduriform ; peduncles long ; flowers in fascicles ; sepals glabrous, mutic ; corolla tubularly-campanulate. 1(..rN. H. Native from Canada to Carolina, in sandy fields, and among bushes. Convolvulus panduratus, Michx. fl. bor. amer. 1. p. 138. Pursh, fl. I. p. 144. —Dill, elth. t. 85. f. 99. Root thick, turnip-formed. Corollas white. There is a variety of this, with double flowers, cultivated in the gardens of America, which is a singular circumstance among Convolvulaceous plants. The roots grow to an enormous size, sometimes as thick as a man's thigh, and more than 2 feet long. Taken in place of jalap, it has the same effect, only in a less degree. A variety, with entire leaves, is very common on the banks of the Arkansas, ex Nutt.

Fiddles ha pedAeaved Ipomcea. Fl. Ju. Sept. Clt. J *732.* Pl.tw.

145 I. SETIFERA (Poir. ency. 6. p. 17.) branches villous ; leaves cordately auriculate, glabrous ; peduncles usually 2-flowered ; sepals large, ovate-oblong, glabrous, ending each in a bristle. 0. ? ^. S. Native of Guiana. Conv. setifer, Spreng. syst. 1. p. 597. Plant glabrous. Auricles of leaves rounded. Corolla large, campanulate, purplish or reddish.

***Bristle-bearing* Ipomcea. PI. tw.**

146 I. MACRORHIZA; downy; leaves cordate, entire or lobed, plicately wrinkled, rather tomentose beneath; peduncles 1-3-flowered ; sepals oval, mutic ; corolla campanulate, 5-lobed ; seeds woolly; root very thick. %.^. G. Native of Georgia and Florida, near the sea-shore. Ip. Jalapa, Pursh, fl. amer. sept. 1. p. 146. Ker. bot. reg. t. 342. Conv. macrorhiza, Michx. fl. amer. bor. 1. p. 141. "Pers. ench. 1. p. 184. Poir. diet. 0. p. 17. I. Michauxii, Sweet, hort. brit. p. 288. Flowers very large, white. This is the Jalap of North America.

Far. /3, rubra; stem tubercular ; peduncles many-flowered ; sepals ovate, obtuse, downy ; filaments tomentose at the base ; F? . *n**. S. Native of Mexico, about Vera Cruz, &c. Conv. Jalapa, Lam. ill. t. 104. f. 2. Pers. ench. 1. p. 179. Woodv. med. bot. p. 59, with a figure. Plenk, off. t. 94. Desf. ann. mus. 2. p. 126. t. 40-41. Sims, bot. mag. 1572. I. Jalapa, Sweet, hort. brit. p. 288. Conv, Jalapa, *ft,* rosea, Ker. bot. reg. t. 621. Root very large, white inside, milky, fleshy, form of a turnip. Stems villous at top. Corolla having the tube violaceous inside, and lilac or pale red outside : lirhb purple. Stigma depressed, 2-lobed.

Large-rooted Ipomoea. Fl. Aug. Oct. Clt. 1815. PI. tw.

147 I. OwARiE/Nsis(Beauv. fl. d'ow. 2. p. 41. t. 82.) stems, peduncles, petioles, and calyxes, beset with stiff hairs ; flowers axillary, umbellate ; leaves cordate, toothed, sublobate, beset with stiff hairs; sepals ovate, acuminated. *If.*. '**. S. Native of Guinea, about the town of Waree. Poir. suppl. 4. p. 634. Conv. Owariensis, Spreng. syst. 1. p. 594. Leaves on long petioles: lobes roundish. Pedicels simple, 1-flowered, unequal, crowded together. Corolla small, campanulate, red; lobes short, obtuse.

Waree Ipomcea. PI. twining.

148 I. CATHARTICA (Poir. suppl. 3. p. *6S3.)* glabrous; leaves cordate, 3-lobed, acuminated ; peduncles generally 1-flowered ;

tube of corolla sub-cylindrical, inflated.—Native of St. Domingo, in humid places. Convv. Africánus, Nicols. hist. nat. st. doming. p. 260. Stem twining, but sometimes rooting along the ground. Leaves large, on long petioles; lobes unequal. Corolla an inch long, pale green; limb large, 5-lobed, with 5 lanceolate rays beneath. Stamens unequal, shorter than the corolla.

Cathartic Ipomœa. Pl. tw.

149 I. ev'ata (Cham. et Schlecht. in Linnæa, 5. p. 118.) shrubby; smoothish; leaves variable, cordate, hastately cordate, ovate, and 3-lobed, with the sides angular, toothed and entire, finely acuminated, hairy beneath on the nerves and veins, and at the insertion of the petioles, with a few hairs above in the young state; cymes on very long peduncles, 2-3 times dichotomous, with elongated branches; sepals ovate-orbicular, obtuse, with a long weak dorsal mucrone. ♄. ◠. S. Native of Mexico, in woods, near Jalapa; also among bushes, near San Andres. Corolla somewhat salver-shaped, scarlet; tube an inch long; limb expanded, an inch and a half. Leaves 4 inches long. Cymes a foot or more long. Perhaps a species of *Quamoclit*.

Rope Ipomœa. Shrub tw.

150 I. funi'ta (Macfadyen, in Hook. bot. misc. 2. p. 116.) stems roundish, hairy; leaves cordate, 3-lobed, acuminated, hairy; petioles hairy: hairs proceeding from purplish glands, as in the stems; peduncles twice as long as the leaves, 6-flowered, hairy; bracteas as long as the pedicels, linear-subulate, hairy; calyx hairy: the hairs proceeding from roundish glands; sepals linear-lanceolate; stigma papillose, somewhat 3-lobed. ⊙. ? ◠. S. Native of Jamaica.

Dotted Ipomœa. Pl. twining.

151 I. Portoricénsis; leaves deeply cordate, somewhat 3-lobed, glabrous: lateral ones very short; peduncles usually 3-flowered, shorter than the leaves; sepals lanceolate; tube of corolla inflated. ♃. ? ◠. S. Native of Porto Rico. Convólvulus Portoricensis, Spreng. syst. 1. p. 595.

Porto Rico Ipomœa. Pl. twining.

152 I. Jamaicénsis; leaves deeply cordate, 3-lobed, sinuated, villous beneath, canescent; peduncles 1-flowered, shorter than the leaves, and are, as well as the sepals, which are lanceolate, glabrous. ♃. ? ◠. S. Native of Jamaica. Convólvulus Jamaicensis, Spreng. syst. 1. p. 595.

Jamaica Ipomœa. Pl. twining.

153 I. Rudólphi (Roem. et Schultes, syst. 4. p. 222.) leaves cordate and 3-lobed; peduncles 2-flowered; bracteas and bracteoles lanceolate; the 3 outer sepals the largest. ⊙. ? ◠. S. Native of St. Domingo. Ip. bracteáta, Ledeb. dec. pl. doming. no. 4; but not of Cav. nor Roem. et Schultes.

Rudolphi's Ipomœa. Pl. tw.

154 I. sinuá'tissima (Ker, bot. reg. t. 39.) downy; leaves cordate, entire or 3-lobed, acuminated, beset with adpressed hairs above, roughish tomentose beneath; flowers numerous, cymosely aggregate on the tops of the peduncles; cymes generally aggregate; calyx close, villous, nearly equal, loose above. ♄. ◠. S. Native of South America. Conv. mutábilis, Spreng. syst. 1. p. 592. Root and stems purple. Corolla large blue; limb campanulate; lobes roundish, cleft at apex. Stamens bearded at the base. Stigma granulately globose. Perhaps a species of *Pharbitis*. Nearly allied to *I. coagĕta*, R. Br. prod. 1. p. 485. which is probably Conv. multiflórus, Banks, herb.

Changeable-flowered Ipomœa. Pl. 3 May, Sept. Clt. 1812. Shrub tw.

155 I. bracteá'ta (Roem. et Schultes, syst. 4. p. 227.) stem a little hairy at top; leaves glabrous, cordate, nearly entire, and 3-lobed, hastate, attenuated; peduncles 1-flowered, length of petioles; outer sepals form of bracteas. ⊙. ◠. S. Native of the East Indies. Conv. bracteátus, Vahl, symb. 3. p. 23. Willd. spec. 1. p. 850. Nearly allied to *I. platanifólia*. Leaves 2 inches long, intermediate lobe lanceolate, attenuated, entire; lateral ones broader, rounded upwards, entire, or retusely somewhat lobed outside. Bracteas 2, opposite under the calyx, lanceolate, acute. Calyx downy. Corolla villous outside, silky; limb 5-lobed.

Bracteate-flowered Ipomœa. Pl. tw.

156 I. acumina'ta (Roem. et Schultes, syst. 4. p. 228.) stem beset with a few adpressed hairs; leaves glabrous, cordate, entire and 3-lobed, acuminated; peduncles elongated, many-flowered, glabrous; sepals lanceolate, attenuated, glabrous; inner ones shorter. ⊙. ? ◠. S. Native of the Island of Santa Cruz. Conv. acuminátus, Vahl, symb. 3. p. 26. Willd. spec. 1. p. 851. Leaves 4 inches long; lateral lobes lanceolate; intermediate one ovate, attenuated. Corollas large, campanulate, purple, with a pale bottom, and 5 lanceolate, excurrent, paler rays at the margins; stigma capitate.

Acuminated-leaved Ipomœa. Pl. tw.

157 I. trachoca'rpa (Ell. S. car. 2. p. 260.) plant smoothish; leaves deeply 3-lobed or entire; peduncles usually 2-flowered; sepals oval-lanceolate, pilose; corollas short; capsule globose, hairy. ⊙. ◠. H. Native of Carolina, in hedges. Conv. Carolinus, Michx. fl. amer. bor. 1. p. 139. Desr. in Lam. dict. 3. p. 563. Ip. communis, Roem. et Schultes, syst. 4. p. 228. Conv. trichocárpus, Spreng. syst. 1. p. 592. Ipomœa Carolina, Pursh, fl. amer. sept. 1. p. 145.—Dill. elth. p. 100. t. 84. f. 98. Bracteas subulate. Corolla large, pale purple.

Hairy-fruited Ipomœa. Pl. July, Aug. Clt. 1732. Pl. tw.

158 I. tomentósa (R. Br. l. c.) leaves cordate, undivided or 3-lobed, acute; petioles biglandular beneath at the apex; peduncles 1-3-flowered, thickened in the fruit-bearing state; sepals somewhat unequal, obtuse, mutic; corollas very long. ♃. ◠. S. Native of New Holland, within the tropic. Ip. macrántha, Roem. et Schultes, syst. 4. p. 251. Conv. longiflórus, Spreng. syst. 1. p. 595.

Long-flowered Ipomœa. Pl. tw.

§ 3. *Leaves palmately, digitately, or pedately lobed; rarely trifid, or 3-lobed. Flowers not in heads. Capsules and sepals middle-sized.*

* *Peduncles 1-3-flowered.*

159 I. Cóccinea (Roth, nov. spec. p. 110. Choisy, in mem. soc. phys. gen. 6. p. 471.) plant herbaceous, smooth; leaves palmate or pedate; leaflets serrated, glabrous; petioles compressed, stipulaceous at the base; peduncles 1-2-flowered, exceeding the petioles; sepals rugosely muricate, glabrous. ⊙. ◠. S. Native of Senegal, East Indies, and Cuba. Ip. Brunónii, Pers. cat. nov. no. 150. Ip. verrucósa, Ort. dec. p. 10. ? Ip. dissécta, Heyne, herb. Conv. Cóccicus, Lin. mant. p. 559. Wall. fl. ind. 2. p. 62. Conv. stipulátus, Desr. in Lam. dict. 3. p. 546. Conv. dissectus, Wall. cat. no. 1351. Stem angular, prostrate, rather long. Leaves palmate or pedate; outer lobes the shortest, and usually bifid: middle ones ovate-lanceolate, acute. Sepals ovate-oblong. Corolla white, tubular, 4-5 lines long, glabrous; lobes acute. Seeds glabrous.

Coptic Ipomœa. Pl. prostrate.

160 I. pentaba'ccum (Choisy, in mem. soc. phys. gen. 6. p. 471.) herbaceous; leaves quinate; leaflets linear-lanceolate or linear, petiolulate, entire, glabrous, obtuse; peduncles exceeding the petioles, 1-2-flowered; sepals glabrous, ovate, obtuse, unequal; outer ones the shortest. ⊙. ◠. S. Native of the East Indies, as on Mount Tsong-Ding, near Ava. Conv. pentadáctylis, Wall. cat. no. 1367. Conv. tenuifólius, Vahl, symb. 3. p. 33. Stem terete. Leaves decreasing in size to the tops of the stems. Corolla tubularly campanulate, glabrous, with the limb hardly spreading. Capsule and seeds glabrous.

1

Var. β; stem and petioles clothed with long, « haires; leaves a little larger.

Five-fingered-leaved Ipomœa. PL tw.

161 I. H<»k. b leaflets I quite enure, wttb undulated margins; peduncles abou as long as the petioles, bearing dichotomous cymes of flowers; sepals imbricate, obtuse, equal; corolla funnel-shap *d. %.* -nr. the East Indies. Corolla of a deep, rich, and glossy rose col Stig.a capitate, 2-lobed, hairy. 1'ilamen *m* a hairy scale or gland, which is vaulted beneath. Leaflets generally 5, rarely 6-7. Perhaps a species of *Batatas*, or a new genus from the vaulted scale at the base of each filament.

Horsfall's Ipomœa. Fl. Dec. Jan. Clt. 1853. Pl. tw.

162 I. (Beauv. fl. d'ow. 2. p. 69. i. 101.) stem angular; leaves palmately 9-lobed: lobes unequal; peduncles 3-flowered; corollas purple. ☿. ◠. S. Native of Guinea, at Chama. irly allied to *I* Porsk, but is without any digitate itipulas. Corolla vml. the mbe narrow at I swollen at top.

Nine-lobed-le red Ipotnoea. PI. twin

163 I. I'ULCHE'LI.A (Rotli, nov, spec. p. 115.) herbaceous, glabrous; leaves quinate; leaflets sometimes entire, sometimes bifid: all elliptic- ovate, peti cles about equal in length to ie petioles, 1-2-flow glabrous: inner on villous. %, ◠. Pendulous-flowered Ipomœa. Fl. May, Oct. Clt. 1805. Pl. trailing.

179 I. PINNATÍFIDA: glabrous: leaves pinnately 7-cleft: segments lanceolate, acuminated, almost quite entire; peduncles 1-3-flowered, longer than the leaves: sepals roundish-concave, nearly equal, glabrous. ♃. ◠. S. Native of Cuba, between Havannah and Regla. Conv. pinnatifidus, H. B. et Kunth, nov. gen. 3. p. 108. Stem angularly striated. Leaves ovate in circumference, 2 inches long. Leaflets sometimes furnished with one or two teeth, or quite entire: intermediate one large, and the lateral ones becoming gradually smaller. Corolla downy outside.

Pinnatifid-leaved Ipomœa. Pl. tw.

180 I. TRÍFIDA: downy: leaves cordate, trifid: segments quite entire: peduncles 2-3-flowered, longer than the leaves: sepals glabrous, ovate-oblong, mucronate: outer ones rather the smallest. ♃. ◠. S. Native on the banks of the Orinoco, between Carichana and San Borja, in woods. Conv. trifidus, H. B. et Kunth, nov. gen. amer. 3. p. 107. Conv. hepaticifolius, Willd. rel. ex Rœm. et Schultes, syst. 4. p. 302. Leaves 1½ inch long: middle segment oblong, acuminated, mucronate: lateral ones a little shorter, diverging somewhat triangular, having the superior angle acuminated, and the lower one rounded. Corolla funnel-shaped, purple, glabrous, size of those of *Ip. pavonina*. Perhaps a species of *Pharbitis*.

Trifid Ipomœa. Pl. tw.

174 I. QUINÁTA (R. Br. prod. p. 486.) glabrous: leaves quinately digitate: leaflets lanceolate, quite entire, mucronulate: peduncles 1-flowered: sepals obtuse, the inner 2 twice the length of the outer 3, about equal to the middle of the corolla in length. ♃. ◠. S. Native of New Holland, within the tropic, on the sea shore. Very nearly allied to *I. biloba*. Convólvulus quinátus, Spreng. syst. 1. p. 599.

Quinate-leaved Ipomœa. Pl. tw.

175 I. TRIXANTHA: twining or prostrate, glabrous: leaves digitately 3-parted: segments narrow, pinnatifid, serrated: stipulas palmate: peduncles 1-flowered, bibracteate in the middle, simple, twice as long as the petioles: sepals oblong, acute, scabrous: stigma capitate, 3-lobed. ♃. ◠. S. Native of Guinea. I. dissecta, Willd. spec. 1. p. 850. phyt. 1. p. 5. no. 10. t. 2. f. 5. Conv. Thonningii, Schum. pl. guin. p. 95. Stems angular. Corolla campanulately funnel-shaped, white. Capsule hidden by a calyx, divided by a thin membrane into 3 cells; cells 1-seeded. Seeds tuberculose. Said to be allied to *I. Cóptaxa* and *I. laciniáta*. Perhaps a species of *Batátas*.

Thonning's Ipomœa. Pl. twining.

176 I. HISPANIÓLA: leaves quinately digitate, glabrous: leaflets lanceolate, serrated, cuspidate: peduncles 1-flowered, exceeding the leaves: sepals obtuse, glabrous. ♃. ◠. S. Native of Hispaniola. Convólvulus Hispaniólæ, Spreng. syst. 1. p. 599. Stems hairy.

Hispaniola Ipomœa. Pl. twining.

177 I. HIRSÚTA (R. Br. l. c.) plant beset with spreading hairs: leaves quinately digitate: leaflets oblong-lanceolate: peduncles generally 1-flowered: calyx glabrous: sepals obtuse, the 2 inner a little longer than the outer 3. ♃.? ◠. S. Native of New Holland, on the sea-shore, within the tropic. Conv. Brównii, Spreng. syst. 1. p. 599.

Hairy Ipomœa. Pl. tw.

178 I. HYBRIDÉLLA (R. Br. l. c. p. 487.) glabrous; leaves palmately 7-parted: segments linear, dentately pinnatifid: intermediate one elongated, and nearly entire: peduncles 1-3-flowered: calyx about equal in height to ½ of the corolla, which is one inch and more long: sepals oblong, wrinkled on the nerves. ♃. ◠. S. Native of New Holland, within the tropic. Conv. diversifólius, Spreng. syst. 1. p. 592.

Diverse-leaved Ipomœa. Pl. tw.

179 I. CAROLÍNA (Lin. spec. 227., but not of Pursh nor Michx.) glabrous?: leaves digitate: leaflets 5-7, lanceolate, attenuated at the base, petiolate: peduncles 1-flowered: calyx short. ♃. ◠. S. Native of the Bahama Islands. Willd. spec. 1. p. 860. Pers. euch. 1. p. 183. I. Caroliniana, Poir. dict. 6. p. 11.—Cat. carol. 2. p. 91. t. 91. Corolla funnel-shaped: tube green outside, and violet inside: limb purple: segments reflexed.

Carolina Ipomœa. Fl. July, Aug. Clt. 1732. Pl. tw.

* * *Peduncles many-flowered.*

180 I. PLATA'NI (Ker, bot. reg. t. 333.) branches, petioles, and peduncles beset with prickly tubercles: leaves palmate: lobes 7, cuneate-oblong, bluntish, with a short mucrone: outer ones the smallest: peduncles few-flowered, cymose at apex, a little longer than the petioles: sepals nearly orbicular. ♃. ◠. S. Native on the banks of the Plata. Conv. Platénsis, Spreng. syst. 1. p. 591. Root tuberous. Corollas pale purple, size of those of *Batátas paniculáta*. Stigma capitate, hardly lobed.

Plata Ipomœa. Fl. Ju. Sept. Clt. 1817. Pl. tw.

181 I. HETERÓA (Ker, bot. reg. t. 335.) branches, petioles, and peduncles hispid from bristles; leaves naked, cordate, 3-lobed: lobes dentately sinuated; peduncles robust, longer than the petioles, many-flowered, trichotomously cymose; sepals oblong. ♃. ◠. S. Native of Brasil. Conv. setósus, Spreng. syst. 1. p. 594. Root tuberous?. Corolla salver-shaped, purplish red, size of those of *Batátas paniculáta*. Stigma globose. Said to be nearly allied to *Ip. platanifólia*, and *Batátas edúlis*.

Bristly Ipomœa. Fl. Aug. Oct. Clt.? Pl. tw.

182 I. VESICULÓSA (Beauv. fl. d'ow. 2. p. 75. t. 106.) plant beset with numerous vesicles: leaves palmately 5-7-lobed: lobes unequal; peduncles 4-6-flowered: corollas purple. ♃. ◠. S. Native of Guinea, in the kingdom of Warre, in woods. Axils of the leaves woolly.

Vesicular Ipomœa. Pl. tw.

183 I. PALMA'TA (Forsk. descript. p. 45. Rœm. et Schultes, syst. 4. p. 207.) glabrous: leaves palmate: leaflets 5, serrulated, outer ones lobed: stipulas foliaceous, palmate: axils woolly: peduncles longer than the leaves, dichotomously corymbose: sepals glabrous, ovate, obtuse. ♃. ◠. G. Native of Egypt, Guinea, also of the Sandwich Islands. Conv. Cairícus, Lamarck. 222. Vahl, symb. 1. p. 15. Willd. spec. 1. p. 862. Sims, bot. mag. 602. Conv. Ægyptius, Berl. ægypt. p. 79. t. 74. Ip. Cairica, Sweet, hort. brit. p. 287.—Barrel. icon. t. 50. Corolla campanulate, purple. Seeds woolly.

Palmate-leaved Ipomœa. Fl. Ju. Sept. Clt. 1680. Pl. tw.

184 I. PES-TIGRÍDIS (Lin. fl. zeyl. 79. spec. 230. Wall. fl. ind. 2. p. 93.) leaves palmate, 5, rarely 7-lobed: lobes ovate, entire, clothed with silky hairs: peduncles many-flowered, equal in length to the leaves: flowers aggregate: bracteas 6-8, surrounding the head of flowers, and longer than it. ☉. ◠. S. Native of the East Indies, as of Travancore, Sukanagur, banks of the Irawadi, Ceylon, Java, &c. Conv. pes-tigridis, Spreng. syst. 1. p. 633. Conv. bryoniæfólius, Sal. prod. p. 125. Convolvuloides palmátus, Moench. meth. 492.—Dill. elth. 420. t. 313. f. 411.—Rheed. mal. 11. p. 121. t. 59.—Knip. cent. 9. t. 53.—Herm. hgdb. 184. t. 187.—Act. hons. 2. p. 302. t. 29. f. g. Hairs on the stem furnished with glands at the base. Lobes of leaves acute, 1-2 inches long. Bracteas bluntish, hairy, ovate, linear. Sepals ovate, acuminated, hairy outside. Corolla hairy outside, funnel-shaped, purplish. Capsule glabrous. Seeds rather villous.

*Tiger*s-foot-\eaved* Ipomoea. Fl. Aug. Oct. Clt. 1732. PI. tw.

184 I. AGGREGA'TA (Poir. suppl. 4. p. *633.* Choisy, in mem. soc, phys. gen. 6. p. 455.) leaves palmate, 7-lobed, pilose ; peduncles long; flowers sessile, aggregate, surrounded by 10-12 ovate-oblong, unequal, pilose, involucra-formed bracteas. ^ • ^\ G. Native of Cochinchina. Convólvulus aggregátus, Lour, cocb. p. 109. Poir. suppl. *3.* p. 471. Stem very hairy, terete. Lobes of leaves acutish, ovate, entire. Sepals lanceolate, pilose. Corolla tubular, 5-cleft, large, white ; segments acute, hairy, closed.

Aggregate-flowered Ipomcea. Shrub tw.

185 I. VITIFÒLIA (Sweet, hort. brit. p. 289. Blum, bijdr. 709.) leaves cordate, palmately 5-cleft: lobes finely toothed ; peduncles many-flowered ; corolla orange yellow. J? . *rs.* S. Native of the East Indies, as of Silhet, Travancore, Malabar, &c. Conv. vitifòlius, Lin. mant. p. 203. Burm. ind. 45. t. 18. f. 1. Wall. fl. ind. 2. p. 61. Conv. angulàris, Roxb. herb. Stems terete, downy, or with a few villi. Leaves lobed to the middle, variously pilose; lobes unequal, irregularly crenate-toothed. Sepals ovate-lanceolate, blackish. Capsules large, and are, as well as the black seeds, glabrous.

Vine-leaved Ipomcea. Fl. June, Sept. Clt. 1820. Shrub twining.

186 I. ANGULA'RIS (Choisy, in mem. soc. phys. gen. 6. p. 454.) leaves cordate, 5-lobed : lobes short, entire, acute ; peduncles 3, many-flowered ; corolla orange-yellow. *V^ . rs.* S. Native of Java. Conv. angulàris, Lin. mant. 203. Burm. ind. 46. t. 19. f. 2. Hardly more than a variety of /. *vitifòlia.* Capsule large.

Angular-leaved Ipomcea. Shrub twining.

187 I. TUBERÒSA (Lin. hort. ups. p. 39. spec. 227.) glabrous ; leaves palmately 7-parted : lobes elliptic-lanceolate, entire ; peduncles dichotomous ; sepals equal, an inch long. 1(,. ^\ S. Native of tropical America, Madras, Islands of Bourbon, France, Ceylon, &c. Jacq. amer. p. 37. Ker, bot. reg. 768, but not of Lour. Conv. tuberòsus, Spreng. syst. 1. p. 591.—Sloane, jam. *56.* hist. 1. p. 152. t. 96. f. 2. Stems terete. Lobes of leaves acute, 1-3 inches long. Petioles 3 inches long. Flowers solitary, and pedicellate in the forks, and spicate along the branches of the peduncle. Sepals ovate, obtuse. Corolla 2 inches long, tubularly campanulate, yellow. Capsule large. Seeds large, black.

Far. ft. uniflbra (Choisy, in mem. soc. phys. gen. 6. p. 45*S.)* peduncles 1-flowered ; sepals acutish. 1/,^. S. Native of South America. Convólvulus gossypifòlius, H. B. et Kunth, nov. gen. amer. 3. p. 107. Conv. macrocàrpus, Spreng. syst. 1.p. 592.

Tuberous-rooted Ipomcea. Fl. Aug. Oct. Clt. 1731. Shrub twining.

188 I. HEPATICIFÒLIA (Lin. spec. 230. Burm. ind. 50. t. 20. f. 2.) very hairy ; leaves 3-lobed : lobes very blunt; peduncles equal in length to the petioles ; flowers capitate, involucrated ; bracteas ovate-unear. ©. ^. S. Native of Ceylon and China. Convólvulus hepaticifòlius, Spreng. syst. 1. p. 594. Stems simple. Leaves deeply lobed ; lobes sometimes entire, subemarginate, ovate ; middle one coarctate at the base, more than an inch long. Corolla purplish.

Hepatica-leaved Ipomcea. Fl. Aug. Sept. Clt. 1759. PI. twining.

189 I. PEDA'TA ; glabrous; leaves pedately 3-5-cleft: lobes lanceolate, obtuse, mucronate ; peduncles cymose ; sepals rounded : inner ones the largest. *h* • ^. S, Native of Guayaquil. Flowers purple, funnel-shaped, (v. ?. in herb. Ruiz, et Pav.)

Pedate-\ei\\ed Ipomce'a. Shrub twining.

190 I. PARVIFLÒRA (Vahl, symb. 3. p. 34.) glabrous ; leaves cordate, palmately 5-lobed ; umbels axillary, pedunculate ; calyx and capsules hairy ; sepals ovate, mucronate, length of capsule. 0. ^. S. Native of the Island of Santa Cruz. Willd. spec. 1. p. 885. Pers. ench. 1. p. 185. Conv. Sloànei, Spreng. syst. 1. p. 593.—Sloane, jam. p. *55.* hist. 1. p. 153. t. 97. f. 1. Ip. trîloba and I. sanguinea of some gardens. Nearly allied to /. *triloba,* but differs in being glabrous, not hairy ; stem triangular, from decurrent lines. Leaves 1\ inch long ; lobes lanceolate, obtuse, mucronate : outer ones gibbous at the base, outside. Pedicels muricated. Flowers small, purplish.

Small-flowered Ipomcea. Fl. July, Oct. Clt. 1822. PL tw.

191 I. UMBELLA'TA (Lin. spec. 227.) glabrous; leaves digitate ; leaflets 7, nearly equal, lanceolate, entire, acuminated ; peduncles very short, sub-umbellate. 1/. *rs.* S. Native of tropical America. Poir. diet. 6. p. 10. Conv. septenàta, Spreng. 1. p. 591.—Plum. spec. 3.—Burm. amer. p. 81. t. 92. f. 2. Tourn. inst. p. 116. Flowers scarlet. Stamens exserted. Capsule glabrous, oblong, acuminated, 3-celled. Perhaps a species of *Qudmoclit.*

Umbellate-flowered Ipomcea. Fl. June, July. Clt. 1739. PL tw.

192 I.? CLAU'SA (Rudolph, ex Led. dec. pi. dom. no. 5) leaves ternate or quinate ; peduncles dichotomous, many-flowered ; corollas tubular, closed. 1;. ? °. S. Native of St. Domingo.

Closed-flowered Ipomcea. PL tw.

§ 6. *Leaves entire at both ends, never cordate. Flowers not crowded into heads. Capsules and sepals middle-sized.*

193 I. BUCHANÀNI (Choisy, in mem. soc. phys. 6. p. 474.) glabrous ; leaves linear-lanceolate, acuminated, on short petioles, entire: peduncles \ an inch long, 1-3-flowered; sepals ovate, glabrous. ©. ? *rs.* S. Native of Bengal. Ip. salicifòlia, Roxb. "in Wall. fl. ind. 2. p. 88. Stem terete. Leaves 3-8 inches long. Corolla white, with a cylindrical tube, 1| inch long, and an obscurely divided limb. Cells of capsule 3-seeded, ex Wall.

Buchanan's Ipomcea. FL May, July. Clt. 1816. PL tw.

194 I. LINIFÒLIA (Blum, bijdr. p. 721.) plant rather pilose; leaves linear, quite entire, blunt at both ends, mucronulate, sometimes somewhat hastate at the base; peduncles axillary, about equal in length to the leaves, few-flowered ; sepals obtuse, glabrous. ©.? ^. S. Native of the Moluccas.

Flax-leaved Ipomcea. PL tw.

195 I. PIIILIPPE'NSIS (Choisy, in mem. soc. phys. gen. 6. p. 475.) glabrous ; leaves linear, mucronulate, glabrous, on short petioles, entire; peduncles terete, 1-flowered, about \ an inch long; sepals ovate, rather mucronulate: outer ones a little smaller. *%.1 rs.* S. Native of the Philippines, and China, near Wangoo. Stem terete, filiform. Leaves 1-2 inches long, and 1-2 lines broad; petioles ciliated. Peduncles glabrous, bibracteate. Corolla unopen, a little larger- than the calyx. Capsule pea-formed, glabrous.

Philippine Ipomcea. PL tw.

196 I. GRAMÎNEA (R. Br. prod. p. 414.) glabrous; leaves long-linear, mucronate, quite entire ; peduncles 1-flowered ; sepals obtuse ; corollas very long. *%.?* ^\ S. Native of New Holland, within the tropic, on the shore. Conv. gramineus, Spreng. syst. 1. p. 607.

Grassy-leaved Ipomcea. jPL tw.

197 I. REINWARDTIA^NA (Blum, bijdr. p. 720.) leaves elliptic-oblong, acuminated, rounded at the base, entire, smooth above, and downy beneath ; peduncles few-flowered, shorter than the petioles; sepals bluntish, clothed with silky villi: outer ones

the largest. ♃. ? ◠. S. Native of Timor. Convólvulus ovátus, Reinwardt, mss. in Blume.

Reinwardt's Ipomœa. Pl. twining.

198 I. LANCEOLA'TA; downy: leaves lanceolate, entire, obtuse: peduncles 1-flowered; bracteæ large, forming an involucrum to the flower.—Native of Sierra Leone, in humid places.

Lanceolate-leaved Ipomœa. Pl. twining.

199 I. OPPOSITIFO'LIA (Roem. et Schultes, syst. 4. p. 247.) glabrous; leaves ovate-oblong, very blunt, emarginate, mucronate, glabrous; peduncles many-flowered, bifid, usually shorter than the leaves; sepals ovate, rusty, equal. ♃. ? ◠. S. Native of the Island of Santa Cruz. Convolvulus quinquepartitus, Vahl, eclog. 2. p. 14. Convolvulus ovalifolius, West, beskr. st. cruz. p. 271. Very nearly allied to *Conv. parviflorus*, Lam., the *Conv. microdactylus*, Roem. et Schultes. Stem and branches rather canescent. Corolla campanulate, glabrous, deeply 5-cleft.

Five parted-flowered Ipomœa. Pl. tw.

200 I. NE'VIS'ENSIS; stems herbaceous; leaves scattered on longish petioles, attenuated, acute, rounded at the base; peduncles axillary, solitary, 3-5-flowered, twice longer than the leaves; flowers middle-sized, pale blue. ♃. ◠. S. Native of the Island of Nevis, among bushes, where it is called the *Jumber vine*. Conv. Nevisianus, Hans. prod. p. 24. Allied to *Conv. verticillatus*, and *C. sagittatus*. Perhaps a species of *Jacquemontia*.

Nevis Ipomœa. Pl. twining.

201 I. SECU'NDA; leaves ovate-lanceolate, silky beneath, on short petioles; racemes secund, crowded, lateral and terminal, panicled. ♃. ◠. S. Native of Sierra Leone, on the mountains, very common. Flowers small, white.

Secund-flowered Ipomœa. Pl. twining.

202 I. AXILLA'RIS (Roem. et Schultes, syst. 4. p. 247.) stem decumbent; leaves oblong, emarginate, lobed or entire at the base; peduncles 1-flowered, twin or solitary, length of petioles; sepals oblong, equal; corolla tubular. ♃. ◠. S. Native of the Azores, and Island of Santa Cruz. Conv. arvensius, Vahl, symb. 1. p. 18. and 3. p. 22. Willd. spec. 1. p. 862. Habit of *Conv. Imperati*, but smoother, the leaves more crowded, and the tube of the corolla gradually widened upwards, 1½ inch long.

Sand Ipomœa. Pl. tw.

203 I. MATAXOCA'RPA; leaves oblong, glabrous, rather coriaceous, mucronate; peduncles 2-flowered, shorter than the leaves; sepals ovate; capsule cylindrical, silky. ♃. ? ◠. S. Native of New Granada, Bertero. Convólvulus mataxocárpus, Spreng. syst. 1. p. 606.

Heavy-fruited Ipomœa. Pl. twining.

204 I. TACHNA'EA; leaves oblong-lanceolate, mucronate, densely woolly on both surfaces; racemes axillary, imbricate, leafy. ♃. ? ◠. S. Native of Hispaniola. Convólvulus lachnæ'us, Spreng. syst. 1. p. 606.

Woolly Ipomœa. Pl. twining.

205 I. PTEROCA'RPA; leaves petiolate, oblong-lanceolate, acuminated, mucronate, attenuated at the base; peduncles 2-flowered; calycine segments ovulate-ovate, acuminated, running into the pedicels. ☉. ◠. S. Native of Guadaloupe. Conv. pterocárpus, Bert. ex Coll. hort. rip. 37. Corolla middle-sized, white. Stamens bearded at the base.

Wing-fruited Ipomœa. Pl. twining.

† *Doubtful, or hardly known species.*

206 I. MACRO'PHA (Choisy, in mem. soc. phys. gen. 6. p. 475.) leaves cordate, repand, acuminated; peduncles 2-3 flowered; tubers of roots aggregate. ♃. ◠. G. Native of Cochinchina, in fields, and Australasian Islands. Conv. macrophyllus, Lour. coch. p. 104. Conv. chrysorhizus, Forst. pl. esc. ins. p. 55. ? Batátas macrophylla, Rumph. amb. 5. t. 131. Stems slender. Leaves glabrous. Flowers lateral, white, campanulate. Tubers pale brown, hairy, ovate-oblong, white inside, edible, and more esteemed than the sweet potatoe.

Nipplet Ipomœa. Pl. tw.

207 I. KAMTSCHA'TICA (Choisy, l. c.) stem decumbent, radicant, striated, glabrous; leaves cordate-ovate, acute, entire, 7-nerved, glabrous, pale beneath, a hand long; petioles length of leaves. ♃. G. Native of Japan, where it is called *Kanami Kadsura* by the natives. Convolvulus in plantis obscuris, Thunb. jap. p. 330.

Kadsura Ipomœa. Pl. creeping.

208 I. PANDURIFO'RMIS (Choisy, l. c. p. 476.) leaves cordate, entire, fiddle-shaped, acuminated; flowers shining, yellow; peduncles long, generally 2-flowered; calyx and fruit smooth. ♃. ◠. G. Native of Cochinchina, in hedges. Conv. panduratus, Lour. coch. p. 107. but not of Linn.

Fiddle-shaped-leaved Ipomœa. Pl. tw.

209 I. CONCAVA'TA (Gaud. in ind. sem. hort. Bocc. 1825. p. 7.) stem compressed; leaves cordate-ovate, entire; peduncles 1-flowered, shorter than the leaves. ☉. ? ◠. S. Native of the East Indies. Plant villous.

Compressed-stemmed Ipomœa. Pl. tw.

210 I. CUSPIDA'TA (D. Don, prod. fl. nep. p. 98.) leaves cordate, quite entire, cuspidate, downy: hind lobes rounded: peduncles many-flowered, exceeding the leaves; sepals linear, acute, pilose: corolla rose-coloured; style very short. ☉. ◠. G. Native of Nipaul.

Cuspidate-leaved Ipomœa. Pl. tw.

211 I. ARBORESCE'NS (Roem. et Schultes, syst. 4. p. 248.) arborescent; leaves lanceolate, acuminated, glabrous, villous on the nerves beneath; peduncles generally 3-flowered; calyx clothed with silky tomentum. ♄. S. Native country unknown. Stem angularly furrowed, downy. Leaves ½ foot long, and hardly 2 inches broad. Corolla white. Perhaps the same as *I. arborescens*, Kunth. Peduncles terminal.

Mauritius-like Ipomœa. Tree.

212 I. SCABRA (Roem. et Schultes, syst. 4. p. 301, under *Convolvulus*,) twining; glabrous; leaves auriculately-hastate: hind-lobes rounded, obtuse, emarginate; peduncles 1-flowered.—Native of Porto Rico.

Eared-leaved Ipomœa. Pl. twining.

213 I. HEDERA'CEA (Roem. et Schultes, l. c. p. 303, under *Convolvulus*,) twining; leaves digitate, quinate, entire, acuminated, rather pilose; stems, peduncles, and calyxes hairy. ♃. ◠. S. Native in shady places, about Comana.

Grape Ipomœa. Pl. twining.

214 I. RHOMBEA (Roem. et Schultes, l. c. p. 302. under *Convolvulus*,) stems creeping, twining a little; leaves oblong, obtuse, mucronate; flowers axillary, racemose. ♃. ◠. S. Native about Havannah, among rubbish.

Lozy Ipomœa. Pl. creeping.

215 I. DENTICULA'TA (Roem. et Schultes, syst. 4. p. 303, under *Convolvulus*,) stem erect; leaves elliptic, denticulated, silky beneath; flowers axillary, sessile.—Native of America, Vahl.

Denticulated-leaved Ipomœa. Pl. erect.

216 I. SCA'BRA (Willd. rel. ex Roem. et Schultes, syst. 4. p. 789.) hairy, scabrous; leaves cordate, 3-lobed; peduncles 2-flowered. ☉. ◠. S. Native country unknown.

Scabrous Ipomœa. Pl. twining.

217 I. BAHI'ENSIS (Willd. l. c.) leaves cordately-hastate, acuminated, glabrous; peduncles 2-flowered; sepals membranous, blunt, glabrous; seeds woolly.—Native of Brazil, Hoffmannsegge. Conv. Bahiénsis, Spreng. syst. 1. p. 598. Ipomœa crenopétala, Bertero.

Bahia Ipomœa. Pl. twining.

218 I. TUBULO'SA (Willd. l. c.) leaves cordate, acuminated:

peduncles 1-flowered; tube of corolla cylindrical, elongated; limb undivided; bottom of stem, and underside of leaves, as well as the peduncles, muricated.—Native of tropical America. Perhaps a species of *Quamoclit*.

Tubular-flowered Ipomœa. PI. twining.

219 I. SIMPLEX (Thumb. prod. p. 36.) leaves lanceolate, entire; flowers solitary. ½. ◠. G. Native of the Cape of Good Hope. Conv. simplex, Spreng. syst. 1. p. 607.

Simple Ipomœa. Shrub twining.

Species only known by name.

1 I. hispidula, Ledeb. in hort. Dorpat. 1822. p. 11.—2 I. superba, Ledeb. l. c.—3 I. Simensis, Fisch. cat. hort. gor. p. 28.

Cult. All the species of *Ipomœa* are very showy when in blossom, and much admired. The shrubby and perennial herbaceous kinds require the same treatment as that recommended for *Exogonium*, see p. 264; and the annual species as those of *Pharbitis*, see p. 263.

XV. JACQUEMO'NTIA (named by Choisy, after Victor Jacquemont, who lately travelled in the East Indies in search of objects of natural history, where he died.) Choisy, in mem. soc. phys. gen. 6. p. 476.—Convólvulus and Ipomœa species of authors.

Lin. syst. *Pentándria, Monogýnia.* Calyx of 5 sepals. Corolla campanulate. Style one; stigmas 2, ovate, flattened. Ovarium 2-celled, 4-ovulate. Capsule 2-celled. Had.—Herbs or sub-shrubs, natives of South America.

1 J. CERULE'A (Choisy, l. c.) plant prostrate, rather creeping; leaves ovate, emarginate, quite glabrous; peduncles equal in length to the petioles, twice trifid; pedicels 1-flowered. Native of Guinea. Convolvulus cærúleus, Schum. pl. guin. p. 101. Root simple. The 3 outer calycine segments roundish, the 2 inner small. Corolla campanulate, blue, entire. Stigmas thickish, entire, recurved. Seeds naked. Said to be allied to *Conv. malifólius*.

Blue-flowered Jacquemontia. Pl. prostrate.

2 J. AZU'REA (Choisy, l. c.) stem, petioles, nerves, and margins of leaves downy; leaves oblong-cordate; peduncles long, fasciculately many-flowered. ¼. ◠. S. Native of South America. Conv. azúreus, Rich. act. soc. hist. nat. par. p. 107. Desr. in Lam. dict. 3. p. 554. Stem rather villous at top. Leaves subsinuated, glaucescent beneath. Sepals acute. Corollas small, blue.

Azure-flowered Jacquemontia. Pl. tw.

3 J. CAPITA'TA; pilose; leaves cordate, entire, acute; peduncles hardly longer than the petioles; flowers capitate, involucrated; sepals narrow, lanceolate. ☉. ◠. S. Native of Senegal. Conv. capitátus, Desr. in Lam. dict. 3. p. 554. Leaves 2 inches long, length of petioles. Peduncles bearing each a dense villous head of involucrated sessile flowers. Bracteas 6-7, unequal, length of calyxes.

Capitate-flowered Jacquemontia. Pl. tw.

4 J. MICRA'NTHA; leaves cordate-oblong, mucronate, rather downy; peduncles many-flowered, corymbose, short, somewhat verticillate. ¼. ◠. S. Native of St. Domingo, on rocks, among rocks. Conv. micránthus, Desr. in Lam. dict. 3. p. 556. Pers. ench. 1. p. 177.—Burm. amer. p. 85. t. 94. f. 2.—Plum. mss. 2. t. 62. Stems slender. Leaves bluntish, mucronate. Corollas small, campanulate, purplish, deeply 5-cleft, ex Desr. l. c. Capsule 4-celled; seeds fulvous, angular, ex Desr. l. c.

Small-flowered Jacquemontia. Pl. tw.

5 J. SORDIDA; rather tomentose; leaves ovate or subcordate; peduncles bifid, many-flowered, shorter than the leaves. ½. ◠. S. Native of the Island of Santa Cruz. Conv. sordidus, Desr. in Lam. dict. 3. p. 557. Vahl, eclog. 2. p. 14. Pers. ench. 1. p. 177. Conv. albiflórus West, herb. over. st. croix. p. 271. Leaves hoary beneath, with a short acumen. Peduncles divided above the middle into many short branches; bracteas subulate. Sepals scarious on the edges, equal, oblong, pale rusty, rather villous. Corollas white, campanulate; limb 5-cleft, crenulated. Corymbs 12-20-flowered.

Neat-flowered Jacquemontia. Shrub tw.

6 J. PANICULATA; glabrous; leaves ovate-cordate, acuminated, rather repand; peduncles umbellately 5-flowered; flowers nearly sessile; calyxes ciliated. ½. ◠. S. Native of tropical America? Conv. paniculatus, Jacq. coll. 4. p. 210. icon. rar. 2. t. 316. Willd. spec. 1. p. 867. Stem terete, glabrous. Leaves rather villous on the edges while young. Bracteas lanceolate, acuminated. Outer sepals larger, drawn out into a point, with reflexed sides; inner ones lanceolate, acuminated. Corolla campanulate, blue, with a paler star; lobes of limb roundish, acuminated. Lobes of stigma oblong.

Fire-flowered Jacquemontia. Shrub tw.

Cult. All the species are free flowerers, and of easy culture, requiring only common care. The annual species should be treated in the manner recommended for the species of *Pharbitis*, see p. 263; the twining, shrubby species should be treated in the manner recommended for *Calonyction*, see p. 265.

XVI. CONVOLVULUS (from *convolvo*, to entwine; twining habit of most of the species.) Choisy, in mem. soc. phys. gen. 6. p. 477.—Convólvulus species of authors.

Lin. syst. *Pentándria, Monogýnia.* Calyx of 5 sepals. Corolla campanulate. Style 1; stigmas 2, linear-cylindrical, often revolute. Ovarium 2-celled, 4-ovulate. Capsule 2-celled. —Herbs or sub-shrubs.

SECT. I. ORTHOCAU'LOS (from ὀρθος, *orthos*, straight; and καυλος, *kaulos*, a stem; in reference to the stems being straight, never twining.) Stems erect or prostrate.

5 l. *Leaves entire, ovate-oblong, spatulate, lanceolate, or linear.*

* *Shrubby or herbaceous perennial plants. Peduncles* 1-2-3-6-*flowered.*

1 C. PERRICAU'LIS (Choisy, in mem. soc. phys. gen. 6. p. 477.) stems suffruticose, villous, many rising from the same root; leaves linear, dilated at apex, sessile, much crowded at the base; flowers 2-3 together, axillary, nearly sessile; sepals linear, acuminated, acute. ½. Native of the East Indies, at Buxar, Hurdwar, Bhaugulpur, and Vikram, on mountains in the south of Hindostan. Evólvulus ferrugíneus, Wall. cat. no. 1316. Conv. spicæfólius, Ham. herb. Stems simple. Leaves bluntish, villous or ciliated. Flowers rising from the base to the top of the stem, forming a spike. Corolla glabrous, twice longer than the calyx. Every part of the plant is hairy.

Hoary-stemmed Bind-weed. Pl. ½ foot.

2 C. MICROPHY'LLUS (Sieb. ex Spreng. syst. 1. p. 611.) stem branched, suffruticose at the base; leaves linear, sessile, villous, as well as the branches, which are twiggy; peduncles 1-flowered, about equal in length to the leaves; sepals acute. ½. H. Native of Egypt.

Small-leaved Bind-weed. Shrub small.

3 C. ERINA'CEUS (Ledeb. in litt. ex Meyer. verz. pflanz. p. 105.) plant silky, stems much branched, shrubby at the base; branches and branchlets very long and spreading; leaves linear; caudine ones elongated; those of the branches and branchlets minute; peduncles solitary, generally 1-flowered, about equal in length to the bracteas; flowers; sepals elliptic, silky, as well as the 5-cleft corolla. ½. H. Native of Caucasus, in the loose sand

towards the Caspian sea, and Gallipoli, near the Karavanserai Enrek.

Evanescent Bind-weed. Shrub dwarf.

4 C. LANA'TUS (Willd. herb. ex Spreng. syst. 1. p. 610.) stems decumbent, branched, woolly; leaves linear, elongated, attenuated at the base, nearly naked; peduncles elongated, 1-flowered; sepals acute, and are, as well as the corollas, woolly outside. ♃. H. Native of North America.

Woolly-flowered Bind-weed. Pl. decumbent.

5 C. HOUTTEA'NUS (Choisy, l. c.) stem simple, biennial; leaves linear, acute, almost sessile, clothed with rusty hairs on both surfaces; peduncles 3-flowered, at first short, but at length elongated; sepals ovate, acuminated, very acute; outer ones rather the longest, hairy; corolla very small. ♃. ? G. Native of Madura. *Retzia pilosa*, Roxb. herb. ex Wall. cat. no. 6689. Stems very leafy the first year, clothed with rusty hairs, as well as the peduncles, branchlets, and leaves. Corolla tubular, clothed with rusty hairs outside: the apex, ending in 5 taper points. Ovarium glabrous. Nearly allied to *Conv. fasciatus*.

Bottler's Bind-weed. Pl. ½ foot.

6 C. LINEA'TUS (Lin. spec. p. 224.) root creeping; floriferous stems erect, simple, corymbose at top; leaves lanceolate, petiolate, acute, silky, villous, lined; peduncles 1-2-flowered, shorter than the leaves; sepals rather foliaceous, silky; corolla hairy outside. ♃. H. Native of Spain, Italy, by the Mediterranean Sea, and of Greece. Sibth. et Smith. fl. græc. t. 139. Conv. spicatus, Desr. in Lam. dict. 1. p. 549.—Mor. hist. 2. p. 17. sect. 1. t. 4. f. 2. bad.—Barrel. icon. t. 317.—Triumf. obs. 91. t. 90. f. 2.—Tourn. cor. p. 1. Leaves narrowed at the base. Peduncles bibracteate. Flowers pale reddish purple.

Lined-leaved Bind-weed. Fl. June, July. Clt. 1714. Pl. ½ to ¾ foot.

7 C. BETA'CEUS (Spreng. syst. 1. p. 610. Lad. fl. alt. 1. p. 226.) leaves spatolate, running into the petioles, silky, lined; peduncles very short, mostly 2-flowered; sepals ovate, acute; stem suffruticose. ♄. H. Native of Siberia, in sandy places, at the river Bekuni, near Lokzaesk; and of Podolia. Conv. lineatus, Bieb. fl. casc. 1. p. 146. Ross. enum. pl. volh. p. 43. no. 1552.

Beaver's Bind-weed. Shrub small, ½ to ¾ foot.

8 C. GERA'RII (Roem. et Schultes. syst. 4. p. 294.) root creeping; stem villous, weak; branches very short; leaves lanceolate, dilated and obtuse, silky; peduncles axillary and terminal, 2-flowered, shorter than the leaves; sepals small, ovate, acute, silky; corolla villous outside. ♃. H. Native of Spain, and the south of France. Ger. prov. p. 317. no. 3. Conv. lineatus, Desr. in Lam. dict. 3. p. 535, exclusive of the synonymes. D. C. fl. fr. no. 2750. Conv. Cneorum β, Gouan, hort. monsp. p. 94.—Barrel. icon. t. 311.—Munting. p. 29. t. 110.—Tourn. inst. p. 84. Stems rather angular. Lower leaves approximate. Calyx with 2 small bracteas under it. Corolla middle sized, a little spreading, rufescent.

Gerard's Bind-weed. Fl. June, July. Clt. ? Pl. ½ foot.

9 C. TATARICUS (Lois. not. p. 40. journ. de bot. 3. p. 264.) root creeping?; stems erect, simple; leaves lanceolate, downy; peduncles axillary and terminal, 1-2-flowered, about equal in length to the leaves; bracteas twin, longer than the calyx. ♃. H. Native of France, near Avignon. C. lineatus, β, Poir. suppl. 2. p. 474. D. C. fl. fr. suppl. p. 423. Very like *C. Cantabrica*, but differs in being clothed with short down, not silky, and the stems 8-10 inches, and more, high. It is also allied to *C. Cantabrica*, but the stems are not branched, as in that plant, and the peduncles are shorter. Corollas purple or white.

Intermediate Bind-weed. Pl. ½ foot.

10 C. SCOPA'RIUS (Ait. hort. kew. 1. p. 214.) stem shrubby; branches twiggy; leaves linear, rather pilose; peduncles generally 3-flowered; calyx silky; sepals ovate, acute. ♄. G. Native of Teneriffe, on the mountains near the town of Santa Cruz. Willd. spec. 1. p. 872. Vent. choix. t. 21. Habit of a species of *Spartium* or *Genista*. Stem erect, glabrous. Leaves short, remote. Racemes terminal, somewhat secund. Corolla white, hairy outside. Wood hard and white, with radiating stripes; and is, perhaps, according to Lin. the *Lignum Rhodium* of the shops. Capsule 1-celled, 1-seeded, dehiscing at the base.

Broom-like Bind-weed. Fl. Aug. Sept. Clt. 1733. Shrub.

11 C. FRUTICOSUS (Willd. herb. ex Spreng. syst. 1. p. 610.) leaves oblong-subspatolate, obtuse, mucronulate, clothed with stellate down when young, as well as the branches; peduncles usually 4-flowered, shorter than the leaves; sepals glabrous, scurfish. ♄. F. Native country unknown.

Leafy Bind-weed. Pl. erect, suffruticose.

12 C. ARGYROPHYLLUS (Lin. suppl. 137.) shrubby, erect; leaves linear, canescent; peduncles axillary, erect, 1-flowered; sepals lanceolate, glabrous, hoary. ♄. G. Native of the Cape of Good Hope. Willd. spec. 1. p. 872. Habit of *C. althæoides*. Stem terete, reddish. Peduncles at the tops of the stems. Bracteas subulate, recurved. Corolla funnel-shaped, large, fulvous.

Evening-Primrose-like Bind-weed. Shrub erect.

13 C. HELIANTHEMIFOLIUS (Poir. dict. 2. p. 463.) shrubby, villous; leaves sessile, small, narrow-lanceolate, acute; flowers small, almost solitary; calyx villous; sepals lanceolate, acute. ♄. G. Native of America. Conv. minimus, Vitm. summ. pl. 1. p. 424. Gmel. syst. veg. 1. p. 341.—Plum. amer. mss. t. 6. f. 42.—Tourn. cor. 84. Plant densely clothed with cinereous down or villi. Stem divided from the base into many short, spreading branches. Peduncles filiform, villous, length of leaves. 1- rarely 2-flowered. Corolla blue.

Sun-rose-leaved Bind-weed. Shrub ½ foot.

14 C. HELIANTHEMIFOLIUS (Bieb. fl. taur. 1. p. 147. cent. pl. rost. t. 24.) the whole plant clothed with shining, silky hairs; leaves linear-lanceolate, blunt-ish; peduncles usually 1-flowered, longer than the leaves; sepals ovate, acute: the 3 outer ones inflately gibbous in the disk. ♃. H. Native of Tauria, on calcareous mountains, along with *C. cantabrica*. C. procumbens, Pall. ind. Bracteas linear, about equal in length to the calyx. Flowers a little larger than those of *C. Dorycnium*. Corolla milk-coloured, silky outside.

Silky Bind-weed. Fl. June, July. Clt. 1824. Pl. procumbent.

15 C. DORYCNIUM (Lin. spec. 224.) stem shrubby, dichotomously panicled; branches stiff; flowers sessile, solitary, terminating the branches lateral, and in the forks of the branches; leaves lanceolate, villous, sessile; sepals naked-ish, obtuse, mucronate. ♄. H. Native of the Levant; Candia, near Canea; and on road sides, about Corinth. Willd. spec. 1. p. 871. Desr. in Lam. dict. 3. p. 548. Sibth. et Smith. fl. græc. t. 201.—Tourn. inst. p. 84. Habit different from other species of *Convolvulus*. Corolla campanulate, spreading, villous outside, 3-4 times longer than the calyx, rose coloured.

Dorycnium-like Bind-weed. Fl. June, July. Clt. 1806. Shrub 1½ foot.

16 C. SUFFRUTICOSUS (Desf. atl. 1. p. 175. t. 48.) suffruticose, villous; stems ascending; leaves narrow-lanceolate, acuminated, peduncles 1-flowered, 3 times longer than the leaves; sepals villous, ovate-oblong, acute. ♃. H. Native of Atlas, near Tlemsen; and of Greece. Sibth. prod. fl. græc. 1. p. 135. This species differs from *C. Cantabrica*, in the stem being suffruticose; in the corolla being twice or thrice larger, beset with spreading, not adpressed hairs. Corolla pale red or white. Stems tufted. Bracteas setaceous.

Suffruticose Bind-weed. Shrub 1 foot.

17 C. CANTA'BRICA (Lin. spec. 223.) plant hirsut with spread-

ing hairs; stems branched, prostrate; leaves oblong-lanceolate, acute; sepals narrow, very villous; peduncles usually 2-3-flowered. ♃. H. Native of the south of Europe, north of Africa, and of Tauria. Willd. spec. 1. p. 808. Bieb. fl. taur. 1. p. 147. Smith, prod. fl. græc. 1. p. 135. Jacq. fl. austr. t. 230.—Mor. hist. 2. p. 17. sect. 1. t. 4. f. 5.—Tourn. inst. p. 82. and 84. This species is readily distinguished from *C. lineatus*, *C. pentilis*, and *C. holosericeus*, by the hairs being spreading, and by the narrow, very villous sepals. Corollas pale red.

Var. β, terrestris (Lin. spec. 224.) leaves linear, silky; peduncles generally 3-flowered; calyx hairy, mucronate. ♃. H. Conv. terrestris, Dalech. hist. 1429. Bauh. hist. 2. p. 100.

Var. γ; stem erect. ♃. H. Ait. hort. kew. ed. 2d. vol. 1. p. 336.

Cantabrian Bind-weed. Fl. Aug. Sept. Cult. 1650. Pl. ½ to 1 foot, prostrate.

18 C. PALLIDUS (Cav. icon. 6. p. 80. t. 600. f. 2.) stems slender, terete, erect, branched, pilose; leaves sessile, linear-lanceolate, hairy; flowers solitary, minute, rather tomentose; sepals ovate-lanceolate, villous. ♃? S. Native of Mexico, in the vicinity of Acapulco, in marshy places. Poir. suppl. 3. p. 465. Leaves an inch long, and a line broad. Peduncles bibracteate, racemose. Corolla yellow, rather tomentose outside, campanulate, 2 times longer than the calyx, ending in 5 obtuse lobes or crenæ.

Marsh Bind-weed. Pl. 1 foot.

19 C. PARVUS (Lin. amœn. acad. 2. p. 241.) tomentose; leaves oval, obtuse, on very short petioles; peduncles 1-flowered, length of leaves; sepals ovate; inner ones smaller. ♃. H. Native of Persia, on the shores of the Caspian Sea, and in the sand, by the Euxine Sea, near Cazar. Willd. spec. 1. p. 874. Bieb. fl. taur. 1. p. 148. —Gmel. sib. 3. p. 86. t. 7. Stems thickness of a writing-quill, terete. Stigmas linear, thickish. Corolla white.

Persian Bind-weed. Pl. 1 foot?

20 C. TRIFIDUS (Thunb. fl. jap. p. 85. Willd. spec. 1. p. 860.) stems filiform, glabrous, simple; leaves opposite, petiolate, ovate-oblong, glabrous, 3-nerved; peduncles very short, generally 1-flowered, seldom 2-flowered. ♃. H. Native of Japan. Leaves pale beneath. Sepals lanceolate-setaceous, glabrous, one-half the length of the corolla. Corolla purple. Stigmas capitate. A species of *Ipomœa*, or a distinct genus, with opposite leaves.

Three-nerved-leaved Bind-weed. Pl. ew. se erect.

21 C. AMMANII (Desr. in Lam. dict. 3. p. 549. Bunge, pl. chin. in mem. acad. petersb. 6. p. 46. Led. fl. alt. 1. p. 260.) plant clothed with silky hairs; stems procumbent; leaves linear, or oblong-linear; peduncles 1-flowered, length of leaves, spreading; bracteas equal in length to the calyxes; sepals ovate, acute. ♃. H. Native of Siberia, at the rivers Jenisea, Tschatysch, Kan, Uluguiun, and Tschuga, and throughout the Kergis-ean steppe, and at Lake Baikal: and of the north of China, in sterile, gravelly places. Willd. spec. 1. p. 870.—Amm. ruth. p. 5. no. 6.—Gmel. sib. 4. p. 93. no. 31. Peduncles furnished with 2 linear bracteas in the middle. Corolla marked by 5 silky lines outside, disposed in a stellate manner, white, with purple tips.

Ammann's Bind-weed. Pl. ¼ foot.

22 C. SERICEUS (Lin. suppl. 137. Willd. spec. 1. p. 871. Bunge, enum. pl. chin. in mem. acad. petersb. 6. p. 47.) shrubby; the whole plant hoar with white, glittering, silky hairs; leaves spatulate-lanceolate, or oblong, silky, sessile; peduncles elongated, 1-flowered; floriferous branches erectish, silky. ♄. H. Native of Siberia, on sandy hills; at the river Irtysch; and of the north of China. Conv. fruticosus, Pall. it. 2. p. 734. t. M. Stem branched at top; branches horizontal, stiff, terminated each by a small, erect, whitish flower. The rudiments of branchlets in the axils of the leaves, and branches are changed into spines. Plant somewhat flexile, hardly climbing. Limb of corolla 5-cleft.

Var. β; calyx quite glabrous. ♄. H. Native of Persia. Desr. in Lam. dict. 3. p. 549. Conv. spinosus, Burm. fl. ind. p. 47. t. 19. f. 4.

Spiny Bind-weed. Pl.

23 C. TRAGACANTHOIDES (Turcz. dec. p. 22. Clusiy, in mem. soc. phys. gen. 6. p. 478.) shrubby; stems diffuse, branched; branches spiny at length; leaves linear; flowers terminal, nearly sessile, bracteless; sepals ovate, abruptly acute, 3 times shorter than the corolla. ♄. H. Native of Mongolia, at Zorgeitaigoun. Nearly allied to the 2 preceding, but differs from the first in the branches being at length spinescent, in the flowers being larger, and in the form of the sepals; and from the second in the more dwarf habit, in the linear leaves, and in the flowers terminating the stems among the branches. Corolla purple.

Tragacanth-like Bind-weed. Shrub.

24 C. HYSTRIX (Vahl, symb. 1. p. 16. Willd. spec. 1. p. 871.) shrubby, much branched, stiff, diffuse; branchlets silky, spinescent; leaves sessile, oblong, silky; flowers sessile, usually solitary, rarely twin; calyx hairy; 2 outer sepals oblong, stiff, larger than the inner 3. ♄. G. Native of Arabia, at Dahki. Conv. spinosus, Forsk. cat. arab. p. 196. no. 101. Leaves small. Bracteas 2, at the base of the calyx, oblong, acutish, ruffened. Corolla small, hairy.

Porcupine Bind-weed. Shrub 1 foot.

* * *Flowers capitate, or umbellate. Shrubby or herbaceous perennial plants.*

25 C. CNEORUM (Lin. spec. 224.) stems shrubby, bramched; leaves lanceolate-obovate, clothed with silky tomentum; flowers capitate on short peduncles; bracteas, some of them, as large as the leaves, and are, as well as the calyxes, hairy. ♄. F. Native of Spain, Crete, and Syria, and the Island of Samos, on rocks. Smith. et Smith. fl. græc. t. 200. Curt. bot. mag. 459.—*C. argenteus*, Desr. in Lam. dict. 3 p. 552.—Tourn. inst. p. 84.—Mor. hist. 2. p. 11. sect. 1. t. 3. f. 1.—Barrel, icon. rar. 4. p. 670.—Bocc. mus. 2. p. 70. t. 70.—Dorycnium, Clus. hist. 2. p. 154. —Cneorum album folio argenteo molli, Bauh. pin. p. 468. Plant clothed with silky silvery down. Leaves sessile, attenuated at the base, mucronate. Corollas white or pale red, hairy outside.

Widow-Wail-like Bind-weed. Fl. May, Sept. Cult. 1640. Shrub 1-3 feet.

26 C. SAXATILIS (Vahl, symb. 3. p. 33.) very hairy; stems erect; leaves linear; flowers capitate; sepals acuminated. ♃. H. Native of Spain, on hills. France, Italy, Tauria. Bieb. fl. taur. 1. p. 146. Lapeyr. abr. p. 101. Conv. lanuginosus, Desr. in Lam. dict. 3. p. 551, exclusive of the syn. of Bocc. t. 70, and Barrel. t. 670. Conv. cneorum, Hablitz, taur. p. 147. Conv. pusillus, Pall. ind. taur.—Bocc. mus. t. 26. Tourn. inst. p. 84. Corolla white, purplish, and villous outside. Heads of flowers girded by 5 unequal leaves or bracteas. Stem clothed with white tomentum.

Var. β, humilior (Roem. et Schultes, syst. 4. p. 295.) Conv. lanuginosus, β, Desr. in Lam. dict. 3. p. 551. Conv. capitatus, Cav. icon. 2. p. 72. t. 189. descr. p. 97.—Tourn. cor. p. 4. Stem erect.

Var. γ; stems half a foot high, declinate. ♃. H. Conv. saxatilis, Bieb. fl. taur. 1. p. 147. Conv. Dorycnium, Pall. ind.

Stone Bind-weed. Fl. Ju. Aug. Cult. 1796. Pl. ½ foot.

27 C. LANATUS (Vahl, symb. 1. p. 16.) shrubby; old branches leafless, sterile, spinose, rather villous; leaves lanceolate, obtuse, tomentose; flowers capitate, involucrated; sepals ovate-lanceolate. ♄. F. Native of Lower Egypt, on Mount Sinai;

sual of Candia, on dry hills. Willd. spec. 1. p. 871. Sibth. et Smith. fl. græc. t. 207. C. cneorum, Forsk. æt. ægypt. p. 62. no. 100. C. sericeus, Burm. ind. p. 49. t. 12. f. 2. f.—Tourn. cor. 1. Flower-bearing branches simple from the base of the old ones, very hairy. Leaves sessile. Floral or involucral leaves 6, a little broader than the rest, very hairy. Pedunches axillary, shorter than the leaves, hairy. Corolla villous outside, white or reddish.

Woolly Bind-weed. Shrub 1-2 feet.

28 C. saxifragus (Sieb. pl. exst. ex Link. enum. 1. p. 201.) stem shrubby, branched; leaves oblong-lanceolate, blueish, nearly sessile, veiny, clothed with woolly villi; flowers in lateral, involucrated, sessile fascicles; bracteas ovate: sepals foliaceous, lanceolate. ♄. F. Native of Palestine.

Saxifrage-leaved Bind-weed. Fl. May. Sept. Cl. 1822. Pl.

29 C. cneorum (Desr. in Lam. dict. 2. p. 555.) plant clothed with rusty tomentum; stem frutescent, a little branched; leaves sessile, lanceolate, scattered on the branches; heads of flowers sessile, connexus, nearly sessile; flowers sessile, or on very short peduncls. ♄. H. Native of the Levant, about Damascus. Stem terete. Leaves furrowed from nerves an inch long. Flowers 5-6 in a head. Bracteas intermixed with the calyxes, and a little longer than them. Corolla rather villous outside, size of those of *C. cneorum*.

Second-leaved Bind-weed. Pl. ½ to 1 foot.

30 C. sericeus (Desr. in Lam. dict. 2. p. 555. exclusive of var. β.) shrubby, silky; leaves linear-lanceolate; flowers capitately umbellate, terminal, involucrated; sepals lanceolate. ♄. H. Native of the Levant. Doryenium, Pyrosp. Alp. exot. p. 75. This species is very nearly allied to *C. cneorum*; but it differs in the sepals being twice longer, and lanceolate. Leaves acutish, 1½ inch long, and 2-3 lines broad.

Olive-leaved Bind-weed. Shrub 1-2 feet.

31 C. tiliæfolius (Curt. bot. mag. 289.) erect, shrubby; leaves linear, acute, clothed with silky hairs; flowers terminal, umbellately panicled; calyx hairy. ♄. F. Native of Spain and South of France. Willd. spec. 1. p. 869. Convv. oleifolius, fl. Desr. in Lam. dict. 3. p. 558. D. C. fl. fr. suppl. no. 2702. Conv. Tournefortii, Sieb.—Tourn. cor. p. 1. Plant silvery. Flowers 3-6 together on long peduncles, girded by 2-4 bracteas, which are hardly longer than the calyxes. Corollas very pale red.

Linear-leaved Bind-weed. Fl. Jn. July. Cl. 1770. Shrub ½ to 1½ foot.

32 C. frutex (Vahl. eclog. 1. p. 18.) shrubby, erect; leaves linear, silky beneath; heads of flowers terminal, and in the forks of the branches; bracteas ovate, very hairy outside. ♄. F. Native of South America. Habit of *C. Cantabrica*. Branches filiform, glabrous at bottom, and tomentose above, bifid at apex. Superior leaves remote: lower ones crowded, glabrous above. Heads of flowers size of a filbert. Bracteas 5 times broader than the leaves, acuminated, glabrous inside. Flowers solitary in the axils of the bracteas.

Prostrate Bind-weed. Shrub erect.

33 C. humifusus (Lin. suppl. 136.) plant shrubby, prostrate, hoary; leaves linear-lanceolate, rather pilose; thyrse terminal, pyramidal, panicled; sepals ovate, concave, acute. ♄. G. Native of Teneriffe, on rocks. Jacq. coll. 1. p. 82. icon. rar. t. 34. Ait. hort. kew. 1. p. 224. Willd. spec. 1. p. 876. Very like *C. cneorum*. Leaves attenuated at the base. Peduncles branched, rising from the axils of the superior leaves, the whole forming a large, ovate, thyrsoid panicle. Flowers very numerous, small. Corolla pale red, or whitish, hairy outside.

Flowery Bind-weed. Fl. Aug. Sept. Cl. 1779. Shrub procumbent.

* * * *annual plants.*

34 C. hirsutissimus (Desr. in Lam. dict. 3. p. 551.) plant villous; axillary branches floriferous; leaves ovulate-lanceolate, sessile; peduncles elongated, many-flowered (few-flowered ex Willd.), hoarsely racemose. ☉. H. Native of the Levant. Willd. spec. 1. p. 870.—Tourn. cor. 1. Leaves and stems green, but pilose. Peduncles 4-6-flowered; bracteas small, lanceolate. Sepals ovate, acute, villous, twice longer than the corolla. Corolla small, campanulate. The Conv. ramosus, incanus, folio pilosello, Tour. cor. 61, is probably a syn. of this, and therefore Conv. *linariifolius*, Mill. dict. no. 28.

Pilosella-like Bind-weed. Pl. prostrate.

35 C. repandus (Lin. hort. cliff. p. 19.) stem declinate, terete, beset with small soft, white hairs; leaves ovate-lanceolate, or spatulate, hairy, ciliated; peduncles 1 flowered, bibracteate, longer than the leaves; sepals ovate-lanceolate, acute. ☉. H. Native of Sicily, Spain, Portugal; on the hills of Ajuda, near Lisbon; and of the North of Africa. Willd. spec. 1. p. 874. Link, fl. port. 1. p. 398. Curt. bot. mag. t. 27. St. Hil. 16. t. 3.—Kniph. cent. 3. no. 26.—Mor. hist. 2. p. 17. sect. 1. t. 4. f. 4. Corolla rather large, with a yellowish throat, a blue limb, the rest white. This is a very common annual in gardens. There is also a variety with almost white flowers.

Three-coloured-flowered Bind-weed. Fl. July, Sept. Cl. 1629. Pl. 1 foot.

36 C. Sibthorpianus (Pursh. fl. amer. sept. 2. p. 50.) trailing, downy; leaves elliptic, retuse at both ends, mucronate; flowers solitary, nearly sessile. ☉. H. Native of Carolina, Catesby. Nearly allied to *Conv. tricolor*.

Sherard's Bind-weed. Pl. trailing.

37 C. ramosissimus (Michx. fl. bor. amer. 1. p. 137.) plant trailing, downy; leaves lanceolate-oblong, linear or oblong, obtuse, mucronate, nearly sessile; peduncles 1-3-flowered, longer than the leaves; sepals ovate, acute; corolla short, campanulate, hairy outside. ☉. H. Native from Virginia to Georgia, in sandy woods. Pursh. fl. 1. p. 143. Flowers small, white. Capsule ovate, downy.

Var. α, *patens* (Desr. in Lam. dict. 2. p. 547. ill. 1. p. 453.) plant filiform, erectish; leaves linear, mucronate; peduncles spreading, longer than the leaves, usually 2 flowered. ☉. H. *C. æquinoctialis*, Walt. fl. carol. p. 94.

Var. β, *teretifolius* (Lam. ill. 1. p. 459. Pursh. fl. 1. p. 143.) twining; leaves oblong-elliptic, obtuse, mucronate, nearly sessile; peduncles longer than the leaves, usually 2-flowered. ☉. H. *C. humistratus*, Walt. fl. carol. p. 94. Pluk. alm. t. 166. f. 4.

Hairy-flowered Bind-weed. Pl. trailing.

38 C. pentapetaloides (Lin. syst. 3. p. 229.) plant prostrate, filiform; stems rather hairy at top; lower leaves petiolate, sagittate-lanceolate, obtuse, nearly naked, lined, ciliated: upper ones linear-cuneiform, sessile; peduncles short, 1-flowered, rather pilose. ☉. H. Native of Majorca, Calabria, and the Grecian Islands. Willd. spec. 1. p. 867. excludes the syn. of Jacq. Sibth et Smith, fl. græc. t. 127. *C. prostratus*, Forsk. descr. p. 202. Roth, beytr. 1. p. 121. abhandl. p. 11. ox. 10. t. 3. exclusive hot. 1. p. 292. p. 22.—Tourn. inst. p. 85. Herb very like *C. tricolor*, but smaller. Bracteas very small. Corolla form of that of *Conv. Cantabrica*, but 3 times smaller, bluish, with a yellow throat, and a semi 5-cleft limb.

Five-petalled-like-flowered Bind-weed. Fl. June, July. Cl. 1759. Pl. trailing.

39 C. hederaceus (Link, et Hoffm. fl. port. 1. p. 369.) stems angular, downy at top, ascending; leaves lanceolate, sessile, with a few scattered hairs; peduncles 1-flowered, longer than the leaves; calyx with a few scattered hairs; sepals oval,

acutish. ☉. H. Native of Portugal, in calcareous places about Coimbra. *C. tricolor*, β. *minor*, Brot. fl. lus. 1. p. 268. Leaves narrowed at the base. Bracteas obsolete. Corolla pale blue, with a yellowish bottom. Very nearly allied to *C. sicculus*, but differs in the corollas being smaller, paler, in the obsolete bracteas, and hairiness.

Small-flowered Bind-weed. Fl. June, July. Clt.? Pl. ½ to 1 foot.

40 C. **sylvestris** (Lehm. sem. hort. hamb. 1825. p. 17. pag. 1. p. 16.) stems nearly simple, straight, villous; lower leaves oblong-spatulate; superior ones lanceolate, spreadingly pilose; sepals unequal, foliaceous; bracteas shorter than the calyx; pedunicles 1-flowered, villous, shorter than the leaves. ☉. H. Native of Egypt. Calyx woolly. Corolla fennel-shaped, white; tube length of calyx; limb pale rose-coloured at the pleat. Capsule ovate, pilose at apex, length of calyx.

Straight Bind-weed. Fl. June, Aug. Clt. 1822. Pl. ¼ to ½ foot.

41 C. **undulatus** (Cav. icon. 3. p. 89. t. 277. f. 1. ann. descript. nat. 3. p. 17.) stems prostrate, erect, rather villous; leaves spatulate, obtuse, sessile, pilose; flowers axillary, solitary, sessile; sepals oblong-ovate, acute, villous. ☉. H. Native of Tunis, near Sfaks; in the Island of Cyprus; also near Tangier; Spain, about the canal near Madrid. *C. humilis*, Jacq. coll. 4. p. 209. t. 22. f. 2. *C. evolvuloides*, Desf. fl. atl. 1. p. 178. t. 49. Sibth. et Smith, fl. græc. t. 198. *C. edictus*, Roth, catalec. 1. p. 29. 2. p. 22. Pers. ench. 1. p. 180. Willd. enum. 1. p. 205. *C. dorycnioides*, Ortega. Stems reddish. Leaves villous, usually undulated, spatulate, ex Desf. Corolla longer than the calyx, with a red and white limb, and a yellow tube, ex Cav. blue, ex Desf. blue, with a white throat, ex Smith. Capsule villous.

Undulated-leaved Bind-weed. Fl. June, Oct. Clt. 1810. Pl. prostrate.

§ 2. *Leaves cordate. Annual plants.*

42 C. **Siculus** (Lin. spec. p. 223.) stems trailing; leaves cordate-ovate: superior ones acute, all hairy; peduncles 1-flowered, shorter than the leaves; bracteas lanceolate, below the calyx; sepals hairy, ovate, acute. ☉. H. Native of Sicily; Spain, in Valencia; Island of Hieria; Peloponnesus; Candia, in shady mountains; as well as of Mauritania and Teneriffe. Willd. spec. 1. p. 866. Lam. dict. 3. p. 740. Sibth. et Smith, fl. græc. t. 196. Ker. bot. reg. 445.—Pace etc. p. 89. t. 48.—Tourn. inst. 83. Stems filiform, angular, beset with adpressed hairs above, and spreading ones at bottom. Corolla small, blue, with a white throat. Stem twining a little.

Sicilian Bind-weed. Fl. June, Aug. Clt. 1640. Plant ½ to 1 foot.

43 C. **elegans** (Willd. enum. 1. p. 205.) leaves cordate-ovate, cuspidate; peduncles 1-2-flowered, longer than the leaves; bracteas linear-subulate, shorter than the pedicels; calyxes ciliated. ☉. H. Native of the Canaries. Ker. bot. reg. t. 408. *C. pseudo-Siculus*, Cav. descr. p. 97. Very like *Conv. Siculus*, but differs in the leaves being broader; in the bracteas not being close to the calyx. Corolla white, having the tube yellow inside. Stems twining a little.

Elongated-peduncled Bind-weed. Fl. July, Aug. Clt. 1813. Pl. 1 foot.

44 C. **ovalifolius** (Roem. et Schultes, syst. 4. p. 284.) stems decumbent, diffuse; leaves cordate, acuminated; peduncles secund, very long; flowers subumbellate; sepals equal, ovate, blunt. ☉. H. S. Native of Peru, on sandy hills; as between Santa Rosa and Yaso, in the valley of Canta. *C. secundus*, Ruiz. et Pav. fl. per. 2. p. 10. t. 117. f. 2. Poir. suppl. 3. p. 472. but not of Desr. in Lam. dict. Leaves petiolate, as long as broad, white beneath, acute or obtuse, with an emarginate point. Pedicels bracteate; bracteas small, subulate. Corolla rather large, blue. Stamens exserted. Stigmas flat.

Oval-leaved-flowered Bind-weed. Pl. decumbent.

45 C.? **sagittifolius** (Desr. in Lam. dict. 3. p. 541.) stem slender, twining a little; leaves cordate-sagittate, blunt behind; peduncles 1, rarely 3-flowered, bracteas, shorter than the petioles; outer sepals the broadest. ☉. H. Native country unknown. Pers. ench. 1. p. 180. Very similar to *C. Sicculus* at first sight; but the leaves and whole plant are larger, and beset with short white hairs. Corolla small, white. Stigmas 2, globular. Perhaps a species of *Ipomœa*.

Bracteas Bind-weed. Pl. trailing.

§ 3. *Leaves cordately lobed, or hastate. Annual and perennial plants.*

46 C. **batatas** (Vahl, symb. 1. p. 17.) glabrous, trailing creeping; leaves panduriform or entire, emarginate, cordate at the base; peduncles 1-flowered, length of leaves, sometimes twin; sepals ovate, obtuse, rather transparent. ♃. H. Native along the Mediterranean Sea; and of the kingdom of Naples and Mauritania. Willd. spec. 1. p. 896. *C. stolonifera*, Desr. in Lam. dict. 3. p. 538. Cyr. pl. rar. fasc. 1. p. 14. t. 8. *Ipomœa's stolonifera*, Poir. dict. 6. p. 20. *C. sinuatus*, Peragn. hist. bot. 2. p. 553.—Mor. hist. 2. sect. 1. p. 15. t. 7.—Barrel. obs. p. 35. icon. 856.—*Convolvulo Marino Imperati*, no. 671. p. 707. Leaves usually lobately palmate, ex Peragna. Peduncles bracteas small. Corolla large, campanulate, cream-coloured. Plant lactescent. Very like *Calystegia soldanella*.

Imperati's Bind-weed. Pl. creeping.

47 C.? **sagittifolius** (Thunb. prod. 35.) glabrous; stems filiform, prostrate; leaves lanceolate-sagittate: hind lobes acute, deflexed; peduncles 1-flowered, longer than the leaves.—Native of the Cape of Good Hope. Willd. spec. 1. p. 877. Sepals ovate, obtuse, concave, equal, glabrous. Corollas small, clothed with rusty villi outside.

Sagittate-leaved Bind-weed. Pl. trailing.

48 C.? **triflorus** (Mill. dict. no. 10. Willd. spec. 1. p. 873.) stem and petioles pilose; leaves cordate and subhastate, villous; peduncles many-flowered; pedicels naked; flowers alternate, pedicellate, having a small lanceolate bractea on each pedicel.—Native of the East Indies.

Hairy Bind-weed. Fl. June, Aug. Clt. 1806. Pl. twining.?

49 C. **Capensis** (Willd. spec. 1. p. 877.) stems ascending, glabrous; leaves linear, hastate at the base; lobes divaricate, small, glabrous, semibifid; peduncles 1-flowered, length of leaves; stems decumbent, villous; sepals ovate, acuminated, equal.—Native of the Cape of Good Hope. C. *hastatus*, Thunb. prod. p. 35. Corolla large, downy outside.

Cape Bind-weed. Pl. trailing.

50 C. **subzonatus** (Lin. suppl. p. 135.) procumbent, pilose; lower leaves cordate; superior ones repandly toothed at apex; flowers capitate, usually 3 in a head, surrounded by a 6-leaved involucrum. ☉. H. Native of India. Willd. spec. 1. p. 877. Corolla large.

Subhastate-leaved Bind-weed. Pl. procumbent.

51 C.? **edulis** (Thunb. jap. p. 84.) stem creeping, angular; leaves cordate, entire, or 3-lobed, glabrous. ♃. G. Native of Japan. Willd. spec. 1. p. 875. Tubers large, fleshy, as in *Batatas edulis*, or sweet potatoe, eatable, of a very pleasant flavour. Perhaps only a variety of *Batatas edulis*.

Edible-rooted Bind-weed. Pl. creeping.

§ 4. *Leaves pinnate, jagged, or palmate. Annual and perennial plants.*

52 C. PLATYCLADUS (Cav. icon. 5. p. 55. t. 482.) stems prostrate, villous; leaves pinnate: leaflets sessile, often 3-lobed at apex, connate at the base; racemes terminal; pedicels distant, 1-flowered; sepals villous, nearly linear. ⊙.? G. Native of Mexico, about Chalma. Poir. suppl. 2. p. 472. Corolla campanulate, twice longer than the calyx, scarlet, divided even to the middle, into roundish segments, lined with green. Stamens villous at the base, with red filaments and yellow anthers. Stigmas subulate. Capsule roundish, compressed, 2-celled, 2-valved, divided by a dissepiment. Seeds black, dotted, 2 or more in each cell, fixed to the dissepiment. Not. W. Not a new genus.

Broad-fronted Bind-weed. Pl. prostrate.

53 C. LACINIATUS (Desr. in Lam. dict. 3. p. 546. exclusive of β.) stems slender, prostrate; leaves finely jagged, sometimes pinnate; segments capillary, 2-3-cleft; peduncles longer than the leaves, 1-flowered, rarely 2-flowered; sepals ovate, obtuse, mucronate, rather scarious. ⊙.? G. Native near Rio Janeiro. Vahl. Symb. 1. p. 32. Convolvulus laciniatus, Linn. sp. 219. Willd. sp. 1. p. 846. Convolvulus fronte Virginiana, Plum. gen. 17. t. 17. Convolvulus Corolbi Vahl. Symb. 1. p. 32. Cav. icon. 3. p. 479. t. 2. Bracteas linear. Corolla campanulate, white, twice as long as the calyx. Seeds black, naked. Leaves similar to those of *Quamoclit vulgaris*, glabrous or silky from pili.

Jagged-leaved Bind-weed. Pl. prostrate.

54 C. LASIANTHUS (Cav. icon. 3. p. 53. t. 279. f. 1.) stems numerous, simple, prostrate, terete, tomentose; leaves palmately jagged, tomentose: segments 7, unequal: middle one largest, all pinnatifid; peduncles 1-flowered, longer than the leaves; sepals concave, coriaceous, scarious, ovate, acuminated, very hairy. ⊙.? G. Native of Chili, about Talcahuana. Poir. suppl. 2. p. 68. C. laciniatus, β, Lam. dict. 3. p. 546. Bracteas linear, acute. Corolla white, campanulate, nearly funnel-shaped, villous outside; segments of the limb obtuse, ending in a small bristle each. Capsule globose.

Woolly-flowered Bind-weed. Pl. prostrate.

55 C. SERICIFLORUS (Thunb. prod. p. 35.) leaves palmate; lobes 7, linear, entire; peduncles 1-flowered; stems decumbent. ♃. G. Native of the Cape of Good Hope. Willd. spec. 1. p. 877.

Mallow-leaved Bind-weed. Fl. June, Aug. Clt. 1822. Pl. dec.

56 C. CATESBÆUS (Michx. fl. bor. amer. 1. p. 135.) plant prostrate, glabrous: leaves thick, sinuately lobed; lobes roundish, obtuse: the middle lobe large and emarginate; peduncles 1-flowered; sepals oblong-oval; corolla short, campanulate. ♃. H. Native of Georgia and Florida, on the sandy beach. Pursh. fl. amer. sept. 1. p. 144. Pers. synth. 1. p. 88. Lower leaves sometimes not lobed, but repand. Calyx bracteless, ex Michx.

Blunt-lobed-leaved Bind-weed. Pl. prostrate.

57 C. LITTORALIS (Lin. spec. p. 227.) stems creeping; leaves large, oblong, lobately palmate, fleshy; peduncles 1-flowered, rarely 2-flowered, shorter than the leaves. ♃. S. Native of Crabe's Island, near Porto Rico, by the shore. Willd. spec. 1. p. 878. Desr. in Lam. dict. 3. p. 546. Plum. spec. 1, ed. Burm. amer. 90. t. 2.—Plum. icon. vol. 2. t. 3. Stems much branched. Petioles rather long. Corolla rather large, white, campanulate, with a spreading, somewhat fringed limb. Capsule clothed with white silky villi.

Sea-shore Bind-weed. Pl. creeping.

SECT. II. STROPHOCAULES (from στρεφω, *strephō*, to twist; and καυλος, *caulos*, a stem.) Stems twining.

§ 1. *Leaves sagittate or hastate, or cordately or sagittately hastate.*

58 C. ARVENSIS (Lin. spec. p. 218.) stems angular, striated; leaves sagittate, somewhat auricled; peduncles usually 1-flowered, bibracteate about the middle; sepals ovate-roundish; corolla white or rose-coloured. ♃. ♡. H. Native throughout Europe, in sandy fields, and by road sides; as well as of China, Cochinchina, some parts of the East Indies, and Persia; and of Virginia, in meadows; very common in Britain. Willd. spec. 1. p. 844. Pursh, fl. amer. sept. 1. p. 144. on the authority of Gronovius, fl. virg. p. 27. Smith, engl. bot. t. 315. Curt. lond. fasc. 2. t. 13. Oed. fl. dan. t. 459. Bull. herb. t. 269. Ore,. et Hayn. t. 24. Hayn. term. bot. t. 12. f. 1. a. Plenck, off. t- i 04, Cotiv, Chineri.sisj Kfi% bot, reg, I. 222. Conv. Malcolmi, Roxb. in Wall. fl. ind. 2. p. 55. Conv. Mahur. Ham. herb. Conv. divaricatus, Wall. cat. no. 1422. 1 and 2. Conv. hastatus, Dels'sie, *i'* Descr. aegypt. p. 55. C. prostratus, Schmidt, fl. bohem. *ik.* no, 135. Root creeping extensively under ground, difficult to extirpate, I-i • ves smoothish. Bracteas in the middle of die pe*!ancles, or m*ar their top Flowers sweet-scented.—There is a variety witli 2-flowered peduncles. Leaves varying in shape, obtuse or acute, having the hind lobes also acute, obtuse, or angular.

Var. α, erectus (Ledeb. fl. alt. 1. p. 224.) glabrous; stems erect, neither procumbent nor twining; leaves hastately-triangular: lobes acuminated, or 2-lobed; peduncles usually 2-flowered, bibracteate, about equal in length to the leaves; having one of the pedicels bracteate, and the other naked; sepals - *pah* mucronate. *11. H,* Native of Siberia, on the stony banks of the rivulet called Tingurink, and the river Katunga, to the north; but has not been observed elsewhere. Flowers rose-coloured or white, wit!; tin marginis reddish.

Var. β, subhirsutus (Led. l. c.) glabrous; stems twining; leaves sagittately i.rjangiijftr : hid lobes acute, 2-lobed at bottom; peduncles exceeding the leaves, mostly 2-flowered, bibracteate, having one (1 uncle ,: the pedicels naked; sepals roundish, mucronate. ♃. ♡. S. Native of Sib:: of mountains near Alexandrovsk.

Var. γ, vulgaris (Ledeb. l. c. p. 225.) plant rather villous; stems sometimes erect, sometimes prostrate or twining; leaves sagittate or hastate; lobes oblong; terminal one elongated, roundish, and mucronate at the apex; lateral ones somewhat 2-lobed, or somewhat serrated below; peduncles exceeding the leaves more or Ei ers, 1-3-flowered, bibracteate; pedicels bractless; sepals roundish, ciliated, hardly mucronate. ♃. ♡. H. Native of Siberia, frequent in fields.

Var. δ, angustatus (Ledeb. l. c.) stems twining; leaves hastate: lobes rounded at the apex: terminal one elongated, oblong, mucronate: lateral ones furnished with a straight stretched out angle; peduncles usually 1-flowered, longer than the leaves, bibracteate above the middle; sepals rounded at the apex, somewhat emarginate, sub-mucronate. ♃. ♡. H. Native of Siberia, in dry places; at the rivers Ulegamen and Katunga.

Var. ε, sagittifolius (Ledeb. l. c.) rather pilose; stems twining a little; leaves sagittate; lobes broad-lanceolate: terminal one mucronate; peduncles 1-flowered, bibracteate, equal in length to the leaves; sepals sub-mucronate. ♃. ♡. H. Native of Siberia, in dry places, very rare. C. sagittifolius, Fisch. hort. gorenk. 1810. p. 25.? Fisch. fl. caucas. suppl. 3. p. 137.—Gmel. sib. 4. p. 96. no. 54. t. 48. f. 1.

Corn Bind-weed. Fl. [illegible], Sept. Britain. Pl. tw.

59 C. SEPIUM (Lam. encyc. 1. p. 301.) leaves hastately sagittate: hind lobes emarginate or bicuspidate; peduncles axillary, 2-3-flowered; calycine segments ovate, acute. ♃. ♡. H.

Native country unknown. Stem quadrangular. Young leaves hoary; adult ones with a few adpressed hairs, as well as the calyx. Bracteas under the calyx. Corolla red.

Emarginate-lobed Bind-weed. Fl. June, Aug. Cl. 1817. Pl. tw.

60 C. EMARGINA'TUS (Fischer, ex Link, enum. p. 201.) leaves hastate; hind lobes bicuspidate; peduncles axillary, 1-flowered; calycine segments obtuse, emarginate, somewhat apiculated. ♃. ♈. H. Native of Dauria. Stem glabrous, quadrangular. Leaves with a lanceolate middle lobe, and recurved hind or lateral ones, scabrous on the margins. Peduncles longer than the leaves, bearing a linear bracteæ above the middle. Calyx glabrous. Corolla red.

Bicuspidate-lobed Bind-weed. Fl. June, July. Cl. 1818. Pl. tw.

61 C. ARVENSOI'DES (Desr. in Lam. dict. 3. p. 340. exclusive of the synonymes;) leaves linear-lanceate, acuminated, hind lobes entire; peduncles 2-flowered. ♃. ♈. S. Native of the Isle of France. Pers. euch. 1. p. 177. Nearly allied to *C. arvensis*, and probably only a variety of it; but differs from the common form of that species, in the leaves being narrower, more oblong, in the peduncles being 2-flowered, nearly the length of the leaves, and in the bracteas being nearer the calyx. Root creeping.

Auricled-leaved Bind-weed. Pl. tw.

62 C. CURASSA'VICUS (Retz. et Schultes, syst. 4. p. 238.) leaves ovate-hastate, rounded at the apex, somewhat emarginate; hind lobes obtuse. ♃. ♈. H. Native of Curaçoa. Nearly allied to some varieties of *C. arvensis*; but differs in the shorter petioles, broader leaves, shorter, thicker peduncles. Superior leaves smaller, and sessile. Probably only a variety of *C. arvensis*.

Curaçoa Bind-weed. Pl. tw.

63 C. TRIBLOBA'TUS (Vahl, eclog. amer. 2. p. 13.) leaves sagittate-oblong, acuminated, glabrous; hind lobes divaricate, acute, entire; peduncles 1-flowered, longer than the petioles; bracteas at the base of the peduncle; sepals lanceolate, acute. ♃. ♈. S. Native of Curaçoa. It differs from *C. arvensis*, to which it is nearly allied, in the hind lobes of the leaves being ovate, entire; in the bracteas being at the base of the peduncles; in the flowers being larger, &c. Corolla large, purple, campanulate.

Flesh-coloured-flowered Bind-weed. Pl. tw.

64 C. MECHOACA'NUS (Willd. enum. suppl. p. 23.) leaves ovate and lobed, hastate; peduncles thick, 1-flowered. ♃. ♈. S. Native of Brazil; and Mechoacan, in New Spain. Root thick, marked under the name of *Mechoacanna*. Conv. Mechoacan, Vent. cultiv. 1. p. 134. Conv. Jetuñca, Pis. bras. with a figure. Conv. Jutiaica, Gmel. 1. p. 289. with the following description; "Nearly allied to *C. sepium*. Root bifid, brown outside. Stem many-angled. Leaves cordate-cared, deep green, nerved beneath. Corolla white or pale red, purple inside. Seeds brown."

Mechoacan Bind-weed. Pl. tw.

65 C. ATRIPLICIFO'LIUS (Pers. suppl. 2. p. 467.) hairy; leaves on short petioles, sagittate, truncate behind; peduncles axillary, hairy, very long, forked at top, each fork bearing a flower; calyx villous; outer sepals the longest, lanceolate, acute, mucronate. ♃. ♈. H. Native of Syria. La Billardiere. Hairs on stems and peduncles rufescent. Peduncles furnished with 2 subulate bracteas at the fork, and 2 longer ones on each pedicel. Corolla white, twice as long as the calyx.

Atriplex-leaved Bind-weed. Pl. tw.

66 C. ACETOSELLIFO'LIUS (Desr. in Lam. dict. 3. p. 564.) mucronated; leaves hastately 3-lobed: lateral lobes roundish-angular; peduncles short, usually 2-flowered; sepals short, ovate, blunish. ♃. ♈. S. Native of the Isle of France. Conv. hepatifolius, Spreng. syst. 1. p. 604.

triloba, to which it is nearly allied in habit. Stems terete, and hoary, as well as the petioles and peduncles, rough from black acute tubercles. Leaves almost panduriform. Corolla small, campanulate, twice longer than the calyx.

Acetosella-leaved Bind-weed. Pl. tw.

67 C. ISACA'EUS (Vahl, symb. 3. p. 23.) clothed with silky tomentum; leaves lance-late-sagittate, obtuse, a little toothed at the base; peduncles 2-flowered, length of leaves; sepals ovate, acute: outer ones villous. ♃. ♈. S. Native of South America. Willd. spec. 1. p. 847. Stems terete. Petioles short. Leaves 1½ inch long; hind lobes rounded. The longest pedicel bibracteate in the middle. Bracteas setaceous. Corolla villous outside. Capsule glabrous, globose.

Hoary Bind-weed. Pl. tw.

68 C. HAMA'TUS (Forsk. descr. p. 203.) stem prone; leaves lanceolate-hastate; peduncles axillary, twin, 2-flowered; sepals acuminated, spreading at apex. ♃. ♈. H. Native of Egypt. Vahl, symb. 1. p. 15. Willd. spec. 1. p. 849. Conv. hastellus. Pour. suppl. 3. p. 467. Petioles one-half shorter than the leaves. Leaves 2 inches long, glabrous above and villous beneath, with rounded auricles, which are sometimes acuminate behind. Peduncles shorter than the petioles, villous.

Halbert-leaved Bind-weed. Pl. tw.

69 C. SCAMMO'NIA (Lin. spec. p. 218. Roy. lugdb. 427.) glabrous; stem angular; leaves cordate-sagittate, truncate behind; peduncles terete, generally 3-flowered, longer than the leaves; sepals loose, glabrous, ovate, repand, obtuse, with a reflexed point. ♃. ♈. H. Native of Syria, Mysia, Cappadocia, and of the Island of Rhodes, in hedges. Mill. fig. t. 102. Pluenk. ill. t. 92. Schk. et Sm. ab. d. grec. t. 192. Woodv. med. bot. 1. p. 19. t. 5. Sweet, fl. gard. n. s. 2. t. 178. Conv. Syriacus, and Scammonia Syriaca, Tourn. inst. 83.—Morr. hist. 2. p. 12. sect. 1. t. 2. f. 3.—Lob. icon. 620. f. 1. Corollas large, campanulate, cream-coloured, or very pale red. The roots of Scammony, which are very long and thick, when fresh contain a milky juice. This is obtained by removing the earth from the upper part of the roots, and cutting off the tops obliquely. The milky juice which flows out is collected in a small vessel sunk in the earth at the lower end of the cut. Each root furnishes only a few drachms; but the produce of several roots is added together, and dried in the sun. This is the true and unadulterated Scammony. It is light, of a dark grey colour, but becomes of a whitish yellow when touched with the wet finger. It is shining in its fracture, has a peculiar nauseous smell, and bitter, acrid taste, and forms, with water, a greenish milky fluid. In this state of purity it seldom reaches us, but is commonly mixed with the expressed juice of the root, and even of the stalks and leaves, and often with flour, sand, or earth. The best to be met with in the shops comes from Aleppo. It is light, spongy masses, having a heavy, disagreeable smell, and a shining ash-colour, verging to black, friable, and easily powdered; powder of a light grey, or whitish colour. An inferior sort is brought from Smyrna, in more compact, ponderous pieces, with less smell, not so friable, of a darker colour, not so resinous and full of sand and other impurities. This last is said to be the produce of *Periploca Scammonia*, and of the *Cynanchum Argel*. Resin is the principal constituent of Scammony. Sixteen ounces of good Aleppo Scammony give eleven ounces of resin, and three ounces and a half of watery extract. Scammony is an efficacious and powerful purgative. It may be given triturated with sugar, or with almonds, and becomes sufficiently safe and mild in its operation. It may be also given to strengthen other purgatives, in small quantities, as with powdered rhubarb, &c. The common dose of Scammony is from 3 to 10 grains; but when mixed with other purgatives, ½ to 1 grain is sufficient.

Corolla campanulate, white, 5-toothed.

Five-leaved Bind-weed. Fl. July, Aug. Clt. 1752. Pl. twining.

103 C. ola'nna (Aubl. guian. 1. p. 158. t. 63.) quid glabrous; leaves digitately quinate; leaflets petiolulate, attenuately acuminated, quite entire; peduncles branched, divaricate, many-flowered; sepals long, firm, smooth, acute. ♃. ○. S. Native of Cayenne. Willd. spec. 1. p. 856. Desr. in Lam. dict. 3. p. 566. Corolla white, with a long tube, and spreading limb, lobes of limb rounded. Lobes of stigma obtuse.

Glabrous Bind-weed. Fl. ? Clt. 1806. Pl. tw.

104 C. erecta'nna (Lin. dict. 3. p. 567.) glabrous; leaves digitate; leaflets generally 6, linear, very narrow; racemes small, somewhat secund in the forks of the branches, a little longer than the leaves; sepals obtuse; seeds very hairy. ♄. ○. S. Native of St. Domingo. Branches grey. Corolla cylindrical, purplish. Capsule ovate, smooth. Hairs on the seeds white, silky.

Woolly-seeded Bind-weed. Shrub tw.

105 C. macrocalyx (Poir. et Pav. fl. per. 2. p. 10. t. 118. f. a. Poir. suppl. 3. p. 471.) glabrous; leaves quinate; leaflets unequal, oblong-lanceolate, quite entire; peduncles very long, racemosely forked; sepals ovate-lanceolate. ♃. ○. G. Native of Peru, in groves. Bracteas of the pedicels subulate. Calyx large, purplish, spreading. Corolla white; having the tube length of the calyx, and the lobes of the limb hardly acute. Stamens exserted. Stigmas flat, ex scon.

Large-calyxed Bind-weed. Pl. tw.

106 C. Cumanensis (Poir. suppl. 3. p. 480.) downy; leaves deeply 5-parted; segments linear, unequal, diverging, acute; middle one long, rather undulated; the rest short, marked by the tooth; middle; peduncles 1-flowered, shorter than the leaves, bearing 2 small bracteas at apex; calyx villous. ⊙. ? ♃. ? ○. F. Native of Chili. Corolla campanulate, spreading, red; tube a little longer than the calyx; segments of the limb ovate, mucronate. Lobes of stigma conjugated. Seeds black. Capsule globose.

Chili Bind-weed. Pl. tw.

107 C. atocrolobus (Cham. et Schlecht, in Linnæa, 5. p. 117.) herbaceous, clothed with villous, stellate down, intermixed with short, black, glandular hairs; the hairs on the upper surface of the leaves 2-parted; leaves ternate; leaflets oblong-ovate, acuminated, acute; peduncles longer than the leaves, 3-7-flowered; sepals ovate, long-acuminated, acute. ⊙. ○. Native of Mexico, near Hacienda de la Laguna. Corolla small, half an inch long, slKirt, blue.

Aparagynum-like Bind-weed. Pl. tw.

108 C. hastatus (Willd. act. acn. nat. cur. 4. p. 196. Roem. et Schultes, syst. 4. p. 271.) glabrous; leaves digitate; leaflets 4, linear-lanceolate; lower ones bipartite; peduncles 1-flowered. Native of the East Indies.

Seven-leaved Bind-weed. Pl. tw.

§. 47. *Leaves cordate or subcordate, entire. Peduncles many-flowered.*

109 C. rumicula'rius (Vahl. eclog, 1. p. 13.) villous; leaves cordate, mucronate; peduncles many-flowered, longer than the leaves; sepals ovate; bracteas lanceolate. ⊙. ○. S. Native of South America. Stems terete. Leaves nearly like those of *Lysimachia nummularium*. The 3 outer sepals foliaceous, broadly ovate, acuminated, villous; the 2 inner ones smaller, oblong, acuminated. Corolla campanulate, entire.

Moneywort-leaved Bind-weed. Pl. tw.

110 C. ramosissima (Poir. suppl. 3. p. 468.) leaves cordate, quite entire; stem filiform; peduncles many-flowered, umbellately cymose; bracteas subulate. ⊙. ? ○. S. Native of Peru, towards Tarma. Conv. cymosus, Ruiz. et Pav. fl. per. 1. p. 9. t. 117. f. b. Pers. ench. 1. p. 178. Stem much branched. Hairs deciduous. Leaves on long petioles, acuminated, 2-3 inches long, shining above. Peduncles bifid, 5-17-flowered. Stamens exserted. Stigmas flat.

Much-branched Bind-weed. Pl. tw.

111 C. Canarien'sis (Mill. dict. no. 18. Lin. spec. p. 121.) stems terete, villous; leaves cordate-ovate, oblong, acute; peduncles many-flowered, longer than the petioles; calyx villous; segments acute. ♃. ○. G. Native of the Canary Islands. Desr. in Lam. dict. 3. p. 556. Willd. spec. 1. p. 838. Sims, bot. mag. t. 1226.—Comm. hort. 2. p. 101. t. 51.—Plukn. alm. 116. t. 335. f. 1. Leaves permanent, soft, white beneath.

Corolla middle-sized, purplish-violet, hairy outside, at length almost flat. Stigmas filiform.

Canary-Island Bind-weed. Fl. June, Sept. Clt. 1690. Shrub tw.

112 C. SUBGLOBOSUS ; stems villous; leaves cordate, acute, downy ; peduncles short, many-flowered, capitulate ; corolla subglobose, campanulate, connivent. 1/ . ^{ry}. G. Native of Cochinchina, in hedges. C. Canariensis, Lour. coch. p. 108. Flowers white.

Subglobose-flowered Bind-weed. Shrub tw.

113 C. VIOLA'CEUS (Vahl, symb. 3. p. 29.) stems, peduncles, and calyxes villous ; leaves smoothish, or a little hairy, ovate-cordate, acuminated ; peduncles elongated, bifid, many-flowered, 3-4 times longer than the leaves; the 2 outer sepals cordate: the third lanceolate: and the 2 interior ones glabrous, mucronate, much smaller than the outer ones. 0. ? ^{rs}. S. Native of the Island of Santa Cruz. Willd. spec. 1. p. 856. Leaves an inch long. Bracteas linear-lanceolate at the base of the pedicels. Corolla campanulate, violaceous, with 5 paler rays. Stigmas reflexed.

Fiofoceows-flowered Bind-weed. PI. tw.

114 C. TILIA'CEUS (Willd. enum. 1. p. 204.) glabrous; leaves cordate, acuminated : hind lobes divaricate ; peduncles axillary, racemosely corymbose, longer than the leaves ; sepals oblong-lanceolate, mucronate, glabrous. %. $^{r>}$. S. Native of Brazil. Leaves 2 inches long. Nearly allied to *Conv. acuminàtus,* but the leaves are never 3-lobed ; and the bracteas are wanting on the proper peduncles ; and the sepals are different.

Lime-tree-leaved Bind-weed. Fl. June, Aug. Clt. 1820. PI. tw.

115 C. MULTIVA'LVIS (R. Br. prod. p. 483.) leaves $_m$ ovate, acuminated, subcordate, entire, downy ; corymbs pedunculate ; sepals unequal, acute ; capsules erect, many-valved ; seeds roughish, with narrow margins. %* ^{r}~^{s}. S. Native of New Holland, within the tropic.

Far. a; leaves downy on both surfaces, hardly cordate ; capsule a little longer than the calyx.—Conv. corymbosus, Forst. prod, but not of Lin.

Var. /3; leaver smoothish, subcordate; capsule shorter than the sepals, which are acuminated.

Many-valved capsuled Bind-weed. PL tw.

116 C. CILIATUS (Vahl, eclog. 2. p. 13.) stems downy ; leaves cordate-ovate, acuminated, with subciliated, villous edges ; heads of flowers pedunculate, very hairy, involucrated. *fy* • $^{\circ\#}$ S. Native of Cayenne. C. villdsus, Pers. ench. 1. p. 177. no. 13. Poir. suppl. 3. p. 471. Habit of *C. Guianensis.* Leaves 2 inches long, glabrous above, rather villous beneath, of a shining yellow colour. Peduncles downy, twice longer than the petioles. The 2 outer bracteas large, ovate-lar.ceolate under the head of flowers, the rest lanceolate, length of calyx, all very hairy from rusty pili, as well as the subulate sepals.

Ciliated-leaved Bind-weed. Fl. June, Aug. Clt. 1820. Shrub tw.

117 C. CRINITIS (Desr. in Lam. diet. 3. p. 568.) leaves cordate, nearly naked ; heads of flowers very hairy, on long peduncles, involucrated : capsule smooth. 1/ . ^. S. Native country unknown.

Long-haired Bind-weed. PI. tw.

118 C. PARVIFLORUS (Vahl, symb. 3. * p. 29. Choisy, in mem. soc. phys. gen. 6. p. 480.) downy; leaves cordate-ovate, very acute, glabrous ; peduncles a little higher than the petioles, umbellately many-flowered ; sepals equal, ovate, very acute. ©. $^{/r>}$. G. Native of India, as in Ava, Prome, Dindygul, Dumraong, &c. ; also of the Islands of Java and Timor. Roxb. in Wall. fl. ind. 2. p. 51. Ipomce'a parviflora, Pers, ench. 1. p. 183. Ipomoe'a paniculata, Burm. ind. p. 50. t. 21. f. 3. Conv. quinquenervius, Ham. herb. C. olepiadeus, Wall. mss. Ipomce'a Timoriensis, Blum, bijdr. p. 711. ? Leaves hardly villous on the nerves beneath. Bracteas linear, villous. Corolla a little longer than the calyx, tubular, 5-lobed at apex, glabrous, blue: lobes acute, white. Capsule and seeds glabrous. Stigmas twisted, cylindrical.

Small-Jlowered Bind-weed. PI. tw.

119 C. VERTICILLATUS (Lin. spec. 220. H. B. et Kunth, nov. gen. amer. 3. p. 98.) leaves ovate-oblong, somewhat cordate, acuminately mucronate, smoothish above, and clothed witn canescent tomentum beneath ; corymbs dichotomous, axillary, nearly sessile, shorter than the leaves; sepals smoothish, roundish, obtuse, nearly equal. %. ^{Ok}. S. Native of tropical America ; as near Caraccas. Ipomoe'a verticillata, Lin. amoen. acad. 5. p. 394. Conv. spirvUis, Willd. rel. ex Roem. et Sehukes, syst. 4. p. 302.—Plum. icon. t. 94. f. 2. Flowers small, white. Stigmas terete, revolute.

Verticillate Bind-weed. PI. tw.

120 C. POLYA'NTHES (Cham, et Schlecht, in Linnaea, 5. p. 117.) shrubby ; stems terete, clothed with scattered, somewhat adpressed, short, white, stellate, 2-3-parted hairs; leaves oblong-ovate, cordate, long-acuminated, discoloured, sparingly pilose above, and clothed with short, dirty, yellow tomentum beneath ; peduncles many times dichotomous, downy, cymose : every branch furnished with a lanceolate, acute bractea; flowers fascicled; sepals unequal, broad-ovate, short-acuminated: outer ones the largest, and pilosely tomentose on the back and margins. Jj . ^{rs}. G. Native of Mexico, near Hacienda de La Lagunu. Leaves 3 inches long, and if broad. Corolla funnel-shaped, blue, 8 lines long. Perhaps the same as C. *violaceus,* Vahl.

Many-flowered Bind-weed. Shrub tw.

§. 5. *Leaves cordate or subcordate•, usually repand or crenated, rarely entire. Peduncles l-S-florvered.*

121 C. FARTNOSUS (Lin. mant. 2. p. 203.) branches terete, mealy; leaves cordate, acuminated, repand, wrinkled above, and veiny beneath, very blunt and emarginate behind ; peduncles longer than the leaves, 3-flowered. h_c . ^{rs}. G. Native of Madeira ; and of Mysia and Peloponnesus, in hedges frequent. Jacq. hort. vind. 1. t. 35. Sal. par. lond. t. 45. Petioles mealy. Stipulas hardly any. Calyx terete, close. Corolla small, thrice larger than the calyx, somewhat flesh-coloured, acute, 5-cleft.

Mealy Bind-weed. Fl. May, June. Clt. 1777. Shrub tw.

122 C. HERMA'NNUE (Lher. stirp. 4. p. *67.* t. *S3.)* tomentose, white ; leaves cordate-oblong, obtuse ; peduncles 2-flowered, longer than the petioles; sepals ovate, acuminated, downy, nearly equal ; limb of corolla acute. %. ^\ G. Native of Peru, in arid places. Ruiz, et Pav. fl. per. *2.* p. 10. Cav. desc. 98. Conv. crenatus, Jacq. coll. 2. p. 277. icon. rar. t. 315. Desr. in Lam. diet. 3. p. *558.* Leaves oblong-lanceolate, cordately sagittate at the base, obtuse, mucronate, crenately repand. Corolla small, white ; limb crenulated ; lobes acute.

Hermann's Bind-weed. Fl. Aug. Sept. Clt. 1799. PI. twining.

123 C. MASSONI (Dietr. gart. nachtr. 2. p. 377. Roem. et Schultes, syst. 4. p. 279.) leaves oblong, subcordate, acute; stems suffruticose, smooth; peduncles 3-flowered and many-flowered. *2 • ^- ^{G}- Native of Madeira. C. suflruticosus, Ait. hort. kew. ed. 2d. vol. 1. p. 330. Ker. bot. reg. 133. C. Dryandri, Spreng. syst. I. p. 597. Corollas pink.

Masson's Bind-weed. Fl. June, Sept. Clt. 1690. Shrub twining.

124 C. SUBEROSUS (Willd. enum. suppl. p. 10.) downy ; leaves cordate, acute, entire ; peduncles axillary, furnished with linear bracteas in the middle; sepals ovate, obtuse, a little reflexed,

glabrous, ciliated. ♄. G. Native country unknown. Corolla white, with 5 hairy purple lines outside.

Corky Buck-weed. Shrub tw.

125 C. suberosus (Willd. act. acad. nat. cur. berol. 4. p. 196.) leaves roundish-cordate, acuminated, pilose above; peduncles usually 2-flowered. ♃.? ◯. S. Native of the East Indies. Stems hairy.

Pilose Bind-weed. Pl. tw.

126 C. sericeus (Desr. in Lam. dict. 3. p. 558.) tomentose; leaves cordate-oblong, obtuse, crose; peduncles length of leaves, 2-flowered. ♃. ◯. G. Native of Monte Video. C. crenatus, β. Lam. ill. no. 2072. Perhaps only a var. of *C. Herniariæ*.

Rose-leaved Bind-weed. Pl. tw.

127 C. rutæfolius (Desr. in Lam. dict. 3. p. 559.) tomentose; leaves cordate, acute, angularly serrated, wrinkled, plicate; peduncles usually 2-flowered. ♃. ◯. G. Native of the Cape of Good Hope. This species is intermediate between *C. crenatus* and *C. erosus*. Stigmas elongated.

Plicate-leaved Bind-weed. Pl. tw.

128 C. Vahlii (Roem. et Schultes, syst. 4. p. 280.) clothed with rather silky tomentum; leaves cordate-oblong, very blunt, crenulated; peduncles 1-flowered, length of leaves; sepals nearly equal, oblong, acutish; 2 inner ones glabrous. ♃.? ◯. S. Native of Brazil. C. crenatus, Vahl, symb. 3. p. 31. Hind lobes of leaves straight, oblong, obtuse. Corolla one half longer than the calyx, silky, with 5 villous lines outside; lobes bearded at apex.

Vahl's Bindweed. Pl. tw.

129 C. auriculatus (Willd. spec. 1. p. 846.) glabrous, except the underside and edges of the leaves, which are finely pilose when examined by a lens; leaves oblong-lanceolate, acute, bluntly cordate; peduncles 1-flowered, length of the leaves; sepals ovate, acute, rather pilose. ♄. ◯. H. Native of Siberia. Bracteas setaceous, in the middle of the peduncle. Leaves 2 inches long. Corolla size of those of *Conv. tricolor*, violaceous, flat, 5-plicate; plicæ downy outside. It differs from *C. Sibiricus*, in the leaves not being acuminated, in the peduncles being 1-flowered, in the corollas being twice the size, and violaceous.

Rock Bindweed. Shrub tw.

130 C. fruticulosus (Desr. in Lam. dict. 3. p. 451.) glabrous; stems terete; leaves linear-lanceolate, sub-cordate at the base, on short petioles; floriferous branches very leafy; peduncles longer than the petioles, but hardly the length of the flowers. ♄. ◯. G. Native of the Canary Islands. Bracteas subulate, unequal. Calyx glabrous. Corolla small, with rather deep segments, and 5 purple stripes.

Shrubby Bindweed. Shrub tw.

§. 6. *Leaves ovate or oblong, sagittate or lanceolate or linear.*

131 C. cantabrica (Desr. in Lam. dict. 3. p. 544.) villous; leaves ovate, serrately sinuated; flowers solitary, nearly sessile; sepals ovate, acute. ♃. ◯. S. Native country unknown. Leaves hardly an inch long. Bracteas small, filiform. Corolla narrow, probably tubular.

Grass-leaf-like Bindweed. Pl. tw.

132 C. graminifolius (Desr. in Lam. dict. 3. p. 559.) stems filiform; leaves oblong-elliptic, obtuse, mucronate, nearly sessile, sometimes emarginate at the base; peduncles longer than the leaves. ♃.? ◯. H. Native of Carolina, Fraser. Willd. spec. 1. p. 861.—Pluken. alm. 114. t. 166. f. 4. Peduncles bearing 2 subulate bracteas at apex. Corolla small, campanulate.

Tender Bindweed. Pl. tw.

133 C. Hayanensis (Jacq. obs. 4. p. 34. t. 84. f. 3.) glabrous; leaves oblong, shining; peduncles 1-flowered, shorter than the flower. ♃.? ◯. S. Native of Cuba, about Havannah. Jacq. amer. pict. t. 204. Lam. ill. 462.—Vittm. summ. pl. 1. p. 435. Stem much branched. Leaves obtuse, quite entire. Corolla small, white; tube hardly longer than the calyx; limb erectish; segments long, acute, spreadingly reflexed. Anthers hastate.

Havannah Bindweed. Pl. tw.

134 C. Guianensis (Aubl. guian. 1. p. 156. t. 62.) branches terete, purplish, villous; leaves oblong, and are, as well as the calyxes, tomentose; peduncles elongated, villous; flowers capitate; sepals acute. ♃. ◯. S. Native of Cayenne and Guiana. Vahl, symb. 3. p. 28. Desr. in Lam. dict. 3. p. 554. Corolla small, white or bluish, la[illegible] the calyx: lobes acuminated. Stigmas reflexed.

Guiana Bind-weed. [illegible]/ June, Aug. Cl. 1820. T>i tw.

† *Doubtful species.*

1 C. [illegible]ta'xrnus (Gmel. spec. 1. p. 343.) leaves truncately rounded [illegible] base; peduncles generally 2-flowered.—Native of deserts, about Cairo. C, biflorws, Fo? [illegible]k. fl. aegypt. arab. p. 203. Delisl. descrip. aegypt. p. 55.

Two-flowered Bind-weed. Pl. tw.

2 C. [illegible]ROSAGITTATUS (Mill. dict. no. 20.) leaves cordate-sagittate; peduncles 1-flowered. ☉.? ◯ H. Native of the North of Africa. Convolvulus exoticus hederaceæ folio, flore magno albo, fundo purpureo, cat. hort. par. Peduncles long, slender.

Betony-leaved Bind- **ireed. PI, tw,.**

pedui • Americanus hi- 3 C. [illegible]nitus, foliis acuminato, flore amplo roseo. Houst. mss. Petioles and peduncles very long. Calyx deeply parted. Corolla large, rose coloured Seeds large, woolly.

[illegible]se-coloured-flowered Bind-weed. Pl. tw.

4. C. [illegible]ata'vus (Mill. dict. [illegible]1.) leaves ovate-oblong, glabrous; peduncles 1-flowered; calyx 10-parted. ☉. ◯. S. Native of Barbadoes. Stems slender. Flowers large, purple.

Glabrous ... **BinU-weed. PI. I w.**

5 C. [illegible]ARISTOLOCHIÆFOLIUS (Mill. dict. no. 9.) leaves hastately lanceolate; auricles rounded; peduncles many-flowered. ☉. ◯. S. Native of Carthagena. Flowers racemose, yellow. Capsule trigonal, 3-celled; cells 3-seeded. Perhaps a species of *Pharbitis*.

Aristolochia-leaved Bind-weed. Pl. tw.

6 C. cynosus (Thunb. ex Roem. et Schultes, syst. 4. p. 309.) stem creeping; leaves ovate-oblong, acute, mucronate, shining but fulvous and tomentose beneath; cymes sessile, terminal, many-flowered; sepals acute, silky. **2*. S. N** ative of Sierra Leone. Conv. Senegambiæ, Spreng. syst. 1. p. 610.

Cynosa-flowered Bind-weed. Pl. creeping.

7 C. [illegible]ERIOSTYLOSUS (Cav. icon. 3. **p. 34. t. I** 1.) leaves cordate, acuminated, rather villous; umbels pedunculate; calyx hairy; stigmas [illegible]iii, divaricate.—Native of the Philippines. Corolla campanulate, small, pale red: lobes acute. Capsule 4-valved, 2-celled; cells 2-seeded. Perhaps a species of *Ipomœa*, or a new genus.

Round-stigmaed Bind-weed. **PL** *(w*

† † *The 3 following names occur in appendix to Salt's Abyss. p. 475, but without defining.*

1 C. [illegible]. 2 C. [illegible]. 3 C. [illegible].

What are Conv. [illegible] **taa, Fdrsk, ilescrip, de** Tog, **also is** Conv. **i** [illegible]orskal'b, natives of Egypt.

Cult. The hardy species of this genus are mostly beautiful

plants when in blossom; common garden soil and a dry situation, suit them best. They are increased by dividing at the root, or by seed. For culture of the stove species, see *Ipomœa*, p. 285.

XVII. ANISEIA (from *aniseros*, aniseed, unequal; in reference to the sepals or segments of the calyx being unequal in size and shape.) Choisy, in mem. soc. phys. gen. 6. p. 481.—Convolvulus, Ipomœa, and Calystegia species of authors.

Lin. syst. *Pentándria*, *Monogynia*. Sepals 5, disposed in 3-3 series; the 2 exterior sepals the largest, and inserted lower down, and also running down the peduncle; the 3d or intermediate sepal, and the 2 interior ones smaller, and inserted higher upon the peduncle. Corolla campanulate. Style one. Stigma capitate, 2-lobed. Ovarium 2-celled, 4-ovulate. Capsule 2-celled; cells 2-seeded.—Creeping or diffuse herbs, rarely twining.

1 A. calycina (Choisy, l. c. p. 482.) stem pilose, twining; leaves oblong-cordate, acuminated, very acute, glabrous, petiolate; peduncles hardly the length of the petioles, 1-3-flowered; sepals with villous edges; exterior ones sagittate; corolla tubular. ♄. ☉. S. Native of the interior parts of India, as at Cawnpore, where it was collected by General Hardwicke. Conv. calycinus, Roxb. in Wall. fl. ind. 2. p. 51. Conv. Hardwickii, Spreng. syst. 4. p. 60. Stems terete. Leaves 1-2 inches long. Petioles pilose. Peduncles villous, furnished with small, acute bracteoles at the apex. Corolla white. Seeds villous, particularly on the angles.

Large-calyx Aniseia. Shrub twining.

2 A. Arnottiana; downy; leaves cordate-sagittate, acuminated; hind lobes obtuse; peduncles 3-4-flowered; calyx foliaceous, involucriform; bracteas lanceolate. ☉.? ☉. S. Native of Sierra Leone, in humid places. Corolla yellow, with a brown bottom, 5-lobed, with acute segments.

Affolter's Aniseia. Pl. twining.

3 A. affolteri (Choisy, l. c.) stems glabrous; leaves sessile, linear-lanceolate, hastately acuminated, auricled, toothed at the base; peduncles shorter than the leaves, 1-flowered, exterior sepals sagittately cordate. ☉. ☉. S. Native of the East Indies, Java, and Madagascar. Conv. médium, Lin. spec. 218, exclusive of the syn. of Rheed; but not of Wall. nor Willd. Desr. in Lam. dict. 3. p. 342. Conv. Javanénsis, Gaer. herb. ex Burm. fl. ind. p. 43. Stems and peduncles angular. Auricles of leaves stem-clasping. Leaves glabrous. Bracteas ovate, acuminated. Auricles of outer sepals rounded or toothed; the 2 inner sepals acute. Corolla yellow, a little longer than the calyx. What is *Conv. médium*, Lour.?

Intermediate Aniseia. Pl. twining.

4 A. venosa (Choisy, l. c. p. 483.) stem glabrous or pilose at the apex, prostrate; leaves oblong, on very short petioles, mucronate at the apex, glabrous; peduncles equal in length to the petioles, 1-flowered; outer sepals joined obliquely at the base. ♃. S. Native of the East Indies, as of Silhet, Malabar, and Goalpara; also of Java. Conv. uniflórus, Desr. in Lam. dict. 3. p. 344. Burm. ind. 47. t. 21. f. 2. Conv. emarginátus, Vahl, symb. 3. p. 23. Ipomœa uniflóra, Roem. et Schultes, syst. 4. p. 247. Conv. Rheedii, Wall. in fl. ind. 2. p. 70. Wight, ill. ind. bot. p. 17. t. 3. Conv. Bónitu, Ham. herb. Bon-tiru-Tali, Rheed, mal. 11. p. 111. t. 54. Stem terete, radicant. Leaves 1-2 inches long; lower ones sometimes emarginate. Peduncles nutant, beset with brown hairs, and usually furnished with 2 linear, villous bracteas at apex. Corolla white, exceeding the calyx a little, clothed with brown hairs outside. Capsule glabrous, but clothed with silky hairs inside.

One-flowered Aniseia. Pl. prostrate.

5 A. biflora (Choisy, l. c.) stem pilose; leaves cordate-oblong; peduncles twin, shorter than the petioles, outer sepals cordate-oblong. ☉. H. Native of China. Ipomœa biflora, Pers. ench. 1. p. 185. Conv. biflórus, Lin. spec. 168. but not of Forsk. Stems terete. Petioles pilose. Peduncles hairy, approximating nearly into one at the base. Corolla white, campanulate, small. Stigma purple.

Two-flowered Aniseia. Pl. erect or diffuse.

6 A. bifloroides (Choisy, l. c. p. 484.) stems elongated, downy; leaves oblong, attenuated at the apex, usually obtuse, entire at the base, or hardly cordate, on very short petioles; peduncles 1-flowered, exceeding the petioles; outer sepals oblong-lanceolate, acute; corolla long, tubularly funnel-shaped. ♃. G. Native of India, as of Gorackpur, Sukanagur, Kamaon, Mysore, &c. Conv. oblongus, Wall. cat. no. 1282. Conv. pánlis, and Conv. barlerioides, Ham. herb. Wall. cat. no. 2256. Stems beset with grey or yellow down. Root thick, twisted. Leaves often mucronate, 1-2 inches long, clothed with adpressed hairs on both surfaces. Peduncles and petioles downy. Calyx villously downy. Corolla with an entire plicate limb, smoothish, 2-3 times longer than the calyx.

Barleria-like Aniseia. Pl. diffuse.

7 A. salicifolia (Choisy, l. c. p. 482.) glabrous; leaves lanceolate, serrated, on short petioles; calyx angular. ♃. S. Native of St. Domingo. Conv. salicifolius, Desr. in Lam. dict. 3. p. 342. Leaves acute at both ends, 3-4 inches long. Peduncles 1-flowered, shorter than the leaves. Bracteas small, subulate, under the tops of the peduncles. Sepals large, acute at both ends.

Willow-leaved Aniseia. Pl. diffuse.

8 A. Martinicénsis (Choisy, l. c.) glabrous; stems terete, creeping; leaves elliptic; peduncles 1-flowered, longer than the leaves; the 3 outer sepals ovate, acute, very large, and very downy; the 2 inner ones much smaller, lanceolate, acuminated. Juv. 1. S. Native of Martinico, in shady, inundated places. Conv. Martinicénsis, Jacq. amer. p. 25. t. 17. pict. p. 19. t. 17. Willd. spec. 1. p. 878.—Loefl. itin. p. 331. Leaves 2 inches long. Bracteas small. Corolla white.

Martinico Aniseia. Pl. creeping.

Cult. Elegant plants when in blossom. See *Calystegia*, p. 264. for the culture of the perennial, herbaceous kinds; and *Pharbitis*, p. 265, for the annual species.

XVIII. POLYMERIA (from πολυς, *polys*, many; and μερος, *meros*, a part; in allusion to the stigma being divided into many parts.) R. Br. prod. p. 488. Choisy, in mem. soc. phys. gen. 6. p. 484.

Lin. syst. *Pentándria*, *Monogynia*. Calyx 5-parted. Corolla funnel-shaped, plicate. Style one; stigmas 4-6, acute. Ovarium 2-celled; cells 1-seeded. Capsule 2-4-valved, 1-celled, 1-2-seeded.—Diffuse or creeping, non-lactescent herbs, natives of Australia. Peduncles axillary, bi-bracteate. This genus differs from *Convólvulus*, in the greater number of stigmas, and the cells of the ovarium being only 1-seeded.

1 P. calycina (R. Br. prod. p. 488.) sepals unequal; outer ones cordate at the base; seeds glabrous. ♃. G. Native of New South Wales, and New Holland, within the tropic.

Var. α; leaves oblong, obtuse, smoothish. ♃. G. Native of New South Wales, about Port Jackson.

Var. β; leaves oblong-linear, clothed with very fine down. ♃. S. Native of New Holland, within the tropic.

Large-calyxed Polymeria. Pl. creeping.]

2 P. **ruiifla** (R. Br. l. c.) sepals equal; leaves cordate, somewhat emarginate; peduncles 1-flowered; seeds rather villous. ♄. S. Native of New Holland, within the tropic.

Var. α; leaves ovate, obtuse.

Var. β; leaves sub-hastate, linear.

Small Polymeria. Pl. creeping.

3 P. **quadrivalvis** (R. Br. l. c.) sepals equal; leaves cordate, obtuse, glabrous above, but downy on the veins beneath; peduncles 1-flowered; capsule 4-valved, 2-seeded; seeds tomentose. ♄. S. Native of New Holland, within the tropic.

Four-valved-fruited Polymeria. Pl. creeping.

4 P. **lanata** (R. Br. l. c.) sepals equal; leaves cordate, obtuse, mucronulate, woolly on both surfaces, as well as the seeds; peduncles 1-flowered. ♄. S. Native of New Holland, within the tropic.

Woolly Polymeria. Pl. creeping?.

5 P. **sericea** (R. Br. l. c.) sepals equal; leaves cordate-oblong, obtuse, mucronulate, smoothish above, and woolly beneath; peduncles 1-3-flowered. ♄. S. Native of New Holland, within the tropic.

Ambiguous Polymeria. Pl. creeping.

Cult. The species of *Polymeria* will grow in a mixture of sand and loam; and they are easily increased by separating the creeping, rooted shoots, or by cuttings.

XIX. CALYSTEGIA (*from* καλὺξ, *calyx*; and στεγω, *stego*, to cover; in reference to 2 large opposite bractes which inclose the flower.) R. Br. prod. p. 483. Choisy, in mem. soc. phys. gen. 6, p. 455.—*Convólvulus* species of Lin. and other authors. *Ess. char. Pentándria, Monogynia.* Calyx 5-parted, inclosed within 2 foliaceous bractеas. Corolla campanulate, 5-plicate. Style one; stigma 2-lobed; lobes terete or globose. Ovarium 2-celled; cells 2-ovulate. Capsule 1-celled from the shortness of the dissepiment.—Lactescent, glabrous, twining, or prostrate herbs. Peduncles solitary, 1-flowered.

1 C. **sepium** (R. Br. prod. p. 483.) leaves sagittate or cordate, very acute; hind lobes obtuse or truncate, entire; bractеas cordate, keeled, acute, longer than the calyx, but one half shorter than the corolla; peduncles tetragonal, exceeding the petioles; sepals acute. ♃. ***. H. Native throughout Europe, in hedges; also of Caucasus, and on the banks of the river St. Laurence; New South Wales, south coast of New Holland, and Van Diemen's Land. Very common in Britain. Conv. sépium, Lin. spec. 1. p. 218. Willd. spec. 1. p. 844. Œd. fl. dan. t. 453. Smith, engl. bot. t. 318. Curt. fl. lond. 1. t. 13. Stev. and Chirch. med. bot. 1. p. 11. t. 2.—Plenck. off. t. 91. Mayerhoffer, fl. mon. t. 27. Conv. Tuguriórum. Forst. prod. no. 75, if hardly distinct. Flowers white, sometimes tinged with red. Roots creeping much, and difficult to extirpate; and, like the roots of most perennial convolvulaceous plants, are purgative in a greater or less degree. A pill composed of one ounce and a half of the extract of the root or two drachms of aloes, and one drachm of ginger, acts with certainty and ease in doses of 10 grains, and might be substituted in most cases for the compound extract of colocynth, where economy is required. Haller affirms, that the expressed juice, if taken in the quantity of 20 or 30 grains, possesses the virtues of scammony: hence it is sometimes called German scammony, and is recommended by Dr. Mason Good, as a hydrogogue purgative in dropsies.

Var. β, incarnata; corollas pale red; white, with a red border, or beautiful crimson, as figured in bot. mag. no. 752. ♃. C. H. Native of North America, from Canada to Carolina, in hedges, and among bushes, sometimes trailing on the ground. Conv. rapens, Michx. fl. bor. amer. 1. p. 137. Lin. spec. ed. 1st. p. 153. ed. 2d. p. 223.—Gron. virg. p. 28.

Var. γ. maritima (Gouan. monsp. p. 27.) leaves narrower, more fleshy, nearly lanceolate.

Hedge Calystegia, or Common Bind-weed. Fl. Jn. Sept. Britain. Pl. tw.

2 C. **sibirica**; stems erect at bottom, smoothish, but twining at top, and rather villous; lower leaves mucronate, cordately sagittate: with the hind lobes roundish; superior leaves acuminated, hastate; peduncles erect, longer than the leaves; bractеas broad-cordate, acute, rather hairy, one half longer than the calyx; sepals ovate, acute. ♃. C. H. Native of Dahuria, in stony, mountainous places. Conv. sibiricus, Bunge, in Ledeb. fl. ross. alt. ill. t. 205. fl. alt. 1. p. 252. Root creeping. Corolla pale red, larger than that of *C. sepium*.

Somewhat-twining Calystegia. Pl. twining.

3 C. **pellita**; twining, villous; leaves ovate-oblong, mucronate, somewhat cordate at the base; peduncles about equal in length to the leaves; bractеas cordate, acute, villous, one half longer than the calyx; sepals elliptic, acuminated, ciliated, villous. ♃. *** H. Native of Siberia, near Irkutsk. Conv. pellitus, Led. fl. ross. alt. ill. t. 206. fl. alt. 1. p. 223. Hind lobes of leaves drawn out, rounded, and mucronate.

Clothed Calystegia. Pl. twining.

4 C. **vellerosa** (Ræm. et Schultes, syst. 4. p. 183.) leaves cordate-sagittate: hind lobes angularly truncate, approximate; peduncles nearly terete; bractеas ovate, obtuse or emarginate, concave, swollen, keeled, longer than the calyx; sepals obtuse. ♃. C. H. Native of Hungary, about Mehadia, near the hot baths of Hercules. Conv. sylvaticus, Willd. enum. 1. p. 209. Waldst. et Kit. pl. rar. hung. 3. p. 290. t. 261. Schultes, aust. fl. 2. ed. 1. p. 581. Very nearly allied to *C. sepium*. Corollas large, white.

Wild Calystegia. Fl. June, Sept. Cl. 1815. Pl. tw.

5 C. **Lucana**; leaves sagittate; hind lobes entire; peduncles tetragonal, longer than the leaves; bractеas ovate-oblong, acuminated, clasping the calyx; corolla with a long cylindrical tube. ♃. C. H. Native of Lucania, in woods. Convólvulus Lucánus, Tenore, fl. neap. prod. append. 5. 1826. Tube of corolla 2-3 inches long; limb white, red below. This species differs from *C. sepium* in the tube of the corolla being cylindrical, and twice as long, in the bractеas being concave, and clasping the calyx, not flat.

Lucania Calystegia. Pl. tw.

6 C. **Dahurica** (Sims, bot. mag. 2609, under *Convólvulus*); stems tomentose; leaves glabrous, oblong-cordate, having the margins and nerves on the under side tomentose; peduncles tetragonal, tomentose; bractеas broad-ovate, acute, longer than the calyx; sepals lanceolate, acute, the 2 outer ones broadest. ♃. C. H. Native of Dahuria. Corolla of a rosy purple colour. Roots creeping.

Dahurian Calystegia. Fl. July, Aug. Cl. 1826. Pl. tw.

7 C. **Catesbyæa** (Pursh, fl. amer. sept. 2. p. 729.) tomentose; leaves oblong-sagittate, acuminated; peduncles 1-flowered, shorter than the leaves; bractеas oval, obtuse, longer than the calyx. ♃. C. H. Native of Carolina. Conv. Catesbæi, Spreng. syst. 1. p. 603. Flowers large, purple.

Catesby's Calystegia. Pl. tw.

8 C. **paradoxa** (Pursh, fl. amer. sept. 2. p. 729.) trailing, tomentose; leaves oblong, cordately sagittate, acute; peduncles elongated, 1-flowered, longer than the leaves; bractеas linear, remote from the flower; calyxes naked, glabrous, acuminated. ♃. H. Native of Virginia or Carolina. Conv. paradoxus, Spreng. syst. 1. p. 608. Flowers large, white.

Paradoxical Calystegia. Pl. trailing.

9 C. soldanélla (*R. Br. prod. p. 483. in a note.*) trailing, glabrous; leaves rather fleshy, reniform, entire, or a little angular; peduncles angular; angles winged; bracteas large, ovate, blunt, mucronate, generally shorter than the calyx. ♃. H. Native of many parts of Europe, along the sea coast; and along the Euxine sea, in Tauria. Found in several places along the coast of Britain. Conv. soldanélla, Lin. spec. p. 220. Smith, engl. bot. t. 314. Reynaud, bot. t. 402. Pluenck, alb. t. 93. C. maritima, Lam. fl. fr. 2. p. 235.—Lob. icon. t. 602. f. 2. Flowers large, pale red, with 5 longitudinal, yellowish plicæ. Seeds angular. The sea bindweed abounds on sea-coasts, where the inhabitants gather the tender stalks, and pickle them. It is considered rather of a cathartic quality.

FIG. 50.

Soldanella-leaved Calystegia. Fl. June, July. Britain. Pl. trailing.

10 C. sepíum (*R. Br. prod. p. 483.*) trailing, glabrous; leaves sagittate, veiny, acute; hind lobes acutish, and a little toothed; bracteas obtuse, one half longer than the corolla; peduncles angular, shorter than the petioles; angles marginate, undulated. ♃. G. Native of New South Wales, about Port Jackson.

Marginate-peduncled Calystegia. Pl. trailing.

11 C. agrestis (*R. Br. l. c.*) prostrate, glabrous; leaves reniform, entire, rounded, thickish; peduncles nearly terete; bracteas cordate, length of calyx. ♃. P. Native of New South Wales, about Port Jackson; and of Chili, about Conception. Hook. et Arn. Beech. voy. pt. bot. p. 35. Sweet, fl. gard. 2. t. 181. Conv. reniformis, Spreng. syst. 1. p. 609. Very nearly allied to *C. soldanélla*, but differs in the peduncles being nearly terete, &c. Corolla pale red.

Reniform-leaved Calystegia. Fl. June, Aug. Clt. 1822. Pl. prostrate.

12 C. nepalénsis (*Wall. fl. ind. 2. p. 94.*) glabrous; stems angular; radical leaves ovate-sagittate, of the stem deeply 3-lobed; peduncles 1-flowered, angular; corolla hardly an inch long. ⊙. ◠. G. Native of Nipaul, Penang. Conv. Wallichianus, Spreng. syst. 1. p. 611. Corolla pale purple.

Ivy-like Calystegia. Pl. tw.

13 C. grandiflòra; glabrous; leaves cordate, acuminated, undivided; auricles rounded, entire on the angles; peduncles 1-flowered, angular, nearly as long as the leaves; bracteas cordate, acuminated, twice as long as the calyx. ♃. ◠. S. Native of Guayaquil. Convol. grandiflorus, Ruiz. et Pav. in herb. Lamb. Corolla large, purple.

Great-flowered Calystegia. Pl. twining.

14 C. tomentòsa (*Pursh, fl. amer. sept. 1. p. 143.*) erect, tomentose; leaves oblong-lanceolate, acuminated, cordate; hind lobes obtuse; peduncles 1-flowered, elongated; bracteas ovate, acute; scape lanceolate; stem floriferous below. ♃. H. Native from Canada to Virginia, on dry rocky hills. Conv. stans, Michx. fl. amer. bor. 1. p. 138. Flowers large, white.

Tomentose Calystegia. Fl. June, July. Clt. 1818. Pl. 1 foot.

15 C. sepiárum (*R. Br. prod. 483, in a note.*) Pursh, fl. amer. sept. 1. p. 143.) erect, downy; leaves subcordate-oval, obtuse; peduncles 1-flowered, shorter than the leaves; bracteas ovate, acute; stem floriferous above. ♃. H. Native from Pennsylvania to Carolina, on dry hills. Hook. Exot. fl. t. 97. Conv. spithamæus, Lin. spec. 222. Willd. spec. 1. p. 878. Flowers white, middle-sized.

Space Calystegia. Fl. July, Aug. Clt. 1796. Pl. ½ to 1 foot.

Cult. The species are elegant when in blossom, and are of the most easy culture. They will grow in any common garden soil, and are easily increased by pieces of the roots, or by seeds. The *C. soldanélla*, a native of the sea-shore, thrives best if watered with salted water now and then.

XX. SHUTERIA (named after Dr. Shuter, who collected many plants in the neighbourhood of Madras.) Choisy, in mem. soc. phys. gen. 6. p. 456.—Convólvulus, Ipomœa, and Calystegia, species of authors.

Lin. syst. *Pentándria, Monogynia.* Calyx of 5 unequal sepals. Corolla campanulate. Style one; stigma 2-lobed; lobes ovate, flattened. Capsule 1-celled, 4-seeded.—Herb twining.

1 S. sericea (Choisy, l. c. p. 456.) stem villous; leaves ovate-cordate, entire, or usually sinuately angular; peduncles usually 1-flowered, bracteate, exceeding the leaves; outer sepals large, involucrating the flower. ⊙. ◠. S. Native of the East Indies, as of Coromandel, Pegu, Ava, Nepaul, Courtall, Rangoon, Straits of Sunda, &c. Conv. bicolor, Roxb. hort. beng. p. 14. Vahl. symb. 3. p. 25. Sims, bot. mag. 2203. Wall. fl. ind. 2. p. 57. Ipomœa bicolor, Sweet, hort. brit. p. 287. Calystegia Keriàna, Sweet, hort. brit. p. 287. Conv. villosissimus, Lin. suppl. p. 135, ex Wall. Conv. involucratus, Ker. bot. reg. 518, but not of Beauv. Conv. bracteatus, and C. bicolor, Herb. madr. Conv. Malabar, and C. gracillus, Russ. herb. Leaves 1–3 inches long, glabrous, villous or hairy. Peduncles villous. Bracteas acuminated at both ends, downy, close to the flower. Outer sepals villous; inner ones linear lanceolate, glabrous, all remaining round the fruit at length. Corolla villous outside, yellow; bottom of the bell deep purple. Capsule hairy, 4-seeded, rarely 2–3-seeded by abortion.

Var. β. bracteata; peduncles shorter; leaves nearly entire, and hastately 3-lobed. ⊙. ◠. S. Conv. bracteatus, Vahl, symb. 3. p. 25. Ipomœa bracteata, Roem. et Schultes, syst. 4. p. 227.

Two-coloured-flowered Shuteria. Fl. Jn. Aug. Clt. 1818. Pl. tw.

Cult. This is a beautiful plant when in blossom. The seeds of it should be raised on a hot bed in spring; and the plants, when of sufficient size, should be planted into separate pots, and trained to sticks, and then placed in a stove or greenhouse, where they will blossom, and ripen their seed. A few plants may be tried out in the open border, in a warm, sheltered situation.

XXI. SKINNERIA (named in honour of Capt. Thomas Skinner, of the East India Company's Service, who lately visited the fountains of the rivers Jumna and Ganges, and Himalaya.) Choisy, in mem. soc. phys. gen. 6. p. 457.—Convólvulus species of authors.

Lin. syst. *Pentándria, Monogynia.* Calyx of 5 sepals. Corolla small, and as if it were urceolate. Style one; stigma capitate, 2-lobed. Ovarium 1-celled, 4-ovulate. Capsule 1-celled.—Tufted herbs.

1 S. cantònis (Choisy, l. c.) stems herbaceous, diffuse; leaves linear-lanceolate, entire, on short petioles; peduncles sometimes simple, sometimes loosely bracteate, many-flowered; sepals ovate, obtuse; corolla veiny, pale yellow. ♃. S. Native of the East Indies, as of Ganjam, Dinapore, Rungpore, Tavoy, &c. Conv. cæspitosus, Roxb. in Wall. fl. ind. 2. p. 70.

Coss. pratêns. Ham. herb. ex W. & A. prod. 1. 1557. Cocc. Bendaroo. Wall. cat. no. 1295. Stems glabrous or villous. Branches usually beset with reflexed hairs. Leaves glabrous, 2-3 inches long. Petioles generally hairy. Sepals glabrous. Corolla glabrous, yellowish, hardly plicate at apex. Capsule and seeds glabrous, rarely 2-3-seeded by abortion.

Twined Siamese Pl. diffuse.

Cult. For culture and propagation, see *Pharbitis*, p. 263.

XXII. PORA'NA (probably from *πορος, poros*, to extend from the rambling branches.) Burm. fl. ind. p. 51. t. 21. f. 1. Schreb. gen. no. 256.—Lam. ill. t. 186. Juss. gen. p. 420. ed. Usteri, p. 469. Dunetra, Sweet, fl. gard. t. 127.

Lin. syst. *Pentandria, Monogynia.* Calyx middle-sized, of 5 sepals, increasing wonderfully and unequally after florescence. Corolla campanulate, or tubularly funnel-shaped. Style one, [illegible] capitate. Ovarium 1-celled, 2-4-ovuled. Capsule usually 1-seeded.—Climbing herbs, [illegible]

Twining Poràna. Fl. [illegible] Clt. 1823. Shrub [illegible].

2 P. ACUMINA'TA (Blyenv. fl. d'ox. 1. p. 53. t. 19.) suffruticose, twining; leaves ovate, acuminated, glabrous; panicles dense-flowered; sepals ovate, obtuse, villous; corolla 5-parted, 2-3 times higher than the calyx. ♄. ◠. S. Native of Guinea, in the kingdom of Warre. Stem glabrous, smooth. Leaves 1½ inch long, and 1 broad. Panicles elongate(3, naked. [illegible] branched. Bracteas pressed to the calyx, small, acute, villous. Flowers small, white; lobes of corolla ovate, acute, veiny, ciliated, and villous inside. Stigmas slender, globose.

Acuminated-leaved Poràna. Shrub twining.

3 P. [illegible]A (Roxb. fl. ind. 2. p. 41. Co[illegible]ti, append. 3. p. 48. mem. act. tar. 23. p. 160.) plant herbaceous, twining; leaves cordate, acuminated, glabrous or downy; panicles loose-flowered; sepals lanceolate, villous, acute, after inflorescence becoming ovate, scarious, glabrous; corolla exceeding the calyx much. ☉. ◠. H. Native of Nipaul, Kamaon, and Silhet. P. dichotoma, Ham. mss. ex D. Don, prod. fl. nep. p. 92. P. cordifolia, Lesleb. mel. sum. hort. dorp. suppl. 1824. p. 6. Dunetra racemosa, Sweet, brit. fl. gard. t. 127. Stems terete or angular, glabrous, smooth or strigose. Leaves 3-4 inches long, with a wide recess at the base. Panicles composed of racemes, leafy. Flowers small, white. Corolla funnel-shaped, glabrous; segments of the limb ovate, acute.

FIG. 21.

Racemose-flowered Poràna. Fl. July, Nov. Clt. 181[illegible]: *ti* [illegible] existing.

4 P. PANICULA'TA (Roxb. corr. t. 235. fl. ind. 2. p. 39.) suffruticose, twining, clothed with hoary tomentum; leaves cordate, acuminated, glabrous above, and hoary beneath; panicles large, much branched; sepals linear-subulate, unequal after florescence, 3 of which are acute and scarious; corolla 5 times higher than the calyx. ♄. ◠. S. Native of India, as of Bengal, ruins of Gour, Ramajahl hills, Saharunpore, Hurdwar, Silhet, Kamaon, banks of the Irrawaddi, &c. P. tomentosa, Lesch. mss. Dunetra paniculàta, Sweet, hort. brit. p. 259. P. corìdata, Gour. Stems terete. Leaves 3 inches long, and 1½ broad. Panicles leafy. Bracteas at the base of the pedicels. Flowers very small, pure white. Corolla tubularly campanulate. Stigma capitate, 2-lobed. Capsule glabrous, compressed, containing only 1 seed, which fills the capsule.

Panicled-flowered Poràna. Fl. [illegible] Clt. 1823. Shrub [illegible] twining.

5 P. GRANDIFLORA (Wall. in Roxb. fl. ind. 2. p. 40.) plant herbaceous, twining; leaves cordate, acuminated, sinuate, scabrous above, and usually glabrous beneath; panicles loose-flowered; sepals linear-lanceolate, acute, increasing much after florescence; corolla more than an inch long. ☉. ◠. H. Native of the East Indies, as of Kamaoon, Silhetpoor mountains, Hutoordal, Nepaul, Chundigherry, &c. Stem angular, branched, glabrous, or hairy. Leaves 2-6 inches long, and 1-3 broad. Panicles racemose, axillary, hardly branched. Bracteas small, filiform. Sepals smoothish or ciliated. Corollas funnel-shaped, rose-coloured; limb 5-plicate, entire, glabrous. Capsule membranous, containing one ovate-spherical, glabrous seed.

Great-flowered Poràna. Pl. twining.

Cult. The shrubby species of *Porana* are well adapted for training on rafters or pillars, in a stove, or warm part of a greenhouse; a mixture of loam, peat, and sand, is the best soil for them; and cuttings will strike root readily in the same kind of soil, under a hand-glass. The annual species are hardy, and grow fast when [illegible]sowed in a sheltered situation, and soon make a good covering for a temporary arbour; or they may be trained on branches of trees; [illegible] are produced in great profusion in autumn.

XXIII. DUPERRE'YA (named in compliment to Louis Isidore Duperrey, an officer in the French navy, who collected many specimens of plants for Gaudichaud, during his hydrographic voyages.) Gaud. in Freyc. voy. pt. bot. p. 502. t. 80.

Lin. syst. *Pentandria, Monogynia.* Calyx 5-parted, propped by 2 smaller bracteæ, increasing much after florescence, membranous, reticulately-nerved, and spreading. Corolla somewhat funnel-shaped, plicately 5-lobed. Stamens inclosed. Ovarium 1-celled? Style exserted; stigma large, thick, trigonally cordiform. Capsule elliptic, indehiscent, membranous, 1-seeded. Seed fixed to the bottom of t[illegible] o *oA'i,* sessile, elliptic. Albumen mucilaginous.—A small shrub, with alternate leaves; axillary, solitary, pedicellate, bluish flowers, the whole forming a leafy racemo[illegible]

1 D. [illegible]ERICEA (Gaud. l. c.) [illegible].G. Native of New Holland, on the west coast, in Shark's Bay.

Silky Duperreya. Shrub small.

Cult. For culture and propagation, see *Bonamia*, p. [illegible]

XXIV. NEUROPE'LTIS (*νευρον, neuron*, a nerve [illegible] *πελτη, pelte*, a buckler; in reference to the nerved bracteas which props the fruit.) Wall. fl. ind. 2. p. 43. Choisy, in mem. soc. phys. gen. 6. p. 421.

Lin. syst. *Pentandria, Digynia.* Calyx of 5 permanent sepals. Corolla funnel-shaped, 5-parted, flat. Styles 2; stigmas fleshy, reniform. Capsule 1-seeded, large, dilated, membranous, propped by a floral leaf.—Weak, erect, spreading shrubs.

1 N. [illegible]ERVOSA (Wall. fl. ind. 2. p. 43.) woody; stem glaucous, racemose, dotted with white; leaves ovate, entire, approxi[illegible]

ovate, acute at both ends, petiolate, coriaceous; racemes axillary, erect; bracteas roundish, surrounding the capsule. ħ. S. Native of Penang, where it was collected by W. Jack. Young branches downy. Leaves numerous, 3-4 inches long, downy beneath. Racemes 4 or more from the same axil, 1-3 inches long.

Racemose-flowered Neuropeltis. Shrub.

2 N. RACEMOSA (Wall. cat. no. 1223. Choisy, l. c. p. 492.) woody; stem white, rugose, beset with white dots; leaves oblong-lanceolate, with revolute edges, but not coriaceous; bracteas ovate, surrounding the capsule, which is about the size of the fruit of *Tilia*. ħ. S. Native of the Burmann Empire, at Amherst. Leaves 3-4 inches long, glabrous on both surfaces. Racemes shorter than the leaves. This species is very nearly allied to the first; but differs, in the leaves being oblong-lanceolate, not ovate, coriaceous; in the bracteas surrounding the fruit being ovate, not roundish, and in the capsule being larger.

Ovate-bracteal Neuropeltis. Shrub.

Cult. For culture and propagation see *Bonamia*, p. 299.

XXV. PREVOSTEA (named after [illegible] Prevost, of Geneva.) Choisy, in mem. soc. phys. gen. 6. p. 492.—Calycobolus, Willd. —Dufourea, H. B. et Kunth, nov. gen. amer. 5. p. 115.—Dufourdiogia, Nees, et Mart. in nov. act. bonn. 11. p. 79.—Reinwardtia, Spreng. syst. 1. p. 598.

Lin. syst. *Pentandria, Digynia.* Calyx of 5 sepals, the 2 outer ones large, and involving the flower. Corolla funnel-shaped, with a plicate limb. Ovarium 2-celled; cells 2-seeded. Styles 2, or style one, deeply bipartite; stigmas capitate. Capsule 2-celled; cells 1-2-seeded.—Twining shrubs, natives of South America. Leaves entire. Peduncles many-flowered, axillary and terminal, panicled. Corollas white.

1 P. OVATA; leaves glabrous; peduncles axillary, many-flowered; outer sepals green. ħ. C. S. Native of the Missions of the Orinoco, on the banks of the Cassiquiares, near San Francisco Solano. Dufourea glabra, H. B. et Kunth, nov. gen. 3. p. 114. Reinwardtia glabra, Spreng. syst. 1. p. 863. Shrub much branched; branches erect. Leaves obovate, obtuse, mucronate, cordate at the base, 2½ inches long, full of pellucid dots. Corollas white.

Glabrous Prevostea. Shrub twining.

2 P. SERICEA; leaves silky beneath; panicles terminal; outer sepals coloured. ħ. C. S. Native of New Granada, near the town of Mariquita, at the altitude of 400 hexapods. Dufourea sericea, H. B. et Kunth, nov. gen. 3. p. 114. t. 214. Reinwardtia sericea, Spreng. l. c. Young branches clothed with silky down. Leaves ovate-elliptic, obtuse, mucronate, cordate at the base, glabrous above, but clothed with yellowish, silky down beneath, 3-4 inches long, and 2 broad, dotted. Corollas white.

Silky Prevostea. Shrub tw.

3 P. REYNARIA; villous; leaves cordate-ovate, acute, rather angular; peduncles 3-flowered, about equal in length to the leaves; sepals unequal, 3 outer ones larger, green. ħ. C. S. Native of Brazil. Dufourea heterandra, Mart. in nov. act. bonn. 11. p. 79. Convólvulus Mártii, Spreng. syst. 1. p. 593. Corolla blue. Style undivided. Perhaps Ipomœa Weinmanni, Rœm. et Schultes, is a species of *Prevostea*.

Variable-flowered Prevostea. Shrub twining.

Cult. For culture and propagation see *Ferdinandea*, p. 498.

XXVI. BREWERIA (named in memory of Samuel Brewer, who is much praised by Dillenius, in his Historia Muscorum.) R. Br. prod. 487. Choisy, in mem. soc. phys. gen. 6. p. 487.

Lin. syst. *Pentandria, Digynia.* Calyx of 5 equal sepals. Corolla funnel-shaped, or campanulate, plicate. Style one, bifid; stigmas 2, capitate. Capsule 2-celled, valvate; girded by the calyx, which is scarcely changed; cells 2-seeded.—Diffuse, non-herbaceous herbs. Leaves entire. Flowers axillary, nearly solitary. This genus is intermediate between *Ipomœa* and *Exogonium*. It differs from *Prevostea* chiefly in the calyx not being changed in the fruit-bearing state, and in habit. It differs also from *Bonamia*, by the same reason.

§ 1. *Leaves cordate at the base.*

1 B. ROXBURGII (Choisy, in mem. soc. phys. gen. 6. p. 493.) stem branched; branches rusty; leaves ovate-cordate, sub-acuminated, rusty; peduncles hardly equal in length to the petioles, 3-many-flowered; sepals ovate, acuminated or ovate-roundish, nearly equal. ħ. S. Native of the East Indies, as of Silhet, Penang, Amherst, Tavoy, Travancore, Coromandel, Silhet, &c. Convólvulus sericiflorus, Roxb. in Wall. fl. ind. 2. p. 47. Convolvulus ferrugineus, Herb. madr. Leaves 2-3 inches long, and 1½ broad. Peduncles and petioles downy. Outer sepals villous. Corollas villous, rufescent. Capsule glabrous, crowned by a tuft of hairs. Seeds black, angular, glabrous.

Roxburgh's Breweria. Shrub diffuse.

2 B. CORDATA (Blum. bijdr. p. 122.) plant tomentose; leaves cordate, acuminated, villous; peduncles umbellately 3-5-flowered at the apex; sepals acuminated, the 2 outer ones the largest. ħ. S. Native of Java, about Buitenzorg. Nearly allied to *B. pannosa*. Styles unequal.

Cordate-leaved Breweria. Pl. diffuse?

3 B. PANNOSA (R. Br. prod. p. 488.) tomentose; leaves ovate, sub-cordate, pannosely tomentose; sepals unequal; outer ones ovate, somewhat acuminated; styles unequal, combined at bottom. ħ. S. Native of New Holland, within the tropic.

Cloth-leaved Breweria. Pl. diffuse.

4 B. HYSSOPIA (R. Br. l. c.) pilose rather villous; leaves lanceolate, obtuse at the base, and somewhat cordate; styles unequal, combined at the base. ħ. S. Native of New Holland, within the tropic.

Intermediate Breweria. Pl. diffuse.

5 B. MADAGASCARIENSIS (Choisy, in mem. soc. phys. gen. 6. p. 493.) Native of Madagascar. Nothing more is known of this species to us, but the name.

Madagascar Breweria. Pl. diffuse.

§ 2. *Leaves ovate or linear, entire.*

6 B. ELEGANS (Choisy, l. c. p. 494.) stem branched, elongated; older leaves ovate-elliptic, obtuse, emarginate; younger ones narrower, almost linear; peduncles 1-3-flowered, straight, generally exceeding the younger leaves; sepals ovate-lanceolate, very acute; corolla showy, tubularly funnel-shaped. ħ. S. Native of the Burman Empire, at Prome. Convolvulus elegans, Wall. cat. no. 1222. Stems smoothish or downy. Leaves near 2 inches long, and hardly an inch broad, smoothish, and green above, but clothed with rusty down, particularly on the veins beneath. Peduncles, pedicels, and bracteas downy. Corolla 1½ inch long, downy on the tube outside.

Elegant Breweria. Pl. diffuse.

7 B. LINIFOLIA (R. Br. prod. 488.) plant villous; leaves lanceolate-linear, conplicate; styles equal, combined at the base. ħ. S. Native of New Holland, within the tropic.

Linear-leaved Breweria. Pl. diffuse.

8 B. LINIFOLIA (Spreng. syst. 1. p. 618.) leaves scattered, linear, smoothish; stem scabrous, simple; peduncles corymbose. ħ. S. Native of Monte Video, Sello.

Flax-leaved Breweria. Pl. erect.

9 B. CONVOLVULOIDES (Choisy, l. c.) stem suffruticose, branched; leaves ovate-lanceolate, sessile, small, glabrous; flowers solitary, axillary, on short peduncles; corolla small. ħ. S. Native of India? Root woody, yellow. Stems quite glabrous. Leaves

3 lines long, and hardly a line broad. Corolla funnel-shaped, twice longer than the calyx. Capsule glabrous ; cells 1-seeded by abortion.

Evolvulus-like Breweria. Shrub 1| foot.

10 B. BURCHE'LLII (Choisy, 1. c. p. 493.) Native of the Cape of Good Hope. Nothing is known to us of this plant, but the name.

BurchelVs Breweria. PI.

11 B. SFECTA'BILIS (Choisy, 1. c.) Native of Madagascar. Nothing is known to us of this plant but the name.

Showy Breweria. PI.

*Cult** For culture and propagation see *Bonamia,* below.

XXVII. BONA^XMIA (in honour of M. Bonami, author of a Flora of the environs of Nantes in 1782.) Pet. Th. veg. d'afr. 1. p. 17. t. 5. Rcem. et Schultes, syst. 4. p. xli. Choisy, in mem. soc. phys. gen. 6. p. 495.

LIN. SYST. *Pentdndria, Monogynia.* Calyx of 5 equal concave sepals. Corolla tubularly campanulate, 5-lobed. Stamens and style exserted. Style bifid ; stigmas capitate. Capsule 2-celled ; cells 2-seeded. Seeds arillate. A shrub, native of Madagascar.

1 B. MADAGASCARIE'NSIS (Pet. Th. veg. d'afr. fasc. 1. p. 17. t. 5. nov. gen. mad. no. 28. t. 5. Rcem. coll. p. 202.) leaves sinuated, ovate, acuminated, undulated, at length glabrous; corymbs panicled, terminal, dense ; calyx villous. J? • S. Native of Madagascar, at Foul-point. Shrub weak, elegant. Branches terete, pilose while young. Corollas white; segments of the limb ovate, acute. Arillus of seed pulpy, pale red.

Madagascar Bonamia. Shrub *5-6* feet.

Cult. This elegant shrub is worth cultivating in every collection of stove plants. A mixture of loam, peat, and sand, will answer it well, or any light rich soil; and cuttings will strike root readily under a hand-glass, in heat.

XXVIII. CRE'SSA (from Cressus, appertaining to the Isle of Crete, now Candia.) Lin. gen. no. 313. Juss. gen. p. 134. ed. Usteri, p. 150. Lam. ill. 183. f. 1. R. Br. prod. p. 490. Choisy, in mem. soc. phys gen. 6. p. 495.—Anthyllis, Alp. cent. 157. t. 156. Magn. char. 212.

LIN. SYST. *Pentdndria, Digynia.* Calyx 5-parted, or of *5* sepals. Corolla funnel-shaped, 5-cleft. Stamens exserted. Styles 2 ; stigmas capitate. Ovarium 2-celled ; cells 2-seeded. Capsule 2-celled, 1-4-seeded.—Dwarf, downy, branched herbs. Leaves scattered, crowded, quite entire. Flowers sub-spicate, solitary in the axils of the superior leaves, bi-bracteate.

1 C. I'NDICA (Retz. obs. 4. p. 24. Wall. cat. no. 2260.) diffuse ; leaves ovate, sessile, acute, crowded, obtuse at the base, clothed with cinereous or hoary down; flowers in the axils of the superior leaves, nearly sessile, forming a spike or head ; tops of corolla bearded. %. H. Native of the East Indies. Said to be hardly distinct from *C. Cretica,* of which, perhaps, it is only a variety.

Indian Cressa. PI. diffuse.

2 C. CRE'TICA (Lin. spec. 325.) stem usually diffuse ; leaves ovate, sessile, obtuse at the base, hairy, white; calyxes rather silky; flowers in the axils of the upper leaves, forming a head; corolla more or less bearded outside. 0. H. Native of the provinces of France, Italy, Candia. Willd. spec. 1. p 1320. D. C. fl. fr. no. 2753. Sibth. et Smith, fl. grsec. t. 256#. C humifûsa, Lam. diet. fl. fr. 2. p. 268. Lin. amcen. acatL 1' p 135. Anthyllis, Alp. cent. 157, t. 156.—Plukn. aim. 236. t. 43, f. 6. Branches hairy. Calycme segments ovate. Corolla white : segments obtuse, rufescent at top, inside. Capsule 1-seeded. Cretica Cressa. Fl. July, Sept. CIt. 1828. K. i foot.

3 C. AUSTRA'LIS (R. Br. prod. p. 490.) leaves lanceolate-elliptic, nearly sessile ; stem erect. ©. H. Native of New Holland, within the tropic. Corolla more or less bearded outside. Capsule 1-seeded

Southern Cressa. PI. \ foot.

4 C. TRUXILLE'NSIS (H. B. et Kunth, nov. gen. 3. p. *93.)* branches clothed with silky, hoary down ; stems elongated, procumbent; leaves sessile, oblong, bluntish; flowers in the axils of the upper leaves. %. S. Native of Peru, near Truxillo, among the sea sand. Calyx clothed with silky down ; sepals obovate, elliptic, obtuse, equal. Corolla white, hardly equal in height to the tube of the calyx; segments ovate, acute. Capsule 4?-seeded.

Truxillo Cressa. PL procumbent.

-f Doubtful species.

5 C. ARA'BICA (Forsk. segypt. 54. no. 81.) stem shrubby, diffuse, glabrous; leaves ovate-oblong, sessile, villous ; peduncles axillary, length of leaves.—Native of Egypt, in the Taas mountains. Lam. diet. *2.* p. 181. Leaves obtuse, mucronate, J an inch long. Sepals ovate-lanceolate, 3 times shorter than the corolla. Corolla campanulate ; limb 5-toothed. Styles 2, diverging; stigmas capitate.

Arabian Cressa. Shrub \ foot.

6 C. MULTIFLORA (Willd. rel. ex Rcem. et Schultes, syst. 6. p. 207.) corollas bearded ; capsule 4-seeded ; leaves oblong, hoary on both surfaces ; flowers subspicate.—Native of South America, Humb. et Bonpl.

Many-flowered Cressa. PL

7 C. SERICEA (Willd. 1. c.) leaves lanceolate, acute, hoary, silky beneath ; peduncles 1-flowered, axillary.—Native of South America. Humb. et Bonpl.

Silky Cressa. PL

8 C. ARENA'RIA (Willd. 1. c.) stem much branched, panicled ; leaves ovate-elliptic, hairy.—Native of South America. Humb. et Bonpl.

Sand Cressa. PL

Cult. For culture and propagation see *Evolvulus,* p. 302.

XXIX. EVO'LVULUS (from *evolvo,* to turn, in the same sense as *Convolvulus,* which this genus resembles in habit.) Linn. gen. no. 385. Juss. gen. p. 134. edit. Usteri, p. 149. R. Bri. prod. p. 489. Choisy, in mem. soc. phys. gen. p. 496.

LIN. SYST. *Pentdndria, Digynia.* Calyx 5-parted, or of 5 sepals. Corolla sub-rotate, campanulate or funnel-shaped, plicate. Styles 2, bifid; stigmas simple. Ovarium 2-cellecjfcf cells 2-seeded. Capsule 2-celled, valvate. — Non-lactescerM prostrate or creeping, rarely erect herbs. Leaves entire. *Ffe-*duncles axillary, 1-few-flowered ; pedicels bibracteate. *If he Cladostyles* of Humb. et Bonpl. differs from *Evolvulus,* in *jihe* valveless capsule, and number of ovula.

1 E. HIRSU TUS (Lam. diet. 3. p. *5S8.* ill. t. 216. f. 2. bu[t not of H. B. et Kunth.) procumbent; leaves ovate-oblong, ntearly sessile, distant, hairy from bristles on both surfaces; pedmncles 1-flowered, equal in length to the leaves, also exceeding jthem. 7/. S. Native of the East Indies, as of Pondicherry, K/amaon, south of Hindostan, &c. E. sericeus, Wall. cat. no. 131^. Corolla blue. ?

Hairy Evolvulus. PL procumbent.

2 E. ALSINOIDES (Lin. fl. zeyl. p. *76.* spec. p. 39#\) elongated, villous ; leaves ovate or oval, blunt at both endk, petiolate, glabrous above, and hairy beneath ; peduncles usually 1-9. flowered, 4-bracteate ; capsule deflexed. i;. S. Native) of th" East Indies, as at Pegamew, Mungger and Ceylon, Stnaits of Sunda; and of New Holland, within the tropic. Burm +'ey., t. 6. f.]., and 19 t. 9. Conv. alsinoides, Knip. cent, xi/no. 34k

Vistnu-Glandi, Rheed. mal. 11. p. 131. t. 64. Flowers blue. In Ceylon, this plant has the name of *Visnugarandi,* from the Malabar deity Visnu and Garandi, which signifies the dysentery. It is reputed to be a sovereign remedy in that disorder, ex Burm.

Chickweed-lilce Evolvulus. Fl. June, July. Clt. 1733. PI. procumbent.

3 E. VILLOSUS (Ruiz, et Pav. fl. per. *3.* p. 30. t. *235.* f. b.) diffuse, villous; branches ascending; lower leaves ovate-elliptic : uppermost floral ones minute; peduncles 1-2-flowered, longer than the leaves. 1£. S. Native of Peru, on sandy hills ; and of New Holland, within the tropic. R. Br. prod. p. 489. Nearly allied to *E. ahinoides.* Bracteas subulate. Corolla blue, spreading. Calyxes ciliated.

Far. β, *lanceoldlus* (Poir. diet. 3. p. 459.) leaves lanceolate, nearly glabrous ; peduncles 1-flowered, shorter than the leaves. %. S. Corolla pale blue, rather large.

J^V/bztf'Evolvulus. PI. procumbent.

4 E. NUMMULA'IUUS (Lin. spec. p. 391. Swartz, obs. p. 118.) stems branched, beset with short hairs, creeping, downy ; leaves roundish-oval, retuse or emarginate ; flowers solitary or 3 together, pedunculate, shorter than the leaves. 7/. S. Native of Jamaica and Barbadoes, in meadows; as well as on the banks of the Mississippi. Lam. diet. 3. p. 539. Jacq. amer. pict. t. 260. f. *23.* Conv. nummulàrius, Lin. spec. ed. 1st. 157.—Sloane, jam. hist. 1. p. 157. t. 99. f. *2.* Leaves hardly larger than those of *Anagdllis tenélla.* Calyx hairy. Corolla pale blue, but white, ex Swartz. Peduncles capillary, downy.

Money-rvort-leaved Evolvulus. Fl. Oct. Clt. 1816. PI. trailing.

5 E. VERONIC;EF6LIUS (H. B. et Kunth, nov. gen. amer. 3. p. 117. t. 215.) stems creeping, pilose ; leaves petiolate, nearly orbicular, somewhat retuse, cordate, smoothish ; peduncles 1-flowered, about equal in length to the leaves. *If..* S. Native of New Granada, in temperate places, near Guadua. Nearly allied to *E. nummulàrius.* Calycine segments oblong-lanceolate, acuminated, equal, with pilosely ciliated edges. Yourg leaves pilose on the nerves beneath. Peduncles pilose. Corolla pale blue; limb 5-toothed. Capsule 1-celled, 1-3-seeded.

Speedwell-leaved Evolvulus. PI. creeping.

6 E. LINIFÒLIUS (Lin. spec. 392. syst. 299. amcen. acad. 4. p. 306.) erect, villous ; leaves linear-lanceolate, nearly sessile ; peduncles 1-3-flowered, a little longer than the leaves ; styles 4, approximating by pairs. ©. S. Native of Jamaica, St. Thomas's; and New Holland, within the tropic. Lam. ill. t. 216. f. 1. Conv. linifolius, Kniph. cent. 11. no. 26.—Brown, jam. p. 152. t. 10. f. 2. Leaves canescent. Corolla rather tubular, blue, small.

Flax-leaved Evolvulus. Fl. Aug. Sept. Clt. 1782. PI. \ ft.

7 E. DECU'MBENS (R. Br. prod. p. 489.) plant prostrate, villous ; leaves linear-lanceolate, nearly sessile ; peduncles usually 1-flowered, a little longer than the leaves ; styles 2, bipartite. ©. ? S. Native of New Holland, within the tropic. Corollas blue ?

Decumbent Evolvulus. PI. decumbent.

8 E. JAVA'NICUS (Blum, bijdr. p. 724.) leaves linear-lanceolate, sessile, clothed with silky villi; peduncles 1-flowered, bibracteate, length of leaves; stems woody at bottom. %. S. Native of Java, on the top of Mount Gede.

Jàva Evolvulus. Fl. February. PI. trailing?

9 E. DE'BILIS (H. B. et Kunth, nov. gen. et spec. 3. p. 115.) stems elongated, filiform, procumbent, pilose ; leaves on short petioles, oblong, somewhat acuminated, silky from hairs on both surfaces ; peduncles usually 2-flowered, much exceeding the leaves. *11.* S. Native at the foot of the Andes, about Quindiu, near Ibague ; of Mexico, near Jalapa, and near Hacienda de la Laguna. E. filiformis, Willd. herb. Nearly allied to *E. linifòlius.* Root woody, creeping. Peduncles and pedicels clothed with silky down. Capsule 2-seeded. Corolla unknown.

Weak Evolvulus. PI. procumbent.

10 E. SERÍCEUS (Swartz, prod. p. *55.* fl. ind. occ. 1. p. *576.)* stems filiform, glabrous, or downy, procumbent; leaves lanceolate, sessile, silky beneath ; peduncles short, 1-flowered. ©. S. Native of Jamaica, in arid, sandy places; and of Mexico, near Jalapa. Brown, jam. p. 153. no. 3. t. 10. f. 3. Very like *E. linifòlius.* Leaves acutish, 3-nerved. Calyx silky outside ; segments lanceolate, acute, with recurved tops. Corolla white, with a short tube, and a 5-parted, spreading limb ; segments acute. Anthers blue. Capsule silky, 2-celled, many-seeded.

Silky Evolvulus. PI. procumbent.

11 E. AZÚREUS (Schum. pi. guin. p. 166.) pilose; leaves ovate-lanceolate, acute, silky beneath ; stems procumbent, filiform ; peduncles 1-flowered, with a bibracteate joint towards the flower; calyx villous, with lanceolate segments. 0. S. Native of Guinea. Corolla rotate, blue, size of those of *Anagdllis ccerùlea.* Capsule globose, glabrous, 1-celled, 4-seeded. Styles 4. Stigmas simple.

Azure-blue Evolvulus. PI. procumbent.

12 E. CUSPIDA'TUS (H. B. et Kunth, 1. c. p. 116.) stems procumbent, clothed with silky villi; leaves nearly sessile, oblong, cuspidately mucronate, clothed with silky villi on both surfaces, hoary ; flowers nearly sessile, shorter than the leaves. 2/. S. Native about the Orinoco, in sandy places near Angostura and Villa Farrera. Calyx clothed with silky villi; segments lanceolate, acuminately subulate, equal. Corolla unknown. Perhaps the same as the preceding.

Cuspidate-leaved Evolvulus. PI. procumbent.

13 E. COMMERSÒNII (Roem. et Schultes, syst. 6. p. 197.) stems slender, shrubby at bottom ; leaves small, linear-lanceolate, silky beneath : lower ones lanceolate-oval; flowers axillary, almost sessile, solitary. ©. ? S. Native of Monte Video. E. sericeus, Poir. diet. 3. p. *5S6.* Pers. ench. 1. p. 288. Flowers white.

Commcrson's Evolvulus. PI. procumbent.

14 E. INCA'NUS (Pers. ench. 1. p. 288. H. B. et Kunth, nov. gen. 3. p. 116.) stems tufted, diffuse, silky; leaves on short petioles, oblong-lanceolate, somewhat falcate, clothed with silky, silvery down on both surfaces; peduncles 1-flowered, equal in length to the leaves, or longer. J? . S. Native of Quito, among rubbish on the banks of the river Guallabamba. E. sericeus, Ruiz, et Pav. fl. per. 3. p. 30. t. *252.* f. 1. Calyx clothed with silvery, silky down ; segments lanceolate-subulate. Corollas blue. Capsule 1-4-seeded.

Hoary Evolvulus. PL procumbent.

15 E. ARGE'NTEUS (R. Br. prod. 489.) plant diffuse, hoary ; branches elongated, undivided; leaves lanceolate-ovate, nearly sessile, acute, silvery; peduncles 1-flowered, about equal in length to the leaves. ©. ? S. Native of New Holland, within the tropic, on the sea shore. Very nearly allied to *E. incdnus;* but the leaves of that species are broader, ovate, and petiolate.

Silvery Evolvulus. PI. diffuse.

16 E. HOLOSERICEUS (H. B. et Kunth, 1. c. p. 116.) procumbent; leaves sessile, oblong, acute, glabrous above, silvery and silky beneath; flowers axillary, sessile. J? . S. Native of New Granada, in fields; in La Culsta de Toluca; and near Ibague. Stem beset with silky hairs, as well as the calyx. Corolla blue.

Whole-silky Evolvulus. PI. procumbent.

17 E. ANGUSTI'SSIMUS (H. B. et Kunth, 1. c. p. 116.) stems rather procumbent, clothed with silky down ; leaves sessile, linear-lanceolate, acuminately cuspidate, glabrous above, and clothed with silky hairs beneath; flowers almost sessile, shorter than the leaves. %. S. Native along with *E. cuspiddtus.*

Calyx hairy; segments lanceolate, acuminated. Corolla pale blue. Ev. virgatus, Willd. rel. is probably the same.

Very narrow-leaved Evolvulus. Pl. procumbent.

18 E. Nuttallia'nus (Roem. et Schultes, syst. 6. p. 198.) erect; leaves linear-oblong, clothed with silky tomentum or hairs on both surfaces; peduncles short, 1-flowered. ♃. F. Native on the banks of the Missouri, and the high hills of Red River, near Kiamesha: also in Florida, and about the banks of the Platte; and of Mexico. E. argenteus, Pursh, fl. i. p. 187. Nutt. gen. amer. 1. p. 174. but not of R. Br. Flowers purple, coming out about the middle of the stem. Sepals partly linear, and acuminated.

Nuttall's Evolvulus. Fl. May, June. Clt. 1821. Pl. erect.

19 E. latifo'lius (Ker. bot. reg. 40 I.) suffruticose, villous, erect at bottom; branches diffuse; leaves nearly sessile, oblong-cordate, acuminated; fascicles of flowers nearly sessile, generally 3-flowered; sepals linear-lanceolate, pilosely ciliated. ♃. S. Native of Brazil. Corollas white, rotate. Styles 2, bipartite.

Broad-leaved Evolyulus. Fl. June, July. Clt. 1819. Pl. diffuse.

20 E. capita'tus (Nees et Mart, in act. bonn. 11. p. 80.) erect, hairy; leaves sessile, lanceolate; flowers capitate, terminal. ⊙. S. Native of Brazil, about Barra da Vaidas, in woods. Plant hoary. Leaves sessile, hoary beneath, 1½ inch long. Flowers in small villous heads, involucrated by 5-6 ovate-elliptic bracteas. Calycine segments unequal, villous. Corolla reddish, somewhat funnel-shaped, twice longer than the calyx; limb large, 5-angled, plicate, villous outside.

Capitate-flowered Evolvulus. Pl. 1 foot.

21 E. oligoca'rpus (Nees et Mart. in act. bonn. 11. p. SI.) procumbent, villous; leaves oblong, attenuated at the base; heads of flowers axillary and terminal, leafy. ♃. S. Native of Brazil, about Tamburil and Valos, among bushes. Leaves 6-9 lines long, on short petioles: lower ones obtuse: superior ones acutish. Heads of flowers sessile, mixed with oblong-lanceolate or lanceolate, villous bracteas. Calycine segments lanceolate, acuminated. Corolla somewhat funnel-shaped, blue; limb 5-lobed, dilated.

Glomerate-flowered Evolvulus. Shrub procumbent.

† *Doubtful species.*

22 E. arbuscu'lus (Poir. suppl. 3. p. 459. ? pi int hi spid; leaves small, almost sessile, ovate-lanceolate; flowers lateral and terminal, on short peduncles; stem shrubby, much branched, filiform. ♄. S. Native of St. Domingo. Leaves hairy. Calyx hardly pilose; segments acute. Corolla white, twice longer than the calyx.

Arbuscalous Evolvulus. Shrub.

23 E. Acapulce'nsis (Willd. rel. ex Kcetn. et Schultes, syst. 6. p. 199.) leaves lanceolate, villous, sessile; stem branched at the base; peduncles usually 2-flowered, length of leaves. ⊙. S. Native of Mexico, about Acapulco.

Acapulco Evolvulus. Pl. procumbent.

24 E. macrorhi'zus (Willd. rel. Qt. 1. c.) stem erect, branched; leaves ovate-oblong, mucronate, toraentose; corymbs axillary. ♄. S. Native of South America. Humb. et Bonpl.

Long-leaved Evolvulus. Shrub erect.

Cult. The species of *Evolvulus* are pretty little plants, of easy culture. They all do well in light sandy soil, or a mixture of sand and peat. They are all readily increased by seed, which ripen in abundance.

XXX. CLADOSTYLES (from κλαδος, *ktadoa, a* branch; and στυλος, *stylos*, a column; in reference to the [be branched styles.) Humb. et Bonpl. pl. aequin. 1. p. 202. t. 57. H. B. et Kunth, nov. gen. amer. 3. p. 118.

Lin. syst. *Pentandria, Digynia.* Calyx 5-parted. Corolla rotately-campanulate; limb 5-cleft. Styles 2, bipartite; stigmas simple. Capsule 1-celled, 1-seeded, not dehiscent.—An erect herb; with alternate, entire leaves, and terminal loose panicles of small yellow flowers.

1. C. panicula'ta (Humb. et Bonpl. l. c.) ⊙. S. Native of New Granada, near Turbaco. Stem branched, rather rough with adpressed, scattered hairs. Leaves sessile, lanceolate, acute, mucronate, narrowed at the base, beset with adpressed hairs on both surfaces, 1 inch long, and 3-4 lines broad. Flowers on long pedicels.

Panicled-flowered Cladostyles, Pl. 2 feet.

Cult. For culture and propagation see *Evolvulus*, above.

XXXI. WILSO'NIA (named in memory of John Wilson, author of a synopsis of British plants in Ray's method.) R. Ur. prod. p. 490. Clioisy, in mini, soc. phys. gen. C. p. 496.

Lin. syst. *Pentandria, Monogynia.* Calyx urceolate, pentagonal, 5-toothed. Corolla funnel-shaped, imbricate in aestivation. Style bifid; stigmas capitate. Ovarium small, 2-seeded.—An humble, prostrate, much branched, downy shrub. Leaves imbricated in 2 rows, small, thickish, sessile. Flowers axillary, sessile, solitary, bracteless.

1 W. rotundifolia (R. Br. l. c.) ♄. C. Native of New Holland, on the south coast.

Round-leaved Wilsonia. Shrub prostrate.

Cult. This is a singular and beautiful prostrate shrub, worth cultivating in every collection. A mixture of sand, loam, and peat, is the best soil for it; and it will be easily propagated by cuttings or by seeds.

Xsn III. DICHO'NDREÆ (this tribe contains plants agreeing with *Dichondra* in having distinct carpella.) Choisy, in mem. soc. phys, gen. C. p. 497. Embryo cotyledonous. Carpella distinct.

XXXII. DICHO'NDRA (from δις, *dis*, double; and χονδρος, *chondros*, a grain; in reference to the double capsule.) Forst. gen. p. 39. t. 20. Lam. ill. t. 183. R. Br. prod. 491.—Juss. gen. 129. ed. Usteri, p 144. H. B. et Kunth, nov. gen. 3. p. 119. —Sibthorpia spec. JJII!—Steripha, Gaert. fruct. 1. p. 81. t. 94. —Demnosia, Gaertn. vcg. iJS.—*Anonymos*, Walt. fl. cnr. 1. p. 110.

Lin. syst. *Pentandria, Digynia.* Calyx 6-parted. Corolla subrotate or campanulate; limb flat, 5-parted, Ovaria 2, 2-seeded. Styles 2, basilar; stigmas capitate or thick. Capsules 2, utricular, 1-seeded.—Humble, creeping, downy, nonlactescent herbs. Leaves cordate or reniform, petiolate. Pedicles axillary, 1-flowered, without bracteas.

1 D. repens (Forst, gen. p. 39. t. 20.) Leaves reniform or roundish-cordate, glabrous above and downy beneath; calyx exceeding the corolla a little. *I H.*. 1. Native of America, New Holland, Van Dieraen's Laud; and of the East Indies, on Mount Taong-Dong, Ava, &c. Lam. ill. t. 183. Rim Pav. fl. per. 3. p. 22. Sibthorpia evolvulacca, Lin. *I*; Steripha reniformis, Gaertn. fruct. 1. p. 81. t. 94. Leaves sometimes retuse or emarginate, ex R. Br.

Creeping Dichondra. Fl. July, Aug. Clt. 1803. Pl. cr.

2 D. sericea (Lamk. enum. 1. p. 249.) stems procumbent, hairy; leaves on long petioles, reniform, emarginate, repandly crenated, of the same colour on both surfaces, hairy; calyxes ciliated, hairy. ♃. F. Native of Pennsylvania.

Round-leaved Dichondra. Pl. trailing.

3 D. Carolinensis (Michx. fl. bor. amer. 1. p. 136.) leaves

reoiform, rounded not emarginate, the same colour on both surfaces, downy beneath; calyxes villous, closed. ♃. H. Native of South Carolina, by way-sides about Charlestown; and on the banks of the Mississippi, near New Orleans. Pursh, fl. 1. p. 187. D. rèpens, fl. Poir. suppl. 2. p. 470. D. rèpens, Nutt. in amer. phil. trans. n. s. 5. p. 195. Anonymos repens, Walt. fl. carol. 1. p. 110. Dematiòfila rèpens, Gmel. syst. veg. p. 458. Plant small, creeping. Flowers small, green.

Carolina Dichondra. Fl. June, Aug. Clt. 1812. Pl. creeping.

4 D. SERICEA (Swartz, fl. ind. occ. 1. p. 555. icon. t. 10.) leaves reniform, retuse at the apex, glabrous, or downy above silky and silvery beneath; calyx exceeding the corolla a little. ♃. F. Native of Jamaica, and near Santa Fe de Bogota; and of Mexico, about Jalapa. D. rèpens, β. sericea, Poir. suppl. 2. p. 470. This species comes very near *D. rèpens*; and only differs in the leaves being smaller, white, and silky beneath, not of the same colour on both surfaces.

Var. β; leaves reniform, emarginate, nerved and silky beneath. ♃. F. Native of Peru. D. rèpens, Ruiz. et Pav. fl. per. 3. p. 58. D. rèpens Peruviana, Poir. suppl. 2. p. 471.

Silky Dichondra. Fl. June, Aug. Clt. 1793. Pl. creeping.

5 D. ASARIFOLIA (Willd. hort. berol. 2. p. 81. t. 81. enum. 1. p. 297.) leaves broadly reniform, cuneated at the base, retuse at the apex, silky and silvery on both surfaces; corolla exceeding the calyx. ♃. F. Native of Mexico, near Guanaxuato and Zelaya; also near Honda. H. B. et Kunth, nov. gen. 3. p. 120.

Silvery-leaved Dichondra. Fl. June, Aug. Clt. 1818. Pl. procumbent.

† *Doubtful species.*

6 D. BARBATA (Willd. rel. ex Ruem. et Schultes, syst. 6. p. 289.) leaves reniform, repand, villous. ♃. F. Native of South America. Humb. et Bonpl.

Repand-leaved Dichondra. Fl. creeping.

7 D. CYMBALARIÆFÒLIA (Willd. rel. l. c.) leaves reniform, 7-lobed, downy beneath. ♃. F. Native of?

Cymbalaria-leaved Dichondra. Fl. creeping.

Cult. These are pretty little creeping plants, generally having the leaves silvery on the under sides. *D. rèpens, Carolinìana* and *retundifòlia* grow well in the seams between flat stones in front of a stove or green-house; and even the other species will do in a similar way through the summer. All grow well in pots in a mixture of peat, loam, and sand; and are easily increased by dividing their plants, which are all creeping

XXXIII. FALKIA (so named by Thunberg, in honour of John Peter Falck, a Swede, professor of botany at Pou Isburgh, and who accompanied Pallas in part of his travels in Siberia.) Thunb. nov. gen. 19. Lin. suppl. 30. Juss. gen. 132. Schreb. gen. no. 611. Convólvulus species, Thunb.

Lin. syst. *Pentándria, Tetragynia.* Calyx 5-parted. Corolla campanulate, crenated. Styles 4; stigmas globose. Ovaria 4, 1-seeded.—A small, suffruticose, glabrous plant.

1 F. RÉPENS (Lin. suppl. 111. Thunb. diss. nov. gen. t. p. 17.) ♄. F. Native of the Cape of Good Hope, on hills near Cape town. Convólvulus Falkia, Thunb. prodr. 1. p. 35. fl. cap. 1. p. 15. Andr. rep. t. 257. Stems brownish grey, decumbent, rooting; branches filiform. Leaves scattered, petiolate, cordate-ovate, obtuse, entire. Peduncles hardly longer than the leaves. Corollas red, with a paler throat.

Creeping Falkia. Fl. May, Aug. Clt. 1774. Pl. creeping.

Cult. *Falkia* is a pretty little plant, which grows freely in a mixture of loam and peat, or any light soil; and the plant is readily increased by division.

TRIBE IV. CUSCUTEÆ (this tribe only contains the genus *Cuscuta.*) Choisy, in mem. soc. phys. gen. 6. p. 497. Embryo without cotyledons. Plants parasitical.

XXXIV. CUSCUTA (According to Gelius, 1536, it is derived from the Arabic name Kechouth.) Tourn. 122. Lin. gen. no. 176. ed. Schreb. no. 227. Gaertn. fruct. 1. p. 257. t. 52. Juss. gen. 137. R. Br. prod. p. 491. H. B. et Kunth, nov. gen. amer. 3. p. 121. Choisy, in mem. soc. phys. gen. 6. p. 497.

Lin. syst. *Pentándria, Digynia.* Calyx 5, rarely 4-parted. Corolla urceolate or campanulate; limb 5, rarely 4-cleft, marcescent. Stamens usually furnished with a scale at the base of each, rarely naked. Styles 2, sometimes free, and sometimes combined; stigmas acute or capitate. Ovarium 2-celled; cells 2-seeded. Capsule 1-2-celled.—Leafless, twining, parasitical herbs. Flowers aggregate, subcapitate, spicate, umbellate, or corymbose, unibracteate. The seed does not split into lobes, but opens and puts forth a little spiral body, which is the embryo. The stalks twine contrary to the sun's apparent motion, sending out a number of little vesicles, which attach themselves to the bark of the supporting plant.

§ 1. *Species natives of Europe.*

1 C. EUROPÆA (Lin. spec. ed. 1. p. 180.) flowers aggregate, nearly sessile; corolla with a naked throat, 4-5-cleft; epipetalous scales none; stigmas acute, filiform. ⊙. H. Native of Europe and Caucasus, in hedges, usually on bushes and the loftier plants, as *Brambles, Bitter-sweet, Ferns, Thistles, Hemp, Hops*, also on *Flax, Nettles*, and *Grass*. In England, in Cambridgeshire; at Shipston upon Stone, Worcestershire. In Scotland, near Aberdeen, and at Musselburgh. Smith, engl. bot. t. 378. Dieb. fl. cane. 1. p. 113. Oed. fl. dan. t. 199. Pleuck. off. t. 70.—Hook fl. lond. 67. C. major, Bauh. pin. p. 209. 1). C. fl. fr. no. 2754. C. tetrándra, Moench. C. scándens, Brotero, fl. lus. p. 208. C. Epithymum, Thuill. fl. par. ed. 2. 1. p. 85. C. filiformis, Lam. fl. fr. 2. p. 307. C. densiflòra, Willdenet, in Linnæa, 1. p. 322. Cassùtha or Cuscum, Fuel, hist. 547. t. 548. Bauh. hist. 3. p. 266. Calyx red; segments bluntish. Corollas urceolately campanulate, white, usually 4-cleft, and tetrandrous; but in the south of Europe 5-cleft and pentandroid. Seeds usually 2 in each cell. Anthers yellow.

European or *Great Dodder.* Fl. Aug. Sept. Britain. Pl. parasitical.

% C. EPITHYMUM (Lin. spec. 180.) flowers fascicled, sessile; corolla 5-cleft; epipetalous scales crescent-shaped, crenated; stigmas acute. ⊙. H. Native throughout Europe; plentiful in Britain, in cultivated fields, particularly among pulse; also on furze, flax, thyme, nettles, heath, lavender, spurge, hops, grass, &c. Smith, engl. bot. 378. Oed. fl. dan. t. 427. Pleuck. off. t. 71. C. Europæa, Smith, engl. bot. t. 55. Lam. fl. t. 88. C. Europæa, β, Lin. spec. p. 180. C. filiformis, β, Lam. fl. fr. 2. p. 307. C. minor, D. C. fl. fr. no. 2755. Epithymum, Cam. epit. 983, Col. ecphr. 2. p. 23. Stems filiform. Mudi smaller in every part than *C. Europæa*. Flowers more crowded, frequently 4-cleft and tetrandrous. Calyx red. Corolla white, bell-shaped, with ncilto segment! The name is from επι, *epi*, upon, and *Thymus*, thyme; so called from being parasitical on thyme.

Epithymum or Lesser Dodder. Fl. July. Oct. Britain. Pl. parasitical.

2 C. LUPULIFORMIS (Krok. fl. siles. no. 251. t. 36.) flowers racemose, not conglomerate or pedunculate; stems lupuliform, rough, dotted. ⊙. H. Native of Bohemia and Silesia. C. monogynum, Pohl. tent. fl. boh. p. 156. Schultes, contr. fl. ed. 2d. no. 728.

Hop-headed Dodder. Pl. parasitical.

4 C. MONOGYNA (Vahl, symb. 2. p. 32.) flowers pedunculate, monogynous; throat of corolla naked; styles combined; stigma globose. ☉. H. Native of the Levant, on *Thymus Gallica*; and between Smyrna and Bursa; and of Caucasus. Sibth et Smith. fl. græc. t. 257. Bieb. fl. taur. 1. p. 116.—Tourn. cor. 45.—Barrel. icon. 1. p. 15. t. 23. Habit of *C. Americana*, but twice the size in all its parts. Stem warted. Flowers clustered, forming lateral and terminal interrupted racemes. Calyx shining red; segments ovate. Corolla urceolate, pale red; segments of the limb obtuse, spreading. Cells of capsule 2-seeded.

Monogynous Dodder. Pl. parasitical.

§ 2. *Species natives of New Holland.*

5 C. AUSTRA'LIS (R. Br. prod. p. 491.) digynous; stigmas capitate; epipetalous scales lacerately fringed, ending beneath the filaments, which are broadly subulate; calyx smooth, deeply 5-cleft; segments keeled, rather wrinkled. ☉. G. Native of New Holland, within the tropic; and New South Wales.

Southern Dodder. Fl. July, Oct. Clt. 1818. Pl. parasitical.

6 C. CAMPA'NA (R. Br. prod. p. 491.) digynous; stigmas capitate; epipetal scales lacerately fringed, exceeding the bases of the subulately filiform filaments; calyx 5-cleft, with keeled, rather wrinkled segments. ☉. G. Native of New Holland, within the tropic. Grisebach aphylla. Lour. coch. 171. Stems white. Corolla campanulate, 5-cleft. Berry white; cells 2-seeded.

Keeled-calyxed Dodder. Pl. parasitical.

§ 3. *Species natives of America.*

7 C. CORYMBO'SA (Ruiz. et Pav. fl. per. 1. p. 69. t. 115. f. b.) corymbs pedunculate; corollas urceolate, quadrifid, tetrandrous, with a naked throat; stamens inclosed; stigmas capitate. ☉. G. Native of Peru, in cultivated fields; particularly on *Medicago sativa*. Scales on the branches acute, concave. Sepals oblong, obtuse, white. Corollas white.

Corymbose-flowered Dodder. Pl. parasitical.

8 C. SCANDE'NS (Ruiz. et Pav. fl. per. 1. p. 69. t. 105. f. a.) flowers crowded, sessile; corollas campanulate; scales at the base of the filaments ovate, fringed or ciliated; stigmas capitate. ☉. G. Native of Peru, in corn-fields near Lima. Stems marked with purple lines and spots. Scales of the branches small, ovate. Flowers sweet-scented, propped by concave scales. Calyx white, dotted with red; segments roundish, obtuse. Corolla white; segments ovate, acute, reflexed; therefore the stamens are exserted. This species is called *Cabellos de Angel* in Peru.

Sweet-scented-flowered Dodder. Pl. parasitical.

9 C. UMBELLA'TA (H. B. et Kunth, nov. gen. amer. 3. p. 121.) umbels pedunculate, generally 8-flowered; calycine segments acute; corolla campanulate, with acute, reflexed segments; scales at the base of the filaments lacerately fringed; stigmas capitate; genitals exserted. ☉. G. Native of New Spain, between Queretaro and Salamanca. Flowers pedicellate, pentandrous, digynous, white.

Umbellate-flowered Dodder. Pl. parasitical.

10 C. OBTUSIFLORA (H. B. et Kunth, l. c. p. 122.) heaps of flowers sessile; calycine segments obtuse; corolla campanulate, with obtuse segments; scales at the base of the filaments lacerately fringed; stigmas capitate; genitals hardly inclosed. ☉. G. Native of Peru, on the Andes. Said by Torrey to be very abundant about the sources of the Canadian river, parasitical on *Port. Oieracea*. Plant orange-coloured. Flowers on short pedicels, pentandrous, digynous, white. Cells of capsule 1-2-seeded.

Blunt-flowered Dodder. Pl. parasitical.

11 C. OBLONGIFOLIA (H. B. et Kunth, l. c.) heaps of flowers sessile; calycine segments obtuse; corollas globose, with obtuse, spreading segments; epipetalous scales fringed; genitals exserted; stigmas capitate. ☉. i. Native of the Spanish Main, near Cumana, in meadows, where it is called by the natives *Hilo de Oro*. Flowers on short pedicels, pentandrous, digynous. Plant strong-scented.

Strong-scented Dodder. Pl. parasitical.

12 C. TOLUCA'NA (H. B. et Kunth, l. c.) heaps of flowers sessile; calycine segments acuminated; corolla nearly globose, with acute, reflexed segments; epipetalous scales ciliated; genitals exserted; stigmas capitate. ☉. G. Native of Quito, near Chillo. Plant parasitical on *Berberis* and *Bernadesia*, orange-coloured. Flowers fetid, pentandrous, digynous, white.

Fetid-flowered Dodder. Pl. parasitical.

13 C. FLORIBU'NDA (H. B. et Kunth, l. c. p. 123.) corymbs pedunculate; calycine segments obtuse; corolla globose, twice higher than the calyx, with acute, reflexed segments; epipetalous scales ciliated; genitals much exserted; stigmas capitate. ☉. G. Native of New Spain, in the places near Pont Isla. Plant parasitical on *Bignonia rosealis*, orange-coloured. Flowers pedicellate, white, pentandrous, digynous. Cells of capsule 1-2-seeded.

Bundle-flowered Dodder. Pl. parasitical.

14 C. PUTAYA'NA (H. B. et Kunth, l. c.) corymbs pedunculate; calycine segments obtuse; corolla globose, a little higher than the calyx, with acute, erect segments; epipetalous scales ciliated; genitals exserted; stigmas capitate. ☉. G. Native near Popayan, in temperate places. Plant yellow. Corymbs trichotomous. Flowers white, pentandrous, digynous, pedicellate. Cells of capsule 1-2-seeded. Said to be allied to *C. corymbosa*, Ruiz. et Pav.

Popayan Dodder. Pl. parasitical.

15 C. GRANDIFLORA (H. B. et Kunth, l. c. t. 213.) peduncles usually 3-flowered, a little crowded; calycine segments obtuse; corollas rotately-campanulate, with obtuse segments; epipetalous scales wanting; genitals included; stigmas capitate. ☉. G. Native near Santa Fe de Bogota. Plant parasitical on *Spermacoces*. Peduncles 2-3-flowered, solitary, or in fascicles. Flowers pedicellate, pentandrous, digynous. Cells of capsule 2-seeded.

FIG. 32.

Great-flowered Dodder. Pl. parasitical.

16 C. CHILE'NSIS (Ker. bot. reg. t. 602. Hook. et Arn. in Beech. voy. p. [illegible] hot, [illegible]. 35.) pentandrous, digynous; calycine segments ovate, rounded, 3 times shorter than the corolla; epipetalous scales lacerately fringed; segments of corolla ovate, 3 times shorter than the tube, reflexed; anthers sessile; one of the styles shorter than the other; stigmas pilliately capitate. ☉. i. Native of Chili, about Concepcion, Valparaiso, and Andes of Chile.

Chili Dodder. Pl. Jan. Dec. Clt. 1821. Plant parasitical.

17 C. AMERICA'NA (Lin. spec. 180.) flowers pedunculate, umbellate, pentandrous, quinquefid; corolla tubular; limb small, spreading; stigmas capitate; epipetalous scales fringed. ☉. H. Native of Jamaica, St. Thomas, Surinam, Virginia; parasitic in hedges, and on other plants, in moist situations. The

whole plant has a reddish-fellow appearance, Lam. diet. 2. p. 229. Pursh, fl. amer. sept. 1. p. 116. Jacq. amer. pict. t. 17.—Sloane, jam. 85. hist. 1. p. 201. t. 128. f. 4. C. Surinam-6nsis, Schill. lepr. t. 2. Vittm. summ. pi. 1. p. 341. C. Gronovii, Willd. herb. Flowers small, aggregate, yellowish. Genitals hardly inclosed.

American Dodder. PI. parasitical.

18 C. JALAPE'NSIS (Schlecht, in Linnsea, 8. p. 515.) scales ovate, cuneated, or spatulate at the base, much shorter than the style, which is hardly exserted; flowers aggregate; corolla deeply 5-lobed : lobes reflexed at length, therefore the anthers are exserted; capsule bicornute. %. S. Native of Mexico, near Jalapa, on *Tragia Bdccharis,* and *Croton,* &c. Flowers white. Said to come nearest to *C. Americana;* but differs from it in the corolla being longer, blunter, and more deeply lobed ; and in the other characters indicated above.

Jalapa Dodder. PI. parasitical.

19 C. MINIA'TA (Mart, reise. ex Linnaea, 5. p. 29.) racemes pedunculate, 6-8-flowered; throat of corolla closed by ciliated scales; genitals inclosed. ©. G. Native of Brazil.

Vermilion Dodder. . PI. parasitical.

20 C. RACEMO'SA (Mart. 1. c. p. 38.) flowers pedunculate, cymosely racemose; corolla twice longer than the calyx, pentandrous ; throat closed by ciliated scales. ©. G. Native of Brazil.

Racemose-Cowered Dodder. PI. parasitical.

§ 3 *A species native of Africa.*

21 C. AFRICA'NA (Thunb. phyt. Watt. p. 17. fl. cap. p. *568.)* peduncles 1-flowered ; flowers 5-cleft, pentandrous, digynous. 0. G. Native of the Cape of Good Hope, parasitical on various trees. C. Americana, Thunb. prod. p. 32. Peduncles capillary, furnished with a bractea at the base. Calyx very short, 5-cleft. Filaments 5, inserted in the incisures between the lobes of the corolla, and equal in length to them. The stems are more slender, and the flowers are smaller than those of C. *Americana.*

African Dodder. PI. parasitical.

22 C. ARA'BICA (Fres. fl. egypt. et arab. p. 165.) digynous, pentandrous; fascicles few-flowered; flowers nearly sessile, small; genitals inclosed; epipetalous scales fringed at top; branches capillary, densely imbricate. %. H. Native of Arabia. Habit of *C. epithymum.* Tube of corolla and calyx shorter than the limb.

Arabian Dodder. PI. parasitical.

§ 4. *Species natives of Asia.*

23 C. VERRUCOSA (Sweet, fl. gard. t. 6.) digynous, pentandrous ; stigmas lanceolate, obtuse, dilated at the base, fleshy ; epipetalous scales fimbriately jagged; anthers nearly sessile ; calyx 5-cleft, with roundish segments. 1/ . H. Native of Nipaul. Branches irregularly marked with purple, linear spots. Racemes numerous, often 3-flowered, but sometimes 9-10-flowered. Flowers white, fragrant.

Warted-stemmed Dodder. Fl. Sept. Nov. Clt. 1822. PI. parasitical.

24 C. HOOKE'RI (Sweet, hort. brit. p. *290.)* digynous, pentandrous ; stigmas nearly sessile, diverging, subulate; corolla campanulate, 5-toothed, with reflexed segments ; epipetalous scales fringed; anthers sessile. 0. G. Native of Mysore and Coromandel. C. reflexa, var. /3, verrucosa, Hook. exot. fl. t. 150. Stems spotted, and dashed with purple. Peduncles and calyxes warted. Corolla white.

Hooker's Dodder. Fl. Sept. Nov. Clt. 1823. PI. parasitical.

25 C. REFLE'XA (Roxb. cor. 2. p. 2. t. 104.) digynous, pentandrous ; style hardly any: stigmas large, fleshy, expanded, acuminated ; corolla with a cylindrical tube and reflexed segments ; calycine segments ovate-oblong, acutish; epipetalous scales bearded ; filaments very short, ©. G. Native of Coromandel, where it is called *Sitamaponynvoloa* by the Telingas. Stems rough. Racemes long, numerous, many-flowered. Flowers white. Capsule baccate.

Reflexed-fiowered Dodder. PI. parasitical.

26 C. CIIINE'NSIS (Lam. diet. 2. p. 229. Willd. spec. 1. p. 704.) digynous, pentandrous; stigmas subcapitate ; corolla urceolate, with corniculate segments ; calyx almost the length of the corolla, with keeled segments; genitals inclosed. 0. G. Native of China. Plant greenish-yellow. Flowers in loose, few-flowered fascicles, the whole forming an irregular panicle. Corollas white. Styles twisted.

China Dodder. Fl. July, Oct. Clt. 1803. PI. parasitical.

27 C. SULCATA (Roxb. ex Wall, cat. no. 1320.) digynous, pentandrous;. stigmas capitate ; corolla campanulate, small; calycine segments ovate-oblong, membranous, pellucid, equal, obtuse, (" fleshy, furr-owed," ex Roxb.); genitals exserted. ©. G. Native of Silhet, Martaban, Bengal. Stems filiform. Flowers crowded, in lateral, few-flowered fascicles, scaly at the base; pedicels almost wanting. Styles nearly equal, exserted. Capsule small.

Furrowed-calyxed Dodder. PL parasitical.

28 C. MACRA'NTHA ; monogynous, pentandrous; style one, short: stigma acute ; corolla tubular, 4-5 times longer than the calyx, 5-lobed at apex : lobes short, acutish, reflexed ; epipetalous scales membranous, near the base of the corolla; sepals oblong-roundish, obtuse, membranous. 0. G. Native of Nipaul. C. grandiflora, Wall, cat. no. 1318. Stems rough, black in the dried state. Common peduncles elongated, racemose, 1-2 inches long, many-flowered, those on the younger branches short and few-flowered ; flowers pedicellate. Corolla showy. Anthers sessile, in the throat of the corolla. This, along with *C. reflexa* and *C. monogyna,* might form perhaps a distinct genus from the simple style.

Large-flowered Dodder. PI. parasitical.

29 C. HYALI'NA (Roth. nov. spec. p. 220.) digynous tetrandrous; peduncles 3-flowered ; flowers pedicellate ; corolla transparent, 4-cleft;. genitals inclosed; stigmas capitate; capsule membranous. ©. S. Native of the East Indies. Stems capillary. Corolla one-half longer than the calyx. Epipetalous scales seated on the stamens, fixed to the mouth of the corolla, and alternating with its segments, which are lanceolate. Capsule 2-celled ; cells 2-seeded.

Hyaline-flowered Dodder. PI. parasitical.

30 C. CAPILLA'RIS (Wall. cat. no. 1321.) 0. S. Native of the East Indies, at Segaen, opposite Ava. This only differs from *C. sulcata* in the flowers being a little more crowded.

Capillary Dodder. PL parasitical.

31 C. CAPITA'TA (Roxb. ex Spreng. syst. 1. p. 864.) flowers disposed in crowded heads; calyx and corolla papillose, pellucid. ©. G. Native of the East Indies.

Capitate-flowered Dodder. * PL parasitical.

*\ *Doubtful species.*

32 C. FUSIFORMIS (Willd. rel. ex Rcem. et Schuhes, syst. 6. p. 205.) peduncles 1-3-flowered; corolla 4-cleft, very minute and remote. ©. G. Native of the Cape of Good Hope, on *Stavia radiata.*

Fusiform Dodder. PL parasitical.

33 C. CYMOSA (Willd. 1. c.) corollas quinquefid; flowers cymose ; cymes bifid. ©. S. Native of South America. Humb. et Bonpl. Perhaps the same as C. *umbellata.*

Cyssus-flowered Dodder. Pl. parasitical.

Cult. The species are all parasitical, or rather epiphytical plants; the hardy species grow very well on ivy, or any small shrubs. All the species may be grown by sowing the seeds in a pot of light earth, and plunging the pot in the earth at the side of any soft wooded plant.

† *It is not known whether the following genus belongs to the present order.*

XXXV. MOUROUCO'A (the name of the genus in Guiana.) Aubl. Guian. 1. p. 142. t. 54. Desr. in Lam. dict. 4. p. 337. Lam. ill. t. 105. Juss. gen. 133. ed. Usteri. p. 148.

Lin. syst. *Pentandria, Monogynia.* Calyx deeply 5-parted, coloured; segments approximate; outer ones the largest, violaceous. Corolla funnel-shaped; tube short; segments of the limb spreading, roundish. Stamens rising from the base of the lobes, in the upper part of the tube; filaments long, incurved. Stigma thick, roundish, bilamellate. Capsule girded by the calyx, 2-celled, ex Lam., 3-celled, ex Juss., ovate-oblong, coriaceous, fibrous; cells 1-seeded. Seeds large.—A climbing shrub, with stiff, elliptic, acute, glabrous leaves, and axillary, fleshy, thick peduncles, bearing fascicles of flowers at their tops. Corollas large, fine, blue.

1 M. violacea (Aubl. l. c.) ♄. ☉. S. Native of Guiana, in woods. Convolvulus macrocpérmus, Willd. spec. 1. p. 860. Stem branched. Leaves entire, plicate; petioles channelled above.

Violaceous-calyxed Mourouca. Shrub climbing or twining.

Cult. For culture and propagation see *Argyréia*, p. 257.

Order CLXV. RETZIACEÆ (this order contains plants agreeing with *Retzia* in important characters.) Bartl. ex Choisy, in mem. soc. phys. gen. 6. p. 400.

Calyx bracteate, bibracteate, deeply 5-parted. Corolla tubular, cylindrical. Stamens inserted into the tube; anthers subcordate. Stigmas 2, or bifid. Capsule 2-celled; dissepiment placentiferous on both sides; cells many-seeded.—Branched, erect, shrubs. Leaves alternate, or 4 in a whorl. Flowers lateral, sessile towards the extremities of the branches. This order differs from its allies in the cells of the capsule being many-seeded, and in the dissepiment being placentiferous.

Synopsis of the genera.

1 Re'tzia. Corolla villous. Style bifid. Cells of capsule many-seeded.

2 Lonchostoma. Corolla glabrous. Styles 2. Cells of capsule generally 10-seeded.

I. RETZIA (so named by Thunberg, in honour of Anders Johan Retzius, professor of natural history and economy, in the university of Lund, in Sweden; author of Observationes Botanicæ, Lipsiæ, fol.) Thunb. act. lund. 1. p. 53. nov. gen. 4. Lam. ill. t. 103. Schreb. gen. no. 985. Lin. suppl. 18. Juss. gen. 133. ed. Usteri. p. 149.

Lin. syst. *Pentandria, Monogynia.* Calyx 5-parted, unequal; segments lanceolate. Corolla tubular, contracted under the limb, villous inside and outside, 5-parted at apex; limb short; segments or lobes obtuse, concave, very villous at apex. Anthers subcordate. Stigma bifid, simple. Capsule oblong, acute; cells many-seeded.—An erect, branched shrub. Leaves 4 in a whorl. Flowers bracteate, terminal, crowded.

1 R. spicata (Thunb. act. lund. 1. p. 55. t. 1. f. 2. Lam. ill. t. 103. Lin. suppl. 128.) ♄. G. Native of the Cape of Good Hope, on the highest mountains. R. Capénsis, Thunb. prod. p. 24. Branches hairy. Leaves crowded, lanceolate-linear, sessile, blunt, 1-grooved above, with impressed dots, 2-grooved beneath. Flowers lateral towards the extremities of the branches, sessile, crowded, upright, almost concealed among the leaves. Bracteas acute, keeled, hairy, longer than the calyx. Corolla rufescent. This plant bears a very great affinity with *Convólvulus*, and especially with *Convólvulus cneorhoides*, which is probably also a species of *Retzia*.

Spicate-flowered Retzia. Fl. May, June. Cl. ? Shrub 4 feet.

2 R.? capensis (Spreng. syst. 1. p. 589.) glabrous; erect; stem herbaceous, branched; leaves alternate, lanceolate, entire, erect; flowers solitary, terminal, naked. ♃. G. Native of the Cape of Good Hope. Polemónium corymbosoides, Thunb. prod. p. 33. Lin. suppl. 139. Willd. spec. 1. p. 1187. Stigma bifid. Said to resemble *Campánula persicifólia*.

Campanula-like Retzia. Pl. 2 to 3 feet.

3 R. serrulata (Spreng. syst. 1. p. 589.) stems herbaceous, villous; leaves alternate, sessile, lanceolate, marginate, scabrous; flowers axillary and terminal, sessile. ♃. G. Native of the Cape of Good Hope. Polemónium roelloides, Thunb. prod. 1. p. 33. Lin. suppl. 139. Willd. spec. 1. p. 887.

Roella-like Retzia. Pl. 1 to 3 feet.

Cult. Any light rich soil will answer this shrub, or a mixture of peat, loam, and sand. Cuttings will strike root freely in sand, under a hand-glass.

II. LONCHOSTOMA (from λογχη, *lanche*, a lance; and στομα, *stoma*, a mouth; in reference to the segments of the corolla, which are lanceolate, and attenuated towards the throat of the corolla.) Wikstr. in acad. holm. 1818. t. 10. Spreng. gen. 1. p. 210.

Lin. syst. *Pentándria, Digynia.* Calyx bracteate, imbricate, 5-parted. Corolla tubular; limb 5-parted; segments lanceolate, attenuated to the throat. Stamens 5, inserted in the tube of the corolla. Styles 2. Capsule 2-celled, 2-valved; dissepiments placentiferous on both sides; cells generally 10-seeded.—Shrubs, natives of the Cape of Good Hope, with alternate leaves. Flowers spicate, terminal.

1 L. obtusifolium (Wikstr. l. c.) leaves elliptic, hairy on one side; sepals and segments of corolla obtuse; styles subclavate, inclosed. ♄. G. Native of the Cape of Good Hope. Passerina obtusifólia, Thunb. prod. 1. p. 76.

Obtuse-leaved Lonchostoma. Shrub.

2 L. acutifolium (Wikstr. l. c.) leaves ovate, pilose on one side; sepals and segments of corolla acute; styles filiform, exserted. ♄. G. Native of the Cape of Good Hope.

Acute-leaved Lonchostoma. Shrub.

Cult. For culture and propagation see *Retzia* above.

Order CLXVI. BORAGI'NEÆ (this order contains plants agreeing with *Borágo* in important characters.) Juss. gen. p. 130. ed. Usteri, p. 143. R. Br. prod. p. 492.—Asperifólia Nuciferæ, Lehm. asp.

Calyx 5-parted, rarely 4-parted, permanent. Corolla hypogynous, monopetalous, usually regular, 5-cleft, rarely 4-cleft, imbricate in æstivation. Stamens epipetalous, equal in number to the segments of the corolla, and alternating with them, rarely more. Ovarium 4-parted, 4-seeded, or simple, 2-4-celled, with

a definite number of pendulous ovula. Carpels 4, distinct, or joined at bottom; or a berry containing 2-4 pyrenae. Seeds exalbuminous. Embryo inverted.—Herbs or shrubs. Leaves alternate, exstipulate, usually rough. Flowers generally disposed in secund spikes, but sometimes panicled and corymbose, and sometimes axillary and solitary.

The true *Boraginece* are chiefly herbaceous plants, with alternate exstipulate leaves, the surfaces of which are covered with minute asperities, and with flowers arranged in one-sided spikes or racemes ; very rarely solitary. The fruit is generally composed of 4 disti :t carpels. Some, *Echiums,* and a few more, **are shrubs. The genus *Tournefortia* and *Messerschmidtia*** are chiefly composed of shrubs. Some of the plants of this order are mere weeds, quite unworthy of culture; others are **eminently beautiful, as many *E^chiums, Onosmas, Onosmodiums,*** *Symphy turns Mertensias,* and others. In general they have mucilaginous and emollient qualities, which are especially abundant in the root of *Symphy turn* and *Cynoglossum.* Pure nitre has been found in several plants of this order. A red colour is given **out by *Anchilsa tinctoria, Lithospermum tinctorium,* and *Onosma*** *cchioides,* which is used in dyeing. Several plants of the same order are employed on the same account in America.

*Synopsis of the genera**

TRIBE I.

BORAGIE^N;E. Fruit of 4 distinct, 1-celled carpels, which are imperforated at the base. Corolla deeply 5-parted, with pointed segments. Stamens usually exserted. Inflorescence diffuse.

SUBTRIBE I.

BOR'AGES. Nuts fixed to the bottom of the calyx, imperforated at the base. Corolla rotate; throat furnished with vaulted processes.

1 BORA'GO. Corolla rotate ; throat furnished with emarginate processes or arches. Stamens glabrous ; anthers oblong, pointed, fixed by the inner side. Nuts turbinate, fixed to the bottom of the calyx.

2 TRACHYSTE^MON. Corolla rotate; throat furnished with short, blunt, or emarginated processes or arches. Stamens with lengthened, hairy filaments, and incumbent, pointless anthers. Nuts fixed to the bottom of the calyx.

SUBTRIBE II.

RINDE'REJE. Nuts adnate to the central column. This, with subtribe *Cynoglossece* of tribe *Buglossece,* might with propriety form a tribe to be called *Cynoglossece,* from the carpels being fixed to the central column.

§ 1. *Throat ofcorolla furnished with vaulted processes.*

3 MA'TTIA. Corolla angular, tubularly funnel-shaped ; throat furnished with processes. Stamens exserted, but usually inclosed ; anthers sagittate, connivent. Nuts furnished with a membranous, emarginate, orbicular wing, fixed to the centre column longitudinally,

4 SOLENA'NTHUS. Corolla tubular, 5-toothed; throat furnished with 5 arched processes. Stamens exserted. Nuts 4, depressed, echinated, adnate to the central column.

§ *2. Throat of corolla naked.*

5 RINDE'RA. Corolla funnel-shaped; throat naked. Anthers sessile, between the segments of the corolla. Nuts margined by a broad, striated, stiffish wing, adhering lengthwise to the thick central column.

6 TRICHODE'SMA. Corolla subrotate; throat naked; segments subulate at apex. Anthers fixed together by hairs. Nuts 4, half immersed in as many hollows or pits of a 4-winged, central column, adnate near the apex.

TRIBE II.

SYMPHY'TE-E. Corolla tubular, truncate; with very short lobes. Stamens inclosed. Carpels or nuts fixed to the bottom of the calyx. Inflorescence usually revolute.

7 SY'MPHYTUM. Corolla tubularly campanulate ; throat furnished with subulate or lanceolate processes, which connive into a cone. Nuts 4, 1-celled, ovate, imperforated at the base.

8 COLSMA'NNIA. Corolla cylindrically campanulate ; throat naked. Anthers sagittate, distinct. Nuts 4, 1-celled, ovate-triangular, perforated at the base.

9 STOMOTE^CHIUM. Corolla tubularly subcylindrical ; throat closed by roundish, fleshy, muricated processes. Anthers oblong. Nuts 4, 1-celled, roundish, perforated at the base.

10 ONOSMA. Corolla tubularly-campanulate ; throat naked. Anthers sagittate, connected by the lobes at the base. Nuts 4, 1-celled, ovate, imperforated at the base.

11 ONOSMODIUM. Corolla tubular ; throat naked ; limb ventricose ; segments conniving. Anthers sagittate, distinct. Nuts 4, 1-celled, turgid, shining, imperforated at the base.

12 PULMONA'RIA. Corolla funnel-shaped ; throat pilose. Nuts 4, 1-celled, turbinate, imperforated at the base.

13 MERTE'NSIA. Corolla tubularly funnel-shaped ; throat naked. Nuts 4, 1-celled, ovate, smooth or wrinkled, imperforated at the base.

14 CERINTHE. Corolla tubular; throat naked. Anthers hastate, connected, having the lobes spirally twisted at the base. Nuts *2,* 2-celled, or 4, combined by twos, imperforated at the base.

TRIBE III.

LITHOSPE'RME*:. Corolla open, tubular ; with broad, mostly rounded lobes. Stamens inclosed or exserted. Nuts 4, distinct, fixed to the bottom of the calyx, imperforated at the base, **except in *Stribila.***

15 LITHOSPE'RMUM. Corolla funnel-shaped; throat naked. Anthers oblorqr, inclosed. Nuts ovate, hard.

16 BA'TSCHIA. Corolla salver-shaped, with a straight tube, longer than the calyx, bearded by a ring of hairs inside at the base ; mouth naked. Nuts 4, hard, shining. Stamens exserted or inclosed.

17 MACROMEDIA. Corolla funnel-shaped; lobes acute;

throat naked. Anthers linear-oblong, incumbent. Style a small pubescent dot. Ovaria 4, connate.

18 MOLTKIA. Corolla cylindrically funnel-shaped: throat naked. Stamens exserted; anthers oblong, incumbent. Nuts hemispheric, concave at the base.

19 CRANCHIA'NUM. Corolla cylindrical, 5-toothed at apex: throat naked. Stamens exserted. Anthers oblong. Nuts large, didymous.

20 SYMPHYTUM. Corolla funnel-shaped, with a slender tube and spreading limb, villous. Stamens length of the limb of the corolla. Style bifid; stigmas 2, capitate. Fruit pyra perforated at the base.

21 ECHIUM. Corolla funnel-shaped; throat wide, nai ted; segments of the limb in many species unequal. Nuts turbinate, gibbous, scabrous.

22 ECHINOSPERMUM. Corolla with a slender arched tube, a bilabiate limb, and a naked throat; upper lip 2-lobed; lower lip somewhat 2-lobed. Nuts glabrous, tuberculed.

23 NONNEA. Calyx at length inflated. Corolla funnel-shaped: tube straight; throat bearded. Stamens inclosed. Stigma simple. Nuts with parallel stripes.

24 LYCOPSIS. Corolla funnel-shaped; throat furnished with erect processes, which bear the stamens on the back. Nuts turbinate.

25 LYCOPSIS. Corolla funnel-shaped, 5-lobed; tube incurved; throat furnished with ovate prominent conniving scales. Stamens inclosed. Stigma emarginate. Nuts turbinate, concave at the base.

TRIBE IV.

HETEROSTEGE. Corolla salver-shaped, or funnel-shaped, having the mouth closed with vaulted processes. Nuts 4, 1-celled, fixed to the bottom of the calyx, perforated at the base, except in *Echinospermum*.

SUBTRIBE I.

ANCHUSEÆ. Nuts fixed to the bottom of the calyx, perforated at the base.

26 ANCHUSA. Corolla salver-shaped; throat closed by erect obtuse processes. Stamens inclosed. Nuts turbinate, concave, and perforated at the base.

27 MYOSOTIS. Corolla salver-shaped; throat furnished with short processes. Stamens inclosed. Nuts perforated at the base.

28 ERITRICHIUM. Corolla salver-shaped; throat furnished with vaulted processes. Stamens exserted; anthers peltate. Nuts umbilicate at the base.

29 BOTRYOSPERMUM. Corolla salver-shaped; throat furnished with bifid processes. Anthers nearly sessile, inclosed. Stigma capitate. Nuts reniform, perforated at the base, and umbilicate on the inner side.

SUBTRIBE II.

CYNOGLOSSEÆ. Nuts fixed to the central column, imperforated at the base.

30 ECHINOSPERMUM. Corolla salver-shaped; throat furnished with short scales. Nuts echinated.

31 ROCHELIA. Corolla funnel-shaped, 5-lobed; throat furnished with arched scales or processes. Nuts 2, oblique, combined, adnate to the indurated style.

32 OMPHALODES. Corolla rotate; throat closed by short processes. Nuts depressed, having the margin cup-shaped from an inflexed membrane.

33 CYNOGLOSSUM. Corolla salver-shaped; throat furnished with erect processes. Nuts depressed, echinated.

34 ASPERUGO. Calyx compressed in the fruit-bearing state, sinuately denticulated. Corolla funnel-shaped; throat closed by processes. Nuts depressed.

TRIBE V.

LITHOSPERMEÆ. Corolla salver-shaped or funnel-shaped, having the throat pervious or bearded; limb plicate. Nuts 4, 1-2-celled, combined into a single fruit, closed at the base, without manifest torus or receptacle.

35 HELIOTROPIUM. Calyx 5-parted. Corolla salver-shaped; throat pervious, in some bearded; limb plicate. Stigma subconical. [illegible]led.

36 PSYCHOTRIA. Calyx tubular, 5-toothed. Corolla salver-shaped; throat furnished with teeth between the segments of the limb. Nuts 4, or solitary, 1-celled, wrinkled.

37 TRACHELIUM. Calyx 5-parted. Corolla salver-shaped; tube angular, arched, 5-rayed; segments of the limb undulated. Stigma capitate. Nuts 3-celled, mitre-formed, acuminated.

38 COLDENIA. Corolla funnel-shaped; throat wide, naked; limb flat, with equal spreading segments. Style bifid at apex. Nuts 1-celled, convex outside.

39 HALENIA. Corolla funnel-shaped; tube short; limb flat; throat naked. Stamens inclosed; anthers fixed by the base, where they are connate and conniving. Stigma simple, obtuse. Fruit obliquely and tetragonally ovate, composed of 2 2-celled divisions; cells 1-seeded.

40 PULMONARIA. Corolla funnel-shaped; limb having a plica between each of the segments; throat furnished with 5 fascicles of pili, just above *[illegible]w*, conniv ent anthers, which are appendiculate at the base, and inclosed. Stigma rising from a conical disk. Fruit divisible into 4 1-seeded parts of tiits.

41 LITHOSPERMUM. Corolla funnel-shaped; limb flat. Stamens inclosed. Stigma annular, bearded at apex. Nuts 4, approximating by pairs, imperforated and angular at the base, fixed to the bottom of the cal

42 TOURNEFORTIA. Corolla salver-shaped or subrotate; throat naked. Stamens inclosed. Stigma peltate, somewhat conical. uerry co[illegible]taining 2 2-seeded bony nu[illegible].

43 MESERASCHMIDTIA. Corolla salver-shaped, or subrotate, thro[illegible]it nakedi Stamens inclosed. Stigma peltate, somewhat conical. Berry containing 4 1-seeded nuts.

44 CERINTHE. Corolla tubular, ventricose, 5-toothed, contracted at the base into a short tube. Stamens inclosed. Nuts 2, stony, roundish, co[illegible]

T

BORAGINEÆ (this tribe contains plants agreeing with *Borago*

in the characters given). D. Don in Edinb. phil. journ. July, 1832. Corolla deeply parted, with pointed segments. Stamens exserted. Inflorescence diffuse. Nuts 4, 1-celled, 1-seeded, distinct.

Section I.

Boragineæ. Nuts fixed to the bottom of the calyx. Corolla rotate; throat furnished with vaulted processes.

I. BORAGO (altered from *Cor*, the heart, and *ago*, to effect; in reference to cordial qualities of Borago). Tourn. inst. t. 52. Lin. gen. no. 188. Schreb. 248. Juss. gen. p. 131. ed. Usteri. p. 146. Lehm. asper. p. 2. Lam. ill. t. 93. f. 1. Stokes, bot. t. 31. Boraginoides, Boerh. p. 88. Cynoglossoides, Ludw. act. gall. 1718. t. 10.

Lin. Syst. *Pentandria, Monogynia.* Corolh. rotate; throat furnished with emarginate vaulted proc-ses. Anthers distinct, oblong or lanceolate, awned, fixed by the inner side, conniving into a cone. Nuts 4, 1-celled. uirbtn;. fixed to the bottom of the calyx.—Rough plants, with fusiform roots; oblong or lanceolate leaves, and blue, panicled, drooping flowers.

1 B. OFFICINA'LIS (Lin. spec. 197.) lower leaves obovate, attenuated at the base; segments of the 'imb of the< corolla ovate, acute, spreading. ♂ H. This plant came originally from Aleppo, but is now naturalized in most parts of Europe. It is pov to be found in England, on dunghills and heaps of rubbish frequently. Smith, engl. bot. t. 56. Sr. Hil. pl. fr. 1. t. 38. Sturm, fl. germ. fasc. icon.—Plenck, icon. t. 77.—Blackw. t. 86.—Sabb. hort. d. t. 20, 21.—Mor. hist. 437. sect. 11. t. 26. f. 1. Plant hispid from pili, glaucous. Upper cauline leaves oblong, sessile, sub-cordate at the base. Corolla blue or purple, and sometimes white. Nuts ovate oblong, obtuse, ribbed on the inner side: ribs denticulated. Borage was formerly in great request, being reckoned one of the four cordial flowers. "Very light, surely," says an ingenious author, "were those sorrows which could be driven away by borage." Yet Borage flowers are at least innocent, which is more than can be said of many other general remedies for care. The whole herb is succulent, and very mucilaginous, having a p juliar Eaml smell when bruised. The juice affords a true nitre. The plant is now seldom taken inwardly. The young tender leaves may be used as salads, or as a pot herb.

Officinal Borage. Fl. June, Sept. Britain. Pl. 1 to 1½ foot.

2 B. CRASSIFÒLIA (Vent. hort. cels. p. 100. t. 100.) leavea lanceolate, acute, fleshy; segments of the timb of the co;olla unequal, linear-lanceolate, spreading. ♃. H. Native of Persia. Willd. enum. 1. p. 185. Lehm. asp. ; 20:;. Stems exceeding, glabrous, and as if they were articulated or nodose. Leaves glaucous, muricate.l from hooked prickles on the edges above, but glabrous beneath, except o he r.erves. Flowers solitary or racemose, purplish, erect at first.

Thick-leaved Borage. Fl. Ju. Jul). Clt. 182L[1]. PL I to 2 feet.

3 B. LONGIFÒLIA (Desf. il. atl. 1. p. l(i t. 44.) leaves linear- ling. :c 1. segments of the limb ovate, acute, e; ea rivc, ♃. H. Native of Numidia, in humid places. Willd. sp ils ;tiul t:nJ;. 777. Lehm. asp. p. 204. Root branched, woody. Stem imicli Ion ger than the ad from yellow retrograde pili. Leaves scabrous a Cu do ny beneath, cauline ones half stem-clasping. Flowers stiatl in a terminal bracteate panicle. Pedic at tin es hai y. egments of the calyx linear, e rolla. Corolla blue. Nuts oblong, smooth, obtuse.

Long-leaved Borage. Fl. July, Aug. Clt. 1825. Pl. 1 foot.

4 B. LAXIFLÒRA (D. C. fl. fr. 6. p. 422.) leaves oblong: segments of the limb of the corolla ovate, bluntish, erectly spreading. ♃. H. Native of Corsica. Horn. hort. hafn. 1. p. 181. Lehm. asp. p. 203. Anchusa laxiflora, Poir. suppl. 1. p. 736. D. C. syn. no. 2728. Sims, bot. mag. t. 1795. Stems decumbent, many from the same root, hispid from retrograde bristles. Leaves rough from strigæ: radical ones rosulate; cauline ones half stem-clasping. Flowers on long pedicels, racemose, nutant. Pedicels and calyx prinse. Corolla fine blue. Nuts turbinate, wrinkled.

Lesser-flowered Borage. Fl. M y, Aug. Clt. 1818. Pl. dec.

Doubtful species.

5 B. MACRANTHE'RA (Russel, hi schr. aleppo 2. p. 151.) leaves lanceolate, ciliated; calyxes ciliated, shorter than the tube of the corolla; anthers unequal. ♃. H. Native about Aleppo.

Long-anthered Borage.

6 B.? STRIGÒSA (Forsk. fl. ægypt. p. 41.) stem of leaves furnished with stiff pungent bristles: calyx prismatic. 1/.[5] H. Nativ e of Arabia. Anthers terminated by a long bristle. Seeds flat, emarginate, serrated.

Warted-leaved Borage. Pl.

Cult. Plants of the easiest culture, requiring hardly any care. Most of them are very pretty border flowers. They are always increased by seed, which should be sown in the open ground.

II. TRACH'YSTEMON (from τραχυς, *trachys*, rough, and στημων, *stemon*, a stamen.) D. Don, in edinb. phil. journ. July-Oct. 1832. Borágo species, Lin. and Smith.

Lin. syst. *Pentandria, Monogynia.* Corolla rotate; throat furnished with short, emarginate processes. Anthers distinct, oblong, pointless, incumbent; filaments long, hairy. Nuts 4, 1-celled, fixed to the bottom of the calyx, imperforated at the base.—Rough plants, with tuberous or fusiform roots, and copious drooping blue flowers.

1 T. ORIENTA'LIS (D. Don, l.c.) lower leaves cordate; segments of the limb of the corolla revolute, pilose outside at the apex. ♃. H. Native about Constantinople, and in woods about Belgrade. Borágo orientalis, Lin. spec. 197. Sabb. hort. 2. t. 22. Smith, fl. græc. t. 175. Ker. bot. reg. 283. Mill. icon i. t. 68. Borágo cordifólia, Moench. meth. suppl. p. 275. Kerner, abbild. t. 116.—Tourn. itin. 2. t. 12.—Busb. epist. 3. p. 10. t. 30. Root tuberous, and black outside. Stem hispid from retrograde pili, paniculately branched at top. Leaves hispid, broad; radical ones on long petioles; the uppermost cauline ones ovate-lanceolate, narrowed at the base, and nearly sessile. Flowers copious, on long pedicels, purplish-blue, disposed in conjugate racemes at the ends of the branches, bracteate. Processes in the throat of the corolla, white, short, blunt, emarginate.

Oriental Trachystemon. Lemon. II, March, May. Clt. 1752. Pl. 1 to 2 feet.

2 T. CRE'TICUM; lower leaves ovate; segments of the limb of the .i.n i linear, revolute, glabrous. ♃. H. Native of the islands of Candia and Zante, and on Mount Athos. Borágo Cretica, Willd. spec. 1. p. 772. Dest. cor. Tourn. in mus. mus. 10. p. 428. t. Sibth et Smith, fl. græc. t. 176. Tourn. cor. inst. p. Lehm. asp. p. 200. Root fusiform. Stem beset with stiff hairs. Leaves pilose, with crenately undulated, subciliated edges, 3-4 inches long; superior leaves nearly sessile. Flowers white, or very pale blue, with rose-coloured stamens an<l j yellow anthers, pedicellate, disposed in loose, terminal, conjugate racemes; processes of the throat subulate. Filaments naked.

Cretan Trachystemon. Fl. Ap. Ju. Clt. 1825. Pl. 1½ foot.

Cult. These are plants of easy culture, but do best in a rather dry situation. They are easily increased by dividing the root, or by seed.

Section II.

Rhagadiæ. Nuts or carpels fixed to the central column. This, with subtribe II. *Cynoglóssea*, of tribe *Boragineæ*, might with propriety form a distinct tribe, to be called *Cynoglossæ*, from the attachment of the carpels.

§ 1. *Throat of corolla furnished with vaulted processes.*

III. MATTIA (meaning unknown to us.) Schultes, obs. p. 30. syst. 4. p. X.—Cynoglossum species of authors.

Linn. syst. *Pentandria, Monogynia.* Calycine segments linear-lanceolate. Corolla tubularly funnel-shaped; tube pentagonal; segments of the limb linear, lanceolate, or rotundish; throat furnished with compressed emarginate connivent processes, which are the length of the tube. Anthers sagittate, included or exserted, connivent. Stigma simple. Nuts 4, 1-seeded, winged by a flat, emarginate, orbicular, diaphanous membrane, concave outside, glabrous, shining, fixed to the central column at the base (top?).—Erect plants, with sessile leaves, and terminal racemes of drooping flowers.

§ 1. *Nuts compressed, smooth. Stamens exserted.*

1 M. UMBELLA'TA (Schultes obs. p. 32.) leaves narrow-lanceolate, downy, canescent; racemes terminal, umbellate; corolla a little longer than the calyx, with oblong obtuse segments; nuts smooth. ♃. H. Native of Siberia and Hungary. Cynoglossum umbellatum, Waldst. et Kit. pl. hung. 2. p. 158. t. 146. Horn. hort. hafn. 1. p. 178. Willd. enum. 1. p. 181. Symphytum rhœticum, Gmel. syst. 2. p. 329.—Gmel. itin. 3. t. 36. f. 1. Root nearly simple, perpendicular. Stems simple, bluntly angular, hairy. Radical leaves ovate-lanceolate, tapering into the petioles; upper cauline ones sessile. Pedicels and calyxes woolly. Corolla yellow, tinged with red; processes of the throat red or wanting?

FIG. 73.

Umbellate-flowered Mattia. Fl. May, June. Clt. 1823. Pl. 1½ foot.

§ 2. *Nuts compressed. Stamens inclosed.*

2 M. LANA'TA (Schultes, obs. p. 31. syst. 4. p. 32.) leaves ovate-lanceolate; villous, canescent, rather scabrous; flowers racemose; corolla twice longer than the calyx, with linear, connivent segments; nuts smooth. ♃. H. Native of Armenia. Cynoglossum lanatum, Lam. dict. 2. p. 338. Desf. ann. mus. 10. p. 332. t. 37. Tourn. cor. p. 7. Stems angular, simple, clothed with hoary tomentum, divided into simple floriferous branches at top. Racemes loose, simple, terminal, and in the axils of the superior leaves; pedicels recurved, and are, as well as the calyxes, woolly. Calycine segments linear, acute. Nuts ovate, ventricose, clypeate. Corollas reddish, drooping.

Woolly Mattia. Fl. June. Clt. 1800. Pl. 1½ f

3 M. GLASTIFO'LIA; leaves lanceolate, glabrous, beset by a few scattered papillæ beneath, and denticulately scabrous on the edges; flowers racemose; corolla nearly twice as long as the calyx, with roundish segments; nuts muricate in the centre, with membranous edges. ♃. H. Native of Armenia. Cynoglossum glastifolium, Willd. spec. 1. p. 764. Desf. cor. Tourn. in ann. mus. 10. p. 330. t. 36. Rindera glastifolia, Rœm. et Schultes, syst. 4. p. 83. Stem branched at top. Peduncles axillary and terminal, few-flowered, glabrous; pedicels racemose, loose; and are, as well as the edges of the calyxes, papillose. Segments of the calyx lanceolate, obtuse. Corollas blue.

Glastum-leaved Mattia. Pl. 1½ to 2 foot.

4 M. ANGUSTIFO'LIA; leaves linear, hispid from pilli; flowers racemose; corollas twice as long as the calyx, with rounded segments; nuts smooth, having the marginal membranes denticulated. ♃. H. Native of Armenia. Cynoglossum angustifolium, Willd. spec. 1. p. 763. Lehm. asp. p. 171. Cynogl. emarginatum, Lam. ill. in. 1799. Cynogl. racemosum, Schreb. in act. berol. 3. p. 170. Rindera? emarginata, Rœm. et Schultes, syst. 4. p. 83. Stems numerous, simple, canescent, pilose, angular. Flowers erect, secund, disposed into 2 terminal bracteless racemes. Calyx hoary, with lanceolate blunish segments. Scales in the throat lanceolate-acute, small. Corollas blue.

Narrow-leaved Mattia. Pl. ½ to 1 foot.

5 M. CANES'CENS; leaves linear-lanceolate, attenuated at the base, hispid from pilli; flowers racemose; corollas a little longer than the calyx, with rounded segments; nuts muricated in the centre, and crestedly rayed along the edges of the wings. ♃. H. Native of Armenia. Cynoglossum crispum, Lam. dict. 2. p. 337. Lehm. asp. 169. Schreb. nov. act. ac. 8. p. 478. exclusive of the synonymes. Omphalodes crispa. Schrank. denks. acad. wiss. munch. 1811 and 1812. p. 321. Root perpendicular. Stems hispid, simple, furnished with some racemiferous peduncles at apex. Racemes 2-3 terminal, and some lateral, many-flowered, loose, drooping before florescence. Pedicels secund, and are, as well as the calyxes, hispid, grey. Calycine segments lanceolate, bluntish. Corollas blue. Stamens inclosed, as in the 2 preceding species.

Crested-fruited Mattia. Pl. 1½ foot.

6 M. COLU'MNÆ; leaves ovate-lanceolate, stem-clasping, villous; flowers racemose; corollas about equal in height to the calyx, with rounded lobes; nuts muricated in the centre, and denticulately rayed on the edges of the wings. ♃. H. Native near the town of Aversa, in stony dry places. Cynoglossum Columnæ, Biv. stirp. rar. sic. man. 2. Tenore, prod. fl. neap. p. 33. Cynogl. cristatum, β. Lam. dict. 2. p. 338. Willd. spec. 1. p. 764.—Column. ecphr. 1. p. 177. t. 178.—Morr. hist. 3. p. 442. sect. 11. t. 30. f. 7. Stem angular. Racemes panicled, terminal. Calycine segments ovate-lanceolate, bluntish. Corolla dirty purple, with deeper veins. Scales of the throat ciliated. Stamens inclosed.

Columna's Mattia. Fl. June, July. Clt. 1825. Pl. 1 to 2 feet.

7 M. MAGELLA'NICA; leaves linear-lanceolate; superior ones broader at the base; flowers disposed in compact racemes; corollas about equal in length to the calyx, with rounded lobes; nuts membranous, muricated in the centre and on the margins. ♃. H. Native of Magella. Cynoglossum Magellanicum, Tenore prod. neap. p. 33. Lehm. asp. p. 168. Plant white from villi. Calyx woolly, with linear segments. Said to be nearly allied to *M. lanata*. Corolla purplish.

Ma gella Mattia. Pl. 1 foot.

§ 3. *Nuts depressed, with denticulately coy edges. Stamens inclosed. Flowers solitary. This section will probably constitute a new genus.*

8 M. PILO'SA; leaves linear, pilose, hoary; flowers solitary, pedicellate, alternating with the leaves; nuts denticulately rayed on the edges. ☉. H. Native of Peru, in the provinces of Cercola and Chancay, in arid places. Cynoglossum pilosum, Ruiz. et Pav. fl. per. 2. p. 6. t. 111. f. b. Lehm. asp. p. 167. Plant hoary pilose. Stem slender, divided into loose, nearly simple branches. Leaves 1 to 1½ inch long. Peduncles much shorter than the leaves. Calyx pilose. Corolla tubular, with a flat limb. Nuts ovate, depressed, glabrous, surrounded by a serrated membrane.

Pilo se Mattia. Pl. ½ foot.

9 M. LATERIFLO'RUM; leaves linear, pilose; flowers solitary, nearly sessile, opposite the leaves; calyxes unequal, a little shorter than the corolla; nuts with deeply-rayed edges. ☉. H. Native of Chili about Santiago, and of Peru about Lima, in arid fields. Cynoglossum lateriflorum, Lam. dict. 2. p. 337. Ill.

t. 92. f. 2. Lehm. asp. p. 166. Cynogl. lineare, Ruiz, et Pav. fl. per. 2. p. 6. Pers. ench. 1. p. 160. Stems filiform, subtrichotomously branched, pilose and hoary as the rest of the plant. Pedicels short, erect when bearing the flower, but reflexed while bearing the fruit. Calycine segments lanceolate, one longer than the rest. Corollas small, white. Nuts 4, depressed, 2 of them smaller, and probably abortive.

Lateral-flowered Mattia. PL J to 1 foot.

Cult, For culture and propagation see *Borago,* p. 509. Plants of the most easy culture.

§ 2. *Throat of corolla naked.*

IV. SOLENA'NTHUS (from *(rio^rjy,* a tube; and *avdog, anthosy* a flower ; in reference to the corolla being tubular.) Led. fl. alt. 1. p. 193. fl. ross. alt. ill. t. 26.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla tubular, 5-toothed, furnished with 5 arched processes in the throat. Stamens exserted. Stigma simple. Nuts 4, depressed, echinated, adnate to the central column, towards the apex, inside. A robust, erect plant, clothed with soft hairs. Radical leaves petiolate, upper cauline ones sessile. Racemes solitary, or twin, many flowered, bractless, at first revolute, at last erect, the whole forming a terminal naked panicle. Corollas purple or blue.

1 S. CIRCINA'TUS (Led. 1. c. p. 194) %. H. Native of Altaia, in the eastern regions of the river Irtysch, also in meadows about mounts Arkaul and Dolenkara. Root thick, perpendicular, furnished with fibres. Stem erect, villous, thickness of a small finger. Radical leaves having the petioles 4-5 inches long, semi-cylindrical, channelled above, striately furrowed beneath,- with membranous edges beset with adpressed, deflexed, white hairs ; the leaves oblong, sub-cordate at the base, unequal, acute or obtuse, entire, beset with adpressed hairs. Scales in the throat of the corolla oblong, obtuse, erect, with villous edges.

Circinate-racemed Solenanthus. Fl. April, May. PL 1| to 2 feet.

Cult. For culture and propagation see *Borago,* p. 309.

V. RINDFRA (named by Pallas after Dr. Rinder, formerly Dean of Medicine in Moscow.) Pall. itin. 1. append, p. 486. t. F. f. 1-2. Lam. ill. t. 92. f. 3. Cynoglossum species, Pall.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla with the tube a little longer than the calyx, a deeply 5-cleft limb, a naked throat, and lanceolate-acute, erect segments. Anthers nearly sessile, in the recesses between the segments of the corolla, inclosed, erect, linear, dehiscing at the sides, and subbifid at the base. Style setaceous ; stigma glandular, hardly conspicuous, simple. Nuts 4, glabrous, ovate, compressed, clypeate, each surrounded by a broad membrane, (one of which, from its small size, is abortive,) fixed to the central column at the base.—A glabrous plant, with a branched root, ovate-lanceolate leaves, and terminal racemosely corymbose reddish flowers.

This genus differs from *Mattia* in the throat of the corolla being naked, that is, without vaulted processes.

1. R. TETRA'SPIS (Pall. 1. c. Led. fl. alt. 1. p. 193.) leaves oblong, or oblong-lanceolate, smoothish; flowers racemosely *c&rjmhose; corollas twice as* long as the calyx, with linear segments ; *stamens shorter than the segments of tie C0ro)J<2, %*H. Native of Siberia. R. leevighta,* Rcem. et SchuJtes, syst. 4. p. *83.* Cynoglossum laevigatum, Lin. syst. p. 157. *suppl 131.* Willd. spec. 1. p. *763.* Lam. ill. t. 92. f. 3. Gaertn. fruct. 1. p. 324. t. *67.* f. 4. *Cynogl Rindera, Pall ft.* ross. 2. p. 96. t. 88—Falck, itin. 2. t. 2.—Mor. hist. 3. sect. 11. t. 30. f. 11. Stems simple. Leaves glaucous, green, soft, glabrous, dotted from minute glands, which are only seen through a lens. Pedicels and calyxes hoary. Calycine segments linear-lanceolate, reflexed when in fruit.

Four-pointed fruited Rindera. FL June, July. Clt. 1818. PL 1 foot.

Cult. See *Borago,* p. 309. for culture and propagation. A plant of easy culture, but of no beauty.

VI. TRICHODE'SMA (from %£ *rptxoe, thrix trichos,* a hair ; and cWjuog, *desmos,* a bond ; anthers bound by hairs to each other.) R. Br. prod. p. 496. Lehm. asper. 192.—Borago species, Lin. Juss. Lam. &c.—Boraginoides, Moench. meth. p. 515.—Pollichia, Medicus, phil. bot. 1. p. 32.—Cynoglossoides Isnard. hist, de l'acad. par. 1718. p. 257. f. 10, 11.

LIN. SYST. *Pentdndria, Monogynia.* Corolla subrotate, with a naked throat; limb 5-parted, having the segments subulate at the apex. Anthers exserted, furnished with 2 rows of hairs on the back, by which they adhere to each other; awns subulate, twisted. Nuts 4, 1-seeded, half immersed in the pits of a 4-winged central column, closed at the base.— Erect, hispid, annual plants, with terminal racemose or solitary pedicellate axillary flowers.

1 T. IVDICUM (R. Br. prod. 496. Lehm. asp. p. 193.) leaves narrow-lanceolate, bluntish, half stem-clasping; pedicels axillary ; calycine segments auricled at the base. ©. H. Native of the East Indies. Borago I'ndica, Lin. spec. ed. 2d. p. 197. Willd. spec. 1. p. 776. Borraginoides sagittata, Mcench. menth. p, 516. Pollichia I'ndica, Med. 1. c. 1718. p. 257.—Isnard. 1. c. t. 10. ed. germ. t. 9.—Pluk. aim. t. *76.* f. 3. Stem hairy, gibbous at the parts where the branches rise. Leaves scabrous above, and softish beneath. Pedicels drooping. Calyx hairy. Corollas pale blue or white; with ovate, cordate-acuminated segments, which are twisted at top ; throat green, marked by 5 rusty spots.

Indian Trichodesma. FL June, Oct. Clt. 1759. PL 1 foot.

2 T. ZEYLA'NICUM (R. Br. 1. c. Lehm. asper. p. 194.) leaves lanceolate, acute, on short petioles, attenuated at the base; pedicels axillary; calyxes not auricled. ©. H. Native of the East Indies, and the shores of New Holland, within the tropic. Borago Zeylanica, Lin. mant. p. 202. Willd. spec. 1. p. 777. Jacq. coll. 3. p. 169. icon. rar. 2. t. 314. Burm ind. p. 41. t. 14. f. 2.—Pluck, mant. 13. t. 335. f. 4. Stem purplish, canescent, scabrous at bottom, and hispid at top. Leaves scabrous above, from numerous, callous, white dots ; soft beneath, without dots, scabrous on the nerves and veins. Pedicels pilose, hoary, longer than the leaves. Calyx hoary, pilose. Limb of corolla white, with a blue star.

Ceylon Trichodesma. Fl. July, Aug. Clt. 1799. Shrub \\ foot.

3 T. AFRICA'NUM (R. Br. 1. c. Lehm. asper. p. 195.) leaves ovate-oblong, acute, petiolate, hispid from bristles ; flowers racemose ; calyxes not auricled. ©. H. Native of the Cape of Good Hope. Borago Africana, Lin. spec. ed. 2. p. 197. Willd. spec. 1. p. 777. Horn. hort. hafn. 1. p. 181. Murr. fl. i^oett. p. 142. Burm. prod. fl. cap. p. 4. Borago verrucosa, Forsk. fl. aegypt. p. 41. Borraginoides aculeata, Moench. meth. p. 516. Pollichia Africana, Med. bot. beob. 1783. p. 248.—Isnard. hist, de l'acad. par. 1718. p. 257. t. 11.—Sabb. hort. 2. *t, 22, Stem trichotomousty* branched, strigose. Flowers drooping, *disposed in axil/ary and termmaf, pecfimcufate W&1?£#'* Calycine segments *lanceolate. Corolla fine blue, with* a yellow throat; segments ovate, acuminated, spirally twisted at top. *Nuts scabrous.*

African Trichodesma. FL July, Aug. *Clt. 1759. PL 1 ft.*

4 T. LITIIOSPERMOIDES (Roem. et Schultes, syst. 4. p. 69.) leaves oblong-lanceolate, nearly sessile, attenuated at the base, with subrevolute edges ; flowers axillary, pedicellate; calyxes

not auricled. ☺. H. Native of the East Indies. Stem downy, dichotomously branched, and strigose like the leaves. Pedicels bifid: upper ones longer than the leaves. Calycine segments unequal, pilose. Corolla dark in the dried state, with tubulate segments.

Lithospermum-like Trichodesma. Pl. 1½ foot.

Cult. Plants of the most easy culture. The seeds require to be reared on a hot-bed early in spring: and the plants should be afterwards planted out in the open ground about the end of May, in a warm sheltered situation.

Tribe II.

SYMPHYTEÆ. (This tribe agrees with *Symphytum* in the characters given.) D. Don, in edinb. phil. journ. July, Oct. 1832. Corolla tubular, truncate, with very short lobes. Inflorescence revolute. Stamens inclosed. Nuts fixed to the bottom of the calyx.

VII. SY'MPHYTUM (from *συμφυω*, *symphyo*, to make unite: and *φυτον*, *phyton*, a plant: in reference to the healing qualities of the plant.) Tourn. inst. t. 36. Lin. gen. 185. Schreb. no. 245. Juss. gen. 131. ed. Usteri. p. 142. Gærtn. fruct. 1. p. 325. t. 67. f. 4. Lehm. asper. p. 3. and 343. Schkuhr, handb. t. 75.

Lin. syst. *Pentandria*, *Monogynia*. Calyx 5-parted. Corolla cylindrically campanulate; throat furnished with 5 subulate, vaulted processes, which connive into a cone. Nuts 4, 1-celled, ovate, fixed to the bottom of the calyx, imperforated at the base.—Rough, herbaceous plants, with broad leaves and terminal, twin racemes of flowers.

§ 1. *Roots tuberous or fleshy.*

1 S. OFFICINA'LE (Lin. spec. p. 195.) stem branched, winged at top; leaves ovate-lanceolate, attenuated at the base, decurrent, very scabrous above, and hairy beneath; racemes twin, rotant, with a flower in the fork; style length of corolla; calyx acute, hairy. ♃. H. Native throughout Europe and Siberia, frequent in watery places. Smith, engl. bot. t. 817. Oed. fl. dan. t. 684. Curt. fl. lond. fasc. 4. t. 18. Dicks. et Hayne, t. 36. Plenck, icon. t. 76. Woodv. med. bot. suppl. 10. t. 215. Gærtn. fruct. 1. p. 325. t. 67. Schk. handb. t. 259. Sm. Fl. Br. pl. fr. 2. t. 164. Lehm. asper. p. 351.—Pers. syn. 1. p. 188. t. 5.—Mor. hist. 3. sect. 11. t. 20. f. 1. Root fleshy, black outside. Stems angularly winged. Corolla yellowish white; segments denticulated. The root of *Comfrey* abounds in a pure, tasteless mucilage. Like that of *Marsh Mallow*, but according to Lewis more tenacious. Being easily obtained, it therefore may be conveniently substituted for *Marsh Mallow*, in all cases where emollients or demulcents are in use; as in irritations of the throat, intestines, and, above all, the bladder.

Var. β, patens (Schth. oxon. 229.) plant stronger; flowers blush-purple, red before expansion. ♃. H. Not so common in England as the species, but more so on the Continent, and in Scotland. Symphytum majus flore purpureo, Tabern. 559. Plenck, icon. 76. We suspect this to be a distinct species, as the habit is very different from that of the species.

Officinal Comfrey. Fl. May, Aug. Britain. Pl. 2 to 3 feet.

2 S. Ecte'nium (Schmidt, boh. no. 211.) leaves ovate-lanceolate, alternate, running into the petioles; racemes twin, erect, revolute at the apex; style exceeding the corolla. ♃. H. Native of Bohemia. S. officinale, β. Bohemicum, D. Don, in Sweet, fl. gard. n. s. t. 304. Stem winged. Flowers red, or reddish purple.

Echinate Comfrey. Fl. May, July. Cit. 1810. Pl. 1 to 1½ foot.

3 S. TUBEROSUM (Lin. spec. 195. Jacq. austr. 3. p. 12. t. 63.) stem simple; leaves ovate-oblong, narrowed at the base: lower ones petiolate: floral ones opposite, sessile, hardly decurrent; segments of the limb of corolla very short, obtuse. ♃. H. Native of Germany, Austria, France, Spain, and Italy. It has been observed in several parts of Scotland, about the Water of Leith, and at North Marchiston, near Edinburgh. Jacq. fl. austr. t. 275. Smith, engl. bot. t. 1502. Schk. handb. 2. t. 31. Lehm. asper. 2. p. 345.—Morr. hist. 3. sect. 11. t. 20. f. 2. S. majus, radice tuberosa. Root whitish, composed of many thick knobs or tubers. Plant not so stiff as S. hirsutum, hairy as S. officinale. The following description is given by Schimper of *S. tuberosum* to distinguish it from *S. Zeyheri* and *S. bulbosum*: Rhizoma oblique, thickened by scales, furnished with short, pro tuberant, branchlets; stem simple; leaves oblong-ovate, attenuated at the base: lower ones petiolate: upper ones approximating by pairs or opposite: floral ones somewhat decurrent; teeth of calyx linear-lanceolate, shorter than the tube of the corolla; segments of the limb of the corolla very short, reflexed. Style about equal in length to the corolla; processes of the throat inclosed.

Tuberous-rooted Comfrey. Fl. May, Oct. Scotland. Pl. 1 to 2 feet.

4 S. Zeyhe'ri (Schimper, in mag. pharm. geiger. Oct. 1829, and Jan. 1830, ex Bull. phil. vol. 21. p. 445.) rhizoma and stolons tuberous; stem almost simple; leaves ovate, acute, running into the marginate petioles: floral ones approximate, or opposite, sessile; calycine segments linear-lanceolate, shorter than the tube of the corolla; corolla funnel-shaped; anthers shorter than the filaments; segments of the limb of the corolla very broad, ovate, 3 times as short as the tube: processes of the throat much exserted, exceeding the style. ♃. H. Native of Sicily.

Zeyher's Comfrey. Pl. 1 to 2 feet.

5 S. BULBOSUM (Schimper, l. c.) rhizoma and stolons tuberous; stem simple; leaves broadly ovate-lanceolate, acute, running into the petioles; floral ones approximating by pairs, or opposite, ovate, rounded at the base, half stem-clasping; calycine teeth lanceolate; tube equalling the corolla; limb of corolla parted to the middle, with ovate, erect segments; anthers as long as the filaments; processes of the throat exserted, exceeding the style. ♃. H. Native of Heidelberg, Vallais, Schleicher; Apennines, Meyer. Rchb. icon. t. 269. f. 567. Mert. et Koch, fl. allem. 2. p. 78. Bluff. and Fingerh. fl. germ. suppl. 2. p. 598. Schimper, bot. zeit. 1829. no. 2. S. filipendula, Bischoff, in bot. zeit. 1829. no. 36. S. Clusii, Gaud. fl. hal. suppl. S. macrolepis, Gay, in Diethach. in Gregor's journ. S. pamphylum, Gaud. fl. helv.

Bulbous-rooted Comfrey. Pl. 1 to 2 feet.

6 S. CORDATUM (Waldst. et Kit. pl. hung. 1. p. 6. t. 7.) stem simple; leaves cordate, acuminated, on long petioles: floral ones ovate-lanceolate, roundish, sessile, nearly opposite; corolla ventricose, with recurved, obtuse segments. ♃. H. Native of Hungary, Transylvania, and Western Iberia, in woods. Reich. fl. exc. 1. p. 136. Lehm. asp. 2. p. 344. S. Pannonicum, Pers. ench. 1. p. 141. Besser, fl. gal. 1. p. 152. Root tuberous, creeping, brown outside. Stem simple, hairy. Leaves large, hairy. Flowers cream-coloured, disposed in short, terminal, twin racemes.

Cordate-leaved Comfrey. Fl. May, July. Clt. 1815. Pl. 1 to 1½ foot.

§ 1. *Roots fibrous.*

7 S. ORIENTA'LE (Lin. spec. 195.) stem branched, hairy; leaves ovate-oblong, acuminated, petiolate, hairy above, and villous beneath; upper ones narrowed at the base: floral ones opposite, sessile; calyx 5-cleft, tubular at the base; segments of corolla ovate, acute. ♃. H. Native of the north of Tauria; and

near Constantinople, on the banks of rivulets. Willd. enum. 1. p. 183. Sims, bot. mag. 1912. Lehm. asper. 2. p. 345. Pall, cat. fl. taur. in act. petrop. 1792. p. 306. Bieb. fl. taur. 1. p. 129.—Tourn. itin. 2. p. 243. t. 14. cor. p. 7.—Buxb. cent. 5. t. 68. Plant hairy. Corollas white," size of those of *S. qfficinale.* Calycine segments linear, acute.

Oriental Comfrey. Fl. May, July. Clt. 1752. PL 2 feet.

8 S. CAUCA'SICUM (Bieb. fl. cauc. 1. p. 128.) stem branched, hairy; leaves ovate-lanceolate, attenuated at the base, half decurrent, clothed with soft hairs, canescent beneath: upper ones opposite; calyxes obtuse; limb of corolla campanulate. %. H. Native of Caucasus, among bushes at the river Terek, between Mosdok and Kisljar. Root branched, black. Plant hairy. Very like *S. officinale,* but more soft. Stem angular, paniculately branched at apex. Calyx hispid. Corolla constantly blue.

Caucasian Comfrey. Fl. May, July. Clt. 1820. PL 2 feet.

9 S. TAU'RICUM (Willd. act. scrut. berol. 8. p. 120. t. 6. f. 1. enum. 1. p. 184.) stem branched, hairy; leaves cordate-ovate, bluntish, petiolate, hairy, bullately wrinkled above : floral ones opposite, sessile ; calyx 5-parted ; lobes of corolla obtuse. 1/. H. Native of the south of Tauria, and Caucasus. Curt. bot. mag. 1787. S. orientate, Bieb. fl. cauc. 1. p. 129.?— Tourn. itin. ed. germ. 2. p. *337.* t. *35.* Jacq. eclog. p. 119. t. 81. Stem branched. Plant hairy. Corolla milk-white.

Var. /3, hullatum (Jacq. eclog. 119. no. 81. Horn, suppl. hort. hafn. p. 13. Ledeb. in Schrad. journ. 4. p. 60.) leaves bullate, unequal at the base; corollas rather swollen. 1/. H. Native of Caucasus. Stems dotted with red. Corolla pale yellow, or cream-coloured.

Taurian Comfrey. Fl. May, July. Clt. 1806. PL \\ to 2 *feet.*

10 S. ASPE'RRIMUM (Bieb. fl. cauc. 1. p. 129.) stems branched, muricated; leaves ovate, cordate, acuminated, running into the petioles, hairy above, and strigose beneath : upper ones opposite, nearly sessile ; calyx muricated, acute ; limb of corolla campanulate. %. H. Native of Caucasus and Tauria, on the margins of rivulets. Willd. enum. 1. p. 183. Curt. bot. mag. t. 929. S. asperum, Lepechin, nov. act. petrop. vol. 14. p. 444. S. orientate *folio* subrotundo aspero, flore casruleo, Tourn. cor. p. 7. Root black. Plant tall, and very rough, but beautiful when in blossom. Stem beset with retrograde strigse. Corollas downy outside, red before expansion, afterwards blue. Leaves broad.

Var. /3, hybridum (Loud. hort. brit. p. 54.) This is a smaller variety, and appears to be a hybrid between *S. orientate* and *S. asperrimum.*

Very rough Comfrey. FL May, Sept. Clt. 1799. Plant 5 to 7 feet.

•f *Species hardly known.*

U S , ECHINA'TUM (Ledeb. cat. hort. dorp, suppl. 1811.) leaves muricated : lower ones cordate : floral ones sessile, nearly opposite ; calyx spreading, twice shorter than the tube of the corolla; stem much branched. If.. H. Native country unknown.

Echbiated Comfrey. PI 2 feet ?

12 S. RACEMO'SUM (Stephan, in Willd. herb, ex Roem, et Schultes, syst. 4. p. 752.) leaves ovate, sessile ; racemes very long, erect. %. H. Native of Persia.

Racemose-lowered Comfrey. PL

What are Symph. lse've, Bess. cat. hort. crem. suppl. 1812? Symph. intermedium, Fisch. cat. hort. goreinki ? and *S. peregrinum,* Ledeb. ?

Cult. All the species of *Comfrey* are extremely hardy, and will grow in any soil and situation. Some are very handsome border'flowers ; and are well fitted for woods or shrubberies, as they will grow under the shade of trees or shrubs. They are easily increased by dividing at the root in Spring ; or by seeds, but the former mode is preferable.

VIII. COLSMA'NNIA (named after John Colsma, ^professor at Copenhagen ; author of Prodromus descriptions Gratiolae Hafn. 1793. 8vo.) Lehm. mag. berol. ges. nat. freund. 8. p. 92. t. 4. asper. p. 3. and *356.*

LIN. SYST. *Pentandria, Monogynia.* Calyx petaloid, pentagonal, 5-parted. Corolla cylindrically-campanulate, with a naked throat. Anthers sagittate, distinct. Nuts 4, 1-celled, ovate-triangular, fixed to the bottom of the calyx, perforated at the base.—A hairy plant, with yellow, pedicellate flowers, which are disposed in terminal racemes.

1 C. FLAVA (Lehm. 1. c.) %. H. Native of the Levant. Root brown outside. Stems numerous, erect, simple, beset with adpressed, yellowish, soft hairs, like all other parts of the plant. Leaves obovate-lanceolate, bluntish, attenuated at the base, silky : lower ones petiolate. Flowers pedicellate, disposed in terminal racemes, drooping before florescence, secund : lower ones furnished with lanceolate bracteas. Calyx unequal. Corollas yellow, downy outside. Style purplish.

Ye I low-flowered Colsmannia. PL | foot.

Cult. This plant will answer very well as a low border flower : it will grow well in common garden soil; and will be easily propagated by dividing at the root, or by seed. As the plant is rare, some of it should be grown in pots, so that it may be protected in winter.

IX. STOMOTE'CHIUM (from *arofjiow, stomoo,* to close the mouth ; and *ex^ov, Echion* Bugloss. This genus differs from *Kchium* in the mouth of the corolla being closed by vaulted processes.) Lehm. asper. 4. and 395.

LIN. SYST. *Pentandria, Monogynia.* Calyx 5-angled, 5-cleft. Corolla tubularly-cylindrical; throat closed by roundish, fleshy, muricated processes. Anthers oblong, inclosed. Nuts 4, 1-celled, roundish, fixed to the bottom of the calyx, perforated at the base.—A shrubby, scabrous plant.

1 S. PAPILLO'SUM (Lehm. asp. p. 396.) J? . G. Native of the Cape of Good Hope. Stem and branches angular, smooth below, and roughish above. Leaves alternate, sessile, almost half stem-clasping, linear-lanceolate, obtuse, stiff, with revolute edges, scabrous from papillae, especially above; papillae white, hispid in the young state. Flowers contiguous, nearly sessile, secund, small, with an ovate, hispid bractea to each, disposed in spicate racemes, terminating the branches, erect, constituting terminal panicles.

Papillose Stomotechium. Shrub.

Cult. A mixture of loam, sand, and peat, is a good soil for this shrub; and cuttings may be rooted in the same-kind of soil under a hand-glass; but the surest way of increasing it, is by layering down the young shoots, having a little nick cut in each shoot so layed. Seeds are sometimes produced, by which the plant may be reared.

X. ONO'SMA (from *ovoq, onos,* an ass ; and *off/un, osme,* smell; grateful to the ass.) Lin. gen. no. *187.* ed. *Schreh. no.* 247. Gaertn. fruct. 1. p. 326. t. 67. Juss. gen. 130. ed. Usteri, p. 146. Lehm. asper. p. 4. and *366.*

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla tubularly-campanulate ; throat naked. Anthers sagittate, connected together by the bases of the lobes. Nuts 4, 1-celled

ovate, stony, fixed to the bottom of the calyx, imperforated at the base.—Small, suffruticose, scabrous, canescent plants, with crowded, lanceolate, or linear leaves; and terminal racemes of large, yellow, secund, usually drooping flowers.

* *Hairs or bristles stellate, rising from tubercles.*

1 O. taurica (Lehill, pl. syr. dec. 3. p. 10. t. 6.) stem shrubby, much branched, hoary; leaves obovate-oblong, hispid from bristles; flowers generally solitary, terminal, nutant. ♄. F. Native of Persia, in the province of Djilan; and of the Island of Cyprus, on Mount Santa Cruz. Smith, fl. græc. t. 175. Lehm. in nov. act. bath. 1808. t. 1. asper. p. 361. Corolla twice as long as the calyx, tubular, sulphur-coloured, an inch long; teeth short, acute, reflexed. Calycine segments hispid, linear-lanceolate. Style purple. Genitals exserted.

Shrubby Onosma. Shrub 1 to 1½ foot.

2 O. asperrima (Lehm. asper. p. 361.) strigose; stems simple; leaves linear, canescent: lower ones sheathing: upper ones dilated at the base; flowers nutant. ♃. Native of Apulia, among rocks, O. cinereum, Sieb. fl. exsic.—Sabb. hort. rom. 2. t. 32.—Column. ecphr. 1. t. 183. f. 2. Stems solitary or numerous. Leaves blueish. Racemes solitary or twin, terminal. Flowers nearly sessile, propped by lanceolate, acuminated bracteas, which are subcordate at the base. Calyx pilose, silky, canescent: with linear, ciliated segments. Corolla pilose, ventricose above; teeth short, reflexed.

Narrow-leaved Onosma. Pl. ½ to 1½ foot.

3 O. arenaria (Smith, prod. fl. græc. 1. p. 181. fl. græc. t. 173.) tuberculary hispid or strigose; stems simple, tufted; leaves linear, a little broader at top: flowers erect. ♃. H. Native of Candia, on the higher mountains. Lehm. asper. p. 364. Symphytum Creticum, echii folio angustiore longiusculis villis horrido, flore croceo. Tourn. cor. p. 6. Root fusiform, blackish brown. One of the hairs in each fascicle is much longer and stiffer than the rest. Racemes terminal, conjugate, spike-formed. Flowers nearly sessile, propped by linear bracteas, which are as long as the calyxes. Corollas yellow, ventricose, twice or thrice as long as the calyxes; teeth obtuse, short, reflexed. Nuts glabrous.

Erect-flowered Onosma. Pl. ½ foot.

4 O. erecta (Bieb. fl. cauc. 1. p. 132.) tuberculary hispid or strigose; stems aggregate; leaves lanceolate, obtuse; lower ones narrowed at the base: superior ones dilated at the base; flowers drooping. ♃. H. Lehm. asper. p. 364. Horn. hort. hafn. 1. p. 180. Stems solitary or many, from the same root. Racemes terminal, conjugate. Flowers pedicellate, propped by ovate-lanceolate bracteas. Calycine segments lanceolate-linear. Corolla citron-coloured, ventricose above; teeth blunish, reflexed. Stigma capitate, emarginate. Nuts glabrous.

FIG. 34.

Var. α, stellulata (Waldst. et Kit. pl. hung. 2. p. 186. t. 173.) leaves broader, flat; the hairs less crowded than in β. Native of Croatia, in the fissures of calcareous rocks; and of Caucasus, in subalpine, grassy, dry places (fig. 34.)

Var. β, Taurica (Pall. itul. taur. in nov. act. petrop. 1732. p. 306. Bieb. fl. casp. p. 138. no. 11.) leaves narrower, with revolute edges, canescent from hairs. ♃. H. Native of Tauria, among calcareous rocks; Island of Candia and the Peloponnesus. Willd. nov. act. cur. berol. 2. p. 132. Sims, bot. mag. 889. O. montanum, Smith, prod. fl. græc. 1. p. 181. O. cinereum, Schreber, in nov. act. nat. cur. 3. p. 474. O. orientalis, Halj. taur. p. 116. Symphytum orientale alcæ folio asperro, Tourn. cor. p. 7.—Column. ecphr. 1. p. 184. t. 183. O. echioides, var. α, Lin. spec. 196. O. echioides, var. γ, Bieb. fl. cauc. 1. p. 131.

Starry-haired Onosma. Fl. April, June. Clt. a. 1810. pl. 1801. Pl. ½ foot.

6 O. stellata (Lam. ill. no. 1840. Pers. euch. 1. p. 162.) tuberculary hispid or strigose; stem branched at top; leaves oblong-lanceolate: floral ones subcordate; calyxes clothed with white hairs: flowers drooping. ♃. F. Native of the Levant. Lehm. asper. p. 365. O. echioides, Pall. itin. 2. p. 463 t. 3. v. 2. echioides, β, altissima, Bieb. fl. cauc. 1. p. 130. fl. taur. p. 135. Roem. et Schultes, syst. 4. p. 37. Stems erect, tetragonal. Lower leaves a foot long, attenuated at the base. Racemes terminal, solitary, or conjugate. Flowers distant, pedicellate. Calycine segments linear-lanceolate. Corolla pale yellow. Stamens inclosed. Style purple. Stigma somewhat 2-lobed. Nuts glabrous.

Hairy Onosma. Fl. March, June. Clt. ? PJ. 3 to 4 feet.

6 O. bujifolia (Ledeb. fl. alt. 1. p. 180. fl. ross. alt. ill. t. 238.) tuberculary-hispid, or strigose; stem much branched at the base; leaves lanceolate, acute; flowers erect. ♃. F. Native of the south of Tauria, in dry, stony places, between Jarsoph and Nikita. Root woody, brown. Stems many from the root, tufted, prostrate at the base. One of the hairs in each fascicle is much longer and stiffer than the rest. Racemes terminal, solitary, or twin. Flowers pedicellate, propped by linear-lanceolate bracteas, which are as long as the calyxes. Calycine segments linear-lanceolate, acute. Corolla pale yellow, swollen towards the top; teeth short, blunish, reflexed. Stamens a little exserted. Stigma 2-lobed. Nuts glabrous. Nearly allied to *O. gigantea*: but differs in the smaller stature, in the want of subcordate leaves, and in the flowers being erect.

Rigid-haired Onosma. Fl. Aug. Pl. ½ to 1 foot.

* * *Hairs or bristles solitary, not stellate, as in the preceding division.*

7 O. echioides (Lin. spec. 196.) tuberculary hispid or strigose; hairs or strigæ erect; stem much branched; leaves lanceolate: floral ones, or bracteas, ovate-cordate; nuts glabrous, shining. ♄. Native of the south of Europe and Iberia, in gravelly, arid, stony places. All. pedem. 1. p. 151. Vill. dauph. 2. p. 455. Gærtn. fruct. 1. p. 126. t. c; Desf. fl. atl. 1. p. 161. FIG. 35.

polyrum collo folio amplioro, radice rubra, flore luteo, Tournef. cor. p. 128. Root brownish-red, woody. Stems numerous, diffuse. Radical leaves crowded, tapering into the petioles; cauline ones sessile, broader. Racemes terminal, conjugate. Flowers drooping, pedicellate. Calyx very hispid, with linear-lanceolate, equal segments. Corolla pale yellow, swollen above; teeth recurved, acute. Anthers a little exserted. Stigma obtuse, emarginate. (fig. 55.)

Var. β. arenarium (Lehm. asper. p. 367.) flowers oblique; corolla cylindrically clavate; lower leaves lanceolate, obtuse; stem erect; stamens very smooth. ♃. H. Native of Hungary, in sandy places. *O. arenarium*, Waldst. et Kit. hung. 3. p. 298. t. 277. Schultes, fl. austr. no. 704.

Var. γ. branches shorter; leaves narrower. Bieb. l. c. ♃. H. Native of Caucasus, in the Caspian desert; and at the lower Volga.

Var. δ. plant dwarf, branched; hairs of the stem and leaves whitish; corollas pale. Bieb. l. c. Native of the south of Taurus, on stony hills.

Beglier-like Onosma. Fl. May, June. Clt. 1653. 3. 1804. Pl. 1 to 1½ foot.

3 O. echioides (Desf. fl. atl. 1. p. 161. t. 45.) tuberculately hispid or strigose: hairs or strigæ spreading; stem branched at top; leaves narrow-lanceolate: floral ones linear-lanceolate; nuts tuberculately wrinkled. ♃. H. Native of Barbary, in sandy deserts near Cafza. Lehm. asper. p. 368. Plant hispid from numerous white, pungent hairs. Radical leaves running into the petioles at the base: cauline ones sessile. Racemes terminal. Flowers pedicellate. Calycine segments linear-lanceolate, bluntish. Corolla yellow, a little longer than the calyx, tubularly campanulate: teeth reflexed.

Echioides Onosma. Pl. ½ to 1 foot.

4 O. stenosum (Led. fl. alt. 1. p. 181. fl. ross. a. alt, ill. t. 196.) tuberculately hispid; bristles or strigæ spreading; stem branched at top; leaves glabrous beneath, ciliated at the midrib: lower ones dilated at top: floral ones, or bracteæ, ovate; nuts reticulately wrinkled. ♃. H. Native in the plains about the Caspian Sea; and near Astrachan. Root simple, perpendicular, covered with violaceous bark. Superior cauline leaves lanceolate. Racemes terminal, solitary, or conjugate. Flowers pedicellate, drooping, at first approximate. Calycine segments lanceolate, acute. Corolla yellow, widened a little at apex; teeth short, reflexed. Anthers nearly inclosed.

Bristly Onosma. Pl. 1 foot.

5 O. taurosum (Bieb. fl. casp. append. p. 136. fl. cauc. 1. p. 182.) tuberculately-hispid, or strigose; hairs or strigæ spreading; stem much branched; leaves lanceolate: superior ones dilated at the base; filaments very short. ♃. H. Native of Taurus, in pastures in the vicinity of Sophiana. Lehm. asper. 370. Root simple, blackish, covered with copious red pigment, which stains paper a violet-colour. Leaves with revolute edges; radical ones very long, narrow-lanceolate, obtuse, narrowed towards the base: cauline ones sessile. Racemes terminal, and from the axils of the upper leaves, pedunculate. Flowers on short pedicels, propped by ovate bracteæ. Calyx very pilose, hoary at length, hispid: with linear-lanceolate segments. Corolla yellow; teeth bluntish, erectly spreading. Stigma capitate. Nuts glabrous, shining, marbled.

Var. α; corollas at first white, then citron-coloured. Bieb. l. c. ♃. B.

Var. β; corollas at first white, then violaceous. ♃. H. Native of Caucasus, in plains at the river Terek: and in fields at the river Don.

Dyer's Onosma. Fl. April, July. Clt. 1826. Pl. ½ to 1 foot.

11 O. rupestre (Bieb. fl. cauc. 1. p. 183.) tuberculately hispid, or strigose; hairs or strigæ spreading; stems very simple, leafy; leaves linear-lanceolate, bluntish, glabrous beneath, except the midrib. ♃. H. Native of Iberia, on rocks about Tiflis. Lehm. asper. p. 370. *O. tenuifolium*, Willd. spec. 1. p. 775. Stems aggregate, ascending. Leaves rather revolute on the edges. Radical leaves 3-6 inches long, attenuated at the base: cauline ones sessile: upper ones linear, dilated at the base. Racemes terminal, conjugate, or ternate. Flowers pedicellate, bracteate. Calycine segments linear. Corolla somewhat ventricose; teeth ovate, acutish, erectly spreading, at length reflexed. Stamens inclosed; anthers longer than the filaments. Nuts glabrous, shining, marbled.

Rock Onosma. Fl. April, June. Clt. 1819. Pl. ½ to 1½ foot.

12 O. sabulosum (Pall. itin. 3. append. no. 72. t. V. f. 1. Lehm. asper. p. 371.) tuberculately-hispid, or strigose; bristles or strigæ spreading; lower leaves lanceolate, obtuse; racemes very long; tube of corolla filiform, very long; limb wide. ♃. H. Native of Siberia, in rocky, arid places. Anchusa arbutifolia, Lam. ill. no. 1822. Root perpendicular, simple. Flowers on short pedicels, propped by bracteæ. Calycine segments linear, connivent. Corolla salver-shaped, downy outside: limb small, funnel-shaped, 5-cleft: lobes rounded. Nuts ovate, gyrose.

Rock Onosma. Pl. 1 foot?

13 O. divaricatum (Lehm. asper. p. 372.) hispid or strigose; hairs or strigæ spreading, pellucid; stem branched; branches divaricate; leaves lanceolate, attenuated at both ends; racemes leafy. ☉. H. Native in sandy places, towards the Caspian Sea. *O. orientale*, Pall. itin. 2. append. no. 100. in a note. Root perpendicular. Leaves sessile, strigosely ciliated; radical ones opposite. Flowers pedicellate, distant, bracteate. Calycine segments linear-subulate. Corolla having the tube cylindrical, almost as long as the calyxes, thickened under the limb, clothed with fine villi; limb short, 5-cleft: lobes obtuse. Stamens inclosed. Nuts ovate, subtrigonal, wrinkled.

Divaricate Onosma. Fl. April, June. Clt. 1818. Pl. ½ to 1 foot.

14 O. micrastrum (Pall. itin. 2. append. no. 100. t. L.) stem branched, divaricate; leaves all on long petioles, hoary and hispid beneath, naked above; racemes terminal, compound, bracteless. ☉. H. Native of Siberia, at the Irtysch; also between the Jaik and Volga, in sandy places. Lam. ill. no. 1840. Willd. spec. 1. p. 775. Lehm. asper. p. 373. Ledeb. fl. alt. 1. p. 182. Root simple, perpendicular, yellow. Stems nearly glabrous. Leaves ovate-oblong. Panicles subdichotomous. Corolla small, purplish, contracted and 5-toothed at the mouth. Anthers included. Nuts naked, oblong-linear, triquetrous, hispid. This species differs from all others in the leaves being on long petioles; in the racemes being terminal, compound, and bracteless.

Small-flowered Onosma. Pl. ½ to 1 foot.

15 O. rostellatum (Lehm. asper. p. 374.) hispid or strigose; leaves lanceolate, attenuated at both ends, hispid from pili or strigæ; flowers erect; corollas cylindrical, deeply 5-cleft; with subulate, conniving segments; stamens exserted. ♃. H. Native of the Levant, where it was gathered by Tournefort. Stem erect, branched at top. Leaves sessile, strigosely ciliated on the margins. Racemes terminal, 2-3-flowered, somewhat capitate. *Flowers on short pedicels, bracteate.* Calycine segments linear-subulate. Corolla tubular, cylindrical, 5-cleft, length of calyxes.

Rostel Onosma. Pl. ½ foot?

16 O. Syriacum (Labill. pl. rar. syr. dec. 3. p. 3. t. 3. fl. f. 2.) pilose; leaves ovate-lanceolate, denticulated, pilose, or strigose; racemes many-flowered; corollas cylindrical, 5-toothed: teeth reflexed; anthers exserted. ¥. H. Native of Syria, near Tripoli. Lehm. asper. p. 375. Leaves sessile, glandularly denticulated, ciliated. Flowers longer than the pedicels. Calycine segments linear, acute. Corolla blue, 5-cleft; segments acute. Nuts small, muricated, ex Labill.

Var. β: leaves narrow-lanceolate.

Syrian Onosma. Pl. 1 to 1½ foot.

17 O. orientale (Lin. spec. 196.) leaves lanceolate: superior ones ovate, hispid from pili or strigæ; racemes few-flowered; corolla cylindrical, drooping, 5-toothed: teeth erect; anthers inclosed. ¥. H. Native of the Levant. Lehm. asper. p. 370. nov. act. soc. reg. hafn. 1. c. t. 2. Willd. spec. 1. p. 773. O. fruticosa, Lam. ill. no. 1837. Cerinthe orientalis, Lin. amœn. 4. p. 267. no. 16. Symphytum orientale quartum, echii folio minore, flore viridi, Bon. pinc. flavescente. Tourn. cor. p. 6. Stems many, rising from a short, woody stipe. Lower leaves sessile: upper ones half stem-clasping. Racemes terminal, twin, 2-3-flowered. Flowers on short pedicels, propped by lanceolate bracteæ. Calyx hispid; segments lanceolate, acute, spreading. Corolla yellow, twice as long as the calyx; teeth lanceolate, acute, spreading. Style purplish; stigma subcapitate.

Eastern Onosma. Fl. May, June. Clt. *U^i.* I>; ½ foot.

18 O. asperrimum (Lin. spec. *196.* man! 535.) stems much branched at the base; sterile branches prostrate: floriferous ones erect: leaves linear, acutish, strigose, silky, and canescent beneath; corolla clavate or ventricose: teeth reflexed. ¥. H. Native of Siberia, Iberia, and the plains of the river Don. Bieb. fl. cauc. 1. p. 133. fl. casp. append. p. S7. Lehm. asper. 377. Curt. bot. mag. 2448. Ledeb. fl. air. Up. 153. Pall. ind. fl. taur. in nov. act. petrop. 1792. p. 306. O. Sibiricum, Lam. ill. no. 1836. O. simplex, Gmelin. fruct. 1. p. 225. Branches simple. Leaves crowded, sessile, half stem-clasping. Racemes twin, terminal. Flowers on short pedicels, propped each by an erect, cordate bractea. Calyx muricose, inflated above, pale yellow, contracted at the mouth. Stamens inclosed. Stigma capitate, somewhat 2-lobed.

Feeg simple-stemmed Onosma. Fl. April, June. Ok. 1708. Pl. ½ to 1 foot.

19 O. Graëlsii (Ledeb. ill. ail. 1. p. 64. fl. ross. alt. ill. t. 280.) tuberculately hispid or strigose; hairs or strigæ spreading; stems simple, ascending; cauline leaves spatulate-lanceolate, rounded at apex: floral ones, or bracteæ, ovate-lanceolate, acute; corolla twice as long as the calyx; anthers exserted. ¥. H. Native of Siberia, frequent among rocks between Barnaoula and Teletzkoi lake; and from Buchtarminsk, even to the lake called Noor Saisan.—Gmel. sib. 4. p. 76. no. 18, t. 10. Stems many, from the same root. Racemes terminal, twin, rarely 3. Calycine segments linear-lanceolate, acute, very hispid. Corolla pale sulphur-coloured, a little contracted at the mouth: teeth ovate, acute, reflexed. Nuts wrinkled.

Graëlsii's Onosma. Pl. ½ to 1½ foot.

20 O. polyphyllum (Ledeb. fl. alt. 1. p. 185. fl. ross. alt. ill. t. 24. Sprengl. syst. 1. p. 550.) silky; hairs prostrate or adpressed: stems tufted; floriferous branches simple, erect: leaves crowded, oblong-linear, nerveless, with revolute margins: flowers drooping: corolla clavate, with a 5-toothed mouth. ¥. H. Native of the South of Taurus, among calcareous rocks. Leaves erect, 2-3 inches long, linear, or lanceolate-linear, acute, attenuated towards the base, silky on both surfaces; lower ones crowded: superior ones more remote, broadest at the base. Racemes terminal, conjugate, many-flowered. Flowers pedicellate, bracteate. Calyx about the length of the bracteæ, with linear segments. Corolla sulphur-coloured; teeth ovate, acutish, reflexed. Tips of anthers exserted. Stigma 2-lobed. Nuts ovate, beaked, glaberous, shining.

Many-leaved Onosma. Pl. ½ to 1 foot.

21 O. virgatum (Lehm. asper. 378.) stem quite simple, leafy; leaves linear-lanceolate, very long, acute, 3-nerved, hispid above, and clothed with incumbent hairs beneath. ¥. S. Native of tropical America. Stem hispid from pili, divided into racemes at top. Leaves sessile. Racemes terminal, bracteate; bracteæ linear-lanceolate, longer than the calyxes. Calycine segments linear-lanceolate. Corolla pilose outside, pale yellow, with a 5-toothed mouth. Anthers pilose, inclosed. Style purplish; stigma capitate. Nuts ovate, obtuse, glabrous, shining.

Three-nerved-leaved Onosma. Clt. 1824. Pl. 1 foot.

22 O. sericeum (Bieb. fl. cauc. 1. p. 132.) stem branched; leaves petiolate, oblong-lanceolate, acute, canescent, clothed with silky hairs: hairs prostrate or adpressed; corollas twice as long as the calyx. ¥. ?. Native of Iberia, on rocky mountains in the vicinity of Tiflis. Willd. spec. 1. p. 774. Lehm. asper. p. 379. Stem woody at the base, clothed with white down. Leaves silky: radical and lower cauline ones petiolate: superior ones sessile, spatulately-lanceolate. Racemes terminal, and from the axiis of the superior leaves, clothed with silky villi, bracteate. Flowers pedicellate. Calycine segments lanceolate, acute, of which 2 are often combined, almost to the apex. Corolla twice as long as the calyx, villous at top, villous outside; teeth reflexed. Anthers inclosed, connected at the base. Style purplish; stigma subcapitate. Nuts not seen.

Silky Onosma. Fl. June, July. Clt. 1752. Pl. ½ to 1 foot.

23 O. virgatum (Lag. nov. gen. et spec. p. 10.) strigose; flowers drooping, longer than the calyx: nuts 3-horned.

Native of Spain, very common about Madrid, Pedro, also in Morcio, by ways Albacete, and elsewhere: in New Castile: called *Oja de Lobo*. This species differs from all others in the 3-horned nuts.

Three-horned-fruited Ofiosma. Fl. April, June. Clt. 1824. Pl. ½ foot.

24 O. macrocephala (D. Don, prod. fl. nep. p. 90.) very hispid from strigæ: leaves lanceolate, acute, soft beneath, 5-nerved: stem ascending, simple: racemes aggregate, terminal: calycine segments linear-plumose, longer than the corolla; genitals inclosed. 11 F. Native of Srinagur, where it is called *Lalgiri* by the natives. O. bracteatum, Wall. fl. ind. 2. p. 13. Leaves soft ittitf silk, beneath, but hispid above. Racemes short, glomerate. Bracteæ ovate, cuspidate, equal in length to the calyxes. Corolla tubular, yellow, silky outside.

tar ge-headed Onosma. Pl. 2 to 3 feet.

25 O. Echioides (Wall. fl. ind. 2. p. 11.) procumbent, strigose; bristles or strigæ spreading: leaves lanceolate, triple-nerved, less hairy beneath; racemes terminal, solitary; bracteæ linear, not half so long as the flowers; calyx 5-cornered, with ovate segments; corolla ventricose, 5-keeled, contracted towards the mouth; anthers longer than the filaments, inclosed; style exserted: stigma annular. ¥. F. Native of Nipeal, in Go-saingthan, where it is called by the natives *Maharinga*. Root branched, covered with deep purple bark. Stem slender, divided into simple branches at top. Leaves sessile, varying in size, mostly lanceolate, 2-5 inches long. Racemes 2 inches long. Corolla pale bluish, the base inverted over the ovarium; segments ovate, acute. Filaments inserted in as many villous protuberances. Nuts dm ed and tubercled, keeled on the inner

side, ending in a compressed, short beak. The root is used as a material for dyeing blue, and is imported from Gosainsthan ; probably also from Thibet as a drug, under the native name *Maharanga,* meaning in Sanscrit a strong, intense colour.

Emodi Onosma. Fl. Aug. Dec. PI. 1 to 2 feet.

26 O. VESTITUM (Wall. cat. no. 937.) stems simple, erect, densely clothed with spreading, yellowish hair ; leaves lanceolate, acute, clothed with soft, silky pili : radical ones crowded ; racemes terminal, and from the axils of the upper leaves, subcorymbose ; pedicels as long as the flowers, and are, as well as the calyxes, densely clothed with pili; corolla swollen, with a contracted, 5-toothed mouth, twice as long as the calyx; anthers inclosed. %. H. Native of Nipaul, in Gosainsthan. Stems many, from the same root. Calycine segments linear-lanceolate. Corolla apparently purple, with reflexed teeth.

Clothed Onosma. PL \\ foot.

27 O. HISPIDUM (Wall. cat. no. 938.) hispid from long strigose pili ; leaves long-lanceolate, bluntish, sessile: upper ones elliptic or ovate-lanceolate ; racemes terminal, and from the axils of the upper leaves ; corolla twice as long as the calyx, tubular, widened towards the top. %. H. Native of Kamaon. Stems simple, many from the same root. Calyx, pedicels, and bracteas very hispid. Calycine segments linear-lanceolate. Corolla yellow or purplish ?. Style exserted.

Hispid Onosma. PI. 1£ to 2 feet.

28 O. BICOLOR (Wall. cat. no. 939.) hispid from white, strigose pili; stem branched at top; leaves elliptic-lanceolate, tapering to both ends: radical ones subspatulate, 3-nerved ; racemes terminal, solitary, or twin ; bracteas and calycine segments ovate acuminated ; flowers nearly sessile ; corolla swollen, contracted at the mouth, half as long as the calyx ? tv\o-coloured. ©. H. Native of the East Indies. Radical leaves rosuJate.

***T?vo-coloured-flowered* Onosma. PI. 1 foot.**

Cult. AH the species of this genus are extremely handsome when in blossom. Most of them being natives of rocks or sandy deserts, they answer well to be grown on rockwork, or on wall tops, in which situations the seeds should be sown, where the species will afterwards maintain themselves if allowed to scatter their seeds. In common they are short-lived and apt to rot. They do, however, very well in pots, among other alpine plants ; and cuttings of them may be rooted under a hand-glass.

XI. ONOSMO'DIUM (so called from its similarity to *Onosma)* Michx. fl. bor. amer. 1. p. 132. Pursh. fl. amer. sept. 1. p. 132. Purshia, Lehm. asp. p. 4. and p. 382. Lithospermum species of authors.

LIN. SYST. *Penldndria, Monogynia.* Calyx 5-parted. Corolla tubularly campanulate, with a naked throat; limb ventricose ; segments conniving. Stamens inclosed; anthers sagittate, distinct. Style exserted. Nuts 4, 1-celled, turgid, shining, fixed to the bottom of the calyx, imperforated at the base. —Hispid, herbaceous plants, with terminal, drooping racemes, of white or cream-coloured flowers,

1 O. HISPIDUM (Michx. fl. amer. bor. 1. p. 133.) hispid; leaves obovate- lanceolate, acute ; segments of corolla subulate, acute. %. H. Native from New York to Carolina, *on* dry limestone rocks. Pursh, fl. 1. p. 132. Lithospermum Virginicum, Lin. spec. p. 190. Willd. spec. 1. p. 752. Lam. ill. p. 397. no. 1783. Mill. diet. no. 2. Purshia hispida, Lehm. asper. p. 382.—Mor. hist. 3. p. 447. sect. 11. t. 28. f. 3. Leaves dotted from papillae. Racemes short, revolute. Flowers yellowish-white, similar to those of *Sijmphytum.*

Hisjrid Onosmodium. Fl. June, Aug. Clt. 1759. PI. 1 foot.

2 O. MOLLE (Michx. 1. c. t. 15. Pursh, 1. c.) plant clothed with white villi; leaves oblong-ovate, somewhat triple-nerved ; segments of corolla suboval, obtuse. 1/. H. Native of the western counties, from Pennsylvania to Tennessee. Lithospermum Carolinianum, Lam. ill. 1. p. 397. Purshia mollis, Lehm. asp. 383. Lithospermum molle, Muhl. cat. pi. amer. p. 19. Leaves approximate, acutish. Racemes short, terminal, nodding. Calycine segments acute. Corollas white.

Soft Onosmodium. Fl. June, Aug. Clt. 1812. PI. 1 foot.

3 O. SCABRUM (Rcem. et Schultes, syst. 4. p. *57.)* leaves elliptic, somewhat triple-nerved, scabrous, obtuse; hairs adpressed, somewhat tubercular at the base; segments of corolla acuminately subulate, acute. *%.H.* Native of Virginia?: and on hills in the prairies of the Red River, and on the uplands of the Arkansas, frequent. Flowers axillary at the tops of the stems, on short pedicels. Calycine segments linear-lanceolate, acute, one-half shorter than the corolla. Corollas testaceous in the dried state, smaller than those of *0. hispidum.*

Scabrous Onosmodium. PI. 1 foot.

4 O. STRIGOSUM ; stem nearly simple, erect; leaves lanceolate, 3-nerved, hispid from strigae; corolla tubularly clavate, clothed with strigose down: lobes acute. %. F. Native of Mexico, in meadows near Pascuaro. Onosma strigosum, H. B. et Kunth, nov. gen. 3. p. 93. Stem very hispid. Leaves acute, *2* inches long, and \ an inch broad. Racemes terminal, twin, leafy, nearly 2 inches long. Calyx hispid, with lanceolate, linear, acuminated segments. Corolla white, a little longer than the calyx. Very nearly allied to *Onosmodium molle.*

Strigose Onosmodium. PI. 1 foot.

Cult. See *Onosma* p. 316, for culture and propagation.

XII. PULMONA'RIA (so named from its being supposed to be a good remedy in disorders of the lungs (pulmones) ; or, according to some, from the spots on the leaves resembling those on some diseased lungs.) Tourn. inst. t. *55.* Lin. gen. no. 184. Juss. gen. p. 130. Schreb. gen. no. 244. Lehm. asper. p. 3. 275.—Cerinthoides, Boerh.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-cleft, prismatically pentagonal, but campanulate while in fruit. Corolla funnel-shaped, with a pervious pilose throat. Nuts 4, 1-celled, turbinate, fixed to the bottom of the calyx, imperforated at the base.—Herbaceous plants with spotted leaves, and terminal corymbose racemes of flowers. Radical leaves petiolate; cauline ones sessile.

1 P. OFFICINALIS (Lin. spec. 194.) calyx length of the tube of the corolla; leaves scabrous; radical ones ovate-cordate, cauline ones ovate-oblong, sessile. %. H. Native throughout Europe and Caucasus, in shady woods. Found by Mr. Goodyer in a wood by Holbury-House, in the New Forest, Hampshire ; and in Flintshire, on the ruins of the monastery of Maes Glas. Smith eng. hot. t. 118. Oed. fl. dan. t. 482. Drev. et Hayne, t. 14. Plenck. off. t. 73. Woodv. med. bot. 2. t. 212. Svensk, bot. 3. t. 135. Blackw. t. *376.* Sabb. hort. 2. t. 2C. Ludw. ect. t. 45. P. altera, Matth. 1040. Cam. epit. t. 784. P. maculosa, Lob. obs. 317 icon. 586. P. latifolia maculata, Park, par. 251.—Mor. hist. 3. sect. 11. t. 29. f. 8. P. Italorum ad Buglossum accedens, Tourn. inst. p. 136. Root thick, black. Leaves spotted with white, scabrous from strigae. Flowers terminal. Calyx hairy, brownish-green, with lanceolate acute segments. Corollas red before expansion, then violaceous. The leaves, which are the part recommended in medicine, have no peculiar smell; but in their recent state manifest a slightly astringent and mucilaginous taste ; hence they are supposed to be demulcent and pectoral, and have been used in hemoptoes, tickling coughs, and catarrhal defluxions upon the lungs. The name of *Pulmonaria* seems, however, to have arisen rather from

the speckled leaves of some species, than from any intrinsic quality which experience has discovered to be useful in pulmonary complaints. Most plants of the order are more mucilaginous than this, which, according to Lemanon, when burnt, affords frequently one-seventh of its weight in ashes.

Var. β. alboflora; flowers white. ♃. H. Native of Europe. *P. vulgaris latifolia flore albo*, Bauh. pin. 259. Tourn. inst. p. 136.

Var. γ. immaculata; leaves without spots, green. ♃. H. *P. non maculosofolio*, Clus. hist. 2. 169. 2. Bauh. pin. 260. Knor. del. vern. 2. t. p. 2. Schk. crypt. 1. no. 72.

Officinal Lungwort. Fl. May. Britain. Pl. 1 foot.

2 P. ANGUSTIFOLIA (Lin. spec. 194. 2. succ. no. 164.) calyxes length of the tube of the corolla; leaves oblong-lanceolate, or lanceolate, clothed with soft down-like hairs, cauline ones half stem-clasping. ♃. H. Native of Portugal, Hungary, Switzerland, Denmark, Sweden, and Siberia, but more rare than *P. officinalis*, in England, in the same places as mentioned for *P. officinalis*. Oed. fl. dan. t. 483. Smith eng. bot. t. 1628. St. Hil. luv. 40. t. 7. Lehm. asper. p. 275.—Bocc. mus. 110. t. 86.—Park. par. 248. 3. t. 851. f. 2.—Gmel. sib. 4. p. 73. no. 6.—Mor. hist. 3. sect. 11. t. 29. f. 15.—Clus. hist. 2. p. 169. icon. Stem hairy. Racemes twin, capitate. Calyx inflated, while bearing the fruit with lanceolate-acute segments. This is very nearly allied to *P. officinalis*, and is only distinguished by the narrower spotless leaves. Corolla violaceous before expansion, and bluish-purple afterwards. There is also a variety with white flowers.

Var. γ. oblongata (Lehm. asper. 275.) leaves a little shorter, broader, and blue. ♃. H. Native of Europe. *P. oblongata*, Schreb. in litt. *P. angustifolia*, Baumg. fl. trans. 1. p. 124. Schultes, fl. austr. ed. 2nd, no 757. Lap. fl. pyr. p. 89. Gmel. fl. bad. 1. p. 424. Willd. enum. p. 105. Vill. dauph. 3. p. 481. All. ped. no. 173. D. C. syn. fl. gall no. 2720. Sut. fl. helv. 1. p. 105. Roth. tent. fl. germ. 2. p. 212. Poll. pal. 1. p. 180.—Hall. helv. no. 596.

Narrow-leaved Lungwort. Fl. Apr. May. Britain. P. foot.

P. MOLLIS (Wulf. ex Horn. hafn. 1. p. 719. D. C. fl. fr. suppl. p. 420.) calyxes rather longer than the tube of the corolla; leaves ovate-oblong, half stem-clasping, clothed with downy tomentum; radical ones oblong-lanceolate. ♃. H. Native of Germany, Transylvania, Siberia, and the Pyrenees, in shady places. Poir. suppl. 4. p. 621. exclusive of *P. angustifolia*, Pall. Baumg. fl. trans. 1. p. 125. Sims. bot. mag. 2482. Lehm. asper. p. 276. D. C. fl. fr. 6. p. 480. Reichb. icon. cent. 6. p. 4. t. 503. f. 986. *P. angustifolia*, Besser, gallic. 1. p. 150. exclusive of the synonymes. *P. officinalis*, Patrin mss. *P. officinalis*, β. Lin. *P. II. non maculoso folio* Clus. hist. 2. p. 169. Knor. del. 2. t. p. 2. An intermediate plant between *P. officinalis* and *P. angustifolia*, covered all over with soft hairs. Peduncles shorter than the floral leaves. The recesses between the lobes of the corolla are wider than in *P. officinalis*. Colour of flower the same as in the two preceding.

Soft Lungwort. Fl. April, May. Cli. 1805. Pl. ½ foot.

4 P. ANGUSTIFOLIA (D. C. cat. hort. monsp. 1813. p. 155. icon. ined. t. 64.) calyxes length of the tube of the corolla; stamens inclosed within the tube; leaves spotted with white, downy, lower ones oblong-spatulate, superior ones ovate-cordate. ♃. H. Native country unknown; but probably of some part of Europe. *P. maculata*, Dict. gart. lex. 7. p. 657. *P. angustifolia*, hort. belg. *P. angustifolia*, Poir. dict. 5. p. 785. t.—Mor. hist. 3. sect. 11. t. 29. f. 9.? Flowers reddish before expansion, afterwards bluish-purple.

Great-flowered Lung-wort. Fl. April, June. Cli. 1817. Pl. 1 foot.

5 P. RUBRA (Willd. herb. ex Roem. et Schultes, syst. 4. p. 745.) calyxes length of the tube of the corolla; leaves mucronate, veiny-nerved, glabrous above, clothed with downy tomentum beneath; radical ones ovate-petiolate; cauline ones ovate-sessile, or cordate, half stem-clasping. ♃. H. Native of Coril Islands, where it was collected by Steller and Pallas. Peduncles naked, terminal, bearing a fascicle of flowers at the apex. Calyx hairy, with lanceolate segments.

Downy Lung-wort. Fl. Apr. June. Cli. 1821. Pl. ½ to ¾ foot.

6 P. AZUREA (Besser, fl. galic. 1. p. 250. Lehm. asp. 274.) calyx hardly so long as the tube of the corolla; leaves hispid from pili; radical ones oblong-lanceolate, acuminated, tapering into the petioles; cauline ones narrow-lanceolate, sessile; limb of corolla campanulate. ♃. H. Native of Galicia, Austria, and Hungary. *P. angustifolia*, Schrad. Besseria azurea, Schultes, obs. bot. p. 27. austr. fl. 2. ed. 1st, p. 735.—Mor. hist. 3. sect. 11. t. 29. f. 8.? Pulm. cæruleo-purpurea, Clus. cærulea, P. Clusii, Baumg. fl. trans. 1. p. 123. Calyx campanulate; segments unequal, acute, keeled at the base; hence it is primatically pentagonal. Corolla tubularly campanulate; tube red, cylindrical, somewhat tetragonal at the base, attenuated in the middle; segments of the limb roundish, spreading, blue. Flowers disposed in a corymbose terminal raceme; florigerous pedicels pendulous. Bracteæ similar to the cauline leaves.

Azure-blue Lung-wort. Fl. Apr. Jn. Cli. 1823. Pl. 1 foot.

7 P. RUBRA (Schrank, cat. hort. mon. 1814.) perhaps only a slight variety of *P. officinalis*. ♃. H. Native country unknown.

Tuberous-rooted Lung-wort. Fl. April, May. Cli. 1824. Pl. ½ foot.

Cult. All the species of *Pulmonaria* are very pretty plants when in blossom; and being early flowerers they are rather desirable for borders. They are of the most easy culture, and will grow in any common garden soil, and are readily increased by division. Most of the species grow well under the drip of trees, and all do best in shady situations.

XIII. MERTENSIA (named after Prof. Mertens, of Bremen, author of a work on marine Algæ.) Roth. cat. 1. p. 24. Pers. ench. 1. p. 161.—Pulmonaria species of Lin. and others.—Lithospermum species of Lehm.

LIN. SYST. *Pentandria, Monogynia.* Calyx short, 5-parted. Corolla funnel-shaped; throat pervious, naked, or furnished with small, fleshy processes. Anthers oblong, inclosed. Nuts 4, 1-celled, ovate, smooth or wrinkled, imperforated at the base, fixed to the bottom of the calyx.—Elegant, trailing or erect, smooth glaucous plants. Racemes panicled or subcorymbose. Flowers blue, drooping. Radical leaves increasing after florescence, petiolate; cauline ones sessile.

1 M. PANICULATA; stem erect; leaves nerved, scabrous, acuminated: lower ones ovate-cordate; superior ones ovate-oblong; flowers panicled; calyx hispid from pili. ♃. H. Native of Hudson's Bay. Pulmonaria paniculata, Ait. hort. kew. 4. p. 181. Pursh. fl. amer. sept. 1. p. 131. Lithospermum paniculatum, Lehm. asp. p. 289. Peduncles glabrous, terminal, and axillary; at first sub-umbellate, then racemose. Lower leaves large. Corollas blue. Nuts ovate, trigonal, wrinkled, white, longer than the calyx. There is also a variety of this with white flowers.

Panicled-flowered Mertensia. Fl. May, June. Cli. 1778. Pl. 1½ foot.

2 M. DAHURICA; stem erect; leaves obsoletely nerved, rather scabrous; radical ones ovate, obtuse; cauline ones lanceolate, acuminated; calyxes blunt, rather villous. ♃. H. Native of Dahuria. Pulmonaria Dahurica, Fisch. hort. gorenk. Sims, bot. mag. 1745. P. amœna, Stev. in litt. Lithospermum hirsutum, Lehm. asper. p. 292. P. gracilis, Willd. herb. ex

Rœm. and Schultes syst. 4. p. 747. Radical leaves sub-cordate, cauline ones half stem-clasping. Flowers in terminal, solitary, or conjugate racemes, blue or lilac. Peduncles from the axils of the upper leaves downy; pilose.

Dilatata Mertensia. Fl. May. Clt. 1812. Pl. 1 to 1½ feet.

5 M. PULMONARIOIDES (Roth. catal. 1. p. 54.) stems erect; leaves nerved, quite glabrous: radical ones obovate-elliptic: cauline ones ovate-lanceolate, bluntish; racemes subcorymbose, many-flowered; calyxes glabrous. ♃. H. Native from Pennsylvania to Carolina, on the gravelly shores of rivers. Pulmonaria Virginica. Lin. spec. p. 194. Michx. fl. bor. amer. 1. p. 131. Pursh, fl. 1. p. 130. Horn. hort. hafn. 1. p. 178. Curt. bot. mag. 160. Mill. icon. 2. t. 212. Trew. pl. sel. t. 42. Lithospérmum pulchrum, Lehm. asper. p. 290.—Plukn. alm. t. 237. f. 6. Stem glabrous. Leaves glaucous-green, bluntish. Peduncles terminal, and from the axils of the upper leaves. Calyx small, of a greenish purple colour, as well as the peduncles and pedicels; with lanceolate, blunt, spreading segments. Corollas beautiful blue; tube [illegible] inside at the base. There is also a white-flowered variety of this.

Longest-tube Mertensia. Fl. March, May. Clt. 1699. Pl. 1 to 1½ foot.

4 M. MARGINA'TA; smallish, glabrous, erect, leaves hispid on the margins: those on the lower part of the stem oblong-spatulate, or oblong-ovate; upper ones ovate, acute, half stem-clasping, all glabrous, glaucous, and rather fleshy; fascicles or racemes pedicellate, a little longer than the leaves, 4-6-8 or more flowered; calyx 5-parted, smooth, acute, having the segments rather hispid on the margins, about half the length of the tube of the corolla. ♃. H. Native of Louisiana; and on arid hills near the confluence of the Teton river, Missouri. Pulmonaria lanceolata. Pursh, fl. amer. sept. 2. p. 729. Pulm. marginata. Nutt. gen. amer. 1. p. 115. Lithospérmum marginatum, Spreng. syst. 1. p. 541. Stem a little branched. Radical leaves petiolate; lower stem leaves sessile. Flowers subpaniculed; fascicles axillary and terminal. Corolla funnel-shaped, blue, much like those of *M. Virginica*. Leaves perfectly glabrous, except on the margins.

Marginate-leaved Mertensia. Fl. June, July. Clt 1813. Pl. 1 foot.

5 M. DAUBÉNTONII; stems glabrous, ascending; radical leaves ovate-lanceolate: cauline ones sessile, oblong-lanceolate, callous, subdenticulated, glaucous; panicles terminal, crowded; calyx glabrous, with lanceolate, acutish, somewhat denticulated segments. ♃. H. Native of North-west America. Lithospérmum Drummóndii, Lehm. pug. 1. p. 28. Stems numerous, from the same root, ½ a foot high. Peduncles much shorter than the leaves. Corolla 3 times longer than the calyx, almost half an inch long, blue; segments rounded.

Drummond's Mertensia. Fl. ½ foot.

6 M. CORYMBOSA; stem erect, pilose; leaves ovate, acute, smoothish, pilose beneath and on the margins; flowers racemosely corymbose; calycine segments lanceolate-linear, elongated, acute. ♃. H. Native of North-west America. Lithospérmum corymbósum, Lehm. pug. 2. p. 27. Stems many from the same root, [illegible]. Calyx hairy. Corolla funnel-shaped, blue, ½ an inch long; tube pilose inside; segments roundish.

Corymbose-flowered Mertensia. Pl. ½ to 1 foot.

7 M. SIBIRICA; plant glaucescent; stems erect; leaves rather fleshy, glabrous: radical ones cordate, roundish-obtuse, or broad-elliptic; cauline ones ovate, acute; calyxes glabrous; pedicels longer than the flowers. ♃. H. Native of Siberia, in woods at the river Lena: and of Kamtschatka. Pulmonaria Sibirica, Lin. spec. p. 194. Willd. spec. 1. p. 770. Lithospérmum Sibíricum, Lehm. asper. p. 292. Ledeb. fl. alt. 1. p. 177. fl. ross. alt. fil. t. 207.—Gmel. sib. 4. p. 75. no. 15. t. 39. [illegible]

had. Root blackish. Stems simple, glabrous. Leaves glaucous-green, like the rest of the plant: superior cauline ones sessile; all nerved; uppermost ones almost opposite. Flowers terminal, pedicellate, disposed in elongated, conjugate racemes, with a flower in the fork. Calyx small, sub-linear, lanceolate, acute, rather unequal segments. Corolla purplish blue; tube 3-4 times longer than the calyx, and a little longer than the limb. Style a little exserted.

Siberian Mertensia. Fl. May, July. Clt. 1801. Pl. ½ to 1½ foot.

8 M. PALLA'SII; quite glabrous, pale green; stem erect, weak; leaves membranous: radical ones subcordate-ovate, bluntish: superior cauline ones ovate, acute; pedicels shorter than the flowers; tube of corolla one and a half longer than the limb, and 3 times longer than the calyx; style shorter than the corolla. ♃. H. Native of the Altaian mountains. Pulmonária bracteáta, Willd. herb. ex Schultes, syst. 4. p. 747. Lithospérmum Pallásii, Ledeb. fl. alt. 1. p. 176. fl. ross. alt. fil. t. 23. Stems simple, striately angular. Racemes usually two, with a flower in the fork. Corolla funnel-shaped, fine blue, showy. Habit more slender than in *M. Sibirica*. Leaves pale green, not glaucous, membranous, not rather fleshy, broader and more numerous. Flowers larger. Calycine segments narrower. Corollas azure blue, not purplish blue; filaments longer and less dilated at apex; and the style longer than the corolla, not shorter.

Pallas's Mertensia. Fl. June. Pl. 1 to 1½ foot.

9 M. DENTICULA'TA; stems erect; leaves nerved, almost glabrous, acute, with denticulately scabrous edges; radical leaves ovate: cauline ones oblong: calycine segments oblong, with denticulated margins. ♃. H. Native of North America; also of Siberia. Pulmonária Sibírica, Pursh, fl. amer. sept. 2. p. 729, exclusive of the synonymes. Lithospérmum denticulátum, Lehm. asper. p. 294. Stems many from the same root, glabrous. Leaves pale green, beset with callous dots above. Petioles stem-clasping at the base: cauline leaves half stem-clasping. Peduncles terminal, corymbose, many-flowered, elongating after florescence. Calyx short. Corolla blue, [illegible] those of *M. Sibirica*.

Denticulated Mertensia. Fl. May, June. Clt. [illegible] Pl. ½ to 1 foot.

10 M. SIMPLICISSIMA; stem erect, quite simple; leaves ovate-oblong, acuminated, rather undulated, glabrous; calycine segments [illegible]-one, undulated. ♃. H. Native of Eastern Siberia. Pulmonária simplicíssima, Ledeb. obs. bot. in act. nov. acad. sc. petro. 5. p. 515. no. 5. Lithospérmum simplicíssimum, Lehm. asper. p. 293. Stem glabrous. Leaves approximating by pairs, or tern. Peduncles terminal, and from the axils of the upper leaves, solitary, at length elongated; the lower ones sometimes 2-flowered, with one of the flowers sessile, and the other pedicellate. Calycine segments [illegible] linear, acuminated. Corolla blue, twice as long as the calyx, smaller than any other species of the genus; tube a little narrower than the limb, ex Ledeb. l. c.

Very simple-stemmed Mertensia. Pl. ½ to 1½ foot.

11 M. VILLÓSULA; stem erect; leaves cordate-ovate, acuminated, nerved, almost glabrous above, but silky beneath from incumbent pili, and villous on the margins; calyxes villous. ♃. H. Native of the Carpathian mountains. Lithospérmum villósulum, Lehm. asper. p. 285. Stems smoothish. Lower leaves on long petioles, 7-nerved; upper ones sessile, ovate, and more acuminated, 5-nerved. Racemes terminal, bifid. Pedicels patent, and are, as well as the peduncles, villous. Calycine segments lanceolate, acuminated, ciliated with longer villi on the margins. Tube of corolla a little longer than the calyx, constricted under the limb.

Fallax Mertensia. Pl. ½ to 1 foot.

12. M. ECHIOIDES; stems erect, more or less rough from strigæ, like the upper surfaces of the leaves, but the under surfaces of the leaves, and margins, and bases of the stems are beset with longer, softer, strigose pili; radical leaves on long petioles, subcordate-ovate, acute, membranous; cauline leaves sessile, narrower; racemes cymose, panicled, terminal, twin. ♀. H. Native of America, in Eschscholtz Bay, beyond Behring's Straits. Stems simple or branched, many from the same root. Radical leaves 4½ inches long, and 2 broad. Pedicels drooping. Calycine segments narrow-lanceolate, acuminated. Corolla 1 to 1½ inch long, pale blue, glabrous outside, but pilose inside; tube slender; limb campanulate; throat furnished with minute, arched, glandular, fleshy processes. Nuts granular, wrinkled. Small fleshy processes of the throat have been observed in this, *M. denticulata*, *M. maritima*, and *M. Dahurica*.

Pilose Mertensia. Pl. 1½ to 2 feet.

13. M. PARVIFLORA; plant quite glabrous, glaucous; stems procumbent, much branched; leaves oval-spatulate, abruptly acuminated, fleshy; peduncles lateral, 1-flowered; corolla shortly twice as long as the calyx. Native of New England and Canada, on the sea shore. Pulmonaria parviflora, Michx. fl. amer. bor. 1. p. 133. Pursh, fl. 1. p. 151. Pulmonaria maritima of all American authors. Flowers small, blue.

Small-flowered Mertensia. Fl. July, Aug. Clt, 1827. Pl. procumbent.

14. M. MARITIMA (Link. handb. erk. der. gew. 1. p. 58.) plant glabrous, glaucous; stems procumbent, branched; leaves ovate, bluntish, fleshy; calyx glabrous. ♃. H. Native of the north of Europe, on the sea shore; as of Britain, Norway Iceland, Greenland, Lapland, &c. Pulmonaria maritima, Lin. spec. 195. Willd. spec. 1. p. 770. Smith, engl. bot. 266. Curt. fl. lond. fasc. 6. t. 18. Oed. fl. dan. t. 29. Light. fl. scot. 154. t. 7. Wahl. fl. lapp. p. 57.—Dill. hort. elth. 75. t. 63. f. 75.—Mor. hist. 3. sect. 11. t. 28. f. 12.—Pluken. phyt. t. 172. f. 3.—Per. ueit. t. 29. f. 3. Root fusiform, woody, with capillary fibres. Leaves ovate or oblong, scottish; upper ones half stem-clasping. Flowers erect, disposed in terminal, corymbose racemes. Calycine segments oval, smtish. Corolla blue, twice as long as the calyx; limb subcampanulate. This plant is a great ornament to the sandy sea coasts in Scotland and the north of England. The plant is by some called the Oyster plant, from the similarity of its taste to that of oysters.

Sea Mertensia. Fl. July. Britain. Pl. procumbent.

Cult. All the species of *Mertensia* are elegant, hardy border plants much admired by gardeners for their brilliant blue flowers, which are of a reddish hue before expansion. The first twelve species do best in a peat border, but they will also grow in common garden soil; these are best fitted for the front of flower borders. The last two species, being natives of the sea coast, require, when cultivated, to be grown in pots, in a mixture of sand and peat, or sand altogether, and placed among other alpine plants; but to keep them in vigour, even in this situation, they require to be refreshed occasionally with salted water.

XIV. CERINTHE (from κηρος, *keros*, wax; and ανθος, *anthos*, a flower; bees are supposed to obtain wax largely from this flower). Tourn. inst. t. 50. Lin. gen. no. 189. Schreb. gen. no. 240. Juss. gen. p. 130. ed Usteri. p. 143. Lam. ill. no. 662. t. 93. Gaertn. fruct. 1. no. 47. t. 67. f. 1. Schkuhr. t. 39. Lehm. asper. p. 386.

Pentandria, Monogynia. Calyx of 5 nearly equal sepals. Corolla tubular, with a naked throat. Anthers hastate, specially twisted at the base of the lobes, where they are connected. Nuts 2, 2-celled, imperforated at the base, fixed to the bottom of the calyx.—Glaucous plants, with terminal, leafy racemes of tubularly campanulate, drooping, variegated flowers.

§ 1. *Corolla 5-toothed: teeth reflexed, or spreading.*

1 C. MAJOR (Lin. spec. 135.) stem branched; leaves cordate-ovate, denticulately ciliated; corollas ventricose at top, 5-toothed: teeth very short, acuminated, reflexed. ☉. H. Native of the south of Europe, Barbary, and Siberia. Scop. fl. carn. ed. 2d. 1. p. 168. All. ped. 1. no. 170. Desf. fl. atl. 1. p. 160. Suter, fl. helv. 1. p. 1[illegible]. Hall. helv. 1. p. 150. Curt. bot. mag. t. 333. Sturm, fl. germ. 1. fasc. 12. icon. C. glabra, Mill. fig. t. 91. *D. C.* syn. fl. fr. no. 2702. C. glauca, Mœnch. meth. p. 526.—Hall. belv. no. 602.—Lob. icon 237. f. 2.—Mor. hist. 3. sect. 11. t. 29. f. 1.—Ger. emac. 533. f. 1—3.—Park. par. 521. f. 1. Stem glabrous. Lower leaves tongue-shaped, emarginate, attenuated at the base; superior ones blunt; the floral ones sometimes purplish-green, all fleshy, glaucous, and stem-clasping, glabrous above, densely beset with white dots, rough beneath. Pedicels shorter than the floral leaves. Corolla yellow at bottom and purple at top. This is one of the most common herbs all over Italy: hence Virgil's expression of "*Cerinthæ ignobile gramen.*" There is abundance of honey juice in the tube of the corolla, for which reason it is much resorted to by bees: the plant is therefore peculiarly proper to be planted near Apiaries.

Greater Honeywort. Fl. July, Aug. Clt. 1596. Pl. 1 foot.

2 C. ASPERA (Roth. catal. 1. p. 33.) stem branched; leaves oblong, denticulately ciliated, rough beneath; corolla cylindrical, 5-toothed: teeth short, acuminated, reflexed. ☉.

Native of Portugal, Spain, France, Italy, Transylvania, and the Islands of the Archipelago. Smith, fl. græc. t. 170. Lapeyr. abr. p. 88. 13. Gouan, fl. pyren. 1. p. 127. St. Hil. pl. fr. 3. t. 235. Hoffm. et Link. fl. port. 1. p. 196. D. C. syn. fl. fr. no. 2701. Lehm. asper. p. 388. C. major, β, Lin. spec. p. 196. Trait. arch. p. 85. t. 63. C. major, Mill. dict. no. 1.—Mor. hist. 3. sect. 11. t. 29. f. 2.—Bauh. hist. 3. p. 502. icone. C. major, var. α, Lam. dict. no. 1. Stem glabrous, sometimes spotted. Lower leaves tongue-shaped, all obtuse and glaucous beneath, and stem-clasping and rough from white warts above: floral ones cordate-ovate. Pedicels much shorter than the bracteas, which are sometimes coloured beneath. Corolla twice as long as the calyx, yellow, with a brownish purple tube.

Rough Honeywort. Fl. July, Aug. Clt. 1683. Pl. 1 to 2 feet.

3 C. RETORTA (Smith, prod. fl. græc. 1. p. 171. fl. græc. t. [illegible] erect, branched at top; corollas retorted, elavately cylindrical, with a constricted 5-toothed mouth; teeth spreading, acute. ☉. H. Native of the Peloponnesus; and of Caria, on cultivated parts of mountains. Leaves stem-clasping, sometimes spatulate, emarginate at top, with a short mucrone, beset with white warts on both surfaces, all quite entire and glaucous; floral ones more oblong, purple beneath while young. Margins of the sepals denticulately ciliated, as in the two preceding. Corolla not above half the size of those of the preceding, with a yellow tube and a violaceous limb.

Retorted-flowered Honeywort. Fl. July, Aug. Clt. 1823. 1½ to 2 feet.

4 C. PURPUREA (Vis. in bot. zeit. 1829. p. 8.) stem erect, branched at top; leaves stem-clasping, obtuse, glaucous, thickish, smooth, entire, spotted with white; lower leaves spatulate, attenuated at the base; superior ones cordate; corollas conically elavate, ventricose under the throat; limb constricted; teeth bluntly triangular, reflexed, very short. ☉. H. Native of Dalmatia, in the woods of Boraca. Nearly allied to *C. re-*

torta, Smith. The floral part of the plant is purple, fading to purplish or blue.

Purple-to\vped Honeywort. PI. 1 foot.

5 C. ALPI'NA (Kit. in Schultes, fl. austr. ed. 2. vol. 1. p. *353.* no. 751.) stem erect, hairy?; leaves ovate-lanceolate, quite entire ; corollas 5-toothed: teeth bluntish, erectly spreading. ©. H. Native of Hungary, on the higher alps ^ and of the Carpathian mountains.—Mor. hist. *3.* sect. 11. t. 129. f. 7.? This species differs from C. *minor,* in the leaves being much narrower and longer ; in the calycine segments being linear-lanceolate ; and in the bracteas and floral leaves being much longer and closely imbricated. Corolla yellow at bottom and violaceous at top.

Alpine Honeywort. PI. 1 foot.

§ 2. *Corolla 5-cleft, with conniving segments,*

6 C. MI'NOR (Lin. spec. 190.) stem solitary, branched; leaves cordate-ovate, quite entire, glabrous ; corollas 5-cleft, with conniving segments. *$* . H. Native of Middle and South Europe, and Barbary, in fields. Scop. fl. cam. ed. 2d. 1. p. 128. All. pedem. no. 177. Vil). dauph. 2. p. 448. Roth. fl. germ. 2. p. 210. Desf. fl. atl. 1. p. 160. Jacq. fl. austr. 2. t. 124. Smith, prod. fl. graec. 1. p. 120. Lapeyr. abr. p. *88.* Baumg. fl. trans. 1. p. 428. C. acuta, Moench. meth. p. 520.—Mor. hist. 3. sect. 11. t. 29. f. 5.—Clus. hist. 2. p. 162. icone. Root branched. Stem glabrous. Radical leaves obovate, tapering into the petioles : cauline ones all stem-clasping : lower ones of these spatulate, all glabrous and pale green, but densely beset with minute white warts above. Bracteas distinct, acutish, much longer than the pedicels, denticulately ciliated on the margins, like the sepals. Corolla ventricose, 5-cleft almost to the middle, yellow ; segments lanceolate-linear.

Smaller Honeywort. Fl. June, Oct. Clt. 1570. PI. 1 to l£ $_A$bot.

~7 C. MACULATA (Lin. spec. ed. 1. p. 137. All. ped. 1. p. 178. Bieb. fl. cauc. 1. p. 134.) stems many from the same root; leaves cordate-ovate, quite entire, glabrous; corollas 5-cleft, 5-spotted, with connivent segments. %. H. Native of Piedmont, Hungary, Tauria, and Caucasus. Lehm. asper. p. *393.* C. minor, *fi,* maculàta, Lin. spec. ed. 2d. p. 196. Willd. spec. 1. p. 772. Horn. hort. hafn. 1. p. 180. C. quinquemaculata, Wahl. fl. carp. p. 50. no. 171. Root branched. Stems many, branched, purplish at bottom. Radical leaves oblong : cauline ones stem-clasping, emarginate, all obtuse, and glaucous. Bracteas or floral leaves acutish, finely and denticulately ciliated, like the sepals. Pedicels on^ \alf shorter than the bracteas, pilosely hispid. Calyx and corolla like that of *C. minor;* but differs in the corolla being marked by 5 dark purple spots on the tube, and sometimes these spots are so close as to form a purple circle.

Spotted-flowered Honeywort. Fl. June, Oct. Clt. 1804. PI. 1 to \\ foot.

Cult. The seeds of all the species only require to be sown in the open ground. The *C. maculàta* is perennial, and requires to be planted in a sheltered dry situation, or the roots, which are fleshy, will be apt to rot.

TRIBE III.

LITHOSPE'RMEiE (this tribe contains plants agreeing with the genus *Lithospermum,* in the characters indicated below.) D.Don, in edinb. phil. journ. July, oct. 1832. Corolla open, tubular, with broad, mostly rounded segments. Stamens inclosed or exserted. Nuts 4, distinct, fixed to the bottom of the calyx, imperforated at the base, except in *Strlbila.*

XV. LITHOSPE'RMUM (from *Xtdog, lithos,* a stone; and σπέρμα, *sperma,* a seed; in reference to the hard seeds or nuts.) Tourn. inst. t. *55.* Lin. gen. no. 181. Schreb. gen. no. 241. Lam. ill. no. 255. t. 91. Gsertn. fruct. 1. no. 420. t. *67.* f. 8. Schkuhr, handb. t. 29. Trev. entw. des embryo, t. 4. f. 61—*67.* Lehm. asper. p. 282. sect. 2. and 3. Buglossoides, Mcench. meth. p. 418.—Arnebia, Forsk. fl. aegypt. p. *62.*

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla funnel-shaped, with a naked pervious throat. Anthers oblong, inclosed. Nuts 4, 1-celled, fixed to the bottom of the calyx, imperforated at the base.—Rough plants, with usually narrow leaves, and terminal white or blue flowers. Radical leaves not increasing after the plants have done flowering.

SECT. I. LEIOCA'RYON (from *etog, leios,* smooth ; and *xapvov, karyon,* a nut; the nuts or carpels are smooth and even.) Nuts hard, stony, glabrous, shining, in most of the species hispid, and beset with impressed dots.

§ 1. *Corolla blue, or purplish blue,*

1 L. GRAMINIFOLIUM (Viv. fragm. fl. ital. fasc. 1. p. 3. t. 5. ann. bot. 1. p. 163.) stems herbaceous, erect; loaves long-linear, scabrous above, but hoary and silky beneath, with revolute edges ; flowers terminal, somewhat corymbose. %. H. Native of Italy, on the alps at Etruria, and Carrara, at the foot of the mountains. Lehm. asper. p. 297. Pulmonaria suffruticosa, Lin. spec. 1. p. 1667. Willd. spec. 1. p. 769. Lois, not. p. 37. journ. bot. 2. p. 261. Lithospermum angustifblium umbellatum, C. Bauh. pin. p. 238. 517. Plukn. phyt. t. 42. f. 7.—Bocc. sic. p. 77. t. 41. f. 2. B". C—Mor. hist. 3. sect. 11. t. 31. f. 6. bad. Plant forming a dense tuft. Stems numerous, simple, pubescently tomentose. Leaves sessile, approximate, green above : lower ones drooping : superior ones erectly spreading, all acuminated, 3-6 inches long. Flowers sessile, secund, forming 3-4 short spikes, which constitute a terminal corymb. Calyx hispid ; segments rather unequal, acute. Corolla blue, tubular. Stigma subcapitate. Nuts ovate, shining. Bracteas linear, longer than the calyx.

Grassy-leaved Gromwell. Fl. May, June. Clt. 1825. PI. ½ to | foot.

2 L. PURIVREO-CCERU'LEUM (Lin. spec. p. 190.) stems herbaceous : sterile ones creeping: floriferous ones erect; leaves lanceolate, acute, attenuated at the base, scabrous; flowers axillary and at the sides of the leaves, disposed in terminal, short, twin racemes, which are elongated at length. If.. H. Native of Middle and South Europe ; and of Caucasus, in woody mountain places ; in England, as in Somersetshire, near Taunton; near Denbigh, in Wales ; in chalky soil in several parts of Kent, in hedges. Scop. fl. earn. ed. 2. 1. p. 122. All. pedem. 1. no. 186. Vill. dauph. 2. p. 451. Jacq. fl. austr. 1, p. 11. t. 14. Roth, tent. fl. germ. 2. p. 214. Sut. fl. helv. 1. p. 103. Smith, engl. bot. t. 117. Gmel. fl. bad. 1. p. 415. Smith, prod. fl. graec. 1. p. 114. L. violaceum, Lam. fl. fr. 2. p. 271.—Hall. helv. no. 596.—Mor. hist. 3. sect. 11. t. 31. f. 2.—Sabb. hort. rom. 2. t. 28.—Lob. icon. 458. f. 1.—Bocc. sic. 75. t. 40. and 41.—Plukn. phyt. t. 76. f. 2. Root blackish. Stems pilose, scabrous. Leaves on short petioles, or sessile, dark green, with revolute margins, \\ inch long. Calyx hairy, scabrous, with linear segments. Corolla showy, at first red, afterwards purple. Nuts hispid, smooth, shiny, whitish. There is a variety of this witli white flowers.

Purple-blue-flowered Gromwell. Fl. May. England. 'PI. 1 foot.

3 L. PROSTRVTUM (Lois. fl. gall. 1. p. 105. t. 4.) stems suffruticose, prostrate; leaves lanceolate-linear, hispid; tube of corolla 3 times longer than the calyx, densely villous inside above. F? . H. Native of France, in dry places, and by way

sides about Bayonne. Lapeyr. abr. p. 86. Lehm. asper. p. 300. Stems pilose, branched ; branches canescent from dense pili. Leaves sessile. Flowers axillary, distant, sessile, disposed in terminal leafy spikes on the older branches. Calyx densely pilose, canescent, with subulate segments. Corolla bluish purple, size of those of *L. purpureo-cceruleum,* downy outside. Stigma emarginate.

Prostrate Gromwell. Fl. May, June. Clt. 1825. Shrub prostrate.

4 L. FRUTICOSUM (Lin. spec. 190.) stem shrubby, erect, much branched; leaves linear, bluntish, with revolute edges, strigosely hispid, hoary beneath ; tube of corolla twice as long as the calyx. h_c . H. Native of the south of Europe; and at Algiers. Desf. fl. atl. 1. p. 155. Smith, prod. fl. graec. 1. p. 114. Lapeyr. abr. p. 86. D. C. syn. fl. fr. no. 2717. Lehm. asper. p. 301. Lois. fl. gall. 1. p. 105. Hoffm. et Link, fl. port. 1. p. 170. t. 21. L. fruticosum, /3, rosmarinifolium, Pers. syn. 1. p. 158.—Barrel, icon. 1168. obs. 143.—Garid. aix. p. 68. t. 15.—Alp. exot. p. 69. t. *68.* Branches hairy, scabrous. Leaves sessile, deep green above. Flowers distant, axillary, disposed in 5--6-flowered, terminal, leafy racemes. Calyx pilose, with linear segments. Corolla of a violet blue colour. Anthers beyond the throat. Stigma obtuse. Nuts ovate, hispid, shining, brown when ripe.

Far. /3, *major* (Lehm. asper. p. *302.)* corolla 3 times as long as the calyx ; stamens about equal in length to the corolla. J?. H. Native of Naples, in Goat's Island ; and the Islands in the Grecian Archipelago, on the mountains. L. rosmarinifolium, Tenore. syn. fl. neap. p. *33.* no. 20. Lindl. bot. reg. 1736. L. fruticosum, Smith, fl. graec. t. 161. This variety differs from the species in the larger form, longer and broader, more crowded leaves, and in the corollas being much larger.

Shrubby Gromwell. Fl. May, June. Clt. 1683. Shrub 1 to /\ foot.

5 L. CILIATUM (Forsk. desc. p. 39. Vahl. symb. 1. p. 14.) stem suffruticose, erect, branched, muricately hispid above; leaves cordate-ovate, hoary, with callous, setosely ciliated edges. J? • F. Native on the banks of canals near Cairo. Willd. spec. 1. p. 755. Lehm. asper. p. 314. Branches dichotomous, white. Leaves thick, half stem-clasping. Calycine segments lanceolate. Corolla violaceous, longer than the calyx. Nuts small, black. Spikes lateral, half an inch long.

Ciliated-leaved Gromwell. Shrub \ to 1 foot.

6 L. CALLOSUM (Vahl. symb. 1. p. 14.) stem suffruticose, branched, hispid; leaves lanceolate-linear, obtuse, callosely warted, strigose, very hispid ; bracteas setosely ciliated. J? . F. Native about Cairo, in deserts. Willd. spec. 1. p. 754. Lehm. asper. p. 315. L. angustifdlium, Forsk. descr. p. 39. icon. vol. *2.* t. 16. f. *2.* Stem covered with white bark, villous below, and hispid above. Leaves sessile, canescent while young. Flowers disposed in terminal racemes. Calyx hispid, with linear, ciliated segments. Corolla twice as long as the calyx ; tube villous, red ; limb violaceous, white in the middle, fading to blue ; segments ovate, acutish. Nuts ovate, acute.

Far. /3, *niveum* (Poir. suppl. *2.* p. *836.)* stems very white, with deciduous bark ; leaves small, ovate-lanceolate. Fp . F.

Callous-tubercled Gromwell. Shrub \ to 1 foot.

7 L. ARNE'BIA (Lehm. asper. p. 316. Roem. et Schultes, syst. 4. p. 45.) stems herbaceous ; leaves linear-lanceolate, obtuse, pilosely hispid ; spikes solitary, terminal, secund ; bracteas lanceolate. 0. H. Native of Egypt. Arnebia tinctoria, Forsk. descr. p. *62—63.* L. tinctdrium, Vahl, symb. *2.* p. *33.* t. 28. Willd. spec. 1. p. 752. but not of Lin. L. tetrastigma, Lam. ill. no. 1790. Pers. ench. 1. p. 158. Root fusiform, red. Stems simple, pilosely hispid, as well as the whole plant: lateral ones decumbent: middle ones erect. Leaves sessile : radical ones *2* inches long: cauline ones 1 inch. Calycine segments linear, bluntish. Corolla longer than the calyx, blue, with a filiform tube. Nuts obcordately triangular, smooth, shining. *Segaret el arneb* is the Arabic name of the plant.

Arnebia Gromwell. PI. J foot.

8 L. MINIMUM (Moris, elench. sard, ex Linnaea, 5. p. 93.) hispid; stem erect, a little branched; leaves oblong-linear: lower ones spatulate ; tube of corolla hairy, almost twice as \QV%* as the calyx. ©. H. Native of Sardinia, in arid pastures by the sea side. Corolla blue, with a yellow throat.

Least Gromwell. Fl. March, April. PI. \ foot.

§ 2. *Flowers white or pale yellow.*

9 L. AGGREGATUM (Ruiz, et Pav. fl. per. *2.* p. 4.) stem herbaceous, prostrate, branched; leaves opposite, ovate, obtuse, wrinkled. ©. H. Native of Peru, on the hills of Tarma and Huanuco. Lehm. asper. p. 313. Plant downy. Root fusiform. Leaves on short petioles. Flowers aggregate, nearly sessile, secund, small, white. Nuts 2, ovate, smooth.

Aggregate-Lowered Gromwell. PI. prostrate.

10 L. LINEATUM (Lehm. asper. p. 312.) stem herbaceous, erect, branched ; lower leaves obovate, obtuse : superior ones broad-lanceolate, hairy, subciliated, lined ; tube of corolla twice as long as the calyx. %. H. Native country unknown. Stem woody at the base, branched, scabrous, hairy. Lower leaves 3-4 inches long, all lined above, with a rudiment of a branch in nearly the axils of all. Racemes terminal, leafy, at first nutant. Calyx hairy, with unequal linear segments. Corolla pale yellow ; tube downy ; throat furnished with 5 obtuse, glandular protuberances. Stigma capitate. Nuts hispid, shining, beset with impressed dots and lines.

Lined-fruited Gromwell. Fl. July, Aug. Clt. 1826. PI. 1 to lj foot.

11 L. OFFICINALE (Lin. spec. p. 189. fl. suec. ed. 2d. p. 159.) stems herbaceous, terete, erect, much branched ; leaves broad-lanceolate, acute, veiny, very scabrous; tube of corolla length of calyx. %. H. Native of Europe, Asia, and North America, on way sides, among bushes; also in waste places, in dry, gravelly, or chalky soil. In Britain it is found but sparingly in some woods. Smith, engl. bot. t. 131. Oed. fl. dan. t. 1084. Bieb. fl. cauc. 1. p. 121. Sturm, fl. germ. fasc. 5. icone. Lehm. asper. p. 310. Svensk, bot. t. 177. Hayne, term. bot. t. 21. f. *3.* Woodv. med. bot. p. 134. t. 213.—Plenck. icon, t. *75.*—Sabb. hort. rom. 2. t. *29.*—Ludw. ect. 147.—Lob. stirp. t. 542. f. 2.—Hall. helv. no. 595. Root fibrous. Stem setosely scabrous. Leaves sessile, deep green above, and paler beneath. Flowers on short pedicels, solitary, axillary, disposed in leafy elongated racemes during florescence. Calyx hairy, with linear-lanceolate segments. Corolla pale yellow ; throat furnished with 5 erect gibbae. Nuts hispid, shining, white, hard ; whence they have been celebrated in ancient times as a cure for the stone, without the least shadow of reason.

Far. /3, *latifolium* (Lehm. asper. p. 311.) seeds turgid, ovate, shining, beset with pitted dots all over; fructiferous calyx spreading, exceeding the corolla ; leaves ovate-oblong, nerved. 1/. H. Native from Virginia to Kentucky, in shady woods. L. latifolium, Michx. fl. bor. amer. 1. p. 130. Pursh, fl. amer. sept. 1. p. 131. L. officinale, β_y majus, Willd. spec. 1. p. 751.—Sabb. hort. rom. *2.* t. 29. Flowers pale yellow.

Officinal Gromwell, or Grey Mill or Millet. Fl. May, Aug. Britain. PI. \\ *to 2* feet.

12 L. SCABRUM (Thunb. in Schrad. journ. 1806. p. 44. prod, fl. cap. p. 34.) stem herbaceous, angular, strict, branched ; leaves narrow-lanceolate, with revolute margins, scabrous from papillae above, rather hairy beneath; tube of corolla hardly longer than

the calyx. %. G. Native of the Cape of Good Hope. Willd. spec. 1. p. 753. Lehm. asper. p. 309. Stem and branches hairy. Leaves sessile, bluntish, lj to 2 inches long. Racemes usually bifid, terminating the stem and branches ; bracteas lanceolate. Corolla salver-shaped, white ; throat marked by 5 obtuse gibbosities. Stigma obtuse. Nuts half ovate, acuminated, shining, white. Habit of//, *qfficinalis.*

Scabrous Gromwell. PL 1 to \\ foot.

13 L. ANGUSTIFOLIUM (Michx. fl. bor. amer. 1. p. 130.) Pursh, fl. amer. sept. 1. p. 137.) stems herbaceous, procumbent ; leaves linear, clothed with adpressed pubescence; flowers as if they were lateral; nuts beset with impressed dots. ©. H. Native of shady woods, on the banks of the river Ohio. Lehm. asper. p. 309. Flowers white. Nuts turgidly ovate, shining.

Narrow-leaved Gromwell. Fl. July, Aug. PI. 1 foot.

14 L. STRICTUM (Lehm. asper. p. 303.) stem herbaceous, very simple, thick; leaves linear, acute, adpressed to the stem, strigose above, and almost glabrous beneath ; spikes terminal, solitary; tube of corolla twice as long as the calyx. ©. H. Native of tropical America. Stem terete, canescent at top. Lower leaves \ inch long, very blunt: upper ones 1^ inch long. Flowers on short pedicels from the axils of linear bracteas. Calyx pilose, with linear-lanceolate segments. Corolla villous outside, pale yellow. Anthers sagittate. Nuts ovate, turgid.

Straight Gromwell. PI. 1 to 1| foot.

15 L. CUNEIFOLIUM (Ruiz, et Pav. fl. per. 2. p. 5. no. 4.) stems herbaceous, prostrate, hoary ; leaves cuneiform, hoary; flowers sessile, axillary, solitary. ©. H. Native of Peru, on arid hills. Pers. ench. 1. p. 158. Lehm. asper. p. 307. Root fusiform, fibry. Stems numerous. Leaves sessile. Corolla white. Nuts ovate, acuminated, shining.

Wedge-leaved Gromwell. PI. prostrate.

16 L. MICRA'NTHUM (Viv. fl. libyc. p. 10. t. 1. f. 4.) hispid from strigae ; leaves linear-lanceolate ; flowers disposed in short, terminal, secund spikes, the whole forming a kind of cyme ; hairs on the calyx spinescent when bearing the fruit; tube of corolla filiform. ©. H. Native of Libya, in the great Syrtus. Root simple. Stem a finger in height. Calycine segments linear, acute. Corolla yellowish green, longer than the calyx, with a naked throat. Nuts ovate, acute, convex on the back.

Small-flowered Gromwell. PL \ foot.

SECT. II. DEINOSPE'RMUM (from *luvoq^ delnos,* rough; and *cnrepfjLa, sperma,* a seed ; the nuts are rough.) Nuts very hard, wrinkled, callosely dotted, rough, or muricated.

§ 1. *Flowers white or yellow.*

17 L. A'PULUM (Vahl. symb. *2,* p. *33.)* stems herbaceous; leaves linear-lanceolate, acute, pilose ; spikes terminal, secund ; bracteas lanceolate ; nuts muricated. ©. H. Native of Portugal, south of France, Italy, Samos, and other islands of the Archipelago; in the kingdom of Tunis, near Caffan ; as well as of North America, in Virginia, Ohio, and Mississippi, in dry woods. Willd. spec. 1. p. *752.* Sibth. et Smith, fl. graec. t. 158. Hoffm. et Link. fl. port. 1. p. 169. Pursh, fl. amer. sept. 1. p. 131. Lehm. asper. p. 317. Myosotis A'pula, Lin. spec. 189. All. pedem. no. 192. Desf. fl. atL 1. p. 158. Lapeyr. abr. p. 83. Myosotis lutea, Lam. fl. gal. *2.* p. 282.—Mor. hist. 3. sect. 11. t. 28. f. 8.—Column, ecph. 1. p. 185. f. 1—Plukn. phyt. t. 16. f. 5.—Lob. icon. t. 587. f. l.—Buglossum luteum annuum minimum, Tourn. inst. p. 134. Root branched. Stems rarely more than one from the same root, pilose. Leaves sessile, deep green, an inch long. Spikes *3-5* together, terminal, many-flowered. Calyx very hairy. Corolla yellow, longer than the calyx. Nuts gibbous on both sides, beaked, marked with 4 elevated submuricated lines.

Apulian Gromwell. Fl. June, July. Clt. 1768. PL \ foot.

18 L. PU'MILUM (Lehm. asper. p. 319.) stems herbaceous, ascending, branched ; leaves imbricate, linear, obtuse, strigosely pilose ; flowers solitary, sessile, interfoliaceous; segments of the limb of corolla acute ; nuts rugose. %. H. Native of North America. Habit of *Anchilsa ccespitosa,* but smaller. Root thick, with filiform fibres. Stems many, 2-3 inches long. Leaves crowded, an inch lon£, and more. Calyx pilose, with ciliated segments. Corolla yellow ? ; tube a little longer than the calyx.

Dwarf Gromwell. PL \ foot.
