19 L. MYOSOTOIDES (Lehm. asper. p. 319.) stems herbaceous, procumbent, filiform; leaves linear-lanceolate, pilose; flowers solitary, lateral; tube of corolla longer than the calyx ; limb obtuse ; nuts rugose. ©. H. Native of Chili, in sandy places about Conception ; and at Santiago. L. tinctdrium, Ruiz, et Pav. fl. per. 2. p. 4. t. 114. L. tingens, Roem. et Schultes, syst. 4. p. 44. Plant pilose. Root slender, fusiform. Stems numerous; middle ones erect. Flowers on short pedicels. Calyx closed in the fructiferous state. Corolla white, exceeding the calyx.—This plant tinges paper in which it has been pressed of a violet colour.

Mouse-ear-like Gromwell. PL procumbent.

20 L. ARVE'NSE (Lin. spec. 190. fl. suec. no. 160. ed. 2d.) stems herbaceous, erect, branched; leaves lanceolate, narrowed at the base, acutish, hairy, subciliated; calyxes a little shorter than the corolla, spreading in the fructiferous state; nuts wrinkled, scabrous. ©. H. Native of Europe, Asia, Africa, and North America, in cultivated fields, and sterile or waste places; plentiful in some parts of Britain. Oed. fl. dan. t. 456. Smith, engl. bot. t. 123. Bieb. fl. cauc. 1. p. 121.—Hall. helv. no. 594.—Mor. hist. 3. sect. 11. t. 31. f. 7.—Riv. mon. tab. 9. f. 1. Root perpendicular, branched, red outside. Stem scabrous from adpressed hairs. Leaves sessile, scabrous, 1| inch long. Flowers nearly sessile, solitary, disposed in leafy racemose spikes. Calyx hispid or pilose. Corolla white, pilose outside, with a violaceous ring inside. Nuts scabrous, black.

Far. /3 ; flowers blue. ©. H. Native of Iberia. Bieb. fl. cauc. 1. p. 121.

Far, y; flowers purplish. ©. H. Native of France. L. arvense, /3, D. C. fl. fr. no. 2713.

Corn-field Gromwell, or Bastard Alkanet. Fl. May, June. Britain. PL £ to l£ foot.

21 L. PLEBEIUM (Cham, in Linnaea, 4. p. 446.) stem erect or prostrate, trichotomous at the nodi, clothed with spreading pili; leaves opposite ; spikes elongated, leafy ; leaves linear, or linear-lanceolate, obtuse, nearly naked above and strigose beneath, irregularly ciliated with twin pili; calyx densely pilose ; nuts rugose, glabrous. ©. H. Native of Unalaschka and the Aleutian Islands, on the sea shore. Stems rarely solitary and erect; but generally many from the same root, and trailing. Flowers nearly sessile. The largest leaves are 3 inches long and 4 lines broad. Calyx 5-cleft or 5-parted, with lanceolate acutish segments. Corolla salver-shaped, hardly exceeding the calyx, glabrous, white or pale yellow.

Plebeian Gromwell. PL \ to f foot.

22 L. RUDERA'LE (Dougl. mss. ex Lehm. pug. 2. p. 28.) stem herbaceous, erect, hairy ; leaves linear, acuminated, strigose ; spikes leafy ; corolla villous : tube length of calyx. ©. H. Native of North-west America. Stem angular, furrowed, branched at top. Leaves scattered, crowded, sessile. Calyx

hairy, with unequal linear segments. Corolla yellow. Flowers almost sessile. Stigma simple.

Rubbish Gromwell. PL 1 foot.

23 L. SCHREBERIANNUM (Spreng. syst. 1. p. 546.) stems nearly simple; leaves all ovate, hispid: radical ones petiolate : cauline ones sessile ; calyx hairy, equal in length to the tube of the corolla. 1J-. H. Native of Kamtschatka. Pulmonaria pùmila, Schrank.

Schreber's Gromwell. PI. dwarf.

24 L. CRASSIFOLIUM (Lehm. asper. p. 324.) stems herbaceous, ascending, hoary ; leaves lanceolate-spatulate, obtuse, canescent from incumbent hairs; floral leaves cordate, acute, nearly glabrous; corolla a little longer than the calyx; nuts rugose. 1/. F. Native of the Levant. Stems numerous. Radical leaves petiolate : cauline ones sessile. Flowers disposed in terminal, leafy, conjugate spikes. Corolla glabrous, the colour not known.

Thick-leaved Gromwell. PI. \ ascending.

25 L. ORIENTA'LE (Lin. syst. ed. 12. vol. 2. p. 145.) stems ascending, herbaceous, branched from the base ; leaves oblong-lanceolate, bluntish, repand, pilose : floral ones ovate-lanceolate; corollas longer than the calyxes, which droop in the fructiferous state; nuts tubercular. %. H. Native of the Grecian Islands; and in sandy places of Cafsa. Vahl, symb. 1. p. 14. Willd. spec. 1. p. *753.* exclusive of the syn. of Forsk. Desf. fl. atl. 1. p. 153. Curt. bot. mag. t. 515. Sibth. et Smith, fl. grsec. t. 160. Anchusa orientals, Lin. spec. ed. 1st. p. 133. ed. 2d. p. 191.—Dill. hort. elth. 1. p. 60. t. *52.* f. 60.—Buxb. cent. 3. t. 29. Root fusiform, black outside. Plant pilosely hispid. Leaves soft, pale green. Flowers golden yellow, on short pedicels, disposed in long, leafy, terminal racemes. Corolla with a cylindrical tube, which is contracted in the middle, longer than the calyx ; limb short, recurvedly convex, with roundish segments, and rather elevated recesses. Nuts incurvedly gibbous, rather reniform, brown, shining. Habit of *Lycopsis lutea.*

Eastern Gromwell. Fl. June, July. Clt. 1713. PI. ascending.

26 L. DECU'MBENS (Vent. eels. t. *37.)* stem herbaceous, decumbent ; leaves lanceolate, acute, strigose ; calyx pentagonal at the base, with subulate, erect segments ; tube of corolla much longer than the calyx ; nuts tubercular. ©. H. Native of the Levant, near Bagdad. Lehm. asper. p. *326.* Root fusiform, fibry. Stems hispid, dichotomously branched ; branches ending in very long spike-formed racemes. Flowers nearly sessile, shorter than the bracteas. Calyx hispid. Corolla yellow, downy outside ; segments rounded, erectly spreading. Nuts pyramidal, angular, acute, truncate at the base.

Decumbent Gromwell. PI. decumbent.

27 L. CORNU'TUM (Ledeb. fl. alt. 1. p. 175. fl. ross. alt. ill. t. *25.)* hairy; stem herbaceous, erect; leaves oblong, callous, ciliated ; calyxes, when bearing the fruit, furnished with 5 horns at the base : segments lanceolate-linear, erect; tube of corolla one half longer than the calyx ; nuts tubercled. ©. H. Native *o^* Siberia, in dry places ; at the river Irtysch ; between the river Kurtschum and the lake called Noor-Saisan ; as well as on the Arkaul and Dolenkara mountains. Stems simple. Plant strigose. Racemes erect, bracteate. Calyx hairy. Corolla yellow, pilose outside. Stigmas 4, capitate. Calyx structure of that of *L. decúmbens.*

Horned-calyxed Gromwell. Fl. May. Plant \ to § foot.

28 L. MURICA'TUM (Ruiz, et Pav. fl. per. 2. p. 4. no. 2. Lehm. asper. p. *327.)* stems herbaceous, prostrate; leaves lanceolate-linear, obtuse, downy : lower ones opposite; calyx equal in length to the corolla, expanded while in fruit; nuts muricated. ©. H. Native of Chili, in waste places, and on walls. Plant downy. Stems many. Flowers lateral and terminal, sessile. Corolla white.

Muricated-seeded Gromwell. PL prostrate.

29 L. HÍSPIDUM (Ruiz, et Pav. fl. per. 2. p. 5. no. 5.) stems herbaceous, ascending, strigosely hispid; leaves linear-lanceolate, acute, revolute at apex, strigosely hispid ; calyx setosely hispid, length of the tube of the corolla; nuts granular. ©. H. Native of Peru, in stony places. Lehm. asper. p. 328. Plant hispid, whitish. Root fusiform, fibry. Stems numerous, rather angular, branched. Leaves sessile, an inch long. Spikes long; flowers nearly sessile, secund : superior ones more crowded and bractless. Corolla yellow. Nuts ovate, acute.

Hispid Gromwell. PI. 1 foot, ascending.

30 L. CALYCÍNITM (Moris, in acad. del Torino, vol. *87.* p. 98. t. 22.) hispid from bristles ; stem herbaceous, erect, branched ; leaves lanceolate : superior ones dilated at the base, sessile, undulated : spikes dense, secund, bractless, revolute at apex ; calyx equal in length to the corolla, expanded in the fruit-bearing state; nuts wrinkled from tubercles. %. F. Native of Chili. Root fusiform, fibrous at bottom. Calyx hispid, like the rest of the plant. Corolla yellow, funnel-shaped. Nuts ovate, gibbous outside, conniving at top. Perhaps the same as *L. hispidum.*

Large-calyxed Gromwell. PI. 1 foot.

31 L. RAMOSUM (Willd. herb, ex Lehm. asper. *328.)* stem herbaceous, erect, much branched ; leaves linear-lanceolate, bluntish, strigose, with ciliated, hispid margins ; calyx hispid, length of the tube of the corolla; nuts granular. ©. H. Native of Mexico. Stem hairy, canescent. Leaves \ an inch or more long. Spikes lateral, and at the tops of the branches, all lateral, conjugate, sometimes solitary, leafy. Flowers sessile, distant, opposite the bracteas, or from the axils of the bracteas. Corolla white, downy under the limb. Nuts ovate, subtrigonal, acuminated, granular outside.

Branched Gromwell. PI. 1 foot.

32 L. PAPILLÒSUM (Thunb. in Schrad. journ. 1806. p. 44—45. prod. fl. cap. p. 34.) stem herbaceous, assurgent, nearly simple ; leaves oblong-lanceolate, papillose, hairy, with revolute margins; calyxes hairy, length of the tube of the corolla, spreading in the fructiferous state; nuts wrinkled. ©. ? H. Native of the Cape of Good Hope. Lehm. asper. p. *329.* Stem bearing 2 flowering branches at top, hispid. Leaves sessile, strigose, canescent. Racemes bracteate : bracteas longer than the flowers. Calycine segments obtuse, concave, lanceolate. Flowers distant. Corolla white; tube a little longer than the calyx. Nuts ovate.

Papillose Gromwell. PI. ^ foot.

33 L. LYCOPSOÌDES (Lehm. pug. *2.* p« 28.) stems herbaceous, procumbent, branched, hairy ; leaves ovate-lanceolate, denticulated, setosely ciliated, hairy on both surfaces; flowers scattered, lateral and axillary; nuts ovate-trigonal, emarginate, convex and wrinkled on the back. ©.? H. Native of North-west America. Stems terete, di-trichotomous. Flowers on short pedicels. Calyx very hispid, drooping when in fruit, somewhat inflated ; segments lanceolate. Corolla yellow, glabrous ; limb small, erect.

Lycopsis-Yike Gromwell. PI. 1 foot ?

34 L, TENUIFLÒRUM (Lin. fil. suppl. p. 130.) stem herbaceous, erect, branched ; leaves lanceolate, obtuse, hairy, scabrous : lower ones opposite ; calyxes shorter than the filiform tube of the corolla, conniving when bearing the fruit. ©. H. Native of Egypt, and the island of Cyprus. Lehm. asper. p. 320. Jacq. icon. rar. *2.* p. 10. t. 313. Sibth. et Smith, fl. grsec. t. 159. Horn. hort. hafn. 1. p. 175. Buglossoides ramosissima,

Mi ^nch. meth. p. 418. Habit of *L. arvense,* but much smaller. Stt downy, scabrous. Leaves 1 to 1£ inch long : floral ones lent ->f calyxes. Flowers on short pedicels, secund, disposed in ten. al, leafy racemes. Calycine segments ciliated. Corolla downy utside, inflated at the base, and constricted in the middle, white, suffused with red ? Nuts brown, incurved, tubercled.

Thin-flowered Gromwell. Fl. May, June. Clt. 1796. PI. \ to 1 foot.

35 L. TENE'LLUM (Nutt. in amer. phil. trans, n. s. 5. p. 188.) leaves linear, acute, strigose ; flowers remote, pedicellate; calyx foliaceous, with unequal segments ; nuts glabrous, convex. ©. H. Native of North America, in arid places in the prairies of the Red River. Stem about a span high, clothed with adpressed whitish strigse. Flowers scattered, small, white. Corolla funnel-shaped. Nuts 4, convex outside, connivent, and rather pilose and angular. Perhaps this plant is not precisely a *Lithosjiermum;* bearing, indeed, some affinity to *Cynoglossum,* and by no means according with the usual character of the fruit of this genus.

Slender Gromwell. PI. J to 1 foot.

§ 2. *Flowers blue or purple.*

36 L. TINCTORIUM (Lin. spec. ed. 1st. p. 132. mat. med. p. 58.) stems herbaceous, procumbent; leaves lanceolate, obtuse, pilosely hispid : floral ones subcordate ; calyxes hairy, a little shorter than the tube of the corolla; nuts tubercled. %. H. Native of Spain; south of France; Italy, and Hungary, in sandy, sterile places ; and in deserts about Alexandria. D. C. syn/fl. fr. no. 2716. Andr. bot. rep. t. 576. Regnau, bot. 1. t. 34. Lehm. asper. p. 330. Anchusa tinctdria, Horn. hort. hafn. 1. p. 176. Willd. enum. 1. p. 178. exclusive of the synonymes. Lapeyr. abr. p. *86.* L. tuberculata, Forsk. descr. p. 41. L. procumbens, seminibus rugosis, Sauv. monsp. p. *63.* Anchusa puniceis floribus, Bauh. pin. p. 255. Anchusa monspeliaca, Bauh. hist. 3. p. 584. Root rather woody, twisted, of many branches, tinges paper of a violet colour. Stems many, dividing into 2 branches at top, hispid, as well as the leaves. Upper leaves half stem-clasping ; lower ones petiolate, subspatulate-lanceolate. Flowers sessile, disposed in simple or conjugate, terminal, leafy spikes. Corolla fine blue, with a white throat. Anthers sessile, in the middle of the tube.

Dyer's Gromwell, or Bugloss. Fl. June, Aug. Clt. 1596. PI. procumbent.

37 L. DISPE'RMUM (Lin. spec. 191. dec. 1. t. 7.) stem herbaceous, erect, branched ; leaves linear-lanceolate, obtuse, pilose; calyx beset with spreading hairs : segments linear, spreading, but incurved in the fructiferous state; nuts covered with callous dots. ©. H. Native of Siberia, at the Volga; in Tauria, and of Caucasus ; also of Thessaly, on Mount Ossa. Willd. spec. 1. p. 755. Smith, prod. fl. graec. 1. p. 115. Bieb. fl. taur. 1. p. 122. Pers. ench. 1. p. 158. L. incurvum, Pers. 1. c. L. retortum, Pall. itin. 3. append, no. 722. t. L. 1. f. 2. Lam. diet. 3. p. 30. Willd. spec. 1. p. 755. Messerschmidtia cancellata, Asso, synop. fl. arrag. no. 162. t. 1. f. 7. Willd. spec. 1. p. 790.—Quer. hisp. 4. p. 145. t. 25. Root simple, perpendicular. Plant pilose. Stem canescent. Lower leaves petiolate, spatulate: upper ones sessile, lanceolate. Flowers secund, on short pedicels, disposed in leafy terminal racemes. Corolla pale purple. Tube of corolla a little longer than the calyx, pale ; limb blue. Nuts usually 2, rarely solitary, or 3, ovate-trigonal.

Two-seeded Gromwell. Fl. June, July. Clt. 1799. PI. 1 foot.

38 L. INCA'NUM (Forst. prod. p. 12. no. *63.)* stem shrubby, decumbent; leaves linear-lanceolate, clothed with silky pill, canescent; calyxes unequal, shorter than the tube of the corolla; nuts rough. P? . G. Native of the island of Teautea, and Savage Island. Plant silky and canescent. Stem and branches pilose. Leaves an inch long. Spikes terminal, pedunculate, compound, | to 1 inch long, coarctate, bracteate, secund, pilose ; flowers on very short pedicels. Corolla pilose outside, colour unknown. Nuts ovate.

Hoary Gromwell. Shrub \ to 1 foot.

39 L. HISPIDULUM (Smith, prod. fl. groec 1. p. 11 \ fl. graec. t. 162.) stem shrubby, depressed, diffuse; leaves obovate, obtuse, hispid ; tube of corolla inflated above, twice as long as the calyx; nuts tubercled, scabrous. 1?. F. Native of Rhode Island. Stems tufted; branches hoary and silky. Leaves generally £ an inch, scabrous. Flowers axillary at the tops of the branches, twice as long as the leaves, blue. Corolla glabrous. Stigma obtuse. Nuts ovate.

Hispid Gromwell. Shrub diffuse, tufted.

40 L. VILLOSUM (Wall. cat. no. 941.) plant clothed with long white hairs all over, which rise from white warts, most conspicuous on the bracteas and calyxes ; leaves narrow-lanceolate: the radical ones crowded ; racemes terminal, and from the axils of the upper leaves, bracteate, very hairy. %. F. Native of the Carnatic, near Hurdwar and Dorhora. Anchusa polygama, Hani. herb. Plant tufted ; stems many from the same root. Corolla salver-shaped, with a long tube. Nuts rugose ?

Villous Gromwell. PI. 1 foot ?

41 L. FLEXU6SUM (Lehm. asper. p. *333.)* stem shrubby, decumbent, flexuous ; leaves ovate, scabrous above, hispid beneath ; calyxes length of the tube of the corolla, spreading and incurved in the fructiferous state; nuts callously muricated. h. G. Native of the Cape of Good Hope. Cynoglossum muricatum, Thunb. in Schrad. journ. 1806. p. 49. prod. p. 34. Willd. spec. 1. p. 762. Stem branched, hispid. Flowers on short pedicels, disposed in terminal, leafy racemes; bracteas lanceolate. Calyx hispid. Corolla blue. Anthers in the middle of the tube, beneath the throat. Nuts 2, ovate, triangular.

Muricated Gromwell. Shrub decumbent.

42 L.OLEIFOLIUM (Lapeyr. abr. suppl. p. 28.) shrubby, diffuse; leaves elliptic-oblong, green above, shining, and beset with short adpressed hairs, but silky and silvery beneath ; branches hoary. T? . F. Native of the Eastern Pyrenees, among rocks on the banks of the river Caumella, below St. Aniol. Lower leaves opposite, 1J inch long, and \ inch broad. Flowers axillary. Calycine segments clothed with silky down, obtuse. Corolla thrice as long as the calyx, blue ; tube downy. Nuts 2, downy, cinereous, trichotomous, somewhat rostrate, glabrous.

Olive-leaved Gromwell. Shrub J to 1 foot.

t *Species not sufficiently known.*

43 L. DIFFU SUM (Lag. gen. et spec. nov. diagn. p. 10.) stem sufFruticose, diffuse ; leaves substrigose, linear, broadest at the base, with revolute edges; corolla 3 times longer than the calyx. *2 . F. Native of Spain, among bushes near Arvas, Pajares, and elsewhere.

Diffuse Gromwell. Shrub diffuse.

44 L. JEGYPTIACUM (Mikan ex Schrank, obs.bot. in act. acad. reg. sc. mon. 1813. § 14. p. 73.

Egyptian Gromwell. PI. ?

Cult. For the culture and propagation of the perennial, herbaceous species, see *Borago,* p. 309 ; for those of the annual species, see *Anchusa,* p. 343; and for those of the shrubby kinds, see *Onosma,* p. 317.

XVI. BA'TSCHIA (named by Michaux after G. J. G.

5 E. CANDI'CANS (Lin. fil. suppl. p. 131.) stem branched, subtomentose above ; leaves lanceolate, feather-veined, clothed with silky silvery canescent down ; panicles terminal, conical ; spikelets pedunculate, simple. T?. G. Native of Madeira, on high rocks. Jacq. coll. 1. p. 44. icon. rar. 1. t. 30. Ait. hort. kew. ed. 1. vol."1. p. 1S6. Willd. spec. 1. p. 782. Lehm. asper. p. 409. Ker. bot. reg. t. 44. Leaves tapering to both ends. Calyx hairy; segments nearly equal, oblong, acute. Corolla campanulate, blue, pilose at top outside.

Whitish Viper's Bugloss. Fl. May, June. Clt. 1777. Shrub 2 to 4 feet.

6 E. CYNOGLOSSOIDES (Hort. par. ex Poir. suppl. 5. p. 487. Roem et Schultes, syst. 4. p. 17.) stem branched, downy ; leaves lanceolate, clothed with silk-grey down; panicle very large, composed of elongated racemes or spikes. J?. G. Native of the Canary Islands. This species is very nearly related to *E. candicans,* but differs in the size of the panicle, and in the down being cinereous. Leaves *5-6* inches long, and 2 broad, attenuated into the petioles at the base. Panicles pilose. Calycine segments acute. Corolla blue ; limb obtuse.

Hound's-tongue-like Viper's Bugloss. Fl. May, June. Clt. 1818. Shrub 2 to 4 feet.

7 E. FASTUO'SUM (Jacq. fil. eclog. no. 41. p. 61. t. 41. Lehm. asper. p. 410.) stem branched, rather villous above ; leaves oblong-lanceolate, acuminated, veiny, beset with soft hairs, ciliated; panicle thyrsoid, ovate, large, dense; spikelets pedunculate, simple. J?. G. Native of the Canary Islands. *E. candi'cans.* D. C. cat. hort. monsp. 1813. p. 107. Leaves pale green, clothed with soft white hairs. Calyx hairy; segments narrow-lanceolate, acute. Corolla campanulate, deep blue.

Proud Viper's Bugloss. Fl. April, Aug. * Clt. 1779. Shrub 2 to 4 feet.

8 E. MACROPHY'LLUM (Lehm. asper. p. 412.) stem erect; leaves oblong-lanceolate, obliquely acuminated, veiny, very soft, nearly glabrous, rather silky, silvery on both surfaces. h_c . S. Native of the Canary Islands ?. Leaves crowded at the tops of the stem and branches, from a span to a foot long, and 1 \ to 2 inches broad ; almost as silvery as those of *Protea argentea,* glaucous, green. Flowers unknown.

Long-leaved Viper's Bugloss. Fl. June, July. Clt. 1823. Shrub 2 to 4 feet.

y E. FOLIO'SUM (Lehm. asper. p. 412.) stem branched, hoary and pilose above; leaves oblong-lanceolate, clothed with soft hairs; panicles leafy; peduncles one-half shorter than the leaves ; spikelets nearly simple. J?. G. Native of the Canary Islands?. Leaves pale green, 5-6 inches long, and 1 or \\ **broad : floral ones *2-3* inches long. Lower spikelets bifid: upper ones simple. Peduncles and calyxes hairy. Segments of calyx unequal, lanceolate, acuminated. Corolla campanulate, white; segments unequal, obtuse.**

***Leafy* Viper's Bugloss. Fl. May, June. Clt. 1815. Shrub *2* to 4 feet.**

10 E. LINEA'TUM (Jacq. fil. eclog. p. 62. t. 42.) stem branched, clothed with white pubescence above ; leaves ovate-lanceolate, hairy, glaucous-green ; spikelets of panicles pedunculate, bifid. F?. G. Native *of* the Canary Islands ?. Lehm. asper. p. 413. Lower leaves 3 inches long; tapering into the stem-clasping petioles: upper ones gradually shorter. Flowers disposed in a leafy raceme, formed from axillary spikelets. Calyx hairy ; segments ovate-lanceolate, acute, marked each with a paler nerve outside. Corolla campanulate, bluish white, fading to purple, nearly equal, elegantly marked inside with 5 blue nerves. Stamens with white filaments and blue anthers.

***Lined-flowered* Viper's Bugloss. Fl. May, June. Clt. 1815. Shrub 1| to 2 feet.**

11 E. SIMPLEX (D. C. cat. hort. monsp. 1813. p. 108. icon. hort. monsp. ined. t. 21.) stem simple; leaves large, ovate-lanceolate, silky on both surfaces ; panicle long, spike-formed ; spikelets bifid; stigma simple. $?. Jj . G. Native of Teneriflfe. Lehm. asper. p. 415. Stem woody, but nevertheless biennial ; hardly a foot high, and leafy at top the first year, but in the second year it lengthens out into a very long, cylindrical, regular panicle, which is leafy at the base. Flowers white.

Simple-stemmed Viper's Bugloss. Fl. June, July. Clt. 1820. Shrub 1 to 3 feet.

12 E. STRICTUM (Lin. fil. suppl. p. 131.) stem branched, hispid from retrograde pili, or bristles; leaves oblong-lanceolate, very scabrous, hairy ; spikelets of panicle bifid : when young capitate. f? . G. Native of Teneriffe among rocks. Lam. ill. p. 414. no. 1868. Jacq. schcenbr. 1. p. 15. t. *35.* Willd. spec. 1. p. 783. Ait. hort. kew, ed. 1st. vol. 1. p. 186. D. C. cat. hort. monsp. 1813. p. 108. Horn. hort. hafn. 1. p. 182. Leaves 2-4 inches long, and | inch broad, callosely dotted above, paler and less dotted beneath. Peduncles axillary and terminal, very hispid; lower ones 3-4 inches long, becoming gradually shorter to the top. Calycine segments lanceolate. Corolla blue, rarely white, sub-campanulate, nearly regular ; segments acutish : the 2 superior ones broadest. Anthers blue.

Strict Viper's Bugloss. Fl. May. Dec. Clt. 1779. Shrub 2 to 3 feet.

13 E. BRACHYA'NTHUM (Horn. hort. hafn. 1. p. 182. Lehm. asper. p. 417.) stem branched; branches hairy ; leaves lanceolate, veiny, hairy ; spikelets of panicles bifid ; corollas nearly equal, one half shorter than the calyx. J? . G. Native of Madeira among rocks. Panicle terminal, ovate, hispid. Calycine segments narrow-lanceolate, acuminated, unequal. Corolla subcampanulate, white, becoming reddish-violet as they fade, pilose at top outside ; segments roundish.

Short-flowered Viper's Bugloss. Fl. June, July. Clt. 1819. Shrub *3-5* feet.

14 E. BIFRONS (D. C. cat. hort. monsp. 1813. p. 107. icon, pi. monsp. ined. t. 19.) stem shrubby, branched; branches pubescent at top ; leaves oblong-lanceolate, downy, attenuated at both ends; panicles ovate ; spikelets usually simple. J? . G. Native of the Canary Islands. Lehm. asper. p. 418. This very distinct species is difficult to characterize : the calyxes in the terminal panicles are equal in length to the corollas, but those in all the lateral panicles are not one half the length of the corolla, hence the specific name. Corolla white, fading to red.

Two-faced Viper's Bugloss. Fl. May, June. Clt. 1820. Shrub 2 to 3 feet.

15 E. VIRE'SCENS (D. C. cat. hort. monsp. 1813. p. 107. exclusive of thesyn. of Jacq Lehm. asper. p. 471.) stem shrubby, branched; branches clothed with soft hairs ; leaves lanceolate, green, hairy ; panicle spike-formed ; spikelets pedunculate, lower ones bifid, superior ones simple. ^ . G. Native of Teneriffe among rocks. Flowers pale blue, with white lines.

Greenish Viper's Bugloss. Fl. June, July. Clt. 1820. Shrub 2 to 3 feet.

16 E. AMBIGUUM (D. C. cat. hort. monsp. 1813. p. 107. icon pi. monsp. ined. t. 20.) stem shrubby, branched; branches hispid from bristles ; leaves oblong-lanceolate, attenuated at both ends, hispid ; panicle oblong-ovate; spikelets bifid; calycine lobes equal in length to the corolla, f? . G. Native of the Canary Islands. E. candicans, Lam. ill. no. 1866. t. 94. f. 2, exclusive of the synonymes. A humble shrub, one-half smaller than *E. bifrons,* and all the species belonging to the present section. Flowers small, from white to flesh-colour.

Ambiguous Viper's Rugloss. Fl. May, June. Clt. 1820. Shrub 1 to 2 feet.

17 E. NERVO'SUM (Ait. hort. kew, ed. 2d. 1810, vol. 1. p. 300.)

stem shrubby; leaves lanceolate, nerved, and rough, as well as the branches, silky; calycine segments linear, bluntish; racemes or panicles ovate; style hairy. ♄. G. Native of Madeira. Flowers blue or purple?

Nerved-leaved Viper's Bugloss. Fl. June, August. Clt. 1777. Shrub.

* * CAPE SPECIES. *Shrubby plants, natives of the Cape of Good Hope. Flowers solitary, axillary or spicate. Stamens exserted or inclosed.*

18 E. ROSSIANUM (Pers. euch. 1. p. 183. Lehm. asper. p. 412.) stem branched above, glabrous; leaves narrow-lanceolate, very scabrous above; racemes subcymose; corollas tubular, very long. ♄. G. Native of the Cape of Good Hope. E. tubiflorum, Poir. dict. 8. p. 655. E. grandiflorum, Desf. arb. 1. p. 177. Vent. malm. p. 37. t. 97. Andr. bot. rep. t. 20. Ker. bot. reg. 124. Kerner, scrop. 5. t. 205. Leaves clasping the stem at the base, grass-green, 3-4 inches long, with spaniously denticulated margins. Bracteas subcordate at the base. Calyx hairy, sub-bilabiate; segments unequal. Corolla equal, red, 1½ inch long. Stamens equal in length to the corolla. Stigma exserted.

Beautiful Viper's Bugloss. Fl. June, July. Clt. 1757. Shrub 2 to 3 feet.

19 E. SCABRUM (Lehm. asper. p. 419.) stem hairy above; leaves ellipsic-lanceolate, scabrous, hispid; spikelets terminal, bipartite; bracteas falcate, hispid. ♄. G. Native of the Cape of Good Hope. Stem much branched at top; branches scabrous; branchlets hairy. Leaves beset with adpressed strigæ, 1 to 1½ inches long. Calycine segments acute, lanceolate, rather unequal, hairy. Corolla irregular, large, blue. Stamens length of corolla.

Scabrous Viper's Bugloss. Fl. May, July. Clt. 1820. Shrub 2 to 3 feet.

20 E. PARVIFLORUM (Lin. spec. p. 199.) stem tomentose; leaves lanceolate-spatulate, scabish, clothed with silky villi; spikelets crowded, corymbose. ♄. G. Native of the Cape of Good Hope. Berg. pl. cap. p. 29. Willd. spec. 1. p. 781. Ait. hort. Kew, ed. 1st, vol. 1. p. 186. Ker, bot. reg. 26. E. Africanum, Pers. euch. 1. p. 183.—Comm. hort. 2. p. 107. t. 54. Stem branched. Spikelets usually bipartite, hairy. Calycine segments acute, nearly equal. Corolla purple, with rather unequal segments. Stamens a little longer than the corolla.

Var. β. setosa (Thunb. fl. cap. prod. p. 83.) stem, as well as the leaves, which are oblong, silky; spikelets alternate, pedunculate. ♄. G. Native of the Cape of Good Hope. Leaves more spatulate, bluntish, and twice the size of those of the species.

Shrubby Viper's Bugloss. Fl. May, June. Clt. 1759. Shrub 2 to 3 feet.

21 E. SABULICOLUM (Lin. mant. p. 308. Lehm. asper. p. 421.) stem branched; leaves lanceolate, acute, reflexed at the apex, clothed with silky pili; margins of the floral ones setosely prickly; spikes terminal, simple, leafy. ♄. G. Native of the Cape of Good Hope. Berg. cap. p. 40. Lam. ill. p. 412. no. 1862. Andr. bot. rep. 154. Thunb. prod. fl. cap. p. 83. Willd. spec. 1. p. 788. E. fruticosum, Jacq. schœnbr. 1. t. 34. Branches hairy, from copious adpressed pili, hispid above from stiff bristles. Lower leaves 1½ inch long. Calyx hispid, with unequal segments; the two lateral ones larger, and keeled. Corolla blue, campanulately tubular; segments unequal, obtuse. Stamens unequal; the 2 lower ones longer than the corolla, the rest inclosed. Plant canescent.

Var. β. ferox (Lehm. asper. p. 422.) stem shrubby; branches and leaves prickly; flowers spicate; corollas nearly equal.

♄. G. Native of the Cape of Good Hope. E. ferox, Pers. euch. 1. p. 183. E. ferocissimum, Andr. bot. rep. t. 20. E. argenteum, Roth. bot. abh. p. 25.

Silvery Viper's Bugloss. Fl. June, July. Clt. 1780, 3. 1794. Shrub 3 to 6 feet.

22 E. CASTORIOLENS (Jacq. coll. 3. p. 225. icon. rar. 3. p. 10. t. 312.) stem branched; leaves lanceolate, glabrous, with callously scabrous edges, glaucous; spikelets bipartite, lanceolate. ♄. G. Native of the Cape of Good Hope. Lehm. asper. p. 423. Andr. bot. rep. t. 165. E. lavigatum, Lam. ill. p. 413. no. 1863. but not of Thunb. E. glaucum, Thunb. in Schrad. journ. bot. 1800, p. 28. prod. fl. cap. p. 83. Stem quite glabrous. Leaves sessile, acute, 1½ inch long, scabrous from white callous dots on the edges. Spikelets panicled, terminal, and from the axils of the leaves. Calyx glabrous, with lanceolate segments, which are edged with callous dots. Corolla violaceous; limb almost regular. Stamens unequal, longer than the corolla.

Glaucous-leaved Viper's Bugloss. Fl. July. Clt. 1792. Shrub 2 to 3 feet.

23 E. LAXUM (Lin. spec. p. 199. Thunb. prod. p. 83.) stem simple, glabrous; leaves ovate-lanceolate, glabrous, spaniously ciliated on the margins; spikes terminal, compound; spikelets simple, very short. ♄. G. Native of the Cape of Good Hope. Lehm. asper. p. 424. Willd. spec. 1. p. 785. exclusive of the syn. of Jacq. Leaves ciliated with distant white bristly strigæ, and with callous dots along the midrib beneath. Calycine segments strigose along the margins and middle nerves. Corolla funnel-shaped; limb nearly equal, obtuse. Stamens much exserted, declinate, unequal. Stigma simple. Corolla blue.

Smooth Viper's Bugloss. Fl. June, July. Clt. 1774. Shrub 1 to 2 feet.

24 E. PANICULATUM (Thunb. in Schrad. journ. 1800. p. 41. prod. p. 83.) stem branched; branches elongated, angular, and downy above; leaves lanceolate, hispid, spaniously ciliated; spikelets panicled. ♄. G. Native of the Cape of Good Hope. Willd. spec. 1. p. 784. Lehm. asper. p. 425. Branchlets subfastigiate, hispid, and compressedly angular. Leaves about an inch long, with diaphanous cilias, which rise from papillæ. Panicle terminal. Calyx 5-angled; segments acute, having the angles and edges hispidly ciliated. Corolla white, regular; limb bluntish. Stamens unequal, twice as long as the corolla.

Panicled-flowered Viper's Bugloss. Fl. May, July. Clt. 1815. Shrub 3-5 feet.

25 E. SWARTZII (Lehm. asper. p. 426.) stem branched at top, glabrous; leaves linear-lanceolate, glabrous, furnished with callous dots on the margins, but when young hispidly ciliated; spikelets terminal, bifid or trifid. ♄. G. Native of the Cape of Good Hope. E. angustifolium, Swartz in litt. Branchlets scabrous. Leaves sessile. Bracteoles hispid. Calyx hispid, with unequal lanceolate segments. Corolla irregular, blue, rather large. Stamens exserted.

Swartz's Viper's Bugloss. Shrub 2 to 3 feet.

26 E. ORIENTALE (Vahl. symb. 3. p. 29.) stem branched; leaves narrow-lanceolate, somewhat falcate, glabrous above, but beset with callous dots beneath; uppermost leaves, as well as the calyxes pilose, or strigose; spikelets alternate. ♄. G. Native of the Cape of Good Hope. Lehm. asper. p. 427. Andr. bot. rep. t. 165. E. falcatum, Lam. ill. p. 413. no. 1864. E. Vahlii, Roem. et Schultes, syst. 4. p. 14. Branches purplish, beset with adpressed villi. Leaves an inch long. Spikelets erect, 2 inches long, leafy, from the axils of the upper leaves. Calyx pilose, with lanceolate unequal segments. Corolla irre-

gular, white. Stamens unequal, the 2 lower ones longer than the corolla, the rest shorter. Stigma sub-capitate, somewhat 2-lobed.

Glabrous Viper's Bugloss. Fl. May, June. Clt. 1791. Shrub 1 to 2 feet.

27 E. VENOSUM (Thunb. in Schrad. journ. bot. 1806. p. 42. prod. p. 33.) stem branched, villously hispid above; leaves oblong-lanceolate, obtuse, canaliculate, very numerous, strigosely pilose; stamens inclosed. ♄. G. Native of the Cape of Good Hope. Lehm. asper. p. 428. Willd. spec. 1. p. 784. Leaves somewhat imbricated, keeled below, very soft and canescent while young. Spikelets terminal, few-flowered. Calyx hoary, villous, with lanceolate obtuse segments. Corolla large, pilose outside, with an obtuse limb. Stamens unequal, about the length of the corolla. Stigma simple.

Tri-coloured Viper's Bugloss. Shrub.

28 E. VERRUCOSUM (Swartz, in litt. ex Lehm. asper. p. 429.) stem branched; leaves linear, bent, much crowded, hispid, but papillosely scrose beneath; spikelets panicled. ♄. G. Native of the Cape of Good Hope. Branches hoary and hairy. Leaves numerous, an inch long. Spikelets forming a terminal crowded panicle. Calyx hairy and hoary, with linear acute segments. Corolla white, rather irregular. Genitals exserted.

Warted Viper's Bugloss. Fl. June, July. Clt. 1822. Shrub.

29 E. CAPITATUM (Lin. suppl. p. 202. Willd. spec. 1. p. 785. Lehm. asper. p. 430. Jacq. hort. vind. 3. p. 17. t. 49. Lam. ill. p. 414. no. 1869. Thunb. prod. p. 33. Burm. cap. p. 4.) stem branched, pilose; leaves lanceolate, hispid; flowers equal, disposed in capitate corymbs; calyxes hoary. ♄. G. Native of the Cape of Good Hope.

Capitate-flowered Viper's Bugloss. Fl. June, July. Clt. 1818. Shrub 2 to 3 feet.

30 E. STRIATUM (Vahl. symb. 3. p. 22. Lehm. asper. p. 431.) stem branched, glabrous; leaves lanceolate, sub-imbricated, convex and strigose beneath; heads of flowers terminal, solitary. ♄. G. Native of the Cape of Good Hope. E. capitatum, var. sphærocephalum, Lam. ill. 1. p. 414. no. 1865. Roem. et Schultes, syst. 4. p. 13. Branches angular, and hispid at top. Leaves sessile, half amplexicaul-clasping, obtuse, hardly a nail in length, pilose above and on the margins, but strigose beneath. Bracteas ciliated. Calyx pilose, with linear segments. Corolla equal, a little longer than the calyx. Stamens fleshy, much longer than the corolla.

Round-headed Viper's Bugloss. Shrub.

31 E. ROSMARINIFOLIUM (Vahl. symb. 3. p. 22.) stem pilose; leaves petiolate, linear, with revolute edges, pilose, and canescent beneath; spikelets terminal, simple. ♄. G. Native of the Cape of Good Hope. Lehm. asper. p. 432. Branches towards the base incurved below, and clothed with white villi above. Peduncles and calyxes pilose. Calycine segments linear, unequal. Corolla nearly regular; tube pilose from the middle to the limb. Genitals inclosed.

Rosemary-leaved Viper's Bugloss. Shrub.

32 E. STRIGOSUM (Swartz, in litt. ex Lehm. asper. p. 432.) stem hoary, villous; leaves lanceolate, obtuse, keeled, strigose on both surfaces; spikelets terminal, bipartite. ♄. G. Native of the Cape of Good Hope. Leaves an inch long, hoary. Bracteas and calyxes hispid. Calycine segments lanceolate, nearly equal. Corolla large, violaceous; limb rather unequal. Stamens exserted.

Strigose Viper's Bugloss. Fl. June, July. Clt. 1821. Shrub 1 to 2 feet.

33 E. TRICHOTOMUM (Thunb. in Schrad. journ. bot. 1806. p. 39. prod. p. 33.) stem glabrous at bottom, somewhat trichotomously branched; leaves linear, very numerous, hoary, villous; spikelets terminal, bipartite, divaricate. ♄. G. Native of the Cape of Good Hope. Lehm. asper. p. 433. Willd. spec. 1. p. 784. Stem purplish. Branches glabrous: when young simple, or bipartite, bifid at apex, villous and hoary. Leaves alternate, scattered, and 3 in a whorl, ½ an inch long, keeled. Flowers [illegible] pedicels; bracteas ovate, acute. Calyx hoary, very villous, with linear segments. Corolla white: limb irregular. Stamens [illegible] exserted.

Trichotomous-branched Viper's Bugloss. Shrub 2 to 3 feet.

34 E. HISPIDUM (Thunb. l. c. p. 40. prod. p. 33.) stem glabrous, branched; branches and leaves hispid; leaves lanceolate; spikelets terminal, rather compound. ♄. G. Native of the Cape of Good Hope. Willd. spec. i. p. 784. Lehm. asper. p. 433. Leaves sessile, an inch long, bluntish. Spikelets terminal, many-flowered. Bractcas linear-lanceolate, hispid. Calyx hispid, with linear, acute segments. Corolla white, regular. Stamens about as long as the corolla, or a little longer.

Hispid Viper's Bugloss. Fl. May, June. Clt. 1818. Shrub 1 to 2 feet.

35 E. LUCIDUM (Link. enum. 1. p. 170.) stem shrubby, branched; leaves lanceolate, quite glabrous, shining, ciliated at the base; spikes terminal, aggregate, thyrsoid, very villous. ♄. G. Native of the Cape of Good Hope. Stem suffruticose, branched from the base. Leaves sessile, bluntish. Corolla funnel-shaped, hardly longer than the calyx, pilose outside, unequal; segments obtuse, longer than the calyx. Stamens unequal, inclosed. Stigma simple. Nuts [illegible] pilose.

Shining-leaved Viper's Bugloss. Shrub.

36 E. LAMORUXIANUM (Link. enum. 1. p. 170.) stem beset with adpressed hairs; leaves lanceolate, apiculated, silky; spikelets short; corollas nearly equal; stamens about equal in length to the corolla, but the style is longer. ♄. G. Native of the Cape of Good Hope? E. longifolium, Hort. but not of Dietrich. Leaves hoary and soft throughout with incumbent hairs. Spikes few-flowered, not curved. Calycine segments linear-lanceolate, about equal in length to the corolla. Corolla pilose outside, white, with a rounded limb. Filaments glabrous.

Woolly-leaved Viper's Bugloss. Fl. June, July. Clt. 1819. Stirub ¾ to 5 feet.

§. 5. *Stems herbaceous: but in a few of the species they are woody at the base.*

37 E. CAUDATUM (Thunb. in Schrad. journ. bot. 1806. p. 43. prod. p. 33. Lin. 61. suppl. p. 202.) stem simple, villous, woody at the base; lower leaves oblong-lanceolate, superior ones lanceolate, all hispid or strigose; spikes terminal, ovate-oblong, compound; stamens unequal, exserted. ♄. G. Native of the Cape of Good Hope, in sandy places. Willd. spec. 1. p. 786. Lehm. asper. p. 436. Stem purplish. Leaves an inch broad, petiolate; lower ones sessile, 2-3 inches long. Spike 2-3 inches long. Calycine segments linear, beset with silky pili on the margins and back. Corolla small, red, irregular.

Tailed Viper's Bugloss. Fl. May, June. Clt. 1818. Plant 2 feet.

38 E. STRICTUM (Thunb. l. c. p. 41, 42. prod. p. 33.) stem herbaceous, simple, pilose; leaves lanceolate-linear, viscid; hairy:

spreading; spikes terminal, compound, linear-oblong; stamens exserted. ♃. G. Native of the Cape of Good Hope, in sandy places. Willd. spec. 1. p. 786. Lam. Ill. 1. p. 313. no. 1961. Lam. exp. p. 5. Root scaly, fusiform, purplish. Stems 2 or more from the same root, purplish. Radical leaves 2-3 inches long, rosulate, nearly sessile, long as the flowering stem, petiolate; cauline leaves sessile, 2-3 inches long, acuminated. Spikes a finger or 2 inches long. Bracteas subulate. Calyx clothed with silvery silk; segments oblong-linear, obtuse. Corollas small, white.

Scarce-flowered Viper's Bugloss. Fl. March, May. Cl. 1799. Pl. 1 to 2 feet.

5 E. rosulatum (Thunb. 1. p. 23. prod. p. 33.) stems herbaceous, simple, canescent; leaves linear-oblong, rather scabrous, clothed with adpressed hairs, subacute; racemes spicate, loose. ♃. G. Native of the Cape of Good Hope, in Swartland, in sandy places. Willd. spec. 1. p. 786. Lehm. asper. p. 150. Leaves a span long, attenuated, and a little shining at the base: cauline ones lanceolate; uppermost ones an inch long. Racemes from a finger to a span long, composed of spikelets. Peduncles and pedicels very short. Calycine segments linear, obtuse, hoary and hairy. Corolla irregular, blue.

Hoary Viper's Bugloss. Pl. 1 to 1½ foot.

40 E. sericeum (Willd. herb. ex Lehm. asper. p. 147.) stem herbaceous, simple; leaves lanceolate, acuminated, clothed with white silk; racemes terminal, compound of nearly sessile spikelets; corolla nearly equal; stamens exserted. ♃. H. Native of Persia, in exposed places of woods. Root nearly simple, dark purple. Stem strigose. Radical leaves petiolate: cauline ones sessile. Bracteas pilose, linear-lanceolate. Calyx clothed with white silk; segments linear, rather unequal. Corolla villose outside; segments obtuse. Stigma sub-capitate.

Short-leaved Viper's Bugloss. Pl. 1 to 2 feet.

41 E. virescens (Vent. malm. p. 98. in a note.) stem herbaceous, simple, hairy; leaves oblong-lanceolate, very rough; flowers (hybrid); corolla unequal; stamens exserted. ♃. H. Native country unknown. Poir. dict. 8. p. 670. Lehm. asper. p. 151. Stem hispid. Leaves strigose above, and pilose below; lower ones 3-5 inches long: superior ones narrower, and gradually shorter. Spikelets approximate at top, forming a terminal thyrse; lowest ones 2 inches long. Calyx hispid, with linear segments. Corolla bluish, villous outside; with ovate, nearly equal segments.

Hyssop-leaved Viper's Bugloss. Fl. July, Aug. Cl. 1820. Pl. ½ to 2½ feet.

42 E. hyssopifolium (Jacq. fl. austr. 5. append. p. 27. t. 3.) stems herbaceous, simple, hispid; leaves linear-lanceolate, hispid; spike terminal, compound, very long; corolla nearly regular; stamens exserted. ♃. H. Native of Austria, Hungary, Transylvania, Tauria, Siberia, and Caucasus, in exposed fields. Lehm. asper. p. 139. Fisch. fl. cauc. 1. p. 135. Sims. bot. mag. t. 1826. Bourg. fl. trans. 1. p. 130. E. Russicum, Gmel. syst. 2. p. 225. E. Creticum, Pall. ind. taur. E. Italicum, Gmel. itin. 1. p. 119. t. 19.—Mor. hist. 3. sect. 11. t. 27. f. 2.—Clus. hist. 2. p. 164. f. 2. Root woody. Stem usually solitary. Flowers in nearly sessile axillary fascicles, the whole forming a compound terminal spike, from ½ to 1½ foot long. Calyx hispid, with unequal linear segments. Corolla red, 3 times longer than the calyx, with downy lines outside; segments of the limb unequal, obtuse. Stigma simple.

Red-flowered Viper's Bugloss. Fl. July, Aug. Cl. 1791. Pl. 2 to 3 feet.

43 E. creticum (Willd. herb. ex Lehm. asper. p. 149.) stem herbaceous, nearly simple; leaves linear-lanceolate, strigose; spike terminal, compound, very short; corolla unilaterally declinate; stamens exserted. ♃. H. Native of the river Ural. Root woody. Stem hispid. Radical and lower cauline leaves petiolate, 2-3 inches long; upper sessile, lanceolate, strigose, with adhering appendiculate scales. Spikelets of flowers sessile, forming 3 terminal spikes. Calyx strigose, with subulate unequal segments. Corolla downy outside. Stigma emarginate, sub-bifid.

Clasping-leaved Viper's Bugloss. Pl. 1 to 2 feet.

44 E. paniculatum (Lehm. asper. p. 151.) stem suffruticose, simple; leaves oblong-linear-lanceolate, attenuated at the base, ciliated, papillose-strigose; spikelets axillary, sessile, short, secund; corolla rather unequal; stamens exserted. ♃. H. Native of Siberia. *Symphytum secundum*, Gmel. syst. 2. p. 330. n. 3. t. 58. f. 1. Stem rather angular, beset with soft hairs. Lower cauline leaves 2-3 inches long, obtuse-oblong, becoming gradually smaller and narrower as they ascend. Calyx pilose-hoary, with lanceolate segments. Corolla downy outside. Stigma simple.

Purplish Viper's Bugloss. Pl. 1½ to 2 feet.

45 E. crassifolium (Poir. dict. 8. p. 670.) stem hoary at the base, simple, strict, hispid; leaves oblong-lanceolate, rough; racemes spike-formed, very long, composed of glomerate spikelets; corolla nearly equal; stamens exserted. ♃. H. Native of Syria. Lehm. asper. p. 142. Stem angular, erect. Leaves adherent, beset with adpressed strigæ: lower ones a span long, upper ones 2-3 inches long, and 2-3 lines broad, becoming gradually shorter as they ascend. Racemes constituting the greater part of the stem. Bracteas with setose margins. Calyx pilose, with lanceolate-linear, with hispid edges. Corolla nearly regular. Style bifid at top.

Glaucous-leaved Viper's Bugloss. Pl. 2 to 3 feet.

46 E. glaucum (Lin. spec. 200.) stem herbaceous, simple, striate; leaves linear-lanceolate, hirsid from strigæ; racemes very long, spike-formed, composed of bifid dense-flowered spikelets; corolla nearly equal; stamens exserted. ♃. H. Native of Spain, south of France, Italy, Switzerland, Hungary, Transylvania, Greece, Tauria, Lesser Caucasus, Dacia, and Jersey, in waste fields. All. fl. ped. no. 180. Sutter, fl. Helv. 1. p. 107. Smith, engl. bot. t. 2041. Lapeyr. abr. p. 89. Sm. prod. fl. græc. 1. p. 124. Bourg. fl. trans. 1. p. 131. E. asperrimum, Bieb. fl. cauc. 1. p. 135. exclusive of the synonyme of Lam. and Sabat. E. altissimum, Jacq. fl. austr. 5. p. 25. app. t. 10. E. lanceolatum, Moench. meth. suppl. p. 119. Hall. hist. no. 604. Stems many from the same root, beset with dark purple dots, and spreading stiff hairs. Calyx hispid, with linear rather unequal segments. Corollas white, or pale violet, pilose outside; segments ovate obtuse. Style bifid at apex.

Var. β. Italicum (Lehm. asper. p. 144.) stem simple; leaves lanceolate, very hairy; corolla nearly regular; stamens exserted. ♃. H. Native of the Pyrenees. E. Italicum, Lapeyr. abr. p. 91. Flowers yellow.

Var. γ. leaves softer and more villous; flowers nearly sessile. ♃. H. Native of the Pyrenees. E. Italicum, β. Lapeyr. abr. p. 89. "Echium, corollis vix calycem excedentibus margine villosis." Lin. herb. spec. p. 35.

Italian Viper's Bugloss. Fl. July. Britain. Pl. 2 to 4 feet.

47 E. Pyrenaicum (Lin. mant. p. 824.) stem herbaceous, branched, hispid from strigæ; branches ascending pyramidal-panicled; leaves linear-lanceolate; spikelets elongated; flowers rather distant; corolla nearly equal; stamens exserted. ♃. H. Native of the South of France; Upper Italy; Lower Pyrenees; and about Tangiers and Algiers. Desf. fl. atl. 1. p. 134. D. C. syn. no. 2708. fl. gall. 6. p. 418. Willd. enum. 1. p. 187. Lehm. asper. 145. E. pyramidale, Lapeyr. abr. p. 90. d. pyr. p. 66. E. asperrimum, Lam. Ill. no. 1954. Pers. euch. 1. p. 196. E. Italicum, var. γ. Willd. spec. 1. p. 787. E. Italicum, var. β. Lin. spec. p. 201. E. Italicum, Lam. fl. fr. 3. p. 451. E. hexagonum, G. Vitm. sicul. 1. p. 128. Murray, syst.

15. p. 126. Stem and branches beset with dark purple dots and spreading stiff hairs. Leaves hispid, from strigæ, deep green. Spikelets conjugate on the top of the stem and branches, axillary. Calyx hispid, with linear almost unequal segments. Corolla white or pale violet, villous outside, with lanceolate, obtuse segments. Style bifid at apex. Nuts beaked.

Pyrenean Viper's Bugloss. Fl. July, Aug. Clt. 1815. Pl. 1½ to 2 feet.

48 E. MARSHALLI'ANUM (Lehm. asper. p. 446.) stem herbaceous, branched, very hispid from bristles; leaves lanceolate, bristly; bristles rising from large tubercles; spikelets almost simple, elongated; stamens about equal in length to the corolla, which is tubular. ☉. H. Native of Egypt. E. Ramwölfii Delile, fl. Egypt. t. 19. f. 3. Spikelets usually solitary, rarely conjugate, very long and very hispid. Calyx hispid, with lanceolate, unequal segments. Corolla rather unequal, white; pilose outside.

Pearl Viper's Bugloss. Pl. 1½ to 2 feet.

49 E. MENZIE'SII (Lehm. pug. 2. p. 29.) stem herbaceous, erect, beset with retrograde strigæ; leaves sessile, acute, very hispid; lower ones narrow-lanceolate; superior ones ovate-lanceolate; racemes many-flowered, imbricate, hispid; stamens much shorter than the corolla, which is small and somewhat tubular. ♃. H. Native of the North-west coast of America. Stems herbaceous, erect, angular, 1½ foot, branched. Leaves obscurely 5-nerved. Racemes secund, simple, terminal, bracteated. Calyx very hispid, with equal linear segments. Corolla glabrous, yellowish; having 3 of its lobes twice the breadth of the rest. Nuts ovate, trigonal, wrinkled.

Menzies's Bugloss. Pl. 1½ foot.

50 E. PLA'TUM (Desf. fl. atl. 1. p. 164. t. 45.) stem herbaceous, simple; leaves lanceolate, very hairy; raceme terminal, spike-formed; spikelets simple, dense; corolla almost regular; stamens exserted. ♂. H. Native of Atlas, near Tlemsen. Lehm. asper. p. 447. The whole plant is covered with numerous yellowish hairs. Racemes very numerous, axillary, twisted into a spire, but erect while in fruit. Calycine segments subulate. Corolla yellow; tube slender, arched; limb obtuse. Stigmas bifid.

Yellow-flowered Viper's Bugloss. Pl. 1 to 2 feet?

51 E. RUBRUCA'NUM (Sibth. et Smith, prod. fl. græc. 1. p. 125. fl. græc. t. 160.) stem herbaceous, nearly simple, tubercularly hispid, as well as the leaves; leaves linear-oblong, repand; spikelets simple, spreading; stamens about equal in length to the corolla, which is irregular. ♃. H. Native of Sicily. Lehm. asper. p. 448. Hairs or strigæ very long, shining, rising from large white tubercles, giving the plant a canescent appearance. Tubercles on the stem blackish. Root fusiform. Calyx hispid, with nearly equal linear segments. Corolla large, sub-bilabiate, blue, or violaceous, before expansion red, marked with pilose lines outside. Style bifid at apex.

Portelate Viper's Bugloss. Pl. 1 to 1½ foot.

52 E. VULGA'RE (Lin. spec. p. 200. fl. suec. ed. 2d. no. 165.) stem herbaceous, usually simple, strigose; leaves linear-lanceolate, hispid; raceme terminal, spike-formed, very long, composed of spreading simple spikelets; corolla irregular; stamens exserted. ♂. H. Native throughout Europe to Caucasus; also of North America, by way sides, and in waste fields and places; plentiful in some parts of Britain. Scop. fl. carn. ed. 2d. 1. p. 129. All. ped. no. 181. Mœnch, meth. p. 442. Vill. dauph. 2. p. 446. Sut. fl. helv. 1. p. 108. Bieb. fl. cauc. 1. p. 135. Bess. fl. gall. 1. p. 174. Smith, prod. fl. græc. 1. p. 125. engl. bot. t. 181. Oed. fl. dan. t. 415. Sturm. fl. germ. fasc. 18. with a figure. Pursh, fl. amer. sept. 1. p. 130. Blackw. t. 229.—Mor. hist. 3. sect. 11. t. 27. f. 1.—Riv. tab. t. 7. f. 2.—Sabb. rom. 2. t. 96. and a monstrous variety, t. 97. Root branched. Stems many from the same root, covered with black tubercles, furnished with axillary spikelets from the middle to the top, the whole forming a very long raceme. Radical leaves roudate, obtuse. Calyx hispid, with unequal segments. Corolla downy outside, fine purple before expansion, afterwards of a violet blue colour. Style bifid at apex. Nuts wrinkled, tuberculed.

Var. β. stem branched from the base, spreading, and often decumbent; stamens longer. ♂. H. Native of Britain. E. vulgare, β, Smith, fl. brit. 1. c. E. violaceum, Schmidt, fl. bohem. no. 203. p. 3.

Var. γ. *albiflorum* (Roth, l. c. and others.) flowers white.

Common Viper's Bugloss. Fl. July, Aug. Britain. Pl. 2 to 4 feet.

53 E. TRAXENSE'NSE (Hoffm. et Link, fl. port. 1. p. 183.) stem herbaceous, simple, upright, tubercularly hispid, as well as the leaves; leaves lanceolate-linear, with revolute margins; spikelets simple, erect, strict; stamens about equal in length to the corolla, which is irregular. ♃. ♂. H. Native of Portugal; by way sides, particularly about Lisbon and Coimbra. Root branched. Superior leaves sessile, 1-3 inches long, and 2-3 lines broad. Spikelets axillary and terminal, dense, pedunculate. Calyx very hispid, with linear segments. Corolla blue, pilose outside. Style bifid at top.

Tubercular Viper's Bugloss. Fl. July, Aug. Clt. 1820. Pl. 1½ to 2 feet.

54 E. LEVITA'NICUM (Royen, lugdb. p. 407. Lin. spec. p. 200.) stems herbaceous, simple, hairy; leaves lanceolate, attenuated at the base, acute, rather villous; spikelets simple, alternate, erectly spreading; corolla nearly equal; stamens exserted, 2 of which are very lon'%. *It. 11.* . Kativ e of Portugal, in sandy places. Lehm. asper. 450. Willd. spec. 1. p. 789. Pers. eneb. 1. p. 164. Mill. dict. no. 4. E. Italicum, Brot. fl. lus. 1. p. 290. Hoffm. et Link, fl. port. 1. p. 185. Root branched. Stems many from the same root. Radical leaves roudate, canescent, 1 foot long, and 2 inches broad, on short petioles; cauline ones sessile, gradually narrower and shorter. Spikelets simple, ous, pedunculate, axillary, covering the stem almost from the base to the top. Peduncles and calyxes strigosely hispid, the hairs rising from blackish tubercles. Calycine segments equal, lanceolate, Lcunlinatec!. Corolla fi unnel-shoped, pilose outside; limb blue, painted with violet lines, blumish. Style bifid at ap ex.

Portugal \'i\ er's Bugloss. Fl. July, Aug. Clt. 1731. Pl. 2 to 3 feet.

55 E. VIOLA'CEUM (Lin. mant. p. 42.) stem herbaceous, branched; lower leaves oblong; upper ones lanceolate, cordate at the base, stem-clasping, hispid from strigæ; spikelets simple, elongated; stamens about equal in length to the corolla, which is irregular. ☉. H. Native of the South of Germany, Spain, France, Italy, Transylvania, and in the South of Tauria, &c. Retz. obs. fasc. 2. p. 9. Willd. spec. 1. p. 788. Bieb. fl. cauc. 1. p. 422. D. C. ill. fl, j'r. \>. no. 2709. Bess. fl. gal. 1. p. 154. Baumg. fl. trans. 1. p. 191. Lapeyr. abr. p. 91. E. Creticum, Lam. ill. no. 1857. Lapeyr. abr. p. 91. Root fusiform. Stem hispid, from strigæ. Lower leaves obtuse, tapering into the petioles at the base; cauline ones acuminated. Calyx pilose, with unequal, narrow-lanceolate, ciliated, spreading segments. Corollas large, violet or pale blue, striated, beset with scattered hairs. Style bifid at apex.

Violaceous-flowered Viper's Bugloss. Fl. July, Aug. Clt. 1658. Pl. 1 to 2 feet.

56 E. ORIENTA'LE (Lin. hort. cliff. p. 43. spec. 200.) stem herbaceous, branched; branches ascending, pyramidal; leaves oblong-lanceolate; uppermost ones cordate, ovate, soft on both surfaces from dense pili; stamens shorter than the corolla, which is large. ♂. H. Native of the Levant. Willd. spec. 1. p. 789. Lam. ill. p. 413. no. 1559. Echium orientale, Verbas-

ci folio, flore maximo campanulato, Tour. itin. 2. p. 107. t. 107,—Trew. pi. rar. 1. t. 1?. Root fusiform, fibrous. Stem pilose. Leaves pale green ; radical and lower cauline ones a foot and more long : the rest gradually shorter as they ascencf. Spikelets axillary and terminal, simple. Calyx hairy ; with lanceolate, acute, segments. Corolla large, purplish blue, with a rather curved tube, and obtuse limb. Style bifid at apex.

Eastern Viper's Bugloss. Fl. July, Aug. Clt. 1780. PI. 2 to 3 feet.

57 E. GRANDIFLORUM (Desf. fl. atl. 1. p. 166. t. 46.) stem herbaceous, nearly simple, pilosely strigose ; leaves ovate-oblong, clothed with downy tomentum : floral ones ovate-lanceolate; spikelets simple, erect; corolla 4 times longer than the calyx ; stamens inclosed. ©. H. Native of Barbary and Cyrenaica. Horn. hort. hafn. 1. p. 183. Lehm. asper. p. 456. E. raacranthum. Roem. et Schultes, syst. 4. p. 20. Leaves bluntish : lower ones drawn out into petioles : middle and upper ones sessile, 2-3 inches long, becoming gradually shorter as they ascend. Spikelets terminal, and from the axils of the superior leaves. Bracteas clasping, hispid. Calyx pilose or hispid, with linear-subulate segments. Corolla large, nearly an inch long, violaceous, striated, pubescently pilose outside, particularly at the striae. Style bifid at apex.

Great-flowered Viper's Bugloss. Fl. July, Aug. Clt. 1818. PI. 1| foot.

58 E. PLANTAGINEUM (Lin. mant. p. 202.) stem herbaceous, erect, paniculately-branched; radical leaves petiolate, ovate-oblong, lined ; cauline leaves sessile, lanceolate, beset with long incumbent hairs ; stamens hardly equal in length to the corolla, which is irregular. ©. H. Native of Greece, Portugal, South of France, Italy, Montevideo, &c. All. ped. no. 138. Smith, prod. fl. grsec." 1. p. 124. fl. grsec. t. 179. Jacq. hort. vind. 1. t. 45. D. C. syn. fl. fr. no. 2711. St. Hil. pi. usuell. bras. t. *25.* Hoffm. et Link, fl. port. 1. p. 186. Poir. diet. 8. p. 671. Horn. hort. hafn. 1. p 182. Lehm. asper. p. 457. E. plantaginoides, Rcem. et Schultes, syst. 4. p. 19.—Barrel, icon, 1026. obs. 145. E. amplissimo folio Lusitanicum, Tourn. inst. p. 135. —E. orientale, folio oblongo molli et cinericio, Tourn. cor. p. (5. Root fusiform, reddish brown. Stems many from the same root, soft to the touch at the base, but scabrous above. Radical leaves obtuse, 2-3 inches long, and 1 to 1J broad: cauline ones stem-clasping : uppermost ones acute. Flowers large, showy, disposed in solitary, many-flowered, pedunculate spikelets. Calyx hispid; with linear lanceolate, nearly equal segments. Corolla large, purplish-violet, rarely white, red before expansion; limb sub-bilabiate, obtuse. Filaments glabrous. Style bifid at apex.

Plantain-like Viper's Bugloss. Fl. July, Oct. Clt. 1779. PL 1 to 2 feet.

59 E. BENTHA'MII (Wall. cat. no. 931.) plant thickly clothed with strigose pili ; radical leaves long, lanceolate, tapering at both ends, acuminated, 5-nerved ; stems simple, naked from the base to the spike of flowers : lower bracteas ovate-lanceolate, acuminated, gradually diminishing in size to the top of the spike: calycine segments very long, linear, very villous. 1/. H. Native of the East Indies, at Buddrinath. Leaves 1 to 1J foot long. Spike solitary, a foot long. Corolla not seen.

Bentham's Viper's Bugloss. PI. 2 to 4 feet.

60 E. E'LEGANS (Lehm. asper. p. 459.) stem herbaceous, erect, branched at the base, pilosely hispid ; leaves linear-lanceolate, hispid, somewhat repand ; stamens a little longer than the corolla, which is irregular. *$* . H. Native in the fields of Naples. E. hispidum, Smith, fl. graec. 1. p. 125. fl. grsec. t. 181. E. Sibthorpi, Rcem. et Schultes, syst. 4. p. 26. The whole plant is canescent. Branches beset with red spots. Spikelets simple, alternate, many-flowered. Bracteas linear, ovate at the base. Calycine segments unequal, lanceolate, acute. Corolla of a fine scarlet colour, pilose at bottom. Filaments glabrous. Style bifid at apex.

Elegant Viper's Bugloss. Fl. June, July. Clt. 1824. PI. 1 to 2 feet.

61 E. CRE'TICUM (Lin. spec. 200.) stem herbaceous, diffuse, very hispid, branched at the base ; leaves oblong-lanceolate, hispid; calyxes while bearing the fruit distant and widened; stamens inclosed. ©. H. Native of Candia, and throughout the Grecian Islands, in the sand by the sea-side. Smith, prod. fl. graec. 1. p. 126. fl. graec. 1.183*. Sims, bot. mag. 1934. Schultes obs. p. *33,* Nocca, in Usteri. ann. bot. 5. stuck, p. 14. Willd. enum. 1. p. 187. Horn. hort. hafn. 1. p. 183. Lehm. asper. p. 460. Sabb. hort. rom. 2. t. 95. E. rubrum Mcench. meth. p. 421. E. angustifdlium, Mill.dict.no. 6. E. Creticum angustifolium rubrum, Tourn. inst. p. 136. Root slender, brown. Stems decumbent in the spontaneous plant, but erect when cultivated. Leaves bluntish : radical ones petiolate : cauline ones sessile: floral ones acute, stem-clasping at the base. Spikelets simple, axillary, and terminal, many-flowered. Calyx hispid, with unequal foliaceous segments. Corolla irregular, reddish-violet, marked by 5 villous lines outside. Style bifid at apex.

Cretan Viper's Bugloss. Fl. July, Sept. Clt. 1683. PI. | to 1 4 foot.

62 E. FLORIBU'NDUM (Lehm. pug. 2. p. 24.) leaves nearly sessile, linear-lanceolate, acute, a little ciliated, downy on both surfaces : radical ones lanceolate, petiolate : racemes bifid, bracteolate ; nuts smoothish : prickles glochidate, disposed in a simple series along the margins. ©. H. Native of the north-west coast of America. Stem beset with adpressed hairs. Racemes axillary, pedunculate, panicled at the top of the stem, many-flowered. Pedicels pilose : floriferous ones length of calyx, erect; but twice that length, and refracted in the fruit-bearing state. Calycine segments lanceolate, obtuse. Corolla blue, size of that of *Myosotis paliistris,* wiih roundish segments. Nuts ovate, acute.

Bundle-flowered Bugloss. PI. 1 to 2 feet.

63 E. BONARIE'NSE (Poir. diet. 8. p. 674.) stem herbaceous, simple, pilose; lower leaves linear, very narrow : superior ones dilated at the base, hairy ; stamens hardly exceeding the corolla, which is large. £ ?. ©?. H. Native of Buenos Ayres. Lehm. asper. p. 462. Stem somewhat fistular. Leaves stem-clasping, 1 to 2 inches long, obtuse: floral ones subsagittate. Spikes terminal on long peduncles. Calyx very hispid, with lanceolate, acuminated segments. Corolla bluish-violet, irregular. Style glabrous ; stigma bifid.

Buenos Ayrean Viper's Bugloss. PI. 1 foot ?

64 E. ANGUSTIFOLIUM (Lam. ill. p. 412. no. 1856.) stem herbaceous, simple, erect, hispid ; leaves linear, very narrow, attenuated at the base, hispid; corolla twice as long as the calyx; stamens exserted. ©. H. Native of Spain. Pers. ench. 1. p. 184. Lehm. asper. p. 462.—Barrel, icon. 1011. —Bocc. raus. t. 78. f. 3. Hairs rising from white conical tubercles. Leaves bluntish, 3-4 inches long, and about a line in breadth: lower ones petiolate : upper ones sessile. Spikelets solitary, pedunculate, terminal, and from the axils of the upper leaves. Calycine segments subulate. Corolla funnel-shaped, blue, beset with long, white, stiff hairs above ; segments unequal. Style bifid at apex.

Narrow-leaved Viper's Bugloss. PI. 1 to 2 feet ?

65 E. MERTE'NSII (Lehm. asper. p. 463.) stems woody at the base, simple, erect, leafy ; leaves linear-lanceolate, hispid, hoary ; corolla twice as long as the calyx ; stamens equal in length to the corolla. 1/. H. Native of Spain. Root fusiform, simple. Stems one or more from the same root, hispid, hoary. Lower leaves 3-4 inches long, and 1-2 lines, broad,

acutish; superior ones smaller, all imbricate at the base, and clasping the stem, with revolute edges. Flowers on short pedicels, disposed in short pedunculate spikelets, the whole constituting a terminal, compact, oblong raceme. Calyx hoary and pilose; with linear, nearly equal segments. Corolla funnel-shaped, blue, beset with long white hairs; segments unequal. Style bifid at apex.

Mertens's Viper's Bugloss. Fl. June, July. Clt. ", 1824. Pl. ½ to 1 foot.

66 E. SPATULÆFOLIUM (Viv. fl. libyc. p. 3. t. 9. f. 1.) plant shrubby, strigose; leaves long-spatulate; corolla twice as long as the calyx; stamens inclosed. ½. F. Native of Libya, on the shores of the Great Syrtus. Stem branched from the base. Leaves tapering into the petioles; upper ones oblong, sessile. Flowers disposed in short terminal spikes. Calyx very hispid; with linear, acute segments. Corolla violaceous, hairy outside, ciliated. Stigma emarginate.

Spatulate-leaved Viper's Bugloss. Shrub.

67 E. SERPENS (Vahl. symb. 2. p. 35.) stems woody at the base, procumbent, branched; leaves linear-lanceolate, very hispid, hoary; stamens a little longer than the corolla. ½. H. Native of Egypt. Willd. spec. 1. p. 784. Lehm. asper. p. 464. E. rubrum, Forsk. descr. p. 41. icon. 2. t. 17. f. 2.—The whole plant is hoary, and strigosely hispid. Leaves blunish, smaller; lower ones more than an inch long. Spikelets terminal, solitary; bractæa ovate-lanceolate. Calycine segments linear-lanceolate, rather unequal. Corolla irregular, red inside, and evanescent from villi outside. Style bifid at apex.

Prickly Viper's Bugloss. Pl. procumbent.

68 E. ECHIOIDES (Vahl, symb. 2. p. 35.) stems woody at the base, ascending, branched, diffuse; leaves linear, emarginated, hoary on both surfaces from incumbent hairs; stamens much longer than the corolla. ½. H. Native of Egypt. Willd. spec. 1. p. 785. Lehm. asper. p. 465.—The whole plant is hoary and pilose. Leaves obtuse: lower ones crowded, petiolate, 1-3 inches long; petioles ciliated, semi-clasping; upper leaves gradually shorter, semi-clasping at the base. Flowers sessile, disposed in terminal, simple, compact spikelets. Calycine segments equal, lanceolate. Corolla irregular, villous outside. Style bifid at apex.

Silky Viper's Bugloss. Pl. ascending.

69 E. SERICEUM (Viv. fl. libyc. p. 8. t. 5. f. 1.) stem shrubby, decumbent, hispid from adpressed bristles; leaves linear, and arc, as well as the calyxes and bracteæ, strigose; corolla twice as long as the calyx; stamens exserted. ½. F. Native of Libya, in the Great Syrtus, on the shores of Pentapoli. Leaves sessile, with subrevolute edges. Calycine segments linear. Spikes conjugate. Floral leaves length of calyxes. Corolla blue, hairy outside, with roundish lobes. Stigma deeply bifid. Allied to *E. arrectum*, and *E. setosum*.

Two-spiked Bugloss. Pl. decumbent.

70 E. BIFRONS (Willd. spec. 1. p. 788. Lehm. asper. p. 466.) stems herbaceous, ascending, simple; leaves spatulate-lanceolate, obtuse, villously strigose, cinereous; stamens about equal in length to the corolla, which is large. ☉. H. Native of Italy and Sicily, near the sea side; and in corn-fields of Tenos. E. maritimum stœchadum, flore maximo cœruleo, Tourn. inst. p. 136.—Barrel. icon. t. 1012.—Bocc. mus. 2. t. 78. f. 1. Root quite simple. Lower leaves tapering into petioles 3 inches long; superior ones sessile, lanceolate, obtuse. Spikelets terminal, and from the axils of the upper leaves, dense, pedunculate. Calyx hoary from numerous hairs, with unequal, lanceolate segments. Corolla blue, irregular, downy outside; segments unequal. Style bifid at apex.

Sea-side Viper's Bugloss. Fl. July, Aug. Clt. 1818. Pl. ascending, ½ to 1 foot long.

71 E. VULGARE (Roth. cat. bot. fasc. 2. p. 16.) stem herbaceous, erect, branched, slender; leaves linear-lanceolate, setosely pilose; stamens unequal, shorter than the corolla, which is small. ☉. H. Native of Barbary, in sandy places. Pers. euch. 1. p. 164. exclusive of the syn. of Schousb. Lehm. asper. p. 467. The whole plant, with the exception of the corollas, is beset with tubercles, and stiff, dense hairs. Leaves acute, 2-3 inches long, and 3-4 lines broad. Racemes terminal, usually 3, alternate, dense. Calycine segments lanceolate-linear, nearly equal, acuminated, connivent. Corolla small, pale blue, reticulately veined, downy outside; limb oblique, unequal, obtuse.

Var. β, humile (Lehm. asper. p. 467.) leaves narrow-lanceolate, pilose, scabrous, running into the petioles at the base; calyxes very hairy. ☉. H. Native of Barbary, in sandy places. E. humile, Desf. fl. atl. 1. p. 165. Pers. euch. 1. p. 164. Plant tufted, 3-4 inches high. Calycine segments linear-subulate.

Slender Viper's Bugloss. Fl. June, July. Clt. 1824. Pl. 1 foot.

72 E. SUBULATUM (Lehm. pug. 1. p. 18.) stem herbaceous, simple; leaves linear-lanceolate, hispid, hoary; spikes terminal, simple, very short; stamens a little longer than the corolla, which is large. ½. H. Native of Egypt. Root rather woody. Stems 2 inches high, simple, hispid. Leaves obtuse. Spikes simple, dense, 8-12-flowered, at first resolute. Calyx hispid; segments equal, linear, blunish. Flowers large for the size of the plant, irregular, violaceous, pilose outside, 3 times as long as the calyx. Stigma bifid.

Dwarf Bugloss. Pl. 2 inches.

73 E. PARVIFLORUM (Mœnch. meth. p. 425. Roth. catal. fasc. 2. p. 14.) stems herbaceous, ascending, branched; leaves obovate-oblong, bluntish, strigosely pilose; stamens one half shorter than the corolla, which is small. ☉. H. Native about the shores of the Mediterranean sea, &c. Pers. euch. 1. p. 164. Host. hort. hafn. 1. p. 183. Willd. enum. 1. p. 187. E. calycinum, Viv. fragm. fl. nat. fasc. 1. p. 2. t. 4. D. Root fibrous. Stems many from the same root, strigosely hispid. Tubercles white, from which hairs rise. Radical leaves more than 2 inches long, petiolate, as well as the lower cauline ones: upper cauline ones sessile. Flowers nearly sessile, disposed in simple, terminal spikes. Calyx hispid, inflated, and larger in the fruit-bearing state; with unequal, lanceolate segments. Corolla rather irregular, pale blue, tubular, pilose outside; segments roundish-cordate. Style bifid at apex.

Small-flowered Viper's Bugloss. Fl. July, Aug. Clt. 1798. Pl. procumbent.

74 E. DIFFUSUM (Smith, prod. fl. græc. 1. p. 135. fl. græc. t. 182.) stems herbaceous, prostrate, diffuse, nearly simple; leaves linear-subspatulate, setosely strigose; stamens a little shorter than the corolla, which is large. ☉. H. Native of Candia. Root thick, rather woody. Stems numerous, hispid. Leaves 1-2 inches long. Flowers sessile, disposed in terminal, simple, many-flowered elongated spikes; bracteæ oblong-spatulate, recurved. Calyx bristly, with nearly equal, linear, acute segments. Corolla irregular, scarlet, beset with white pili outside. Style bifid at apex.

Diffuse Viper's Bugloss. Fl. June, July. Clt. 1[illegible]. Pl. procumbent.

75 E. LONGIFOLIUM (Delile. descrip. egypt. 2. t. 16. f. 3.) erect, simple ; leaves linear-lanceolate, elongated, strigose; corolla large ; stamens exserted. 3/ . H. Native of Egypt.

Long-leaved Viper's Bugloss. PI.

76 E. ARENA'RIUM (Guss. sem. hort. Bocc. 1825. ex Linnsea, 4. p. 37.) stem diffuse ; leaves obtuse ; corolla small, tubular; calyx hispid from strigae, by which it differs from *E. diffusum,* and *E. tenue.* %, H. Native of the South of Europe.

Sand Bugloss. PI. diffuse.

f *Species doubtful or hardly known, many of which are probably synonymous with some of those described above.*

77 E. SALMA'NTICUM (Lag. gen. et spec. nov. diagn. 1806. p. 10.) radical leaves lanceolate ; stamens very long, glabrous; throat of corolla impervious. %. H. Native of Spain, about Salamanca. Plant hispid.

Salamanca Viper's Bugloss. Fl. June, July. Clt. 1811. PI. 1 to 2 feet.

78 E. VALENTINUM (Lag. 1. c.) plant strigose; leaves lanceolate ; corollas campanulately funnel-shaped, nearly equal, longer than the calyx ; stamens about equal in length to the corolla. 1/. H. Native of Spain, in the province of Valentia, where it was gathered by Cavanilles.

Valentia Viper's Bugloss. PI.

79 E. SCHIFFE'RI (Lang, in syll. soc. reg. ratisb. vol. 2. with a figure, ex Bull. phil. 18. p. 240.) We know nothing of this species.

Schiffer's Viper's Bugloss. PL

80 E. LAGA'SCJE (Roem. et Schultes, syst. 4. p. 27.) strigose; stem panicled at top ; branchlets alternate, terminated by a bifid spike ; corolla shorter than the calyx ; upper leaves lanceolate, subpetiolate. %. H. Native of Spain, near Hispalim. E. panicul&tum, Lag. 1. c. but not of Thunb.

Lagasca's Viper's Bugloss. PL

81 E. ELONGA'TUM (Lam. ill. no. 1855. Poir. diet. 8. p. 669.) stem herbaceous, erect, pilose, forming a long spike at top ; corolla hardly exceeding the calyx ; stamens exserted. £.? H. Native country unknown. This species is said to differ from *E. asperrimum,* and *E. Pyrendicum,* in the long spike ; in the sessile flowers, small, obliquely truncate corollas, with short, obtuse, white lobes.

Elongated-sp\ke& Viper's Bugloss. PL

82 E. SPINE'SCENS (Med. bot. beob. des jahres. 1783. no. *36.* Lehm. asper. p. 474.) Nothing is known of this plant but the name.

Spinescent Viper's Bugloss. PL

83 E. MEGALA'NTHUM (Lapeyr. abr. suppl. p. 39.) stem herbaceous, sijjple, elongated, pilose ; leaves lanceolate, strigose ; corolla unequal, rather villous outside, much longer than the calyx ; pistil longer than the stamens, which are exserted. $. H. Native of the Pyrenees ; as well as of Galicia and Jacca, on the mountains. E. grandifldrum, Lapeyr. abr. p. 90. fl. pyr. ined. t. 65. E. longistamineum, Pourr. chlor. hisp. no. 6i1. Habit of *E. altissimum,* Jacq.; but the stem is only floriferous at the apex. Corolla irregular, 4 times longer than the calyx, white, ciliated on the edges. Perhaps only a var. *E. violaceum.* SeeD.Cfl.fr. 6. p. 418.

Large-flowered Viper's Bugloss. PL 2 to 3 feet.

84 E. AUSTRA'LE (Lam. ill. no. 1860. Poir. diet. 8. p. 692.) stem herbaceous, pilose ; leaves ovate, attenuated at both ends ; corollas equalling the stamens, which are villous at the apex. 0. H. Native about the Nile, in fields. Poir. diet. 8. p. 692. D. C. syn. fl. fr. no. 2710. Pers. ench, 1. p. 164. This species is joined by Loiseleur, in fl. gall. 1. p. 111. with *E. Lusitdnicum;* others have joined it with *E. violaceum, E. Creticum,* and *E. grandflbrum.* It is often to be found in gardens and Herbaria under the names of *E. violaceum,* and *E. Creticum;* and is probably the *E. Creticum* of Schultes, obs. bot. p. 33. of which he gives the following diagnosis : " Stem 1-2 feet high, clothed with cancscent -hairs. Superior leaves acuminated. Spikes elongated, leafy, very hispid. Calycine segments straight, acute. Corolla twice as long as the calyx, rather pilose, violaceous or purple, irregular. Stamens and style rather pilose; stigma bifid. ©. H. Native of the south of Europe."

Southern Viper's Bugloss. Fl. July, Aug. Clt. 1824. PL l£foot.

85 E. LONGIFLORUM (Du Mont de Courset, bot. cult. 7. suppl. p. 147. to vol. 3. p. 198.) Nothing is known of this plant but the name. T?. G. Native of the Cape of Good Hope.

Long-flowered Viper's Bugloss. FL June, July. Clt. 1806. Shrub 2 to 3 feet.

86 E. PYRAMIDA'TUM (DU Mont de Courset, 1. c.) J? . G. Native of the Cape of Good Hope. Nothing is known of this plant but the name.

Pyramidal Viper's Bugloss. Fl. May, July. Clt. 1820. Shrub 2 to *3* feet.

87 E. BRACHYSTA'CHYUM (Pall, ex herb. Willd. see Roem. et Schultes, syst. 4. p. 726.) corollas nearly equal, twice longer than the calyx ; stamens longer than the corolla ; spikes axillary, usually 5-flowered, sessile ; leaves lanceolate, obtuse, rough from dots or tubercles. %. H. Native of Siberia. Pallas.

Short-spiked Viper's Bugloss. PL

88 E. A'LBICANS (Schott. fil. ex Roam, et Schultes, syst. 4. p. 726.) stem erect, simple, hairy, mixed with long strigae ; radical leaves broad-lanceolate : cauline leaves linear-lanceolate, densely strigose ; bracteas and leaves of calyx hispid from long, ciliated §trig3e ; corolla pale red, hairy. $. ? H. Native near Tarifa, Schott. Plant white from strigse. Spikes lateral, much shorter than in *E. Itdlicum.*

Whitish Viper's Bugloss. PL erect.

Cult. All the species of *Echium* are very elegant when in flower ; and are, therefore, worth cultivating in every collection, particularly the hardy species. The shrubby kinds, being all greenhouse plants, grow very well in a mixture of loam, sand, and peat; and cuttings of them will strike root in the same kind of soil, under a hand-glass; but they are more readily increased by layering down the young shoots, making a small incision with a knife on the back of each shoot so laid before pegging it down ; they may be also raised from seeds, which are sometimes produced in this country. The hardy species grow ver^ well in common garden soil, in a dry situation; and they are omy to be increased by seeds, which should be sown in the open ground in spring ; their treatment is that of other hardy, perennial, biennial, and annual plants. All the hardy kinds are well fitted for decorating flower borders, from the different shades of their elegant blossoms.

XXII. ECHIOCHrLON (from *tχtlv, echion,* Bugloss ; and XctXoc, *cheilos,* a lip ; in reference to the bilabiate limb *of* corolla, and its affinity with Bugloss.) Desf. fl. atl. 1. p. 166. t. 47. Lehm. asper. p. 477.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 4-parted. Corolla with a slender arched tube, a naked throat, and a bilabiate limb ; upper lip 2-lobed : lower one somewhat 3-lobed. Stamens 5, inclosed. Nuts 4, 1-celled, glabrous, tubercled, imper-

torated at the base, fixed to the bottom of the calyx.—A shrubby plant, with hairy branches, evergreen, subulate, hispid leaves, and axillary, sessile, solitary, small blue flowers. This genus appears to be the connecting link between *Boraginece* and *Labiàtce.*

1. E. FRUTICOSUM (Desf. 1. c. Delile, fl. segypt. 238. Viv. p. 9.) *h* • F. Native of the kingdom of Tunis', near Kerwan ; and on the shores of the Great Syrtus. Stems and leaves tubercular, rather strigose. Branches clothed with white pili. Lower leaves reflexed : upper ones adpressed to the stem. Corolla hairy outside ; lobes rounded. Anthers versatile. Style slender ; stigma 2-lobed.

Shrubby Echiochilon. Shrub 1 foot.

Cult. For culture and propagation see *Onósma,* p. 317.

XXIII. NO^NNEA (named by Mcench, after J. P. None, a German botanist.) Mcench. nieth. 420. Med. phil. bot. 1. p. 31. D. C. syn. fl. fr. no. 2718, &c.—Oscámpia, Mcench. meth. p. 420. Lycópsis, Lehm. asper. 252.—Echioides, Dill. —Lycopsis species of Lin. and other authors.

LIN. SYST. *Pentdndria, Monogynm.* Calyx 5-cleft, drooping, inflated and campanulate in the fruit-bearing state. Corolla funnel-shaped, with a pervious bearded throat, and a straight tube. Stamens inclosed. Stigma simple. Nuts 4, 1-celled, turbinate, concave, and perforated at the base, fixed to the bottom of the calyx.—Hispid, annual plants; with terminal, leafy racemes of flowers. Habit of species of *Lycópsis.* Radical leaves petiolate : cauline ones sessile.

1 N. PICTA; hispid; stems procumbent, much branched; leaves linear-lanceolate, undulated, obsoletely toothed: floral ones broadest at the base; limb of corolla equal, shorter than the tube. ©. H. Native of Siberia, in sandy deserts at the Volga, Terek, and Kuma; in vineyards about Astrachan ; and in Eastern Iberia ; as well as in the Soongarian desert. Anchùsa pìcta, Bieb. fl. cauc. 1. p. 127. Trev. in schrift. gesell. nat. freund. berol. 1817. p. 147. Lehm. asper. 255. Ledeb. fl. alt. 1. p. 185. Root simple. Floral leaves much longer than the flowers. Calycine segments unequal, subulate. Corolla having the tube a little longer than the calyx, pale at bottom, with a pilose throat, and a blue limb, painted with deeper veins.

Painted-dowered Nonea. Fl. June, July. Clt. 1800. PI. procumbent.

2 N. CA'SPICA ; hispid ; stem erect, almost simple ; leaves lanceolate, or narrow-oblong, attenuated at both ends, entire ; limb of corolla equal, shorter than the tube. ©. H. Native in sandy places towards the Caspian Sea ; and in the Soongarian desert. Ledeb. fl. alt. 1. p. J85. Onósma Càspica, Willd. spec. 1. p. 775. exclusive of the synon. of Pall. Lycópsis Càspica, Lehm. asper. p. 256. Root fusiform, violaceous. Pedicels shorter than the floral leaves. Calycine segments hairy, lanceolate-linear, long-acuminated. Corolla one-half longer than the calyx, purple; tube slender, dilated at top, equal in length to the limb.

Caspian Nonea. PI. ¡ to § foot.

3 N. CILIA'TA (Roam, et Schultes, syst. 4. p. 71.) hispid; stem simple, erect; leaves oblong-lanceolate, obtuse, denticulated : floral ones acuminated ; limb of corolla unequal, nearly the length of the tube. 0. H. Native of the Levant. Lycópsis ciliàta, Willd. spec. 1. p. *780.* Lehm. asper. p. *257.* Root quite simple. Racemes twin, terminal. Floral leaves longer than the calyx. Calycine segments narrow-lanceolate, **acuminated. Corolla large, yellow ; tube cylindrical, a little longer than the calyx. Leaves beset with long white pili, especially *on* the margins and midrib.**

Ciliated-leaved Nonea. Fl. June, July. Clt. 1804. PI. * to | foot.

4 N. OBTUSIFÒLIA ; hispid from pili; stems ascending, simple ; leaves oblong-lanceolate, obtuse, nearly entire: floral ones lanceolate, acute ; limb of corolla unequal, one-half shorter than the tube. ©. H. Native of Chio. Lycopsis obtusif61ia, Willd. spec. 1. p. 780. Pulmonària Chia echii folio verrucoso, calyce vesicario, flore cceruleo, Tourn. cor. p. 6. Root fibrous. Stems many from the same root. Radical leaves rosulate, roundish-obtuse: cauline leaves half stem-clasping. Calycine segments ovate, acute. Corolla blue, one-third longer than the calyx.

Far. fl. Pulmónaria Lesbia, echii folio verrucoso, calyce vesicario, flore cceruleo, Tourn. cor. p. 6. ©. H. Native of Lesbo. This is larger ; the leaves more hispid, and obsoletely and remotely toothed, but otherwise very like var. a.

Obtuse-leaved Nonea. Fl. June, July. Clt. 1818. PL \ to f foot.

5 N. SIBTHORPIA'NA ; hispid from pili ; stems procumbent, almost simple ; radical leaves oblong-elliptic : cauline ones lanceolate, obtuse, quite entire : floral ones acute, ovate-lanceolate at the base ; limb of corolla equal, flat, one-half shorter than the tube. 1/. H. Native of Candia, on the Spaciotic mountains. Anchusa ventricdsa, Smith, prod. fl. graec. 1. p. 117. fl. graec. t. 169. Viv. fl. libyc. p. 10. t. 4. f. 1. Root fusiform, fibrous. Steins simple or bifid at top : lateral ones prostrate : middle ones ascending. Leaves sessile. Flowers sessile, in the axils of the floral leaves. Calycine segments short, unequal, acute. Corolla white, ex Smith, violaceous or blue, ex Viv., small, having the tube a little longer than the calyx, and the throat bearded; processes in the throat ciliately fringed. Style exceeding the corolla. This and *N. alpestris* are probably species of *Anchùsa*, from the throat of the corolla being furnished with fringed processes.

Sibthorjfs Nonea. PI. procumbent.

6 N. ALPE'STRIS ; hispid; stems ascending, simple; leaves oblong-lanceolate, bluntish, erosely toothed ; limb of corolla equal, length of tube ; calyx 5-toothed ; teeth bluntish, ex Stev. acute, ex Lehm. 2£.? H. Native of Eastern Caucasus, on alp Schahdagh, at the fountains of the river Jucharibasch. Anchusa alpestris, Stev. in Lin. trans. 11. p. 409. t. 32. Lycopsis alpestris, Lehm. asper. p. 260. Root branched, blackish. Racemes terminal, conjugate, revolute at top. Bracteas lanceolate, acuminated. Corollas size of those *of Anchusa liitea,* twice as large as the calyx; tube cream-coloured; limb yellow, with a fulvous base; throat closed by 5 very short bearded scales. **Calyx with 5 bluish lines.**

***Alp* Nonea. PI. 1 foot.**

7 N. ROSEA (Link, enum. 1. p. 167.) hispid; stems procumbent, simple ; leaves oblong, bluntish, obsoletely toothed, clammy ; limb of corolla equal, length of tube. 0. H. Native of Siberia, at the river Terek, in gardens and vineyards. Anchusa rosea, Bieb. fl. cauc. 1. p. 225. cent. pi. ross. t. 43. Lehm. asper. p. 261. Root fusiform, simple. The whole plant is hispid and clammy. Floral leaves cordate-oblong, obliquely acuminated, much longer than the flowers. Racemes usually solitary. Calycine segments lanceolate-subulate, conniving in the fruit-bearing state. Corolla having the tube a little curved, a little longer than the calyx; limb fine purple, marked with 10 yellow lines towards the throat, disposed by pairs; throat bearded with long hairs. Anthers bluish.

/tose-coloured-flowered Nonea. Fl. June, July. Clt. 1823. PI. procumbent.

8 N. DECU'MBENS (Mcench, meth. p. 422.) hispid; stems

procumbent, branched ; leaves lanceolate, quite entire: floral ones much longer than the calyx ; corolla equal, hardly exceeding the calyx; limb very short. ©. H. Native of Europe, and in sandy places near Tozzer. N. violacea, D. C. syn. fl. fr. no. 2718. exclusive of the syn. of Desf. Echioides nigricans, Desf. fl. atl. 1. p. 163. Anchusa nigricans, Brot. fl. lus. 1. p. 298. Lycopsis nigricans, Pers. ench. 1. p. 163. Horn. hort. hafn. 1. p. **181.** Hoffm. et Link, fl. port. 1. p. 130. t. 22. Lycopsis vesicaria, Lin. spec. 198. Roth. tent. fl. germ. 2, p. 216. Willd. spec. 1. p. 779. enum. 1. p. 188. Lapeyr. abr. p. 89. Lehm. asper. p. 262.—Mor. hist. 3. sect. 11. t. 26. f. 11. —Zan. hist. t. 30. Leaves acute, pale green ; floral ones obliquely acuminated. Calycine segments lanceolate, acute. Corolla with a yellowish tube, and a dark purple, almost black limb ; throat pilose. Anthers brown. ,

Decumbent Nonea. Fl. June, July. Clt. 1686. PI. procumbent.

9 N. ELONGATA ; hispid from pili; stem erect, simple ; leaves lanceolate, quite entire: floral ones ovate, cordate, shorter than the calyxes ; limb of corolla equal, one-half shorter than the exserted tube. %.*1* H. Native of the deserts of Alexandria. Lycopsis elongata, Lehm. asper. p. 264. Calycine segments lanceolate, unequal. Corolla with a pale yellow tube, and purplish blue limb ; tube of corolla length of calyx.

E longated-racemed Nonea. PI. 1 \ to 2 feet.

10 N. COLSMANNIA^NA ; hispid; stems erect, branched; branches divaricate; leaves linear-lanceolate, quite entire: floral ones ovate, acuminated ; limb of corolla unequal, a little shorter than the tube. %. H. Native country unknown. Lycopsis Colsmanniana, Lehm. asper. p. *265.* Root woody, twisted. Stems many from the same root, tufted. Floral leaves a little longer than the flowers. Racemes usually conjugate. Calycine segments lanceolate, acute. Corolla purple ; tube length of calyx. Nuts as in *N. decumbens.*

Colsmann's Nonea. PI. \ to § foot.

11 N. PULLA (D. C. syn. fl. fr. no. 2719.) pilose; stems erect, nearly simple; leaves lanceolate, quite entire, soft, clothed with adpressed pili: floral ones ovate-lanceolate ; limb of corolla equal, length of tube. %. H. Native of South and Middle Europe, in corn-fields, and by way sides ; and of Caucasus, in grassy places. Lycopsis **pulla,** Lin. spec. p. 196. Jacq. fl. austr. 2. p. 53. t. 188. Gsertn. fruct. 1. p. 327. Lapeyr. abr. p. 89. Bess. fl. gal. 1. p. 153. Anchusa pulla, Bieb. fl. cauc. 1. p. 125. Lycopsis vesicaria, Horn. hort. hafn. 1. p. 181. but not of Lin. Echioides violacea, Desf. fl. atl. 1. p. 164. Anchusa tinctoria, Pall. ind. taur.—Clus. hist. 2. p. 164. f. 1.— Riv. intr. herb. 1. t. 8. Root fusiform, simple. Leaves somewhat canescent: radical ones more or less crowded : cauline ones half stem-clasping, acuminated, ciliated with long rigid hairs, longer than the flowers. Racemes axillary and terminal, at the tops of the stems, short, dense, many-flowered, nutant. Calycine segments unequal, acuminated. Corolla with a pale yellow tube, which is shorter than the calyx, and a dark purple, almost black limb.

ZW£-flowered Nonea. Fl. June, July. Clt. 1648. PI. \ to \\ foot.

12 N. LUTEA (D. C. fl. gall. 6. p. 420.) pilose; stems ascending, branched above ; leaves oblong, obtuse, almost quite entire : floral ones subcordate, obliquely acuminated, at last distich; limb of corolla equal, length of tube. ©. H. Native of France and Italy; and of Caucasus, in sterile places, especially among sand at the river Terek. Lycopsis lutea, Lam. ill. no. 1828. Schultes, obs. p. *33.* Lehm. asper. p. 267. Anchusa lutea, Bieb. fl. cauc. 1. p. 126. exclusive of the syn. of Lin. and Curt. Horn. hort. hafn. 1. p. 176. Willd. enum. 1. p. 179. exclusive of the syn. of Lin. and Forsk. Anchusa lycopsidis, Retz, fil. pug. p. 8—9. Anchusa dubia, Nocca, hort. ticin. t. 3. Asperugo divaricata, Murray, in nov. comm. goett. 1776. vol. 7. p. 25. t. 2. Oscampia dichotoma, Mcench. meth. p. 421. Root fibrous. Radical leaves obovate-oblong, obtuse ; floral ones longer than the calyxes, all rather clammy. Racemes terminal, erect. Calycine segments lanceolate, acuminated. Corolla pale sulphur-coloured, longer than the calyx; tube much shorter than the calyx, marked by 5 hollows under the throat, which is green and pilose.

Far. /3; flowers about half the size. 0. H. Bieb. fl. cauc. 1. p. 126.—Bieb. cent. 2. t. 13. f. 2.

Yellow-flowered Nonea. Fl. June, July. Clt. 1805. PI. 1 to 2 feet.

13 N. FLAVESCENS ; annual, downy, also beset with stiff bristles or strigae ; stems diffuse or erect, branched ; leaves oblong-lanceolate, acute, quite entire : cauline ones sessile: floral ones subcordate ; corollas about equal in length to the calyx: tube 3 times longer than the limb, which is equal; calyxes, when bearing the fruit, inflated and pendulous: teeth connivent; nuts obovate, nearly glabrous. ©. H. Native of Caucasus, in fields near Sallian and Lenkoran ; as well as in the island of Sara. Lycopsis flavescens, Meyer, veiz. pflanz. p. 98. Corollas pale yellow.

***Yello?vish-flow ered* Nonea. PI. diffuse.**

14 N. SETOSA: strigose; stem erect, simple; leaves oblong-lanceolate, denticulated : floral ones ovate ; limb of corolla equal, twice as long as the calyx, and the length of the tube. ©. ? H. Native of Iberia. Lycopsis setosa, Lehm. asper. p. 269. Leaves obtuse. Strigse or bristles very long. Racemes at first conglobate. Calycine segments lanceolate, acuminated. Corolla large, yellow, with a pilose throat. Habit of JV. *oides.*

Bristly Nonea. PI. | to 1 foot.

15 N. ECHIOIDES; pilose; stems erect, much branched; leaves lanceolate, quite entire, pilose, rather silky: floral ones ovate, somewhat cordate; limb of corolla unequal, thrice as long as the calyx, but one-half shorter than the tube. %. H. Native of Caucasus and Armenia, in alpine pastures. Lycopsis echioides, Lin. spec. p. 199. Willd. spec. 1. p. 781. Lehm. asper. p. 270. Lycopsis pulchra, Willd. herb. no. 3396. Anchusa echioides, Bieb. fl. cauc. 1. p. 270.—Buxb. cent. t. 1. Stems numerous. Radical leaves large ; lower cauline ones 3-4 inches long. Flowers nearly sessile, disposed in terminal, conjugate, leafy, spike-formed racemes. Calyx silky from pili, with lanceolate segments. Corolla large, an inch long, pale yellow, with very black spots in the throat, which is pilose.

Bugloss-like Nonea. Fl. June, July. Clt. 18^0. PI. § to \ foot.

16 N. DECURRENS ; perennial; the whole plant clothed with short, minute, velvety down; stem erect, a little branched, winged ; cauline leaves lanceolate, acute, quite entire, a little decurrent; corollas hardly longer than the calyx ; tube exceeding the limb, which is equal; calyx, when bearing the fruit, inflated, pendulous; teeth of calyx connivent; nuts large, downy. *V-.* H. Native of Caucasus, on the Talusch Mountains, in grassy places, at the altitude of 900 to lOOOjiexapods. Lycopsis decurrens, Meyer, verz. pflanz. p. 98. Corollas purple.

***Decurrent-leaved* Nonea. PI. erect.**

17 N. VEiisfcoLOR (Sweet, hort. brit.) pilose or strigose ; stems prostrate; leaves obtuse; corollas equal. 0. H. Native of Caucasus, on alps about Chinalug; and on the edges of fields towards Kasbek. Anchusa versicolor, Stev. m act. mosc. p. 1]. Nearly allied to *N. rbsea,* and *N. lutea,* but differs in the floral leaves being obtuse, not cordate ; in the co-

rollas being larger, and the limb subcampanulate, striped with blue, dusky-white, and violet ; in the nuts being larger and veiny, not smooth.

Party-colour ed-Rowered Nonea. Fl. June, Aug. Clt. 1820. PI. prostrate.

18 N. PIIANERANTHE^RA (Viv. fl. libyc. p. 9. t. 1. f. 3.) radical leaves elliptic: cauline and floral ones half stem-clasping; spikes erectish, secund; stamens exserted, alternating with the segments of the corolla. ©. H. Native of Cyrenaica. M61-kia Cyrenaica, Spreng. syst. 1. p. 548. Stem erect, hispid, simple, but sometimes branched at the base. Leaves hispid ; cauline ones linear-elliptic ; floral ones ovate-acuminated. Flowers disposed in a secund, racemose spike, which is hardly recurved. Calyx cleft beyond the middle; segments linear, acuminated, connivent, but reflexed in the fructiferous state. Corolla glabrous, hardly longer than the calyx ; throat naked. Nuts convex on the back, reticulately veined, beaked at the apex, and tubercled at the sides. Filaments inserted a little below the segments of the corolla.

***Appearing-anlhered* Nonea. PI. \ foot?**

19 N. SCHULTE'SII; plant very hispid; leaves and bracteas very long, lanceolate; stem erect; calyx at length inflated. 0. H. Native of Teneriffe. Lycopsis calycina, Koem. et Schultes, syst. 4. p. 74. Root purple, a span long. Stems many, branched from the base. Leaves thin. Bristles or strigae on the leaves white, on the calyxes and bracteas yellowish. Bracteas twice as long as the flowers, or more. Calycine segments linear-subulate, unequal. Corolla twice as long as the calyx, fucescent in the dried state.

Schulles's Nonea. PL J to 1 foot.

20 N. CONFERTIFLORA ; branches decumbent, diffuse, very rough ; leaves long-lanceolate, quite entire, strigose ; spikes imbricate, bracteate ; corolla longer than the calyx. ©. ? H. Native of Palestine. Lycopsis confertiflora, Clark, ex Spreng. syst. 1. p. *556.*

Crowded-jlorvered Nonea. PI. decumbent.

t *Species hardly known.*

21 N. ALBA (D. C. fl. gall. 6. p. 420.) *Q.* H. Native in corn-fields near Avignon. Corollas white.

***White-fiowered* Nonea. PI.**

22 N. CAPE'NSIS ; leaves lanceolate, strict, dotted ; peduncles recurved ; flowers terminal, spicate, secund.—Native of the Cape of Good Hope. Lycopsis Capensis, Burm. prod. fl. cap. p. 4.

Cape Nonea. PI. ?

What are *Echioides rubra,* Desf. fl. ad., and *Echioides grandiflora,* Desf. tabl. d l'ecole, bot. 1815 ?

Cult. For culture and propagation see *Anchusa,* p. 343.

XXIV. LOBOSTEMON (from \o/3oc, *lobos,* a lobe, and <nV *jcwp, stemofi,* a stamen ; in allusion to the processes of the throat bearing the stamens on their back). Lehm. sem. hort. hamb. 1827.

LIN. SYST. *Pentdndria, Monogynia** Calyx 5-parted. Corolla funnel-shaped ; throat furnished with erect processes, which bear the stamens on their back. Nuts 4, 1-celled, turbinate, fixed to the bottom of the calyx, imperforated at the base.—A small **shrub, with the habit of *E'chium sphcerocephalum.***

1 L. ECHIOIDES (Lehm. 1. c. t. 5. f. 1.) stem terete, glabrous ; branches hairy ; leaves scattered, sessile, elliptic-lanceolate, obtuse, glabrous above, but strigose beneath ; spikes *2-3* together, terminal bracteate ; bracteas length *of* calyx. J? • G. Native of the Cape of Good Hope, at Brede river. Corolla blue.

Bugloss-like Lobostemon. Shrub.

Cult. For culture and propagation see the shrubby species of ***E'chium,* p. *335.***

XXV. LYCO'PSIS (from *XVKOQ, lycos,* a wolf; and *ofa, opsisy* the face ; some resemblance in flowers.) Lin. gen. no. 190. Schreb. gen. no. 250. Juss, gen. p. 131. ed. Usteri, p. 146. Schkuhr, handb. 1. t. *29.* Lam. ill. t. 92.—Anchusa species of Lehm. and Bieb. Buglossum, Gaertn. fruct. 1. no. 414. t. *67.* f. 2. Echioides, Dill. gen. 3.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-cleft, erect, not inflated. Corolla funnel-shaped, 5-lobed, erectly spreading ; lobes entire; tube incurved ; throat furnished with ovate, prominent, connivent processes; Stigma emarginate. Nuts concave at the base, 1-celled, turbinate, fixed to the bottom of the calyx.—Rough, erect plants. This genus differs principally from *Anchusa* in the curved tube of the corolla.

1 L. ORIENTA^LIS (Lin. spec. p. 199.) stem erect, dichotomously branched ; leaves ovate, half stem-clasping, unequal at the base, quite entire, hispid from strigae ; racemes very long, leafy ; tube of corolla unequal, incurved: the processes in the throat pencilled. ©. H. Native of Caria. Smith, prod. fl. grace. 1. p. 124. Anchusa ovata, Lehm. asper. p. *222.*—Buxb. cent. 5. t. 30. Plant strigose. Stem bluntly angular. Pedicels one half shorter than the bracteas. Calycine segments linear-lanceolate, unequal, erect in the flowering state, but spreading in the fruit-bearing state. Tube of corolla length of calyx, white at bottom and violaceous at top; limb sky-blue. Nuts wrinkled, black.

Eastern Wild Bugloss. Fl. June, July. Clt. 1796. PI. 1 foot.

2 L. VARIEGATA (Lin. spec. 198.) stems ascending, nearly simple ; leaves ovate-oblong, half stem-clasping, hispid from strigae, spiny, toothed ; racemes solitary, bracteate at bottom; tube of corolla unequal, incurved ; processes in the throat downy. ©. H. Native *of* Italy, and the adjacent islands ; Candia, and other islands of the Archipelago and of the Peloponnesus. Allion, pedem. no. *168.* Smith, fl. graec. t. 178. Anchusa Cretica, Mill. diet. no. 7. Plant very hispid from strigae. Radical leaves obtuse, 3-4 inches long; the upper cauline ones hardly an inch. Racemes short at first, capitate. Calycine segments linear, unequal. Tube of corolla a little shorter than the calyx ; limb blue, variegated with white lines ; processes in the throat white.

Fariegated-fiowered Wild Bugloss. Fl. June, July. Clt. 1683. PI. ascending, 1 foot.

3 L. ARVE'NSIS (Lin. spec. 199. fl. suec. no. 167.) stem erect, branched ; leaves lanceolate, half stem-clasping, toothed, very hispid from strigae; racemes leafy ; tube of corolla incurved, length of the calycine segments, which are unequal and lanceolate ; processes of the throat hairy. ©. H. Native throughout Europe and North z\merica, in corn-fields and waste grounds; plentiful in Britain. Curt. fl. lond. t. *336.* Oed. fl. dan. t. 435. Smith, engl. bot. t. 938. Anchusa arvensis, Hoffm. et Link, fl. port. 1. p. 179. Bieb. fl. cauc. 1. p.. 123. Lehm. asper. p. 225. —Blackw. t. 234.—Mor. hist. 3. sect. 11. t. 26. f. 8. Echioides, Riv. mon. t. 7. f. 2. Plant hispid from strigae. Leaves undulated. Racemes short at first, but at length elongated. Corolla

blue, striped with 5 fine white veins. Nuts reticulately wrinkled, girded by a tumid circle below. This plant was formerly recommended as a remedy against the anthrax, or corrosive ulcer, commonly called a carbuncle, by laying the bruised leaves on the tumour ; but it is difficult to persuade oneself that such a plant can have any efficacy in such a disease.

Corn or Common Wild Bugloss. Fl. June, Sept. Britain. PI. | to 1 foot.

4 L. VIRGINICA (Gron. virg. 140. Pursh, fl. 1. p. 133.) leaves linear-lanceolate, entire, crowded, soft, tomentose ; stem erect. ©. H. Native from Pennsylvania to Virginia, in dry woods. Plant small, very hispid. Lower leaves spatulate, entire. Racemes solitary. Corollas small, white.

Virginian Wild Bugloss. PI. small.

Cult. The seeds of all the species only require to be sown in the open border in spring.

Tribe IV.

BUGLO'SSEiE (*fiovyTuoaaog* is the Greek name for Bugloss, from *fiovg, bous,* an ox ; and yXwcro-a, *glossa,* a tongue ; in reference to the roughness and shape of the leaves of most species.) D. Don. in edinb. phil. journ. July, Oct. 1832. Corolla salver-shaped, having the mouth closed with vaulted processes. Nuts 4, distinct, 1-celled.

Sub-Tribe I.

ANCHUSEiE. Nuts perforated at the base, fixed to the bottom of the calyx.

XXVI. ANCHLPSA (from *ayxovcra, anchousa,* paint for the skin ; use of some species.) Lin. gen. no. 182. ed. Schreb. no. 242. Juss. gen. p. 131. Lam. ill. no. 257. t. 92. Schkuhr, handb. 1. t. 29. Lehm. asper. p. 211.— Buglossum Gaertn. fruct. 1. no. 414. t. *67.* f. 2. Tourn inst. t. 53.—Lycopsis species of authors.

LIN. SYST. *Pentdndria, Monogijnia.* Calyx 5-cleft or 5-parted. Corolla funnel-shaped ; throat closed by erect obtuse processes. Nuts 4, 1-celled, turbinate, fixed to the bottom of the calyx, perforated and concave at the base.—Rough plants, usually with terminal flowers.

§ 1. *Calyx 5-parted, erect in the fruit-bearing state. Corollas unequal in most of the species.*

1 A. LINIFOLIA (Willd. herb, ex Lehm. asper. p. 215.) stems decumbent, stoloniferous ; leaves opposite, sessile, linear-lanceolate, acute, entire, nearly glabrous, ciliated at top ; flowers axillary, solitary, equal. %.F. Native of South America. A. leucántha, Willd. herb. 1. c. A. lanceoláta, Willd. herb. no. 3316. Root creeping. Calyx pilose. Corolla glabrous, pale yellow : tube length of calyx: throat closed by 5 very hairy tubercles; segments roundish, obovate.

Flax-leaved Bugloss. PI. \ foot.

2 A. OPPOSITIFOLIA (H. B. et Kunth, nov. gen. amer. 3. p. 91. t. 200.) stems procumbent, creeping, branched; leaves opposite, linear, quite entire, ciliated with strigae on the back and margins ; flowers axillary, solitary, on short pedicels. "2/. F. Native of the Andes, of Quindiu near Teindala; and Jaquanquer, between the town of Pasto and Tulcan. Herb tufted, strigose. Leaves subconnate at the base, acute, 9-10 lines long, and one broad. Calyx hispid, with lanceolate, equal segments. Corolls white, about the size of those of *M. palustris.* Nuts strigose, glabrous.

Opposite-leaved Bugloss. PL procumbent.

3 A. PYGMiEA (H. B. et Kunth, nov. gen. 3. p. 92.) plant tufted, creeping, leafy ; leaves scattered, sessile, linear, quite entire, hispid from strigae; flowers axillary, solitary, sessile. *Vl.* F. Native of Quito, on the top of Mount Antisana, at the altitude of 2104 hexapods. Leaves imbricate at the base, acutish, 4 lines long. Calyx beset with adpressed pili; with linear-lanceolate, acute, nearly equal segments. Corolla funnel-shaped, white, glabrous, size of those of *Myosbtis arvénsis.* Nuts wrinkled, glabrous.

Pygmy Bugloss. PI. tufted, creeping.

4 A. CRUCIA'TA (Cham, in Linnaea. 4. p. 438.) shrubby, strigosely pilose, canescent at top, much branched ; branches ascending ; leaves linear-lanceolate, connate at the base, and are, as well as the axillary branchlets, strictly opposite ; cymes scorpioid, panicled at top, furnished with bracteas which are hardly longer than the calyxes. P?. F. Native of the South of Brasil. Calyx very hairy, with lanceolate, unequal segments. Corolla hairy outside, with a short tube ; processes of the throat fringed. Stigma emarginate.

Cross-leaved Bugloss. Shrub 1 to 1^ foot.

5 A. STCECHADIFOLIA (Cham, in Linnsea, 4. p. 439.) nearly allied to *A. crucidta,* and in like manner has opposite leaves, but differs from it in the cymes being solitary and terminal, in the flowers being larger, in the leaves being linear, with revolute margins, hoary, and in habit. J? . F. Native of the South of Brasil. Habit of *Gnaphálium Stce'chas,* or *Lavdndula;* of a hoary aspect. Bracteas longer than the pedicels. Corolla having the tube shorter than the calyx, and the limb blue, villous outside; processes *of* the throat fleshy, papillose. Stigma subcapitate.

Stcechas-leaved Bugloss. Shrub 1 to *I*\ foot.

6 A. TETRA'QUETRA (Cham, in Linnaea, 8. p. 113.) glabrous: tops and inflorescence hairy ; stems simple, erect, tetraquetrous ; leaves lanceolate, or oblong-lanceolate, mucronate : radical ones on long petioles : cauline ones opposite, partly connate at the base, all strigose ; cymes on long peduncles, composed of short spikes : terminal ones twice bifid: axillary ones bifid; flowers sessile, bracteate; nuts smooth, solitary by abortion; calyx 5-toothed. %. F. Native of Brasil, Sello. Stems height of the radical leaves. Teeth of calyx acute. Corolla pilose outside; processes of the throat small, fringed. Nuts smooth, a little smaller than the calyx.

Four-sided-stemmed Bugloss. PI. 1-i to 2 feet.

7 A. SELLOWIA'NA (Cham, in Linnaea, 8. p. 115.) plant scabrous, from strigae ; stems erect and decumbent, glabrous, acute-angled at the base; leaves scattered, mucronate : superior ones ovate, half stem-clasping : lower ones obovate-lanceolate, narrowed into marginate half stem-clasping petioles ; spikes twin, terminal and axillary, on peduncles which are equal in length to the leaves ; bracteas broad, cordate, ovate, acute, exceeding the flowers a little; nuts granular, glabrous, solitary by abortion ; covered by the 5-cleft calyx. %. F. Native of Brasil, Sello. Corolla clothed with silky pili outside ; processes of the throat small, villous. Stigma deeply emarginate.

Seltfs Bugloss. PI. \\ foot.

8 A. C^SPITOSA (Lam. diet. 1. p. 504. ill. no. 1818.) stems decumbent; leaves linear, obtuse, hispid from pili, undulated, longer than the stems ; racemes terminal, few-flowered; flowers equal. %. H. Native of Candia, on the Spaciotic mountains. Willd. spec. 1. p. 759. Sibth et Smith, fl. graec. t. *}(&*-— Buglóssum Créticum humifusum acaulon perenne, echii folio angustissimoTourn. cor. p. 6. Roots woody, dark brown Sterns simple, short, tufted. Flowers 2-4 terminal, large for the size of the plant. Corolla with a white tube, which is nearly twice as long as the calyx, and a deep blue limb ; the processes in the throat pencil-formed and white.

Tufted Bugloss. PI. decumbent and tufted.

9 A. HISPIDA (Forsk. descr. p. 40. VahL symb. fasc. 2. p.

33.) stems diffuse ; leaves ovate-lanceolate, attenuated at the base, bluntly-toothed, hispid from strigae ; pedicels axillary, conjugate ; flowers equal.—Native in Egypt. Lehm. asper. p. 216. Stem hispid, from retrograde pili. Calyx hispid. Corolla small, nearly the length of calyx ; segments ovate, short.

TZ^rf Bugloss. Fl. May, June. Clt. 1817. PI. diffuse.

10 A. CILIA'TA (Cham in Linnaea, 4. p. 440.) leaves tufted, large, obovate, elliptic-lanceolate, but usually linear-lanceolate, exceeding the stems, which are erect or ascending, and furnished with small leaves; cymes scorpioid, bracteate, forming terminal panicles ; flowers sessile. 1/. F. Native of Brazil, both within and without the tropic. Habit of *Myosotis.* Plant beset with short strigose hairs. Radical leaves a foot long ; cauline ones *3* inches long, half stem-clasping, ciliated with longer strigae, all acuminated. Calycine segments equal, lanceolate, acute, pilose on the back. Corolla tubular, hairy outside; segments of the limb lanceolate, acute; processes of the throat fringed, bearded. Stigma capitate, hardly emarginate. Nuts usually solitary by abortion, chartaceous, shining.

Ciliated Bugloss. PI. 1 foot.

11 A. TENE'LLA (Lehm. asper. 217.) stems depressed, dichotomous, weak ; leaves on short petioles, ovate, hispid ; pedicels solitary, interfoliaceous, nodding, while bearing the fruit; flowers equal. ©. H. Native of China. Horn. hafn. 1. p. 176. A. Zeylanica, Jacq. eclog. p. 47. t. 29. Horn. enum. 1807. Plant hairy. Corolla small, glabrous, white ; tube shorter than the calyx; segments of the limb roundish-obovate, purplish at the base; processes *of* the throat emarginate, yellowish. Nuts somewhat kidney-shaped, verrucose.

Weak Bugloss. Fl. May, June. Clt. 1820. PL \ foot.

12 A. TINCTORIA (Lin. spec. ed. 2d. vol. 1. p. 192. exclusive of the syn. edit. 1st.) stems diffuse; leaves oblong, hispid from pili ; bracteas exceeding the calyx; processes of corolla shorter than the stamens. %. H. Native of the Peloponnesus, Island of Cyprus, and in deserts about Alexandria. Sibth. et Smith, fl. graec. t. 166. Desf. atl. 1. p. 156, exclusive of many synonymes. Willd. spec. 1. p. 758. Lehm. asper. p. 218. Plant pilose. Root woody, descending, of a dark blood colour. Spikes or racemes usually twin, rarely 3 or 4 terminal, many-flowered. Corolla with a deep blood-coloured tube, which is inflated at the base and the length of the calyx ; processes inserted near the middle of the tube ; limb deep blue ; segments roundish, obovate. This plant is cultivated in the South *of* France for the deep purplish red colour of its roots. It imparts a fine deep red colour to oils, wax, and all unctuous substances, as well as to spirits of wine. The spirituous tincture on being inspissated changes to a dark brown. Its chief use is for colouring plasters, lip-salves, &c.

Dyer's Bugloss. Fl. June, Oct. Clt. 1596. PL J foot, diffuse.

13 A. AGGREGA'TA (Lehm. asper. p. 219.) stems diffuse, strigose ; leaves linear-oblong, obtuse, very hispid; flowers sessile, aggregate, 4 times shorter than the bracteas; nuts hemispherical. 0. H. Native near Athens. A. parviflora Smith, prod. fl. graec. 1. p. 117. fl. graec. t. 167, but not of Willd. Plant very hispid. Flowers sessile, crowded in dense, solitary, terminal, leafy spikes. Corolla with a pale tube, which is twice as long as the calyx ; limb deep blue, with ovate flattened segments ; processes of the throat pencil-formed. Calyx subglobose, with conniving segments. Perhaps a species of Nonea.

sJggregate-fiowered Bugloss. PL •£ foot.

14 A. PARVIFLORA (Willd. spec. 1. p. 759.) stem much branched, hispid ; leaves linear, bluntish, hispid ; racemes few-flowered, crowded. 0.? H. Native *of* the Levant. Lehm. asper. 220.

Small-flowered Bugloss. PL \ to 1 foot.

15 A. ECHINA'TA (Lam. diet. 1. p. *505.* ill. no 1821.) stems ascending, nearly simple, bristly; leaves sessile, lanceolate, attenuated at the base, acute, very hispid from bristles ; spikes leafy ; flowers equal.—Native *of* Syria, near Tripoli. Lehm. asper. p. 221. Root woody, twisted. Bristles on the plant stiff and white. Spikes of flowers lateral and terminal, simple, or bifid. Calyx white, from bristles. Corolla having the tube longer than the calyx ; segments of the limb obtuse.

Echinated Bugloss. PL 1 foot.

16 A STYLOSA (Bieb. fl. cauc. 1. p. 123.) stem erect, branched at top; leaves lanceolate, attenuated at the base, undulately denticulated, hispid; bracteas subulate ; calyxes nearly equal, shorter than the tube of the corolla, with subulate segments. ©. H. Native of Tauria, on stony hills, on the banks of the Karasu, and among corn. Bieb. cat. pi. t. 23. A. annua Pall, ind. taur. Buglossum Orientale erectum, foliis undulatis, flore amoene coeruleo Tourn. cor. p. 6.—Barrel, icon. *578.*—Bocc. mus. t. 77. Root perpendicular, branched, white. Plant hispid. Racemes axillary, and terminal, usually twin. Flowers regular, a little smaller than those of *A. officinalis.* Corolla fine blue ; segments of the limb roundish : processes of the throat naked. Style equal, filiform, about equal in height to the corolla.

Long-styled Bugloss. FL May, June. Clt. 1820. PL 1 foot.

17 A. BARRELIE RI (D. C. syn. fl. fr. 2731.) stems erect, nearly simple; leaves oblong-lanceolate, denticulated, hispid; racemes conjugate, panicled, bracteate; calyxes very blunt, longer than the tube of the corolla ; corolla regular. 1/. H. Native of the South of Europe, by road sides, among rubbish, and in shady places; as of Piedmont, Naples, &c. Baumg. trans. 1. p. 122. Bess. fl. gal. 1. p. 147. Lehm asper. 227. Lois. fl. gall. 1. p. 106. Vittm. summ. 1. p. *288.* Bell, append, fl. pedem. p. 15. Tenor, fl. neap. p. 46. Buglossum Barrelieri, All. pedem. no. 164. Pentagn. inst. 2. p. 314. Myosotis obtusa, Waldst. et Kit. pi. rar. hung. 1. p. 103. t. 100. Schultes, fl. austr. no. 792. Horn. hafn. 1. p. 173. Willd. enum. 1. p. 176.—Barrel, icon. *333.* Root woody, branched. Cauline leaves half stem-clasping. Calyx pilose; segments obtuse. Corolla with a white tube ; limb blue, with roundish obtuse segments ; throat yellow ; processes of the throat erect, white. The flowers are very like those of a species of *Myosotis,* both in colour and form.

Barrelleds Bugloss. FL May, June. Clt. 1820. PL 1 to 2 feet.

18 A. STRIG6SA (Labill. icon. pi. syr. dec 3. p. 7. t. 4.) stem erect, branched at top; leaves ovate-lanceolate, denticulated, prickly ; racemes conjugate, furnished with bracteoles at the base, which are shorter than the pedicels; calyxes obtuse, shorter than the tube of the corolla ; flowers regular ; processes of the throat papillose. %. H. Native of Syria, about Tripoli. Lehm. asper. p. 229. Plant covered all over with white bristles, which rise from white papillae or glands. Racemes twin, secund. Corolla blue; processes of the throat nearly orbicular.

Strigose Bugloss. PL 1| foot.

19 A. PANICULA'TA (Ait. hort. kew. 1. p. 177.) stem erect, branched ; leaves lanceolate, undulated, strigose, lucid ; racemes conjugate, divaricate, panicled, bracteate ; flowers equal; calyxes longer than the tube *of* the corolla, with subulate segments; processes of the throat pencil-formed. %. H. Native of the South of Europe, North of Africa, Island of Madeira, and Siberia. Willd. spec. 1. p. *756.* Sibth et Smith, fl. graec. t. 163. Lehm. asper. p. 230. A. Italica, Retz, obs. 1. p. 12. elàtum Mcench. meth. p. 418. Bugl. angustifolium, All. ped. no. 163?—Mor. hist. 3. sect. 11. t. 28. f. 2. and t. 26. f. 1. —Tourn. inst. p. 134. Buglossum amoènum, Gaertn. fruct. 1. p. 323. t. *67.* f. 2. Roots creeping. Plant hispid, large. Racemes twin, with a flower in the fork, constituting panicles at the tops of the stems. Bracteas linear, length of pedicels. Calycine segments subulate, unequal. Corolla blue, or violaceous^ with a white throat; processes of the throat erect, pencilformed ; segments of the limb unequal, obovate-roundish, obtuse. This is a very showy plant when in blossom.

Panicled-flowered Bugloss. Fl. May, June. Clt. 1777. PL *3* to 5 feet.

20 A. MICROCA'LYX (Vis. in bot. zeit. 1829. p. 8.) hispid; stems weak, nearly simple ; leaves flat: radical ones obversely-lanceolate, attenuated at the base, obtuse, repand: cauline ones lanceolate, sessile, acute, entire ; racemes pedunculate, conjugate, alternate, leafy at the base, loose ; calyx very hispid, 5-cleft, shorter than the tube of the corolla, but twice as long as the bracteas ; processes of the throat thickened at tops, truncate, smoothish. !£. H. Native of Dalmatia, about Verlika, on the edges of fields. Calyx smaller than in *A. sempervirens.* Tube of corolla straight. Nuts wrinkled, acutely bicostate at the apex, and umbilicate. Peduncles erect in the fructiferous state.

Small-calyxed Bugloss. PL 1 foot ?

21 A. DASYA'NTHA (Cham, in Linnaea, 4. p. 437.) leaves of the floriferous branches oblong-cuneated, sometimes acute, and sometimes bluntish at apex, and short-acuminated : upper ones dilated at the base, and more acute ; bracteas subcordate-ovate, acute, length of flowers ; cymes or spikes glomerate ; flowers sessile; calyx hardly 5-cleft to the middle; corolla funnel-shaped ; tube exceeding the calyx; throat villous ; stigma 2-lobed. %. F. Native of Tropical Brasil. Said to have the habit of *Anchiisa sempervirens;* but the flowers are smaller, the calyx hardly 5-cleft to the middle, the corollas hairy outside, the processes of the throat small and bearded. The upper portion of a branch is the only part of this plant which has been examined.

Thick-flowered Bugloss. PL ?

22 A. MILLE^RI (Willd. enum. 1. p. 179.) stems ascending, diffuse ; leaves oblong, bluntish, obsoletely denticulated, hispid ; racemes solitary, leafy ; calyx length of the tube of the corolla, with linear-obtuse segments; corolla equal. ©. H. Native country unknown, Levant. ? Lycopsis Milleri, Horn. hort. hafn. 1. p. 182. Plant strigose, hispid. Corolla flesh-coloured; throat oblique, incurved ; segments of the limb obovate, roundish ; processes of the throat erect, yellow, pilose at the base. Perhaps a species of *Lycopsis* from the oblique, incurved throat of the corolla.

Miller's Bugloss. FL May, June. Clt. 1713. PL 1\ foot.

23 A. MACROPHY'LLA (Lam. ill. no. 1816. Lehm. asper. p. 233.) stem weak, branched at top ; radical leaves oval: cauline ones lanceolate, acute, quite entire, strigose ; racemes somewhat panicled, loose, bracteate ; calyxes length of the tube of the corolla, with acutish segments ; flowers regular. *%1.* H. Native of the kingdom of Morocco. Desf. atl. 1. p. 157. Lycopsis macrophylla, Lam. diet. 3. p. 657. Plant strigose. Radical leaves large, disposed in an orb: cauline ones half stem-clasping. Corolla tubular, pale yellow, small, a little longer than the calyx, glabrous ; segments of the limb obtuse ; processes of the throat erect, obtuse, tomentose.

Long-leaved Bugloss. PL \\ foot.

24 A. LATIFOLIA (Lehm. sem. hort. hamb. 1821. p. 2. png, 1. p. 6.) leaves ovate-lanceolate, undulated, hairy ; bracteas ovate-lanceolate, equal in length to the calyx ; calyx 5-cleft, bluntish ; processes of the throat bearded. *$.* H. Native country unknown. Anchusa versicolor Hortul. Stems many from the same root, erectish, hairy, much branched. Flowers imbricate, on short pedicels, disposed in conjugate, bracteate, terminal racemes. Corolla with a violaceous tube, equal in length to the calyx; constricted below the throat; limb deep rose-coloured, having the edges variegated with white.

Broad-leaved Bugloss. FL May, June. Clt. 1826. PL 1| to 2\ feet.

25 A. VILLOSA (Spreng. syst. 1. p. 560.) stem branched; leaves lanceolate, quite entire, villous ; racemes axillary ; flowers remote ; bracteas exceeding the calyxes ; calycine segments bluntish, shorter than the tube of the corolla. %. H. Native country unknown. Calyx 5-parted, erect.

Villous Bugloss. PL

26 A. MYOSOTIDIFLORA (Lehm. asper. p. 234.) stem erect, simple ; radical leaves on long petioles, reniformly cordate : cauline ones sessile, ovate, hairy ; racemes terminal, panicled, bractless; flowers equal. %. H. Native of Siberia, among rocks. Myosotis macrophylla, Bieb. cauc. 1. p. 119. Adams and Web. et Mohr, cat. 1. p. 46. no. 7. Bieb. cent. pL ross. t. 14. Root oblique, covered by the remains of the leaves at top. Leaves large, canescent while young. Calycine segments linear. Corolla having the tube the length of the calyx ; limb fine blue ; and the throat closed by yellow processes.

Mouse-ear-flowered Bugloss. Fl. July, Sept. Clt. 1825. PL 1 foot.

27 A. TUBEROSA (H. B. et Kunth, nov. gen. 3. p. 92.) root tuberous; stem erect, nearly simple; leaves scattered, sessile, linear, quite entire, hispid from strigae; spikes leafy, terminal. # . F. Native of Mexico, in bushy places, between Moran and Regla, at the altitude of 1300 hexapods. Root tuberous, turnip-formed, globose, size of a cherry, furnished with fibres. Plant strigose. Leaves an inch long, and 1 line broad. Calyx hispid, with linear, bluntish segments. Spikes 1-2 inches long. Corolla pale yellow, ex Bonpl. downy outside, sweet-scented. Ovaria glabrous.

*Tuberous**rooted Bugloss. PL I foot.

§ 2. *Calyx 5-cleft, or deeply 5-toolhed, campanulate when in fruit, and more or less inflated and nodding. Corollas equal.*

28 A. AMPLEXICAU'LIS (Sibth et Smith, prod. fl. grsec. 1. p. 116. Lehm. asper. p. 237.) cauline leaves cordate-oblong, stein-clasping, repand ; spikes dichotomous, 2-leaved; calyx 5-cleft. 7£?. H. Native in fields about Constantinople. According to the diagnosis given this plant would appear to approach the *Anchusa sempervirens,* now *Omphalodes sempervirens.*

Stem-clasping-\eaved Bugloss. PL 1 foot.

29 A. VERRUCOSA (Lam. ill. p. 403. no. 1819. Horn. hort. hafn. 1. p. 176. Lehm. asper. p. 238.) leaves oblong-lanceolate, . repandly-toothed, hispid from strigae, which rise from white warts : upper ones subcordate at the base; pedicels interfoliaceous. ©. H. Native of Egypt. A. flava, Forsk. descr. p. 40. no. 30. Lycopsis iEgyptiaca, Lin. spec. 1. p. 138. Pers. ench. 1, p. 163. Asperugo ^Egyptiaca, Lin. spec. ed. 2. p. 198. mant. 334. Vahl. symb. 1. p. 14. Jacq. vind. 3. p. 15. t. 21. Willd. spec. 1. p. 778. Plant very hispid from strigse. Stems branched at top. Upper leaves sometimes subcordate at the base. Calycine segments unequal, lanceolate-linear, acute. Corolla yellow; tube shorter than the calyx; segments of the limb rounded ; processes *of* the throat yellow.

Parted-leaved Bugloss. FL July, Aug. Clt. 1821. PL \ to 1 foot.

30 A. DEFLE'XA (Lehm. sem. hort. hamb. 1823. p. 17. pug.

1. p. 5.) leaves linear-lanceolate, hispid; pedicels solitary, axillary, deflexed while bearing the fruit. ©. H. Native of Egypt. Stem solitary, or many from the same root, nearly terete, hispid. Calycine segments linear-lanceolate, bluntish, beset with white strigae, especially along the edges. Corolla shorter than the tube of the calyx ; segments roundish obovate, rose-coloured, or blue, with deeper veins; processes of the throat glabrous.

Deflexed-pediceMed Bugloss. PL ½ to 1 foot.

31 A. OCHROLEU'CA (Bieb. fl. cauc. 1. p. 125. Curt. bot. mag. t. 1603. Lehm. asper. 239.) leaves lanceolate, strigose, hispid, ciliated on the edges ; bracteas linear-lanceolate ; calyx 5-toothed : teeth obtuse ; tube of the corolla length of the calyx. %. H. Native of Caucasus and Transylvania, in fields. Bailing, fl. trans. 1. p. 120. Horn. hafn. 1. p. 176. Willd. enum. 1. p. 178. Schrank, pi. rar. mon. 1. t. 6.—Gmel. sib. 4. p. 74. no. 13. Root branched. Stems diffuse, angular, scabrous. Flowers on short pedicels in the axils of the bracteas, disposed in conjugate, spike-formed, terminal racemes, which are crowded in fascicles before expansion. Corolla cream-coloured ; tube a little longer than the calyx; processes of the throat erect, villously tomentose.

Cream-coloured flowered Bugloss. FI. July, Aug. Clt. 1810. PI. 1 to *2* feet.

32 A. AGA'RDHII (Lehm. asper. p. 241.) leaves linear-lanceolate, tubercled, strigose ; bracteas ovate-lanceolate, setosely ciliated ; calyx 5-cleft: segments obtuse ; tube of corolla one-half longer than the calyx. 1/. H. Native of Siberia. Stem erect, strigose. Flowers on short pedicels, distant, disposed in terminal racemes, which are generally conjugate. Corolla purple ; processes of the throat erect, pilose.

AgardKs Bugloss. Fl. July, Sept. Clt. 1820. PI. 1 foot.

33 A. UNDULA'TA (Lin. spec. ed. 2d. 1. p. 191. ed. 1. p. 133.) leaves lanceolate, dentately undulated, hispid from strigae ; racemes spike-formed, compact ; bracteas lanceolate; calyxes deeply 5-parted, acute. 1£. H. Native of Italy, France, Spain, Portugal, Barbary, and the Islands of the Archipelago, in meadows and fields. Sibth et Smith, fl. graec. t. 165. HofFm. et Link, fl. port. 1. p. 177. t. 22. Brot. fl. lus. 1. p. 297. Curt. bot. mag. t. 2119. Horn. hort. hafn. 1. p. 175. Mill, fig. 1. t. 29.—Sabb. hort. 2. t. 24. Stems many from the same root. Plant canescent. Flowers on short pedicels, secund, disposed in conjugate, terminal, compact racemes. Corolla purple, with the tube longer than the calyx, and ovate obtuse segments; processes of the throat saccate above, with pilose edges.

Undulated-hawed Bugloss. Fl. June, Aug. Clt. *1752.* PI. | to 1| foot.

34 A. CRISP A (Viv. append, fl. cors. 1825. ex Linnaea. 1. p. 500.) strigose ; leaves linear-oblong, coarsely and distantly toothed: cauline ones undulately curled ; spikes loose ; calyx 5-cleft, equal in height to the tube of the corolla, when bearing the fruit ventricose, pendulous, and secund; corolla with obovate segments ; processes of the throat ovate, ciliated ; nuts smooth, triquetrous. 2/ ?. H. Native of Corsica.

Curled-leaved Bugloss. PI. \ to 1 foot.

35 A. HY'BRIDA (Ten. prod. fl. neap. 1. p. 45. t. 11.) leaves oblong-lanceolate, sinuately toothed, undulated, villously hispid ; bracteas ovate-cordate ; calyx 5-toothed : teeth bluntish. If. H. Native near Naples, along way-sides. Root fusiform. Plant villously hispid. Stems simple. Flowers on short pedicels, disposed in axillary and terminal, conjugate racemes. Corolla purple ; tube longer than the calyx ; processes *of* the throat white, obtuse, pilose.

Hybrid Bugloss. Fl. June, Aug. Clt. 1820. PI. 1 to 1| foot.

36 A. ANOUSTIFOLIA (Lin. spec. ed. *2d.* vol. 1. p. 192.) leaves linear-lanceolate, hispid from pili; bracteas ovate-lanceolate, small when the flowers are open ; calyx 5-toothed: teeth very blunt. %. H. Native of the South of Europe. Curt, bot. mag. 1897. Sibth et Smith, fl. graec. t. 164. Horn. hort. hafn. 1. p. 175. Lapeyr. abr. p. 86. A. officinalis, Lin. spec, ed. 1st. p. 133. A. spicata, Lam. ill. no. 1810. Buglossum angustifolium, Moench, meth. p. 418.—Zan. hist. 49. t. 50. stirp. rar. t. 39.—Mor. hist. 3. sect. II. t. 28. f. 9.—Lob. stirp. *576. f. 2.* Buglossum angustifolium minus, Tourn. inst. 134. Root fusiform. Stems very scabrous, canescent from retrograde hairs. Racemes spike-formed, conjugate, terminal; bracteas hispidly ciliated. Corolla with a pale purple tube, which is white at bottom, exceeding the calyx; limb deep blue; segments obovate-oblong, conniving a little.

Narrow-leaved Bugloss. Fl. May, June. Clt. 1640. PI. 1 to *2* feet.

37 A. LYCOPSOIDES (Bess. hort. Krzem. ex Link. enum. 1. p. 166.) very like *A. procera* and *A. angustifolia,* but smaller; flowers secund, almost in one row; bracteas ovate, acuminated, ciliated, spreading also in one row. *y* . H. Native of Russia. Corolla smaller than in *A. procera,* at first violaceous, but at length blue.

Lycopsis-Uke Bugloss. Fl. July, Aug. Clt. 1824. PI. 1 \ foot.

38 A. PROCE'RA (Bess. 1. c. ex Link. 1. c.) larger than *A. angustifolia ;* flowers secund in 2 rows; bracteas ovate, acuminated, ciliated, distinct, spreading; calyx closed. ^. H. Native of Galicia. Corolla blue. Perhaps a variety of *A. angustifolia.*

Tall Bugloss. Fl. May, June. Clt. 1824. PL 2 to 3 feet.

39 A. LEPTOPHY'LLA (Roam, et Schultes, syst. 4. p. *90.)* leaves oblong-lanceolate, strigose ; spikes secund, imbricate ; calyxes 5-cleft, length of the tube of the corolla. %. H. Native of the South of Europe. A. angustifolia, Willd. enum. 1. p. 178, exclusive of his spec. pi. Schultes fl. austr. 2. ed. 1. p. 364. Sims, bot. mag. 1897. Corolla twice smaller than in *A. officinalis,* pale blue. Stem pilose. Calycine segments obtuse, silky, from adpressed hairs. Leaves thinner than in *A. officinalis.*

Slender-leaved Bugloss. Fl. July, Oct. Clt. 1640. PI. 1 to 2 *feet.*

40 A. OFFICINA'LIS (Lin. spec. ed. 2. vol. 1. p. 191. fl. suec. ed. 2d. no. 161.) leaves lanceolate, hispid; bracteas ovate-lanceolate, equal to the calyx in length; calyxes 5-cleft, acute. 1/. H. Native of Europe, Asia, and Africa, in waste places, and by way sides, and on the edges *of* fields. Smith's engl. bot. t. 662. Oed. fl. dan. t. 5. Bieb. fl. cauc. 1. p. 124. Bess. fl. gal. 1. p. 146. Gmel. fl. bad. 1, p. 417. Vill. fl. dauph. 2. p. 455. Scop. fl. cam. ed. 2. vol. 1. p. 123. Willd. 1. p. *756.* Lehm. asper. p. 247.—Plenck, off. t. 79.—Blackw. herb. t. 500. Plant hispid. Radical leaves tufted. Flowers sessile, imbricate, disposed in conjugate, terminal spikes. Corolla blue, or purple ; tube length of calyx ; segments of the limb oblong-roundish ; processes of the throat erect, tomentose. This plant when tender in the spring is eaten boiled in Upland. The tube of the corolla is melliferous, and the bees are very fond *of* it. This is not the *Anchusa,* but the Bugloss of the officinal writers. It appears to be nearly similar to Borage; the leaves being less juicy, and the roots more mucilaginous ; these, with the leaves and flowers, are ranked among the articles of the Materia Medica, bnt they are very seldom made use of. " In China," Loureiro says, "the plant is in great esteem for gently promoting the eruption of the small-pox."

Far. /3. ccerulea; flowers blue. %. H. Native of Europe. A. angustifolia, Baumg. fl. trans. 1. p. 121. Schultes fl. austr. no. *783.* Gmel. fl. bad. 1. p. 418. Suter, fl. helv. 1. p.

104. Roth tent. fl. germ. 2. p. 220. Vill. dauph. 2. p. 455. Poll. pal. 1. p. 183, and of many other European Floras.

Far. y. incarnata; flowers flesh-coloured, or red. 1/. H. Roth. tent. fl. germ. 1. c. and some other Floras. A. incarnata Schrad. in litt.

Far. Z. alba; flowers white. %. H. Roth. 1. c.

Officinal Bugloss. Fl. June, Oct. Britain. PL 1 to 2 feet.

41 A. CAPE'LLII (Moris, elench. sard, ex Linnaea, 5. p. 93.) plant procumbent, clothed with strigose hairs ; leaves lanceolate, denticulated: radical ones undulated; bracteas ovate-lanceolate, half stem-clasping ; flowers loosely racemose ; calyx 5-cleft, when bearing the fruit inflated and nutant. %. H. Native of Sardinia. Allied to *A. qfficinalis* and *A. angustifblia.*

Capellis Bugloss. PI. procumbent.

42 A. CAPE'NSIS (Thunb. in Schrad. journ. 1806. p. 45. prod. fl. cap. p. 34.) leaves linear-lanceolate, attenuated at both ends, somewhat hispid from villi; racemes terminal, panicled; bracteas ovate-lanceolate; calyxes 5-cleft, obtuse. $. G. Native of the Cape of Good Hope, Andr. bot. rep. t. *336.* Curt, bot. mag. t. 1822. Lehm. asper. p. 249. Stems simple, hairy, canescent. Corolla blue, twice as long as the calyx.

Cape Bugloss. Fl. July, Aug. Clt. 1800. PI. 1| foot.

43 A. LEUCOIIIFOLIA (Lehm. asper. p. 249.) leaves linear-subspatulate, bluntish, silky and hoary ; spikes solitary ; bracteas lanceolate, attenuated at the base ; calyxes 5-cleft, acute. *11.* H. Native of Armenia. Lithospermum Orientale leucoji folio, flore coeruleo parvo, Tourn. cor. p. 6. Stem downy, hoary, leafy at bottom. Flowers sessile, crowded into terminal spikes. Bracteas longer than the calyx. Corolla a little longer than the calyx; tube very short; limb blue, with obovate-rounded segments.

Snow-drop-leaved Bugloss. PI. 1 foot.

44 A. BRACTEOLA'TA (Viv. fl. libyc. p. 10. t. 4. f. 2—3.) plant clothed with soft white hairs, which rise from obsolete tubercles; lower leaves spatulate: cauline ones linear-oblong, sessile, obtuse : floral ones half stem-clasping, cordate, acute, imbricated in two rows. 1(1. H. Native of Cyrenaica, on the mountains. Lycopsis Cyrenaica, Spreng. syst. 1. p. *557,* Stem ascending, dividing into spike-bearing branches at top. Floral leaves or bracteas a little longer than the leaves. Flowers disposed in dense, leafy, revolute spikes. Calyx hispid, with linear-acute segments, equal in length to the tube of the corolla. Corolla blue; the throat and tube white.

Bracteolate Bugloss. PI. ascending.

** Species hardly known,*

45 A. LONGIFOLIA (Lam. ill. no. 1817. diet. 1. p. 502.) leaves long, tongue-shaped, broadest' at the base and apex ; spikes small, naked, somewhat panicled. %. *H.* Native of Italy. Stem simple; hairs springing from white tubercles. Flowers small, of a beautiful blue.

Long-leaved Bugloss. Fl. June, Aug. Clt. 1819. PI. 1J foot.

46 A. AFRICA'NA (Burm. prod. fl. cap. p. 4.) stem shrubby, villous ; leaves lanceolate, tomentose beneath. ^ • G. Native of the Cape of Good Hope.

African Bugloss. Shrub.

Cult. The species of *Bugloss* are of the most easy culture ; they will grow in any soil, and are readily increased by seed. *A. Capensis* should be treated as a green-house plant. Some of the species are very pretty when in blossom, as *A. paniculata, A, Barrelieri,* &c.

XXVII. MYOSO'TIS (from f/vc *fivog, mys myos,* a mouse; and *ove U)TO£, ous otos,* an ear ; supposed resemblance in leaves.) Dill. gen. 3. Lin. gen. no. 180. Schreb. gen. no. 240. Juss. gen. p. 131. ed. Usteri, p. 146. Schkuhr, handb. t. 29. Lehm. asper. p. 78.—Echioides, Moench. meth. p. 416.

LIN. SYST. *Pentdndria, Monogynia.* Corolla salver-shaped ; throat furnished with short processes ; limb 5-parted, obtuse. Stamens inclosed. Nuts 4, 1-celled, fixed to the bottom of the calyx, perforated at the base.—Annual or perennial, rough or smoothish plants, with terminal racemes of blue flowers ; the racemes revolute before expansion.

§ 1. *Nuts smooth, glabrous.*

1 M. LATIFOLIA (Poir. suppl. 4. p. 45. Lehm. asper. p. 82.) stem erect, nearly simple, pilose ; leaves on long petioles, ovate-lanceolate, pilose; calyxes acute, villous ; corollas a little longer than the calyx. 1/. F. Native of the Canary Islands. This species differs from the rest in the leaves being on long petioles, 2-3 inches long, and 1| inch broad. Corollas blue?

Broad-leaved Scorpion-grass. PI. ?

2 M. GRANDIFLORA (H. B. et Kunth, nov. gen. amer. 3. p. 90. t. 199.) stems nearly simple ; leaves strigose, obtuse: radical ones lanceolate, petiolate: cauline ones lanceolate-oblong, sessile; spikes terminal, solitary, or twin, leafy ; flowers pedicellate ; calyx closed; fruit glabrous. %. F. Native of Quito. Stems terete, strigose. Corolla white, size of those of *Tiaridium Vndicum ;* processes of the throat roundish, downy. Calycine segments linear, acutish.

Great-jlowered Scorpion-grass. PI. \ to f foot.

3 M. CORYMBOSA (Ruiz, et Pav. fl. per. 2. p. 5. no. 2.) stems procumbent, divaricate; leaves linear, acute; flowers corymbose; corollas 3 times longer than the calyx. ©. H. Native of Chili, about Conception, in fields. Pers. ench. 1. p. 157. Lehm. asper. p. 82. Plant hispid. Middle stem erect; side ones procumbent; branches forked at top. Corymb forked, sometimes spicate. Corolla white.-

Corymbose-Rowered. Scorpion-grass. PI. procumbent.

4 M. ROBU'STA (D. Don, prod. fl. nep. p. 101.) leaves elliptic-oblong, acute, sessile, pilose on both surfaces; racemes conjugate, short, bractless; calycine segments oval, obtuse, longer than the tube of the corolla. 1/. H. Native of Nipaul, in Gosainsthan, where it is called *Khurkurree* by the natives. Root fusiform. Stems ascending, simple, pilose. Leaves 3 inches long, and \ inch broad.

Robust Scorpion-grass. PI. 1| foot.

5 M. LA'XA (Lehm. asper. p. 83.) stem filiform, loose ; leaves obovate-lanceolate, obtuse, nearly glabrous; racemes bractless, very long ; pedicels diverging while bearing the fruit, very long, much longer than the calyx, which is spreading and obtuse; corollas small. ©. H. Native of North America. Stem glabrous, divided at top into some racemiferous branches. Calyx rather pilose, ventricose at the base ; teeth ovate-lanceolate, acute.

Loose Scorpion Grass. PI. 1 to 1| foot.

6 M. SPARSIFLORA (Mikan, in Hoppe. taschenb. 1807. p. 74. Pohl, fl. boh. 1. p. 175.) stem branched, diffuse; leaves oblong-lanceolate, acutish ; racemes loose, few-flowered, leafy at the base ; pedicels deflexed while bearing the fruit, longer than the calyx, which is spreading, and beset with hooked bristles at the base ; corollas small. ©. H. Native of Bohemia, Silesia, Transylvania and Caucasus, in shady humid places ; and of Altaia, at the river Kurtsclmm. Baumg. fl. trans. 1. p. 117. Horn. hort. hafn. 1. p. 174. Bess. fl. gal. 1. p. 143. Lehm. asper. p. 84. Led. fl. alt. 1. p. 186. M. sepium, Hort. crac. Stem angular at top, scabrous from reflexed hairs. Leaves strigose. Racemes axillary and terminal. Calyx globose at the base. Corollas small, blue, sometimes white ; throat yellow.

Scattered-flowered Scorpion Grass. Fl. May, June. Clt. 1822. PI. *h* foot*

7 M. SYLVATICA (Ehrh. herb. 31. Lehm. asper. p. 85.) leaves oblong-lanceolate, bluntish, clothed with soft hairs; racemes very long, loose, bractless; pedicels diverging while bearing the fruit, a little longer than the 5-cleft, closed calyx; limb of corolla flat, longer than the tube. 1/. H. Native throughout Europe, in woods in mountainous places. Hoffm. deutschl. fl. 1. p. 85. exclusive of *M. alpina.* Baumg. fl. trans. I. p. 117. exclusive of the synonymes. Pers. ench. 1. p. 156. Sut. fl. helv. 1. p. 102. M. intermedia, Smith, engl. fl. 1. p. 250. M. scorpioides, var. sylvatica, Horn. hort. hafn. 2. p. 956, M. scorpioides, var. Smith, fl. brit. 1. p. 212. M. arvensis, Wahl. fl. suec. 1. p. 120.—Hall. helv. no. 591 Knip. cent. II. t. 81. M. pererinis, *ft,* D. C. fl. fr. no. 2725. M. arvensis,? *ft,* sylvatica, Pers. ench. 1. p. 156. M. intermedia, a, parviflora, Led. fl. alt. 1. p. 187. Stems simple, divided at top into long loose racemes, hairy. Racemes solitary and conjugate. Calycine segments unequal, lanceolate, acuminated, obsoletely 3-nerved, furnished with hooked hairs at the base, conniving while bearing the fruit. Corolla blue, with a yellow throat.—There is a variety of this species found at the Cape of Good Hope. See Cham, in Linnaea, 4. p. 445.

Wood Scorpion Grass. Fl. June, July. Britain. PI. \ to 1 foot.

8 M. CESPITOSA (Schultes, fl. starg. suppl. p. 11. Ledeb. fl. alt. 1. p. 188.) plant strigose, tufted; leaves lanceolate, obtuse; calyx 5-cleft, about equal in length to the tube of the corolla, strigose; fruit bearing pedicels twice as long as the calyxes; racemes loose, naked. %. H. Native of the duchy of Mecklenburgh; and of Altaia, near Riddersk, Smejow, &c, in boggy places; in Britain, common about ponds. Link. enum. 1. p. 165. Bess. pi. volh. p. *52.* Hook, suppl. engl. bot. t. 2661. M. lingulata, Schultes. Lehm. asper. 1. p. 110. M. uliginosa, Schrad. M. commutata, Schultes, syst. 4. p. 102. M. strigulosa, Rchb. M. scorpioides parviflora, Wahl. fl. suec. 1. p. 119. Hairs of the stem and calyx adpressed. Corolla blue, with a yellow throat; limb as long as the tube. Very nearly allied to *M. palustris.*

Tufted Mouse ear. Fl. June, Aug. Britain. PI. tufted.

9 M. ALPE'STRIS (Hoppe, in Schmidt, fl. boh. cent. 3. no. 225.) stems tufted, erect; leaves lanceolate, or oblong-linear, acutish, obsoletely 3-nerved, strigose; racemes strict, bractless; pedicels spreading while bearing the fruit, a little longer than the calyx, which is 5-parted and spreading; limb of corolla flat, a little longer than the tube. 1/. H. Native of Europe, and the north of Asia, on the alps, and in dry alpine places; in Scotland, on the elevated range of the Breadalbane mountains. Lehm. asper. p. *86.* Schultes, fl. austr. 1. p. 788. Willd. enum. 1. p. 175. Ledeb. fl. alt. 1. p. 189. M. lithospermifolia, Horn. hort. hafn. 1. p. 173. M. scorpioides, *ft,* lithospermifolia, Willd. enum. 1. p. 175. M. suaveolens, Waldst. et Kit. hung. ined. Willd. 1. c. M. odorata, Poir. suppl. 4. p. 44. M. rupicola, Smith, engl. bot. t. 2559. M. Pyrenaica, Pourr. mem. acad. toul. 3. p. *323.* M. montana, Bess. fl. gal. 1. p. 142. Bieb. 3\ p. 116. exclusive of the syn. of Erhr. pi. volh. p. 8. M. alpina, Lapeyr.—Barrel, icon. t. 404. Root brown. Stern beset with adpressed hairs, simple at bottom, but divided at top into short racemes; the raceme terminating the stem, conjugate; those terminating the branches solitary. Calyx beset with hooked hairs; segments linear-lanceolate, acute. Tube of corolla shorter than the calyx; limb blue; throat yellow There are varieties of this with white and reddish flowers.

Alp Scorpion Grass. Fl. June, July. Scotland. PI. \ foot.

10 M. NEMOROSA (Besser. pi. volh. p. *52.* Ledeb. fl. alt. 1. p. 188.) stem erect, acute-angled, shining and smooth at the base; racemes loose, naked; fruit bearing pedicels a little longer than the calyxes; calyx 5-toothed, exceeding the tube of the corolla, hispid from strigae, as well as the leaves. %. H. Native of Altaia, in woods and groves near Riddersk, &c. M. laxiflora, Rchb.

Grove Scorpion-grass. Fl. June, Aug. PI. \ foot.

11 M. ROTUNDIFOLIA (Wall. cat. no. 930.) plant tufted, beset with short strigae; leaves small, oval-roundish: radical ones on long petioles; upper cauline leaves sessile; racemes terminal, twin. *1[.* H. Native of Kamaon. Stems simple, erect. Nuts unknown. Nearly allied to *M. alpestris.*

Round-leaved Scorpion-grass. PI. 5 foot.

12 M. ? LONGIFLORA (Wall. cat. no. 929.) root creeping; stems smoothish, prostrate or ascending; leaves ovate, mucronate, on long petioles, beset with short strigse; racemes short, simple or twin, terminal. }/. H. Native of Simla and Kamaon. Racemes and calyxes strigose. Calycine segments linear-lanceolate, shorter than the tube of the corolla. Corolla salver-shaped, white or blue. Nuts unknown. Habit of a species of *Omphalodes.*

Long-flowered Scorpion-grass. PI. prostrate, creeping.

13 M. PALU'STRIS (With. p. 225.) hairs of the stem adpressed; leaves obovate-lanceolate, obtuse, rather scabrous from strigae; racemes bractless; pedicels diverging while bearing the fruit, nearly twice the length of the calyx, which is 5-parted, obtuse, and spreading, and equalling the tube of the corolla; limb of corolla flat, longer than the tube. %. H. Native throughout Europe, Asia, and North America, in humid meadows, bogs, banks of rivers, rivulets, and ditches; plentiful in Britain, in like situations. Lehm. asper. p. *88.* Hoffm. et Link, fl. port. 1. p. 174. Bess. fl. gal. 1. p. 142. M. perennis, Mcench. hass. no. 154. Lapeyr. abr. p. 84. D. C. syn. fl. fr. no. *2725.* M. scorpioides, Horn, hort. hafn. 1. p. 173. Pursh, fl. 1. p. 133. Willd. spec. 1. p. 746. Wahl. fl. lapp. p. 54. Bieb. fl. cauc. 1. p. 118. Michx. fl. 1. p. 129. M. scorpioides, var. palustris, Lin. spec. ed. 2d. vol. 1. p. 188. fl. suec. ed. 2d. no. 157. Smith, fl. brit. 1. p. 212. Curt. fl. lond. fasc. *27.* t. *65.* Smith, engl. bot. 1973. St. Hil. pi. fr. 3. t. 264. Sturm, fl. germ. fasc. 5, with a figure. Svensk, bot. 1. t. *72.* Ledeb. fl. alt. 1. p. 189. Echioides palustris, Moench, meth. p. 416. Plant pale green, roughish. Stems creeping at the base. Racemes simple or conjugate. Corolla blue; throat yellow; tube length of calyx; segments of the limb obovate, emarginate, or obcordate.—There is also a variety of this with white flowers. This, the *Forget-me-not,* is the emblem of affection among the Germans. It is now a general favourite, and deservedly so; its beauty is so striking as to have acquired for it a kind of proverbial name. Few who have observed the flower are likely to forget it.

FIG. *36.*

Var. ft, parviflora (Led. fl. alt. 1. p. 189.) flowers 3 times smaller, and more crowded than in the species. 1/. H. Native near Barnaoul.

Marsh Scorpion Grass, or Forget me not. Fl. April, May. Britain. PI. \ to 1 foot.

14 M. RE'PENS (G. Don, Hook. fl. scot. p. 83. under M. palustris. Engl. bot. suppl. t. 2703.) hairs of the stem spreading; leaves obovate, obtuse, rather strigose; calyx covered

with adpressed bristles, deeply 5-cleft when in fruit, mostly connivent, shorter than the diverging pedicels ; limb of the corolla flat, longer than the tube: lobes somewhat emarginate. %. H. Native of Scotland ; and in Yorkshire, Kent, and Sussex, in open heaths and parts of forests. Root creeping. Leaves Ungulate. Nuts smooth. Plant pilose.

Creeping Scorpion Grass, or Mouse-ear. Fl. April, Aug. Britain. PI. \ foot.

15 M. COLLINA (Hook. engl. bot. suppl. 2629. ed. 2d. t. 257.) annual; calyx beset with spreading, uncinate bristles, open and ventricose when bearing the fruit, as long as the diverging pedicels; limb of corolla concave, shorter than the tube. ©. H. Native of Britain, common in dry fields, and on sunny sandy banks, flowering early in summer, and soon withering away. M. arvēnsis, Smith, engl. bot. 2558. engl. fl. 1. p. 252. Racemes without peduncles, the flowers beginning among the leaves, sometimes from the very base of the stem. Corollas small, blue, with a yellow throat.

Hill Scorpion Grass. Fl. May, June. Britain. PI. | to \ foot.

16 M. ARVE'NSIS (Sibth, fl. oxon. p. 68.) leaves oblong-lanceolate, acute, hairy; racemes bractless; pedicels spreading while bearing the fruit, twice as long as the calyx, which is erect, 5-cleft, and open; limb of corolla erectly spreading, nearly the length of the tube. 0. H. Native throughout Europe, Asia, Africa, and North America, in corn fields and in sterile dry places; plentiful in Britain in like situations. Bess. fl. gal. 1. p. 142. Wahl. fl. lapp. p. *55.* Bieb. fl. cauc. I. p. 119. Willd. spec. 1. p. 747. Lehm. asper. p. 90. M. ānnua, Mcench, fl. hass. no. 153. Lapeyr. abr. p. 84. D. C. syn. no. 2724. M. scorpioides, Desf. fl. atl. 1. p. 153. M. scorpioides, var. *a* arvē'nsis, Lin. spec. ed. 2d. p. 188. Smith, fl. brit. 1. p. 212. engl. bot. suppl. 2629. (Ed. fl. dan. t. 583. Bull, herb. t. 355. Lin. fl. suec. ed. 2d. no. 157. Echioides ānnua Moench. meth. p. 416.—Hall. hist. no. 590.—Gerard, hist. p. 338. f. 4.—Lob, icon. 461. f. 2. Stem beset with spreading hairs. Lower hairs of calyx hooked. *Calycine segments linear-lanceolate, unequal, conniving when in fruit. Corolla with a white tube, which is a little shorter than the calyx; limb blue ; throat yellow ; segments hardly emarginate.

Far. /3. *simplex* (Pers. ench. 1. p. 156.) stem very simple; leaves rosulate ; petals not emarginate ; flowers on short pedicels. ©. H.

Far. $. alpīna; stem dwarf, branched, more pilose; radical leaves tufted; flowering racemes revolute ; flowers on short pedicels; corolla small, blue, rarely white or purple, with a yellow throat. ©. H.

Corn Scorpion Grass, or Mouse-ear. Fl. April, Aug. Britain. PI. \ to 1 foot.

17 M. VE'RNA (Nutt. gen. addend.) small and hairy; stem simple; radical leaves spatulate-oblong : cauline ones linear-oblong ; spikes simple; flowers nearly sessile ; seeds smooth and shining. ©. H. Native of New Jersey, in sandy woods and by way sides. Flowers small and white. Lycopsis Virginica, Pursh ?.

Spring Mouse-ear, or Scorpion Grass. Fl. May, July. PI.

18 M. MULTICAU'LIS (Wall. cat. no. 7020.) plant rough from short strigse; stems numerous, simple, ascending, dividing into racemiferous branches at top; radical leaves oval, on long petioles : lower cauline ones petiolate : upper cauline ones sessile, oval-oblong; racemes numerous, axillary, and terminal, slender; pedicels erect. %. H. Native of Nipaul, in Gosainsthan. Stems many from the same root. Racemes twin or solitary. Nuts unknown.

Many-stemmed Mouse-ear, PI. ascending, 1 foot long.

19 M. PA'LLENS (Wall. cat. 7019.) hispid from strigse ; stems erect, simple; radical leaves rosulate: cauline ones lanceolate, sessile, and half stem-clasping, bluntish, tnucronate ; terminal racemes twin, with a flower in the fork: axillary ones solitary ; nuts unknown. ©. H. Native of Kamaon. Lower leaves lanceolate-spatulate. Pedicels at length drooping. Nearly allied to *M. arvēnsis.*

Pale Mouse-ear, or Scorpion Grass. PI. 1 to \\ foot.

20 M. INTERMEDIA (Link. enum. 1. p. 164.) stem erect, branched, hispid; leaves obversely lanceolate, or ovate-oblong, hispid; pedicels much longer than the flowers ; calyx beset with hooked hairs, exceeding the corolla, closed in the fruit-bearing state. ©. ? H. Native of Europe, in humid places : and of the Cape of Good,Hope. M. arvēnsis, Lehm. asper. p. 90. but not of Lin. Drev. et Heyne, bild. 2. t. 51. M. intermēdia, *fi,* parviflōra, Ledeb. fl. alt. 1 . p. 187. M. scorpioides, Thunb. fl. cap. 183. Racemes strict, naked. Corolla small, blue, with a yellow throat. This species is usually confounded with *M. arvēnsis.*

Intermediate Mouse-ear, or Scorpion Grass. Fl. April, May. Britain. PL 1 to 2 feet.

21 M. VERSICOLOR (Roth. fl. germ. 2. p. 222.) leaves lanceolate, bluntish, hairy; racemes bractless ; pedicels erectly spreading while in fruit, shorter than the calyx, which is 5-cleft, acute, and closed ; limb of corolla spreading, shorter than the tube. ©. H. Native throughout Europe, in dry, arid places. Engl. bot. ed. 2d. t. 258. M. scorpioides, Smith, engl. bot. 480. f. 1. M. scorpioides, y, Lin. spec. ed. 2d. p. 189. Smith, fl. brit. 1. p. 212. M. arvensis, var. y, versicolor, Pers. ench. 1. p. 156. M. arvēnsis, /3, Willd. 1. p. 747. M. discolor, Lin. syst. *ej\.* 15. p. 190. M. collina, Hoffm. fl. germ. 1791. p. 61. Ehrh. herb. p. 51.? M. arvensis, var. /3, Gmel. fl. bad. 1. p. 411. Smith, fl. brit. 1. p. 213. Roth. 2. p. 223.—Knip. cent. 11. t. 80. Stems angular, hairy, solitary, or tufted. Flowers on short pedicels. Lower hairs of calyx hooked. Calycine segments unequal, narrow-lanceolate, conniving when in fruit. Corolla small, blue, with a yellow throat, or pale yellow; segments of the limb obtuse.

Far. /3, *arenāria* (Schrad. in litt. ex Lehm. asper. p. 93. Schulz, starg. suppl. p. 12.) flowers small, all blue ; throat yellow ; stigma somewhat 2-lobed. ©. H. M. ramosissima, Roehel. Leaves oblong, hispid. Tube of corolla exserted, usually yellow.

Far. y, *lūtea* (Pers. ench. 1. p. 156. Hoffm. et Link, fl. port. 1. p. 173.) stem scabrous, hairy ; superior leaves lanceolate, quite entire ; tube of corolla exceeding the calyx. ©. H. M. arvensis, var. /3, Willd. 1. p. 747. Anchūsa lūtea, Cav. icon. 1. p. 60. t. 69. f. 1. exclusive of the synonymes.

Party-coloured-flowered Scorpion Grass, *qr* Mouse-ear. Fl. April, June. Britain. PI. J to 1 foot.

22 M. STRI'CTA (Link, enum. 1. p. 164. exclusive of var. versicolor, Roth. Ledeb. fl. alt. 1. p. 186.) stem branched at the base, hispid as well as the leaves, which are oblong ; racemes strict, naked; pedicels shorter than the calyx; calyx 5-cleft, exceeding the tube of the corolla, hispid from hooked bristles. ©. H. Native of Siberia, in dry sterile places on hills near Sogra, between Butokowna and Tscheremschuka. Flowers usually yellow.

Strict Mouse-ear. Fl. June, July. Clt. 1822. PL 1 foot.

23 M. FORSTE'RI (Lehm. asper. p. 95.) leaves obovate-spatulate, hispid from strigse ; racemes bractless ; pedicels erectly spreading while in fruit, length of calyx ; calycine segments oblong, bluntish, 3-nerved. 2/. G. Native "of New Holland, where it was collected by Forster. Root creeping ; fibres in fascicles. Stems ascending, hispid. Racemes filiform.

Forster's Scorpion Grass. PI. \ to 1 foot.

24 M. LITTORA[N]LIS (Stev. cat. hort. gorenki ? Lehm. asper. p. 95.) radical leaves obovate, obtuse : cauline ones ovate-cor-

date, pilose above and nearly glabrous beneath ; flowers nearly sessile, imbricate, disposed in spike-formed, bractless racemes. ©. H! Native on the shores of the Caspian Sea. Plant small at the time of flowering, but afterwards more elongated. Radical leaves rosulate. Racemes solitary, pilose, many-flowered. Calyx hairy; segments unequal, connivent, linear-lanceolate. Tube of corolla length of calyx.

Sea-shore Scorpion Grass. PI. 1 to *2* inches.

25 M. PUSILLA (Lois, in Desv. journ. 2. p. 260. t. 8. f. 1. not 36. D. C. fl. fr. 6. p. 421. no. 2724. Lehm. asper. p. 96.) radical leaves somewhat spatulate, obtuse : cauline ones oblong, pilose; racemes short, leafy; pedicels axillary, erect, much shorter than the leaves; tube of corolla a little longer than the calyx ; limb very short. ©. H. Native of Corsica, in fields. Root simple, slender, with some long fibres. Stems simple, numerous from the same root, pilose. Calycine segments acute.

Least Mouse-ear. Fl. June, July. Clt. 1820. PI. | foot.

26 M. SPATULATA (Forst prod. p. 12. no. *62.)* stem filiform, procumbent ; leaves petiolate, ovate, distant, hispid from pili ; pedicels lateral, one-half shorter than the leaves ; tube of corolla much longer than the calyx. ©. H. Native of New Zealand. Pers. ench. 1. p. 175. Willd. spec. 1. p. 748. Lehm. in act. soc. hal. 3. t. 1. f. 2. asper. 97. Anchusa spatulata, Rcem. et Schultes, syst. 4. p. 100. Stem pilose. Calyx obovate, with lanceolate segments.

Spatulate-leaxed Mouse-ear. PI. procumbent.

27 M. SERI'CEA (Lehm. asper. p. 98.) stem erect; leaves sessile, oblong-lanceolate, silky ; racemes leafy ; pedicels axillary, erect when in fruit, length of the floral leaves; tube of corolla length of calyx. ©. H. Native of Siberia. Anchdsa serfcea, Roam, et Srhultes, syst. 4. p. 774. M. pectinata, Hort. Stem silky, divided into many erect leafy racemes at apex. Calycine segments linear, bluntish. Corollas large, blue.

Silky Mouse-ear, or Scorpion Grass. Fl. June, Aug. Clt. 1802. PI. ½ to 1 foot.

28 M. FOLIOSA (Lehm. asper. p. 99.) leaves spatulate-lanceolate, roundish, obtuse, nearly glabrous; flowers axillary, on short pedicels, one-half shorter than the leaves ; tube of corolla nearly the length of the calyx. %. G. Native of South America. Anchusa foliosa, Roem. et Schultes, syst. 4. p. 775. Roots nearly simple. Stem scabrous from adpressed short hairs. Racemes leafy. Calyx pilose ; with linear-lanceolate, obtuse segments. Corolla rather pilose outside.

Leafy Mouse-ear, or Scorpion Grass. PI. \ to 1 foot.

29 M. VILLOSA (Ledeb. act. ITOV. acad. petrop. 5. p. 516. no. 3. fl. alt. 1. p. 191: fl. ross. alt. ill. t. 215.) plant clothed with white villi; stems simple ; leaves elliptic, obtuse, 3-nerved, reticulately veined, villous; racemes twin, bracteate; bracteas minute ; pedicels hardly the length of the flowers; nuts truncate, marginately toothed : teeth inflexed. %. H. Native of Siberia, on the alps, along with *Dryas octopetala;* and of the bay of St. Lawrence, along with *M. alpestris.* Lehm. asper. p. 100. Anchusa villosa, Roem. et Schultes, syst. 4. p. *775.* Plant tufted, white from villi. Root woody. Stems simple, divided at top into simple leafy racemes. Racemes axillary and terminal. Calycine segments linear. Corolla rather large, deep blue, with a pale throat.

Villous Mouse-ear, or Scorpion Grass. PI. J foot.

30 M. ARETIOIDES (Cham, in Linnaea, 4. p. 443.) stems tufted, clothed with long white hairs, divided at top; leaves densely imbricated, sessile, lanceolate, cuneate at the base, acutish at the apex; racemes cymose, twin, terminal, each furnished with a leaf at the base. 3/. H. Native of the island of St. Laurence. Stems hardly emerging from the tufts of leaves. Surculi creeping. Pedicels longer than the calyxes. Calycine segments lanceolate, acutish. Corolla salver-shaped; limb fine blue ; genitals inclosed.

Aretia-like Mouse-ear. PI. 2 to 4 inches.

31 M. RUPE'STRIS (Pall. itin. 3. append, p. 716. E. f. *3.* R. Br. prod. p. 494.) plant silky ; leaves linear, villous ; racemes twin or tern, alternate, leafy at the top of the stem ; pedicels erectly spreading while bearing the fruit, length of the floral leaves, but exceeding the flowers. If.. H. Native of Dahuria, and Altaia, on the mountains, in dry rocky places. Willd. spec. 1. p. 748. Lam. ill. p. 305. no. 1772. Lehm. asper. p. 100. Anchusa rupestris, Roam, et Schultes, syst. 4. p. 100. Root simple. Stems tufted, numerous from the same root, simple, slender, canescent. Racemes axillary and terminal. Calyx villous ; with spreading segments. Corolla large, showy, deep blue, twice as long as the calyx. Nuts truncate, marginate, with the margins toothless.—There is a white-flowered variety of this plant foundat the river Tschuja.

Rock Mouse-ear. Fl. July. Clt. 1802. PI. \ to \ foot.

32 M. OBOVATA (Ledeb. fl. alt. 1. p. 190.) plant rather silky; stems tufted, simple; leaves obovate-oblong ; racemes twin, bracteate; pedicels hardly exceeding the flowers ; nuts unknown. %. H. Native of Kamtschatka ; also of Dahuria, near Nertschinsk. Root thick, woody. Radical leaves rosulate, all attenuated into the petioles. Flowers like those of *M. rupestris.*

Obovate-leaved Mouse-ear, or Scorpion Grass. Fl. June, July. PI. ½ to | foot.

^ *33* M. FLACCIDA (Dougl. mss. ex Lehm. pug. 2. p. 22.) stem erect, branched ; leaves linear, strigose ; spikes bractless, bifid ; calyx 5-parted, closely adpressed *to* the fruit, closed, very hispid at the base and apex. ©. H. Native of Northwest America. Stem beset with adpressed hairs or strigae. Calycine segments linear, obtuse. Corolla yellow, glabrous ; limb short. Nuts ovate, beaked, smooth.

Flaccid Mouse-ear, or Scorpion Grass. PI. 1\ foot.

34 M. LEUCOPHCEA (Dougl. mss. ex Lehm. pug. 2. p. *22.,* stem erect; leaves lanceolate-linear, silky above and strigose beneath ; spikes crowded at the top of the stem, few-flowered ; calyx very hispid; nuts unknown. ©. H. Native of Northwest America.—A very pretty plant. Stem angular, beset with adpressed hairs below, and spreading pili above. Leaves 3-nerved. Spikes hispid. Calycine segments linear, obtuse, tomentose inside at apex. Corollas large, white ; with roundish, obovate segments.

Leucophceous Mouse-ear, or Scorpion Grass. PI. I foot.

35 M. PAUCIFLORA (Ledeb. in act. nov. acad. petrop. 5. p. 517. no. 4. Lehm. asper. 1. p. 101.) leaves linear, villously hispid, hoary ; racemes conjugate, usually 3-flowered ; pedicels 3 times longer than the calyx when bearing the fruit; bracteas minute. %. H. Native of Dahuria. Anchusa pauciflora, Roem. et Schultes, 4. p. 774. Plant clothed with white, shining hairs. Stems simple, numerous from the same root. Racemes terminal. Corollalarge for the size of the plant, pale blue, with a yellow throat.

Few-Jlorvered Mouse-ear. PI. \ to \ foot.

§ 2. *Nuts wrinkled, rugged, granular, or bristly.*

36 M. PEDUNCULARIS (Trev. in scrift.ges. freund. berol. 1813. p. 147. t. 2. f. 6, 7, 8,9.) leaves elliptic-roundish, obtuse; racemes many-flowered, bractless, loose ; pedicels longer than the calyxes, thickened above while in fruit; nuts pyramidal, downy. ©. H. Native near Astrachan, in fields and vineyards. Lehm. asper. p. 102. Roots fibrous. Steins numerous from the same root, beset with adpressed hairs, as well as the leaves. Racemes terminal, simple. Calycine segments linear,

or lanceolate, erectly spreading. Nuts beset with hooked bristles at the sides, nevertheless shining.

Peduncular Mouse-ear, or Scorpion Grass. Fl. May, June. Clt. 1821. PI. *I* to *I* foot.

37 M. TENUIFLORA (Viv. fl. libyc. 9. t. 1. f. 2.) plant strigose; stem erect; lower leaves spatulate: superior linear-oblong; calyx 5-parted, equal in length to the corolla, erect when bearing the fruit; bracteas linear-lanceolate, exceeding the flowers. ©. H. Native of Cyrenaica, in dry, exposed parts of mountains. Stem sparingly branched. Flowers disposed in short, imbricate, solitary, terminal spikes. Calyx hispid; with linear, acute, connivent segments. Corolla furnished with 5 fascicles of hairs inside. Nuts triquetrous, having the margins and back tubercled.

Thin-flowered Mouse-ear. PL | foot.

38 M. NANA (Vill. dauph. 2. p. 459.) leaves oblong-lanceolate, villous; racemes few-flowered, leafy at bottom; nuts denticulately crenulated on the margins*. %. H. Native of the alps of Dauphiny, Piedmont, Switzerland, Tyrol, Carinthia, Carniola, and Savoy. Vill. delph. 4. t. 13. prosp. p. 41. t. *23.* f. 3. All. ped. no. 189. Wulf. in Jacq. coll. 1. p. 261. Schmidt, fl. boh. cent. 2. p. 27. Lam. ill. 1. p. 396. no. 1780. D. C. syn. fl. fr. no. 2726. Lois. fl. gall. 1. p. 104. Sut. fl. helv. 1. p. 102. Pers. ench. 1. p. 157. M. pauciflora, Vittm. summ. 1. p. *382.* M. Terglovensis arid M. nana, Vittm. summ. 1. p. 382. M. Terglovensis Hacq. pi. alp. cam. p. 21. t. 2. f. 6. Arctia Hacq. in act. soc. hist. nat. berol. 1780. p. 128. Lithospermum alpinum tomentdsum minimum Tourn. inst. p. 137. Plant tufted, the smallest species of the genus. Root blackish. Steins numerous, simple, leafy. Radical leaves rosulate. Racemes simple, with hardly ever more than 4 flowers. Calyx villous; segments lanceolate, bluntish. Corollas large, sweet-scented; tube pale, about the length of the calyx; limb blue; throat yellow; segments ovate-roundish.

Dwarf Mouse-ear, or Scorpion Grass. Fl. May, July. Clt. 1800. PI. 1 to 3 inches.

39 M. PECTINATA (Pall. itin. vol. 3. append, no. 71. t. E. f. 4.) leaves ovate-lanceolate, villous; racemes erect, strict, bracteate; nuts truncate at the apex, pectinated by erect marginal bristles. %. H. Native among frigid, mossy rocks, at the Jenissee; also about the Baical, and in Kamtschatka. Pers. ench. 1. p. 157. Willd. spec. 1. p. 750. Lam. ill. p. 396. Lehm. asper. p. 105. Root fibrous, adhering to the fissures of rocks. Stems erect, pilose, many from the same root, divided into simple racemes at top. Calyx pilose, with lanceolate, acute segments. Corolla blue, with a pale throat; tube length of calyx.

Pectinate-fruited Mouse-ear. PI. | to 1 foot.

40 M. CILIATA (Rudolph, in mem. acad. st. petersb. 1809. vol. 1. p. *352.* t. 11. Led. fl. alt. 1. p. 191. fl. ross. alt. ill. t. 215.) leaves oblong-lanceolate, canescent, strigose, as well as the stems; racemes many, bracteate, loose; nuts truncate at the apex, girded by a toothed margin, having the teeth erect and ciliated. *If.*. H. Native of Siberia, in exposed places at the Jenissee, especially near Krasnajarsk; also of the Altaian mountains, near Salair. Root perpendicular, fibry. Stems simple, many from the same root, divided into numerous loose racemes at top, strigose and canescent. Pedicels 3 times as long as the flowers. Calyx pilose, with linear segments. Corolla twice as long as the calyx; throat closed by 5 peculiar scales. Habit of *Echinospermum barbatum.*

Ciliated-toothed Mouse-ear. PI. \ to 1 foot.

41 M. ALBIDA (H. B, et Kunth, nov. gen. amer.3.p. 91.) stem erect, much branched, and are, as well as the leaves, hispid, white; leaves sessile, linear, acutish; spikes terminal, leafy; flowers sessile; calyx closed; nuts scabrous. ©. H. Native of Mexico, near San Juan del Rio, and Hacienda de Lira, at the altitude of 1000 hexapods. Lithospermum ramosum, Lehm. asper. p. 328. ex Lam. Leaves 1 to \\ inch long, and one line broad. Corollas very minute, yellow, glabrous; and the processes of the throat orange-coloured. Calyx hispid, with linear-lanceolate segments.

Whitened Mouse-ear. PI. 1 foot.

42 M. GRANULOSA (Ruiz, et Pav. fl. per. 2. p. 5. no. 1.) stem erect; leaves linear-lanceolate, bluntish, rather hispid; corolla twice longer than the calyx; nuts granular. ©. H. Native of Peru, in sandy places in the provinces of Lima and Chancay. Pers. ench. 1. p. 157. Lehm. asper. p. 108. Plant hispid, or strigose. Root fusiform, fibry. Branches disposed in a corymbose manner. Racemes terminal. Flowers distant. Calyx hairy, with obtuse segments. Corolla white. Nuts ovate.

Granular-fruited Mouse-ear. PI. J to 1 foot.

43 M. HUMILIS (Ruiz, et Pav. fl. per. 2. p. 5. no. 4.) stems procumbent; leaves linear, hispid; flowers lateral, secund; nuts rugose. 1/. G. Native of Peru, in fields. Pers. ench. 1. p. 157. Lehm. asper. p. 108. Plant hispid from pili. Root fusiform, fibry. Middle stems erect. Flowers on short pedicels. Calycine segments lanceolate. Corolla white, longer than the calyx. Nuts ovate.

Humble Mouse-ear. PI. procumbent.

44 M. FULVA (Hook, et Arn. in Beech, voy. pt. bot. p. 38.) hispid; stem erect, nearly simple; leaves remote, broad-linear, bluntish; racemes spike-formed, conjugate, bractless; calyx densely pilose, deeply 5-parted; nuts only 2, and one of which is abortive. ©. H. Native of Chili, about Conception. Stem slightly branched upwards. Root fusiform, simple. Pedicels and calyxes clothed with fulvous hairs. Leaves strigose. Corolla white. Nuts wrinkled.

FulvousAmired Mouse-ear, or Scorpion Grass. PL 1 foot.

45 M. MICRANTHA (Pall, in litt. ex Lehm. asper. p. 109.) stems diffuse, decumbent; leaves narrow-lanceolate, obtuse, strigose; flowers nearly sessile, interfoliaceous; nuts rugose, with prominent ribs.—Native of Siberia, at the Volga. Stems strigose, branched, many from the same root. Flowers distant, secund, axillary, and interfoliaceous. Calyx hairy; segments lanceolate, elongated and spreading when in fruit. Corolla small, a little longer than the calyx. Nuts ovate.

Small-flowered Mouse-ear. PI. procumbent.

46 M. CHORISIANA (Cham, in Linnaea, 4. p. 444.) plant beset with white strigose pili; radical leaves linear, acute, obscurely 3-nerved; stems filiform, ascending, usually simple, bearing racemes from the base; segments of calyx, bearded at apex; stigma capitate; nuts wrinkled. ©. $?. H. Native of New California, at port St. Francisco. Calyx beset with adpressed strigae. Radical leaves 3 inches long, and 2 lines broad. Corolla rotate. Calycine segments lanceolate, acute. Said to agree in hairiness and duration with *M. ccespitosa,* Schultes, and in the racemes being leafy at bottom with *JVL parmflbra,* but the nuts are wrinkled, and the habit peculiar.

Choris's Mouse-ear, or Scorpion Grass. PI. \ to 1 foot.

47 M. GLOMERATA (Nutt. gen. amer. 1. p. 112.) stem erect, simple; leaves spatulate-linear, those on the stem rather acute, hairy; spikes pedunculate, axillary, conglomerate, bifid, sessile above; calyx extremely hispid; lobes of corolla entire. $. H. Native of the Missouri, on arid, argillaceous hills, around the great Bend. Cynoglossum glomeratum, Pursh. fl. amer. 2. p. 729. Rochelia glomerata, Torrey. Radical leaves villous, obovate-spatulate. Corolla white; tube constricted near the base. Stigma capitate. Stamens included beneath the arched protuberances of the orifice. Nuts rugose, with an elevated, scabrous, or minutely crenulated ridge in the centre.

Glomerate-spiked Mouse-ear, or Scorpion Grass. Fl. May, Aug. Clt. 1812. PL \ to 1 foot.

†*Species not sufficiently known.*

48 M. AUSTRA'LIS (R. Br. prod. p. 495.) hispid; leaves oblong-lanceolate; calyxes equal to the tube of the corolla, beset with hooked hairs. © ?. H. Native of New South Wales, about Port Jackson; and of Van Diemen's Land. R. Br. says that the anthers are peltate in *Myosdtis,* and that there is hardly any difference between it and *Anchusa,* unless in the one the racemes are bractless, and bracteate in the other.

Southern Mouse-ear. PL

49 M. ALPINA (Lapeyr. abr. p. 85. fl. pyr. t. 64.) nuts smooth; stem simple, sub-bifid; flowers capitate; calyxes hoary from villi; leaves lanceolate, those at the bottom of the stem very villous. %. H. Native of the Pyrenees. This is a peculiar species.

Alpine Mouse-ear. PL tufted.

50 M. LINGULA'TA (Lehm. asper. p. 110.) the specimen received by Lehmann under this name is nearly allied to *M. palustris,* and is probably the *M. commutata,* Schultes. It has also been received under the name of *M. uligindsa,* Schrad.

Lingulate-leaved Mouse-ear. PL 1. foot ?

51 M. RAMOSISSIMA (Rochel, Lehm. asper. p. 111.) stem much branched, beset with spreading hairs; floriferous branches beset with adpressed bristles; calyx divided beyond the middle, unequal, a little shorter than the corolla: with linear, hispid, obtuse segments. ©. H. Native country unknown. Flowers very small, blue.

Much-branched Mouse-ear. PL \ to | foot.

Cult. Some of the species of this genus are very delicate and beautiful when in blossom, as *M. palustris,* the *Forget-me-not, M. rupestris, M. repens, M. nana,* and all the perennial kinds. They thrive best in moist places, or by the edges of ponds or ditches; they also may be grown in pots and placed among the other alpine plants. The annual species grow best in dry sandy soil, or on old walls where the seed may be sown. Most of the perennial species may be increased by dividing at the root, and all by seed.

XXVIII. EXARRHE^{N}NA (e£, *ex,* without; and *atfrjv, arrhen,* a male; in reference to the exserted stamens.) R. Br. prod. p. 495. Lehm. asper. *76.*

LIN. SYST. *Pentdndria Monogynia.* Calyx 5-cleft. Corolla salver-shaped; throat closed by arched processes; limb 5-parted, obtuse. Stamens exserted; anthers peltate. Style length of stamens; stigma nearly simple. Nuts 4, distinct, 1-celled, fixed to the bottom of the calyx, umbilicate at the base.—A pilose herb, with the habit of *Myosdtis,* and differs principally from that genus in the exserted stamens. Leaves decurrent. Racemes conjugate or solitary, bractless. Flowers white, sweet-scented.

1 E. SUAVE'OLENS (R. Br. 1. c.) *Q* ?. H. Native of Van Diemen's Land. Lehm. asper. 1. c. Myosdtis suaveolens, Poir. suppl. 4. p. 44.

Sweet-scented-dowered Exarrhena. PL

Cult. For culture and propagation see *Myosdtis* above.

XXIX. BOTHRIOSPE'RMUM (from *fiodpiov, bothrion,* a small pit, and *anepfia, sperma,* a seed; in reference to a deep pit on the inner side of each carpel.) Bunge, in mem. acad. petersb. 2. p. 121.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted, permanent at length, a little widened or increased. Corolla salver-shaped; throat furnished with bifid, arched processes; tube short; limb 5-cleft. Anthers nearly sessile, oblong. Stigma capitate. Nuts 4, 1-celled, fixed to the bottom of the calyx, reniform, granular on the outside, perforated at the base, and deeply umbilicate on the inner side; each pit girded by a neck. —This genus is nearly allied to *Myosbtis, Exarrhena* and *Borago.* Habit of *Myosbtis.*

1 B. CHINE'NSE (Bunge, 1. c.) $. H. Native of China, near Pekin, among rubbish. Herb very hairy. Leaves oblong, entire, attenuated into the petioles. Racemes leafy. Flowers blue, like those of *Myosdtis.* All parts of the plant are more robust than most species of *Myosdtis.*

China Bothriospermum. PL 1 foot ?

Cult. For culture and propagation see *Myosdtis* above.

SUBTRIBE II. CYNOGLO'SSEJE. Nuts fixed to the central column, not perforated at the base.

XXX. ECHINOSPERMUM (from $e_{X}ivo_{Q}$, *echinos,* a hedgehog, and *(Tnepfxa, sperma,* a seed; in allusion to the seeds or nuts being echinated.) Swartz, ex Lehm. asper. p. 113. Blum, bijd. 846. Led. fl. alt. 1. p. 197. Myosotis species, Lin. Juss. Lam. &c. Lam. ill. t. 91. Gsertn. fruct. 1. t. 68. f. 1.—Lappula Rivin.—Mcench. meth. 1. p. 416.—Rochelia, Lam. ill. t. 91, under Myosotis. Roem. et Schultes, syst. 4. p. xi. and p. 108.—Echioides species, Mcench.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla salver-shaped, or funnel-shaped; throat furnished with short scales; limb 5-parted, obtuse, spreading. Nuts 4, distinct, 1-celled, triangular, compressed, echinated, fixed to the central column, not perforated at the base.—Scabrous, annual, or biennial-branched, erect plants. Leaves decurrent. Racemes bracteate, terminal. Flowers small, blue. "The Linnean species of *Myosdtis,* with echinated fruit, constitute a distinct genus, nearly allied to *Cynoglossum,* from the nuts being adnate to the central column, but differs from that genus in the nuts being compressed, not depressed, and in the racemes being bracteate." R. Br. prod. p. 494.

§ 1. *Fruit drooping, or defiexed. Racemes almost bractless.*

1 E. ZEYLA'NICUM (Lehm. asper. p. 116.) leaves somewhat cordately ovate, callously hispid; racemes erect, very long, bractless; nuts densely clothed with sub-imbricate, glochidate prickles. %. H. Native of Ceylon, on the sea-shore among the sand. Myosotis Zeylanica, Swartz in litt. Lehm. in act. soc. schrift, hall. 3. p. 20. Cynoglossum Zeylanicum Thunb. in litt. Anchusa Zeylanica, Vahl. herb. Horn. enum. hort. hafn. 1807. Rochelia Zeylanica, Roem. et Schultes, syst. 4. p. 108. Plant hispid, erect, branched. Corollas small, blue, a little longer than the calyx. Calycine segments ovate, obtuse.

Ceylon Echinospermum. PL 1 to 2 feet.

2 E. VIRGINICUM (Lehm. asper. p. 117.) leaves ovate-oblong, acuminated, scabrous above, downy beneath; racemes divaricate, bracteolate; nuts beset with dense, scattered, glochidate prickles. ©. H. Native of North America, in woods, especially in Virginia, Carolina, and Kentucky. Myosotis Virginica, Lin. spec. ed. 2d. vol. 1. p. 189. Pursh. fl. 1. p. 134. Willd. spec. 1. p. 748. Mill. diet. no. 1. Michx. fl. bor. 1. p. 129. Wahl. fl. lapp. p. *56.* Rochelia virginica, Rcem. et Schultes, syst. 4. p. 108.—Mor. hist. 3. p. 449. sect. 11. t. 30. f. 9. Myosotis seminibus hispidis, foliis lanceolato-ovatis, Gron. virg. p. 19. i Plant erect, scabrous, branched; hairs on the stem retrograde. Corolla white, a little longer than the calyx. Calyx pilose, with ovate lanceolate segments, which are elongated and divaricate in the fruit-bearing state. "Leaves large. Flowers small, pale blue." Pursh. 1. c.

Virginian Echinospermum. Fl. June, July. Clt. 1699. PI. 1 to \\ foot.

3 E. JAVA'NICUM (Lehm. asper. p. 118. Blum, bijdr. p. 846.) leaves lanceolate, strigose above, hairy beneath; racemes erect, loose, bifid, bractless; nuts depressed, densely clothed with scattered, somewhat imbricate, glochidate prickles. 1/. H. Native of Java, on mounts Gede and Salak, in dry, exposed places. Myosotis Javánica, Swartz in litt. Lehm. in act. soc. schrift. hall. 3. p. 20. Rochèlia Javánica, Roem. et Schultes, syst. 4. p. 108. Cynoglóssum Javánicum, Thunb. in litt. Stem erect, downy. Racemes bifid. Corolla blue; tube a little longer than the calyx, hispid, with ovate obtuse segments. This species differs from *E. Firginicum,* to which it is very nearly allied, in the floriferous branches being erect, not divaricate, in the leaves being elliptic-lanceolate, short-acuminated, strigose above, and hairy beneath, not villous ; and in the racemes being longer and bractless.

Java Echinospermum. PL 1 foot.

4 E. BORBÓNICUM (Lehm. asper. p. 119.) suffruticose; leaves lanceolate-linear, very long, nearly naked ; racemes erect, bractless ; nuts beset with densely scattered, very short, glochidate prickles. F? . S. Native of the island of Bourbon. Myosótis Borbónica, Lehm. in act. soc. scrift. hall. 3. p. 25. t. 2. Pers. ench. 1. p. 157. Myosótis Borbóniae, Lam. ill. 1. p. 396. no. 1777. diet. 4. p. 401. Rochèlia Borbónica, Roam, et Schultes, syst. 4. p. 108. Stem scabrous, branched at top. Leaves scabrous above from white dots, and almost glabrous beneath. Flowers in 2 rows. Calyx obovate ; with oblong lanceolate, bluntish segments. Corolla as in *Myosótis palústris.*

Bourbon Echinospermum. Shrub 1 to 1-J foot.

5 E. DEFLE'XUM (Lehm. asper. p. 120.) leaves oblong-lanceolate, bluntish, hairy ; racemes erectly spreading, bracteolate at the base ; nuts having a simple series of prickles along the margins, which are connate at the base, and glochidate at the apex. $. H. Native of Lapland, Norway, Hungary, Siberia, and Styria, at the bottom of the Alps, in stony shady places. Myosótis deflexa, Wahl. fl. carp. p. 47. fl. lapp. p. *55.* act. stockh. 1810. p. 113. t. 4. Horn. hort. hafn. 1. p. 174. Oed. fl. dan. t. 1568. Rochèlia deflexa, Roam, et Schultes, syst. 4. p. 109. Root fusiform, fibry. Stem hispid, branched at top. Calyx hairy, with oblong, obtuse segments, which are elongated, divaricate, and reflexed in the fruit-bearing state. Corolla size and colour of *E. Idppula.* There are varieties of this, with blue or white, smaller or larger corollas.

Deflexed-calyxed Echinospermum. Fl. May, June. Clt. 1820. PL I to 1 foot.

§ 2. *Fruit erect. Racemes leafy.*

6 E. LA'PPULA (Lehm. asper. p. 121.) stem branched at top ; leaves lanceolate, beset with incumbent strigae, ciliated ; calyx at length spreading, exceeding the pedicels ; corolla small, exceeding the calyx, with an erectly spreading limb ; nuts furnished with a double row of glochidate prickles along the margins, having the disk and sides tubercled. ©. H. Native of Europe, Asia, and North America, among rubbish, stones, and on walls ; and of China, on mountains. Myosótis Lappula, Lin. spec. ed. 2d. vol. 1. p. 189. fl. suec. ed. 2d. no. 158. All. ped. 1. p. 191. Smith, prod. fl. graec. 1. p. 112. Bess. fl. gall. 1. p. 145. Pursh. fl. 1. p. 134. Baumg. fl. trans. 1. p. 118. Oed. fl. dan. t. 692. Wahl. fl. lapp. p. 56. Bieb. fl. taur. 1. p. 120. Lam. ill. 91, Lappula Myosótis, Mcench. meth. p. 417. Cynoglóssum Lappula, Scop. fl. cam. ed. 2d. vol. 1. p. 25. Rochèlia Lappula, Roem. et Schultes, syst. 4. p. 109.—Hall. hist. helv. no. 589.—Column, ecphr. p. 179. icon.—Clus. hist. 2. p. 163. f. 1. Root fusiform. Stems scabrous from pili, branched at top. Calycine segments linear-lanceolate, spreading in the fruit-bearing state. Corolla with a very short tube; limb exceeding the calyx, blue. There is also a white flowering variety.

Far. /3. squarrósum (Lehra. asper. 1. p. 122.) angles of nuts beset with hooked prickles; leaves lanceolate, pilose, callous at apex. ©. H. Myosótis squarrósa, Retz. obs. 2. p. 9. no. 10. Willd. spec. 1. p. 749, exclusive of the syn. of Pall. Pers. ench. 1. p. 157.

Burdock Echinospermum. Fl. April, Aug. Clt. 1656. PL 1 to 1| foot.

7 E. HETERACA'NTHUM (Ledeb. suppl. ind. hort. dorp. 1823. p. 3. fl. alt. 1. p. 198.) stem erect, branched above; leaves strigose ; corolla hardly exceeding the calyx ; calyxes at length, spreading, exceeding the pedicels ; nuts furnished with 2 rows of glochidate prickles along the margins : those in the inner row connate at the base, having the disk tubercled, and the sides tubercled and prickly. ©. H. Native near Astrachan.

Farious-spined Echinospermum. PL 1 foot.

8 E. INTERMEDIUM (Ledeb. fl. alt. 1. p. 199. fl. ross. alt. ill. t. 180.) stem branched above; leaves strigose; corolla length of calyx; flowers pedicellate ; pedicels a little longer than the calyx in the fruit-bearing state; nuts furnished with a single row of horizontal, approximate, glochidate prickles along the margins, having the disk granulated, and the sides wrinkled. ©. H. Native of Altaia, in sandy places at the river Katunga. Habit exactly of *E. Lappula.* Stem hispid. Leaves oblong-linear. Racemes solitary or twin. Bracteas ciliated. Corollas blue.

Intermediate Echinospermum. PL 1 to 1^- foot.

9 E. PA'TULUM (Lehm. asper. p. 124.) branches divaricate, spreading ; leaves oblong-lanceolate, beset with spreading strigae ; corolla length of calyx, at length spreading; flowers sessile ; nuts furnished with a single row of distant, elongated, glochidate prickles along the margins, having the sides and disk beset with acute prickles. ©. H. Native of Caucasus, at the rivers Kuma and Terek ; also on the lower Volga, about Sarepta, and about the town of Astrachan, &c. Myosótis squarrósa, Bieb. cauc. 1. p. 120, exclusive of the synonymes of Retzius, Horn. hort. hafn. 1. p. 174. Willd. enum. 1. p. 176. Rochèlia squarrósa, Rcem. et Schultes, syst. 4. p. 124. M. Lappula, var. Pall, kin 3. p. 718. no 71, in a note. Root simple, perpendicular. Stem beset with rigid spreading hairs. Calyx pilose; segments linear, erectly spreading inflorescence, but in the fruit-bearing state they are divaricate and elongated. Corolla small, blue, a little longer than the calyx, like those of ***Myosótis arvensis.***

Spreading-hvdiuchedi Echinospermum. FL April, Aug. 1802. PL \ to \\ foot.

10 E. STRÍCTUM (Ledeb. fl. alt. 1. p. 200. fl. ross. alt. ill. t. ^ branches erect; leaves lanceolate, beset with spreading strigse ; tube of corolla length of calyx; flowers pedicellate ; pedicels when bearing the fruit length of calyx ; nuts furnished with a single row of erect, approximate, glochidate prickles along the margins, keeled and beset with obtuse tubercles on the disk, and wrinkled on the sides. ©. H. Native of Altaia, in sandy places at the river Irtysch, between the river Kurtschum and Lake Noor-Saisan. Sterns many from the same root. Limb of corolla pale blue. Bracteas much smaller than in *E. pdtulum.*

Strict Echinospermum. PL 1 foot.

11 E. TE^NUE (Ledeb. fl. alt. 1. p. 201. fl. ross. alt. ill. t. 182.) stem branched above, hispid from strigse, as well as the leaves; leaves oblong-linear, obtuse; corolla exceeding the calyx a little ; calyxes when bearing the fruit divaricate, twice as long as the pedicels ; nuts furnished with a single row of short, distant, glochidate prickles along the margins, having the disk a little

keeled, and the sides tubercled. ⊙. H. Native of Altaia, at the river Tscherysch, and near Smejew. The whole plant is hispid from spreading hairs. Racemes terminal, elongated, usually solitary, rarely twin; bracteas narrow, ciliated. Corolla pale blue. Segments of calyx linear.

Slender Echinospermum. Pl. ½ to 1 foot.

12 E. MICROCARPUM (Ledeb. fl. alt. 1. p. 202. fl. ross. *i,* alt. ill. 1. 128.) stems branched above, and are, as well as the leaves, silky from strigæ; leaves oblong, or •ivate-oblonj», attenuated at the base: radical ones rosulate; tube of corolla exceeding the calyx; segments of calyx erectly spreading while bearing the fruit, about equal in length to the pedicels; nuts furnished with a single row of approximate, glochidate Tickles *a'* long the margins, having the disk a little keele (1, ami the keel and sides tubercled. ☿. H. Native of Altaia, in stony places, near ihe summits of the Arkaul mountains; and on moi «s terini: ntains near Buckterminsk, and near the mine of N colnjew, Stems many from the same root. Racem al, and sometimes axilliry. Bracteas ciliated. Corolla ; with a pole bhte limb; and the scales on the throat yellow.

Small-fruited Echinospermum. PL £- to 1 foot.

13 E. COMPLICATUM (Lehm. asper. p. 12 ',) branches diva* ricately reflexed; leaves lanceolate, villous; pedicels tlickined when bearing the fruit; nuts furnished with a single row of glochidate prickles along the margins. *11.* H. Native of Siberia. Root fusiform, simple, woolly. Stem branched above, beset with incumbent hairs. Racemes ir the most pan conjiigate, with a solitary flower in the fork; flowers distant. Calyx strigose; with oblong scutish segments, which are elongated and divaricate in the fruit bearing state. Corolla fine itlut: tube nearly the length of the calyx.

Club-bearing Echinospermum. PL 1 foot.

14 E. MACROCARPUM (Led. (1. alt. 1. p. *2t>3.* fl. rciss. alt. ill. i. 302.) stems branched above, and are, as well as the leaves, rather silky from adpressed soft strigæ; leaves as in *E. microcarpum;* tube of corolla a little sh arter than the calyx; but twice shorter than the limb; calycine segments ITCCC in the fructiferous state, exceeding the pedicels; nuts edged with a single row of very short prickles, having the disk . tubercled. ⊙. H. Native of Altaia, in exposed stony places between Batukowa and Tscherremschuka, and near Bar '.tarmsk. Very like *E. microcarpum.* Racemes elongated. . Calyx Natty. Corolla varying to blue, red, an •/ white.

Miium. PI. I i o 2 feet.

Short-spurred Echinospe . ross. ah. ill. 495. 15 E. SPINULOSUM (Ledeb. fl. alt. 1. p. 204. fl. 'i, as L 28.) leaves oblong, glabrous above, but hispid beneath, as salve i ; tube of corolla len»ih of parte as well as the stems which are branche yx, and about equal in length to the pedicels; nuts furnished lengt a single row of very long glochidate •lickU'i along Lhe margins, having the disk keeled and l>nckly, anil the sides tubercled. ⊙. H. Native of .\h;ii3, in salush s;;ii(ly plao s at the river Irtysch, not far from the Lake called Noor-Saisan. Stems many from the same root, rather tufted I. liadical li aves rosulate, sub-spatulate, obtuse; cau'iue leaves (illated at the base. Racemes solitary or twin, bracteate. I alyx hispid. Corolla small white, rarely pale blue,

Half-glabrous Echinospermum. Pl. ½ to 1 foot.

16 E. SACRA'STRUM (Ledeb. fl. alt. |. p. 205. fl. ross. alt. ill. i. 29.) stem branched; leaves strigose, oblong, obtuse, tapering to the base; corollas twice as large as the spreading ilyx; fruit-bearing pedicels about equal in length to the calyx; nuts furnished with a single row of glochidate prickles, which are dilated at the base, upper ones the smallest, having the disk keeled; the keel prickly, and the sides somewhat tubercled. ⊙. or ☿. H. Native of Altaia, in sandy, salush places, at the river Irtysch, not far from the Lake called Noor-Saisan. Stem solitary, or many from the same root. Leaves strigose. Racemes terminal, erect, strict. Bracteas similar to the leaves. Calyx hispid. Corolla with a white tube, one-half shorter than the calyx, and a blue limb, which is 3 times l inger tlia;. the tube.

Large-flowered Echinospermum. Pl. ½ to 1½ foot.

IT E. MAXIMUM (Lehm. asper. p. 126.) branches iivaricatc; leaves lanceolate, obtuse, beset with spreading hairs; pedicels thickened in the fruit-bearing state; nuts large, furnished with a single row of somewhat branched, glochidate, very long prickles along the inai gins. ⊙. H. Native of Siberia, at the Volga, in nitrous places. Myosotis echinophora. Pall. itin. 3. appt i d. no. 71. t. j. f. 1. Willd. spec. 1. p. 750. Rochelia echinophora, Roem. et Schultes, syst. 4. p. ' *10.* I lant hispid from white hairs. Root simple, perpendicular. Calycine segme: ts lanceolate, elongated, and spreading in the fruit-bearing state. ' Corolla small, nea |y the length oi the calyx, with a blue limb and a white thr pei ::ium. PI ½ foot.

18 E. i | or. p. i 27.) stem simple, straight; l^-ives lanceolate-linear, besei with spreading hairs, reflexeil; nuts furnished with ;i sii gle row of short glochidate gins, £.11. t* ative of Russia. Myosotis • i. lialn. 1. p. 174. Redówskii, Roem. ho Rochelia Redówskii, R«"ii r yst. 4, p. 110 et Schultes, syst. Root fusiform. Stem EUtc mi ;la •<'•• ami I rminal, simple or strigose. -ifid. Calyx ith linear segmer ts, hardly the length of the corolla, pilose, w e elongated and spreading in the fruit-bearing state.

Redowski's Echinospermum. Fl. May, July. Clt. 1819. Ti. 1 to 2 feet.

19 E, i: ARRA'TUM (Lehm. asper. p, 128.) stem branched abc> ; leave : lanceolate! beset nidi inci mbent hairs; corolla large, with a flat limb; nuts tunii shed with a double row of very short glochiciate prickles along the edges. ⊙.11. Native of Tauria, DD calcareous monii ains, to Caucasus *at* Iber a, in gravelly i.iiii exjioseil placet Myosotis barbata, Bieb. fl. cauc. 1. ;.. 121. pi, cent. ross. t. 36. Myosotis, Pall. cat. |»l. tatir. in nov ser. p ;rop. 1/1)2. p. 303. Rochelia barbata, Roem. et Schultes, syst. . p. 1 10. Root fibry, reddish. Stem beset wttli soft incumbent hairs. Branch* leafy, bearing the flowers attlie aJii'v, tor the most part bifid, Calyx villous, with oblong, acuiiah segments, which spr cad in the fruit-b earing state. Corolla fine azure blue, size of those nf *Myosotis palustris.* Proceses o : [ho throat orange colour.

Bearded Echinospermum. PI. June, Jnly. Clt. !828. PI. 1 to 1½ foot.

20 E. ORA'TUM (Lehm. asper. p. 129.) stems procumbent, filif uni ; le:r es linear; nuts vehicated; vehiue glochidate. ⊙. H. Nit live of Chili, about Conception in fields, and on hills. Myosotis gracilis, Ruiz, et Pav. fl. per. *2.* |>. *ij* nnd *G.* no. *$,* Per-. ench. 1. p. 157. Rocbelia gi acilis, Roem. et Scbi ltes, syst. .+. p 111. Horn capillary. Plant rather hispid. Flu wers lateral, secund, disposed in a loose, leafy raceme. Corolla white.

Wenk Echinospermum. Pl. procumbent.

21 E. MARSHA'TUM (Lehm. asper. p. 130.) stem erect, branched above; leaves oblong, obtuse, beset with sprea !mj£ hairs; nuts furnished with a single row of glochidate prickles aloii the margins, which are combi t-d to the middle. 0. H. Native on the Lower Volga, about Astrachan, in vineyards and sandy places. Myosotis marginata, Bieb. fl. cauc. 1. p. 120. Horn. hort. hafn. 1. p. 174. Willd. enum. :. I.]). 178. Rochelia marginata, Roem. et Schultes, syst. . t simple, perpendicular. Stem pilose. Racemes erect. Calyx pilose; segments lanceolate, spreading in the fruit-bearing state. Corolla small, a little longer than the cal yx, blue.

4. p. 11" Km

Margin-fruited Echinospermum. Fl. April, Aug. Clt. 1824. Pl. ½ to 1 foot.

22 E. OTTAVIANUM (Lehm. purg. 2. p. 33.) stem and leaves hairy; radical leaves petiolate, oblong-lanceolate; upper cauline ones ovate, obtuse, sessile; racemes erect, simple, bracteate; nuts covered with glochidate prickles all over. ☉. H. Native of the north-west coast of America. Myosotis diffusa, Dougl. mss. Stem divided at top into racemiferous branches. Leaves somewhat 3-nerved. Pedicels subsecund, drooping in the fructiferous state. Calycine segments oblong-linear, blunt. Corollas large, white.

Diffuse Echinospermum. Pl. 1 foot.

23 E. SYMPHYTOIDEUM (Lehm. asper. p. 131.) stems erect, subfrutticose; leaves lanceolate, obtuse, hispid; nuts furnished with a single row of long, glochidate prickles along the margins, which are combined to the middle. ♄. G. Natives of the Cape of Good Hope. Myosotis cynoglossoides, Lain. ill. no. 1778. p. 396. Pers. ench. 1. p. 137. Cynogl. echinatum, Thunb. in Schrad. new. journ. bot. 1809. p. 4 tf. pmd, I. p. 34. Pers. ench. 1. p. 60. Willd. spec. 1. p. 788. Rochelia cynoglossoides, Roem. et Schultes, syst. 4. p. 111. Stems numerous, branched from the base, clothed with adpressed hairs. Racemes erect, secund. Calyx hispid; with lanceolate segments, which spread in the manner of a star in the fruiting state. Corolla blue?

Cynoglossum-like Echinospermum. Shrub 1 to 2 feet.

24 E. VARIEGATUM (Lehm. asper. p. 132.) stem suffruticose, dichotomously branched at top; leaves linear, densely pilose, greyish; nuts muricately spinose. ♄. G. Native about Alexandria. Myosotis spinosa, Vahl, symb. 2. p. 32. Willd. spec. 1. p. 790. Lehm. in act. nat. scrut. hal. 3. 2. p. 24. Lam. ill. t. 1. Anchusa spinosa, Forsk. descr. p. 41. Del. cat. hort. p. 42. t. 17. f. 2. Plant greyish. Leaves bluntish. Pedunculs axillary, solitary, in the branches. Leaves ?; undfir each calyx. Keel of nuts toothed.

Vahl's Echinospermum. Shrub ½ foot.

Cult. Most of the species of this genus have rather a weed-like appearance; and therefore they are chiefly to *he* found in botanical gardens. They are of the most easy culture; only requiring the treatment given to other common hardy annuals and perennials. The two last species, being natives of America, should be kept in pots and placed among other greenhouse plants. They are all increased by seed.

XXXI. ROCHE LI A (named after Anthony Rochel, director of the botanic garden at Pest, in Hungary, who has written on the plants of the Carpathian mountains.) Rchb. consp. in icon. pl. rar. 2. p. 15. t. 125. f. 236. 237. Ledeb. fl. alt. 1. p. 172. fl. ross. alt. ill. t. 241. but not of Roem. et Schultes.

LIN. SYST. *Pentándria, Monogynia.* Calyx 5-parted. Corolla funnel-shaped, 5-lobed; throat furnished with inflected scales. Nuts 2, oblique, sinuate to the indurated style, or central column, combined, 1-celled, 1-seeded.—Hispid plants, with narrow leaves, and terminal racemes of flowers.

1 R. CZIOCA'NA (Ledeb. l. c.) plant hispid from spreading pili; cauline leaves oblong-linear; nuts smooth, glabrous. ☉. H. Native of the Soongarian steppe, in sterile places at the river Kurtschum. Herb green. Stem simple, divided into 2 or 3 racemes at top, or branched from the base to the apex: the branches very straight, and adpressed to the stem.

Smooth-fruited Rochelia. Pl. ½ foot.

2 R. STELLULA'TA (Led. fl. alt. 1. p. 172.) plant hoary, and hispid from erectish strigæ; cauline leaves oblong-linear, somewhat spatulate; nuts strigose. ☉. H. Native of Siberia.

Starry Rochelia. Pl. ½ foot.

Cult. For culture and propagation, see *Echinospermum* above.

XXXII. OMPHALO'DES (from ομφαλος, *omphalos*, the navel; and ειδος, *eidos*, like; nuts or fruit resembling the navel; hence some species have been called Venus's Navelwort.) Tourn. inst. t. 38. Mœnch. meth. p. 420. Lehm. asper. p. 180.—Cynoglóssum species, Lin. gen. no. 151, and Schreb. no. 242. Juss. gen. p. 131. ed. Usteri. p. 147. Gærtn. fruct. 1. no. 426. t. 87. f. 4. C.—Picótia species, Roem. et Schultes, syst. 4. p. 84—85.

LIN. SYST. *Pentándria, Monogynia.* Calyx 5-cleft. Corolla rotate; throat closed by short vaulted processes; limb 5-parted, obtuse. Nuts 4, 1-celled, depressed, cup-shaped, with an inflexed membrane along the margin, fixed to the central column, not perforated at the base.

§ 1. *Perennial plants, with usually rhizomatous roots, broad green leaves, and terminal racemes of blue or white flowers.*

1 O. KI'RTDA (Lehm. in new schrift. gesell. berol. 8. p. 97. asper. p. 181.) leaves oblong-lanceolate, nerved, glabrous above, and shining, downy beneath; lower ones on long petioles; superior ones sessile. If. H. Native of Portugal, in humid places, under the shade of trees. Hoffm. et Link, fl. port. 1. p. 104. t. 25. Cynoglóssum nítidum. Willd. enum. 1. p. 181. Sims, bot. mag. t. 2529. *Cynoglóssum Lusitánicum*, Lam. dict. 2. p. 23H. Br< t. fl. lus. 1. p. 296. Cynoglóssum lanceolátum of Viiiit ns Herbaria. Picótia nítida, Roem. et Schultes, syst. 4. p. 84. Cult. The species are elegant border flowers, and of the most easy culture. The perennial kinds grow well under the shade of trees or shrubs, and are increased by division. The seeds of annual species should be sown in spring, in the open border.

XXXIII. OVNOGLO'SSUM (ironi [illegible], a dog; and γλωσσα, *glossa,* a tongue; from the form of the leaves of most of the species; in English, however, the generic name is *Hound's-tongue,* instead of *Dog's-tongue.*) Tourn. inst. t. 57. Lin. gen. no. 183. Schreb. gen. no. 243. Juss. gen. 131, ed. Usteri, p. 147. Lam. ill. no. 256. t. 94. Gœrin. fruct. 1. no. 110. t. 67. f. 4. A. B. Lehm. asper. p. 184. exclusive of Mtittt: and Rudéra.

Lin. syst. *Pentandria, Monogynia.* Calyx J-pamd, Corolla

funnel-shaped, or subrotate; throat furnished with erect processes. Stamens inclosed. Stigma nearly simple. Carpels 4, 1-celled, depressed, echinated, imperforated at the base, fixed to the central column.—Tall, robust, downy plants, soft to the touch. Leaves large, broadest at top. Racemes usually bractless, secund, terminal, simple, bifid, or twin. The prickles on the outside of the carpels are usually glochidate.

§ 1. *Stamens inclosed.*

1 C. PAUCIFLORUM (Ruiz, et Pav. fl. per. 2. p. 6.) stem erect; leaves lanceolate, narrowed towards the base ; peduncles usually 7-flowered ; flowers on short pedicels. ©. H. Native of Chili, in fields about Conception. Lehm. asper. p. 139. Plant densely hispid, canescent. Peduncles axillary. Corolla twice as long as the calyx.

Few-flowered Hound's-tongue. PI. 1 to 2 feet ?

2 C. JAPONICUM (Thunb. fl. jap. p. 81. icon. dec. 3. t. 2.) stems prostrate ; leaves oblong, stem-clasping, acute, villous, finely serrulated. ©. H. Native of Japan. Lehm. asper. p. 139. Root fibrous. Calyx villous. Corolla purple, longer than the calyx.

Japan Hound's-tongue. PI. decumbent.

3 C. DIFFU'SUM (Roxb. fl. ind. ed. Wall. 2. p. 7. Lehm. asper. p. 140.) stems ascending, diffuse; leaves obovate-spatulate, petiolate, strigosely pilose, terminated by a short acumen ; racemes leafy. ©. H. Native of Bengal. Root fusiform, fibrous. Calyx pilose, with ovate-lanceolate, acuminated segments. Stems and pedicels canescent from long hairs. Corolla with a gibbous tube ; its mouth contracted by 5 broad, emarginate scales. Carpels obovate, scabrous.

Diffuse Hound's-tongue. PL ascending.

4 C. PROSTRA'TUM (Hamilt. mss. ex D. Don, prod. fl. nep.' p. 100.) plant hispid from bristles, prostrate; radical leaves obovate, on long petioles: cauline ones elliptic, sessile ; flowers on short pedicels, generally extra-axillary ; nuts muricate. ©. H. Native of Nipaul, at Baguanpur.

Prostrate Hound's-tongue. PI. prostrate.

5 C. FURCA'TUM (Wall, in Roxb. fl. ind. 2. p. 6. D. Don, prod. fl. nep. p. 100.) stem erect; leaves elliptic-oblong, acute, half stem-clasping, silky on both surfaces, as well as the stem ; racemes erect, thin-flowered. %. F. Native of Upper Nipaul, at Suembu. C. caeruleum, Ham. mss. Racemes twin, woolly, bractless. Calycine segments ovate, obtuse, bristly. Corolla blue. Carpels glochidate. Very like a species of *Myosbtis.*

For ked-r seemed Hound's-tongue. PI. lj foot.

6 C. MARIF6LIUM (Roxb. fl. ind. ed. Wall. 2. p. 8.) plant diffuse, hairy; leaves bifarious, oblong; flowers solitary, between the leaves ; corolla half the length of the calyx. ©. H. Native of Bengal. Leaves \ inch long. Flowers on short pedicels, of a pale, whitish blue. Stigma emarginate. Nuts rough, round, almost hid by the calyx.

Marum-leaved Hound's-tongue. PL procumbent.

7 C. PANICULA'TUM (Hook, et Arn. in Beech, bot. p. 37.) plant clothed with adpressed hairs ; leaves lanceolate, very acute, gradually tapering into the petioles, ciliated, shining, clothed with hoary, silky down beneath; racemes terminal, panicled, loose, few-flowered, bracteate; fruit bearing pedicels, very long, spreadingly deflexed; carpels glochidate. $. ? F. Native of Chili, at Conception ; and of Peru, in Murilla Bay.—The base of the plant is frutescent. Leaves 3-4 inches long, with slightly revolute edges.

Panicled Hound's-tongue. PL 1| to 2 feet.

8 C. CHEIRIFOLIUM (Roy. lugdb. p. 406. Lin. spec. p. 193.) stem erect; leaves lanceolate, obtuse, tomentose, hoary ; racemes bracteate; corolla twice as long as the calyx. $.? %. F.? Native of the South of Europe, Levant, and Barbary. Horn, hort. hafn. 1. p. 177. Lapeyr. abr. p. 87. Hoffm. et Link, fl. port. 1. p. 191. Vill. dauph. 2. p. 457. All. ped. 1. no. 171. Gouan. hort. monsp. p. 82. Lehm. asper. 141. C argenteum, Lam. fl. fr. 2. p. 277.—Dalech. hist. 2. p. 1261. *L* 1. Stems many from the same root, simple. Plant hoary from fine tomentum. Racemes terminal, simple, rarely bifid. Calycine segments lanceolate, bluntish. Corolla rose-coloured; processes of the throat deep red. Carpels covered with glochidate prickles.

Far. /3, *lanatum* (Lehm. asper. p. 141.) leaves villous; calyxes hairy ; stamens rather longer than the corolla. $. F. Native of Barbary. Anchusa lanata, Lin. spec. p. 192. Desf. fl. atl. 1. p. 158. Willd. spec. 1. p. 758. Lam. ill. gen. no. 1813.

Far. y, *calcaratum* (D. C. fl. fr. 6. p. 422.) $. H. Native of France.

Wall-flower-leaved Hound's-tongue. Fl. June, July. Clt. 1596. PL | to 1 foot.

9 C. DECU'RRENS (Ruiz, et Pav. fl. per. 2. p. 6. no. 1.) stem erect, angularly winged ; leaves broad, lanceolate, acute, decurrent, veiny, hispid. ©. H. Native of Chili, in groves. Lehm. asper. p. 143. Feulle, chil. 2. t. 49. Hook, et Arn. in Beech, voy. pt. bot. p. *37.* Plant hispid. Flowers distant. Corollas whitish-blue. Carpels echinated with glochidate bristles. Racemes terminal, leafy.

Decurrent-lesived Hound's-tongue. PL 1 to 2 feet ?

10 C. MEXICA'NUM (Cham, in Linnaea, 5. p. 114.) stem erect, hairy, leafy, branched at the top ; radical leaves elliptic, mucronate, on long petioles, clothed with hair-like down, rough above: cauline leaves similar to the radical ones: uppermost ones lanceolate, sessile; racemes loose, panicled; carpels furnished with glochidate prickles on the outer sides. $. H. Native of Mexico, on Mount Macultipec. Flowers blue. Nuts size of grains of pepper.

Mexican Hound's-tongue. PL 2 to 3 feet.

11 HI'SPILUM (Thunb. in Schrad. journ. 1. p. 1806. p. 46. prod. p. 34.) stem orect; lower leaves oblong-lanceolate, obtuse : upper ones lanceolate, acute, hispid; racemes bractless, usually 3-flowered; stamens shorter than the corolla, whkv'}^. ventricose. ©. H. Native of the Cape of Good Ha^.* Lehm. asper. p. 143. Stem hispid from adpressed hairs. Racemes constituting a terminal panicle. Calyx hispid ; segments oblong, obtuse. Corolla rufescent ; processes of the throat fleshy.

Hispid Hound's-tongue. PL 1 to 1| foot.

12 C. TOMENTOSUM (Lehm. asper. p. 144.) stem erect: lower leaves oblong-lanceolate, bluntish : superior ones linear-lanceolate, half stem-clasping, clothed with dense, yellow, golden tomentum ; racemes terminal, bractless, many-flowered. %. H. Native of Italy. Stems angular, canescent. Radical leaves 3-4 inches long. Racemes twin, terminal. Calycine segments oblong-lanceolate, obtuse. Carpels covered with short glochidate prickles.

Tomentose Hound's-tongue. PL \ to 1 foot.

13 C. LANCEOLA^TUM (Forsk. descr. p. 41.) stem erect; leaves sessile, lanceolate, acute, entire, attenuated at the base, hairy, veined, downy beneath; racemes solitary, bractless; stamens inclosed. ©. H. Native of the Cape of Good Hope, and Arabia. Vahl, symb. 2. p. 34. Willd. spec. 1. p. 761. Lehm. asper. p. 145. C. hfrsutum, *Thunb. in Schrad.* jouvn. 1. p. 1806. p. 47—48. prod. fl. cap. p. 34. Willd. spec. 1. p. 763. Stems hairy, canescent. Young branches densely clothed with yellow hairs. Leaves hairy or strigose ab^ve.

Racemes simple, hairy. Calycine segments oblong, obtuse. Tube of corolla length of calyx. Carpels cohered with glochidate bristles.

Lanceolate-leaved Hound's-tongue. PL 1 to \\ foot.

14 C. VESICULOSUM (Wall. cat. no. 920.) hispid from strigse ; stem much branched ; leaves oval, attenuated at both ends ; racemes terminal, solitary or twin, slender ; calycine segments ovate, acute ; carpels beset with glochidate prickles on the margins, and smooth in the centre. $. H. Native of Nipaul. Corollas rather small, white. Racemes bractless.

Bladdery Hound's-tongue. PL 2 to 3 feet.

15 C. HE'YNEI ; plant hispid from strigae; leaves ovate-lanceolate, acuminated ; racemes slender, terminal twin, or axillary solitary ; carpels beset with glochidate prickles along the margins, and tubercled in the centre, shorter than the calycine segments, which are bluntish. $. H. Native of the East Indies, at Dindigul. C. lanceolatum, Heyne, herb, ex Wall. cat. no. 921. but not of Forsk. Racemes bractless.

Heyne's Hound's-tongue. PL 1 to 2 feet.

16 C. WALLI'CHII ; stem erect, angular, rather strigose; leaves oblong-lanceolate, 3-nerved ; racemes twin or solitary, elongated, terminal, or from the axils of the upper leaves ; flowers distant; calyx spreading, longer than the carpels, with ovate, mucronate segments; carpels beset with glochidate prickles along the margins, and tubercles in the centre. $. F. Native of Nipaul, in Gosainsthan. C. calycinum, Wall. cat. no. *923.* but not *of* Meyer. Leaves 3-5-nerved. Racemes bractless.

WallicKs Hound's-tongue. PL *2 to 3* feet.

17 C. CANE'SCENS (Horn. hort. hafn. 1. p. 177. Willd. enum. 1. p. 180.) stem erect, branched at top ; cauline leaves lanceolate, acute, petiolate, erosely denticulated, hairy, clothed with soft hairs beneath, somewhat 3-nerved ; racemes conjugate, divaricate, bractless. ©. H. Native of the East Indies. Lehm. asper. p. 144. C. micranthum, Desf. pi. hort. par. 1804. p. 220. C, hirsutuin, Jacq. hort. schcenbr. 4. t. 489. exclusive of the synonymes. C. racemdsum, Roxb. fl. ind. ed. Wall. 2. p 6. ex Lehm. Plant hispid. Flowers secund. Calycine segments ovate, obtuse. Corolla white ; throat a"d scales blue. Carpels ovate, clothed with glochidate prickles.

Canescent Hound's-tongue. Fl. June, Aug. Clt. 1819. PL [illegible] feet.

C. HIRSUTISSIMUM (Lehm. asper. p. 145.) stem erect, simple ; leaves narrow-lanceolate, half stem-clasping, acute, papillosely-hairy on both surfaces; hairs spreading; racemes solitary, elongated, bractless. ©. ? H. Native of Africa. Stem very hairy. Peduncles hairy, terminal and lateral, racetniferous. Calyx hairy, with oblong, obtuse segments. Carpels beset with glochidate prickles.

Very-hairy Hound's-tongue. PL 1 to \\ foot.

19 C. REVOLUTUM (Ruiz, et Pav. fl. per. *2.* p. 6. no. *3.)* stem erect, branched; leaves lanceolate, acute : cauline ones sessile, hispid ; racemes subspicate, leafy, revolute at apex ; pedicels lateral. ©. H. Native of Peru, in Huassa-Huassi, in shady places. Pers. ench. 1. p. 160. Lehm. asper. p. 148. Plant hispid. Stem angular. Pedicels drooping. Corolla whitish-blue. Carpels beset with glochidate prickles.

Revolnte-racemed Hound's-tongue. PL 3 feet

20 C. SUAVE'OLENS (R. Br. prod. p. 495. Lehm. asper. p. 148.) leaves lanceolate, strigose; those of the branches half stem-clasping; racemes bracteate; carpels echinated with equal glochidate prickles.—Native of New Holland.

***Sweet-scented-Cowered* Hound's-tongue. PL**

21 C. AUSTRA'LE (R. Br. 1. c.) stems erect; leaves lanceolatj^trigose on both surfaces ; racemes bractless ; carpels echinated with glochidate prickles : the prickles on the back fewer, and with a single row of longer ones along the margin.—Native of New Holland.

Southern Hound's-tongue. PL ?

22 C. LANUGINOSUM (Lehm. asper. p. 148.) stem erect; leaves linear-lanceolate, acute, half stem-clasping, woolly, and hoary ; racemes terminal, loose, bractless.—Native country unknown. Stem furrowed, simple, white from wool. Calyx woolly, with lanceolate, bluntish segments. Corolla very like that of *C. qfficinale.* Carpels ovate, covered with glochidate prickles.

Woolly Hound's-tongue. PL 1 to 2 feet.

23 C. CLANDESTINUM (Desf. fl. atl. 1. p. 159. *t.* 42.) *stem* erect; leaves narrow-lanceolate, bluntish, half stem-clasping, hairy ; racemes bractless ; corolla villous at top. $. H. Native of Portugal and Algiers. Hoffm. et Link. fl. port. 1. p. 190. Horn. hort. hafn. 1. p. 117. Lehm. asper. p. 149. C. officinale, Brot. fl. lus. 1. p. 295. C. fulvum, Rudolph, in Schrad. journ. 1795. p. 295. Pers. ench. under *Auchusa ltdlica.* Root fusiform. Plant pilose. Pedicels and calyxes clothed with dense, yellow, silky hairs. Calycine segments lanceolate, obtuse. Corolla violaceous, hardly longer than the calyx ; limb tomentosely villous at apex. Carpels ovate, covered with glochidate prickles.

Clandestine Hound's-tongue. FL June, Aug. Clt. 1821. PL 1 to 2 feet.

24 C. DIOSCORIDIS (Vill. dauph. 2. p. 457. prosp. p. 21. exclusive of the synonymes. Lehm. asper. p. 150.) stem erect; leaves narrow-lanceolate, acuminated, dilated at the base, rather hispid ; racemes elongated, bractless, loose. $ H. Native of Dauphiny. C. elongatutn, Horn. hort. hafn. 2. p. *956.* C. Virginicum, Willd. enum. 1. p. 180. exclusive of the synonymes. C. remotum, Mcench, meth. p. 419. Root fusiform. Stem simple, canescent, beset with retrograde hairs. Racemes pilose, terminal and axillary in the spontaneous plant; but terminating the stem and branches in the cultivated plant. Calycine ^pgriients ovate, obtuse. Corolla red or flesh-coloured, with deeper veins. Carpels ovate, clothed with short glochidate bristles.

Dioscorides's Hound's-tongue. FL June, Aug. Clt. 1820. PL l£ to 2 feet.

25 C. OFFICINA'LE (Lin. spec. p. 192. fl. suec. 162. hort. cliff. 47.) stem erect, leafy; lower leaves broad-lanceolate: superior ones broadest at the base, acute, canescent from downy tomentum ; racemes bractless, panicled at the time the flowers are open. $. H. Native of Europe, Asia, Africa, and North America, in waste places, and by way sides and margins of fields, and particularly near towns; in Britain, in like situations, but a doubtful native. Scop. fl. earn. ed. 2d. p. 124. Vill. dauph. 2. p. 456. All. ped. 1. no. 124. Desf. fl. atl. 1. p. 158. Suter, fl. helv. 1. p. 105. Smith, engl. bot. t. 921. Oed. fl. dan. t. 1147. Curt. fl. lond. t. 149. Regnault, bot. 8. t. 364. Sturm, fl. germ. fasc. 9. icone. Baumg. fl. trans. 1. p. 122. Pursh. fl. 1. p. 123. MayrhofF, fl. mon. t. *23. Led.* fl. alt. 1. p. 196.—Blackw. herb. t. 249.—Plenck. icon. t. *76.* Stem sulcately angular, branched at top, beset with soft, incumbent hairs. Flowers nutant, secund. Racemes terminating the stem and branches, canescent, villous. Calycine segments oblong, connivent. Corolla reddish ; processes of the throat purple. Carpels ovate, densely clothed with glochidate prickles. The whole plant has a disagreeable smell, like most of the species, much resembling that of mice. It is suspected to possess narcotic qualities. It has formerly been used in medicine ; and Mr. Ray informs us, from Dr. Hulse, that a decoction of the roots inwardly, and cataplasms of them outwardly,

were used in strumose and scrophulous cases. It is, however, discarded from the present practice. All animals are said to dislike it, and leave it untouched. The large Dutch Hound's-tongue is only a variety of this.

Var. /3, bicolor (Lehm. asper. p. 153.) leaves lanceolate, narrowed at the base, downy: upper ones sessile, cordate. $. H. Native of Germany and Siberia. Corolla white; with the processes in the throat red, and the limb marked with 5 red spots. C. hybridum, Thuill. fl. par. 1. p. 94. C. angustifdlium, Hort. C. officinale, var. flore albo, Roth, tent. fl. germ. 2. p. 170.

Officinal, or Common Hound's-tongue. Fl. June, July. Britain. PL 2 feet.

26 C. PICTUM (Ait. hort. kew. ed. 1. vol. 1. p. 179.) stem erect, leafy; leaves lanceolate, acute: upper ones ovate-lanceolate, cordate, finely tomentose; racemes bractless; limb of corolla dilated, veiny. $. H. Native of the South of Europe, Iberia, Barbary, and Madeira. Vahl, symb. 2. p. 34. Willd. spec. 1. p. 761. Willd. enum. 1. p. 180. Lehm. asper. 154. Hoffm. et Link. fl. port. 1. p. 189. t. 24. Pall. ind. taur. C. Creticum, All. auct. p. 4. Vill. dauph. 2. p. 457.—Clus. hist. 2. p. 1(52. f. 2. C. variegatum, Hort. Root fusiform, Stem bluntly angular, furnished with axillary, racemiferous branches at top, and canescent from short, soft, retrograde T °aves canescent. Calyx clothed with incumbent hairs; o ^iong-lanceolate, bluntish. Corolla a little longer than me calyx, purple or blue, elegantly marked with deeper dichotomous veins, which are branched at top. Carpels covered with glochidate prickles.

Painled-fiowered Hound's-tongue. Fl. Aug. Clt. 1658. PL 2 feet.

27 C. CILIATUM (Dougl. mss. ex Lehm. pug. 2. p. 24.) stem erect, simple, hairy; leaves linear, acute, elongated, 3-nerved, clothed with hair-like tomentum, ciliated; racemes terminal, bracteate, secund; stamens inclosed. $. H. Native of North-west America. Stem terete, canescent; hairs on the base of the stem retrograde, but those at its top are spreading. Racemes subcorymbose. Calyx villous; with lanceolate, obtuse segments. Corolla blue, one half longer than the calyx.

Ciliated-\eaved Hound's-tongue. PL 1^ foot.

28 C. GRANDE (Dougl. mss. ex Lehm. pug. 2. p. 25.) stem erect, glabrous, naked above; leaves petiolate, pilose beneath: lower ones large, cordate-ovate, undulated: superior ones oblong-lanceolate; racemes bractless, glabrous, pedunculate, few-flowered; calyx villous. $. H. Native of North-west America. Stem rather angular, destitute of leaves at top. Leaves acute, ciliated, beset with adpressed hairs above, and paler beneath, 9 inches long, and 4 lines broad. Racemes constituting a loose, terminal panicle. Pedicels glabrous, pilose at top. Calycine segments elliptic-lanceolate, obtuse. Corolla blue, twice as long as the calyx, larger than those of *C. officinale**

Great Hound's-tongue. PL 2 to 3 feet.

29 C. VIRGINICUM (Gron. virg. p. 19. Lin. spec. p. 193.) stem ercfif; leaves oval-oblong, acute: upper ones cordate at the base, stem-clasping, veiny, hairy; racemes short, corymbose, bractless. 1/. H. Native of Virginia and Pennsylvania; and Arkansas, in woods. C. amplexicaule, Michx. fl. amer. bor. 1. p. 132. Pursh, fl. 1. p. 133. Pers. ench. 1. p. 159. Stems terete, beset with retrograde hairs, branched at top. Leaves green. Racemes canescent from hairs. Calycine segments oblong-lanceolate, bluntish. Corolla blue, twice as long as the **calyx.** ***Carpels ovate, furnished with glochidate prickles.***

Virginian Hound's-tongue. Fl. May, July. Clt. 1812. PI- 2 to 3 feet.

30 C. PILOSUM (Nutt. gen. amer. 1. p. 114.) erect and hairy; radical leaves spatulate-oblong, obtuse; the rest lanceolate-oblong, obtuse; flowers axillary, almost spiked, unilateral; stamens very short, inclosed; carpels scabrous, depressed, oblong, acute, muricate on the margins. %. ? H. Native of Missouri, on arid hills above Rapid River. Flowers small, white.

Pilose Hound's-tongue. PL erect.

31 C. SYLVATICUM (Smith, fl. brit. 1. p. 216. engl. bot. t. 1642.) stem erect; lower leaves somewhat spatulate-lanceolate: superior ones half stem-clasping, ovate-oblong, acute, smoothish above and shining, but scabrous beneath; racemes bractless. $. H. Native throughout Europe, in shady places, in elevated situations; in England, about hedges in several parts, especially in Essex; but, like many other biennials and annuals, changes its abode; it is also found in like situations in North America. Gmel. fl. bad. 1. p. 421. Sut. fl. helv. 1. p. 105. Haenke, in. Jacq. coll. 2. p. 77. Baumg. fl. trans. 1. p. 122. Pursh, fl. 1. p. 133. C. officinale, *ft,* sylvaticum, Willd. spec. 1. p. 760. This plant is said to differ from *C. officinale* in the character given above; in the stem being more humble; in the flowers being smaller, blue, verging to red or purple. Perhaps **not distinct from *C. Dioscoridis,* or *C. sylvaticum.***

Hcenke's Hound's-tongue. FL June, Aug. Clt. 1819. PL li to 2 feet.

33 C. CLAVATUM (Viv. fl. libyc. p. 11. t. 5. f. 2.) hoary; cauline leaves half stem-clasping: racemes secund, leafy; processes in the throat of the corolla cylindrically clavate, emarginate, equal in length to the limb; style permanent, elongated, subulate, exceeding the calyx. $. H. Native of Libya. Stem branched, terete. Floral leaves lanceolate-linear, longer than the flowers. Calycine segments lanceolate, acuminated. Corolla glabrous. Carpels beset with stellate, glochidate bristles.

Ctofl/e-appendaged Hound's-tongue. PL erect.

34 C. VIRIDIFLORUM (Willd. herb, ex Lehm. asper. p. 160. Ledeb. fl. alt. 1. p. 196. fl. ross. alt. ill. t. 106.) stem *erect, simple; leaves oblong, acute: lower ones petiolate: unnpr ones sessile, attenuated at the base, glabrous,* and pale *JJ*

z z 2 to

above, tomentose or downy beneath; racemes erect, loose, panicled : lower ones bracteate: upper ones bractless. $. ? H. Native near Schemanaika and Schulba, in sandy places. Stems simple, glabrous. Racemes constituting a terminal, pyramidal panicle, a foot or a foot and a half long. Calyx and pedicels grey from silky hairs. Calycine segments obtuse. Corolla salver-shaped, twice as long as the calyx, yellowish green. Carpels ovate, densely beset with glochidate prickles.

Green-flowered Hound's-tongue. PL 4 to 6 feet.

35 C. CALYCINUM (Meyer, verz. pflanz. p. 100.) annual, glaucous ; stems branched, assurgent; leaves sessile, thick, oblong, bluntish, entire ; racemes bracteate ; corollas small; calyx in the fructiferous state large, with ovate, connivent lobes ; carpels oblong, convex, scabrous; style marcescent. ©. H. Native of Caucasus, near the Caravansarai Koete-Koili, in the desert between Baku and Sallian. Corollas blue.

Large-calyxed Hound's-tongue. PL assurgent.

36 C. DIVARICATUM (Steph. in litt. ex Lehm. asper. p. 161.) stem erect, branched; branches divaricate ; lower leaves oval, petiolate : superior ones sessile, lanceolate, attenuated at both ends, nearly glabrous above, and downy beneath ; racemes bracteate. *%.H.* Native of Siberia. Root perpendicular. Stems beset with incumbent hairs. Pedicels and calyxes hairy, cinereous. Leaves pale green. Calycine segments ovate, bluntish, a little shorter than the corolla, which is small. Carpels ovate, densely covered with glochidate prickles.

Divaricate Hound's-tongue. PL 1J to 2 feet.

37 C. LATIFOLIUM (R. Br. prod. p. 496.) stem prickly; floral leaves ovate, on short petioles, acuminated, scabrous; peduncles extra-axillary. $. ? H. Native of New Holland.

Broad-leaved Hound's-tongue. PL

38 C. ROYLEI (Wall. cat. no. 917.) rough from strigae ; radical leaves wanting in the specimens examined: cauline ones cordate, petiolate, acuminated, nerved, and canescent from down; racemes short, canescent, bracteate. $. H. Native on Choor Mount.

Royle's Hound's-tongue. PL

39 C. LAXUM ; stem erect, branched at top; leaves ovate, acuminated, 7-nerved, all peticlate, and beset with short strigae, as well as the upper part of the stem and branches ; racemes terminating the e^m did branches, twin, loose, few-flowered, t"^t$_r$* solitary flower in the fork ; corolla rotate; carpels com-~pressed, beset with glochidate prickles outside. £. H. Native of Emodus and Gosainsthan, in Nipaul. Rindera glochidata, Wall. cat. no. 926. Picotia glochidata, Wall. mss. Perhaps a species of *Mdttia,* or *Omphalodes.* Corolla blue. Leaves distant. Racemes bracteate at the base.

Loose Hound's-tongue. PL *3* to 5 feet.

§. 2. *Stamens exserted. Perhaps a distinct genus.*

40 C. LONGIFLORUM (Lehm. asper. p. 162.) stem erect; leaves lanceolate, acute, strigosely muricated, scabrous; racemes bracteate, few-flowered; pedicels in the axils of the bracteas; tube of corolla twice as long as the calyx; and the segments of the limb linear ; stamens equal in length to the corolla. $. ? H. Native of Syria, about Aleppo. Lycopsis Dioscoridis nondum cognita, Rauwolf, trav. syr. 1. ch. 9. p. 120. t. 22.? Stem glabrous. Pedicels nutant. Calycine segments lanceolate, having the margins and keel tubercularly ciliated. Corolla glabrous. Anthers beyond the throat of the corolla. Carpels ovate, beset with glochidate prickles.

Low-flowered Hound's-tongue. PL 2 feet ?

41 C. STAMINEUM (Desf. am. mus. 10. p. 431. t. 36. journ. hot. par. 1. p. *35S.)* stem erect, simple; cauline leaves lanceolate, obtuse, sessile, silky above, and finely tomentose beneath ; flowers minute, disposed in short, bractless racemes, the whole forming a terminal panicle ; stamens twice as long as the corolla. $. ? H. Native of Syria and Cappadocia. Cynoglossum Orientale vulgari simile, flore minimo longis staminibus donato, Tourn. cor. p. 7. Stem tomentose. Calyx tomentose, with linear-lanceolate segments. Corolla salver-shaped, rose-coloured, length *of* calyx ; limb length of tube, with bluntish segments. Stamens inserted in the throat of the corolla, rather unequal. Anthers incumbent. Carpels ovate, prickly on the outer side. Habit of a species of *Eschium,*

Long-stamened Hound's-tongue. PL 2 to *3* feet.

42 C. APENNI'NUM (Lin. spec. p. 193.) stem erect, leafy; cauline leaves linear-lanceolate, attenuated at the base, sessile, acute, very long, rather villous ; racemes bractless, compact before expansion ; stamens a little longer than the corolla. $. H. Native of the South of Europe; as of Italy, in subalpine places. Lehm. asper. p. 164. Lapeyr. abr. p. *87** Smith, prod. fl. graec. 1. p. 118. Willd. spec. 1. p. *762.* Gaertn. fruct. 1. p. 324. t. *67.* f. 4. Sabb. hort. rom. 2. t. *36.* Willd. enum. 1. p. 181. D, C. fl. fr. syn. no. 2740.—Column, ecphr. 1. p. 168. t. 170. Stem simple, villous. Racemes forming large, dense, ovate, leafy, terminal panicles. Pedicels and calyxes hoary and villous. Calycine segments lanceolate-acute. Corolla length of calyx, at first red, afterwards violaceous, with short segments. Anthers incumbent. Nuts not seen.

Apennine Hound's-tongue. FL April, July. Clt. 1731. PL 1 to 3 feet.

43 C. MOLLI'SSIMUM (Lehm. asper. p. 165.) stem erect; leaves oblong, on long petioles, almost glabrous above, and downy beneath; flowers in short, compact, bractless racemes, the whole forming a terminal panicle; stamens twice as long as the corolla. $. H. Native *of* Persia, in the province *of* Djilan. Root perpendicular. Stem hoary, pilosely tomentose. Pedicels and calyxes canescent from villi. Calycine segments oblong, obtuse. Corolla a little longer than the calyx, veined. Stamens fleshy, alternating with the bearded processes of the throat. Habit of *C. Apenninum.*

Very soft Hound's-tongue. PL 1| foot.

f *Species hardly known.*

44 C. BORBONICUM (Bory. St. Vine. trav. p. *383.)* leaves lanceolate, acute, pilose ; branches forked ; seeds rough.—Native of the Island of Bourbon.

Far. a; leaves broader, oblong. Bory. 1. c.

Far. /3 ; leaves narrower, linear. Bory. 1. c.

Bourbon Hound's-tongue. PL ?

45 C. LIME'NSE (Wilid. spec. 1. p. 762. Lehm. asper. p. 177.) leaves oblong, acuminated, sessile, glabrous. £, ? G. Native of Peru, in the valley called Ylo, near Lima. Poir. suppl. 2. p. 432. Cynogl. foliis nervosis acutissimis, Feuille, per. 1. p. 71. t. 49. Plant pale green. Racemes terminal, simple. Calyx glabrous, with ovate, acute segments. Corolla having the margin white, and the centre blue. Carpels tubercled.

Lima Hound's-tongue. PL 1 to \\ foot.

46 C. VALENTYNUM (Lag. gen. et spec. nov. p. 10. no. 133.) leaves narrow-linear, hairy : cauline ones sessile ; calycine segments ovate ; spikes or racemes bractless. $. ? H. Native of Spain, in Valentia, Cavanilles. Plant herbaceous, with the habit of *Anchusa angustifolia.*

Falentia Hound's-tongue. PI.

47 C. LUSITA'NICUM (Lin. spec. 193. exclusive of the synonymes.) leaves linear-lanceolate, scabrous.—According to Hoffmansegg and Link, the plant named *C. Lusitdnicum,* by Linnaeus,

is not a native of Portugal, but of Siberia, according to the Linnean herbarium. See Schrad. new. journ. bot. p. 183. If the plant should prove distinct, it is undoubtedly referrible to the genus *Omphalodes,*

Portugal Hound's-tongue. PL

48 C. PELLU'CIDUM (Lapeyr. abr. suppl. p. 28.) lower leaves on long petioles : cauline and rameal ones half stem-clasping ; all lanceolate and acute ; calyxes pellucid ; peduncles axillary, elongated ; flowers secund. $. H. Native of the Pyrenees. Stem erect, simple, furnished with a few white hairs. Cauline leaves ciliated, diaphanous, furnished with some callous warts. Peduncles naked, or furnished with leaves. Calycine segments spatulate. Corolla blue, almost inclosed in the calyx. Carpels prickly.

Pellucid Hound's-tongue. PI. 2 to 3 feet.

49 C. HOLOSERICEUM (Stev. in act. mosq. p. 12.) clothed with silky tomentum ; leaves oblong-lanceolate; racemes terminal, simple ; flowers drooping; segments of corolla blunt. %. H. Native of Caucasus, on the tops of the alps of Chinalug and Wander. Corolla rose-colour. Carpels muricate.

Silky Hound's-tongue. Fl. June, Aug. Clt. 1821. PI. 2 feet?.

50 C. BAICALE'NSE (Willd. herb, ex Roem. et Schultes, syst. 4. p. 764.) leaves spatulate, hispid; racemes of flowers capitate ; stamens longer than the corolla. % ?. H. Native of Siberia, at Lake Baical. Stem a little longer than the radical leaves, which are obtuse and petiolate, furnished with 4-5 sessile leaves. Calyx densely woolly. Corolla tubular, hardly longer than the calyx. Stamens filiform. Carpels marginate, inclosed in the calyx. Perhaps a species of *Rindera* or *Mdttia.*

Baical Hound's-tongue. PI. i foot.

Jl C. RUGOSUM (Sestini, in Wifld. herb, ex Roem. et Schultes, syst. 4. p. *764>.)* leaves lanceolate, strigose ; carpels rugose from impressed dots.—Native of Galatia, Sestini.

Rugose-fruited Hound's-tongue. PL

Cult, All the species are coarse growing plants, but the flowers of some of them are very pretty. They are of the most easy culture, growing in any soil or situation. They are generally increased by seed, which should be sown in spring in the open border. The greater number of the species are biennial, and none are perhaps truly perennial.

XXXIV. ASPERITGO (from *asper,* rough; from the asperity of the whole plant.) Tourn. inst. t. 54. Lin. gen. no. 189. Schreb. gen. no. 249. Juss. gen. p. 131. Lam. ill. no. 264. t. 94. Schkuhr, handb. t. 31. Lehm. asper. p. 208. Schrad. comm. asper. f. 9.

LIN. SYST. *Pentdndria, Monogynia.* Calyx compressed in the fruit-bearing state, with piano-parallel, sinuately-toothed segments. Corolla funnel-shaped ; throat closed by vaulted processes. Carpels 4, 1-celled, ovate, compressed, smooth, glabrous, not perforated at the base, fixed to the central column, which is 4 winged.—An annual, rough, procumbent plant: with nearly wi \>osite, distant, oblong, obtuse leaves ; and lateral, usualljinolitary, small blue flowers, on short pedicels.

1. A'7'PROCU'MBENS (Lin. fl. lapp. 778. spec. 198.) ©. H. Native throughout Europe and Siberia, by way-sides, hedges, and on walls, and among rubbish. In Britain, at Wangford, near Brandon, and about Newmarket church ; also in Durham, as well as in Scotland, about Dunbar and near Edinburgh. Hall. helv. no. 606. All. ped. 1. no. 171. Roth. tent. fl. germ. 2. p. 217. Willd. spec. 1. p. 778. Smith, fl. grsec. t. 177. engl. bot. t. 661. OEder, fl. dan. t. 552. Fl. Bat. t. 152. Bieb. cauc. 1. p. 134. Ledeb. fl. alt. 1. p. 192. Wahl. fl. lapp. p. 57. Lapeyr. abr. p. 89. Baumg. fl. trans. 1. p. 128. A. vulgaris, Tourn. inst. p. 135.—Mor. hist. 3. sect. 11. t. 26. t. 13.—Column. ecphr. p. 183. f. 2. Stem branched, tetragonal, beset with small hooked spines or bristles. Leaves alternate, but nevertheless nearly opposite, attenuated at the base, beset with hispid pili on both surfaces, having the margin and midrib furnished with hooked hairs. Corolla with a cylindrical white tube; and obovate, roundish, blue segments. Calyx hairy, terete when in flower, deeply 5-cleft; with lanceolate, distant segments, intersected by teeth.

Procumbent German Madwort, or Great Goose-grass. FL April, May. Britain. PL procumbent.

Cult, This is a weed-like, rough plant, of no beauty. The seeds only require to be sown in the open border.

TRIBE V.

HELIOTROTEJE (this tribe contains plants agreeing with *Heliotrbpium* in the characters indicated below.) D. Don, in edinb. phil. journ. Corolla salver-shaped, or funnel-shaped, having the throat naked or bearded, and the limb plicate. Carpels 4, 1-celled, combined into a single fruit, closed at the base, not perforated, without any manifest torus or receptacle.

XXXV. HELIOTRCVPIUM (from ^*Xiog, helios,* the sun ; and *rponr), trope,* a turning; the spikes of flowers are circinnate, and face outwardly.) Tourn. inst. t. 57. Lin. gen. no. 179. Schreb. gen. no. 239. Juss. gen. p. 130. ed. Usteri. p. 145. Lam. ill. no. 253. t. 91. Gsertn. fruct. 1. p. 423. t. 68. f. 2. Schkuhr, handb. t. 29. Lehm. asper. p. 19.

LIN. SYST. *Penttindria, Monogynia.* Corolla salver-shaped ; throat usually naked, but in some bearded; segments of the limb furnished with a simple plicature, or a tooth between each. Stigma sub-conical. Carpels 4,1-celled, combined, closed at the base, without any manifest receptacle.—Strigose, annual, or shrubby plants with alternate leaves, and circinnate, secund spikes of small blue or white flowers.

SECT. I. GYROSTACHYS (from *yvpog, gyros,* curved or bent; and *ara^vQ, stachys,* a spike ; in reference to the spikes being spirally revolute.) Spikes of flowers bractless, spirally revolute in the young state.

1 H. AMPLEXICAU'LE (Vahl. symb. 3. p. 31.) stem shrubby ; leaves half stem-clasping, lanceolate, obtuse, obsoletely repand, rather canescent; spikes terminal, aggregate ; tube of corolla twice as long as the calyx. T? . S. Native of Brazil. Willd. spec. 1. p. 740. Lehm. asper. p. *25.* Habit of *H. Peruvidnum.* Branches pilosely tomentose. Leaves 2 inches long, greenish grey. Peduncles pilose, 2 or 3 times forked. Corollas large.

Stem-clasping-\ea.ved Heliotrope, or Turnsole. Shrub 1 to 3 feet.

2 H. PERUVIA'NUM (Lin. spec. p. 187.) stem shrubby ; leaves petiolate, oblong-lanceolate, wrinkled, repand ; spikes terminal, branched ; tube of corolla hardly the length of the calyx. T? . G. Native of Peru. Ruiz, et Pav. fl. per. 2. p. 2. no. 1. Willd. spec. 1. p. 740. Lehm. asper. p. 26. Curt. bot. mag. t. 141. Mill. fig. t. 144. H. odoratum, Mcench. meth. 415. Stems hairy. Leaves clothed with soft hairs above, and somewhat canescent beneath. Spikes by threes and fours rarely compound. Flowers sweet-scented, smelling like vanilla. Corolla intersected by 5 plicatures of a purple-lilac colour, with a greenish throat.

Far. ft, hybridum; flowers larger. This hybrid was raised from seed by Mr. More, of the King's Road, London.

Peruvian Heliotrope, or Turnsole. FL May. Sept. Clt. 1757. Shrub 1 to 2 feet.

3 H. CORYMBÔSUM (Ruiz, et Pav. fl. per. 2. p. 2.. no. 1. t. 107. f. a.) stem shrubby; leaves oblong-lanceolate, attenuated at the base, acute, deflexed; spikes collected into corymbs ; tube of corolla twice as long as the calyx. J? . G. Native of Peru. Bonpl. malm. t. 32. Sims bot. mag. t. 1609. H. grandifldrum, Schrank, hort. mon. fasc. 1. p. 2. t. 2. Branches downy. Leaves white from hairs beneath, and downy above, but in the cultivated plant they are hairy on both surfaces, and not white beneath. Corolla of a lilac-purple colour, with 5 plicatures, and greenish throat.

FIG. 37.

Corymbose-dowered Heliotrope, or Turnsole. Fl. May, Sept. Clt. J808. Shrub *2* to 6 feet.

4 H. OPPOSITIFÔLIUM (Ruiz, et Pav. fl. per. 2. p. 2. no. 2. t. 108. f. b.) stem shrubby ; leaves broad-ovate, acute, quite entire, clothed with retrograde asperities; spikes dichotomously corymbose. J?. G. Native *of* Peru, in arid places in Muna. Lelim. asper. p. *28.* Plant densely hispid. Branches clothed with rusty tomenturn. Calyx small. Corollas white, hispid outside, twice as long as the calyx.

Opposite-leaved Turnsole. Shrub 3 to 6 feet.

5 H. INCA'NUM (Ruiz, et Pav. fl. per. 2. p. 2. no. 4. t. 108. f. a.) stem shrubby ; leaves thick, ovate, acute, crenulated, very much wrinkled above, and lined with retrograde asperities, but softer and hoary beneath ; spikes dichotomously corymbose. *h* . G. Native of Peru, at Huanuca, on arid hills. Lehm. asper. p. 29. Branches villous, hoary. Peduncles hairy. Calyx villous. Corolla white, twice as long as the calyx, rather hispid outside. Carpels wrinkled.

Hoary Turnsole. Shrub 2 to 3 feet.

6 H. VIRIDIFL6RUM (Lehm. asper. p. 30.) stem shrubby, erect, rather hispid; leaves thickish, petiolate, ovate, quite entire, rather scabrous above, and velvety beneath ; peduncles bifid, divaricate ; spikes terminal, sub-corymbose. T? . S. Native *of* the East Indies. Lithospermum viridifldrum, Roxb. Calyx hispid. Corolla green, nearly twice as long as the calyx, densely clothed with hairs outside.

Green-jlorvered Turnsole. Shrub

7 H. LANCEOLA'TUM (Ruiz, et Pav. fl. per. 2. p. 4. no. 9. t. 111. f. a.) stem shrubby, erect; leaves on short petioles, lanceolate, wrinkled, rough ; spikes terminal, dichotomously corymbose, h • G. Native of Peru, in the groves of Pillao and Huanaco. - Lehm. asper. p. 31. Plant hispid. Corolla twice as long as the calyx, pale blue.

Lanceolate'-leaved Turnsole. Shrub

8 H. CITRIFÔLIUM (Lehm. asper. p. 32.) stem shrubby, erect, glabrous ; leaves thick, petiolate, oblong, glabrous, shining above ; spikes terminal, aggregate, disposed in sub-capitate corymbs, f? . S. Native of South America. Corolla twice or thrice as long as the calyx, hairy outside.

Citron-leaved Turnsole, or Heliotrope. Shrub.

9 H. LATIFÔUUM (Willd. herb, ex Lehm. asper. p. 33.) stem shrubby, erect, glabrous; leaves alternate, on very short petioles, ovate, acute, nearly glabrous, narrowed at the base, ciliated • spikes elongated, conjugate and solitary, terminal and lateral, J?. S. Native *oi'* Cumana, in arid places. H. scorpioides, H. B. et Kunth, nov. gen. 3. p. 89. Stem branched, angular at top, beset with adpressed hairs. Leaves nearly opposite and alternate, green above and paler beneath, beset with adpressed hairs. Peduncles and calyxes hispid. Corollas small, white. Carpels roundish, scabrous.

Broad-leaved Heliotrope, or Turnsole. Shrub 1 to 1^ foot.

10 H. STENOPHY'LLUM (Hook, et Arn. in Beech, voy. pt. bot. p. 38.) shrubby, densely leafy ; leaves in fascicles, very narrow-linear, fleshy, obtuse, with revolute edges, scabrous from short strigae; spikes conjugate, bractless, hardly longer than the superior leaves. J? . F. Native of Chili, about Coquimbo. Allied to *H. Ciirassdvicum,* but that has plane and somewhat spatulate, glaucous leaves, and is quite glabrous.

Narrow-leaved Heliotrope or Turnsole. Shrub.

11 H. CURASSA'VICUM (Lin. spec. 188.) stem herbaceous; leaves nearly opposite and alternate, narrow-lanceolate, or oblong-lanceolate, obsoletely veined, glabrous, glaucous ; spikes conjugate, compound, or solitary. ©. H. Native of South America, by the sea-side; Sandwich Islands ; North America, on the sandy banks of the great salt river, and similar situations on those of the Arkansas.—Forsk. fl. arab. p. 38. Swartz. obs. bot. p. 56. Desf. fl. atl. 1. p. 158. Ruiz. et Pav. fl. per. 2. p. 4. no. 10. Horn. hort. hafn. 1 p. 172. Willd. enum. 1. p. 175. Lehm. asper. p. 34. H. glaucophyllum, Mcench. meth. suppl. p. 147.—Sloane. hist. 1. t. 132. f. 3. —Mor. hist. 3. sect. 11. t. 31. f. 12. Plant quite glabrous, glaucous-green. Corolla a little longer than the calyx, white, with a yellowish-green bottom. Carpels ovate, rugose.

Var. (3, chenopodioides (Lehm. 1. c.) leaves lanceolate, spatulate, glaucous, glabrous, obsoletely veined, opposite and alternate; spikes conjugate. 0. H. H. chenopodioides, Humb. et Bonp. ex Horn. hort. hafn. *2.* p. *956.* Willd. enum. 1. p. 175.—Pluk. aim. t. *36.* f. 3.—Herm. par. bat. t. 138.

Curacoa Heliotrope, or Turnsole. Fl. June, July. Clt. 1731, /3, 1823. PI. procumbent, or \ to 1 foot.

12 H. CANE'SCENS (H. B. et Kunth, nov. gen. amer. 3. p. *88.)* erect, clothed with adpressed villi; leaves obovate, obtuse ; spikes terminal and lateral, by threes. %. S. Native near Cumana, Bordones, and Cumanacoa, in woody places. Plant canescent. Leaves having the veins and nerves prominent beneath. Spikes woolly. Corolla white. Very nearly allied to *H. Coromandeliana,* Retz.

Canescent Turnsole, or Heliotrope. PI. erect.

13 H. CINE^REUM (H. B. et Kunth, nov. gen. amer. 3. p. 89. t. 206.) erect ?, clothed with spreading villi; leaves petiolate, obovate, obtuse; spikes terminal and lateral by threes, bractless. 1/. S. Native on the banks of the river Apures, near Arichuna. Stem branched. Branches and leaves white from villi. Calyx hispid, unequal. Corollas small, white. Fruit hispid.

Grey Turnsole, or Heliotrope. PI. erect ?

14 H. PARTIBILCE'NSE (H. B. et Kunth, 1. c. p. 87.) erect?; leaves oblong-lanceolate, acute, hispid from pili on both surfaces ; spikes terminal and lateral, solitary or twin. *1J.*. S. Native on the shores of the Pacific Ocean, between Santa and Partibilca. Stem and branches hispid. Calyx suV ^rigose. Corolla pilose outside. Fruit bipartible, scabrous.

Partibilca Turnsole or Heliotrope. PI. erect.

15 H. LANA^TUM (H. B. et Kunth, 1. c. p. 89.) shrubby, clothed with white wool; leaves ovate, acute, nearly sessile ; peduncles lateral, dichotomously multifid, of many spikes, f? . S. Native of New Granada, near Loxa and Gonzanama, on the eastern declivities *of* the Andes, at the altitude of 1000 hexapods. H. argenteum, Willd. herb, ex Lehm. asper. p. 73. Corollas unknown. Perhaps a species *of Tournefortia.*

Woolly Turnsole, or Heliotrope. Shrub

16 H. CORIA'CEUM (Lehm. pug. 1. p. 20.) stems shrubby, erect; leaves petiolate, broad-lanceolate, acute, scabrous, canescent beneath, coriaceous ; spikes terminal, aggregate ; tube of corolla .Q times longer than the calyx. ^ • G. Native of Mexico. Stem branched. Spikes sub-corymbose, many-flowered ; flowers sessile, secund, aggregate. Calycine segments linear. Corolla lilac. Segments roundish, obtuse. Carpels 4, oblong, wrinkled.

Coriaceous-\eaved **Heliotrope. Shrub**

17 H. LINIFOLIUM (Lehm. in act. soc. scrut. hal. 3. p. 8.) stems shrubby, panicled, glabrous ; leaves linear, nearly glabrous; spikes racemose, solitary, filiform, lateral and terminal, elongated; flowers distant, pedicellate, ^i . G. Native of the Cape of Good Hope. Myosotis fruticosa, Lin. mant. p. 201. Willd. spec. 1. p. 748. Lam. ill. 1. p. *395.* no. 1773. Lehm. asper. p. 35. Leaves glaucous green, beset with minute, incumbent strigae on both surfaces. Corolla white, twice or thrice longer than the calyx. Fruit hispid. This differs from *H. Zeyldnicum,* particularly in the stem and leaves being nearly glabrous, and in the flowers being pedicellate.

Flax-leaved Heliotrope, or Turnsole. Fl. June, Sept. Clt. 1815. Shrub 1 to 2 feet.

18 H. ZEYLA'NICUM (Lam. diet. 3. p. 94. ill. p. 393. no. 1762.) stem shrubby, branched, pilose; leaves linear, scabrous above and villous beneath ; spikes terminal, filiform, solitary, elongated; flowers sessile, f? . S. Native of Ceylon and Arabia Felix. Willd. spec. 1. p. 744. Lehm. asper. p. *37.* H. Curassávicum, /3, Zeylánicum, Burm. ind. p. 41. t. 16. f. 2. H, frutiedsum, Forsk. descr. p. 38. Flowers small, white.

Ceylon Turnsole. Fl. July, Aug. Clt. 1818. Shrub 1 foot.

19 H. WILLDENOWII ; stem shrubby, erect; leaves lanceolate, narrowed at the base, mucronate at the apex, clothed with strigose down, hoary while young; spikes conjugate, or by threes, axillary. ^ • S. Native of Brazil. H. canescens, Willd. herb, ex Lehm. asper. p. 38. but not of Kunth. Stem strigose above ; young branches hoary. Corollas small, white. Carpels rather hispid.

Willdenow's Heliotrope, or Turnsole. Shrub.

20 H. INUNDATUM (Swartz, prod. p. 40. fl. ind. occ. 1. p. 343;) stem frutescent; leaves oblong, obtuse, canescent from hairs ; spikes terminal, erect, by fours. ^ • S. Native of the West Indies, Mexico, and Brazil, along the sea-shore. Willd. spec. 1. p. 741. Lehm. asper. p. 39. H. procumbens, Lehm. H. canescens, Willd. and H. cinereum, Willd. are said to be the same, ex Cham, in Linnaea, 4. p. 456. Stem and branches canescent from adpressed villi. Spikes sessile. Flowers white ?

Inundated Turnsole, or Heliotrope. Shrub.

21 H. DECUMBENS (Lehm. in act. nat. scrut. hal. 3. p. 16.) stem shrubby, decumbent; leaves elliptic, roundish-obovate, obtuse, strigose ; spikes filiform, solitary, conjugate, or by threes, lateral or terminal. ^ • S. Native of Cumana, Bardones, and Cumanocoa, in woody places, where it is called *Rava de Claras.* Lehm. asper. p. *31).* H. procumbens, H. B. et Kunth, nov. gen. amer. 3. p. 88. Stem and branches beset with incumbent hairs wi top, as well as the leaves. Calyx unequal. Flowers smallijina.nte, much crowded. Carpels rugose, hispid.

Decumbent Heliotrope, or Turnsole. Shrub decumbent.

22 H. GRACILE (R. Br. prod. p. 493.) stem erect; leaves Gbkihg-lanceolate, flat, acutish, greyish on both surfaces from adpressed hairs ; spikes conjugate or solitary ; calyxes unequal. Jj. S. Native of New Holland, and of Brazil, on the sea-shore. Lehm. asper. p. 40. The var. */3,* depressum, Cham, in Linnaea, 4. p. 457. a native *of* Brazil, may be a distinct species. Stem decumbent.

Slender Turnsole, or Heliotrope. Shrub erect.

23 H. SYENITES (Spreng. syst. 1. p. 539.) stem shrubby, branched, very villous; leaves ovate-oblong, attenuated at both ends, entire, villous, on long petioles ; spikes conjugate, lateral; tube of corolla equal in length to the calyx. *? . F. Native of Upper Egypt. H. villosum, Sieb. H. cinereum, R. Br. H. Kunzii, Lehm.

Syenite Heliotrope. Shrub.

24 H. PILOSUM (Ruiz, et Pav. fl. per. 2. p. 3. no. 7. t. 110. f. a.) stem suffruticose, procumbent; leaves broad-lanceolate, pubescently pilose ; spikes short, usually by fours. ^ • &• Native of Peru, on arid hills about Lima. Lehm. asper. p. 41. Plant canescent. Spikes lateral and terminal. Calyxes unequal. Corolla white; tube pilose outside, longer than calyx. Fruit hispid.

Pilose Turnsole, or Heliotrope. PI. procumbent.

25 H. MICROCALYX (Ruiz, et Pav. fl. per. 2. p. 3. no. 5. t. 109. f. b.) stem shrubby, erect; leaves oblong-lanceolate, subacuminated ; spikes dichotomous, opposite the leaves; calyx small, 5-toothed. h_c . G. Native of Peru, on hills. Lehm. asper. p. 42. Plant very downy. Corolla white, twice as long as the calyx.

Small-calyxed Turnsole, or Heliotrope. Shrub erect.

26 H. HUMILE (Lam. ill. p. 393. no. 1757. Lehm. in act. nat. scrut. hal. 3. p. 11.) stem sufFruticose, depressed ; leaves petiolate, lanceolate-ovate, acute, repand, villous ; spikes solitary, lateral, pedunculate. ^ • S. Native of the West Indies. Lehm. asper. p. 43. Branches pilose. Leaves green above, and paler beneath. Flowers crowded. Corolla white; tube length of calyx. Nut rugose from numerous dots.

Humble Turnsole, or Heliotrope. Fl. May, June. Clt. 1752. Shrub 1 foot.

27 H. PARVIFLORUM (Lin. mant. p. 201.) stem herbaceous, erect; leaves opposite, petiolate, oblong-ovate, hairy ; spikes solitary and conjugate; flowers small. ©. S. Native of the East Indies, and of the West Indies, in St. Thomas, by waysides. Willd. spec. 1. p. 741. enum. 1. p. 174. Horn. hort. hafn. 1. p. 172. H. angiospermum, Murr. prod, goett. p. 217. —Dill. elth. p. 178. t. 146. f. 175. Stem pilose. Lateral spikes usually solitary : terminal ones conjugate. Calyxes unequal. Corollas small, a little longer than the calyx ; tube green, ventricose ; limb white ; segments intersected by plicae ; throat pilose. Carpels rugose and hispid.

Small-flowered Turnsole, or Heliotrope. Fl. July, Sept. Clt. 1732. PI. \\ foot.

28 H. COROMANDELIANA (Retz. obs. 2. p. 9. Vahl. symb. 1. p. 13.) stems herbaceous, prostrate; leaves petiolate, obovate-oblong, canescent from incumbent hairs ; spikes solitary or conjugate, lateral or terminal; calyxes unequal. ©. S. Native of Coromandel and Bengal. Willd. spec. 1. p. 743. Lehm. asper. p. 46. Roxb. in Wall. fl. ind. 2- p. 2. Root simple, woody. Stems many from the same root, at first prostrate, then ascending, grey from adpressed hairs. Spikes and calyxes pilose. Corolla white, pilose outside ; tube longer than the calyx.

Far.fi, ovalifblium (Lehm. asper. p. 47.) leaves oval, villous, silky; spikes conjugate and simple ; calyxes unequal; stigma nearly sessile, bearded at apex ; stem erect or decumbent. 0. H. Native of Arabia Felix, and New Holland, within the tropic. H. ovalifolium, Forsk. descrip. p. 38. R. Br. prod. p. 493. This variety differs from the species in its larger stature ; in the branches and leaves being densely villous and silky; and in the carpels being pilose. Perhaps a distinct species.

Coromandel Turnsole, or Heliotrope. Fl. July, Nov. Clt. 1812. PI. prostrate.

29 H. CAPENSE (Swartz, in litt. Lehm. in act. nat. scrut. hal. 3. p. 13, asper. p. 50.) stem herbaceous, erect, branched; leaves

ovate-roundish, plicate, strigose above, and rather tomentose beneath; spikes pedunculate, solitary, and conjugate; calyx closed, with 5 short connivent segments, falling off in the fruit-bearing state. ©. H. Native of the Cape of Good Hope. Plant hoary and downy. Leaves undulately plicate. Spikes axillary. Carpels large, wrinkled, glabrous.

Cape Turnsole. Fl. June, July. Clt. 1824. PI. 1 to *2* feet.

30 H. EUROPIUM (Lin. spec. p. 187. hort. ups. p. 33.) stem herbaceous, erect; leaves ovate, flat, lined, finely tomentose; lateral spikes solitary : terminal ones conjugate ; calyx stellately spreading in the fruit-bearing state. ©. H. Native of the South of Europe, and in the regions of Caucasus. Gmel. sib. 4. p. 74. no. 11. Scop. fl. cam. ed. 2d. vol. 1. p. 120. Poll. pal. 1. p. 177. All. ped. 1. no. 187. Vill. dauph. 2. p. 450. Jacq. fl. austr. 3. p. 4. t. 207. Sabb. hort. rom. 2. t. 33. Regn. bot. 1. t. 32. Roth. tent. fl. germ. 2. p. 211. Sut. fl. helv. 1. p. 101. Bieb. fl. cauc. 1. p. 118. Lapeyr. fl. pyr. p. 84. Baumg. fl. trans. 1. p. 115. HofTm. et Link. fl. port. 1. p. 166; D. C. fl. fr. no. 2705. H. supinum, Pall. ind. taur. H. canescens, Mcench. meth. p. 415. H. erectum, Lam. fl. fr. 2. p. 281.—Hall. helv. no. 593.—Plenck. off. t. 74.—Mor. hist. 3. sect. 11. t. 31. f. 7. Tourn. inst. p. 139. Stem grey from villi. Leaves smoothish above, canescent, obtuse or terminated by a small acumen. Corolla white, plicate above, intersected by 5 teeth. Stigma bifid at top. Carpels rugose, war ted.

Var.fi; flowers larger, sweet-scented. ©. H. Native of Caucasus, Tauria, and Switzerland. Bieb. fl. cauc. 1. p. 118. Suter, 1. c. Haller, 1. c. H. Europae'um, Pall. ind. taur.

European Turnsole, or Heliotrope. Fl. June, Oct. Clt. 1562. PL j to J foot.

31 H. OBLONGIFOLIUM (Link. enum. 1. p. 163.) leaves petiolate, oblong, obtuse, quite entire, rough, beset with scattered hairs. ©. H. Native of the South of Europe. Very like *H. Euro]'ce\wi,* and hardly distinct. Corolla white.

Oblong-leaved Heliotrope, or Turnsole. Fl. June, Oct. Clt. 1824. PI. | to 1 foot.

32 H. iEGtfPTi'AcuM (Lehm. in. sem. hort. hamb. 1820. p. 8.) stem erect, branched, soft, downy, pale green; branches spreading ; leaves elliptic, or ovate, quite entire, clothed with fine tomentum ; spikes terminal, much branched. ©. H. Native of Egypt. H. pallens, Cailliaud voy. pi. meroe. no *55.* t. 3. f. 4. Habit of *H. Europium* and *H. suaveolens,* but differs in the much greater stature. Corollas large, white. Nuts glabrous, reticulated, scabrous, ex Cailliaud.

Egyptian Heliotrope. Fl. June, July. Clt. ? PI.

33 H. COMMUTATUM (Roam, et Schultes. syst. 4. p. 29.) leaves ovate, wrinkled, petiolate ;, corolline segments obtuse. ©. H. Native of Galicia. H. humile, Schultes, obs. bot. p. *27.* This is much smaller than *H. Europceum,* but otherwise much like it.

Changed Turnsole. Fl. June, Oct. Clt. 1800. PI. \ foot.

34 H. VILLOSUM (Willd. spec. 1. p. 744.) stem herbaceous, erect, very villous ; leaves ovate, flat, villous; spikes lateral and terminal, solitary and conjugate; corollas large; calyx spreading in the fruit-bearing state. ©. H. Native of the Islands in the Archipelago. Desf. ann. mus. 10. p. 427. t. *33.* Lehm. asper. p. *53.* H. hirsutissimum, Weber, pi. kil. 1783. no. 1. Heliotr. majus, flore magno inodoro, Tourn. cor. inst. p. 7. Habit of *H. Europceum.* Plant densely villous; hairs yellowish. Corollas large, white, with a yellow throat, densely villous outside. Fruit wrinkled, glabrous.

Villous Turnsole, or Heliotrope. PI. 2 feet.

35 H. BOCCONI (Guss. sem. hort. Bocc. 1825. ex Linnaea, 4. p *37*) perhaps the same as *H. suaveolens,* from Buccone's synonymes, but in Gussone's the leaves and calyxes are tomentose. 0. H. Native of the South of Europe. Calyxes not subulate, nor the stem less divaricate, and the seeds smaller than in *H. Europceum.*

Boccone's Heliotrope or Turnsole. PI. | foot.

36 H. OBOVATUM (Roxb. mss. ex D. Don. prod. fl. nep. p. 101.) herbaceous; stem decumbent, divided; leaves obovate, petiolate, nerveless, flat, silky *on both* surfaces ; spikes conjugate; calyx shorter than the tube of the corolla. ©. H. Native of Nipaul, towards the banks of the river Morshidabad.

Obovate-lewed Turnsole, or Heliotrope. Fl. May, June. Clt. 1825. PI. decumbent.

37 H. GLANDULOSUM (R. Br. prod. p. 493.) stem suffruticose ; leaves oval, obtuse, wrinkled, tomentose; spikes conjugate ; calyx glandular. J?. G. Native of New Holland, on the south coast.

Glandular-ca\yxed Turnsole, or Heliotrope. Shrub.

38 H. EROSUM (Lehm. in act. nat. scrut. hal. 3. p. 15. asper. p. 54.) stem sufFruticose, decumbent; leaves oblong, obtuse, tapering into the petioles, erosely denticulated, beset with retrograde stiff hairs ; spikes terminal, conjugate, rarely by threes. T? . G. Native of Teneriffe. Plant canescent. Spikes compact. Peduncles and calyxes hairy. Corolla white; tube longer than the calyx, pilose ; limb curled. Fruit glabrous.

Erose-leaved Heliotrope, or Turnsole. Shrub decumbent.

39 H. ERIOCA'RPUM (Dehle, in litt. ex Lehm. asper. p. *55.)* stem shrubby, erect, much branched, hoary; leaves sessile, ovate, villous, warted, with waved, repand, revolute margins ; spikes conjugate. ^ • G. Native of Egypt. Lithospermum digynum, Forsk. fl. arab. descrip. p. 40. H. lineatum, Delile, fl. segypt. p. *37.* t. 16. f. 2. but not of Vahl. Branches dichotomously divided, hoary, tomentose at top, spinescent and naked in summer. Leaves canescent. Spikes sessile, terminal. Calyx villous. Corolla glabrous, red ? ; tube ventricose above. Carpels hoary from very long villi.

Hairy-fruited Turnsole, or Heliotrope. Shrub.

40 H. UNDULATUM (Vahl. symb. 1. p. 13.) stem shrubby, procumbent; leaves lanceolate, hispid, with undulately curled margins ; spikes conjugate, axillary and terminal. T?. G. Native of Egypt, in sandy places. Willd. spec. 1. p. 743. H. crispum, Desf. fl. atl. 1. p. 151. t. 41. Lithospermum hispidum, Forsk. descr. p. 38. no. 24. Branches grey from short tomentum. Leaves rather cinereous. Calyx pilose. Corolla small, white, pilose outside, longer than the calyx, with teeth-formed plicae between the segments of the limb. Carpels clothed with white villi.

Undulated-leaved Turnsole, or Heliotrope. Fl. July, Aug. Clt. 1820. Shrub procumbent.

41 H. LINEATUM (Vahl. symb. 1. p. 13.) stem shrubby, procumbent ; leaves petiolate, elliptic, villous, flat, with revolute margins ; spikes conjugate, bracteolate, lateral and terminal. J? . G. Native of Egypt. Willd. spec. 1. p. 743. Lehm. asper. p. 58. Lithospermum heliotropioides, Forsk, descr. p. 39. no. *25.* Branches villous, tomentose above. Bracteas linear, acute. Calyx villous. Corolla glabrous, longer than the calyx, having teeth between the segments of the lim[irl]^ Carpels villous. Stigma entire.

LinedAeaved Turnsole, or Heliotrope. Shrub procumbent.

42 H. ASPE'RRIMUM (R. Br. prod. p. 493.) plant stnfose, very rough ; spikes capitate ; leaves oblong, obtuse, sessile, with revolute, undulated margins ; stem erect. J? ?. G. Native of New Holland, on the south coast. Lehm. asper. p. *56.*

Very-rough Turnsole, or Heliotrope. PI. erect.

43 H. MOROCCA'NUM (Lehm. asper. p. *56.)* stem shrubby,

erect, strict; leaves lanceolate, beset with incumbent hairs, with undulated, revolute margins; spikes conjugate and compound, lateral and terminal. J?. G. Native of the kingdom of Morocco. Stem hispid. Branches beset with incumbent pili, as well as the leaves, rather hispid. Spikes at first horizontal, ^alyx grey, hispid, with ciliated segments. Corolla large; tube nearly twice as long as the calyx, beset with white hairs above; limb undulately curled. Carpels wrinkled, glabrous. Nearly allied to *H. undulatum.*

ShS^C toJfLT^le,OrHeli0tr0Pe_ FLJune,Ju^ Clt_1823,

44 H. W . « (Fres. fl. egypt. et arab. p. 168) part * % £ ^ ^ ^ * »ie on the younger branches terminal, pedunculate

cloothed with glandular hairs; stem shrubby at the base, branched, clothed with canescent villi; leaves petiolate, ovate-lanceolate, pilose, with undulated margins; spikes almost solitary, bractless, spiral while young; tube of corolla twice as long as the calyx. Fj. G. Native of Arabia, at Thai Ambain.

Ambain Heliotrope, or Turnsole. Shrub.

SECT. II. ORTHOSTACHYS (from *OO$OQ, orthos,* straight; and *ar — — — — '" » '" " • » v"" » OÓ-ZOQ, ortnos,* straight; and *a-w-stáchys,* a spike: the spikes of flowers are straight at first, not circinnate, evolute as in the preceding section.) R. Br. prod. p. 493. Spikes generally solitary, bracteate or leafy, not spiral or circinnate in the young state. Bracteas opposite the flowers, or nearly so.

Lanu (Wall. fl. ind. 2. p. 2.) plant suffruticose, rcased greyish hairs; stems prostrate, densely -- -pproximate, sessile, narrow-linear, somewhat falcate, with recurved margins, canescent; racemes solitary terminal, slender, ex.gli*. with short, ovate bracteas, opposite to, and equalling the pedicels, linear; calyx and nuts strigose. $?. F.. Native of Nipaul, in the vicinity of Katmandu and Gosainsthan. H. compactum, D. Don, prod. fl. nep. p. 101. Plant greyish. Racemes at first slightly recurved. Corolla white, twice as long as the calyx, with a yellow tube; limb plicate; segments slightly crenulated.

Short-leaved Turnsole, or Heliotrope. Fl. June, July. Clt. 1824. PI. prostrate.

46 H. SALICOIDES (Cham, in Linnaea, 4. p. 117.) plant shrubby, canescent from silky strigae; branches terete, slender; leaves scattered, nearly sessile, oblong, ovate-lanceolate, acute, keeled from the nerve, with reflexed margins; spikes simple, terminal, revolute, sometimes lateral, and opposite the leaves, bracteolate, dense flowered; flowers sessile; calycine segments ovate, acute, nearly equal; tube of corolla equal in height to the calyx; limb strigose outside; carpels strigose, shorter than the calyx; anthers connivent and cohering at top. J?. S. Native of Brazil. A small trailing or creeping shrub, with the habit of *S'alix incubacea,* and *S. repens.* Said to be nearly allied to //. *Ottbnis* and *H.fruticosum.*

Willow-like Heliotrope. Shrub creeping.

47 H. OTTONIS (Lehm. asper. p. 59.) stem shrubby; leaves linear-lanceolate, erect, with revolute edges, canescent from somewhat silky, [illegible] hairs, or strigae; spikes solitary, terminal, elongated, bracteate. ?. S. Native of Caracoas. H. strictum, H. B. et Kunth, nov. gen. amer. 3. p. 87. Tournefórtia monostachya, Willd. rel. ex Roem. etSchultes, syst. 4. p. 610. Stem branched at top. Carpels rather hispid, Branches "near, acuminated, hispid. Calyxes unequal.

[illegible] Heliotrope. Shrub U foot.

H. FRUTICOSUM (Lin. spec. p. 187. amoen. 4. p. 394.) stem shrubby; leaves linear-lanceolate, pilose, recurved at apex • tive of South America. Lam. ill. vol. iv.

60. Tournefórtia hùmilis, Swartz. obs. bot. p. 55, exclusive of the syn. of Lin. Willd. spec. 1. p. 793. H. detnissum, Roem. et Schultes, syst. 4. p. 27.—Plum. pl. amer. t. 227. f. 2.—Sloane, hist. t. 192. f. 4. Stem much branched; branches aves with revolute edges, green above, and hoary the hairs being more copious. Bracteas linear. Flowers on short pedicels. Peduncles and calyxes pilose. Corolla Stigma capitate. Carpels rather hispid. Heliotrope. Shrub 2 feet.

49 H. TERNAW (Vahl. symb: 2. p. 21.) stem shrubby; [illegible]

Schum. pl. guin. 6u.) stem shrubby, ascending; leaves linear-lanceolate, strigosely papillose; spikes leafy: lateral ones solitary: terminal ones conjugate. ?. S. Native of Guinea. Lehm. asper. p. 64. Root fusiform. Stem covered with adpressed white hairs, branched. Leaves on short petioles, beset with white adpressed hairs on both surfaces, which rise from papillae. Bracteas sessile, lanceolate, length of flowers, which are distant. Corolla white, with a tooth between each of the

55 H. MYOSOTOIDES (Lehm. in act. nat. scrut. hal. 2. p. 65.) stem fruticosent, erect, purplish: leaves linear,

no. 1166. Lehm. asper. p. a>pet

Heliotrope. Shrub ½ to 1 foot.

sessile, strigose ; spikes solitary, bracteate ; bracteas longer than the calyx. J? • F» Native of the Levant. Habit of *Myosotis.* Stem beset with adpressed, stiff hairs, as well as the calyx and pedicels. Young branches hoary from copious hairs. Leaves deep green. Spikes lateral and terminal. Flowers pedicellate. Carpels rather hispid.

Mouse-ear-like Heliotrope. Shrub erect.

56 H. ROTTLE'RI (Lehm. asper. p. *66.)* stem shrubby, erect; leaves oval-lanceolate, hispid ; spikes lateral and terminal, solitary ; bracteas lanceolate, nearly the length of the calyx. J? . S. Native of the East Indies. Root fusiform, woody, with horizontal fibres. Stems many from the same root, beset with small white hairs or strigae. Flowers on short pedicels. Calyx hispid, length of the tube of the corolla. Corolla pilose outside. Carpels hispid when examined by a lens.

Bottler's Heliotrope. Shrub J to 1 foot.

57 H. THYMIFOLIUM (Vahl, in litt. ex Lehm. in act. nat. scrut. hal. 3. p. 17.) stem shrubby, depressed; leaves oblong, strigose ; spikes solitary, terminal, elongated, leafy. J? . S. Native country unknown. Lehm. asper. p. 67. Stem hispid at top; branches floriferous. Bracteas lanceolate, on short petioles, length of the cauline leaves. Calyx hispid, length of the tube of the corolla. Corolla small, downy outside. Nuts rather villous.

Thyme-leaved Heliotrope. Shrub depressed.

58 H. PAUCIFLORUM (R. Br. prod. 493.) annual, erect, much branched, strigose ; hairs decumbent; leaves lanceolate, linear, shorter than half an inch, with recurved margins; spikes few-flowered ; bracteas linear, length of calyx, equalling the tube of the corolla, which is acutish. ©. H. Native of New Holland, within the tropic.

Few-flowered Heliotrope. PI. erect.

59 H. PERSICUM (Lam. diet. 3. p. 94. ill. p. 393. no. 1761.) stem shrubby, branched ; leaves linear-lanceolate, oblique, recurved, silky, hoary; spikes terminal, leafy. *? . F. Native of Persia. Lehm. asper. p. 68. Heliotropium Persicum incanum, floribus variegatis, Burm. fl. ind. p. 41. t. 19. f. 1. Branches grey from adpressed hairs. Leaves hoary from copious, prostrate hairs. Flowers on short pedicels. Carpels minute, rather hispid.

Persian Heliotrope. Shrub \ to 1 foot.

60 H. FASCICULATUM (R. Br. prod. p. 494.) suffruticose, much branched, strigose ; hairs spreading *, leaves linear, acute, sessile, with recurved margins, a line and a half long, in fascicles ; flowers scattered. J?. G. Native of New Holland, within the tropic.

Fascicled-lew ed Heliotrope. Shrub.

61 H. CAMPECHIA'NUM (Willd. herb, ex Lehm. asper. p. 69. H. B. et Kunth, nov. gen. amer. 3. p. *86.)* stem shrubby, branched, procumbent; leaves lanceolate, strigose, acute at both ends; spikes terminal, solitary, elongated, leafy; calyx subbilabiate, with unequal segments, *fy* . or %. S. Native about Campeachy. Branches filiform, strigose. Lower flowers on short pedicels: upper ones sessile. Tube of corolla length of the larger calycine segments, pilose outside; segments acutish. Carpels hispid when examined by a lens.

Campeachy Heliotrope. Shrub procumbent.

62 H. BRACTEA'TUM (R. Br. prod. p. 493.) annual, strigose from decumbent hairs; branches erect; leaves lanceolate, flat; spikes few-flowered; bracteas lanceolate, nearly sessile, a little longer than the calyx. ©. H. Native of New Holland, within the tropic, on the sea-shore.

Bracteatc-fiowered Heliotrope. PI. erect.

63 H. MARIFOLIUM (Retz. obs. 2. p. 8-9. no. 8.) stern fruticulose, procumbent, filiform; leaves petiolate, lanceolate, acute, pilose ; spikes usually solitary ; bracteas linear-lanceolate, shorter than the calyx. J?. S. Native of India. Willd. spec. 1. p. 742. Lehm. asper. p. 70. Stem beset with incumbent hairs. Leaves figure of those of *Teucrium Mdrum,* but narrower and smaller. Flowers distant, on short pedicels. Nuts hispid, or prickly at the base.

Cat-thyme-leavcd Heliotrope. Shrub procumbent.

64 H. SCABRUM (Retz, obs. 2. p. 8. no. 7.) stem herbaceous, depressed, branched; leaves linear-lanceolate, oblique, strigose, with revolute edges ; spikes solitary, lateral and terminal; bracteas lanceolate, longer than the calyx. 0. H. Native of India, in rice-fields. Lehm. asper. p. 70. Plant small. Root fusiform, simple. Stem nearly simple, strigose from adpressed hairs. Leaves nearly sessile: upper ones opposite. Flowers small, distant. Calyx hispid. Carpels villous at apex.

Far. ft, humile (Lehm. asper. p. 71.) stem more humble and more branched. Q. H. Native of India, in waste places.

Scabrous Heliotrope. PI. small.

65 H. VENTRICOSUM (R. Br. prod. p. 494.") annual, erect, branched, strigose from rather spreading hairs ; leaves linear, acute, with recurved margins ; spikes many-flowered ; bracteas equalling the acuminated calyxes ; tube of corolla exserted near the top, and ventricose. ©. H. Native of New Holland, within the tropic, on the sea-shore.

Fentricose-fiowered Heliotrope. PI. erect.

66 H. PANICULA'TUM (R. Br. prod. p. 494.) suffruticose, much branched, strigose from rather adpressed pili; leaves narrow-linear, with recurved margins ; spikes alternate, panicled; bracteas shorter than the acute calyxes. J?. S. Native of New Holland, within the tropic, on the sea-shore.

Payiicled-spiked Heliotrope. Shrub.

67 H. TENUIFOLIUM (R. Br. 1. c.) plant erect, clothed with hoary tomentum ; leaves linear-filiform ; spikes alternate or solitary; bracteas subulate, shorter than the calyx, which is silky. ©. H. Native of New Holland, on the sea-shore, within the tropic.

Thin-leaved Heliotrope. PI. erect.

68 H. GLABE'LLUM (R. Br. 1. c.) suffruticose, much branched, glabrous ; leaves linear-filiform, with recurved« margins, beset with a few hairs beneath ; spikes few ; bracteas subulate, hardly equalling the calyxes, which are ciliated ; limb of corolla shorter than the tube. ^ • S. Native of New Holland, within the tropic.

Glabrous Heliotrope. Shrub.

69 H. PROSTRA'TUM (R. Br. 1. c.) annual, prostrate, strigose from adpressed pili; leaves lanceolate, acuminated, flat, nearly sessile; bracteas hardly equal in length to the calyx. 0. H. Native of New Holland, within the tropic, on the sea-shore.

Prostrate Heliotrope. Fl. June, July. Clt. 1826. PI. prostrate.

70 H. HUMISTRA'TUM (Cham, in Linnaea, 4. p. 462.) tufted and trailing; stems simple, many from the same root, villous ; leaves densely imbricate, villous, lanceolate, acute ; racemes leafy; flowers pedicellate, extrafoliaceous, equal in length to the leaves ; pedicels length of calyx. 0. F. Native of tropical Brazil, in argillaceous soil. Habit of *Paronychia,* or *Herniaria.* Flowers *size of those of H. parviflorum.* Calycine segments equal, lanceolate, acute, rather villous. Corolla villous outside, bearded in the throat. Anthers bearded at apex.

Trailing Heliotrope. PI. trailing.

71 H. OCELLA'TUM (Cham, in Linnaea, 4. p. 463.) erect, cinereous, strigose; leaves lanceolate, bluntish, sub-cuneated, petiolate ; spikes simple, terminal, bracteate; bracteas equalling or exceeding the flowers. ©. H. Native of Brazil. The whole

plant is greyish from strigae. Leaves \ an inch long. Flowers small, size of those of //. *parvifldrum.* Calycine segments unequal, lanceolate, acute. Corolla slender, pale, strigose outside ; tube shorter than the calyx; limb with a tooth between each lobe. Carpels smooth.

Ocellate-fruhed Heliotrope. PI. | to f foot.

72 H. HUMIFU'SUM (H. B. et Kunth, nov. gen. amer. *3.* p. 85. t. 205.) plant suffruticose, creeping, leafy; leaves crowded, lanceolate-oblong, acute, 1-nerved, stiff, hispid ; flowers in the axils of the superior leaves. J?. S. Native of Cuba, near Havana, in dry places. Lithospermum humifusum, Spreng. syst. 1. p. 548. Leaves *3* lines long, on short petioles, which are dilated and sheathing at the base. Calyx hispid, rather unequal. Corollas size of those of *Myosotis arvensis,* hispid outside ; tube inflated in the middle, hardly equal in length to the calyx; limb plicate, 5-lobed. Stigma capitate, depressed. Fruit hispid. Said lo be nearly allied to *H. orientate,* Lin. Perhaps a proper genus.

Trailing Heliotrope. Shrub creeping.

73 H. FILIFORME (H. B. et Kunth, 1. c. p. 86. t. 204.) procumbent, hispid from strigae ; leaves lanceolate-spatulate, obtuse; spikes terminal and lateral, solitary and conjugate, filiform, bracteate ; bracteas minute, linear. %. S. Native on the sandy banks of the river Apures, between El Diamante and San Fernando. H. tenue, Willd. herb, ex Rcem. et Schultes, syst. 4. p. 737. Stems diffuse. Leaves \ inch long, with the petioles. Spikes revolute at top. Calyx unequal, hispid. Corolla white; tube about equal in length to the calyx. Carpels downy.

Filiform Heliotrope. PI. procumbent.

SECT. III. HELIOTROPHY'TUM (derivation the same as that of the genus, with the addition of <J>VTOV, *phyton,* a plant.) Cham, in Linnaea, 4. p. 458. Carpels 2, 2-celled, 2-seeded. This section joins this genus with *Tournefortia,*

74 H. TOMENTOSUM (Poir. suppl. 3. p. 23.) plant clothed with white tomentum; stem shrubby ; leaves ovate, obtuse, on long petioles, nerveless ; spikes lateral, twin, bracteate. J?. S. Native of the East Indies. Roem. et Schultes, syst. 4. p. 39. Stem branched from the base. Leaves 8-10 lines long. Spikes an inch long, a little revolute at apex. Calyx hispid, acute, a little shorter than the corolla, which is small.

Tomentose Heliotrope. Shrub.

75 H ?. NICOTIAN^FOLIA (Poir. suppl. 3. p. 23.) stem herbaceous, villous; leaves broad-lanceolate, nearly glabrous, with undulated margins ; spikes twin, terminal, bracteate. © ?. H. Native of Buenos Ay res. Leaves petiolate, 3-4 inches long, and 2 broad ; petioles an inch long, pilose, with usually a pair of smaller leaves in the axils of the larger ones. Peduncles compressed, pilose, length of petioles. Calyx hispid, a little smaller than the corolla, which is small. Perhaps a species of *Tiaridium.*

Tobacco-leaved Heliotrope. PI. 1 to 2 feet ?

76 H ?. ANCHUS^EFOLIUM (Poir. suppl. 3. p. 23.) stem shrubby ; leaves stem-clasping, linear-lanceolate, roughish ; peduncles terminal, solitary; spikes bifid, or trifid ; flowers spicately capitate, bracteate. ^ . S. Native of Buenos Ayres, and Brazil. Roem. et Schultes, syst. 4. p. 40. The whole plant is velvety from strigose canescent tomentum. Leaves crowded, 2 inches long, and 6-8 lines broad, obtuse. Peduncles villous. Spikes 2-3 together, crowded into a head. Calyx hispid. Corollas blue, size and form of those of *H. Peruvianum;* tube clothed with viscid villi outside. Perhaps the same as *H. amplexkaule,* Vahl. symb. 3. p. 21.

Bugloss-leavcd Heliotrope. Shrub \ to1| foot.

77 H ?. POLYSTA'CHYUM (Poir. suppl. 3. p. 23.) plant yellow ; leaves ovate-lanceolate, on long petioles, tomentose beneath ; spikes numerous, terminal. ?. S. Native of Pondicherry. Commerson in herb. Rcem. et Schultes, syst. 4. p. 40. Branches spreading, rather rose above. Leaves thickish, 1-2 inches long, Calyx hispid. Corolla small white together, unequal, very long. indurated angular calyx. Carpels involucrated by the capsular pericarp.

Many-spiked Heliotrop

78 H. SINUATUM (Cham. in Linnaea, 4. p. 460.) stem shrubby ; leaves lanceolate and ovate-lanceolate, petiolate, or bluntish ; spikes terminal, and from the axils of the leaves. ?. F. Native of Brazil. This species agrees with H. riness, inflorescence, flov es. Plant strigose. Flowers nearly sessile.- Corolla hairy outside. Very tuberculed.

Sida-leaved Heliotrope. Shrub?*> if tot

i *I* ?" TM ? oiDES (Cham. in Linnaea 4. Se«<ls contained in an umbonate 4-angled berry.

Berry-bearing Heliotrope. Shrub.

84 H. PETRARDEUM (Lour. coch. p. 103. ed. Willd. 1. p. •«) leaves ovate-lanceola labrous, opposite ; spikes crowded, terminal. Y. T of Cochinchina, among luxuriant herbs. Stems P™^ Pe, diffuse, whitish, bluntly tetragonal. Flowen reddS' T long dense spikes. Corolla campanulate, 5-cleft. Stamt's T stamens 4, about equal in length to the

corolla. Stigma bifid. Seeds 4, naked. Calyx small, 5-cleft. Perhaps a species of *Verbena.*

Tetrandrons-fiowered Heliotrope. PI. 1 foot.

N.B. In Salt's trav. *in* abys. p. 475, there are *8* species enumerated, but without any diagnosis. 1. H. cinereum, R. Br. 2. H. ellipticum, R. Br. and H. dubium, R. Br.

Cult. Several of the species of *Heliotropium,* or *Turnsole,* are valued on account of the fragrance of their blossoms, so that a few of them are to be met with in almost every collection of plants. The shrubby and perennial kinds thrive in any kind of rich, light soil ; and young cuttings of them root readily under a hand-glass. The European annual species should be treated as other hardy annuals, by sowing the seeds in the open ground : the tropical species, like other tender annuals, by being reared on a hot-bed, and afterwards planted out.

XXXVI. PIPTOCLAINA (from *TTIITTOJ, pipto,* to fall; and *kXaiva, klaina,* a cloak ; in reference to the calyx being deciduous.) Heliotropium, species of authors.

LIN. SYST. *Pentdndria, Monogynia.* Calyx tubular, 5-toothed, deciduous. Corolla salver-shaped ; throat furnished with a tooth between each of the segments. Stamens inclosed. Stigma simple. Carpels solitary, or 4, 1-celled.—Diffuse or canescent annual plants. Leaves petiolate, alternate. Flowers disposed in solitary, or twin spikes.

1 S. MALABA'RICA ; stems herbaceous, depressed ? leaves ovate, plicate, entire, clothed with hoary tomentum on both surfaces, pilose ; spikes lateral and terminal, generally solitary ; calyx large, deciduous in the fruit-bearing state. 0. H. Native of Malabar. Heliotropium Malabaricum, Retz. obs. 4. p. 24. Willd. spec. 1. p. 742. Lehm. asper. p. 48. H. Europaeum, Forsk. descr. p. 38. H. Europse'um, var. Malabaricum, Burm. ind. p. 40 ?. Plant soft to the touch. Spikes sometimes conjugate. Corolla white, longer than the calyx. Carpels rugose, glabrous. Calycine teeth short, connivent.

Malabar Piptoclaina. PI. trailing.

2 S. SUPINA ; stems herbaceous, decumbent; leaves oval, obtuse, plicate, with the margins a little reflexed, and obsoletely crenulated, hoary beneath, villous ; spikes generally solitary, seldom conjugate, usually lateral ; calyx closed, deciduous in the fruit-bearing state. ©. H. Native of Portugal, South of France, Islands of the Archipelago, Barbary, Arabia, and the Cape of Good Hope. Heliotropium supinum, Lin. spec. 187. Lehm. asper. p. 48. Gouan. hort. monsp. p. 17. t. 1. Desf. fl. atl. 1. p. 152. Sibth et Smith, fl. grsec. t. 157. Lapeyr. abr. suppl. 27. D. C. fl. fr. no. 2706. Thunb. fl. cap. prod. p. *S3,* Hoffm. et Link. fl. port. 1. p. 167. Heliotropium humifusum, flore minore, &c. Tourn. cor. p. 7. voy. 1. p. 342. t. 23.—Mor. hist. 3. sect. 11. t. 31. f. 10. Stems many from the same root, hairy, canescent. Calycine teeth linear. Corolla with a yellow tube, length of the calyx, and a short white limb ; segments of the limb reniform, intersected by teeth, which harcTly close the throat. Carpels scabrous, solitary, the other 3 being abortive.

Trailing Piptoclaina. Fl. June, July. Clt. 1640. PI. trailing.

Cult. This species of the genus being annuals, the seeds only require to be' sown on a hot-bed in spring, and about the end of May the plants should be planted out in the open border, in a"sheltered situation.

XXXVII. TIARI'DItf M (from *napa, tiara,* a Persian diadem ; and *ei£og, eidos,* like ; in reference to the form of the capsule.) Lehm. asper. p. 13. Blum, bijdr. 845.—Heliotropium species of authors.

LIN. SYST. *Pentandria, Monogynia.* Calyx 5-cleft, or 5-parted. Corolla salver-shaped; tube angular; throat coarctate, 5-rayed; segments of the limb undulated. Style very short. Stigma capitate. Carpels 4, 2-celled, mitre-formed, acuminated, cohering, closed at the base, without any manifest receptacle.—Plant with the habit of *Heliotropium.*

1 T. PNDICUM (Lehm. asper. p. 14. Blum, bijdr. p. 846.) stem herbaceous, erect, hairy ; leaves ovate-cordate, acuminated, hairy at the base; tube of corolla twice as long as the calyx. ©. H. Native of both Indies and North America, in rather dry places. Heliotropium I'ndicum, Lin. spec. 187. Swartz. obs. p. 54. Willd. spec. 1. p. 740. Willd. enum. 1. p. 174. Pursh. fl. amer. sept. 1. p. 130. Horn. hort. hafn. 1. p. 172. Michx. fl. bor. amer. 1. p. 129. Sims bot. mag. t. *1837.* Heliotropium cordifolium, Moench. meth. p. 415.—Sabb. hort. rom. 2. t. 34. —Mor. hist. *3.* sect. 11. t. 28. f. 1.—Plukn. phyt. 245. f. 4. Plant scabrous. Stem branched. Leaves running into the petioles at the base, *3* inches long, and 2 broad, subserrate. Spikes terminal, solitary, hairy, reflexed at first. Calycine segments rather unequal. Corolla with a white tube, a cream-coloured throat, and a lilac or bluish limb. In spontaneous specimens *of* this plant the leaves are nearly opposite, and the spikes terminal; but in cultivated specimens the leaves are often alternate, and the spikes conjugate. " Nuts 2-celled," ex Cham, in Linnaea.

Indian Tiaridium. Fl. June, July. Clt. 1820. PI. I to 2 feet.

2 T. ANISOPHY'LLUM ; stem branched, hardly villous ; leaves petiolate, ovate-lanceolate, glabrous, nearly entire, opposite, or alternate, unequal at the base ; spikes solitary, terminal, and axillary. ©. H. Native of Guinea, on the gold coast. Heliotropium anisophyllum, Beauv. fl. d'ow. 2. t. 94. Flowers white.

Unequal-leaved Tiaridium. Fl. June, July. Clt. 1823. PI. 1 foot.

3 T. VELUTINUM (Lehm. asper. p. 15. Blum, bijdr. 846.) stem erect, herbaceous, villous ; branches decumbent ; leaves ovate, bluntish, undulated, canescent on both surfaces, velvety ; tube of corolla a little longer than the calyx, villous outside. ©. H. Native of the East Indies. In Java this and *T. I'ndicum* are called *Bunta-tikus.* Bena-patsja, Rheed. mal. 10. p. *95.* t. 48 ?. Leaves oppos te, petiolate, obsoletely crenulated on the margins, hoary from tomentum while young, running obliquely into the petioles at the base. Spikes lateral and terminal, pilose, solitary, revolute before florescence.

Velvety Tiaridium. Fl. June, July. Clt. 1820. PI. 1 foot,

4 T. ELONGATUM (Lehm. asper. p. 18.) stem suffruticose, decumbent; leaves rhomb-lanceolate, acuminated, hairy ; tube of corolla thrice as long as the calyx, hairy outside. I?. G. Native of Brazil, in sandy places, Heliotropium elongatum, **Willd.** herb. no. 3228. Stem woody at the base, herbaceous and hairy at top. Leaves tapering into the petioles at the base, obsoletely crenulated. Spikes lateral and terminal, solitary, very long, pedunculate at first, revolute. Calycine segments incurved. Carpels 1-celled, ex Cham, in Linnaea, 4. p. 452.

Elongated-spiked Tiaridium. Shrub decumbent.

5 T. HELIOTROPIOI'DES (Cham, in Linnaea, 4. p. 453.) shrubby, beset with adpressed pili ; leaves nearly opposite and attenuate, broad, lanceolate, acute at both ends, strigose above, downy beneath ; tube of corolla exceeding the calyx. J? . G. Native of the South of Brazil, Sello. Heliotropium tiaridioides, Cham, in Linnaea, 4. p: 453. Leaves 2| to 4 inches long, and 1 to 1| broad. Spikes twin at first, terminal, bractless. Calycine segments narrow, acute. Corolla downy outside. Stigma conical. Fruit divisible into two 2-celled parts.

Heliotrope-like Tiaridium. Shrub \\ foot.

6 T. MONOSTA'CHYUM (Cham, in Linneea, 4. p. 455. under Heliotrópium) ; this species is very nearly allied to *T. heliotropioldes,* but differs in the spikes being simple and solitary, never twin ; and in the leaves not being so opposite; stem dichotomous ; strigae adpressed. T2 . S. Native of tropical Brazil. Leaves with the petioles, 4-4| inches long, and 15 lines broad. Spikes half a foot long.

One-spiked Tiaridium. Shrub \ to 1\ foot.

Cull. The three first species being annuals, the seeds of them should be sown on a hot-bed early in spring ; and the plants may be planted out in the open border, in a warm, dry, sheltered situation, about the middle of May. The rest should be treated in the manner recommended for the shrubby species of *Heliotrópium.*

XXXVIII. COLDE'NIA (named by Linnaeus in honour of Conwallades Colden, a North American botanist, who discovered many new plants; these are published in the Upsal Acts for 1743.) Lin. gen. no. 173. Schreb. gen. no. 233. Juss. gen. 130. edit. Usteri, p. 145. Lam. ill. no. 248. t. 89. Gaertn. fruct. 1. no. 424. t. 68. f. 3. Lehm. asper. p. 7.—Tiquilia, Pers. ench. 1. p. *57.*

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla funnel-shaped ; throat wide, naked; limb flat; segments equal. Style bifid at apex. Carpels 4, 1-celled, convex outside, coherent, closed at the base, beaked, without any manifest receptacle.—Prostrate plants, with alternate leaves, and axillary flowers.

1 C. PROCU'MBENS (Lin. fl. zeyl. p. 6'). spec. p. 182.) leaves cuneiform, petiolate, haying one of the sides shorter than the other, coarsely serrated, plicate ; flowers axillary, usually solitary ; carpels wrinkled. ©. S. Native of the East Indies. Willd. spec. 1. p. 712. Lehm. asper. p. 8. Lam. ill. t. 89.—Plukn. aim. t. 64. f. 6. Stem villous. Leaves \ to 1 inch long, beset with adpressed hairs above, except in the plicae, villous beneath. Flowers supra-axillary, sessile, white.

Procumbenl Coldenia. Fl. July, Aug. Clt. 1699. PI. procumbent.

% C. DICHÓTOMA (Lehm. asper. p. 9.) leaves lanceolate, attenuated at the base, lined, hoary; flowers crowded; carpels smooth. 1? . S. Native of Peru, in sandy places about Lima. Lithospérmum dichótomum, Ruiz, et Pav. fl. per. 2. p. 5. t. 3. f. c. Tiquilia dichótoma, Pers. ench. 1. p. 157. Plant hispid, hoary. Stems dichotomous, geniculate, hispid at top. Leaves rather plicate, pilose, with reflexed, subrepand margins. Flowers sessile, axillary, violaceous ; segments of the limb emarginate.

Dichotomous Coldenia. Shrub procumbent.

Cult. For culture and propagation see *Tiarídium* above.

XXXIX. HALGA^{X}NIA (named by Gaudichaud after Admiral Halgan, of the French navy.) Gaud, in Freyc. voy. pt. bot. p. 448. t. 59.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-cleft, regular. Corolla funnel-shaped ; tube short; segments spreading, obtuse. Stamens inclosed; anthers erect, fixed by the base, where they are cordate and cohering, drawn out each into a linear appendage at apex. Style longer than the stamens; stigma simple, obtuse. Fruit obliquely and tetragonally ovate, coriaceous, bipartible; divisions 2-celled ; cells 1-seeded ; premature seeds linear-reniform, suspended towards the middle of the inner parietes of the cell.—A branched, pilose shrub. Branches scattered. Leaves scattered, lanceolate, cuneated, a little toothed, 3-lobed at apex, and sometimes entire. Corymbs terminal, bractless. Flowers blue.

1 H. LITTORA'LIS (Gaud. 1. c. p. 449.) *fy* • G. Native of New Holland, on the western coast, along the shore in Shark's Bay.

Sea-shore Halgania. Shrub.

Cult. For culture and propagation see *Heliotrbpium,* p. 364.

XL. PRESLiE^{N}A (named after J. and C. B. Presl, of Prague, brothers, experienced naturalists.) Mart. bras. 2. p *75.* t. 164. *'

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla funnel-shaped; limb 5-cleft, with a plica between each of the segments, which are falcate and bent inwards; throat furnished with 5 fascicles of pili just above the connivent anthers. Anthers appendiculate at the base. Style from the top of the ovarium ; stigma from a conical disk. Fruit dry, divisible into 4 1-seeded parts or carpels.—A branched diffuse herb, with the habit of *Lithospermum orientdle,* clothed with simple hairs. Leaves alternate, lanceolate. Flowers axillary, solitary, on short pedicels. Corollas yellow. Perhaps *Lithospermum Orientdle* is a species of *Preslce^{K}a.*

1 P. PARADÓXA (Mart. 1. c. p. *76.)* stem much branched, diffuse, hoary and hispid; leaves narrow-lanceolate, acute. }/. G. Native of Brazil, in the province of Bahia, on the sandy banks of the river St. Francisco, near Joazeiro. Ovarium ovate. Carpels perforated at the base, fixed to the central column ? cohering.

Paradoxical Preslsea. PL diffuse.

Cult. For culture and propagation see *Heliotrópium,* p. 364.

XLI. EU'PLOCA (from *ev, eu,* well; and *TTXEKU), pleco,* to fold; in reference to the peculiar character of the corolla.) Nutt. in amer. phil. trans, n. s. 5. p. 189.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla funnel-shaped ; limb flat, plicate, 5-angled ; throat naked" Genitals inclosed. Stigma annular, bearded at apex. Carpels 4* approximate, by pairs, angular, imperforated at the base, oblique* fixed to the calyx.—Herbaceous. Leaves rough, alternate! Flowers scattered, with a plicate limb, as in *Convolvulacece.* Said by Nuttall to be allied to *Messerschmidtia* and *Argazia* but the fruit is different.

1 E. CONVOLVULA^{X}CEA (Nutt. 1. c. p. 190.) ©. H. Native of North America, on the sandy banks of the Arkansas. Stem angular, 4-6 inches high. Leaves scabrous from adpressed hairs : lower ones alternate. Flowers lateral, approximating and nearly sessile. Corolla rough, pilose outside, size of those of *Qudmoclit vulgaris.* Perhaps this plant ought to be united with *TournefSrtia Argúzia* of Siberia.

Convolvulaceous-flowered Euploca. PL \ foot

Cult. For culture and propagation see' *Tiaridium* above.

XLII. TOURNEFO'RTIA (so named by Linnaeus in memory of Joseph Pitton de Tournefort, the famous author of an elegant arrangement of plants, under the title of "Institutiones Rei Herbariae," 1694, 8vo. and 1700, in 3 vols. 4to. with figures of all the genera then known ; also author of "Corollarium Inst." &c. 1798 ; "Elémens de Botanique," 1698 ; and of the Plants about Paris," first pub-

lished in 1725.) Lin. gen. no. 192. Schreb. gen. no. 253. Gaertn. fruct. 1. p. 365. t. 7fi. Juss. gen. 129. R. Br. prod. 490. H. B. et Kunth, nov. gen'

followed rallp,l tt T , foundation of the arrangement now JuSSleuan> or Neural System.)

amer. 3. p. *78.*—Messerschmidtia species, Lin.—Pittonia, Plum, gen. 5. icon. *227.* f. *2.*

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla salver-shaped, or somewhat rotate, with a naked throat. Stamens inclosed. Stigma peltate, somewhat conical. Berry containing *2* nuts; nuts 2-seeded.—Twining, scandent, or erect shrubs. Leaves scabrous or tomentose, scattered, rarely by threes, petiolate. Peduncles usually terminal, rarely axillary or lateral, generally bearing many spikes, which are usually cymose. Spikes secund, revolute at top, bractless. Embryo inverted.

SECT. I. PITTONIA (see genus for derivation). H. B. et Kunth, nov. gen. 3. p. 80. Limb of corolla plicately 5-cleft. Berry more or less globose, containing *2,* 2-celled, 2-seeded nuts.

* *Species natives of America.*

1 T. CYMOSA (Lin. spec. 20g.) branches compressed, angular, glabrous ; leaves ovate, acuminated at apex, and attenuated at the base, naked, glabrous; peduncles axillary and terminal, glabrous; spikes cymose. ^ • '§. Native of Jamaica. Jacq. coll. 1. p. *96.* icon. rar. t. 31. Swartz, obs. p. *57.*—Sloane, jam. hist. *2.* p. 109. t. *212.* f. *2.* T. macrophylla, Lam. ill. p. 416. no. 1874. Poir. diet. 5. p. *356.* Pers. ench. 1. p. 165. Leaves 6 inches long, and 1-2 broad, veiny. Spikes long, pendulous. Calycine segments narrow, acute. Corolla flesh-coloured, or pale red, short, rusty or greenish-white. Berries white.

Cymose-ftowered Tournefortia. Fl. July. Clt. 1777. Shrub 8 to 10 feet.

2 T. FCETIDI'SSIMA (Lin. spec. 201. hort. cliff, p. 48.) branches angular, hairy ? leaves ovate-lanceolate ; peduncles axillary and terminal ; spikes pendulous, cymose. F2 . S. Native of Mexico, Jamaica, and other West India Islands. Willd. spec. 1. p. 792. T. cymosa, var. /3, Poir. diet. 5. p. *S36.* Pittonia raeemdsa, nicotianae foliis fcetidissimis, Plum. gen. *5.* icon. 220.—Plukn. aim. 182. Leaves 5 inches long and 2 broad, hairy on the under side, fetid when bruised. Peduncles bearing 2-3-4, or *5* pendulous spikes. Flowers dirty white, crowded. It differs principally from *T. cymosa* in the leaves being hairy or villous beneath.

Very fetid Tournefortia. Fl. July. Clt. 1739. Shrub 10 to 12 feet.

3 T. BI'COLOR (Swartz, prod. p. 40. fl. ind. occ. 1. p. 344.) branches glabrous, compressed, rather angular; leaves ovate, acuminated, glabrous, veiny, wrinkled above; peduncles terminal, glabrous; spikes erect, cymose. T? . S. Native of Jamaica, Martinico, and Guadaloupe. Willd. spec. 1. p. *793.* T. laevigata, Lam. ill. no. 1875.? Poir. diet. *5.* p. 357. Leaves rarely rather hairy above, smooth and pale beneath, 3-4 inches long. Flowers dirty white, or greenish white, crowded ; tube of corolla hairy.

Two-coloured-leaved Tournefortia. Fl. July. Clt. 1812. Shrub 5 to 6 feet.

4 T. UNDULA'TA (Ruiz, et Pav. fl. per. 2. p. 25. t. 149. f. b.) branches angular, downy ; leaves oblong-lanceolate, lined, wrinkled, rather downy, undulated ; peduncles dichotomously corymbose, lateral and terminal; spikes short, numerous, recurved. ^ . S. Native of Peru, on hills in the province of Cumana. Shrub rather downy. Corolla white, downy outside. Berry white. Nuts *cornute* at the base.

Undulated-lewed Tournefortia. Shrub 6 to 7 feet.

5 T. ANGUSTIFLORA (Ruiz, et Pav. fl. per. *2.* p. 25.) glabrous ; branches angular ; leaves ovate, unequal at the base, with an oblique acumen ; peduncles bifurcate, terminal and axillary, therefore the spikes are conjugate ; flowers somewhat pedicellate ; corollas narrow. I? . S. Native of Peru, in woods. Spikes 2 inches long, hardly recurved. Calyx small. Corolla white, very long, rather downy outside ; tube swollen at the base ; limb spreading, reflexed. Stigma nearly sessile. Anthers linear. Berry white, globose, 2-seeded. Perhaps a species *of Messerschmidtia.*

Narrow-flowered Tournefortia. Shrub 4 to 5 feet.

6 T. VIRGATA (Ruiz, et Pav. fl. per. 2. p. 25. t. 50. f. a.) stems terete, and are, as well as the branches, which are angular, hispid ; leaves ovate-oblong, acuminated, hardly petiolate, hispid; peduncles terminal, subdichotomous, cymose; spikes few ; flowers crowded. J?. S. Native of Peru, in woods. Branches attenuated. Leaves alternate, or 3 in a whorl, rather wrinkled. Corolla white.

Twiggy Tournefortia. Shrub.

7 T. MACULA'TA (Jacq. amer. p. 47. Lam. ill. no. 416. Poir. diet. 5. p. 357.) glabrous; branches twiggy, rather angular ; leaves ovate, acuminated, petiolate ; peduncles of many spikes ; spikes pendulous ; flowers few, in a single row. fj . S. Native of Carthagena, among bushes, and in hedges. Leaves 4 inches long, and 2 broad. Spikes short. Corolla yellow, with a long slender tube, and acute segments, ex Poir. Fruit yellow, with 4 roundish dark spots at the base.

Spotted-fruited Tournefortia. Shrub.

8 T. CARACCASANA (H. B. et Kunth, nov. gen. amer. 3. p. *80.)* branches terete, hairy when young, angular; leaves ovate-oblong, acuminated, narrowed at the base, strigose above, and clothed with hair-like, canescent tomentum beneath; peduncles lateral, dichotomously multifid, usually bearing 8 spikes ; calyx strigosely downy, 4 times shorter than the tube of the corolla. J?. S. Native near the town *of* Caraccas, on the banks of the river Anauco. T. acutifdlia, Willd. rel. ex Room, et Schultes, syst. 4. p. 540. Leaves 4 inches long, and 2 broad. Peduncles downy. Spikes diffuse. Segments of calyx ovate, acute. Corolla with a green, downy, angular tube, and a white, blunt limb. Stigma sessile.

Caraccas Tournefortia. Shrub.

9 T. FULIGINOSA (H. B. et Kunth, 1. c. p. 81. t. 203.) branches compressedly tetragonal, clothed with rusty tomentum ; leaves oblong, acute at both ends, wrinkled, hispid above, and clothed with rusty tomentum beneath; peduncles lateral, dichotomously tnultifid, of many spikes; calyx clothed with rusty tomentum, much shorter than the tube of the corolla; corolla also clothed with rusty tomentum ; drupes glabrous. J? . S. Native near Cumana and Bordones. T. rugosa, Willd. rel. ex Rocm. et Schultes, syst. 4. p. 540. Leaves 4-5 inches long, and 1| to 2 broad. Peduncles clothed with rusty tomentum. Spikes narrow, 4 inches long. Calycine segments ovate, acute. Limb of corolla obtuse.

Sooty Tournefortia. Shrub.

10 T. SUAVE'OLENS (H. B. et Kunth, 1. c. p. *8}.)* branches angular, hispid; leaves ovate-oblong, acute at both ends, beset with adpressed hairs above, and soft hair-like tomentum beneath ; peduncles terminal, somewhat dichotomously multifid, of many spikes; calyx, peduncles, and petioles hispid; calyx a little shorter than the tube of the corolla. *? . S. Native of Peru. Leaves canescent beneath, *3* inches long, and 1| inch broad. Spikes numerous, corymbose, short. Calycine segments linear. Corolla beset with adpressed hairs outside ; lobes ovate, acute. Fruit not seen.

Sweet-scented-Cowered Tournefortia. Shrub.

11 T. LOXE'NSIS (H. B. et Kunth, 1. c.) branches terete,

hairy; leaves ovate, acuminated, narrow at the base, strigose above, but clothed with fine tomentum beneath; peduncles terminal and lateral, dichotomous, of many spikes ; calyx and peduncles clothed with hoary tomentum; calyx one half shorter than the tube of the corolla ; drupes glabrous. J? . S. Native of Quito, in woody places between Alto de Pulla and Loxa, at the elevation of 1100 hexapods. Shrub with a very grateful scent. Leaves 3 inches long. Spikes linear. Flowers crowded, about the size of those of *Heliolropium Peruvianum.* Calycine segments ovate-oblong, acute. Corolla white, clothed with hispid tomentum outside; lobes roundish, curled. Berry 3-celled, 3-seeded.

Loxa Tournefortia. Shrub 10 to 12 *feet.*

12 T. CANE'SCENS (H. B. et Kunth, 1. c. p. 82. Willd. mss. ex Rcem. et Schultes, syst. 4. p. 540.) branches nearly terete when young, angular and villous; leaves ovate-oblong, acuminated, angular at the base, nearly sessile, strigosely villous above, but clothed with hoary tomentum beneath; peduncles terminal, dichotomously multifid, of many spikes, clothed with hoary villi; calyx hispid ; drupes glabrous. J? . S. Native near Cumana. Corolla unknown. Berry nearly globose, 4-celled; cells 1-seeded. This and the preceding species are very nearly allied to *T. polystachya,* Ruiz, et Pav., both of which are probably species of *Messerschmidtia,*

Canescent Tournefortia. Shrub.

13 T. HI'SPIDA (H. B. et Kunth, 1. c. p. 82.) branches rather angular, hispid; leaves ovate, acuminated, narrowed at the base, hispid on both surfaces, but canescent beneath; peduncles terminal, hispid, dichotomously multifid, usually of 10 spikes; calyxes hispid, much shorter than the corolla. ^ • S. Native on the shady banks of the river Magdalena, near TenerifFe. Leaves *S* inches long, and 2 broad. Spikes thick. Flowers approximate. Calycine segments roundish, obtuse. Corolla strigose outside ; lobes obtuse. Fruit unknown.

Hispid Tournefortia. Shrub.

14 T. SCA'BRIDA (H. B. et Kunth, 1. c. p. 83.) branches terete, even, clothed with adpressed hairs ; leaves oblong-elliptic, acute at both ends, scabrous above from strigae, canescent and hairy beneath, as well as the peduncles, which are terminal, dichotomous, of about 6 spikes ; calyxes and drupes strigosely pilose, T? • S. Native on the shady banks of the river Magdalena, near TenerifFe. Leaves stiif, bullated above, *S* inches long, and 20-21 lines broad.

Scabrous Tournefortia. Shrub.

15 T. CUSPIDA^TA (H. B. et Kunth, 1. c. p. 83.) branches terete, hairy; leaves oblong, acuminately cuspidate, acute at the base, pilose on both surfaces, hairy on the veins beneath ; peduncles terminal, dichotomously multifid, of many spikes, hairy. b • S. Native of Guayaquil, on the sea shore. Leaves 6£ inches long, silky and rusty while young.

Cuspidate-leaved Tournefortia. Shrub.

16 T. L^VIGA'TA (Lam. ill. p. 419. H. B. et Kunth, nov. gen. amer. 3. p. 83.) branches rather angular, and rather scabrous ; leaves ovate-elliptic, short-acuminated, rounded at the base, coriaceous, glabrous; peduncles terminal, paniculately multifid, of many spikes, beset with scattered hairs ; calyxes downy; drupes glabrous. T? . S. Native of Guadaloupe, Martinico, and on the banks of the river Magdalena, near Monpox. F. latifblia, Willd. mss, ex Rcem. et Schultes, syst. 4. p. 540. Leaves 5-6 inches long, and 3 broad. Spikes 10-12 on each peduncle, an inch long, diffuse.

Smooth Tournefortia. Shrub.

17 T. NI'TIDA (H. B. et Kunth, 1. c. p. 84.) branches angular, smooth, glabrous ; leaves somewhat elliptic, acuminated, acute at the base, coriaceous, glabrous, shining above; corymbs terminal, sessile, of many spikes ; calyx puberulous; drupes glabrous. I? • w ˢ- Native on the western declivities of the Andes of Quindiu, near Carthage, at the altitude of 500 hexapods. Leaves 4 inches long, and 2 broad.

Nitid-\eaved Tournefortia. Shrub twining.

18 T. CORNIFOLIA (H. B. et Kunth, 1. c. p. 84.) branches nearly terete, striated, beset with hairs; leaves obovate-oblong, acute, narrowed at the base, stiff, rather scabrous on both surfaces ; peduncles terminal and lateral, bifid, smoothish, with generally about 6 spikes ; calyxes rather scabrous ; drupes glabrous. T? . S. Native along with the preceding. Leaves about 3 inches long, and 1 broad.

Dogwood-leaved Tournefortia. Shrub.

19 T. LU'CIDA (Desv. herb, ex Ham. prod. p. 24.) branches twiggy, clothed with rusty tomentum; leaves ovate, acute, quite entire, shining above, and nearly glabrous beneath; flowers racemose, lateral, opposite the leaves. 1?. S. Native of the Antilles.

Shining-leaved Tournefortia. Shrub.

20 T. TERNIFOLIA (H. B. et Kunth, 1. c.) branches terete, beset with adpressed hairs; leaves 3 in a whorl, oblong, narrowed at both ends, acute, membranous, glabrous; spikes terminal, twin. T?. S. Native on the banks of the river Amazon, near Tomependa, and Jaen de Bracamoros. Leaves about *7* inches long, and 2| broad, sometimes beset with adpressed hairs on the nerves beneath. Spikes about an inch long. Flowers pedicellate. Calycine segments linear-lanceolate. Corolla strigose outside, 3 times as long as the calyx.

Tern-leaved Tournefortia. Shrub.

21 T. LEUCOPHY'LLA (H. B. et Kunth, 1. c. p. *85.)* branches terete, clothed with fuscescent tomentum ; leaves oblong-elliptic, acuminated, rounded at the base, glabrous above, and shining, but clothed with fine white tomentum beneath; peduncles terminal, dichotomously multifid, of many spikes, clothed with pale rusty tomentum ; calyxes clothed with rusty tomentum. *2 . S. Native of New Granada, near Ibague. Leaves rather membranous, 4 inches long, and nearly 2 broad. Spikes 7-8 on each peduncle, \ to 1 inch long.

White-leaved Tournefortia. Shrub.

22 T. BRASILIE'NSIS (Poir. diet. 5. p. 357.) branches terete, fuscescent, striated, with a few hairs; leaves ovate-lanceolate, subsinuated, rough on both surfaces, white beneath ; cymes short, reflexed, downy. T? . S. Native of Brazil. Leaves 2-3 inches long, and 1 broad. Calycine segments acute, a little recurved, villous.

Brazil Tournefortia. Shrub.

23 T. SUFFRUTIC6SA (Lin. spec. p. 202.) stem sufFruticose; branches downy, cinereous, twiggy ; leaves sub-lanceolate, hoary beneath ; spikes short, terminal and axillary, cymose. Jj . S. Native of Jamaica, and tropical America, near the sea. Browne, jam. p. 170. Lam. ill. no. 1880. t. 95. f. 3.—Sloane, hist. 2. p. 29. t. 162. f. 4. Leaves 2 inches long, and 1 broad, dark green above, sessile. Corollas white, twice as long as the calyx.

Suffruticose Tournefortia. Fl. June, July. Clt. 1759. Shrub 3 to 4 feet.

24 T. SCA'BRA (Lam. ill. no. 1883. Poir. diet. 5. p. 359.) branches elongated, striated, rather downy ; leaves oblong or linear-lanceolate, obtuse, reflexed, very scabrous, denticulated ; peduncles branched, terminal, scabrous, as well as the calyxes ; berry conical. I? . S. Native of St. Domingo. Leaves 1-2 inches long, and 4 lines broad, villous and wrinkled beneath. Teeth of calyx acute, spreading. Berry rufescent.

Far. ft ; leaves narrower, and very long. ^2. S. Native of St. Domingo. Leaves acute, green, acuminated, twice as long

as those of the species. Perhaps a proper species, ex Poir. 1. c.

Scabrous Tournefortia. Shrub.

25 T. MICROPHY'LLA (Desv. herb, ex Ham. prod. p. 24.) stem erect, mutic, branched, quite glabrous; leaves small, ovate, obtuse, quite entir£, almost glabrous ; flowers spicate, sub-bifid. J? . S. Native of the Antilles.

Small-leaved Tournefortia. Shrub.

26 T. SESSILIFÓLIA (Poir. diet. 5. p. 360.) stems terete, beset with stiff hairs ; leaves sessile, lanceolate, linear, villous on both surfaces ; flowers crowded, terminal. T? . G. Native of Buenos Ayres, Commerson. Leaves obtuse, half stem-clasping at the base, an inch and more long, and 3 lines broad. Peduncles divided into 2 branches, having the flowers densely glomerate on the top of each branch. Corolla tubular; limb short, dilated, obtuse. Peduncles and calyxes beset with numerous glandular pili.

Sessile-leaved Tournefortia. Shrub.

27 T. INCA'NA ; hoary, villous ; stems herbaceous ; leaves sessile, linear, with revolute edjjes. 2/. S. Native about Essequibo. Messerschmidtia incåna, Meyer, esseq. p. 92. Stems angular, woody, and rather naked at the base ; branches simple, spreading; corymbs racemose, terminal, having the branches twice bifid. Corolla hairy, coloured, funnel-shaped; throat naked. Berry corky, containing 2, 2-seeded pyrense. Said by Meyer to be the same as the preceding.

Hoary Tournefortia. PI. *h* to 1 foot.

28 T. ? FERRUGI'NEA (Lam. ill. no. 1882.) branches terete, striated, climbing a little, beset with numerous, stiff, straight, rust-coloured hairs while young, as well as the petioles and nerves ofleaves ; leaves subcordate, acute, villous beneath ; peduncles much branched, villous ; spikes short; calyx villous, scabrous. T? • ^- S. Native of St. Domingo. Leaves scabrous above, a little ciliated, deep green, 2-3 inches long, and 1 broad. Corolla short, tubular. Said to be very nearly allied to *T. volùbilis,* but is less sarmentose.

Rusty Tournefortia. Shrub climbing.

29 T. SCHIEDEAVA ; leaves elliptic-lanceolate, acuminated, attenuated at the base, glabrous ; peduncles 3-4 times dichotomous, puberulous, as well as the calyxes; tube of corolla 4 times as long as the calyx; fruit not seen. ^ • G. Native of Mexico, in the woods of Jalapa. Tourn. spec. nov. Cham, in Linnaea, 8. p. 514.

Schiede's Tournefortia. Shrub.

SO T. ? TOMENTÒSA (Mill. diet. no. 4.) stems twining; branches flexile; leaves cordate, tomentose beneath; spikes short, racemose. Tj . ^. S. Native of South America, near Carthagena. Leaves 2 inches long, and 15 lines broad, on very short petioles. Flowers small, dirty white. Berry 2-3-4-seeded. Pittònia scándens racemòsa, foliis subrotundis, subtus incanis, Plum. Perhaps a species *of Messerschmidtia.*

Tomentose Tournefortia. Shrub 10 to 12 feet, twining.

31 T. ? CARNÒSA (Mill. diet. no. 6.) leaves ovate, wrinkled, petiolate; spikes racemose, axillary. f?. S. Native about Carthagena. Pittònia frutéscens, folio carnoso hirsuto et obtuso, Plum. gen. p. 5. ? Stem and branches strong; branches pale brown. Leaves thick, 4 inches long, and 3 broad, scabrous, dark ;;reen, paler beneath. Flowers small, white. Berry containing *2-3* oblong nuts. Perhaps a species of *Misserschmidtia.*

***Fleshiy-leaved* Tournefortia. Tree 20 feet.**

**** * Species natives of the East Indies, New Holland, and Isle of France.***

***82 T.* MUTA'BILIS (Vent, choix. t. *0.)* branches roughish,** densely tomentose towards the tops; leaves ovate, lanceolate, scabrous, downy ; cymes terminal, narrow, dichotomous, downy as well as the calyxes ; lobes of corolla crenulated. \). S. Native of Java, Lahaye. Leaves 4 inches long, and 2 broad. Peduncles terminal, solitary, bifurcate. Calycine segments lanceolate, acute. Corolla greenish white, with a cylindrical tube, and obtuse limb. Berry white, containing a nut which is divided into 2, 1-seeded cells.

Changeable Tournefortia. Shrub.

33 T. SARMENTÒSA (Lam. ill. no. 1877. Poir. diet. 5. p. 835.) branches terete, striated, beset with adpressed, white hairs; leaves ovate-oblong, acute, villous, white beneath ; spikes branched, very short. J? . ^. S. Native of the Isle *of* France, Sonnerat. Leaves nearly glabrous above, but white and villous beneath, *2-3* inches long, and 1 broad. Flowers terminal, hairy. Calycine segments acute.

Sarmentose Tournefortia. Shrub climbing.

34 T. ARBORE'SCENS (Lam. ill. no. 1878. Poir. diet. 5. p. *357.)* branches angular, rough, *or* hïspid ; leaves ovate-lanceolate, attenuated at both ends, scabrous, but rather tomentose beneath while young ; peduncles rough, white ; spikes branched, very short. *fy* . S. Native *of* India, Sonnerat. Leaves 4-5 inches long, and \\ broad; petioles rather villous. Calyx divided nearly to the base, into broad, acute, firm, permanent segments. Corolla tubular, with obtuse segments.

Arborescent Tournefortia. Tree.

35 T. ARGE'NTEA (Lin. suppl. p. 133. R. Br. prod. p. 497. Blum, bijdr. 844.) erect, clothed with velvety, silky tomentum ; leaves ovate, approximate at the tops of the branches: ultimate ones obovate ; cymes decompound; corolla eampanulately rotate ; stigma sessile, semi-bifid. J? . S. ' Native of Ceylon, Java, &c, on the sea shore; Island of Carnicobar; Isle *of* France, and New Holland, within the tropic. Wall. fl. ind. 2. p. 4. Buglõssum laniigindsum, Humph, amb. 4. p. 119. t. *55.* Branches spreading, hairy. Leaves crowded in a rosulate manner at the tops of the branches, in the same way as those of *Sempervïvum Canarlense* and its allies, sessile, white on both surfaces from silky hairs. Flowers white, with a short tube and a recurved limb. This is the prettiest species of the genus.

Silvery Tournefortia. Fl. June, Nov. Clt. 1822. Shrub 5 to 6 feet.

36 T. BÍFIDA (Lam. ill. no. 417. Poir. diet. 5. p. 360.) leaves ovate, glabrous, petiolate ; peduncles axillary, bifid ; spikes divaricate. I? . S. Native of the Isle of France, Commerson. Bark cinereous, wrinkled. Leaves coriaceous, with yellowish nerves. Peduncles bearing *2* horizontal spikes. Calyx short, with 5 blunt teeth. Corolla tubular, elongated! cream-coloured.

Bifid Tournefortia. Shrub.

37 T. ORIENTALS (R. Br. prod. p. 497.) twining; leaves broad, ovate, subacuminated ; cymes dichotomous ; limb of corolla 5-cleft, with plicate sinuses; nuts cellular. T? . °\ S. Native of New Holland, within the tropic.

Eastern Tournefortia, Shrub twining.

38 T. TETRA'NDRA (Blum, bijdr. p. 843.) stem sarmentose, scabrous; leaves ovate-oblong, acuminated, quite entire, glabrous above, but rather roughish beneath; cymes terminal, dichotomous, or multifid ; flowers sccund, sessile, tetrandrous; tube of corolla tetragonal; stigma sessile, bifid. ^ . w. s! Native of Java, among bushes on the mountains, where it is called *Ojot Sisier.*

Far. ft, hirsùta (Blum. 1. c.) branches, leaves, and peduncles hairy. J? . S. Native of the Moluccas.

Tetrandrous Tournefortia. Fl. Dec. Shrub rambling.

39 T. URVILLEÁNA (Cham, et Schlecht, inLinnaea, 4. p. 465.)

twining ? branches angular, scabrous; leaves ovate, acute, oblong-lanceolate, and obovate, equal, and rounded at the base, or unequal and subcordate ; cymes bractless, many times dichotomous ; limb of corolla 5-cleft, with plicate sinuses. T? . ^. S. Native of the Island of Luçon. This species differs from *T. Orientalis* in the leaves being pilose or scabrous; from *T. tetrdndra* in the flowers being pentamerous ; and from T7. *arborescens,* Link, in the leaves being shorter and broader, and never tomentose beneath. Spikes or branches of cyme elongated, pilose. Calycine segments ovate, acute. Drupes glabrous.

Z)' *Urvillès* Tournefortia. Shrub twining ?

40 T. OVATA (Wall. cat. no. 908.) branches striated, downy; leaves ovate-elliptic, acuminated, rather strigose; cymes terminal, branched ; flowers on short pedicels, tubular. J? . S. Native of Rangoon. Very nearly allied to *Heliotrôpium viridi-Jldrum,* Lehm. ; the I7, *viridiflôrum,* Wall. ; and *Lithospermum viridiflorum*^ Roxb.

Ovate-leaved Tournefortia. Shrub.

41 T. HEYNEA^NA (Wall. cat. no. 910.) rather strigose, or nearly glabrous; leaves ovate-lanceolate or ovate, acuminated; cymes axillary, on long peduncles; flowers on short pedicels, unilateral; corollas tubular. T? , S. Native of the East Indies.

Heyne's Tournefortia. Shrub.

SECT. II. MESSERSCHMI'DTLE ANTIQUÆ. The following species have been formed by Linnaeus and others into a distinct genus. Corolla funnel-shaped; limb swollen towards the top. Berry round, depressed, girded by 5 prominent teeth in a circle, divisible into 2, 2-seeded niits.

42 T. FRUTICÔSA (R. Br. prod. p. 496. Roem. et Schultes, syst. 4. p. 539.) scabrous, branched, hairy; leaves ovate, lanceolate, petiolate ; calyx short. T? . G. Native of Teneriffe, in sterile places. Messerschmidtia fruticôsa, Lin. syst. 190. suppl. 132. Lher. stirp. 2. t. 1. Willd. spec. 1. p. 789. Desf. arbr. 1. p. 175. Hairy in every part. Spikes cymose, dichotomous, terminating the branches and stem. Corolla funnel-shaped, or salver-shaped, with a flat limb, ex Lin. Corollas white.

Shrubby Tournefortia. Fl. June, July. Clt. 1800. Shrub 5 to 6 feet.

43 T. ANGUSTIFÔLIA (R. Br. 1. c. Rcem. et Schultes, 1. c.) stems nearly glabrous ; leaves petiolate, narrow-linear-lanceolate, glabrous; spikes as in *T.fruticôsa.* T? . G. Native of the Canary Islands. Messerschmidtia angustifôlia, Lam. ill. no. 1872. Poir. suppl. 1. p. 449. Habit of *T.fruticbsa ;* but differs in the stems being nearly glabrous. Leaves scabrous on both surfaces. Flowers bluish.

Narrow-leaved Tournefortia. Fl. June, Nov. Clt. 1820. Shrub 5 to 6 feet.

44 T. TUBERCULÔSA (Cham, et Schlecht, in Linnaea, 4. p. 467.) herbaceous, erect, branched, very scabrous from strigae all over ; leaves lanceolate, sinuately undulated, acute, opaque, attenuated into the short petioles ; cymes terminal, bifid, or spikes twin; calyx small. %. G. Native of the Cape of Good Hope, at Gamka river, where it was collected by Mundt and Maire. Stems angular, a little dilated towards the ramifications. Spikes filiform, few-flowered. Calycine segments ovate, acute, callously ciliated. Corolla tubularly salver-shaped ; segments of the limb triangular, long-acuminated. Drupe nearly dry, tubercled; pyrenae tubercularly echinated on the back. Habit of a species of *Chenopôdium* or *A?triplex.* It differs from all other species in the tubercled fruit.

Tubercled-fruhed Tournefortia. PI. 2 to 3 feet ?

45 T. SIBI'RICA (Lin. spec. 202. act. petrop. 1763. p. 315. t. 11.) root creeping ; stems herbaceous, branched ; leaves sessile, ovate-oblong, hoary from tomentum ; corymbs or fascicles usually twin. %, H. Native of Dahuria, and Tauria, in gravelly places ; and of China, about Pekin,and from that to the northern limits of the empire. Messerschmidtia Argûzia, Lin. syst. p. 190. suppl. 132. mant. 42. 334. hort. ups. p. *SQ.* Argûzia montâna, Amm. ruth. *38.* Corolla white, funnel-shaped, with a naked throat. Calyx shorter than the tube of the corolla. " Corollas larger than those of *T.fruticôsa,* with a plicate limb, and membranous sides," ex Lin.

Siberian Tournefortia. Fl. June, Oct. Clt. 1780. PI. -1 to 1 foot.

SECT. III. HELIOTROPIOI^DE». The species contained in this section have been referred by authors to *Heliotrdpium,* from their habit, but they have nothing peculiar in character.

46 T. GNAPHALTOÏDES (R. Br. prod. p. 496.) frutescent; the whole plant white from tomentum; leaves linear, obtuse; peduncles terminal; spikes bifid or twin, short, f? . S. Native of Barbadoes, Jamaica, Grand Cayman Island, &c, by the sea side. Heliotrôpium gnaphalioides, Lin. spec. 189. Jacq. amer. p. 25. t. 173. f. 11. pict. t. 264. f. 97.—Mor. hist. 3. sect. 11. t. 28. f. 6.—Plukn. aim. 182. t. 193. f. 3. Shrub erect. Leaves crowded at the tops of the branches. Spikes secund, usually bifid. Corolla white, small.

Gnaphalium-like Tournefortia. Fl. July, Sept. Clt. 1824. Shrub 1 to 2 feet.

47 T. MICROSTA^CHYA (Roem. et Schultes, syst. 4. p. *538.)* stems herbaceous, procumbent; leaves ovate-oblong, flat, downy, hoary beneath ; lateral spikes nearly sessile ; terminal ones pedunculate, usually by fours, short. ©. H Native of Peru, in arid places about Tarma. Heliotrôpium microstâxhyum, Ruiz, et Pav. fl. per, 2. p. 3. t. 110. f. b. Lehm. asper. 40. Stems angular, downy. Calyx pilose, with lanceolate, acute, equal segments. Leaves petiolate. Corollas small, white, Berry containing 2 2-celled, 2-seeded nuts, as in the oiher species.

Small-spiked Tournefortia. PI. procumbent.

48 T. SYNZYSTA'CHYA (Rcem. et Schultes, syst. 4. p. 539.) plant herbaceous, procumbent; branches angularly furrowed ; leaves opposite and alternate, ovate, wrinkled, pilose; lateral spikes solitary, very long : terminal ones twin, shorter. ©. S. Native of Peru, in fields about Lima. Heliotrôpium synzyst^-chyum, Ruiz, et Pav. fl. per. 2. p. 3. no. 6. t. 109. f. a. b. ? Plant villous. Leaves petiolate. Spikes 2-3 inches long: terminal ones 1-2 inches. Calycine segments linear, acute. Corolla funnel-shaped, white ; tube longer than the calyx, villous inside above. Fruit as in the preceding species.

Twin-spiked Tournefortia. PI. procumbent.

f *Species hardly known.*

49 T. RUFE'SCENS (Willd. rel. in Roem. et Schultes, syst. 4. p. 541.) leaves ovate-oblong, rugosely veined, clothed with rufous tomentum beneath. J? . S. Native of South America. Humb. et Bonpl.

Rufescent Tournefortia. Shrub.

50 T. GLA'BRA (Aubl. guiana. 1. p. 118.) much branched, glabrous; berries white. P? . S. Plum. mss. t. 6. f. *53.* ex Vittm. summ. pi, 1. p. 402. ?

Glabrous Tournefortia. Shrub.

N.B. What are *Tournefortia lucida,* and *T. angulôsa,* Desf. tabl. de l'Ecole de bot. 1815. p. 85. ?

Cult. None of the species of *Tournefortia* are worth cultivating for ornament; therefore the species are only to be seen

in botanical gardens. They are of the most easy culture, and are readily increased by cuttings under a hand-glass, in heat. *T. Sibirica,* being a rare, nearly hardy plant, should be grown in a pot, and placed among other alpine plants.

XLIII. MESSERSCHMI'DTIA (in honour of Daniel Gottlieb Messerschmidt, a traveller in Siberia.) Roem. et Schultes, syst. 4. p. li. and p. 541.—Tournefórtia species of authors.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla funnel-shaped; throat naked, swollen; segments of the limb usually subulate. Stigma conical. Berry 4-lobed, containing 4 1-seeded nuts, but often fewer by abortion.—Shrubs with the habit of *Tournefórtia.* This genus is principally distinguished from *Tournefórtia* by the berry containing 4 1-seeded nuts, instead of *2* 2-seeded nuts. Berries generally white.

§ 1. ***Segments of corolla linear-subulate. Berry 4-lobed; each lobe containing a \-celled, I-seeded nut. Embryo arched, with the cotyledons at the back of the cell, and the radicle in the front.—Twining shrubs.***

1 M. VOLU'BILIS (Roem. et Schultes, syst. 4. p. 841.) branches strigose; leaves ovate, acuminated, nearly glabrous ; petioles and peduncles hairy ; cymes terminal; spikes much branched ; berries hairy ; segments of corolla subulate. I2 . ^. S. Native of Jamaica, St. Thomas, and Mexico. Tournefórtia volúbilis, Lin. spec. p. 201. Willd. enum. 1. p. 188. Lam. ill. t. 95. f. 2. Tourn. microphýlla, Bert, in Spreng. syst. 1. p. 644.—Sloane, hist. 1. p. 234. t. 143. f. 2.—Plúkn. aim. *389.* t. *235.* f- 6. Branches weak, rufescent. Leaves an inch long, and 3-4 lines broad. Peduncles downy. Corollas greenish-yellow.

Twining Messerschmidtia. Fl. July, Aug. Clt. 1739. Shrub tw.

2 M. SCA'NDENS (Roem. et Schultes, 1. c. p. 542.) glabrous ; leaves ovate-oblong, acuminated, reflexed ; calyx campanulate, 5-toothed ; segments of corolla subulate. T? . w. S. Native of Peru, in groves. Tournefórtia scándens, Willd. enum. 1. p. 188. Tournefortia volúbilis, Ruiz, et Pav. fl. per. 2. p. 24. t. 148. Tourn. Peruviana, Poir. suppl. 4. p. 425. Flowers greenish-yellow, or whitish, corymbosely dichotomous. Very nearly allied to the preceding, but is 4 times the size in all its parts.

Climbing Messerschmidtia. Fl. July, Aug. Clt. 1816. Shrub climbing.

3 M. PANICULA'TA; branches obsoletely angled, downy at top ; leaves ovate, rounded at the base, acuminated and acute at the apex, rather downy on both surfaces ; panicles terminal, large, bractless, pyramidal, erect, decompound. h_c. S. Native of tropical Brazil, Sello. Tournefórtia paniculáta, Cham, et Schlecht, in Linnaea, 4. p. 468. This species differs from *M. scdndens* in its downiness; in the pyrenae being 1-seeded; and in the ample panicle. Calyxes downy and ciliated, acute.

Panicled-fiowered Messerschmidtia. Shrub erect ?

4 M. SUBSE'SSILIS (Cham, in Linnaea, 8. p. 118. under *Tournefórtia)* branches obsoletely angular, or nearly terete ; leaves on short petioles, roundish or long, ovate, subcordate, acutely acuminated, glabrous and smooth above, and inconspicuously strigose beneath, with reflexed edges ; panicles clothed with rufescent, velvety strigae, composed of short, dense-flowered spikes ; calyxes sessile, somewhat immersed in the dilated rachis. *h* . ^. ? S. Native of Brazil, Sello. Nearly allied to *M. pan'culdta* and *M. scdndens.* Branches strigose at top. Calycine segments narrow, acute. Drupe glabrous ; one or two of the pyrenae usually abortive.

Subsessile-fiowered Messerschmidtia. Shrub twining ?

5 M. SERI'CEA (Roem. et Schultes, 1. c.) branches cinereous from villi at top ; leaves ovate-lanceolate, clothed with silky tomentum beneath ; spikes lateral and terminal, dichotomous, panicled; segments of corolla setaceous. *V>* • w S. Native of the Islands of Mont Serrat, St. Domingo and Jamaica. Tournefórtia sericea, Vahl, eclog. 1. p. 17. Willd. spec. 1. p. 749. Tourn. incána, Lam., and Tourn. canéscens, Willd. ex herb. Balb.—Frútex Marcgr. hist. p. *78.* Habit of *M. volúbilis.* Leaves l£ inch long, acute, glabrous above. Peduncles villous. Corollas small, villous outside.

Silky Messerschmidtia. Shrub climbing.

6 M. SYRINGJEFÒLIA (Roem. et Schultes, 1. c.) branches, petioles, ribs of leaves on both surfaces, veins beneath, and peduncles villous ; leaves subcordate-ovate, acuminated, glabrous, except the nerves and veins; peduncles terminal, many times forked ; spikes downy ; segments of the corolla very narrow, somewhat setaceous. *V>* . S. Native of Cayenne. Tournefórtia syringaefdlia, Vahl, symb. *2.* p. *23.* Willd. spec. 1. p.* 792. Leaves 2 inches long, almost like those of *Syringa vulgáris.* Corolla villous outside.

Lilac-leaved Messerschmidtia. Shrub climbing ? or erect ?

7 M. PSILOSTA'CHYA ; twining; branches terete, glabrous, but while young downy; leaves oblong, acuminated, acute at the base, strigose on both surfaces ; peduncles terminal, usually of 5 spikes; calyx strigosely downy, one half shorter than the tube of the corolla ; segments of corolla subulate. **? . rs.* S. Native on the shores of the Pacific, near the Port of Guayaquil. Tournefórtia psilostáchya, H. B. et Kunth, nov. gen. amer. 3. p. *78.* Tourn. tristáchya, Willd. herb. no. 3433. Leaves *2* or *2* inches long, and 1 broad. Peduncles downy. Spikes filiform, 1 to li inch long. Corolla downy outside, with an inflated throat; stigma subconical.

Naked-spiked Messerschmidtia. Shrub twining.

8 M. FLORIBU'NDA ; scandent; branches terete, clothed with hoary tomentum ; leaves ovate-oblong, acuminated, rounded at the base, clothed with fine pubescence above, and hoary tomentum beneath ; peduncles lateral, dichotomously multifid, of many spikes; calyx tomentose, one half shorter than the tube of the corolla ; segments of the corolla linear-subulate : berries glabrous. ^. <J, S. Native of New Andalusia, near Cumana and Cumanacoa ; also of Brazil. Tournefortia floribunda, H. B. et Kunth, nov. gen. amer. 3. p. *79.* Willd. herb. no. 3434. Peduncles tomentose, bearing 20-24 filiform spikes, which are 3-4 inches long. Calycine segments ovate-lanceolate, acuminately subulate. Corolla downy outside.

Bundle-flowered Messerschmidtia. Clt. 1828. Shrub climbing.

9 M. VELUTINA; scandent, clothed with hoary tomentum all over ; branches terete ; leaves ovate-oblong, acuminated, rounded at the base, white beneath; peduncles terminal, dichotomously panicled, *of* many spikes; calyx villous, twice shorter than the tube of the corolla ; berries hispid. J? . ^. S. Native of Mexico, near Acapulco. Tournefórtia velutina, H. B. et Kunth, nov. gen. amer. 3. p. 79. t. 201. Leaves about 3 inches long, with an obtuse acumen. Spikes about 10 on each peduncle, filiform, about 3 inches long. This is a very elegant species.

Velvety Messerschmidtia. Shrub climbing.

10 M. PUNCTA'TA (Spreng. new entd. 3. p. 2.) stem scandent; leaves oblong, attenuated at both ends, ciliated, beset with white dots above, but smootli beneath ; spikes panicled, axillary, dichotomous. 1?. ^. S. Native of Martinico. Tournefórtia punctáta, Spreng. syst. 1. p. 643. Tourn. scándens, Sieb. mart. no. *63.* Lobes of corolla unknown. Perhaps the same **as** ***Af, psilosttichya.***

Dotted-\es.ved Messerschmidtia. Shrub climbing.

11 M. UMBELLATA ; young branches angular, downy ; leaves lanceolate-oblong, acute, narrowed at the base, undulated, beset with fine strigae on both surfaces ; peduncles terminal, of about 7 spikes; spikes subumbellate ; calyxes downy, about equal in length to the tube of the corolla; segments of corolla linear, revolute. T? • *KJ'* S. Native of Mexico, near Campeaehy, along the shore. Tournefórtia umbellata, H. B. et Kunth, nov. gen, amer. 3. p. 79. Leaves 2-4 inches long. Peduncles downy. Spikes linear, *2-3* inches long, spreading. Calycine segments linear-lanceolate.

Umbellate-spiked Messerschmidtia. Shrub climbing.

12 M. LAURIFOLIA (Rcem. et Schultes, syst. 4. p. 543.) twining, glabrous; branches terete ; leaves ovate-oblong, acute, repand, glabrous; petioles geniculated ; peduncles terminal, bifurcate ; spikes cymose; calyx glabrous, twice shorter than the tube of the corolla ; segments of the corolla ovate, elongated at top, very acute. T? . ^ S. Native of Porto Rico, and the Island of St. Thomas. Tournefórtia laurifólia, Vent, choix, t. *2.* Poir. suppl. 4. p. 425. Leaves deep green above, but paler beneath, finely dotted, 4-6 inches long and % broad. Flowers pale yellow. Calycine segments very acute. Hairs on the corolla manifest. Berry glabrous, 4-furrowed.

Laurel-leaved Messerschmidtia. Fl. July. Clt. 1819. Shrub twining.

13 M. MILLE'RI (Rcem. et Schultes, syst. 4. p. 544.) twining ; leaves cordate, hairy ; spikes racemose, reflexed. J?. ^\ S. Native of Jamaica. Tournefórtia scándens, Mill. diet. no. 4. Poir. diet. 5. p. 360. Pittónia scandens racemdsa, flore fusco, Houst. mss. Leaves rather thin, 3 inches long, and 1^ broad, acute, on short petioles. Spikes slender. Flowers dirty brown. Berry small, fleshy, containing 4 1-seeded nuts.

Miller's Messerschmidtia. Shrub twining.

14 M. E'LEGANS ; leaves petiolate, from ovate-elliptic to lanceolate, attenuated at both ends, long-acuminated, downy from short scattered hairs on both surfaces ; panicles terminal, with cymose branches; lower cymes generally bifid ; the common peduncles furnished with a leaf; limb of corolla 5-cleft, expanded. T? . S. Native of Brazil, Sello. Tournefórtia élegans, Cham, et Schlecht, in Linnaea, 4. p. 469. and 8. p. 118. Branches obsoletely angular, downy at top. Calyx minute, with narrow, acute, pilose, and erectly ciliated segments. Corolla tubularly salver-shaped, downy outside, with a slender tube and expanded segments, which are narrow-acute, from a broader base; having the sinuses intraplicate. Anthers a little exserted. Drupe 4-sided, depressed ; pyrenae spheroid, chartaceous, 1-seeded.

Elegant Messerschmidtia. Shrub.

15 M. PILIÓCHROS ; stem scandent ; leaves lanceolate, petiolate, rather villous above, and clothed with white wool beneath ; spikes terminal, dichotomously panicled, divaricate ; fruit scabroils. 1? . ^. S. Native of Jamaica. Tournefórtia piliochros, Spreng. syst. 1. p. 644. Flowers white ?

Yellow-haired Messerschmidtia. Shrub climbing.

16 M. TOMENTÓSA ; stem twining; leaves cordate, oblong, green above, and very soft, but clothed with white stellate tomentum beneath ; spikes short, dichotomous, divaricate, tomentose. *2 ,^\ S. Native of America, about Carthagena. Tournefórtia tomentosa, Mill. diet. no. 4. Leaves *2* inches long. Flowers small, dirty white ; lobes of corolla unknown. Berry containing 2-3, but usually 4 nuts.

Tomentose Messerschmidtia. Shrub twining.

17 M.CORYMBÓSA; stem scandent; leaves oblong, attenuated at both ends, veiny, glabrous ; spikes paniculately corymbose, coarctate, elongated, many-flowered ; tube of corolla elongated : segments of the limb acuminated. T?. ^. S. Native of tropical America. Tournefórtia corymbdsa, Willd. rel. ex Rcem. et Schultes, syst. 4. p. 540. Spreng. syst. 1. p. 644.

Corymbose Messerschmidtia. Shrub climbing.

18 M. FERRUGI'NEA ; stem twining a little ; leaves subcordate, ovate, acuminated, acute, entire, thickish, rather villous on both surfaces, green above; spikes terminal, branched, corymbose, clothed with rusty villi: branches short; corolla short, tubular: segments unknown. ^ . ^\ S. Native of St. Domingo. Tournefórtia ferruginea, Lam. ill. no. 1882. Branches terete, striated, beset with rusty stiff hairs. Leaves *2-3* inches long, and an inch broad. Peduncles much branched, villous; spikes short. Flowers unilateral. Calyx scabrous, villous.

Rusty Messerschmidtia. Shrub twining.

§ *2. Segments of the corolla short. Berry even, roundish, containing* 4 \-*celled,* 1 -*seeded nuts. Embryo straight, with a superior radicle. Erect trees or shrubs.*

19 M. HIRSUTI'SSIMA (Rcem. et Schultes, syst. 4. p. 541.) branches terete, hispid ; leaves ovate-oblong, acuminated, narrow at the base, hispid above, strigosely pubescent beneath ; peduncles terminal and axillary, dichotomous, of many spikes ; calyx one half shorter than the tube of the corolla, and are, as well as the berries, hispid ; limb of corolla plicate, having the segments short, ovate, and acute. ^ . S. Native *of* America, especially near Cumana and Bordones ; and of the Island *of* St. Thomas. Tournefórtia hirsutissima, Swartz, obs. p. *56.* Willd. spec. 1. p. 791. H. B. et Kunth, nov. gen. amer. 3. p. 80. Tourn. corymbósa, Sieb. pi. trin. no. 439. Cordia pellita, Willd. rel. ex Rcem. et Schultes, syst. 4. p. 800. Ehretia cymósa, Willd. herb. no. 4529. Pittonia hirsutissima et ramosissima, baccis albis, Plum. gen. 5. icon. 209. Heliotropii flore frutex baccifer ramosus, folio rugoso fcetido, &c. Sloane, jam. 173. hist. 2. p. 108. t. 212. f. 1. Leaves about 4 inches long. Peduncles hispid. Spikes linear, diffuse. ^ Berry 4-celled, bipartible ; cells 1-seeded," ex Kunth, 1. c. " Ovate, containing 4 1-seeded nuts," ex R. Br. prod. p. 496. Embryo straight, with a superior radicle.

Var. /3, minus (Lam. ill. no. 1873.) smaller, hairy; spikes shorter. J? • $. Native of South America. Stems nearly terete. Leaves pale green, nearly glabrous; fruit roundish, containing 4 oval-oblong nuts.

Very haïry Messerschmidtia. Fl. May, July. Clt. 1818. Tree 10 to 20 feet.

20 M. POLYSTA^CHYA (Rcem. et Schultes, syst. 4. p. 542.) branches angular, compressed while young ; leaves ovate, acute, wrinkled, hairy; peduncles terminal and lateral, corymbosely dichotomous, composed of loose spikes, f? • S. Native of Peru. Tournefórtia polystachya, Ruiz, et Pav. fl. per. 2. p. 24. t. 149. f. a. Leaves 4-5 inches long, and 3 broad. Corollas white ; tube green, exceeding the calyx. Berry white, containing 4 1-seeded nuts.

Many-spiked Messerschmidtia. Shrub.

21 M. LONGIFOLIA (Rcem. et Schultes, syst. 4. p. 543.) branches angular, channelled ; leaves oblong-lanceolate, oblique, very veiny, with subrevolute edges ; peduncles corymbose, terminal ; spikes few-flowered. J? . S. Native of Peru, in woods. Tournefórtia longifólia, Ruiz, et Pav. fl. per. 2. p. 25. t. 150. f. b. Shrub glabrous, very like in habit a large species *of Symphytum.* Leaves a foot long. Berry containing 4 trigonal nuts.

Long-leaved Messerschmidtia. Shrub or tree.

f *Species doubtful or hardly known.'*

22 M. ? MONTÀNA (Lour. coch. p. 122. ed. Willd. 1. p. 150. under *Tournefórtia)* branches scandent, hairy; leaves ovate-lanceolate, wrinkled, glabrous ; spikes nearly simple, recurved, terminal. \> . *KJ.* G. Native of Cochinchina, in mountain woods. Leaves incurved, reflexed, on short petioles. Flowers pedicellate. Corolla white; tube urceolate at the base ; limb acutely 5-cleft. Anthers and stigma sessile. Berry inversely pear-shaped, 2-celled, 2-seeded, imperforated at top.

Mountain Messerschmidtia. Shrub climbing.

23 M. ? ROSMARINIFÓLIA (Willd. herb, ex Roem. et Schultes, syst. 4. p, 844.) stem branched, herbaceous, hispid from villi; leaves sessile, linear, with revolute edges; corollas funnel-shaped. 1/. F. Native of Siberia, Pallas. Lower leaves alternate : superior ones opposite: uppermost ones aggregate, pilose above, and clothed with white villi beneath. Cymes terminal, few-flowered. Calyx one half shorter than the corolla; calycine segments acute, villous. Tube of corolla downy; limb 5-parted, spreading. Fruit elliptic, globose, woody, striated, tomentose, 2-celled.

Rosemary-leaved Messerschmidtia. PI. \ foot.

21 M. MINOR ; stem erect; leaves lanceolate-linear, obtuse, scabrous; spikes bifid, few-flowered. T? . S. Native of Jamaica. Tournefórtia minùta, Bertero, ex Spreng. syst. 1. p. 644.

Smaller Messerschmidtia. Shrub small.

Cult, For culture and propagation see *Tournefortia,* p. *369.*

XLIV. CAN A'LA (named in honour of Joseph Count Malabaila de Canal, Chamberlain, and one of the Privy Council *to* the King of Bavaria, a promoter of botany.) Pohl, pi. bras. 2. p. 62.

LIN. SYST. *Pentdndria, Monogy'nia.* Calyx 5-parted. Corolla tubularly ventricose, 5-toothed, constricted at the base into a short tube. StJTmens inclosed ; anthers sagittate. Style inclosed ; stigma capitate, warted. Nuts 2, combined, stony, roundish. Seeds 4 in each cell.—Small shrubs. Leaves ovate or oblong, opposite, entire. Spikes axillary and terminal, unilateral, revolute at apex, bracteate. Flowers beautiful pure red or scarlet. The species have the habit of *Spigèlia.*

1 C. HELIOTROPIOI'DES (Pohl, pi. bras. 2. p. 63. t. 142.) leaves ovate, beset with stellate hairs above, and yellowish tomentum beneath; corolla 5-toothed ; calyx beset with stellate **hairs. J? . S. Native of Brazil, in the province of Minas Geraes, in fields about Villa St. Joao d'el Rey. Flowers large, scarlet.**

Turnsole-like* Canala. PI. 2 *feet.

***2* C. MACROCA'RPA (Pohl, 1. c. p. 64.) leaves oblong, acute, glabrous above, and rather pilose beneath ; corolla 5-toothed; calyxes pilose, f? . S. Native of Brazil, about Rio Janeiro.**

***Large-fruited* Canala. Shrub 2 feet.**

3 C. RUBLEFÓLIA (Pohl, 1. c. p. *65.)* leaves twin: superior ones 4 in a whorl, lanceolate, acuminated, and are, as well as the calyxes, glabrous; corolla 5-toothed. J?. S. Native of Brazil, in the province of Goyaz, on Mount Clara, and on Serra de Cristaes.

***Rubia-leaved* Canala. Shrub 2 feet ?**

***Cult.* For culture and propagation see *Tournefortia,* p. *369.* All the species are extremely elegant when in blossom.**

Additional Borageineous plants.

1 MERTE'NSIA AĹPINA ; smoothish ; stem simple, assurgent; leaves ovate-spatulate : lower ones acute : superior ones acuminated, rather pilose above, minutely ciliated on the margins ; flowers in terminal fascicles, on short pedicels; corolla hardly twice as long as the calyx ; calycine segments oblong, bluntish, ciliated. 1£. H. Native of the Rocky Mountains. Pulmonària alpina, Torrey, in ann. lye. 2. p. 224. Corolla sub-campanulate, with 5 minute scales in the throat; border 5-lobed; lobes obtuse. Stamens inclosed ; anthers linear-oblong. This species is said *to* be nearly allied to *M. parviflòra.*

Alpine Mertensia. PI. J foot assurgent.

2 MERTE'NSIA CILIA'TA f glabrous, erect? leaves ovate-lanceolate, attenuated at both ends, with ciliated margins ; flowers fasciculately-panicled, pedicellate; corolla tubularly campanulate; calyx short, 5-parted, with ovate-obtuse segments. %. H. Native of the Rocky Mountains, in the crevices of rocks along streams. Pulmonària ciliàta, James, cat. ex Torrey, ann. lye. 2. p. 224. Stems smooth, simple. Leaves dotted above. Corolla blue ; border erect, 5-lobed ; tube slightly ventricose ; throat partially closed by 5 yellowish protuberances. Stamens inclosed ; anthers linear. Allied to *M. paniculata.*

Ciliated-leaved Mertensia. PI. 1 foot.

3 MERTE'NSIA OBLONGIFÓLIA ; smooth ; stem simple, erect; leaves lanceolate-oblong, bluntish : superior ones acute; flowers panicled, pedicellate ; calyx short, with linear, acute, ciliated segments; corolla tubularly campanulate. 1/. H. Native of North America, towards the sources of the Columbia river. Pulmonària oblongifólia, Nutt. in journ. acad. nat. sc. phil. 7. p. 43. Leaves all more or less pubescent above : upper ones sessile. Panicle formed of axillary approximate clusters of flowers. Corolla bright blue, similar to those of *M. Virgmica,* except in size ; the lobes obtuse.

Oblong-leaved Mertensia. PI. \ to f foot.

4 BA'TSCHIA PILÓSA ; simple, pilosely hairy ; leaves linear, acuminated, sessile, approximate ; flowers fascicled, sessile, small, yellow ; segments of the corolla oblong, entire. %. H. Native of North America, at Flat Head river. Lithospérmum pildsum, Nutt. in journ. acad. nat. sc. phil. 7. p. 43. Leaves almost hoary, strigosely pubescent. The flowers sessile, and similar to other species of the genus. Stem clothed with brown scales at the base, which gradually become the leaves as they ascend the stem.

Pilose Puccoon. PI. \ to § foot.

5 BA'TSCHIA TORRE'YI ; plant strigosely hispid ; leaves oblong-linear, bluntish, scattered ; stem dwarf, branched ; fascicles terminal, few-flowered ; lobes of corolla oblong, entire. %. H. **Native of North America, at Flat Head river; and of the Rocky Mountains. Lithospermum decumbens, Torrey, in ann. lye. 2. p. 225, but not of Nutt. Lithospermum Torreyi, Nutt. 1. C Stem a span high, without any brown scales. Leaves less crowded than in the preceding ; the stem at length branched, and not near so hairy. Segments of the calyx linear, a little shorter than the tube of the corolla.**

***Torrey's* Batschia. PI. \ to f foot.**

6 N6NEA SÓRDIDA (Fisch. et Meyer, sem. cat. hort. petrop. 1836. p. 43.) annual, diffuse, clothed with glandular down, intermixed with stiff strigae or bristles; leaves lanceolate, acute, a little toothed; tube of corolla 3 times shorter than the calyx, and hardly longer than the campanulate limb ; carpels downy, depressed, sub-plicate at the base, and entire. ©. H. Native of the eastern shore of the Caspian Sea. Very nearly allied to *N. picta.* Corolla dirty, yellowish-red.

Dirty-flowered Nonea, " Fl. ? Clt. 1836. PI. diffuse.

7 MYOSÒTIS CALÍFORNICA (Fisch. et Meyer, sem. cat. hort. petrop. 1836. p. 42.) annual, strigose, much branched, procumbent ; leaves linear, acute, ciliated ; racemes elongated, leafy at

the base ; pedicels very short; calyxes rather longer than the corolla, spreading in the fruit-bearing state ; carpels wrinkled. ©. H. Native of New California, about the Russian colony, Ross. Corolla white, with 10 yellow glands at the throat; segments of the limb roundish, hardly emarginate. Very nearly allied to *M. Chorisiana,* Cham. ; but differs in the flowers being nearly sessile.

Californian Scorpion-grass. Fl. ? Clt. 1836. PL \ foot.

8 MYOSOTIS suFFRUTicdsA (Torrey, in ann. lye. *2.* p. *225.)* stem sufFruticose, much branched, hairy ; leaves linear-lanceolate, hispidly pilose; spikes terminal, numerous ; flowers pedicellate ; calyxes closed ; nuts smooth, depressed. ^ • H. Native of North America, in barren deserts along the river Platte. Flowers unilateral, on short pedicels. Corolla as large as that of *M. palustris,* blue, salver-shaped ; lobes obtuse, entire. This is the only frutescent species.

Suffruticose Scorpion Grass. Shrub -| to § foot.

9 ECHINOSPE'RMUM LEIOCA'RPUM (Fisch. et Meyer, cat. sem. hort. petrop. 1836. p. *36.)* annual, branched, diffuse, rather hoary from erectly spreading hairs; leaves rather linear, obtuse; racemes leafy ; fructiferous calyx closed ; carpels unarmed, very smooth. ©. H. Native of New California, about the Russian colony, Ross. Flowers minute, white, with small yellow scales in the throat. This species differs from others in habit, and the closed calyx and smooth carpels.

Smooth-fruited Echinospermum. Fl. ? Clt. 1836. PL | foot.

10 ECHINOSPE'RMUM SZOVITSIA'NUM (Fisch. et Meyer, sem. cat. hort. petrop. 1836. p. *36.)* annual, hairy from spreading pili; leaves linear-lanceolate ; racemes leafy ; calyxes oblique, spreading while bearing the fruit, shorter than the spreading thickened pedicels ; corollas length of calyx ; carpels tubercled on the disk and sides, and furnished with a single row of glochidate prickles along the margins, which are dilated at the base, and often connate. ©. H. Native of the North of Persia, on the edges of fields. Very nearly allied to *E. minimum;* but the prickles on the fruit are fewer, a little shorter, broader at the base, and often connate.

Szovits's Echinospermum. FL ? Clt. 1836. PL \ foot.

11 ECHINOSPE'RMUM PA'TENS ; strigosely pilose ; leaves oblong-linear, bluntish ; stem simple, nearly naked; floriferous branches spreading ; flowers pedicellate, loose. %. H. Native of North America, at Flat Head river. Rochelia patens, Nutt. in journ. acad. nat. sc. phil. 7. p. 43. Radical leaves on long petioles ; those of the stem remote and sessile. Flowers in all respects almost similar to those of *Myosotis scorpioides ;* rather large, and apparently red. Calycine segments small, linear, obtuse. Nuts wrinkled.

Spreading Echinospermum. PL ?

LV. P
ve£ and *Tf* P[IOB] ° —M— -Aa.o[Ct] *plagios,* trans- *ZL and S°eP^ve> hd?S,* 3 P,t; in reference to the pits at Fit h^ \°lr Carpels being transve> and not longitudinal.) tisch. et Meyer, cat. sem. hort. petrop. 1836. p. 46.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corona tunnel-shaped; throat closed by 5 inclosed plica: Stamens inclosed. Stigma capitate, 2-lobed. Carpels 4, distinct nearly ovate, 1-celled ; having the insertion of the areola lateral pertorated; receptacle elevated, hemispherical. This genus is d^t,ng Ulshed *from Lithospirmum* in the carpels being perforated and the receptacle elevated ; from *Anchusa* and *Myosotis,* in the lateral in tacle anT ^ tlle areola; as well as in the elated r. pels K« T *Cynogtissum* and *Echinospermum,* in the carrying perforated.

1 P. RUFE'SCENS (Fisch. et Meyer. 1. c.) ©. H. Native of Chili.—An annual herb, with the habit of *Lithospermum arvense* beset with spreading simple hairs. Leaves scattered, nearly linear, bluntish. Racemes terminal, conjugate, almost leafless. Flowers almost sessile, erect. Calyx beset with rufous hairs, conniving while bearing the fruit. Corolla white. Carpels very like those of *E^Kchium,* rugose, tubercled, marked by a lateral circular areola. Cotyledons flat, nearly orbicular, undivided.

Rufescent Plagiobothrys. FL ? Clt. 1836. PL 1 foot.

Cult. For culture and propagation see *Amsinckia,* below.

XLVI. CRYPTANTHA (from *KQVKTOQ, cryptos,* hidden ; and *avdog, anthos,* a flower.) Lehm. sem. hort. hamb. 1S32.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-cleft, with ovate or lanceolate segments. Corolla funnel-shaped, shorter than the calyx ; throat naked ? Stamens inclosed. Carpels 4, 1-seeded, tubercled or nearly smooth, fixed to the bottom of the calyx, imperforated at the base ?—Annual plants, with the habit of *Echinospermum.*

1 C. GLOMERA'TA (Lehm. ex Fisch. et Meyer, sem. cat. hort. petrop. 1836. p. 35.) leaves ovate-lanceolate, bluntish ; calycine segments ovate ; carpels obsoletely tubercled, or nearly smooth. ©. H. Native of Chili. Leaves pale green, broader than those of *C. microcdrpa.*

Glomerate-flowered Cryptantha. FL ? Clt. 1836. PL

2 C. MICROCA'RPA (Fisch. et Meyer, 1. c. p. 35.) leaves lanceolate, acute ; calycine segments linear-lanceolate ; carpels rough from acute tubercles. ©. H. Native of Chili. Lithospermum clandestinum, Trev. Echinospermum cynoglossoides, Hort, but not of Lehm. Herb glaucescent. Carpels minute.

Small-fruited Cryptantha. FL ? Clt. 1836. PL \ foot.

Cult. For culture and propagation see *Amsinckia,* below.

XLVII. AMSI'NCKIA (meaning unknown to us.) Lehm. defect, sem. hort. hamb. 1831-2.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted ; segments linear, gibbous. Corolla funnel-shaped ; segments of the limb equal, roundish ; throat naked. Stamens inclosed. Stigma capitate, emarginate. Nuts 4, 1-seeded, fixed to the bottom of the calyx, imperforated and ovate at the base, gibbous outside, conniving at top, wrinkled from tubercles.

1 A. LYCOPSOIDES (Lehm. 1. c. Fisch. et Meyer, sem. cat. hort, petrop. 1836. p. 26.) throat of corolla bearded; limb *3* times shorter than the tube ; stamens inserted a little above the base of the tube. 0. H. Native of America. Tube of corolla 3| lines long. Limb *2* lines in diameter.

h Lycopsis'like Amsinckia. FL June, July. Clt. 1836. PL foot.

2 A. ANGUSTIFOHA (Lehm. l r is<?o v i c) throat of corolla g[ab]ro[TM]us nakedI Lh f *£ Me[yer]> »• the tube; stamens inserted in the th^t 7 rt"* S honer tba» Native of Chili. A. lycopsoides, and *A. spectdbilis.* It differs from the first in the insertion of the stamens, and from the second in the corolla being smaller, and especially in the throat not being half closed by inclosed plicae*

Intermediate Amsinckia. Fl. ? Clt. 1836. PL ± foot.

4 A. SPECTA'BILIS (Fisch. et Meyer, 1. c.) throat of corolla glabrous, half closed by thrust-in plicae ; limb length of tube : stamens inserted in the throat of the corolla. ©. H. Native of New California, about the Russian colony, Ross. Corolla beautiful yellow; limb 6 inches in diameter, furnished with 5 plicae at the throat, which are similar to scales.

Showy Amsinckia. Fl. Clt. 1836. PL \ foot.

Cult. The seeds of these plants only require to be sown in the open ground about the beginning of May in a dry, warm, sheltered situation. None of them are worth cultivation, except in botanical gardens.

ORDER CLXVII. CORDIA'CE^E (the plants contained in this order agree with *Cordia* in the drupaceous fruit, and bifid or dichotomous style.)

Calyx 5-cleft, or 4-5-toothed. Corolla funnel-shaped ; throat naked ; limb 5-10-lobed. Stamens equal in number to the segments of the corolla, exserted or inclosed. Style semi-bifid, or dichotomous; stigmas obtuse. Berry or a drupe containing 2 2-celled, 2-seeded nuts, or 4 1-celled, 1-seeded nuts, or a 4-celled putamen, which is sometimes only 1-2-celled from abortion, partly or altogether covered by the calyx. Cotyledons plicate.—Trees or shrubs. Leaves entire, serrated, or cut. Inflorescence terminal, panicled, or corymbose, or spicate, usually bractless.

This order was formerly united with *Boraginece,* from which its habit, plaited cotyledons, and divided style, separate it. Little is known *%f* the properties of the plants contained in it, except that the flesh of the fruit is emollient and mucilaginous. The nuts of *Cordia Sebestena* are sometimes employed as laxatives.

Synopsis of the genera.

TRIBE I.

Cohdie'ae. Style dichotomous. Fruit drupaceous.

1. CORDIA. Calyx 4-10-toothed. Limb of corolla 4-10-cleft. Stigmas 4. Drupe containing a 4-celled putamen, which is sometimes 1-3-celled by abortion.

2 PATAGONU'LA. Calyx 4-parted. Limb of eorolla 4-cleft. Stigmas 4 ?. Drupe containing a 4-celled putamen.

TRIBE II.

EHRETIA'CE^I. Style semi-bifid ; stigmas 2, obtuse. Berry containing 2-4, 2-celled, 2-seeded nuts, or 4, 1-celled, 1-seeded nuts. Cotyledons plicate ?

3 EHRE'TIA. Calyx 5-cleft. Corolla funnel-shaped, with a 5-lobed limb, and a naked throat. Stamens exserted. Berry containing 2 2-celled, 2-seeded nuts.

4 BEURRE*RIA. All as in *Ehretia,* except that the berry contains 4 2-celled, 2-seeded nuts.

5 CORTE'SIA. Calyx 10-toothed. Corolla funnel-shaped ; limb spreading, 5-lobed. Stamens 5, exserted. Style bifid at apex ; stigmas peltately globose. Drupe containing 2 1-seeded? nuts.

6 CARMONA. Calyx 5-patted. Corolla campanulate, or rotate ; limb 5-6-cleft. Stamens *5-6,* inclosed. Styles 2, capillary ; stigmas simple. Drupe containing a 5-6-celled putamen.

7 LUTROSTYLIS. Calyx 5-parted. Corolla funnel-shaped, 5-cleft. Stamens a little shorter than the corolla. Styles 2, short; stigmas sub-capitate: Drupe small, containing 4 1-seeded nuts.

8 RHA'BDIA. Calyx 5-parted. Corolla campanulate, 5-cleft. Stamens inclosed. Style simple ; stigma 2-lobed. Drupe containing 4 1-seeded pyrense or nuts.

9 MORELOSIA. Calyx 5-cleft. Corolla rotate, 5-cleft. Stamens exserted. Style forked ; stigmas 2, capitate. Drupe containing a 4-celled, 4-seeded putamen.

TRIBE HI.

ERIMATA *LEJE.* Style hardly any. Stigma large, discoic^ 5-grooved. Drupe containing only one 1-seeded nut.

10 ERYSIBE. Calyx 5-parted. Corolla salver-shaped, 5-parted ; segments of the limb bifid.

f *A genus not known whether belonging to the present order.*

11 ROCHEFORTIA. Calyx 5-parted. Corolla funnel-shaped; limb spreading. Stamens inserted in the recesses between the lobes of the corolla. Styles 2, subulate ; stigmas simple. Fruit globose, 2-celled ; cells containing numerous angular seeds.

I. CO'RDIA (named after Euricius Cordius, whose true name was Henricus Urbanus, and Valerius his son, German botanists of the 16th century.) Plum. gen. 14. Lin. gen. no. 256. Schreb. gen. no. 350. Juss. gen. p. 128. ed. Usteri. p. 143. Gaertn. fruct. 1. t. *76.* R. Br. prod. p. 498. Cordana, Ruiz, et Pav. fl. per. 2. p. 47. t. 184. Sebestena, Dill. elth. t. *255.*

LIN. SYST. *Tetra-Pentandria> Tretragynia.* Calyx tubular, usually 5, rarely 3-4-6-10-toothed. Corolla funnel-shaped; limb from 4 to 10-cleft, but usually 5-cleft. Stamens equal in number to the divisions of the corolla. Style dichotomous ; stigmas 4. Drupe partly or wholly covered by the calyx, containing a 4-celled putamen, which is sometimes only 1-3-celled by abortion. Cotyledons plicate.—Trees or shrubs. Leaves quite entire, or cut. Inflorescence terminal, panicled, corymbose, or spicate, bractless.

SECT. I. SEBESTE'NJE. Calyxes and fruit smooth. Inflorescence corymbose, or panicled. Segments of calyx acute. Throat of corolla glabrous. Flowers large.

1 C. RU'MPHII (Blum, bijdr. p. 843.) leaves on long petioles, ovate-oblong, acuminated, attenuated at the base, nearly equal, somewhat repand, smoothish above, but downy in the axils of the nerves beneath ; corymbs length of petioles; segments of calyx without furrows, tridentate, tomentose inside. h_t, g_a Native of the Moluccas. Novella nigra, Rumph. amb. 2. p. *226.* t. *75.* Allied to *C. Sebestena.* Corollas orange-red.

Rumphius's Cordia. FL Aug. Sept. Tree.

2 C. DICHOTOMA (Forst. prod. no. 1J0. R. Br. 1. c.) leaves ovate, a little toothed, glabrous ; cymes opposite the leaves,

pedunculate; flowers tetramerous; calyxes campanulate, and are, as well as the fruit, smooth. *?. S. Native of New Holland, within the tropic.

Dichotomous Cordia. Clt. 1824. Tree 30 feet.

3 C. SEBESTE'NA (Jacq. amer. 42. ed. 2d. t. 44. Lin. spec, ed. 1. p. 1073.) leaves ovate, acute, or elliptic, quite entire, hispid, scabrous above; peduncles terminal, corymbose ; calyx smooth, clothed with hispid tomentum ; limb of corolla 7~cleft, with a glabrous throat. ^. S. Native of Cuba, about the Havanna, St. Domingo, &c. Andr. bot. rep. t. 157. Curt. bot. mag. t. 794. Tratt. tab. t. 354. Lam. ill. no. 1898. t. 96. f. 1. C. juglandifolia,, Jacq. amer. 43. C. speciosa, Willd. rel. ex Rcem. et Schultes, syst. 4. p. 799.—Plenck, icon. t. 115. —Plum. gen. 13. icon. 105.—Sloan, jam. 2. p. 20. t. 164. Branches glabrous in the adult state, but clothed with hispid tomentum while young. Leaves 4-5 inches long, rather unequal at the base. Calyx 2-6-toothed ; teeth bluntish. Corolla funnel-shaped, orange coloured, or tawny yellow ; limb spreading, 5-7 parted, with crenately undulated edges. Stamens exserted, glabrous. The young leaves are serrated, the full grown ones hardly repand, and the upper certainly quite entire. A small piece of the wood put on a pan of lighted coals will perfume the whole house with a most agreeable smell. The flower in Jacquin's figure is coloured like that of the bloody-wallflower. Browne says that the flower in the Jamaica plaint is scarlet. Said by Cham, to be very nearly allied to *C, Abyssinica.*

Sebestena Cordia. Fl. June, Aug. Clt. 1728. Tree 10 to *35* feet.

4 C. DILLE'NII (Spreng. syst. 1. p. 649.) leaves ovate-oblong, acutish, repandly serrated, scabrous on both surfaces ; peduncles terminal, sub-corymbose ; calyx tridentate; segments of corolla usually 7, roundish, undulated ; stigmas revolute. f? . S. Native of the Bahama Islands. C. Sebestena, Willd. spec 1. p. 1076.—Dill, elth, p. 341. t. *255.* f. *331.*—Catesb. car. p. 2. t. 91. Corolla orange-coloured or scarlet. Stamens exserted.

Dillenius's Cordia. Fl. June, July. Clt. 1728. Tree 10 to 30 feet.

5 C. LiE^Nvis (Jacq. hort. schoenbr. 1. p. 39. t. 40.) leaves ovate, acuminated, smooth, repand; racemes short, branched; calyx glabrous, tubular, smooth ; corolla wrinkled, with a *6-7*-cleftj large spreading limb ; stamens *6-7* ^ ^ . S. Native about Caraccas. Habit of *Sebestena** Leaves shining above, 9 inches long. Corolla orange-red ; segments semi-oval. Stamens exserted.

Smooth Cordia. Fl. June, Aug. Clt. 1826. Tree 14 to 20 feet.

6 C. AFRICA'NA (Lam. ill. no. 1896.) leaves roundish, oval, entire, obtuse ; panicles terminal; calyx turbinate ; drupe containing a triquetrous putamen. J? . S. Native of Abyssinia, Bruce. C. Sebestena, /3, Poir. suppl. 7. p. 45. C, Abyssinica, Salt. trav. p. 475, where there is also a species named *C. ovdlis,* but without any diagnosis. Wanzey Bruce, trav. 5. p. 54. t. 17. French, ed. p. 70. Perhaps the Sebestena of Alpini. Branches inclinate. Leaves dark green, paler beneath. Corolla white. Stigma dark, bifid or trifid. Fruit at first soft and green, but at length bony and wrinkled.

African Cordia. Tree 18 to 20 feet.

7 C. SUBCORDA^VTA (Lam. ill. 1. p. 421. no. 1699.) leaves ovate subcordate, on long petioles, repand, acute, smooth ; panicles lateral; calyx, stamens, and pistil almost like those of C. *Sebestena;* corolla campanulate; drupe ovate, dry, hid in the calyx. ^. S. Native of the East Indies, in various parts, Sandwich Islands, and of New Holland, within the tropic, &c. C. orientalis, R. Br. prod. p. 498. C. campanulata, Roxb. fl. ind. 2. p. 336. C. Rumphii, Blum, bijdr. p. 843.? C. Sebestena, Forst. prod. p. 18. no. 108. C. hexandra, Willd. herb, ex Rcem. et Schultes, syst. 4. p. 799. Novella nigra, Rumph. amb. 2. p. 226. t. *75.* ? Corolla large, white, suffused with red segments, *6-7,* roundish, spreading. Calyx like that of a species of *Dianthus.* Stamens length of the tube of the corolla.

***SubcordateAeaved* Cordia. Tree.**

. 8 C. LATIFOLTA (Wall. cat. no. 893.) leaves broad, ovate-roundish, glabrous, with 5 nerves running from the base ; panicles terminal and lateral, dichotomous; calyx smooth, cup-shaped, unequally toothed ; drupe large, ovate, acuminated, surrounded by the calyx at the base. ^ . S. Native of Silhet. Flowers large.

Broad-leaved Cordia. Tree.

9 C. DECA'NDRA (Hook, et Arn. in Beech, voy. pt. bot. p. 38. t. 10.) leaves linear-lanceolate, attenuated, scabrous, sessile, with revolute edges, hoary from down ; flowers disposed in a terminal leafy corymb; calyx 10-toothed, clothed with black down ; corolla 10-lobed; stamens 10, inclosed. ^. G. Native of Chili, about Coquimbo. Tops of branches scabrous. Flowers large, very showy white, fragrant. Stamens inclosed, pilose at the base. Capsule size of a filbert, covered by the calyx. The wood of this tree is very extensively employed in the production of charcoal, whence it is called *Carbon,* and likewise for fuel for smelting copper, as the withered stems of *Cactus* are for refining metal.

Decandrous Cordia. Shrub 8 to 10 feet.

10 C. SUPE'RBA (Cham.etSchlecht in Linnsea, 4. p. 474. and 8. p. 123.) leaves cuneate-oblong, to oblong-elliptic, acuminated, acute, toothed in front, glabrous above, except the nerves, which are strigose, but beset with short hairs beneath ; cymes at first terminal, then lateral, pedunculate ; calyx clavately tubular, irregularly cut at top, or with lacerated lobes, smooth ; corolla campanulately funnel-shaped, 5-lobed : lobes roundish and acuminated. T? • S. Native of Brazil, within the tropic, Sello. Young branches angular, scabrous from dense stiff short hairs. Leaves form of the leaflets of the horse-chestnut, firm and opaque, the largest 6| inches long, and 2| broad. Branches of cyme angular, compressed, and are, as well as the calyxes, scabrous from short dense stiff hairs. Flowers large, showy. Corolla glabrous, having the tube length of calyx, and the limb campanulate. Stamens 5, inclosed, hairy at the base. Stigmas lamellate.

Far. a, *cunedta* (Cham, et Sehlecht, 1. c.) leaves cuneate, oblong.

Far. /3, *elliptica* (Cham, et Sehlecht, 1. c.) leaves elliptic, obtuse at the base, and rounded, 8j inches long, and 4j broad.

Superb Cordia. Tree.

11 C. GLA'BRA (Cham, in Linnaea, 8. p. 124.) tops of branches, inflorescence, and petioles scabrous from small bristles, or stiff hairs, the rest glabrous ; branches cinereous, terete ; leaves scattered, opposite, and 3 in a whorl, on short petioles^ lanceolate, narrowed at both ends, somewhat acuminated, acute' 6 inches long, membranous, flat; cymes scorpioid, terminal' but at length lateral; corolla campanulately funnel-shaped' glabrous. *?. S. Native of Brazil, Sello. Leaves truncate and semi-erose, or sinuated on the margins. Cymes bifid or trifid. Corolla \\ inch long. Drupe inclosed, truncate at top.

Glabrous Cordia. Tree.

12 C. MOLUCCA^NNA (Roxb. fl. ind. 2. p. 337.) leaves on long petioles, ovate-cordate, obtuse, entire, smooth ; panicles axillary and terminal, shorter than the leaves ; calyx gibbous, hairy inside; drupe pointed, and nearly hid in the calyx, containing a 4-celled nut. f? . S. Native of the Moluccas, This species is often tetrandrous. The filaments are short and very hairy

as is also the rim round the mouth of the gibbous tube of the corolla where they are inserted. Size of flowers not mentioned by Roxburgh.

Moluccas Cordia. Tree.

13 C. TOMENTOSA (Wall, in Roxb. fl. ind. 2. p. 339.) leaves round-ovate, more or less cordate at the base, repand, entire, smooth above, but very soft and tomentose beneath; calyx ovate, villous within. J? • S. Native of the East Indies. C. obliqua, var. Heyne, herb. The densely tomentose, soft, acute leaves distinguish this species from *C, Myxa,* of which *C. obliqua,* Willd. is probably only a variety. *C. domestica,* Roth, comes very near to this, but differs in the figure and comparative smoothness of the leaves. The flowers are largish.

Tomentose Cordia. Tree.

14 C. COLLOCOCCA (Lin. spec. 274.) leaves oblong-ovate, quite entire; corymbs loose, terminal, somewhat panicled; calyx tomentose inside. F? . S. Native of Jamaica. C. glabra, Lin. spec. ed. 1st. p. 191. Collococcus foliis rugosis, &c. Browne, jam. p. 167.—Sloane, jam. p. 169. hist. 2. p. 95. t. 203. f. 2.—Plukn. phyt. t. 158. f. 1.? Leaves attenuated at the base, acuminated, wrinkled, nearly glabrous. Branches of corymb unequal. Corolla middle-sized, with deep green segments. Drupe red, clammy, villous, containing a wrinkled, lacunose putamen. Turkeys and other poultry feed much upon the fruit; the pulp is sweetish, and of a clammy consistence. In Jamaica it has the name of *Clammy-cherry* and *Turkey-berry tree,* ex Browne.

Neck-fruited Cordia. Fl. ? Clt. 1759. Tree 20 to 50 feet.

15 C. TETRAPHY'LLA (Aubl. guian. 1. p. 224. t. *88,)* leaves obovate, narrowed at the base, 4 in a whorl, entire, glabrous; corymbs lateral, pedunculate; calyx smooth, with *5* acute teeth; drupe olive-formed, containing a 1-celled putamen. Tj . S. Native of Guiana, by the sea-side. Lam. ill. no. 1908. Willd. spec. 1. p. 1076. Branches nodose. Leaves nearly sessile, acutish. Corolla white, funnel-shaped: lobes 5, roundish, acutish. Stamens 5, exserted. Drupe yellowish, fleshy, size of an olive.

Four-leaved Cordia. Shrub 6 to 7 feet.

16 C. NODOSA (Lam. ill. no. 1905.) branchlets nodose, hispid; leaves ovate-oblong, acuminated, pilose, usually 3 in a whorl; calyx turbinate, villous, or bearded; corymbs terminal and axillary, hairy, pedunculate; drupe containing a 2-celled putamen. - T? . S. Native of Guiana and Cayenne, in woods. C. collococcus, Aubl. guian. 1. p. 219. t. 86, but not of Willd. C. hirsuta, Willd. spec. 1. p. 1076. Meyer esseq. p. 114. Leaves sessile, green, pilose on both surfaces. Corymbs beset with rufescent hairs. Calyx 5-toothed, teeth very short. Corolla white, having the tube thickened at the throat. This species differs from *C. collococca* in the characters given above, and in the narrower leaves; coarctate subumbellate corymbs, not dichotomous and divaricate; and in the white, oblique, acuminated fruit. The stamens are exserted.

Knotted-bramhed Cordia. Fl. June, July. Clt. 1803. Shrub 6 feet.

17 C. ELLIPTICA (Swartz. prod. p. 47* fl. ind. occ. 1. p. 461.) leaves petiolate, oblong, entire, attenuated at apex, rather coriaceous, glabrous; racemes terminal, dichotomous, compound, diffuse; calyx coriaceous, tubular, glabrous, 2-5-toothed; drupe acuminated, nearly inclosed. f?. S. Native of Jamaica and St. Domingo. Leaves shining above. Flowers rather large. Corolla white; tube hardly longer than the calyx, gibbous at the base; segments of the limb linear-lanceolate, reflexed. Filaments bearded in the tube of the corolla; anthers glandular at top. Putamen wrinkled.

Elliptic-leaved Cordia. Clt. 3 804. Tree SO to 50 feet.

18 C. ASPERRIMA (Spreng. syst. 1. p. 649.) leaves ovate-oblong, obtuse, crenulated, rough from dots above, and hispid and tomentose beneath: floral ones obovate, entire, clothed with fulvous' tomentum; peduncles cymose, panicled; calyx campanulate. J? . S. Native of Brazil.

Very-rough Cordia. Shrub or Tree.

19 C. STRIGOSA (Spreng. syst. 1. p. 649.) leaves rhomboid, coarsely toothed, strigose on both surfaces; peduncles cymose, elongated; calyx strigose, campanulate, with subulate segments. J? . S. Native of St. Domingo.

Strigose Cordia. Shrub or Tree.

SECT. II. MICRA'NTH^ (from *pucpog, micros,* small; and *avdoq, anthos,* a flower. The flowers are small compared with those of the preceding section.) Cham, et Schlecht in Linnaea, 4. p. 476. and 8. p. 124. All as in the preceding section, but the flowers are small.

* *Species natives of America.*

20 C. MAGNOLIIFOLIA (Cham, et Schlecht in Linnaea, 4. p. 476.) leaves on short petioles, cuneated at the base, elliptic, acuminated, acute, mucronate, entire, rarely furnished with an accessary tooth near the acumen, rather coriaceous, with reflexed margins, quite glabrous in the adult state, but when young rather strigose, as well as the buds and branches of inflorescence; inflorescence terminal, sessile; panicle subfastigiate, composed of 3-5 tri-dichotomous branches; calyx pilose outside; corolla salver-shaped, glabrous: tube length *of* calyx: segments narrow-elliptic, obtuse, one-half longer than the tube; drupe size of a cherry. *?. S. Native of the south of Brazil, Sello. Branches densely leafy, bluntly, many angled from the decurrent insertion of the petioles, pilose at the internodes. Calyx irregularly 3-4-lobed. Stamens much exserted. Stigmas lanceolate. Leaves 9 inches long, and *2* broad, sometimes somewhat tricuspidate at apex.

Magnolia-leaved Cordia. Tree.

21 C. DIOSPYRIFOLIA (Cham, et Schlecht, 1. c. p. 477.) leaves on short petioles, elliptic or obovate, sometimes oblong, attenuated at the base, and acute, undulated on the margins, bluntly acuminated at the apex, mucronate, rather coriaceous, beset with a few scattered hairs on botli surfaces, shining beneath, and more opaque above; panicles expanded, convex, on short or long peduncles, more pilose towards the top; calyx pilose outside and inside, usually 5-cleft; tube of corolla cylindrical; stamens shorter than the segments of the corolla. ^ • S. Native of the south of Brazil, Sello. This species is nearly allied to the preceding, but differs from it in the leaves being smaller, elliptic, or obovate, beset with scattered hairs on both surfaces; in the stamens being about equal in length to the segments *of* the corolla, not exceeding them.

Date-plum-leaved Cordia. Tree.

22 C. SELLOWIANA (Cham, et Schlecht, 1. c p. 478.) leaves on short petioles, ovate, entire, bluntly cuneated at the base, and attenuated at the apex, acuminated, at first downy, in the adult state scabrous and shining above, but clothed with velvety tomentum beneath; inflorescence lateral; cymes large, 3-6 trichotomous and dichotomous, tomentose: calyx campanulate, 5-toothed: teeth acute; corolla salver-shaped, glabrous; stamens much exserted. I? . S. Native of the south of Brazil. Very nearly allied to C. *macrophylla,* Lin. and *C. pubescens,* Willd. herb. Roem. et Schultes, syst. 4. p. 803. See Desf. ann. mus. 1. p. 205. Branches terete, clothed with rufescent tomentum. Leaves 10 inches long. Corolla having the tube length of calyx; segments shorter, obtuse, reflexed. Stamens villous at the base, as well as the tube of the corolla at their insertion. Ovarium globose, glabrous; style hairy.

Sello's Cordia. Tree.

23 C. HETEROPHY'LLA (Willd. herb. 5474. Cham, et Schlecht, 1. c. p. 480.) leaves form of those of *C. pubescens,* tomentose, as in the preceding species ; cymes pedunculate, terminal, lateral, and extra-axillary ; calyx narrow, clavate, not globose; corolla narrower : segments short, exceeding the calyx a little ; stamens rarely equal in length to the segments of the corolla ; throat of corolla and filaments glabrous ; ovarium oblong-elliptic, hairy on the top, as in C. *Sellowwna.* ^ • s- Native of Cayenne.

***Farious-kaved* Cordia. Tree.**

24 C. OBSCU'RA (Cham, et Schlecht, in Linnsea, 4. p. 480.) very nearly allied to the preceding, but is distinguished by the nearly sessile, pergamaceous, less silky leaves, which are furnished on both surfaces with more numerous stiff short hairs, with the vascular rete finer, and more prominent on the upper surface ; cymes smaller, on shorter peduncles, terminal, lateral, and axillary. J? . S. Native of Brazil, within the tropic, Sello. Young branches angular, beset with brown hairs, as well as bark. Leaves 2 inches to J foot long, and 2-| inches broad. Cymes fastigiate. Calyx downy. Segments of the corolla obtuse, a little shorter than the tube. Stamens exserted, hardly the length *of* the segments of the corolla, inserted in the throat, where it is very villous.

Obscure Cordia. Tree.

25 C. SALICIFOLIA (Cham, et Schlecht in Linnaea, 4. p. 481.) leaves thin, firm, hardly pellucid, lanceolate, acuminated, acute, tapering into the petioles ; cymes lateral, on short peduncles, nearly sessile, or on long peduncles, erect, sub-fastigiate, beset with short hairs ; flowers pedicellate ; calyx short, campanulate, irregularly lobed, glabrous outside, but pilose inside ; corolla salver-shaped ; tube length of calyx ; limb 5-cleft; segments reflexed, narrow-elliptic, obtuse, one-half the length of the tube, or a little longer ; stamens much exserted, twice as long as the segments of the corolla, *fy* • S. Native of the south of Brazil, Sello. Besides the buds, the tops of the inflorescence and branchlets are glabrous. Leaves 5 inches long, and an inch broad.

***Willow-leaved* Cordia. Tree.**

26 C. AMBIGUA (Cham, in Linnaea, 8. p. 125.) beset with stiff hairs all over, the upper surfaces of the leaves scabrous, and the inflorescence tomentose; branches angular and furrowed ; leaves nearly opposite and scattered, 6-8 inches long, firm, membranous, flat, elliptic, drawn out into the petioles at the base, acute, obtuse and few-toothed at the apex, or acuminated, acute, and nearly entire; cymes small, terminal; calyx closed, clavate at first, at length obconically tubular, irregularly 5-toothed; corolla salver-shaped, having the tube dilated upwards, and the segments oblong, length of tube, a little dilated, and undulately plicate at top; drupe half-closed in the calyx. T?. S. Native of Brazil, Sello. Cordia Anabaptista, Cham. Very like *C. superba, var. elliptica,* but the flowers are much smaller. Stamens exserted. Drupe containing a 3-celled, 3 or 1 seeded putamen.

Ambiguous Cordia. Tree.

27 C, PUBE'SCENS (Willd. herb, ex Roam, et Schultes, syst. 4. p. 803. Cham, in Linnaea, 8. p. 127, and 4. p. 479.) leaves on short petioles, ovate, or ovate-oblong, somewhat unequal-sided, rounded at the base, and subcordate, drawn out at apex into a fine tail-like acumen ; others are nearly orbicular, acutely acuminated on very short petioles, all are entire and discoloured, wh«n young rather silky and shining above, and strigulose and velvety beneath, when old strigulose above and downy beneath ; inflorescence cymosely panicled, sub-fastigiate, loose ; calyx with 5 acutish, erect teeth, clothed with velvety tomentum inside; corolla salver-shaped : tube length of calyx : segments obtuse, reflexed ; filaments bearded at their insertion, hardly exceeding the segments of the corolla; ovarium hairy at top ; stigmas not dilated. J? . S. Native of Brazil. Branches angular, tomentose, or villous. Leaves 10-12 inches long, and 4-5 broad. Calyx downy outside.

Downy Cordia. Tree.

28 C. CORDIFOLIA (H. B. et Kunth, nov. gen. 3. p. 70.) leaves oblong, obtuse, cordate, quite entire, glabrous above, and pubescent beneath ; corymbs terminal, dichotomous, diffuse ; flowers sessile, glomerate ; calyx campanulate, downy, smooth, with acute teeth ; limb of corolla 5-cleft, with linear, reflexed segments ; stamens pilose at the base. Tj . S. Native of the islands in the river Apures, near El. Diamante and Arichuna. Willd. rel. ex Rcem. et Schultes, syst. 4. p. 800. Branches terete, glabrous, white. Leaves 3-4 inches long, and 2 or more broad. Flowers sessile, size of those of *Mybsotis scorpidides.* Corollas white. Stamens much exserted. Style inclosed.

Heart-leaved Cordia. Tree or Shrub.

29 C. EHRETIOIDES (Lam. ill. no. 1902.) leaves oblong-ovate, acute at the base, quite entire, glabrous ; panicles lateral, shorter than the leaves. J? . S. Native of Jamaica. C. collococca, /3, Poir. diet. 7. p. 42. ?—Sloane, hist. 2. t. 203. f. 2. Flowers small. This differs from *C collococca* in the leaves not being cordate at the base. Said to be the same as *C.jlavescens,* by Sppeng.

Ehretia-like Cordia. Tree.

30 C. FLAVE'SCENS (Aubl. guian. 1. p. 226. t. 89.) leaves oblong, acuminated, quite entire, glabrous ; racemes simple, axillary ; peduncles very long; calyx deeply divided into *5-6* rounded, acute segments ; drupe dry, greenish-yellow, cherry-formed. J? . S. Native of Guiana and Cayenne, on the edges of fields. C. sarmentosa, Lam. ill. no. 1907. Stems many, sarmentose. Leaves sub-petiolate, *6-7* inches long, and 3 broad. Corolla yellowish, with rounded lobes. Stamens 5-6, exserted; anthers sagittate.

Yellowish-fruited Cordia. Clt. 1823. Shrub sarmentose, 8 to 9 feet.

31 C. TETRA'NDRA (Aubl. guian. 1. p. 222. t. 87.) leaves ovate, acute, somewhat cordate at the base, rough beneath, and glabrous above; corymbs or cymes terminal; calyx turbinate, with 4 rounded, acute teeth ; limb of corolla of 4 rounded, acutish segments ; stamens 4, inserted under the divisions of the limb, exserted; drupes small, containing 4 1-seeded nuts. \/ . S. Native of Guiana and Cayenne, on the banks of rivers, and on the sea-shore. Leaves 8-10 inches long, and 3-4 broad, subundulated. Cymes like those of *Sambitcus;* peduncles dichotomous. Corolla small, funnel-shaped, green ; tube short,

Tetrandrous Cordia. Tree 40 to 50 feet.

32 C. TOQUE^VE (Aubl. guian. 1. p. 228. t. 90.) leaves cordate-ovate, acuminated, entire, villous ; corymbs panicled, terminal, racemose ; calyx tubular, 5-toothed; corolla with a short tube, and 5 roundish, spreading lobes. T?. S. Native of Guiana, in woods near Sinemari. The whole plant villous, much branched. Leaves 4-6 inches long, and 3-4 broad. Common peduncles long and villous. Corolla white. Stamens exserted. Drupe oblong, 1-seeded, yellowish. *Toqueve* is the Guiana name of the shrub, ex Aublet.

Toqueve Cordia. Shrub 5 to 6 feet.

33 C. MACROPHY'LLA (Lin. spec. p. 273. Mill. diet. no. 3. Willd. spec. 1. p. 1075.) leaves ovate-oblong, villous, entire, or a little denticulated ; racemes corymbose, small, villous; calyx villous, cup-shaped, with 5 obtuse teeth ; corolla having the tube villous inside, and the segments of the limb deflexed and curled; drupe reddish, containing a 2-celled, 2-seeded putamen. T? . S. Native of the Antilles, Jamaica, Porto Rico, St.

Domingo, &c. Lam. ill. no. 1901. Desf. ann. mus. 1. p. 205. Red. pict. mus. par. Prunus racemosa, &c. Sloane, jam. p. 184. hist. 2. p. 130. t. 221. f. 1. Branches inclinate, bitrifurcate, cinereous, downy, or villous. Leaves on short petioles, 1^ foot long. Racemes girded by 2-3 small leaves from the forks. Drupe size of a pea.

Long-leaved Cordia. CIt. 1752. Tree 40 to 60 feet.

34 C. SALVIFOLIA (Juss. ex Poir. diet. 7. p. 46.) leaves ovate-lanceolate, obtuse, wrinkled, very rough, coriaceous ; racemes lateral, small, with villous divisions. J? . S. Native country unknown, but most probably of some part of tropical America. Branches cinereous, or yellowish, striated, rather downy while young. Leaves petiolate, very firm, beset with copious white dots above, 2 inches long, and 1 inch broad.

Sage-leaved Cordia. Tree or Shrub.

35 C. DOMINGE'NSIS (Lam. ill. no. 1900.) leaves ovate, entire, scabrous on both surfaces, whitish beneath; panicles terminal, downy; calyx tubular, with obtuse teeth, rufescent. I?. S. Native of St. Domingo. Branches angular, very rough, blackish brown, downy at top. Leaves dark green above : upper ones 8-10 inches long, and 4-5 broad. Racemes shorter than the leaves, with short terete scabrous branches. Corolla unknown.

St. Domingo Cordia. Tree or Shrub.

3* C. ? BL'XIFOLIA (Juss. ex Poir. diet. 7. p. 45.) leaves coriaceous, ovate-cuneated, entire, nearly sessile, obtuse, scabrous ; panicles corymbose, downy, lateral and terminal; calyx short, ovate, tubular, with 5 obtuse lobes. F? . S. Native country unknown, but probably of some part of tropical America. Habit of *Ehretta buxijblia.* Branches terete, grey, glabrous. Leaves numerous, hardly an inch long, beset with copious white dots above. Corolla funnel-shaped, having the tube cylindrical and longer than the calyx, and the limb middle-sized and spreading. Style bifid, each division bearing a solitary capitate stigma, and is therefore probably a species of *Lutrostylis.*

Box-leaved Cordia. Shrub.

37 C. EXALTA TA (Lam. ill. no. 1910. Poir. diet. 7. p. 47.) leaves ovate, acute at the base, rough, entire, coriaceous, on very short petioles ; corymbs a little longer than the leaves, glabrous, terminal; calyx small, glabrous, campanulate, with 5 small acute teeth ; limb of corolla 5-cleft. I? . S. Native of Guiana, Richard. Branches glabrous, striated. Leaves almost shining above, and paler beneath, 4 inches long, and 2 broad. Branches of corymb diffuse. Pedicels thick, very short, 1-flowered. Drupe globose, size of a pea, containing a 2-celled, 2-seeded putamen.

Tall Cordia. Tree 60 feet.

38 C. NERVOSA (Lam. *ill.* no. *1906.* Poir. diet. 7. p. 47.) leaves alternate and opposite, ovate-oblong, acuminated, shining and dark green above, but pale yellow, and rather downy beneath, on short petioles ; corymbs glabrous, short; bracteas subulate ; calyx glabrous, with short, ovate, bluntish teeth. J? . S. Native of Guiana, Richard. Nearly allied to *C.flavescens,* Aubl. Branches scabrous, cinereous, angular. Leaves nearly glabrous, 8-10 inches long, and 4 broad; petioles nodose at the base. Corymb having the first branches somewhat dichotomous, the rest short and thick, rather woody. Corolla and *fruit* unknown.

Nerved-leaved Cordia. Clt. 1820. Shrub or tree.

39 C. RETICULA'TA (Vahl. eclog. amer. 3. p. 5.) leaves ovate-oblong, long-acuminated, reticulated, shining, scabrous beneath, and smooth above ; racemes terminal, erect, branched, dichotomous, and are, as well as the calyxes, clothed with rusty tomentum; flowers 4-5 at the top *of* each peduncle, hardly pedicellate; calyx smooth, not striated, campanulate in the fruit-bearing state, trifid, with oblong, obtuse segments ; stamens length of corolla ; segments of the limb of the corolla oblong, bluntish. *Yl.* S. Native *of* Montserrat, Ryan. Branches terete, glabrous, but clothed with rusty tomentum at top. Leaves petiolate, glabrous, shining on both surfaces. Branches of raceme twice dichotomous. Tube of corolla length of calyx. Stigmas dilated, transverse. Drupe obovate, glabrous, larger than a pea.

Reticulated-\eaved Cordia. Tree.

40 C. CALOPHY'LLA (Vahl. eclog. amer. 3. p. 5.) leaves elliptic-lanceolate, acuminated, quite entire, glabrous, rather coriaceous, smooth above, and rather scabrous beneath; corymbs axillary; calyx smooth, campanulate, 5-toothed. I?. S. Native of Cayenne, Rohr. Branches angular, glabrous, dichotomous, yellowish. Leaves petiolate, 6-8 inches long, yellowish beneath. Corymbs at the sides of the forks and tops of the branches, with *opposite leaves, 3 times longer than the* petioles.

Beautiful-leaved Cordia. Tree.

41 C. FORMICA'RUM (Roem. et Schultes, syst. 4. p. 800.) leaves oblong, acuminated, quite entire, scabrous; branches ventricose ; corymbs pilose, coarctate. J? . S. Native of Brazil, in the province of Para. Branches terete, smooth, dilated at the ramifications, hollow in the axils, and forming nests for ants, whence the tree is called *Pao de Formige* by the natives. Leaves nearly sessile, a foot long, and a hand wide, ciliated.

Ants[1] Cordia. Tree.

42 C. A'SPERA (Forst. prod. no. 109. Willd. spec. 1. p. 1074.) leaves ovate, acuminated, rough ; flowers cymose, wrinkled. J? . G. Native of the Island of Tongatabu. Forster does not mention the size of the flowers.

Rough Cordia. Tree.

* * *Species natives of Asia.*

43 C. LATIF6LIA (Roxb. fl. ind. 2. p. 230.) leaves roundish, cordate, entire, repand, 3-nerved, smooth above and scabrous beneath ; panicles terminal and lateral ; flowers polygamous; calyx villous, campanulate, leathery, witl an unequally-toothed mouth; corolla short, campanulate, with 5 linear-oblong segments ; drupes oblately globose, on a smooth calyx, containing a 1-4-seeded nut. I?. S. Native of Hindostan. Trunk short, generally crooked, as in C *Myxa.* Branches spreading and drooping; young shoots smooth and angular. Leaves 3-7 inches long, and rather less in breadth. Panicles roundish. Flowers numerous, small, white. Stamens as long as the segments of the corolla, inserted immediately under the fissure. Drupe about an inch or more in diameter, yellow when ripe; pulp soft, clammy, and is eaten by the natives. Mr. Colebrooke says that the writers on Indian Materia Medica notice two sorts of Sepistan. The first as large as a prune, with its nut immersed in mucilaginous pulp, and separable from it. The second smaller, with its nut adhering to the pulp, (as described by the writers on Materia Medica in Europe,) but with less mucilage, and sweeter than the large one. The rest of the description, he observes, is common to both kinds, the fruit growing in clusters; when ripe yellow, but afterwards turning black. The first, or large sort, is, no doubt, the fruit of the present tree; and the small sort that of *C. Mijxa,* which has hitherto been considered in Europe as the only tree that produces this drug. The Arabic and Persian names of *Sepistan* and *Pistan* are applicable to both sorts. Dr. Wallich proposes to give this species the specific name of *C. Scpistana,* and the West Indian species, now called *Sebestena, C. coccinea,* Wai), in Roxb. fl. ind. 2. p. *332.*

Broad-leaved Sepistan. Tree 8 to 12 feet.

44 C. MY'XA (Lin. spec. 273. syst. p. 161. mat. med. t. 67.) leaves oval, ovate, or obovate, repand, smooth above, but rather scabrous beneath ; panicles terminal and lateral, globular ; flowers polygamous ; calyx tubular, widening towards the mouth, and torn as it were into *3-5* divisions ; divisions of corolla revolute. h_c . S. Native of the Circars, chiefly in gardens, hedges, &c. near villages ; and of Nipaul on Bheempedi. Delile, fl. egypt. p. 47. t. 19. f. 1—2. Vidi-Marum, Rheed. mal. 4. t. *37.* Sebestena officinalis, Gsertn. fruct. 1. p. 363. t. 76. Cornus sanguinea, Forsk. descr. p. *33.* ex Vahl. symb. 1. p. 19. Sebestena domestica, or C. officinalis, Lam. ill. p. 420. no. 1895. t. 96. f. 2. Myxa, Commel, hort. 1. p. 139. Prunus Sebestena, &c. Plukn. aim. 306. t. 217. f. 3. C. domestica, Roth. Sebestena domestica, Prosp. Alp. aegypt. p. 30. Bauh. hist. 1. p. 198. Prunus Sebestena Mathioli, Plukn. aim. p. 306. t. 217. f. 2. Trunk generally crooked. Branches numerous, spreading, and bent in every direction, forming a dense shady head. Leaves 2-3 inches long, and from 1^ to 2 broad. Bracteas none. Calyx not in the least striated. Drupe globular, smooth, size of a cherry, yellow ; pulp transparent, viscid, containing a sub-tetragonal, 4-celled nut, which is cordate at both ends ; the cells rarely all fertile. The smell of the nut when cut is heavy and disagreeable, the taste of the kernels like that of fresh filberts. The fruit is not used medicinally among the Circars, but when ripe is eaten by the natives: the pulp is of a sweetish taste. The dried fruit is the *Sebestena* of the Materia Medica. The Telinga name of the tree is *Neckra,* the Hindoostan one *Lusora* or *Lesoora,* and the Bengal name is *Bohoori.* Linnaeus erroneously describes this plant as having a 10-striped calyx.

Myxa Sepistan. Clt. 1644. Tree 10 to 15 feet.

45 C. SWAVE OLENS (Blum, bijdr. p. 843.) leaves alternate, ovate, or ovate-oblong, bluntish, a little attenuated at the base, nearly equal, quite entire, or somewhat repandly angled, glabrous above, but tomentose in the axils of the nerves beneath; corymbs terminal; flowers spicate, secund ; tube of corolla inclosed in the calyx, which is campanulate, without furrows, and downy outside^*fy*. S. Native of Java, on the west side, in mountain woods. Allied to *C. I'ndica,* and *C. domestica.*

Sweet-scented Cordia. Fl. Oct. Tree 40 feet.

46 C. BANTAME'NSIS (Blum, bijdr. p. 843.) ultimate leaves 3 in a whorl, oval, bluntish, almost quite entire, coriaceous, glabrous above, and tomentose beneath ; corymbs terminal, dichotomous, divaricate; calyx without a furrow, 3-5-toothed. J? . S. Native of Java, near Tjikandie, where it is called *Kandal.*

Bantam Cordia. Fl. Dec. Tree 30 feet.

47 C. WALLICHII ; leaves broad, ovate-roundish, triple-nerved, acute, glabrous above, and densely clothed with tomentum beneath ; corymbs lateral and terminal, dichotomous ; calyx campanulate, downy, irregularly toothed ; genitals exserted. Jj . S. Native of the East Indies. Cordia tomentdsa, Wall, cat. no. 897, but not of Cham. Allied to *C. Myxa.*

Wallich's Cordia. Shrub.

48 C. POLY'GAMA (Roxb. fl. ind. 2. p. 337.) leaves ovate-cordate, entire, scabrous; panicles terminal, in the male more divided; flowers polygamous; the male ones generally tetrandrous ; the hermaphrodite ones often pentandrous ; filaments in the male flowers as long as the corolla, in the hermaphrodite flowers shorter ; calyx narrow, campanulate, 4-5-toothed, villous; corolla funnel-shaped, 4-5-cleft, with linear revolute segments. h_c . S. Native of the mountains of Coromandel. Trunk short. Young shoots terete, scabrous. Leaves from ovate to cordate, entire, or slightly scollop-toothed, when young soft and villous, 1-6 inches long, and about 3-fourths of that broad. Panicles pubescent. Flowers small, white. Drupes oval, size of a black currant, smooth, when ripe yellow, containing a 4-celled putamen ; pulp mucilaginous, as in *C. Myxa.*

Polygamous-flowered Cordia. Tree middle-sized.

49 C. MONOICA (Roxb. cor. 1. p. 43. t. 58. Willd. spec. 1. p. 1072.) leaves ovate, toothed, scabrous; corymbs axillary and terminal, with many male flowers; drupe pointed, containing a 4-celled nut; calyx, corolla, and genitals as in the genus. T?. S. Native chiefly in the Circar forests. Small tree. Leaves about 3 inches long, and 2 broad. Panicles dichotomous, composed of short, recurved, one-ranked spikes. Flowers white. Drupe size of a cherry, yellow, pulpy. Stigmas bifid, acute.

Monoscious-ftowered Cordia. Fl. March, April. Clt. 1799. Tree small.

50 C. SERRATA (JUSS. ex Roxb. fl. ind. 2. p. *333.)* tender parts hairy ; leaves ovate-cordate, acuminated, serrated ; corymbs lateral; flowers usually octandrous, with from 7 to 9-cleft corolla ; calyx sub-cylindrical, 3-5-toothed. f?. S. Native of Travancore. Branches numerous, spreading in every direction. Leaves rather harsh, with few hairs, 4-6 inches long, and from 2 to 4 broad. Corymbs dichotomous. Flowers white, middle-sized. Corolla with a cylindrical tube, length of calyx ; limb about 8-cleft; segments oblong, recurved. Filaments hairy, inserted in the tube of the corolla below its middle. Perhaps the same as *C. serrata,* Juss. ex Poir. diet. 7. p. 41.

Serrated-leaved Cordia. Tree.

51 C. GRANDIS (Roxb. fl. ind. 2. p. 335.) leaves round-cordate, obtuse, entire, scabrous, somewhat triple-nerved; panicles terminal, drooping; flowers tetramerous, tetrandrous ; drupe containing a 4-celled nut, 2 or 3 of the cells usually abortive. 1? . S. Native of Chittagong. Cordia obliqua, Herb. Madr. Leaves rounded, or retuse at the base ; the apex acute or obtuse, often remotely toothed. Ramifications of the panicle many times dichotomous, those with the petioles and young leaves are beset with rusty villi. Calyx with an even surface, and 4-toothed mouth. Drupe dirty yellow, smooth, slightly-depressed at apex, half an inch long, supported by the enlarged, many-toothed, striated calyx ; pulp gelatinous. Leaves often a foot long. Perhaps belonging to section *Gerascdnthus.*

Great-leaved Cordia. Tree.

52 C. ANGUSTIFOLIA (Roxb. fl. ind. 2. p. 238.) leaves nearly opposite, lanceolate, obovate-lanceolate, obtuse, or emarginate, scabrous ; panicles terminal, corymbose; flowers tetramerous and tetrandrous ; calyx campanulate, obscurely 4-toothed; corolla having the tube longer than the calyx, and the limb of 4 linear revolute divisions. *fy* • S. Native of Mysore. C. reticulata, Roth. nov. spec. 124. Trunk short; branches numerous, spreading in every direction, often drooping. Leaves 4 inches long by one broad. Flowers small, white. Stamens 4, inserted just below the divisions of the corolla. Drupe size of a large pea, round, smooth, yellow ; when ripe the pulp is yellow, gelatinous, and pellucid ; putamen 4-celled, though seldom more than one of the cells comes to maturity.

Narrow-leaved Cordia. Clt. 1820. Tree 12 to 15 feet.

53 C. ACUMINATA (Wall, in Roxb. fl. ind. *2.* p. 339.) glabrous, smooth ; leaves oblong-ovate, acuminated, entire ; corymbs terminal, short, dichotomous ; flowers with funnel-shaped corollas, and deeply divided calyxes. T?. S. Native *of* Silhet, where it is called *Ramutti.* Cordia reflexa, Rcem. et Schultes, syst. 4. p. 800. Leaves about 5 inches long, smooth. Corymbs oval, rather downy, composed of unilateral spikes of small white flowers. Corolla having the tube twice as long as the calyx ; segments of the limb lanceolate, ciliated, recurved, or bent backwards. Stamens elevated above the throat.

Acuminated Cordia. Tree middle-sized.

54 C. OBLIQUA (Willd. phyt. 1. p. 4. no. 16. t. 4. f. 1.) leaves roundish-cordate, nervosely veined, oblique. I? . S. Native of the East Indies. Willd. spec. 1. p. 1072. C. Myxa, y, Poir. diet. 7. p. 40. Nearly allied to *C. Myxa,* and probably only a variety of that species. Leaves quite entire, not repand. Calyx not striated. Stamens exserted.

Oblique-leaved Cordia. Clt. 1818. Tree.

55 C. SPINE'SCENS (Lin. mant. 206. syst. *230,)* leaves ovate, serrated, scabrous above, and tomentose beneath ; old petioles permanent, spinescent; racemes axillary, simple or bifid, filiform, length of leaves ; calyx campanulate, obsoletely 5-toothed ; corolla campanulate, 5-toothed, twice as long as the calyx ; stigmas acute. ^ . S. Native of the East Indies. Branches strict, tomentose, rusty. Leaves size of those of the cherry-tree. Fruit sessile, black, size *of* currants.

Spinescent-pet\o\ed Cordia. Clt. 1824. Tree 40 to 60 feet.

56 C. SINE'NSIS (Lam. ill. no. 1914. Poir. diet. 7. p. 49.) leaves oblong, obtuse, villous in the axils of the veins; panicles lateral and terminal, shorter than the leaves; calyx glabrous, hardly striated, campanulate, with 4-5 short, obtuse lobes; corolla funnel-shaped, twice as large as the calyx ; drupe small, ovate, containing a 2-celled putamen. J? . G. Native of China. Leaves elliptic, entire, 2-3 inches long. Branches of panicle glabrous, divaricate, dichotomous, usually recurved. Corolla white.

China Cordia. Tree or shrub.

57 C. IN'DICA (Lam. ill. no. 1913. Poir. diet. 7. p. 49.) leaves ovate, naked, obtuse, or acutish, entire, membranous ; panicles terminal and lateral, elongated, composed of short pendulous racemes ; flowers on short pedicels ; calyx campanulate, with a torn mouth ; tube of corolla inclosed ; drupe containing a 2-celled nut. f? . S. Native of the East Indies, Sonnerat. Branches terete, glabrous. Leaves 2-4 inches long, and 2 broad, paler beneath ; petioles 1^ inch long. Corolla small, with a short spreading limb. Drupe small, ovate.

Indian Cordia. Tree or shrub.

58 C. PANICULA'TA (Roth. nov. spec. p. 124.) leaves roundish-ovate, somewhat emarginate at the base, and rather unequal, pilose above on the midrib and veins, entire; panicle terminal, composed of alternate, sub-corymbose branches ; flowers sub-secund; calyxes smooth. T?. S. Native of the East Indies. Leaves obtuse at both ends, quite glabrous beneath. Calyx beset with minute pili. Like most of the species of *Cordia* the calyx increases much in size after florescence, but in substance is coriaceous, and its form more campanulate, inclosing the fruit in the manner of the cup in acorns.

/Wc/ee/-flowered Cordia. Tree.

* * * *Species natives of Africa,*

59 C. CRENA'TA (Delile, fl. segypt. p. 51. t. 20.) leaves ovate or rhomboid, glabrous on both surfaces, crenately serrated at the apex ; cymes terminal; stigmas filiform. F? . S. Native of Egypt. Cordia Myxa, Forsk. arab. p. *63,* no 136. Sebestena sylvestre, Nep. egypt. 17. t. 8. Branches twiggy. Leaves same colour on both surfaces. Flowers scent of Jasmine. Calyx tubular, 4-5-toothed. Putamen 2-celled ; cells 1-seeded.

Crenated-leaved Cordia. Shrub or tree.

60 C. SENEGALE'NSIS (JUSS. ex Poir. diet. 7. p. 47.) leaves membranous, ovate, acuminated, glabrous on both surfaces, quite entire, reticulately veined ; panicles with short branches, which are hardly longer than the petioles; flowers on short pedicels, tetrandrous; corolla 4-cleft; calyx trifid. T?. S. Native of Senegal, Adanson. A quite glabrous shrub, with slender, black, terete branches. Leaves alternate, 4-5 inches ong, and 3 broad. Probably a distinct genus.

Senegal Cordia. Tree 20 *feet.*

SECT. II. GERASCANTHUS (from *yrjpa<ric(o, gerasco, to* grow old ; and *ardoç;, anthos,* a flower ; probably in reference to the hoary appearance of the flowers.) Calyx 10-striped, or 10-ribbed. Flowers large, corymbose. Cerdana, Ruiz, et Pav.

61 C. GERASCA'NTHUS (Jacq. amer. p. 43. t. 175. f. 16. pict. t. 259. f. 12. Swartz. obs. *86,* Lin. spec. 273.) leaves ovate-oblong, acute, quite entire, glabrous ; racemes terminal, aggregate; flowers verticillate, sessile; calyx 10-furrowed, 10-striped, downy, 5-toothed ; limb of corolla 5-cleft; throat villous ; stamens length of corolla. J? . S. Native of the West Indies, in woods ; and of Mexico, near Acapulco. Lam. ill. t. *96,* f. 2.— Brown, jam. p. 107. t. 29. f. 3. Leaves unequal at the base, 3-4 inches long. Racemes usually 4 together, 3-4 inches long. Flowers verticillate ; whorls distant. Corolla funnel-shaped, white ; tube longer than the calyx; lobes *of* limb roundish. Stamens hardly exserted. There is a variety of this species with hexamerous hexandrous flowers. This is esteemed one of the best timber trees in Jamaica, of which it is a native. The wood is of a dark brown colour, and gently striped ; it is tough and elastic, of a fine grain, and easily worked. It is called Spanish elm or Prince wood by the English, and *Bois de chyjire* by the French. The leaves of the Jamaica tree are said to be rather scabrous. The plant of Jacquin differs from that of H. B. et Kunth, nov. gen. 3. p. 54. Poir, ency. 7. p. 42. t. *96,* f. 2, and Browne, jam. 170. t. 29. f. 3, in the leaves, young branches, and inflorescence being beset with stellate hairs, not glabrous ; in the leaves being lanceolate-oblong, acute at both ends, not obtuse at the base ; in the stamens being equal in length to the segments of the corolla, not inclosed. We therefore propose *to* call the plant *of* Kunth *C, Kunthei,* should it prove distinct.

Spanish-elm>, or Grey Cordia. Fl. May. Clt. 1789. Tree 30 feet.

62 C. GERASCANTHOIDES (H. B. et Kunth, nov. gen. amer. 3. p. 69.) leaves oblong-lanceolate, acuminated at both ends, quite entire, glabrous, shining above ; panicles terminal, spreading ; flowers pedicellate, solitary ; calyx 10-furrowed, 10-striped, hispid, 2-4-toothed: teeth acute ; limb of corolla sub-quinquefid, with a glabrous throat, and roundish lobes. 1?. S. Native of Mexico, about Acapulco. Branches wrinkled, white, glabrous. Panicle clothed with fuscous tomentum. Corolla funnel-shaped, white. Genitals exserted.

Gerascanthus-Uke Cordia. Tree 30 feet.

63 C. LU'TEA (Lam. ill. no. 1897. Poir. diet. 7. p. 45.) leaves ovate, obtuse, crenated above ; corymbs lateral and terminal ; calyx 10-furrowed, 10-striped, ovate-cylindrical: with 4 ovate, short teeth, having white, scarious margins ; corolla funnel-shaped, having the tube length of the calyx, the limb rather large, of *6-8* segments ; stamens 8, villous at the base ; drupe ovate, acute, containing a 2-4-celled nut. T?. S. Native of Peru, about Lima and Huanaca. C. Myxa, Lin. spec. 273. syst. p. 230. mat. med. *67,1* Branches glabrous, but downy towards the top. Leaves scabrous on both surfaces, beset with white dots above, when young downy beneath. Corymbs small, clothed with cinereous or yellowish tomentum; peduncles very short. Corolla yellow. Drupe white.

Yellow-Roweved Cordia. Tree.

64 C. ROTUNDIFOLIA (Ruiz. et. Pav. fl. per. 2. p. 24. t. 148. f. a. H. B. et Kunth, nov. gen. 3. p. 70.) leaves roundish-elliptic, obtuse at both ends, a little denticulated, scabrous above, and clothed with hoary tomentum beneath ; peduncles dichotomously corymbose, many-flowered ; flowers sessile; calyx furrowed, downy ; limb of corolla 6-cleft; throat rather

pilose. J? . S. Native of Peru, in flats at the bottom of the Andes, near Santa and Chala. G. lutea, Lam. ill. 1. p. 421. no. 1897.? Pavonia lutea, Dombey, herb. ?—Prunus Sebestena, Plukn. aim. p. 306.? phyt. t. 217. f. 2. ? Young branches villous. Flowers large, sessile, yellow. Corolla funnel-shaped ; tube length of calyx; segments ovate, acute. Stamens *5-8,* villous at the base. Drupe half inclosed, ovate, acuminated, containing a 5-furrowed, 2-celled putamen. Leaves 2-3 inches long, and 2 broad. Teeth of calyx acute.

Round-leaved Cordia. Tree 15 to 20 feet.

65 C. CERDA'NA (Rcem. et Schultes, syst. 4. p. 467.) clothed with stellate down in all parts ; leaves oblong and ovate ; panicles terminal; stamens equal in length to the segments of the corolla. *2 • S. Native of Peru, in the woods of Pozuzo and Munna. Cerdana alliodora, Ruiz et Pav. fl. per. 2. p. 47. t. 184. Pers. ench. 1. p. 167. A tall tree, with fetid bark, smelling of garlic.

Cerdana Cordia. Tree.

66 C. SELLOWIA'NA ; leaves large, narrow, ovate, or elliptic, or rather oblong, obtuse, or subcordate at the base; acute, or acuminated at apex, very much wrinkled, scabrous above, and hairy along the midrib, but clothed with soft hairs or pubescence beneath, having the margins reflexed and unequally subsinuated ; cymes or corymbs sessile, smaller than the leaves, composed of 3 main branches ; branches 2-3 times forked ; spikes dense-flowered ; calyx tubular, obconical, 10-striped ; corolla salver-shaped : tube length of calyx: limb 5-cleft: divisions narrow, elliptic, obtuse, one-half as long as the tube. J? . S. Native of tropical Brazil, Sello. C. grandis, Cham, et Schlecht in Linnaea, 4. p. 473, but not of Roxb. Branches terete, but clothed with fuscescent hairs, and rather angular and striated while young. Largest leaves almost a foot long, and 4| inches broad, on short petioles. Calyx 3-5-toothed ; teeth roundish, mucronate. Stamens exserted, villous at the base. Fruit not seen. *

Sellers Cordia. Tree.

67 C. TOMENTOSA (Cham, et Schlecht. in Linnaea, 4. p 472.) leaves ovate, or elliptic, to ovate and obovate, rarely oblong, acuminated, acute, usually acute at the base, and drawn out a little into the petioles, rarely obtuse, generally unequal, clothed beneath with dirty, canescent, adpressed tomentum, as well as the young shoots, inflorescence, and calyxes, but beset with a few starry hairs on the upper surface ; calyx 4 lines long; limb of corolla 5-cleft: segments rounded at top; stamens about a third part shorter than the segments of the corolla. *J2* • S. Native of the South of Brazil, Sello. This species is said to differ from *C. Cerdana,* in the larger flowers, in the stamens being shorter than the corolla, in the hairs being stellate and much more crowded, in the leaves being broader and shorter, &c. There is also a variety of this with narrower leaves.

Tomentose Cordia. Tree.

68 C. INSIGNIS (Cham, in Linnaea, 8. p. 122.) leaves elliptic and obovate, acuminated, glabrous above, clothed with simple fuscous tomentum beneath, on short petioles; panicles terminal, sub-fastigiate, tomentose; calyx nearly sessile, cylindrical, deeply 10-furrowed, nearly an inch long : teeth unequal ; corolla funnel-shaped, with a 5-cleft limb, and rounded, obtuse segments ; stamens inclosed in the throat. I?. S. Native of Brazil, in the province of Minas Geraes, Lhotzky and Sello. Branches irregularly many-angled, smoothish ; angles obtuse; bark separating. Largest leaves 7-J- inches long, and *3}* broad. Inflorescence somewhat cymose, smaller and denser than in *C. Gerascdnlhus,* hardly exceeding the leaves. Calyx clothed with velvety tomentum both inside and outside. Corolla with a short tube and wide limb. Stamens villous at the base. Ovarium obpyramidal, with a flattish top.

Showy Cordia. Tree.

69 C. CALYPTRA'TA (Bertero ex Spreng. syst. 1. p. 649.) leaves roundish, sub-attenuated at the base, toothed, rough from dots above, scabrous beneath, veiny ; calyx furrowed, truncate ; corolla sub-rotate, wide ; flowers polygamous. ^ • S. Native of South America, at St. Martha.

Calyptrate Cordia. Shrub or Tree.

70 C. TINIFOLIA (Willd. herb. no. 457. Rcem. et Schultes, syst. 4. p. 799.) leaves obovate-lanceolate, glabrous ; inflorescence capitate ; calyxes clothed with simple tomentum ; tube of corolla twice as long as the calyx; limb funnel-shaped, 5-lobed : lobes dilated, short, somewhat emarginate ; stamens short, inclosed in the throat. F?. S. Native of South America. Leaves 4 inches long, and 1| broad. Heads of flowers dense, globose, size of a walnut. Diameter of the limb of the corolla 9 lines. Perhaps only a variety of *C. Gerascdnthus.*

Tinus-leaved Cordia. Tree.

71 C. ? DUBIOSA (Blum, bijdr. 844.) leaves elliptic-oblong, bluntly acuminated, acutish at the base, setaceously serrated; serratures bearded, smooth above, and beset with a few hairs beneath; fructiferous calyx striated, tubular. f? . S. Native of Java, in the province of Bantam, in the woods of Tjiangassa.

Dubious Cordia. Tree.

72 C. CUJABE'NSIS (Manso et Lhotzky, fl. matto-grosso cujab. 2. no. 13.) leaves larger than those of *C, Gerascdnthus,* Jacq. ; elliptic-lanceolate, acuminated, acute at both ends, clothed with stellate down or tomentum beneath, and rather scabrous above ; inflorescence, flowers, and the rest, as in *C. Gerascdnthus,* Jacq.; of which it is perhaps only a mere variety. 1? . S. Native of Brazil.

Cujabo Cordia. Tree or shrub.

73 C. CHAMISSONIA'NA ; leaves petiolate, large, broad-ovate, acute, rather wrinkled, scabrous above, and hairy beneath; panicles axillary, sessile, decompound, exceeding the leaves, having the rachi clothed with fuscous tomentum ; calyx short, tubular, subglobose, rather velvety and canescent, obscurely 10-striped, 5-toothed: teeth short, bluntish, beset with silky hairs inside at top ; corolla glabrous, salver-shaped, equal in length to the tube of the calyx, with narrow, spreading, or rather reflexed segments; stamens exserted, inserted in the throat of the corolla, which is villous. T? . S. Native of Brazil, Sello. C. latifdlia, Cham, in Linnaea, 8. p. 126, but not of Roxb. Very nearly allied to *C. grandis,* Cham, in Linnaea, 4. p. 473.

Chamissd[1] s Cordia. Tree.

74 C. DENTA'TA (Vahl. eclog. amer. 3. p. 5. Poir. diet. 7. p. 48.) leaves ovate-elliptic, acute, denticulated, scabrous above, and downy beneath ; corymbs terminal, dichotomous, diffuse ; flowers glomerate, sessile ; calyx downy, 4-toothed, sulcately striated, with bluntish teeth ; limb of corolla 5-cleft; throat pilose. J? . S. Native of New Andalusia, near Cumana and Bordones, in open places ; and of Mexico, near Actopan. H. B. et Kunth, nov. gen. amer. 3. p. 70. Tree much branched; branches terete, hoary. Leaves 2-3 inches long; petioles warted. Corymb downy. Flowers nearly sessile. Corolla funnel-shaped,, white. Stamens hardly exserted. Drupe oblong, girded by the calyx at the base, size of a grain of Indian corn, containing a 4-celled putamen, 3 of which are abortive.

ToothedAewed Cordia. Tree 20 feet.

75 C. SCABE'RRIMA (H. B. et Kunth, nov. *gen.* amer. 3. p. 71.) leaves oblong, acuminated at both ends, wrinkled, serrated, scabrous on both surfaces; corymbs terminal, dichotomous; flowers sessile, glomerate ; calyx striated ? hispid. *h* . S. Native of Peru, between Lucarque and Ayavaca, at the altitude of 1300 hexapods. Branches terete, glabrous, but while

young tetragonal and scabrous. Corymb strigose. Corolla white.

Very scabrous Cordia. Tree.

76 C. MICRA'NTHA (Swartz, prod. p. 47. fl. ind. occ. 1. p. 460.) leaves elliptic, acute, entire, membranous, hairy beneath; racemes compound, loose ; calyx short, glabrous, striated; stamens exserted. fj . S. Native of Jamaica, in woods on the mountains. Nearly allied to *C. collocócca;* hut the leaves are less attenuated at the base and apex, hispid beneath ; racemes small, and flowers much smaller. Branches glabrous, wrinkled, grey. Leaves dark green, and shining above, paler beneath, attenuated at the base, obtuse or acuminated.

Small-flowered Cordia. Fl. ? Clt. 1822. *Tree SO* feet.

77 C. L^VIGA^VTA (Lam. ill. no. 1912. Poir. diet. 7. p. 46.) leaves ovate, veiny, shining, rather scabrous ; panicles lateral and terminal, longer than the leaves, glabrous ; calyx glabrous, or rather scabrous, striated ; corolla salver-shaped, or subcampanulate; stamens villous at the base, shorter than* the corolla. *h* • S. Native of the Antilles ?, Richard. Branches slender, nodose, grey, terete. Leaves roundish, entire, obtuse, or acute, attenuated at the base, rather small, coriaceous, pale beneath. Corollas like those of *Ehrétia tlmfblia ;* with the lobes of the limb ovate, obtuse. " Cymes many times dichotomous. Drupe globose/' ex Cham.

Smooth Cordia. Shrub or tree.

SECT. III. VARRONIA (SO named by Browne, from Marcus Tarrentius Varro, a learned Roman, author of a treatise de Re Rustica. He died in the year *27.)* Flowers small, glomerate, capitate or spicate, always pentamerous, pentandrous, and herniaphrodiate. Throat of corolla pilose. Calycine segments acute, or subulately setaceous. Leaves on short petioles.— Varrónia, Browne, jam. t. 13. f. 2. Lin. gen. no. *258.* Jacq. amer. p. 40.

§. I. CYMOS*:. Cymes glomerate at the time of florescence, but evolute in the fruit-bearing state. Calycine teeth acute.

78 C. DI'SCOLOR (Cham, et Schlecht, in Linnsea, 4. p. 482.) leaves nearly opposite, ovate, obtuse at the base *to* ovate-lanceolate, acute at the base, or all acute, unequally and coarsely toothed, or almost entire, strigose on both surfaces : the hairs beneath tomentose, fine, adpressed, and of a lurid rust-colour, mixed with strigae; cymes *2-3* times bifid, nearly capitate ; spikes secund, dense; flowers usually pentamerous, rarely tetramerous ; calyx obconically campanulate : teeth acute, erect, glabrous inside; corolla campanulately funnel-shaped, bluntly 5-lobed, glabrous outside, villous inside ; stamens inclosed. ^. S. Native of Brazil, within the tropic, at Rio Janeiro, Sello. Branches terete; young shoots tomentose. Largest leaves 2 inches long, and 10 lines broad, equal to the internodes. Cymes strigose. Calyx tomentose outside. Ovarium globose, inclosed in the calyx, 2-celled, having the calycine teeth conniving over its vertex.

Two-colour edAeaved Cordia. Shrub.

79 C. URTICIFOLIA (Cham, et Schlecht, in Linnsea, 4. p. 483.) leaves ovate, subacuminated, acute, obtuse at the base, coarsely, simply, and doubly serrated, hairy beneath, and beset with fewer, shorter pili above, scabrous from short pili along the margins ; cymes 2-3 times bifid ; calyx cup-shaped or campanulate, hairy, ciliated, glabrous inside, 5-toothed : teeth acute, erect, acuminated ; corolla tubularly campanulate ; limb bluntly 5-lobed, glabrous outside, and villous inside ; stamens inclosed. *h* . S. Native of the South of Brazil, Sello. Young shoots and inflorescence beset with spreading rufescent hairs. Leaves on short petioles, longer than the internodes, 3 inches long, and \\ broad. Branches axillary, alternate, cymiferous, forming a leafy panicle at the tops of the branches. Corolla 2 lines long. Drupe ovate, inclosed in the calyx, with the top alone free; putamen of drupe usually 1-celled, 1-seeded from abortion.

Nettle-leaved Cordia. Shrub.

80 C. HERMANNIEFOLIA (Cham, et Schlecht, 4. p. 484.) leaves nearly opposite, elliptic or ovate-lanceolate, with the base sometimes obtuse, and sometimes acute ; sometimes bluntish, and sometimes acute at the apex, simply, or obsoletely doubly serrated on the margins; serratures acute or obtuse, granular above, and beset with short white strigae between the nerves, scabrous along the margins, but clothed with longer, softer hairs beneath ; cymes terminal, nearly sessile ; calyx sub-campanulate, 5-toothed : teeth erect, acute, thicker, and acuminated at apex, glabrous inside; corolla tubularly campanulate, glabrous outside : tube villous inside : limb length of tube, bluntly 5-lobed; stamens villous at the base, inclosed. J? . S. Native of Brazil. Shrub much branched. Leaves on short petioles, 1^ inch long, and \ inch broad, larger than the internodes. Branches axillary, cymiferous, each furnished with a leaf. This species comes very near C. *discolor,* but the tomentum and hairs are larger.

Far. /3, *calycma* (Cham, et Schlecht, 1. c. p. 486.) habit more slender and loose ; leaves usually alternate, longer and broader, shorter than the internodes; inflorescence more loose; flowers a little larger ; teeth of calyx more prolonged ; tube of corolla smoothish inside ; anthers exserted, exceeding the corolla. ^ • S. Native of Brazil, in humid places; and of Mexico, at Hacienda de La Laguna. Perhaps a proper species.

Hermannia-leaved Cordia. Shrub.

81 C. BIFURCA TA (Rcem. et Schultes, syst. 4. p. 466.) leaves alternate, and nearly opposite, ovate-lanceolate, acute, serrated upwards ; peduncles umbellately cymose, composed of unilateral, few-flowered, small racemes or spikes; calyx 5-toothed. f?. S. Native of Peru, in stony places. Varrónia bifurcata, Ruiz, et Pav. fl. per. 2. p. 24. t. 146. f. a. Desv. journ. hot. 1. p. 280. no. 26. Branches rather angular while young. Leaves on short petioles. Peduncles axillary and terminal. Corolla white, about half the length of the calyx. Stigmas 4, spreading. Drupe ovate, scarlet, half inclosed in the calyx; nuts 1-celled by abortion. Genitals inclosed ?

Bifurcate-coxymhed Cordia. Shrub 3 to 4 feet.

82 C. I'ARVIFLORA ; leaves ovate-oblong, serrated ; peduncles opposite the leaves, and alternating with them; spikes globose. J? . S. Native of Peru ? Varrónia parvifldra, Ort. dec. 7. p. *86.* Pers. ench. 1. p. 167. Perhaps the same as C. *bifurcata.*

Small-flowered Cordia. Shrub or tree.

83 C. LOURE'IRI (Rcem. et Schultes, syst. 4. p. 466.) leaves on short petioles, ovate-lanceolate, quite entire, opposite and alternate, shining ; peduncles lateral and terminal, many-flowered ; calyx short, 5-cleft; stamens about equal in length to the corolla, inserted in the mouth of the tube. ^ • G. Native of China. Varrónia Sinensis, Lour. coch. p. 138. ed. Willd. 1. p. 171. Desv. journ. bot. 1. p. 280. no. 27. Calyx subcampanulate. Corolla white, campanulate, with a short thick tube, and a 5-parted limb; segments ovate, spreading, equal. Drupe small, ovate, glabrous, red, acid, edible, containing a 4-celled nut.

Loureiro's Cordia. Tree middle-sized.

84 C. A'LBA (Rcem. et Schultes, syst. 4. p. 466.) leaves ovate, toothed, subcordate at the base ; cymes \ a foot in diameter ; calyx entire, bursting from which the corolla lies in a horizontal manner; stigmas obtuse. *h* . S. Native of Cura-

90a, and about Carthagena. Varrônia álba, Jacq. amer. p. 41. ed. pict. p. 25. Desv. journ. bot. 1. p. 280. no. 28.—Commel. hort. 1. p. 155. t. 86.—Calabùra álba, Plukn. phyt. t. 152. f. 4. A tree with a tufted head; trunk half a foot in diameter; but shrubby in the hedges. Leaves 4-5 inches long, ovate, or roundish-ovate. Flowers white. Limb of corolla campanulate. Drupe large, oblong, whitish, subpellucid ; pulp white, sweet, clammy ; nut striated, oblong, blackish, Jacq.

White-fruited Cordia. Clt. 1820. Tree 30 feet.

§ 2. DASYCE'PHALJE. Spikes capitate, globose. Throat of corolla pilose.

Calycine teeth acute.

85 C. MARIQUITE'NSIS (H. B. et Kunth, nov. gen. amer. 3. p. 75.) leaves nearly sessile, lanceolate, remotely and crenately serrated towards the apex, wrinkled, scabrous above, and clothed with rusty tomentum beneath ; spikes subglobose, lateral, pedunculate ; calyx strigose ; throat of corolla pilose ; stamens exserted. ^ . S. Native of New Granada, betwixt the towns of Honda and Mariquita, in rocky places. Varrônia lanceolàta, Willd. herb. no. 4546. fol. 2. Branches terete, glabrous, brown. Leaves on short petioles, nearly opposite, acuminated, acute at the base, 1 to 1 \ inches long. Spikes sometimes bifid, size of a pea. Corolla funnel-shaped, twice as long as the calyx. Drupe ovate-obtuse, half covered by the calyx, glabrous.

Marlquito Cordia. Shrub.

86 C. PA'TENS (H. B. et Kunth, nov. gen. amer. 3. p. 75.) leaves ovate, acuminated, rounded at the base, remotely and sharply denticulated, scabrous from strigse above, but clothed with fuscescent tomentum beneath ; spikes globose, axillary and terminal, on long peduncles, spreading ; calyx hispid from strigae ; throat of corolla villous ; stamens exserted. 7?. S. Native of New Andalusia, in temperate places betwixt Guanaguana and the monastery of Caripe, at the altitude of 400 hexapods; as well as of Brazil. Young branches terete, densely clothed with fuscescent hairs, as well as the petioles and peduncles. Leaves 3 inches, and longer, on short petioles. Corolla funnel-shaped, white, twice as long as the calyx; limb nearly entire. Spikes size of a sloe. Drupe unknown.

Var. a, monocephala (Cham, et Schlecht, in Linnaea, 4. p. 486.) head of flowers always solitary, *fy .S,* Native of Brazil, within the tropic, Sello.

Var. fi, polycephala (Cham, et Schlecht, 1. c.) heads of flowers usually by threes, the lateral 2 approximating the terminal one, on short peduncles. J? . S. Native of tropical Brazil, Sello. Stamens hardly exserted. Drupe glabrous, covered by the calyx, but with the vertex free.

Spreading Cordia. Tree 15 feet.

87 C. SERRATIFOLIA (H. B. et Kunth, 1. c. p. 76.) leaves oblong, acuminated, narrowly cuneated at the base, sharply and coarsely serrated, scabrous above, pubescent and canescent beneath; spikes globose, lateral, pedunculate;'calyx strigose; throat of corolla pilose; stamens exserted. P?. S. Native of Mexico, near Campeche. Branches terete, clothed with hair-like down. Leaves petiolate, about 3 inches long. Spikes size of a pea. Peduncles downy. Corolla funnel-shaped, white. Drupe not seen.

Serrated-leaved Cordia. Tree or shrub.

88 C. LANCEOLA'TA (Desv. in journ. bot. 1. p. 277. under *Varrònia,* H. B. et Kunth, nov. gen. 3. p. 75.) leaves nearly sessile, lanceolate, crenately-serrated, wrinkled, hispid above, but clothed with hoary pubescence or tomentum beneath ; spikes globose, pedunculate, lateral; calyx strigose ; stamens exserted ? T?. S. Native of New Granada, near the city of Honda. Branches terete, hispid from strigae. Leaves on short petioles, entire at the base, 1 inch long, and 2-3 lines broad. Spikes globose, size of a large pea. Peduncles downy. Calyx campanulate, clothed with hoary tomentum. Drupe globose, glabrous, inclosed in the calyx, 1-celled, 1-seeded.

LanceolateAeaved Cordia. Tree or shrub.

89 C. LIMA (Desv. journ. bot. 1. p. 278. no. 24. under *Varrònia)* leaves ovate, obscurely toothed, scrobiculate, pubescent beneath; spikes capitate, few-flowered, on short peduncles. *2. S. Native of St. Domingo.

Rasp-leaved Cordia. Tree or shrub.

90 C. LINEA'TA (Desv. 1. c. p. 278. no. 23. under *Varrònia)* leaves lanceolate-linear, acuminated, serrated, tomentose beneath, scabrous above ; spikes pedunculate, lateral and axillary ; peduncles elongated, adnate to the petioles, naked, *fy* • S. Native of Jamaica. Varrònia linedta, Lin. amcen. acad. 5. p. 394. Swartz, obs. p. 87. Varrònia polycéphala, Lam. ill. no. 1887.? ex Poir. diet. 4. p. 263. no. 2. Varrònia corymbdsa, Desf. tabl. jard. par. 171. Lantàna corymbdsa, Lin. spec. p. 628. —Plukn. aim. p. 395. t. 328. f. 5. Branches rather pilose. Leaves on short petioles, serrated by some crenatures. Spikes globose. Peduncles rather villous. Corolla funnel-shaped.

Lined Cordia. Clt. 1793. Shrub or tree.

91 C. HU^MILIS ; leaves roundish, equal; fruit 2-seeded. f? . S. Native of Carthagena. Varrònia hùmilis, Jacq. amer. p. 41.—Brown, jam. p. 172. t. 13. f. 2. This is a very doubtful species. Corolla tubular.

Dwarf Cordia. Shrub 4 feet.

92 C. VILLÒSA (Spreng. syst. 1. p. 654.) leaves oblong, obtuse, lined with veins, clothed with white villi on both surfaces, undulately crenated; heads terminal, few-flowered, on short peduncles. J?. S. Native of St. Domingo, Bertero.

Villous Cordia. Shrub or tree.

93 C. RA'DULA (Spreng. syst. 1. p. 654.) leaves oblong, obtuse, attenuated at the base, stiff, wrinkled, hispid, shining above ; heads few-flowered, nearly sessile, axillary; calyx hispid. I? . S. Native of Hispaniola. Varrònia scaberrima, Bertero.

RaspAe&xed Cordia. Shrub or tree.

94 C. GUAzuMiEFoLiA (Roem. et Schultes, syst. 4. p. 463.) hairy ; leaves ovate-lanceolate, on short petioles, acute, toothed, entire at the base, and rather oblique, hairy beneath, wrinkled, and very veiny ; heads pedunculate, few-flowered, sub-corymbose. I?. S. Native of Brazil. Varrònia, Desv. in journ. bot. 1. p. 276. no. 20. Branches alternate, terete, downy. Corolla tubularly funnel-shaped. Teeth of calyx very short.

Guazuma-leaved Cordia. Shrub or tree.

95 C. CRENA'TA (Roem. et Schultes, syst. 4. p. 463.) stem much branched, fuscous ; leaves ovate-roundish, crenated, veiny, wrinkled, canescent beneath, rather hairy on both surfaces, but most so beneath ; peduncles lateral, generally 4-flowered ; flowers capitate, loose; stamens exserted? ^ • S. Native of Peru. Varrònia crenàta, Ruiz, et Pav. fl. per. 2. p. 22. t. 146. f. b. Desv. journ. bot. 1. p. 276. no. 19. Cordia lantanoides, Spreng. syst. 1. p. *653.* Habit of a species of *Lantàna.* Branches spreading, terete, rather hairy while young. Leaves obtuse, on short petioles. Peduncles a little longer than the leaves. Calyx downy, blackish outside, and white inside. Corolla white, plicate, a little longer than the calyx. Stigmas elongated. Drupe red, ovate, girded by the calyx to the middle, containing a 1-celled, rarely 2-celled putamen.

CrenatedAeaved Cordia. Shrub 6 feet.

96 C. CORYMBOSA; scabrous; leaves ovate-lanceolate, sca-

brous, entire at the base, serrated at top ; spikes globular, few-flowered, disposed in a corymbose or cymose manner ; calyx villous, elongated ; corolla campanulate; stamens inclosed. J? • S. Native about Caraccas. Varrdnia corymbosa, Desv. in journ. bot. 1. p. 275. no. 18. Schrad. new journ. 4. p. 80. Varrónia monospérma, Jacq. hort. schoenbr. 1. t. 39. Willd. spec. 1. p. 1081. Varrónia ulmifólia, Dum. Cours. bot. cult. 2. p. 148. Córdia monospérma, Rcem. et Schultes, syst. 4. p. 463. Varrónia polycéphala, Lam. ex Spreng. Córdia ulmifólia, Spreng. syst. 1. p. 653. Branches terete, brownish-green. Leaves on short petioles, acute, deep green, 4 inches long. Peduncles terminal, bifid, trifid, about an inch long. Corolla dirty white, twice as long as the calyx ; limb unequal, divided into many teeth. Stamens usually 6. Stigmas elongated, flat. Drupe roundish, size of a pea, shining, deep red, containing an ovate, rough, brown 1-celled nut, ex Jacq.

Corymbose-flowered Cordia. Clt. 1800. Shrub 12 feet.

* * *Calycine teeth long, subulately setaceous. Throat of corolla pilose**

97 C. DASYCE'PHALA (Rcem. et Schultes, syst. 4. p. 462.) leaves ovate-oblong, acuminated, narrowed at the base, coarsely serrated, hispid from strigae on both surfaces ; heads terminal, pedunculate ; calyx tubular, glabrous: with subulately setaceous pilose teeth ; throat of corolla pilose ; stamens exserted ? *? . S. Native of New Andalusia, near Bordones and Cumana, in humid places, where it is called by the natives *Bretonica.* Varrónia dasycéphala, Desv. journ. bot. 1. p. 274. no. 15. Córdia sphaerocéphala, Humb. in Rcem. et Schultes, syst. 4. p. 801. Branches terete, warted, strigose while young. Leaves petiolate, 2 inches long. Heads of flowers round, size of a cherry. Corolla funnel-shaped, with emarginate lobes. Very nearly allied to *C. globósa.*

Thick-headed Cordia. Shrub or tree.

98 C. GLOBÓSA (Rcem. et Schultes, syst. 4. p. 464.) leaves ovate-oblong, obtuse, de^ly serrated, stiff, hispid from strigae on both surfaces, but softer beneath ; heads globose, pedunculate, lateral ; calyx strigose : with subulately-setaceous teeth ; corolla funnel-shaped; throat of corolla pilose ; stamens exserted. *2 . S. Native of Cuba, near Regla and Havana; as well as of Jamaica, and other of the West India Islands. H. B. et Kunth, nov. gen. amer. 3. p. 76. Varronia globósa, Lin. spec. 274. Jacq. amer. p. 41. Lam. ill. no. 1889. t. *95. f.* 4. exclusive of var. /3. Varronia bullata, Lin. spec. 274. Jacq. amer. pict. 4. t. 43. Swartz, obs. 48. Desv. journ. bot. 1. p. 274. no. 14. Cordia bullata, Roem. et Schultes, syst. 4. p. 462. Córdia pilulifera, Rcem. et Schultes, syst. 4. p. 801. Varrónia pilulifera, Willd. herb.—Sloane, hist. 2. t. 194. f. 2. Varrónia fruticósa, Browne, jam. t. 13. f. 2. " Stems dichotomous. Peduncles naked from the forks of the stem," ex Lin. According to Jacquin, it agrees with *C. Martinicénsis* in many points, but differs from it in the globosity of the heads of flowers; in the segments of the corolla being emarginate, and in the blunt quadruple stigma.

Globose-headed Cordia. Fl. Aug. Clt. 1818. Shrub.

99 C. MIRABILOI[X]DES (Rcem. et Schultes, syst. 4. p. 465.) leaves ovate-oblong, on short petioles, hispid from strigee on both surfaces, serrated ; petioles inflexed and articulated at the base ; heads of flowers roundish, simple or compound, pedunculate ; calycine segments ovate at the base, ending each in a long setaceous point; corolla salver-shaped; stamens exserted. *2 • S. Native of St. Domingo, in hedges, in the vicinity of Porto Prince. Varrónia mirabiloides, Jacq. amer. p. 41. t. *33.* Lam. ill. no. 1886. Swartz, prod. p. 48. fl. ind. occ. 1. p. 465. Varrónia genicul&ta, Pers. ench. 1. p. 167. Varrónia bullàta, Cent. amer. 1. t. *55.* ex Desv. journ. bot. 1. p. £78. no. *25.* Tournefórtia serràta, Lin. spec. 201.—Plum. gen. 5. icon. 228. f. 1. and *ft.* gen. 5. t. 228. f. 2. Leaves *2* inches long. Flowers size and figure of *Mirdbilis Jdlapa,* white. Limb of corolla flat, 5-rayed. Drupe size *of* a pea, covered by sweet clammy pulp. Stigmas subulate, obtuse. Perhaps the same as *C. globbsa,* or a variety of it.

MirabiUs4ike Cordia. Fl. Sept. Clt. 1798. Tree *3-6 feet.*

100 C. BONPLANDIA[V]NA (H. B. et Kunth, nov. gen. amer. 3. p. 77.) leaves ovate, acuminated, narrowed at the base, doubly crenated, scabrous from papillae above, but pilosely tomentose and hoary beneath ; heads on short peduncles, axillary and lateral, crowded at the tops of the branches ; calyx hairy; calycine teeth subulately setaceous ; stamens exserted. ^ . S. Native of the shore of Caraccas, near Porto Cabello. Varrónia globulifera, Willd. herb. no. 4541. C. Bonplándii, Rcem. et Schultes, syst. 4. p. 462. Varrónia Bonplándii, Desv. journ. bot. 1. p. 275. no. 16. Branches hispid, terete. Leaves petiolate, 3-4 inches long. Heads of flowers size of a small cherry. Peduncles hispid. Calyx campanulate. Corolla funnel-shaped, white ; limb nearly entire. This is a very elegant plant.

Bonjiland's Cordia. Tree.

101 C. ORANDIFLORA (H. B. et Kunth, nov. gen. amer. 3. p. *77.* Rcem. et Schultes, syst. 4. p. 461.) leaves ovate, acuminated, narrowed at the base, serrated, clothed with silky strigae above, and dense fuscescent pili beneath ; heads globose, on long peduncles, lateral ; calyx clothed with silky strigae, with subulately setaceous teeth ; stamens inclosed. J? . S. Native of tropical America, on the sandy banks of the river Apures, near St. Fernando and Arichuna, in the province of Varinas. Varrónia grandiflóra, Desv. journ. bot. 1. p. *27S.* no. 12. Varrónia lantanoides, Willd. herb. no. 4543. Branches terete, strigose. Leaves petiolate, *2* inches long, having the serratures erect and mucronate. Heads globose, size of a cherry. Calyx fuscescent. Corolla campanulate, tapering into a tube at the base, white, 1| inch; with an entire, revolute limb, and pilose throat ? This is a very elegant species.

Great-flowered Cordia. Shrub.

102 C. MICROPHY'LLA (Rcem. et Schultes, syst. 4. p. 463.) leaves small, nearly sessile, entire, tridentate or 3-lobed at apex ; heads few-flowered, sessile. ^ • S. Native of New Spain. Varronia microphylla, Desv. journ. bot. 1. p. *275.* no. 17. Calycine teeth elongated. Corolla funnel-shaped or tubular.

Small-leaved Cordia. Shrub.

103 C. MACROCE'PHALA (H. B. et Kunth, nov. gen. amer. 3. p. *77.* Rcem. et Schultes, syst. 4. p. *462.)* leaves ovate-oblong, narrowed at both ends, acutish, crenated, clothed with hoary tomentum on both surfaces, but most so beneath; heads globose, pedunculate, terminal and lateral; calyx clothed with rusty tomentum, with subulately setaceous teeth; throat of corolla rather pilose ; stamens exserted ? T? . S. Native of the Andes of Peru,# near Cascas, ex H. B. et Kunth ; Brazil and Mexico, ex Desv. Varrónia macrocéphala, Desv. journ. bot, 1. p. 274. no. 13. Branches clothed with hoary tomentum when young, rather angular. Leaves petiolate, *2* inches long. Heads of flowers size of a walnut. Peduncles clothed with hoary tomentum, somewhat quadrangular. Corolla funnel-shaped, white, twice as long as the calyx. Drupe containing a 1-celled, 1-seeded nut.

Large-headed Cordia. Shrub or tree.

104 C. CALOCE'PHALA (Cham, et Schlecht, in Linnaea, 4. p. 488. and 8. p. 129.) leaves broad, lanceolate, subcordate, obtuse, crenated, canescent above and hoary beneath ; heads on short peduncles, lateral and terminal, clothed with fuscescent

hairs ; calycine teeth setaceous, hairy. T?. S. Native of tropical Brazil, Sello. Leaves petiolate, 3 inches long and 2\ broad. Branches obscurely angular, clothed with hairy tomentum. Peduncles 2 inches long. Drupe inclosed in the calyx. Corolla smaller than those of *C. macrocephala,* to which species it comes nearest. In both the tomentum is stellate, according to Cham. 1. c. Rachis of the head of flowers clavate.

***Beautiful-headed* Cordia. Shrub.**

105 C. SESSILIFOLIA (Cham, et Schlecht, 1. c.) leaves sessile, lanceolate, acute, simply serrated, but sometimes the lower ones are doubly and deeply serrated, so as to be almost pinnatifid, hairy on both surfaces, softer beneath; heads pedunculate, terminal and lateral, nearly globose; calyx obconical, with somewhat setaceously acuminated teeth, hairy; segments of the corolla 2-lobed : lobes arched, blunt; stamens shorter than the limb. V>. S. Native of tropical Brazil, Sello. A rough hairy shrub. Stems 10 inches high bearing 1 head of flowers, or 2 feet high bearing many heads of flowers, thickness of a hen's quill. Leaves 2\ inches long, and about \ an inch broad. Hairs strigose. Peduncles a little shorter than the upper leaves, about an inch long, having the rachis hardly thickened, and beset with hairs between the calyxes, which are glabrous in their lower part. Corolla funnel-shaped, with a large 5-lobed limb. Stigmas slender, as in the congeners. Drupe partly covered by the calyx, containing a 2-celled nut, one of which is abortive.

Sessile-leaved Cordia. Shrub 1 to 2 feet,

§. 3. SricA^TiE. Spikes of flowers elongated. Calycine teeth short, acute. Throat of corolla pilose.

106 C. RIPA'RIA (H. B. et Kunth, nov. gen. amer. 3. p. 71. t. *9,07.)* leaves ovate-oblong, acuminated, denticulated, scabrous above, and clothed with rusty tomentum beneath ; spikes cylindrical, dense, disposed in a panicle ; calyx, peduncles, and branches clothed with rusty hairs ; throat of corolla pilose ; stamens exserted. J?. S. Native of New Granada, on the banks of the river Magdalena, near Monpox, in humid places. Leaves petiolate, 3-4 inches long. Spikes 2-3 inches long. Calyx campanulate, 5-6-toothed ; teeth smooth. Corolla campanulately funnel-shaped, white, size of those of *Myosotis scorpioides;* limb 5-cleft ; lobes rounded. Stigmas subclavate. Drupe unknown.

River-side Cordia. Shrub.

107 C. FERRUGI'NEA (H. B. et Kunth, nov. gen. amer. 3. p. 71. Rcem. et Schultes, syst. 4. p. 458.) leaves ovate, acute, denticulated, pilose above, and clothed with rusty tomentum beneath ; spikes terminal and axillary, interrupted; calyx hairy ; throat of corolla pilose. 1?. S. Native of New Granada, near Gonzanama and Loxa. Varrdnia ferruginea, Lam. ill. p. 418. no. 1888. Desv. journ. bot. 1. p. 266. no. 1. t. 9. Varronia Martinicensis, Desf. tabl. de l'ecole. p. 71. but not of Lin. ex Desv. 1. c. Cordia pyrifdlia, Rcem. et Schultes, syst. 4. p. 802. Varronia pyrifolia, Willd. rel. Floriferous leaves alternate, the rest opposite. Spikes an inch long. Calyx 5-toothed, length of corolla, which is yellowish.

Rusty Cordia. Shrub.

108 C. LAXIFLORA (H. B. et Kunth, nov. gen. 3. p. 72.) leaves broad-ovate, very shortly acuminated, denticulated, scabrous above, and clothed with rufescent down beneath ; spikes axillary, interrupted ; calyx hairy ; throat of corolla pilose ; genitals exserted. ^ • $• Native of New Granada, in hot places between Monpox and Morales, in the valley of the river Magdalena. Branches terete, clothed with fuscescent hairs, as well as the petioles and peduncles. Leaves subalternate, petiolate, 2-3 inches long, and 1J to 2 inches broad. Corolla somewhat campanulate, white. Drupe girded by the calyx, size of hemp-seed. Very nearly allied to *C. ferruginea.*

***Loose-flowered* Cordia. Shrub.**

109 C. LANA^TA (H. B. et Kunth, 1. c. p. 72.) leaves ovate-oblong, acute, serrated, woolly on both surfaces, but most so beneath ; spikes terminal and axillary, panicled, dense ; calyx hairy ; throat of corolla pilose ; genitals exserted. *2 . S. Native of New Granada, near the town of Santa Fe de Bogota. Branches terete, hairy, angular while young, and clothed with rusty hairs, as well as the peduncles. Leaves subalternate, petiolate, 3 inches long, hairy above, and clothed with fuscescent tomentum beneath. Calyx campanulate, with smooth teeth. Corolla funnel-shaped, white ; tube length of calyx. Stigmas clavate. Very nearly allied to *C. tomenlbsa.*

Woolly Cordia. Shrub.

110 C. TOMENTOSA (Rcem. et Schultes, syst. 4. p. 459.) leaves ovate, serrated, acute, tomentose; spikes thick, short, obtuse, forming a terminal panicle ; peduncles dichotomons, axillary and terminal. ^ . S. Native of Cayenne, Richard. Varronia tomentosa, Lam. ill. p. 419. no. 1892. Desv. journ. bot. 1. p. 266. no. 3. The whole plant is clothed with tomentum, or very hairy. Leaves white beneath ; petioles villous.

Tomentose Cordia. Shrub.

111 C. SALVLEFOLIA (H. B. et Kunth, nov. gen. amer. 3. p. 72.) leaves lanceolate-oblong, narrowed at both ends, crenately serrated, wrinkled, scabrous from strigse above, but clothed with hoary tomentum beneath ; spikes terminal and lateral, dense, disposed in a panicle ; calyx hairy ; throat of corolla rather pilose; genitals exserted. ^ • S. Native along with *C. landta.* Cordia Humboldtii, Rcem. et Schultes, syst. 4. p. 801. C. floribunda, Spreng. syst. 1. p. *652.* Varronia floribunda, Desv. journ. bot. 1. p. *267.* no. 2. Branches terete, glabrous, but when young hairy, and rather angular. Leaves petiolate, 2-3 inches long, and \ to 1 inch broad ; petioles hairy. Spikes I to \\ inch long. Flowers densely glomerate. Peduncles clothed with fuscescent hairs. Calyx campanulate. Corolla funnel-shaped, yellow ? twice as long as the calyx. Stigmas capitately clavate.

Sage-leaved Cordia. Shrub.

112 C. CYLINDRISTA'CHYA (Roem. et Schultes, syst. 4. p. 459.) leaves ovate, acute, densely serrated, wrinkled, hispid above, and tomentose beneath; spikes oblong, bifid and trifid, supra-axillary and terminal, dense-flowered ; calyx hairy ? genitals exserted ? T?. S. Native of Peru, in hedges. Varronia cylindristachya, Ruiz, et Pav. fl. per. 2. p. 23. Desv. journ. bot. 1. p. 269. no. 5. Varronia macrostachya, Ruiz, et Pav. fl. per. 2. p. 23. t. 147. f. a. Cordia macrostachya, Spreng. syst. 1. p. 652. Branches terete, hairy, angular while young. Leaves alternate, hardly petiolate, rough beneath, 4-6 inches long. Spikes densely cylindrical. Calyx greenish yellow. Corolla white. Drupe white, inclosed in the calyx, containing a 1-2-celled nut.

***Cylindrical-spiked* Cordia. Shrub.**

113 C. PORTORICE'NSIS (Spreng. syst. 1. p. 651.) leaves lanceolate, attenuated at the base, dentately serrated, mucronate scabrous, of the same colour on both surfaces; spikes terminal' solitary. I?. S. Native of Portorico.

Portorico Cordia. Shrub or tree.

114 C. CANE'SCENS (H. B. et Kunth, nov. gen. 3. p. 73.) leaves lanceolate, acute, serrated, wrinkled, scabrous above, but clothed with hoary tomentum beneath : spikes terminal and lateral, rather dense ; calyx clothed with hoary down; throat of corolla pilose ; stamens exserted. J?. S. Native of New Granada, on the eastern declivities of the Andes of Quindiu, near the town of Ibaque, at the altitude of 760 hexapods. Varronia rugosa, Willd. herb. no. 4550. C. rugosa, Rcem. et Schultes, syst. 4. p. 801. Branches terete, clothed with hoary down of hairs. Leaves petiolate, 2-3 inches long, and ^ an inch broad

Spikes 2 inches long, clothed with hoary down. Calyx campanulate. Corolla somewhat campanulate, white, twice as long as the calyx. Drupe ov,ate, inclosed in the calyx, size of a hempseed ; nut 1-celled, 1-seeded by abortion.

Canescent Cordia. Shrub.

115 C. POLYSTA'CHYA (H. B. et Kunth, 1. c.) leaves obovate-oblong, acutish, cuneate,Jy narrowed at the base, remotely-toothed, scabrous and shining above, but clothed with fine hoary tomentum beneath ; spikes terminal and axillary, disposed in panicles, a little interrupted ; calyx downy ; throat of corolla rather pilose ; stamens exserted. I? . S. Native on the banks of the river Orinoco, near the cataract of Maypure. C. can£scens, Willd. ex Roem. et Schultes, syst. 4. p. 799. Branches terete, clothed with hoary down. Leaves subalternate, petiolate, often obtuse, 3 inches long, and lj broad. Spikes cylindrical, 1^ to *2* inches long. Flowers glomerate. Calyx campanulate, 4-6-toothed. Corolla campanulately funnel-shaped, white. Very nearly allied to *C. ob/lqua.*

Many-spiked Cordia. Shrub.

116 C. GRAVE'OLENS (H. B. et Kunth, 1. c. p. 74.) leaves oblong, acute, narrowed at the base, toothed, scabrous above, but clothed with hoary down beneath; spikes lateral, elongated ; calyx downy ; throat of corolla rather pilose ; stamens exserted? *? ." S. Native in woods of the Orinoco, between Villa Farrera and the town of Angostura. C. spicata, Willd. rel. ex Rcem. et Schultes, syst. 4. p. 799. Branches a little compressed, striated, scabrous, rather angular while young. Leaves alternate, petiolate, 2-3 inches long. Spikes on long downy peduncles, cylindrical, 2-3 inches long. Flowers dense, glomerate. Calyx campanulate. Corolla white ; margins of the segments crenulated. This and the preceding are probably only varieties of the following.

Strong-scented Cordia. Shrub 6 feet.

117 C. OBLI^UA (H. B. et Kunth, 1. c. p. 74.) leaves ovate-oblong, acute, cuneately-narrowed at the base, serrately toothed, scabrous from strigae above, but clothed with hoary pubescence beneath ; spikes lateral, elongated; calyx clothed with strigose down ; throat of corolla pilose ; stamens exserted ? J? . S. Native of Peru ; and of Mexico, on the sea shore, near Campeachy. Varronia obliqua, Ruiz, et Pav. fl. per. 2. p. 24. t. 147. f. b. Desv. journ. bot. 1. p. 268. no. 4. Cordia Peruviana, Roem. et Schultes, syst. 4. p. 459. Branches terete, rather scabrous, but clothed with hoary down in the young state. Leaves nearly 3 inches long, on short petioles. Spikes 4 inches long ; flowers rather distant, ex Kunth ; dense, ex Ruiz, et Pav. Corolla white, ex Ruiz, et Pav.

ObliqueAehYed Cordia. Shrub *5 to 6* feet.

118 C. GUIANE'NSIS (Roem. et Schultes, syst. 4. p. 460.) leaves ovate-oblong, running into the petioles at the base, sharply serrated : serratures erectish ; flowers loose, on the spikes, minute, very few towards the base of the spikes. J?. S. Native of Guiana, and Cayenne, near towns. Varronia Guianensis, Desv. journ. bot. 1. p. 270. no. 7. Varronia Martinicensis, Aubl. guian. 1. p. *232.* but not of others. Leaves large, *5-7* inches long; petioles short.

Guiana Cordia. Shrub.

119 C. DIVARICA^TA (H. B. et Kunth, nov. gen. 3. p. 74.) leaves oblong-lanceolate, obtuse, cuneated at the base, crenated, wrinkled, scabrous above, but clothed with fuscescent tomentum beneath; spikes lateral, dense-flowered; calyx downy; throat *of* corolla pilose ; stamens exserted ? T? . S. Native of New Andalusia, *in* woods near Cumana, Cariaca, and Quetepe. Cordia dentata, Vahl, eclog. 3. p. *5.* C. corylifolia, Willd. herb, ex Rcem. et Schultes, syst. 4. p. 801. C. corymbosa, Schlecht, in Willd. herb, no. 4566. Roem. et. Schultes, syst. 4. p. 801. Branches terete, glabrous, fuscous, downy while young. Leaves on short petioles, hardly an inch long, and 3-4 lines broad. Spikes pedunculate, 1 inch long, cylindrical. Calyx campanulate. Corolla subcampanulate, 6-cleft. Drupe ovate, glabrous, half covered by the calyx, size of a hempseed ; nut 1-celled, 1-seeded by abortion.

Divaricate Cordia. Shrub 5 to 10 feet.

120 C. ANGUSTIFOLIA (Room, et Schultes, syst. 4. p. 460.) leaves linear, subdentate, bluntish, with revolute edges, scabrous above, and rather tomentose beneath ; spikes linear-oblong, terminal; calyx villous; stamens almost length *of* the corolla. *?. S. Native of the Island of Santa Cruz. Varronia angustifolia, West, St. Croix, p. 202. Willd. spec. 1. p. 1081. Desv. journ. bot. 1. p. 271. no. 8. Varronia Curassavica, Lam. diet. 4. p. 264. Branches rusty. Leaves petiolate, crowded. Spikes dense, 2-3 inches long, length *of* peduncles. Calyx inflated, with *5* setaceous teeth, which are the length *of* its tube. Corolla white; tube length of calyx; lobes of limb short, emarginate. Style short; stigma simple, capitate ? Drupe small, red. Poir. diet, suppl. 3. p. 729. under *F.. Curassavica.*

Narrow-leaved Cordia. Clt. 1808. Shrub 12 *feet.*

121 C. MARTINICE'NSIS (Roem. et Schultes, syst. 4. p. 461.) leaves broad-ovate, acuminated, serrated, very much wrinkled, scabrous above, and downy or tomentose beneath ? spikes terminal and axillary, dense-flowered ; calyx downy ? large, inflated; stamens exserted. F? . S. Native of Martinico, on the edges of fields. Varronia Martinicensis, Jacq. amer. p. 41. t. 32. pict. t. 42. Willd. spec. 1. p. 1080. Gaertn. fruct. 3. p. 171. t. 212. f. 5. Desv. journ. bot. 1. p. *272.* no. 10. Leaves 3 inches long. Spikes an inch long, oblong, ex Jacq. Habit of C. *macrostachya* and *C. Curassdvica.*

Martinico Cordia. Fl. Aug. Sept. Clt. 1795. Shrub 5 to 6 *feet.*

122 C. MULTISPICVTA (Cham, et Schlecht, in Linnaea, 4. p. 490.) leaves ovate, acuminated, acute, toothed at top, bluntly cuneated, and running into the petioles at the base, scabrous from strigae above, and downy beneath ; spikes oblong-clavate, subcylindrical, terminal and axillary, forming the panicle, exceeding the leaves ; calyx downy, 5-toothed: teeth acute, thicker, and somewhat acuminated at apex ; corolla subcampanulate, with an almost entire limb, exceeding the calyx a little; stamens various in length, sometimes shorter than the limb of the corolla, and sometimes longer. F?. S. Native *of* Brazil, within the tropic. Young branches, peduncles, and petioles, clothed with short hairs, which are less adpressed than those in *C. Martinicensis;* and the petioles are combined with the peduncular, axillary branches at the base. Larger leaves 6 inches long and 3 broad. Style and ovarium glabrous. Drupe ovoid, loosely covered by the rather inflated calyx ; putamen I-celled, 1-seeded by abortion. This is probably a variety of *C. Martinicensis,* or a very nearly allied species. It differs in the spikes being more slender, 3 J inches long, loose at the base ; in the terminal ones being by threes, and the axillary ones solitary, the whole forming panicles at the tops of the branches. The calyx is very similar, but smaller; having the teeth acute and shorter, or less acuminated.

Many-spiked Cordia. Shrub 6 to 8 feet.

123 C. MACROSTA^CHYA (Rcem. et Schultes, syst. 4. p. 461.) leaves oblong-lanceolate ; spikes oblong. *? • S. Native of tropical America, about Carthagena. Varronia macrostachya, Jacq. amer. p. 41. Desv. journ. bot. 1. p. 272. no. 11. Shrub much branched. Leaves narrow, 6 inches long, length of spikes. The rest as in C. *Curassdvica.* Calycine teeth ending in setaceous points.

Long-spiked Cordia. Shrub 12 feet.

124 C. INTEGRIFOLIA (Rcem. et Schultes, syst. 4. p. 461.) shrub quite glabrous ; leaves sublanceolate, obtuse, quite entire,

glabrous ; spikes at first subglobose, then elongated and linear ; calyx almost globose, downy, 5-toothed : teeth short, ovate, acute. *2 • S. Native of Hispaniola. Varrònia integrifòlia, Desv. journ. bot. 1. p. 271. no. 9. t. 10. Poir. suppl. 3. p. 729. Leaves on short petioles, 1| inch long, and 3-4 lines broad, beset with white dots above, paler beneath. Peduncles and calyxes downy. Corolla a little longer than the calyx; with roundish segments.

***Entire-leaved* Cordia. Tree.**

125 C. CURASSA'VICA (Roem. et Schultes, syst. 4. p. 460.) leaves sublanceolate, acute, serrated, wrinkled, scabrous above, and clothed with white down beneath ; spikes terminal, oblong, dense-flowered; calyx tubular, inflated, downy ? 5-toothed : teeth ovate at the base, and ending each in a setaceous point; stamens a little shorter than the limb of the corolla, f? . S. Native of Curaçoa, in hedges, and among trees. Varrònia Curassàvica, Jacq. amer. p. 40. ed. 2. p. 25. Desv. journ. bot. 1. p. 269. no. 6. Swartz. obs. p. 88. Cordia Martinicensis, Link, enum. 1. p. 162. Sieb. pi. trin. no. 42. Varrònia Martinicensis, Lam. diet. 4. p. 264. ex Desv. 1. c. Cent. amer. t. *56,* according to Desv. 1. c. and probably of Swartz. Lantàna Curassàvica, Lin. spec. ed. 1. p. 627. Mill. diet. no. 7. Varrònia assùrgens, &c. Browne, jam. p. 172.?—Sloan, hist. 2. p. 81. Branches terete, scabrous, when old rusty. Spikes 2-3 inches long, pedunculate; flowers small. Corolla white ; tube length of calyx ; limb short, with the lobes short and emarginate. Drupe small, red. " Leaves alternate, elliptic-lanceolate, or oblong, obtuse or acutish, crenated or serrated, densely clothed with canescent down beneath, but scabrous above ; spikes solitary, terminal and lateral, slender, loose-flowered ; lower flowers abortive, gland-formed ; calyx downy, 5-toothed : teeth acute, thickened, and a little acuminated at apex ; corolla campanulate, 3 times as long as the calyx; with a 5-lobed limb, and elliptic, obtuse segments ; stamens exserted, length of the segments of the corolla ; style hardly higher than the insertion of the filaments, divided into 4 branches at top, as in the rest of the genus. ^ . S. Native of Brazil, in the island of St. Catharine, in gardens. Branches angular, striated, clothed with adpressed down at top. Calyx short, campanulate, glabrous inside. Corolla glabrous outside, villous downwards from the insertion of the filaments inside. Ovarium glabrous." Cham, et Schlecht, 4. p. 489. 490.

Curaçoa Cordia. Shrub 15 feet.

*** * *Doubtful species belonging to Sect.* III. *Varrònia,***

126 C. NI'TIDA (Willd. herb, ex Roam, et Schultes, syst. 4. p. 800.) leaves elliptic, quite entire, petiolate, obtuse, shining, reticulately veined; flowers cymose. J? . S. Native country unknown.

Shi?iing-\eave& Cordia. Shrub or tree.

127 C. ALNIFOLIA (Roem. et Schultes, syst. 4. p. 801.) leaves ovate-oblong, downy, sharply and equally serrated. J? . S. Native country unknown. Varrònia alnifòlia, Horn. hort. hafn. 1. p. 227. Very nearly allied to C. *parviflòra,* the *Varrònia parviflora,* of Ortega, but differs in the form of the leaves.

Alder-leaved Cordia. Clt. 1818. Tree or shrub.

128 C. CHAMJEDRYOI^DES (Roem. et Schultes, syst. 4. p. 801.) clothed with tomentose down; leaves ovate, doubly serrated, and cordate; peduncles axillary, cymosely capitate. J? . S. Native country unknown. Varrònia chamaedryoides, Willd. herb.

***Germander-like* Cordia. Shrub.**

129 C. MICROCE'PHALA (Roem. et Schultes, syst. 4. p. 801.) leaves lanceolate-oblong, serrated, scabrous ; spikes ovate. *2 . S. Native of Caraccas. Varrònia microcèphala, Willd. herb.

Small-headed Cordia. Shrub.

130 C. PARVIFLORA (Desf. hort. par. ex Link, enum. 1. p. 162.) leaves oblong, acute, serrated, attenuated, and quite entire, scabrous, hairy; petioles downy. *fy* • S. Native country unknown. Flowers cymose, as in C. *mirabiloides.*

Small-flowered Cordia. Clt. 1819. Shrub or tree.

131 C. GRANDIFLORA (Lindl. bot. reg. 1491.) leaves alternate, serrated; flowers large, white, terminal, corymbose. J?. S. Native of tropical America. ? This is a very doubtful shrub.

Great-flowered Cordia. Fl. Aug. Clt. 1827. Shrub.

Cult. All the species of tin's genus are very pretty while in blossom, and are of the most easy culture. They thrive best in a mixture of loam, peat, and sand, or any light rich soil; and cuttings strike root readily when planted in sand, with a hand-glass placed over them in heaU

II. PATAGO'NULA (so called because a native of Patagonia.) Lin. gen. and Lam. ill. t. 96. Patagònica, Dill. elth. p. 304. t. 226. f. 293.

LIN. SYST. *Pentdndria, Monogynia.* Calyx small, deeply 4-6-cleft, but usually 5-cleft, at length increasing much as the fruit comes to maturity. Corolla rotate, about 2 lines in diameter ; limb 5-cleft, with acutish, elliptic segments ; tube very short. Stamens 5, glabrous, shorter than the segments of the corolla, inserted in its throat. Ovarium and style glabrous. Style and stigmas as in *Cordia.* Drupe globose, acute, beaked by the permanent base of the style, dry, surrounded by the calyx as an acorn in its cup, containing a 1-celled, 1-seeded putamen by abortion. Embryo pendulous; cotyledons plicate.—A much branched shrub, with pale green, alternate or nearly opposite leaves, serrated towards the top. Inflorescence terminal, bractless, panicled, composed of few-flowered cymes. Flowers white.

1. P. AMERICA^NA (Lin. spec. 212.) 1?. G. Native of Patagonia and the South of Brazil, Sello. Cordia Patagònula, Ait. hort. kew. 1. p. 259. ed. 2d. vol. 2. p. 10. Patagònica foliis partim serratis partim enteàris, Dill. hort. elth. p. 304. t. 226. f. 293. Branches terete. Buds and tender parts of branches beset with longer hairs. Leaves glabrous on both surfaces, lanceolate, or oblong-lanceolate, tapering into the short petioles, and sub-cuneated at the base, generally acute, rarely obtuse at the apex : younger ones cuneately obovate, entire or serrated towards the top: largest ones 2| inches long, with the consistence and smoothness of those of *Laùris nòbilis,* margined, when young furnished with cilia at the base. Flowers small, pedicellate, cymose, white, or greenish white, smelling like those of elder. Limb of corolla from 4 to 5-cleft, with an equal number of stamens.

Var. /3, glàbra (Cham, in Linnaea, 4. p. 492.) shrub perfectly glabrous in every part, f? . S. Native of the South of Brazil.

American Patagonula. Fl. June, Aug. Clt. 1732. Shrub 10 to 12 feet.

Cult. For culture and propagation see *Còrdia,* above.

***Tribe* II.**

EHRETIA^CEJE. (The plants contained in this tribe agree with *Ehrètia* in the characters given below.) Style semi-bifid ; stigmas 2, obtuse. Drupe containing 2-4 2-celled, 2-seeded nuts, or 2-4 1-celled, 1-seeded nuts, rarely a 5-6-celled, 5-6-seeded nut. Cotyledons plicate. ? This tribe differs from Tribe I. *Cordidcece,* in the stigmas being 2, not 4, and in the

drupe containing generally more than one nut. Mart, in pi. bras. 1. p. 134. has made a distinct order of *Ehretiacece.*

III. EHRE[X]TIA (so named in memory of the ingenious artist and botanist, G. D. Ehret, in French Cabrillet.) Browne, jam. t. 1C. Lin. gen. no. *275.* Schreb. gen. no. 352. Jacq. amer. 45. Juss. gen. p. 128. ed. Usteri, p. 143. R. Br. prod. p. 497. Lam. ill. t. 96.

LIN. SYST. *Pentdndria, Monogynia.* Calyx deeply 5-parted. Corolla funnel-shaped, with a naked throat, and a 5-cleft limb. Stamens exserted. Style semi-bifid ; stigmas obtuse. Berry containing 2 2-celled, 2-seeded pyrenae or nuts.—Trees or shrubs. Leaves petiolate, altern^e, opposite, or 3 in a whorl, entire or serrated Flowers terminal or axillary, panicled or corymbose.

* *Species natives of Asia.*

1 E. SERRA'TA (Roxb. fl. ind. 2. p. 240.) leaves alternate, broad-lanceolate, serrated, 5-pointed, glabrous; panicles terminal, and from the upper axils, with numerous short, spreading, compound, and simple ramifications. f? • S. Native of the East Indies, at Bhotan ; it is also a native in the eastern part of Bengal. Leaves 2-5 inches long, and 1-2| inches broad ; petioles short. Flowers small, numerous, collected into small, somewhat remote, nearly sessile fascicles, some of them hexandrous. Bracteas small, ovate, pressed *to* the calyx. Corolla having the tube as long as the calyx, and the segments of the limb oblong and spreading. Stamens inserted in the mouth of the tube of the corolla, rather shorter than the limb. Drupes round, pulpy, about the size of a pea, red when ripe. This is one of the commonest trees in Nipaul, where it is called *Nuhhima.* The flowers spread a honey-like, powerful smell. In Silhet, where it is indigenous, and there called *Kala Oja.* The fruit is not esteemed like those of most of the species, there being little pulp.

Serrated-\e<ixed Ehretia. Fl. ? Clt. 1823. Shrub or Tree.

2 E. MACROPHY'LLA (Wall, in Roxb. fl. ind. 2. p. 343.) arboreous ; leaves alternate, coriaceous, ovate, ac.ute, sharply-toothed, harsh, strigose above, and downy beneath ; panicle terminal, composed *of* racemose branches. J?. G. Native of Nipaul, on Chundragiri. Branches terete, with ash-coloured, dotted bark, rather villous while young. Leaves 5-10 inches long; nerves uniting in sub-marginal arches. Drupes round, ovate, obscurely 4-furrowed, slightly clothed, the size of a gooseberry, supported at the base by a 5-cleft calyx, whose segments are lanceolate, ciliated, and spreading. Embryo erect. ? Cotyledons parallel.

Long-leaved Ehretia. Tree large.

3 E.? UMBELLULATA (Wall, in Roxb. fl. ind. 2. p. 344.) arboreous ; leaves ovate, nearly entire, glabrous ; umbellets scattered, round, small, downy; stigma deeply and almost equally 4-lobed. j? . S. Native of Silhet, where it is called *Kunuka.* Branches like those of *E. macrophylla.* Leaves repand, slightly undulated, *3-5* inches long, generally with a retuse apex ; nerves uniting into sub-marginal arches, elegantly reticulate. Flowers very small, white, fragrant, crowded together in lateral, simple, or corymbose heads. Calyx supported by an oval bractea ; segments of the calyx round, ciliated. Corolla rotate, with reflexed lobes, shorter than the stamens. This seems to connect *Ehretia* with *Cordia,* from the sho t style and deeply 4-lobed stigma, but the fruit is unknown.

Umbellate-dowered Ehretia. Shrub.

4 E. WIGHTIA[X]NA (Wall. cat. no. 7013.) glabrous; leaves oblong-lanceolate, or obovate-oblong, entire, coriaceous ; peduncels terminal, corymbose ; flowers secund, pedicellate. 1?. S. Native *of* the East Indies. Nearly allied to *E. umbellulata.*

Wight's Ehretia. Shrub.

5 E. PYRIFOLIA (D. Don, prod. fl. nep. p. 102.) leaves ovate, acute, serrated, glabrous, rounded at the base : floral ones oblong ; panicles terminal; flowers crowded. Tj . G. Native of Nipaul. Flowers small, disposed in an ample, crowded panicles. Nearly allied to *E. serrata,* Roxb., but the leaves of that plant are acute at the base.

Pear-leaved Ehretia. Tree or shrub.

6 E. JAVA'NICA (Blum, bijdr. p. 842.) leaves alternate, oval, attenuated at both ends, quite entire, glabrous ; corymbs lateral and terminal, divaricate ; calyx deeply 5-cleft, with acuminated segments. f? . S. Native of Java, on the declivities of mountains on the west side, where it is called *Sikup Burrum.*

Java Ehretia. Fl. Nov. Tree 60 feet.

* * *Species natives of New Holland.*

7 E. ACUMINA'TA (R. Br. prod. p. 497.) leaves oblong, acuminated, serrated, quite glabrous ; panicles decompound, having the branches and branchlets quite glabrous. J? . G. Native of New South Wales, about Port Jackson.

Acuminated-leaved Ehretia. Fl. July. Clt. 1823. Tree *15* feet?

8 E. SALIGNA (R. Br. 1. c.) leaves linear-lanceolate, subfalcate, elongated, quite entire, glabrous, *3-5* inches long; cymes panicled, dichotomous ; flowers polygamous. ^ . G. Native of New Holland, within the tropic, on the sea-shore.

Willowy-leaved Ehretia. Shrub or tree.

9 E. MEMBRANIFOLIA (R. Br. 1. c.) leaves long-lanceolate, quite entire, and quite glabrous, strict, membranous, \\ to *2*\ inches long; cymes dichotomous. J?. S. Native of New Holland, within the tropic. The fruit being unknown the genus is doubtful.

Membrane-leaved Ehretia. Shrub or tree.

• * * *Species natives of America.*

10 E. TINIFOLIA (Lin. spec. 273. amoen. acad. 5. p. *595.* Jacq. amer. p. 45. Swartz. obs. p. *87.)* leaves oblong-ovate, or ovate, obtuse, quite entire, glabrous ; panicles terminal, oblong; calyx 5-cleft, obtuse. J?. S. Native of Jamaica, and Cuba.—Trew. ehret. t. 24.—Browne, jam. p. 168. t. 16. f. 1.—Sloan, jam. 2. p, 94. t. 203. f. 1. A tree with a dense, oblong head. Leaves about 4 inches long, on short petioles. Flowers numerous, small, white, strong-scented. Corolla a little longer than the calyx ; with obovate, acute, reflexed segments, which exceed the tube in length. Stamens a little longer than the corolla. Stigma bifid. Drupe containing 4 nuts, ex. Jacq., 2 nuts, ex Lin., globular, at first yellow, then black, size of currants. They serve to feed poultry, and are sometimes eaten by the poorer sort of people. The tree is known in Jamaica by the name of *Bastard Cherry-tree.*

Tinus-leaved Ehretia. Fl. June, July. Clt. 1734. Tree 16 *to* 28 feet.

H E . ? INTERNODIS (Lehr. stirp. 1. p. 47. t. 24.) leaves alternate, oblong-ovate, quite entire, acute, glabrous; panicles intra-foliaceous ; flowers corymbose, panicled ; corolla campanulate, with reflexed segments. J? . S. Native of the Antilles. E. petiolaris, Lam. diet. 1. p. 527. no. 5. ex Poir. suppl. 2. p. I. Cordia petiolata, Desf. hort. par. Branches loose, grey, tubercled. Leaves 4 inches long. Style simple. Stigma *2*-lobed. Berries round, containing 4 1-seeded nuts.

Var. ft, Subria (Commers. herb, ex Lam. diet. 1. c.) very like the species ; flowers hardly a line long, with acute segments; stamens inserted in the tube of the corolla ; stigma capitate; panicles terminal and axillary. *h* . S. Native of the Mau-

ritius. E. intern6dis, Roxb. fl. ind. 2. p. 343. This, as well as the species, are very doubtful from the form of the stigma.

Interhnotted Ehretia. FL ? Clt. 1819. Shrub 5 to 8 feet.

12 E. GRANDIFLÒRA (Poir. suppl. 2. p. 3.) leaves alternate, ovate, smooth, with unequal sides, glabrous, quite entire, obtuse ; flowers corymbose; calyx rather tubular, downy, grey, with 5 acute teeth ; segments of corolla roundish, spreading. T? . S. Native of St. Domingo. Branches terete. Leaves on short petioles, *2* inches long, and \\ inch broad. Tube of corolla red, length of calyx. Stigma bifid, obtuse. Fruit unknown.

Great-flowered Ehretia. Shrub or tree.

13 E. ? DU'BIA (Jacq. obs. 1. p. 19. Gmel. syst. 1. p. 394. Vittm. summ. *2,* p. 15.) leaves alternate, oval-oblong, acute, quite entire, glabrous; peduncles 1 -flowered, aggregate ; calyx bilabiate : lower lip campanulate : superior one roundish, concave, spreading, at length not half the size of the lower one; segments of the limb of the corolla flat, ovate, obtuse. J?. S. Native of Jamaica, about Kingston. Leaves *3-6* inches long, petiolate. Tube of corolla funnel-shaped, hairy inside. Stamens short, inserted in the upper part of the tube. Anthers didymous. Style subulate, semi-bifid at apex ; segments bifid, inflexed. Stigmas acute. This is probably a species of *Córdia,* from the twice bifid style, or a new genus belonging to section *Cordiàcece.*

Doubtful Ehretia. Clt. 1825. Tree *20* feet.

14 E. TOMENTÔSA (H. B. et Kunth, nov. gen. amer. 3. p. 64. t. 208.) branches angular, clothed with hoary tomentum; leaves opposite, elliptic-oblong, acute, entire, glabrous above, and clothed with downy tomentum beneath, and hoary ; flowers axillary, corymbose, about equal in length to the petioles; calyx clothed with hoary tomentum, almost entire, rather angular, loose. *2 • S. Native of New Granada, near Santa Fe de Bogota. Ehretia Bogotensis, Spreng. syst. 1. p. 648. Leaves running into the petioles at the base, 5 inches long. PedunciB^xillary, short, many-flowered. Calyx turbinately campanulate. Corolla campanulate, glabrous ; tube twice as long as the calyx; limb spreading, with ovate, oblong, obtuse segments. Stamens a little exserted, glabrous. Anthers *2* lobed at the base. Stigmas acute. Drupe depressed, globular, smooth, size of a sloe, surrounded by the calyx, which is warted at the base, and irregularly lobed, 4-celled ; cells 1-seeded.

Tomentose Ehretia. Shrub or tree.

15 E. TEiiNiFOLiA (H. B. et Kunth, nov. gen. amer. 3. p. *66.)* branches nearly terete, smoothish ; leaves 3 in a whorl, oblong, obtuse, quite entire, glabrous, rather powdery ; corymbs axillary, about equal in length to the petioles ; calyx clothed with hoary powder, irregularly 4-lobed. T? . S. Native of the province of Venezuela, near Los altos de San Pedro, at the altitude of 850 hexapods. Branches white. Leaves petiolate, furnished with minute, canescent atoms, pale beneath, 4-5 inches long, and 2\ broad. Petioles powdery. Flowers the size of those of *Lycium bdrbarum.* Calyx turbinately campanulate. Corollas white, funnel-shaped, glabrous ; tube hardly equal in length to the calyx : limb spreading, with ovate-oblong, obtuse segments; throat puberulous. Stamens exserted. Stigmas acute. Drupe like that of the preceding.

Tern-leaved Ehretia. Tree 15 to 20 feet.

Cult. N.B. The following names occur in Salt. trav. abyss, append, p. 475, but without any definition. 1 E. obovàta, R. Br. 2 E. Abyssinica, R. Br.

Cult. For culture and propagation see *Córdia,* p. 387.

IV. BEURRE^XRIA (named by P. Browne, after Mr. Beurrer, an apothecary of Nuremberg, who was a great promoter of natural history.) Brown, jam. p. 168. r. 15. f. 2. Jacq. amer. 45. t. 173. H. B. et Kunth, nov. gen. amer. 3. p. 67.—Ehretia species of other authors.

LIN. SYST. *Pentdndria, Monogynia.* Calyx campanulate, 5-toothed, or 5-cleft. Corolla funnel-shaped ; limb 5-parted ; throat naked. Stamens a little exserted. Style usually bifid, rarely undivided ; stigmas 2, sub-capitate. Drupe containing 4 pyrenae or nuts ; nuts 2-celled ; cells 1-seeded.—Small trees or shrubs. Leaves alternate, nearly entire, or quite entire. Corymbs sub-terminal. Flowers white.

* *Species natives of America,*

1 B. EXSTTCCA (Jacq. amer. p. 45. t. 173. f. 17. ed. pict. t. 259. f. 13.) branches and leaves downy ; leaves ovate, acute, or obovate and obtuse, quite entire ; corymbs dichotomous ; calyx downy, irregularly bifid or trifid ; fruit dry, tetragonal, divisible into 4 parts. fj. S. Native of South America, in hot places near Cumana, St. Thomas de la Guyana, and New Barcelona ; and of Mexico, near Actopan, &c. H. B. et Kunth, nov. gen. amer. 3. p. *67.* Ehrètia exsùcca, Lin. spec. p. 275. Lam. diet. 1. p. 527. Rhàmnus Cumanénsis, Loefl. itin. p. 182. Guatacare of the natives of Cumana. Branches terete, hoary, glabrous, when young rather downy. Leaves \\ to 2 inches long, petiolate, clothed with strigae on both surfaces, sometimes nearly glabrous ; petioles downy, glabrous, or ciliated. Flowers white, sweet-scented. Corolla white, salver-shaped ; tube longer than the calyx ; limb spreading, with roundish, cordate segments. Stamens length of corolla, villous at the base. Style bifid. Jacquin mentions his plant as glabrous, while that of Kunth is downy. They are, however, probably identical.

Dry-fruited Beurreria. Clt. 1804. Tree 20 feet.

2 B. REVOLUTA (H. B. et Kunth, nov. gen. amer. 3. p. *67.)* branches and leaves glabrous, ovate, obtuse, with entire revolute margins; corymbs dichotomous; calyx downy, 5-toothed. J?. S. Native of New Spain, in temperate places near Hacienda de Regla. Shrub much branched. Branches terete. Leaves acute at the base, 1-2 inches long, petiolate. Corymbs terminal, downy. Calyx tubularly campanulate. Drupe red, size of a sloe, nearly globose, the rest as in the genus.

Revolute-leaved Beurreria. Shrub 5 to 6 feet.

3 B. DIVARICA^TA ; leaves oblong, entire, scabrous above, ancK downy beneath ; flowers terminal, corymbosely racemose ; calyx 5-cleft, downy. ^2 • S. Native of Cuba, about the Havana.- Ehrètia divaricàta, D. C. hort. monsp. 1813. p. 108. icon, ined.j t. 4. Branches divaricate. Leaves firm. Flowers white.* Drupe orange-coloured, globose ; the rest as in the genus.

Divaricate Beurreria. Clt. 1820. Tree.

4 B. VIRGA'TA ; branches filiform ; leaves oblong, entire, obtuse, hardly petiolate, scabrous above, and downy beneath ; peduncles terminal, scattered, 1-flowered; calyx tubular, hairy, with 5 short, ovate, acuminated segments. J? . S. Native of New Spain, in deserts. Ehrètia virgàta, Swartz. prod. p. 47. fl. ind. occ. 1. p. 463. This plant differs from *B. succulènta,* in being more twiggy, in the leaves being more scabrous, and in the inflorescence. Corolla white, twice as long as the calyx. Berry roundish, red ; the rest as in the genus.

Twiggy Beurreria. Shrub 6 to 8 feet.

5 B. SUCCULENTA (Jacq. amer. p. 44. ed. pict. p. *28.* t. 45. obs. 2. p. 2. t. 26.) leaves oblong, quite entire, obtus?, or acute, smooth, or rather scabrous to the touch ; corymbs loose, terminal, composed of irregular dichotomous cymes; calyx tubular,

glabrous, with ovate, acute segments. T? . S. Native of Jamaica and Antilles, &c. Ehretia Beurreria, Lin. spec. *275.* Mill. diet. no. 2. Willd. spec. 1. p. 1078. Desf. ann. mus. 1. p. 1>79 Cordia Beurreria, Lin. amoen. acad. 5. p. 395.—Brown,'jam. p. 1G8. t. 15. f. 2—Sloane, jam. 2. p. 96. t. 204. f# i.__Comm. hort. 1. p. 153. t. 79.—Pittonia similis, Catesb. carol. 2. p. 79. Leaves 3 inches long, running into the short white petioles. Flowers white, sweet-scented. Segments *of* corolla obovate, with deflexed sub-undulated margins. Stigma green, depressed, 2-lobed. Drupe globose, smooth, size of a pea, orange-coloured, 4-angled ; the rest as in the genus. The berry being sweet and succulent is eaten by children and natives. In Jamaica it is called *Poison-berries,* The French name is *Bois Cabril Batard.*

Succulent-fruited Beurreria. Clt. 1758. Tree *20* to 45 feet.

6 B. TOMENTOSA ; leaves ovate, scabrous above, and tomentose beneath, obtuse, tapering into the short petioles at the base; calyx short, with 5 deep obtuse segments ; tube of corolla twice as long as the calyx, f? . S. Native of Jamaica and St. Domingo. Ehretia tomentosa, Lam. ill. no 1919. Poir. suppl. 2. p.]. no. 7.—Sloane, jam. hist. 2. t. 204. f. 1.? Branches striated, rather nodose. Flowers white. Berry yellowish, roundish, containing 4 nuts; but the nuts are not said to be 2-celled and 2-seeded.

Tomentose Beurreria. Tree.

7 B. RA^DULA ; leaves coriaceous, obovate, obtuse, scabrous from dots ; corymbs loose, terminal; calyx whitish grey, with dilated segments. f? . S. Native *of St.* Domingo. Ehretia radula, Poir. suppl. 2. p. 2. Leaves quite entire, attenuated at the base, 1-2 inches long, and *6-9* lines broad, beset with white dots above, and cinereous beneath : uppermost ones narrower, and nearly lanceolate. Corolla white, a little longer than the calyx. Berry containing 4 nuts; but it is not said whether these nuts are 1 or 2-celled, or 1 or 2-seeded.

Rasp-\ea\ed Beurreria. Shrub.

* * *A species native of the Isle of Bourbon,*

8 B. LA'XA ; branches reclinate; leaves ovate, obtuse, or acutish, quite entire, or a little sinuated, glabrous ; panicles corymbose, loose, terminal ; calyx 5-cleft : segments of corolla ovate, obtuse, with reflexed margins. T? . S. Native of the Island of Bourbon. Ehretia laxa, Jacq. hort. schoenbr. t. 41. fragm. >jio. 31. t. 5. f. 2. Leaves petiolate, scattered, dark green, about *i&* inches long. Flowers greenish white. Corolla twice as long aas the calyx, with ovate, obtuse, reflexed segments. Berry efleshy, red, size of a pea, containing 4 nuts ; but the nuts are not said to be 2-celled or 2-seeded.

Loose-Lowered Beurreria. Clt. 1826. Shrub 6 to 10 feet.

* * * *Species natives of Asia. Drupe containing* 4 *1-celled, l-seeded nuts. Perhaps a distinct genus.*

9 B. *LJE^V\S*; arboreous; leaves ovate, smooth, entire, or sometimes scalloped; corymbs lateral and axillary, composed of dichotomous, recurved, secund spikes ; drupe containing a 4 partible nut, or 4 l-seeded, 1-celled nuts. T? . S. Native of the Circar mountains, and Bengal, and on the banks of the Irawaddy. Ehretia affinis, Wall. cat. no. 900. Ehretia lae%vis, Roxb. cor. 1. p. 42. t. 56. Seregada of the Telingas. Branches erect. Leaves on short petioles, pretty smooth, 3-4 inches long, and *2-3* broad. Flowers small, white. Nuts wrinkled outside. The wood of this tree is used by the hill people for many purposes.

Smooth Beurreria. Clt. 1823. Tree 12 to 20 feet.

10 B. A'SPERA; shrubby; leaves ovate, scabrous above, and downy below, entire ; corymbs terminal, dichotomous ; calycine segments ovate; drupe containing a 4-celled nut, or a nut divisible into 4 1-celled l-seeded parts. J?. S. Native of the East Indies. Ehretia aspera, Roxb. cor. 1. p. 41. t. *55.* Willd. spec. 1. p. 1077. E. tomentosa, Roth, nov. spec. p. 126. Ehretia Heynii, Roem. et Schultes, syst. 4. p. *532.* Bark of the larger branches rust coloured; young shoots downy. Corymbs globular, composed of dense, recurved, naked, secund spikes *of* pedicellate flowers. Flowers very small, white. Stigmas simple. Drupe red, size of a grain of pepper, somewhat tetragonal. Nuts smooth outside.

Bough Beurreria. Clt. 1795. Shrub.

11 B. SETOSA (Roxb. fl. ind. 2. p. 342.) tender parts bristly; leaves ovate-cordate, acuminated, entire ; panicles terminal, composed of dichotomous, secund, recurved spikes; calycine segments lanceolate, as long as the corolla ; drupe containing 4 1-celled, 1-seeded nuts. F? . S. Native of the Island of Hamoa.

Bristly Beurreria. Shrub or tree.

12 B. RETU'SA ; leaves small, obovate, retuse or acute, downy, as well as the young branches and peduncles ; peduncles simple, terminating the short stiff branches, few-flowered. J? • ®* ^a'' tive on the banks of the Irawaddy. Ehretia retusa, Wall. cat. no. 903. A stiff, stunted, branched shrub. Nut containing 4 l-seeded nuts.

Retuse-leaved Beurreria. Shrub 3 to 4 feet.

13 B. UNIFLORA (Roxb. fl. ind. 2. p. 342.) shrubby, twiggy; leaves crowded, nearly sessile, oblong, entire, hairy ; flowers solitary, nearly sessile; drupe containing 4 1-celled, l-seeded nuts. J?. S. Native of the Moluccas.

One-flowered Beurreria. Shrub.

14 B. PUNCTA'TA ; leaves oval, entire, glabrous on both surfaces, beset with dots towards the margins, which are excavated beneath, but elevated, and rather wrinkled above; corymbs terminal, dichotomous, divaricate, downy, composed of secund spikes of flowers, *h* . S. Native of the East Indies. E. punctata, Roth, nov. spec. p. 126. Dots at the margins of the leaves, as in *Coffea Ardbica,* but more copious, and appear like secreting pores. It differs from *B. Icevis,* in dots only being on the margins of the leaves, not throughout its surface as in it, and the leaves themselves are less coriaceous, and the corymbs and calyxes more hairy.

Dotted-leaved Beurreria. Shrub of tree.

15 B. DICHOTOMA (Rottl. herb. Blum, bijdr. 842, under *Ehretia,)* leaves oblong, acuminated, quite entire, coriaceous, glabrous ; corymbs terminal, dichotomous; flowers secund; segment of calyx bluntly toothed. ^ • S. Native of Java, in the higher woods on mount Burangrang.

Dichotomous-corymbed Beurreria. Fl. June, July. Tree.

16 B. GLA'BRA ; leaves oval-roundish, glabrous, quite entire ; corymbs terminal, dichotomous, divaricate, composed of secund racemes or spikes of pedicellate flowers; calyx membranous in the fruit-bearing state, obovate, sub-inflated, 5-cleft, downy inside. J?. S. Native of the East Indies. E. glabra, Roth, nov. spec. p. 126. This species differs from all others in the calyx being membranous and somewhat inflated, and less divided.

Glabrous Beurreria. Shrub or tree.

Cult. For culture or propagation see *Cordia,* p. *387.*

V. CORTE'SIA (so named in honour of Ferdinando Cortesio, of New Spain, who collected many specimens of plants, which he sent to Cavanilles.) Cav. icon. 4. p. *53.* t. *377.*

LIN. SYST. *Pentdndria, Monogynia.* Calyx truncate, 10-

toothed. Corolla funnel-shaped; tube length of calyx; limb 5-parted, spreading, with rounded lobes. Stamens 5, exserted; anthers ovate. Style bipartite at top; stigmas peltately globose. Drupe ovate, containing 2 1-seeded? nuts.—A much branched shrub, with alternate, sessile, cuneiform, glabrous leaves, which are trifid at apex; and terminal, sessile, solitary flowers. Calyx surrounding the drupe at the base.

1 C. CUNEIFOLIA (Cav. 1. c.) ^ • G. Native of Buenos Ayres, in the plains called Pampas. Leaves tubercular; tubercles white, with a deciduous white hair rising from the centre of each. Calyx villous, turbinate, hemispherical in the fruit-bearing state. Flowers yellowish white.

Wedge-leaved Cortesia. Shrub 4 to 5 feet.

Cult. For culture and propagation see *Cordia,* p. 387.

VI. CARMO'NA (named by Cavanilles, after Brunond Salvatori Carmona, a painter, and companion of Lcefling in his travels up the Orinoco.) Cav. icon. 5. t. 438.—Ehrëtia species of Roxb.

LIN. SYST. *Pentdndria, Monogijnia.* Calyx 5-parted. Corolla campanulate, or rotate; limb 5-6-cleft. Stamens *5-6,* inclosed, shorter than the corolla. Styles capillary; stigmas simple. Drupe succulent, small, containing a 5-6-celled nut.—Branched shrubs. Leaves alternate, on the older branches fascicled, coriaceous, stiff. Peduncles rising from the fascicles of leaves, 2-6 flowered; flowers pedicellate, small, white.

1 C. HETEROPHY'LLA (Cav. icon. 5. t. 438.) leaves alternate or in fascicles, cuneiform, tridentate at the apex, sessile, very scabrous from callous dots; peduncles racemose; flowers on short pedicels; calycine segments lanceolate, as long as the corolla. P? . S. Native of the East Indies, in barren lands and forests. Ehrëtia heterophylla, Spreng. syst. 1. p. 648. Cordia retusa, Vahl. symb. 2. p. 42. Ehretia buxifolia, Roxb. cor. 1. p. 4^. t. 57.?—Plukn. aim. p. 159. t. 31. f. 1. Bapanabooree of the Telingas. Leaves very hard, shining above, \ to 1 inch long, and \ to | inch broad. Corolla campanulately rotate, 5-6-cleft. Stamens *5-6.* Drupe size of a pea, red, containing a 5-6-celled nut. *Ehrëtia buxifblia,* Roxb. is probably a true species of *Beurreria.*

Variable-leaved Carmona. Clt. 1823. Shrub 5 to 8 feet.

2 C. MICROFHY'LLA; leaves cuneiform, obtuse, quite entire, scabrous above, dotted, 4-5 in a fascicle; peduncles short, axillary, 1-flowered, shorter than the leaves; calycine segments linear, scabrous. T? . S. Native of the East Indies. Ehrëtia microphylla, Lam. ill. 1. p. 425. no. 1921.—Plukn. phyt. t. 31. f. 1.? Plant glabrous. Berry dry? globose, size of a grain of pepper, somewhat mucronate.

Small-leaved Carmona. Fl. June, Aug. Clt. 1818. Shrub 5 to 8 feet?

3 C. LYCIOI'DES; branches numerous, short, ending in a spine; leaves in fascicles, small, obovate-lanceolate, entire, glabrous. T? . S. Native of Pegamew. Ehrëtia lycioides, Wall, mss.

Lycium-lihe Carmona. Shrub 4 to 6 feet.

4 C. VIMINEA; leaves alternate, cuneate-lanceolate, entire, mucronate, downy, as well as the branches and peduncles, which are terminal, few-flowered, corymbose; segments of the calyx long, linear, acuminated. Tj . S. Native of Martaban, on the banks of the Attran, and on the Pundua mountains. Ehrëtia viminea, Wall. cat. no 906.

Twiggy Carmona. Shrub.

Cult. For culture and propagation see *Cordia,* p. 387.

VII. LUTRO'STYLIS (from *Xvrpioaig, lutrosis,* a freeing; and *(TTVKOQ, stylos,* a column; the styles are free to the base, not combined at the base as the other genera belonging to the present order.) Ehrëtia species of authors.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla funnel-shaped, ? 5-cleft. Stamens a little shorter than the corolla. ? Styles 2, short; stigmas sub-capitate. Drupe globose, usually containing 4 1-seeded nuts.—Much branched, glabrous shrubs. Leaves rather coriaceous, fascicled. Corymbs terminal, dichotomous. Flowers small, white, or yellowish.

1 L. INE'RMIS; glabrous, unarmed; leaves fascicled, obovate-oblong, obtuse, quite entire, finely ciliated; corymbs terminal, dichotomous; calyxes ciliated. I? . S. Native of America, near Cumana. Ehretia fasciculata, H. B. et Kunth, nov. gen. amer. 3. p. 66. Shrub much branched; branches terete, white. Leaves usually 3 in a fascicle, on the tops, of very short branches, petiolate, acute at the base, deep green above, pale beneath, 2 inches long. Corymbs downy, with angular branches. Flowers sessile. Segments of the calyx ovate, acute, ciliated. Corolla and stamens hardly seen. Drupe size of a grain of pepper, somewhat tetragonal.

Unarmed Lutrostylis. Shrub 6 to 8 feet.

2 L. SPINO'SA; spinose, glabrous; leaves fascicled, oblong attenuated at the base, sometimes sub-repand; corymbs racemose, short, terminal; calycine segments lanceolate, acute. J? . S. Native of South America. Ehrëtia spindsa, Jacq. amer. 46. t. 80. f. 18. edit. pict. t. 259. f. 14. Spines on the branches short, and sub-axillary; those on the trunk strong, woody, and very thick. Leaves 3-4 inches long, usually *5-6* in a fascicle. Stipulas subulate, rising from the centre of the tubercles in the branches. Flowers small, numerous, yellowish. Corolla length of calyx; segments of the limb ovate, obtuse, reflexed, length of tube. Stamens a little shorter than the corolla. Styles subulate; stigmas simple. Drupe red, small.

Spinose Lutrostylis. Shrub 4 to 10 feet.

3 L. ? MONTEVIDE'NSIS; leaves oblong, bluntish, quite entire; when young serrated a little at the apex, coriaceous, shining above, and of a different colour beneath, having the axils of the veins villous; spines opposite the branches, supra-axillary; racemes lateral, simple, opposite the leaves. ^ • S. Native of Montevideo, Sello. Ehretia Montevidensis, Spreng. syst. 1. p. 647.

Monte-video Lutrostylis. Shrub.

Cult. For culture and propagation see *Cordia,* p. 387.

VIII. RHA'BDIA *(pafttoQ, rhabdos,* a twig; in reference tc the shrub being twiggy.) Mart. pi. bras. 2. p. 136. t. 195.

LYN. SYST. *Pentdndria, Monogynia,* Calyx 5-parted. Corolla campanulate, 5-cleft, with a naked throat. Stamens 5^ from the base of the corolla, inclosed. Style simple; stigma 2-lobed. Berry or drupe usually containing 4 1-seeded pyrense.—*I* Branches downy. Leaves alternate, sessile. Flowers axillary^ or in few-flowered, bracteate corymbs.

1 R. LYCIOI'DES (Mart. 1. c. p. 137. t. 195.) leaves oblong-lanceolate, obtuse, undulated, adpressed to the stem, downy beneath, and pale green; inflorescence corymbose; peduncles trifid, 3-flowered, or bifid, 2-flowered; drupe ovate, globose, scarlet. h_c . S. Native of Brazil, in the province of Bahia, on the inundated banks of the river St. Francisco, near Joa Siero. Leaves sessile, green above, and glaucous beneath. Corolla small, of a rose-purple colour, with a white tube.

Lycium-lihe Rhabdia. Shrub 5 to 6 feet.

Cult. For culture and propagation see *Cordia,* p. *387.*

IX. MORELOSIA (meaning unknown to us.) La Lave et Lexarza, rtov. veg. mex. p. 1.

LIN. SYST. *Pentdndria, Digynia.* Calyx adherent, ventricose, rather coriaceous, 5-cleft. Corolla rotate; with rounded segments. Stamens 5, exserted. Style forked; stigmas 2, capitate. Drupe tetragonal, containing a 4-seeded, 4-celled nut.—A moderate-sized tree, with a scabrous trunk, and twisted, angular, green branches. Leaves quite entire. Flowers terminal, corymbose, articulated to the extremities of the peduncles, sweet-scented, falling spontaneously before fecundation.

1 M. HUANI'TA (La Lave, ex Lexarz. 1. c.) T? . S. Native of Mexico. Branches difformed at the extremities. Leaves 3-4 inches long.

Huanita Morelosia. Tree.

Cult. For culture and propagation see *Cordia,* p. *387.*

Tribe III.

ERIMATALIE'iE (this tribe only contains the genus *Erysibe.)* Style hardly any; stigma large, 5-groved. Drupe pulpy, containing only one 1-seeded nut.

X. ERYSFBE (probably the East Indian name of *E. iianiculata.)* Roxb. cor. 2. t. 159. fl. ind. 2. p. 284. Blum, bijdr. p. 1046. Erimatàlia, Lam. diet. 2. p. 348.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted, or 5-toothed; segments obtuse, imbricate. Corolla with a short tube, tomentose outside; limb spreading, 5-parted: lobes bifid, induplicate in aestivation. Ovanum 1-celled, 3-4-ovulate; ovula attached to the bottom of the cell. Stigma sessile, discoid. Berry 1-seeded, ex Roxb.—Climbing shrubs, with alternate leaves, and axillary and terminal panicles of flowers. This genus is nearly allied to *Moorcroftia* and *Maripa,* on the one hand, and *Apocynece* on the other.

1 E. PANICULA'TA (Roxb. cor. 2. t. 159.) leaves oblong, pointed, glabrous; panicles large, terminal. J? . ^\ S. Native of the Circars, and the eastern borders of Bengal. Branches and panicles clothed with rust-coloured farinae. Leaves 4-5 inches long, and about 2 broad. Flowers small, rust-coloured: border yellow. Berry size of a cherry, black. On the mountains bordering on Silhet, the shrub blossoms in October, and is called there *Luta-Bichutti.*

Panicled-flowered Erysibe. Shrub tw.

2 E. RIIEE^DII (Blum, bijdr. p. 1047.) leaves elliptic-oblong, bluntly acuminated, coriaceous, glabrous; panicles axillary and terminal. f? . $^{rs}{}_{m}$ S. Native of the Malabar coast; and of lava, on the Salak mountains, where it is called *Mugmale-aroy.* Erima-Tàli, Rheed. mal. 7. p. *73.* t. 39. Lam. diet. 2. p. 348. Erimatàlia Rhe&dii, Room, et Schultes, syst. 5. p. 331.

Rheede's Erysibe. Fl. July. Shrub tw.

3 E. GLOMERA'TA (Blum, bijdr. p. 1047.) leaves elliptic-oblong, acuminated, coriaceous, glabrous; flowers axillary, glomerate. \? . ^\ S. Native of Java, in woods, on mount Salak, where it is called *Kisimutti.*

Far. /3, longifblia (Blum. 1. c.) leaves cuneate-oblong, bluntly acuminated. I? . ^. S. Native of the Island of *Nusce-Kambanga.*

Glomerate-dowered Erysibe. Fl. Nov. Shrub tw.

4 E. TOMENTÒSA (Blum, bijdr. p. 1048.) leaves ovate, acute, glabrous above, and tomentose beneath; racemes axillary, very short. J? . ^. S. Native of Java, on the mountains of Parang.

Tomentose Erysibe. Fl. July, Aug. Shrub tw.

5 E. EXPA'NSA (Wall. cat. no. 1331.) young branches, racemes, calyxes, petioles, and undersides of young leaves clothed with rusty tomentum, as in *E. paniculata;* leaves coriaceous, elliptic, acuminated, mucronate, shining, entire; panicles axillary and terminal, many-flowered, solitary or aggregate; flowers racemosely fascicled. *? . ^ S. Native of Martaban, Moalmeyne, and Tavoy.

Expanded Erysibe. Shrub climbing.

6 E. SUBSPICA^NTA (Wall. cat. no. 1332.) young branches, &c. as in the last; leaves obovate-oblong, acuminated, tapering to the base, or oblong-lanceolate; racemes spicate, solitary, terminal; flowers aggregate, crowded. J?. ^,. S. Native of the Burman Empire, on Mount Taong-Dong.

Subspicale-flowered Erysibe. Shrub climbing.

7 E. PRI'NCEI (Wall. cat. no. 1335.) young branches, &c. as in the two last species; leaves oblong, acuminated, on very short petioles, almost sessile; racemes axillary and terminal, solitary or twin, simple, short; flowers aggregate. T? . $_{w}$. S. Native of Singapore, J. Prince.

Prince's Erysibe. Shrub climbing.

8 E. *FRA GRANS* (Wall. cat. no. 1336.) racemes and calyxes clothed with rusty tomentum; leaves large, coriaceous, glabrous, acuminated; racemes usually aggregate, panicled or simple, axillary, very short. F? . ^. S. Native of the Burman Empire, at Amherst. Flowers aggregate.

Fragrant Erysibe. Shrub climbing.

9 E. L,EVIGA'TA (Wall. cat. no. 1333.) glabrous, except the outside of the inner calyxes; leaves coriaceous, oblong-lanceolate, acuminated, entire; calyxes ciliated; racemes short, axillary and terminal, panicled; flowers aggregate. J? • $_{w}$. G. Native of China and Silhet, Corollas white; anthers brown.

Smooth Erysibe. Shrub climbing.

10 E. GLAUCE'SCENS (Wall. cat. no. 1334.) pedicels and calyxes clothed with velvety brownish down; leaves glabrous, glaucescent, but perfectly glaucous beneath, broad-elliptic, acuminated; racemes panicled, axillary and terminal, usually solitary, elongated, the whole forming a diffuse, terminal panicle; flowers aggregate. T? . ^. S. Native of Moalmyne.

Glaucescent Erysibe. Shrub climbing.

Cult. The species of *Erysibe* are well fitted for training up rafters or pillars in stoves; they are of easy culture, will grow well in any rich light soil, and are readily propagated by young cuttings in sand, in heat, with a hand-glass placed over them.

f *A genus not known whether belonging to the order or not.*

XL ROCHEFORTIA (named in honour of M. De Rochefort, author of Histoire naturelle et morale des Isles Antilles de 1' Amerique; Rotterdam, 1039.) Swartz, prod. p. 54. fl. ind. occ. 1. p. 552. icon. t. 10.

LIN. SYST. *Pentdndria, Digynia.* Calyx 5-parted; with ovate-oblong segments. Corolla funnel-shaped, with a short tube and open throat; segments of the limb ovate-oblong, spreading. Stamens 5, inserted in the plicse of the throat of the corolla. Styles 2, subulate; stigmas simple. Fruit globose, 2-celled. Seeds numerous, angular.—Branched shrubs, with alternate leaves; and corymbose, dichotomous, terminal, and axillary inflorescence.

1 R. CUNEA'TA (Swartz, fl. ind. occ. 1. p. 552. icon. t. 10.) leaves cuneiform, obovate, entire, alternate, fascicled; peduncles terminal and axillary, subdichotomous, cymose. F?. S. Native of Jamaica, in stony mountain places. Branches flexuous, terete, spinose, smooth; spines close to the petioles, long. Leaves fascicled, 1-3 together, rarely more, rather emarginate at top, glabrous, of an obscure, shining, greenish brown colour above, and paler beneath. Cymes shorter than the leaves. Flowers small, greenish white. Calyx downy. Tube of corolla pentagonal. Stamens subulate, inserted in the recesses, between the lobes of the corolla. Stigmas villous, rather plumose. Seeds angular.

Cuneate-lcnved Rochefortia. Shrub *3 to 4 feet.*

2 R. OVA'TA (Swartz, fl. ind. occ. 1. p. 554.) leaves ovate, emarginate, entire, villous; peduncles many-flowered, twin]

shorter than the leaves. I? . S. Native of Jamaica, among bushes in stony places. Branches terete, glabrous. Leaves an inch long. Segments of calyx erect, incumbent, with villous margins. Tube of corolla campanulate, open, length of calyx, or a little shorter ; segments oblong. Stamens shorter than the segments of the corolla. Stigmas acute.

Ovate-leaved Rochefortia. Shrub 3 to 4 feet.

3 R. BRASILIE'NSIS (Hoffm. in Willd. herb, ex Roem. et Schultes, syst. 6. p. 210.) leaves ovate, acuminated, coriaceous, remotely subserrated ; corymbs racemose. *2 • S. Native of Brazil.

Brasilian Rochefortia. Shrub.

Cult, For culture and propagation see *Cordia,* p. 387.

N.B. Varrônia mollis, Desf. tabl. de jard. par p. 220. is a species of *Meldchia,* according to Desvaux.

Cordia aspérrima, Spreng. syst. 1. p. 649. does not belong to the order, but is a plant of the order *Labidtce.*

ORDER CLXVIII. HYDROPHY'LLEJE (this order contains plants agreeing with the genus *Hydrophyllum* in important characters.) R. Br. in bot. mag. vol. 50. t. *2373.* append, to Frankl. journ. Benth. in Lin. trans. 17. p. 267. Boragineae, sect. II. Juss. gen. 129. ed. Usteri, p. 144.

Calyx inferior, permanent, deeply 5-cleft; the recesses between the segments often furnished with reflexed appendages. Corolla monopetalous, hypogynous, regular, shortly 5-cleft, rotately campanulate, rarely somewhat funnel-shaped. Stamens 5, perigynous, alternating with the lobes of the corolla, inflexed in aestivation ; anthers versatile, 2-celled ; cells parallel, dehiscing lengthwise. Ovarium superior, simple, 1-celled. Style elongated, bifid ; stigmas 2, terminal. Placentas 2, free to the back, or adnate to the parietes of the fruit; their inner surface bearing 2 or many ovula. Fruit capsular, dehiscing by 2 valves; sometimes 1-celled, from the large placentas filling the capsule ; but sometimes the dissepiment is hardly complete, therefore the capsule is half 2-celled. Seeds reticulated outside. Albumen copious, cartilaginous. Embryo conical, with the radicle looking to the hilum.—Elegant herbs, natives of America ; hispid, like those of *Boraginece.* Leaves usually lobed, alternate, or the lower ones are opposite. Flowers disposed in unilateral, subdichotomous spikes or racemes, which are at first circinately scorpioid; rarely axillary, solita y, pedunculate. Corollas blue or pink, elegant.

This order is distinguished from *Boraginece,* and its nearest allies, by the capsular fruit, copious, cartilaginous albumen, placentation of the seeds, and generally by the compound, or deeply lobed leaves.

Synopsis of tig genera.

1 HYDROPHY'LLUM. Corolline processes 5, linear, adnate by the back, but with the top and margins free. Stamens exserted. Placentas large, biovulate.

2 ELLI'SIA. Calyx without appendages. Corolline processes 10, short, or wanting. Stamens rather shorter than the corolla. Placentas large, biovulate.

3 NEMOPHILA. Sinuses of the calyx furnished with reflexed teeth. Corolline processes 10, short or wanting. Stamens rather shorter than the corolla. Placentas large, 2-12-ovulate.

4 EiRROCA. Corolla deciduous. Ovarium pilose. Placentas linear, 4, or many-ovulate. Capsule half 2-celled.

5 PHACE'LIA. Corolla deciduous. Ovarium pilose. Placentas linear, 2-ovulate. Capsule falsely 2-celled.

6 EMMENA'NTHE, Corolla permanent. Ovarium clothed with glandular pubescence. Placentas linear, adnate by the back. Capsule falsely 2-celled.

I. HYDROPHY'LLUM (from *bZwp bSarog, hydor hydatos,* water ; and *tyvWov, phyllon,* a leaf. Miller supposes that Morinus gave it the name of *Water-leaf,* because the spring water stands in the cavity of the leaves, and not from its growing in water, as Tournefort conjectures.) Tourn. inst. t. 16. Lin. gen. p. 83. no. 284. Schreb. gen. no. 267. Juss. gen. p. 129. ed. Usteri, p. 144. Gaertn. fruct. 2. p. 133. t. 110. Lam. ill. t. 97. f. 1—2. Benth. in Lin. trans. 17. p. 272.—Nemophila species, Spreng.

LIN. SYST. *Pentdndria, Monogynia.* Corolline scales 5, linear, adnate by the back, but with the margins and top free. Stamens much exserted. Placentas large, free on the back, filling the ovarium, biovulate.—Radical leaves numerous : cauline ones few, alternate, broad, pinnately or palmately cut. Racemes bractless, scorpioid, dichotomous. Corollas blue or white.

1 H. APPENDICULA'TUM (Michx. fl. bor. amer. 1. p. 134.) lower leaves pinnate : cauline ones palmately lobed ; racemes very loose; calyx very hispid : the sinuses furnished with reflexed appendages.]/. H. Native of Virginia, near Harper's Ferry, Tennessee, Alleghanies, &c. on shady rocks near springs. Pursh, fl. amer. sept. 1. p. 134. Benth. 1. c. p. 272. Nemophila, paniculata, Spreng. syst. 1. p. 569. Plant very hairy. The radical leaves are like those of *H. Virginica ;* and the upper ones like those of *H. Canadénsis.* Pedicels almost twice as long as the fructiferous calyx. Calyx of *Nemophila,** but with the habit of the genus. Calyx almost tke length of the corolla. Corollas pale blue. Fascicles of flowers panicled.

Appendiculate-caUyxed Water-leaf. Fl. May, June\ Clt. 1813. PI. | to 1 foot.

2 H. CANADE'NSE (Lin. spec. p. 208.) leaves palmately-lobed or angular ; cymes of flowers loose ; calyx glabrous. 3/. H. Native from Canada to Pennsylvania, on wet rocks and shady mountains. Lam. ill. t. 97. f. *2.* Ker. bot. reg. t. 242.. Pursh, 1. c. Benth. 1. c. p. 273. Plant smoothish, or a little hispid. Leaves broad, roundish, glabrous on both surfaces, or hispid from a few hairs, hardly divided to the middle into lobes, having the margins furnished with a few sharp teeth. Pedicels usually shorter than the calyx. Corollas white, tinged with blue or purple.

Canadian Water-leaf. Fl. June, July. Clt. 1759. Shrub \ to 1 foot.

3 H. VIRGI'NICUM (Lin. spec. 208.) leaves pinnate: segments deeply cut; cymes of flowers rather loose ; calycine segments narrow-linear, ciliately hispid. %. H. Native from Canada to Carolina, in shady, rocky situations. Lam. ill. t. 97. f. 1. Ker. bot. reg. t. 331. Schkuhr, handb. 1. p. 114. t. *35.* Pursh, fl. 1. p. 134.—Sabb. hort. rom. 1. t. 15.—Mor. hist. 3. p. 599. sect. 15. t. 1. f. 1.—Dod. pempt. 77. t. 77. Benth. 1. c. Plant smoothish. Leaves hispid from a few scat-

tered pili above, pale and glabrous beneath, with *2-3* pairs of segments : lower segments on short petioles : upper ones usually combined with the terminal one. Corollas beautiful blue.

Virginian Water-leaf. Fl. May, June. Ck. 1739. PI. 1 *to* 1 foot.

4 H. MACROPHY'LLUM (Nutt. in journ. acad. nat. scienc. phil. 7. p. 111.) leaves pinnate; segments or leaflets deeply toothed ; cymes of flowers very dense; calycine segments lanceolate, ciliately hispid. 3/. H. Native of North-west America, in fissures of moist rocks, in the interior *of* Columbia, Douglas, 1826; in the forests of Kentucky, Mr. Short, ex Nutt, I.e. H. capitatum, Dougl. mss. ex Benth. 1. c. p. 282. H. caelestinum, Dougl. mss. The specimens collected on moist rocks in the interior of Columbia, (H. capitatum, Dougl. mss.,) have the leaves hispid on both surfaces ; the segments or leaflets but little divided, and not narrowed at their base. The other specimens gathered in shady moist woods (H. caelestinum, Dougl. mss.) have the leaves larger, with broader segments, much more cut, and the flowers fewer. The same plant also occurs in *California,* but with the leaves much more hispid on the upper surface, and clothed with whitish down beneath, ex Benth. All these differences are perhaps attributable to locality. Corollas blue.

Large-leaved Water-leaf. PI. 1 foot ?

f' *A doubtful species.*

5 H. LINEAGE (Pursh, fl. 1. p. 134.) pilose; leaves linear; racemes elongated. *11.* H. Native on the banks of the Missouri.

Linear-leaved Water-leaf. Fl. April. PL?

Cult. Plants of the most easy culture. They thrive best in a shady moist situation, and are readily increased by dividing at the root in spring or autumn.

II. ELLISIA (so named by Linnaeus, in memory of his correspondent John Ellis, F.R.S., author of a Treatise on Corollines.) Lin. gen. p. 83. no. 244. Schreb. gen. no. *268.* Juss. gen. p. 129. ed. Usteri, p. 144. Benth. in. Lin. trans. 17. p. £74.

kj, LIN. SYST. . . *Pentdndria, Monogynia.* Calyx without appendages at the sinuses. Corolline processes 10, short or wanting. ^Stamens rather shorter than the corolla. Placentas large, free the back, filling the ovarium, biovulate___North American ill annual herbs. Leaves pinnately cut : lower ones opposite. Lower peduncles opposite the leaves: superior ones disposed in simple, unilateral, loose racemes.

1 E. NYCTELE'A (Lin. gen. 97. syst. 195. mant. p. *336.)* ^petioles without appendages ; leaves pinnatifid, with cut lobes; jalyx increasing much after florescence. ©. H. Native of Virginia, on the banks of the Potomac river, and on theiSfnks of the Missouri. Gaertn. fil. carp. 3. t. 184. f. 6. Lam. ill. t. 97.- Benth. 1. c. p. 274. Polen onium Nyctelea, Lin. spec. 231. Ehret, nov. act. ups. 1. p. 97. t. 5. f. 5. Trew. pi. sel. p. *56.* t. 99. Planta Lithosperma aflinis, Act. eph. nat. cur. 1761. p. 330. t. 7. f. 1.—Mor. hist. 3. p. 451. sect. 11. t. 28. f. 3. Segments *of* the fruit-bearing calyx ovate-lanceolate, acute, foliaceous, half an inch long. Stem dichotomous. Peduncles 1-flowered, opposite the leaves. Leaves downy. Flowers drooping. Corolla white, with minute, purple dots inside the divisions.

FIG. *38.*

Nyctelea or Cut-leaved Ellisia. Fl. July, Aug. Clt. 1755. PI. ^ foot.

2 E. AMBI'GUA (Nutt. gen. 1. p. 118.) plant decumbent, branched ; stem glabrous, rather glaucous ; leaves hairy, lyrately pinnatifid, almost sessile : segments nearly lanceolate, angularly toothed or lobed; racemes opposite the leaves, lateral and terminal; corolla small, hardly longer than the calyx : with emarginate segments. ©. H. Native on the banks of the Missouri, in alluvial soils. Corolla white ?

Ambiguous Ellisia. PI. decumbent.

3 E. MICROCAXLYX (Nutt. in amer. phil. soc. trans, n. s. 5. p. 191.) smoothish, decumbent; leaves lyrately pinnatifid, on long petioles ; segments few *(3-5)* : lateral ones oblique, deeply toothed : middle one trifid and obtuse ; flowers solitary, minute. ©. H. Native of the Arkansas, Alabana, &c. Hydrophyllum pusillum, Muhl. herb. Leaves slightly hairy; lateral segments half reniform ; the terminal division nearly entire, but trifid. Catyx minute. Corolla very small, subcampanulate; with 5 shallow lobes.

Small-calyxed Ellisia. PI. decumbent.

4 E. RANUNCULA'CEA (Nutt. 1. c.) rather hairy; stems procumbent ; leaves pinnatifid, somewhat 5-lobed : superior ones tripartite, deeply toothed, obtuse, on long petioles; racemes secund, few-flowered. 0. H. Native of the Arkansas, *in* shady, alluvial, humid forests. Lateral segments of the superior leaves toothed on the lower side; the central segment trifid. Corolla pale blue, cylindrically campanulate, naked. Ovarium hairy. Nearly allied to *E. ambigua,* from which it differs in the less compound leaves, on conspicuous petioles.

Crowfoot-like Ellisia. PI. procumbent.

5 E. MEMBRANA'CEA (Benth. in Lin. trans. 17. p. 274.) quite glabrous ; petioles exappendiculate ; leaves pinnatifid: segments quite entire ; calyx hardly increasing after florescence. ©.?H. Native of California, Douglas. Leaves thin; lobes divaricate, broad-lanceolate, obtuse. Flowers small, pedicellate, loosely racemose. Corolla white.

Membranous-leaved Ellisia. PI. ?

6 E. CHRYSANTHEMIFOLU (Benth. 1. c.) hispid ; petioles auriculately dilated at the base ; leaves subr-bipinnatifid: lobes deeply toothed, obtuse; calyx increasing a little after florescence. ©.?H. Native of California, Douglas. Flowers similar to those of *E. membrandcea.* Processes of corolla toothed.

Chrysanthemum-leaved Ellisia. PI. ?

Cult. The seeds of these plants only require to be sown in the open ground ; and if allowed *to* scatter their seeds, will maintain themselves.

III. NEMO'PHILA (from *refioc, nemos,* a grove ; and 0(Xfw, *phileo,* to love ; the plants delight in shady situations.) Barton, fl. amer. p. 61. Nutt. journ. acad. nat. scienc. phil. vol. *2.* p. 179. Benth. in Lin. trans. 17. p. 272.—Phacelia species, Juss. gen. p. 144. Pursh, fl. amer. sept. 1. p. 140.

LIN. SYST. *Penthidria, Monogynia.* Sinuses between the lobes of the calyx appendiculated by reflexed teeth. Corolline processes 10, short or wanting. Stamens rather shorter than the corolla. Placentas large, free on the back, filling the ovarium, 2-12-ovulate.—Diffuse, brittle, annual herbs. Lower leaves^opposite ; all pinnatifid. Peduncles sometimes axillary, 1-flowered; sometimes few at the tops of the branches, disposed in short racemes. Flowers usually blue.

1 N. PARVIFLORA (Dougl. mss. ex Benth. 1. c. p. 275.) leaves pinnatifid : lobes few, broad, a little toothed ; sinuses of calyx with short appendages; corolla hardly exceeding the calyx ; placentas 2-ovulate. ©. H. Native of Columbia, on the west coast of America, Douglas and Scouler. Flowers small. Appendages of calyx usually very short, sometimes hardly evident, rarely elongating after florescence. Processes of corolla small, narrow.

Small-flowered Nemophila. Fl. ? Clt. 1826. PI. 1 foot.

2 N. PEDUNCULATA (Dougl. mss. ex Benth. 1. c.) leaves pinnatifid ; sinuses of the calyx furnished with short appendages ; corolla hardly exceeding the calyx ; placentas 6-ovulate. ©. H. Native of North-west America, on the Columbia, Douglas. Habit, calyx, and corolla, almost as in *N. parviflora.* Leaves narrower, on longish petioles; and the lobes more entire and distinct.

Pedunculate Nemophila. PI. 1 foot ?

3 N. PHACELIOIDES (Bart. fl. amer. bor. p. 61.) petioles without appendages ; corolla exceeding the calyx a little ; sinuses of the calyx furnished with lanceolate appendages, which equal in length one half the calyx ; placentas biovulate. ©.or $. H. Native of North America. Sweet, fl. gard. 1. t. 32. Sims, hot. mag. 2373. N. Nuttallii, Coll. hort. rip. append, t. 5. Corollas blue. This plant is nearly related to *N. parviflora ;* but differs in the flowers, which are twice the size, and the larger or longer appendages of the calyx.

Phacelia-like Nemophila. Fl. July, Aug. Clt. 1822. PI. 1 foot.

4 N. AURITA (Lindl. bot. reg. t. 1601.) petioles auriculately dilated at the base ; sinuses of the calyx furnished with elongated appendages; corolla twice as long as the calyx ; placentas biovulate. ©. H. Native of California, Douglas. Leaves while opposite connate at the base ; lobes lanceolate, quite entire, divaricate, or tending to the base of the leaf. Peduncles somewhat racemose at the tops of the branches. Corolla nearly an inch in diameter, purple. Benth. 1. c. p. 275.

£araJ-petioled Nemophila. Fl. May, Aug. Clt. 1831. PI. prostrate.

5 N. INSIGNIS (Dougl. mss. ex Benth. 1. c. p. 275. Lindl. bot. reg. 1713.) petioles without appendages; corolla twice as long as the calyx; placentas 10-12-ovulate. ©. H. Native of California, Douglas. D. Don, in Sweet, fl. gard. n. s. t. 329. N. phacelioides, Ker. bot. reg. t. 740. ? Herb deep green. Leaves with 3-4 lobes on each side, quite entire or cut. Peduncles longer than the leaves. Corolla blue, with a white centre, more than an inch in diameter. Processes of the corolla villous at the base.

Showy Nemophila. Fl. July, Aug. Clt. 1822. PI. 1 foot.

6 N. ATOMARIA (Fisch. et Meyer, cat. sem. hort. petrop. p. 42.) leaves opposite, pinnatifid: lobes 5-9, almost entire; peduncles axillary, elongated ; corolla rotate, with a very pilose bottom, and obovate segments; placentas about 10-ovulate; seeds strophiolate, smooth. ©. H. Native of New California, about the Russian colony, Ross. Very like *N. insignis,* but the herb is pale green ; the flowers white, ornamented with violaceous spots. Seeds yellowish, beset with minute scales, as in A[r]. *imignis.* Corollas nearly an inch in diameter.

Atom Nemophila. Fl. ? Clt. 1836. PI. 1 foot.

7 N. MENZIE'SII (Hook, et Arn. in Beech, voy. pt. bot. p. 152.) leaves all pinnatifid, scabrous: segments approximate, ovate, obtuse, ciliated, somewhat tridentately lobed; peduncles twice as long as the leaves, and opposite them ; calyx with lanceolate segments, and minute appendages to the sinuses. ©. H. Native of Chili ? Capsule many-seeded. Corollas blue ?

Menzies's Nemophila. PI. 1 foot?

Cult. These are all pretty plants, and worth cultivating. The seeds may be reared on a hot-bed, if the plants are wanted to flower early ; but if otherwise, they may be sown in the open ground. They delight in a moist, shady situation, and peat or vegetable soil.

IV. EUTOCA (from *EVTOKOQ, eutocos,* fruitful; in reference to the number of seeds in each capsule.) R. Br. in append, to Frankl. trav. ed. 2. p. 51. t. 27. Dougl. in bot. reg. t. 1180. Benth. in Lin. trans. 17. p. 276.—Phacelia species, Pursh.

LIN. SYST. *Pentdndria, Monogynia.* Corolla deciduous. Ovarium ovoid-globose, hispid from pili. Placentas linear, adnate by the back to the parietes of the ovarium, 4 to many-ovulate. Capsule half 2-celled, from the dissepiment being incomplete.—Annual herbs, usually erect, with the habit of *Phacelia*^ rarely diffuse or divaricate. Flowers racemose, dense and sessile, or loose and pedunculate. Cymes unilateral, simple or dichotomous.

1 E. DOUGLA'SII (Benth. in Lin. trans. 17. p. 276.) diffuse; leaves all pinnatifid: with ovate, almost entire lobes ; placentas 12-20-ovulate. 0. H. Native of California, Douglas. Leaves nearly all radical, hispid ; with 4-6 lobes on each side. Floriferous stems ascending, furnished with a few leaves at the base, naked and many-flowered at the apex. Peduncles elongated. Flowers as large as *Nemophila insignis,* to which plant the habit is referrible.

Douglas's Eutoca. PI. 1 foot.

" -2 E. CUMINGII (Benth. in Lin. trans. 17. p. 276.) erect, clothed with scabrous pubescence ; leaves elongated, pinnate : lobes or leaflets oblong, obtuse, cut a little ; placentas 6-8-ovulate. ©. H. Native of the Andes of Chili. The corolla appears to be shorter than the calyx. Very nearly allied to *E. hrachyloba,*

Cuming's Eutoca. PI. 1 foot ?

3 E. BRACHYLOBA (Benth. 1. c. p. 277.) erect, beset with scabrous pubescence ; leaves long, pinnatifid: lobes ovate, obtuse, a little cut; placentas 6-8-ovulate. ©. H. Native of California, Douglas. Leaves petiolate, 2-3 inches long, with 6 lobes on each side. Pedicels short. Racemes dichotomous, almost as in *Phacella circinata.*

Short-lobed-lesLxed Eutoca. PI. 1 foot ?

4 E. MEXICA^NA (Benth. 1. c.) diffuse ; leaves ovate-oblong,' deeply pinnatifid : lobes ovate or oblong, glabrous on both surfaces ; placentas, 6-8-ovulate. ©. H. Native of Mexico, in the neighbourhood of the mines of Tlalpuxahua, and between that place and the city *of* Mexico, G. J. Graham. Racemes elongated, simple. Flowers pedicellate, twice as large as those of *E. parviflora,* to which the present species is nearly allied ; the filaments are pilose as in it, and the processes of the corolla are wanting.

Mexican Eutoca. PI. diffuse.

5 E. PARVIFLORA (R. Br. append, to Frankl. trav. ed. 23. p. 51. Benth. 1. c.) diffuse; leaves pinnatifid or trifid : the superior ones sometimes undivided, and the lobes of the lower ones are ovate, or oblong, quite entire, hispid on both surfaces; placentas 6-8-ovulate. ©.H. Native of Pennsylvania, Schweinitz; Alleghanies, Drummond ; on rocks near Harper's Ferry on the Potomac, Pursh. Phacelia parviflora, Pursh, fl. amer. sept. 1. p. 140. Polemonium dubium, Willd. spec. 1. p. 887. —Polemonium, foliis inferioribus hastatis, superioribus lanceolatis, Gron. virg. p. 29.—Plukn. aim. t. 245. f. 5. Flowers small, pale blue.

Small-flowered Eutoca. Fl. May. Clt. 1826. PI. 1 foot ?

6 E. LOAS^EFOLIA (Benth. in Lin. trans. 17. p. 277.) erect,

very hispid ; leaves ovate, pinnatifid : lobes broad, acute, deeply-toothed ; corolla hardly exceeding the calyx; stamens exserted ; placentas 6-8-ovulate. 0. H. Native of California, Douglas. Habit almost of *Phacelia.* All parts of the plant very hairy from long stiff pili, intermixed with clammy down.

Loasa-leaved Eutoca. PI. 1 foot ?

7 E. FRANKLINII (R. Br. in append, to Frankl. trav. p. *52.* Benth. 1. c.) erect; leaves pinnatifid, or bi-pinnatifid ; ovula 20 or more to each placenta. ©. H. Native of North America. Hook. bot. mag. 2985. Corollas with a blue limb and white tube.

Franklin's Eutoca. FL April, July. Clt. 1827. PI. 1 foot.

8 E. MEKZIE'SII (R. Br. 1. c.) erect, hispid ; leaves linear, or lanceolate, quite entire, sometimes trifid or pinnatifid ; placentas 20, or many-ovulate. 0. H. Native of North West America, on dry sandy soils, and California, Douglas. E. multiflora, Dough in bot. reg. t. 1180. Lehm. pug. *2.* p. 19. E. echioides, and E. glomerata, Dough mss. E. congesta, Dough mss. Lehm. pug. *2.* p. 18. Plant variable in the breadth of the leaves and stature. Corollas blue.

FIG. 36.

Menziess Eutoca. FL May, July. Clt. 182G. PL 1± foot.

9 E. SERICEA (Graham, in edinb. phil. journ. July 1830. p. 172.) erectish; leaves silky on both surfaces, pinnatifid ; segments cut outwardly ; superior leaves linear, entire ; stamens *3* times as long as the corolla ; placentas many-ovulate, several *of* which are abortive. ©. H. Native of North America. Hook, bot. mag. t. 3003. E. pulchella, Lehm. pug. *2.* p. 18. Flowers blue.

Silky Eutoca. Fl. May, July. Clt. 1827. Ph 1 foot.

10 E. GUANDIFL6RA (Benth. in Lin. trans. 17. p. *278.)* ascending ; leaves broad, ovate, toothed, sub-cordate at the base; jplacentas above 50-ovulate. 0. H. Native of California, Douglas. Stem or branches nearly simple. Leaves \\ inch bllong, and almost as broad, wrinkled, hispid, as well as stems t^and calyxes. Racemes numerous, at the top of the stem circi- ^nate. Calyxes nearly sessile. Corolla l| inch in diameter, fivvithout any processes. Filaments glabrous.

Great-flowered Eutoca. PI. 1 foot ?

H E . DIVARICA'TA (Benth. 1. c.) stems dichotomously divaricate; leaves all ovate, undivided; placentas 12-20-ovulate. ©. H. Native of California, Douglas. Lindh bot. reg. t. 1784. "Leaves all alternate. Racemes many-flowered, unilateral. Flowers almost sessile. Calyx increasing much after florescence. Corolla pale blue, exceeding the calyx a little.

Divaricate Eutoca. Ph decumbent.

12 E. PHACELIOIDES (Benth. 1. c. p. *279.)* erect, branched ; leaves all ovate, undivided, quite entire; placentas 4-ovulate. 0. H. Native of California, Douglas. Habit of *Phacelia circinata,* but much smaller. Leaves all alternate, petiolate. Racemes many-flowered. Flowers nearly sessile. Calyxes very hispid. Corolla somewhat funnel-shaped, exceeding the calyx a little. Stamens inclosed within the tube.

Phacelia-like Eutoca. Ph 1 to *2* feet.

13 E. WRANGELIAVA (Fisch. et Meyer, cat. sem. hort. petrop. p. *37.)* diffuse, downy; leaves ovate, acute, quite entire; corollas about twice as long as the calyx, and about equal in length to the stamens ; placentas 8-10-ovulate. ©. H. Native of New California, about the Russian colony, Ross. Herb canescent, much-branched. Corollas an inch in diameter, bluish-violet.

}Vrangers Eutoca. Fh ? Clt. 1836. Ph diffuse.

14 E. VI'SCIDA (Benth. in bot. reg. t. 1808.) clothed with clammy pili ; stem erect, branched ; leaves cordate-ovate, a little angular, serrated ; racemes elongated, forked and simple ; placentas many-ovulate. ©. H. Native of California. Corolla fine blue ; tube rose-coloured.

Viscid Eutoca. Fl. June, Aug. Clt. 1834. Ph *2* feet.

Cult. All the species are elegant and hardy. They succeed best on rockwork, in dry, sandy, or gravelly soil. They are raised from seeds, which are produced sparingly.

V. PHAC£XLIA (from 0a/ce\oc, *phakelos,* a fascicle; in reference to the fascicles of flowers.) Juss. gen. p. 129. ed. Usteri, p. 144. Michx. fl. bor. amer. 1. p. 134. t. 16. Benth. in Lin. trans. 17. p. *279.*

LIN. SYST. *Pentdndria, Monogynia.* Corolla deciduous. Ovarium ovoid-globose, hispid from pili. Placentas linear, usually adnate by the back to the parietes of the ovarium, biovulate. Capsule falsely 2-celled, from the dissepiment being almost complete.—Annual or perennial, erect or diffuse herbs, natives of America. Flowers racemose, dense, sessile, or loose, pedicellate. Cymes unilateral, simple, or forked.

1 P. MALVJEFLORA (Cham, in Linnaea, 4. p. 495.) hispid ; leaves broadly cordate-ovate, lobed; calycine segments linear-spatulate, hispid: outer one large; stamens exserted. *$.* H. Native of California. Corolla campanulate, a little longer than the calyx ; limb unequally 5-lobed. Plant beset with glandular and simple hairs.

Mallow-flowered Phacelia. Ph \\ foot.

2 P. BRACHYA'NTHA (Benth. in Lin. trans. 17. p. *279.)* leaves ovate, quite entire, undivided, or furnished with *1-2* lobules at the base; corolla hardly exceeding the calyx ; stamens inclosed. *$* . H. Native of the Andes of Chili, at the baths of Collina. Habit of *P. circinata.* Flowers almost like those of *Eutoca phacelioides,* but the placentas are constantly biovulate.

Short-flowered Phacelia. Ph l| foot.

3 P. CIRCINA'TA (Jacq. fih eclog. 1. p. 135. t. 91.) leaves usually pinnate, but sometimes undivided : lobes oblong or ovate, quite entire, unequal; corolla more than one-half longer than the calyx; stamens exserted. *$* . or *If..* H. Native of Chili, Straits of Magellan, Commerson ; Peru, Ruiz, et Pavon ; Mexico, on Mount Orizaba, Schiede and Deppe ; California, Chamisso, Douglas, &c.; on the Columbia, Dough and Scouler; on the banks of the Kooskoosky, Lewis. P. Peruviana, Spreng. syst. 1. p. 584. Cham, in Linnsea, 4. p. 494. P. California, Cham. 1. c. P. heterophylla, Pursh. fl. amer. sept. 1. p. 140. P. rudis, Dough mss. P. hastata, Dough mss. ex Lehm. pug. *2.* p. *20.* Heliotrdpium pinnatum, Vahh symb. 3. p. 21. Hydrophyllum Magellanicum, Lam. journ. d'hist. nat. 19. p. *373.* H. Aldea, Rccm. et Schultes, syst. 4. p. 114. Aldea pinnata, Ruiz, et Pav. fl. per. 2. p. 8. t. 114. Aldea circinata, Willd. enum. suppl. p. 9. Leaves ternate, or pinnate, with 5 leaflets; leaflets unequal. Spikes glomerately capitate, circinate. Plant hispid, canescent from villi and pubescence. There are several varieties of this plant, differing in the pubescence, which variation is probably owing to locality. Flowers pale blue, or purplish. Floral leaves simple. Spikes dichotomous.

Cmoinate-spiked Phacelia. Fh June, July. Clt. 1817. Ph 1 to *2* feet.

4 P. INTEGRIFÒLIA (Torrey, in ann. lye. new york, 2. p. 222. t. 3.) leaves ovate, undivided, crenately serrated ; stamens exserted. %.? H. Native of the banks of the river Platte.

Entire-leaved Phacelia. PL 1| foot ?

5 P. CILIVTA (Benth. in Lin. trans. 17. p. 280.) clothed with scabrous pubescence; leaves pinnate : leaflets oblong, obtuse, somewhat pinnatifid; calycine segments ovate, rather membranous, reticulated, ciliated on the margins ; stamens about equal in length to the corolla. %. 1 H. Native of California, Douglas. Leaves almost like those of *Eutoca Cumingii,* and with the habit of *Eutoca brachtfloba,* but the placentas are biovulate.

Ci/wted-caiyxed Phacelia. PI. 1 to 2 feet.

6 P. RAMOSÍSSIMA (Dougl. mss. ex Lehm. pug. 2. p. 21. Benth. 1. c.) clothed with scabrous glandular pubescence or hispid; leaves pinnate: leaflets ovate, obtuse, somewhat pinnatifid ; calycine segments oblong, green, hispid ; stamens exserted. %. ? H. Native of California, and on the Columbia, Douglas. Branches elongated, divaricately-branched, few-leaved. Flowers rather smaller than those of *P. circinata.* Corolla and ovarium glabrous. Calyx ciliated with glandular hairs.

Much-branched Phacelia. PL 1 to 2 feet ?

7 P. TANACETIFÒLIA (Benth. 1. c.) clothed with scabrous pubescence, or hispid; leaves bi«pinnatifid : leaflets oblong, dentately pinnatifid; calycine segments oblong-linear, hispid ; stamens exserted. 7£.? H. Native of California, Douglas. Lindl. bot. reg. t. 1696. Stem branched at the base. Flowers blue, a little smaller than in *P. circinata.*

Tansy-leaved Phacelia. PL 1 to 1\ foot.

8 P. BIPINNATÍFIDA (Michx. fl. bor. amer. 1. p. 134. t. 16.) erect; leaves pinnatifid: segments deeply lobed; spikes for the most part bifid, oblong, many-flowered ; lobes of corolla entire. %. H. Native of the Western counties, principally on the Alleghany mountains, and in Kentucky, and on the Missouri, and from Pennsylvania to Virginia. Pursh. fl. 1. p. 140. P. pubéscens, Poir. diet. 5. p. 239. Plant pubescent. Corollas blue.

BipinnatifidAezved Phacelia. FL June, July. Clt. 1824. PL 1 to 2 feet.

9 P. FIMBRIA'TA (Michx. fl. bor. amer. 1. p. 134. t. 16.) assurgent, pilose ; leaves pinnate, or pinnatifid : leaflets entire; racemes loose; corolla fringed; ovaries seated on a very thick base. !£. H. Native on high mountains in Carolina, Michx. ; near Harper's Ferry on the Potomac, Pursh ; in Kentucky, Torrey. Habit of *Eiltoca Mexicdna.* Leaves sessile, or on short petioles; leaflets lanceolate, acute, glabrous beneath, but hispid from pili above. Racemes solitary; pedicels elongated. Flowers beautiful blue, ex Pursh; white, ex Michx.

Fringed-flowered Phacelia. PL 1 foot.

10 P. GLA'BRA (Nutt. 1. c. p. 192.) erect; leaves pinnatifid; superior ones stem-clasping, ciliated : segments almost entire ; calycine segments ovate ; lobes of corolla entire, naked; filaments bearded at the base. 0 or £. H. Native of the Arkansas, in humid and elevated woods, on the edges of rivulets, near the Dardanelle settlement. Very like the following, growing, however, not more than *5-6* inches high. Segments of the lower leaves 3-4 pairs, somewhat incisely toothed, and obtuse; the upper leaves pectinately pinnatifid. Calycine segments ovate, ciliated. Corolla lilac-blue, campanulate, rather large and pilose externally; the lobes sub-oval, having 10 purplish spots at the base of the corolla. Stamens a little exserted. Capsule smooth, 4 to 8-seeded.

Glabrous Phacelia. Fl. April. PL \ foot.

I I P . HIRSXJTA (Nutt. in amer. phil. soc. trans, n. s. 5. p. 191.) stem erect, branched; leaves pinnatifid: superior ones sessile : segments nearly entire ; calycine segments linear, spreading ; lobes of corolla entire, naked ; filaments bearded at the base. ©. £ . H. Native of the Arkansas, in sylvan prairies ; common from the Cadron to the garrison at Belle Point. The whole plant hairy. Upper leaves pectinately pinnatifid; the segments of the lower leaves sparingly toothed; those of the upper ones linear and entire. Spikes simple, rarely bifid ; pedicels longer than the calyxes. Calycine segments linear. Corolla campanulate, purplish blue, 5-grooved, the grooves naked and melliferous. Capsule ovate, hairy, 4-8-seeded, the ovarium 8-10-ovulate.

Hairy Phacelia. FL April, May. PL f to 1 foot.

12 P. CONFE'RTA (Hook. bot. mag. t. 3452. D. Don, in Sweet, fl. gard. n. s. t. 327.) clothed with hoary down, intermixed with bristly hairs; leaves bi-pinnatifid: segments ovate-oblong, acute, deeply serrated; calycine segments linear-lanceolate, acute; stamens exserted. Q. H. Native of Texas. Racemes terminal, many-flowered, cymose, often forked, bractless. Corolla campanulate, pale blue. Placentas biovulate.

Crowded-flowered Phacelia. Fl. July, Oct. Clt. 1835. PL 1 to 1\ foot.

Cult. Some of the species of *Phacèlia* are pretty when in blossom. They all require a sheltered situation, and as they are apt to rot in the winter, the situation in which they are grown should also be dry. A few duplicate plants of each should be grown in pots, in order that they may be sheltered in winter. AU are increased by seeds.

VI. EMMENA'NTHE (from t/z/zcwjcj *emmenes,* permanent; and *CLVQOQ, anthos,* a flower; in allusion to the corolla being permanent.) Benth. in Lin. trans. 17. p. 281.

LIN. SYST. *Pentdndria, Monogynia** Corolla permanent. Ovarium oblong compressed, clothed with glandular pubescence. Placentas linear, adnate by the back, 8-ovulate. Capsule falsely 2-celled, from the half complete dissepiment, which is thickened at the axis.—An elegant, erect, branched herb, clothed with rather clammy villi. Leaves alternate, pinnatifid, half stem-clasping, not auricled at the base. Racemes numerous, erect, slender, circinate before florescence; pedicels slender, longer than the flowers. Flowers pendulous, 5 lines long. Calyx pubescent, rather clammy. Corolla campanulate, white or yellowish ? spotted with purple inside at the base; corolline processes 10, minute, at the base of the corolla. Stamens shorter than the corolla. The capsule is somewhat 4-celled from the placentas being thickened at the axils.

1. E. PENDULIFLORA (Benth. 1. c.) 1/.? H. Native of California, Douglas.

Pendulous-flowered Emmenanthe. PL erect.

Cult. For culture and propagation see *Phacèlia,* above.

N.B. Phacèlia furcàta, Dougl. mss. is a Polemoniaceous plant allied to Gilia, and probably a new genus, ex Benth. Convólvulus platycárpus, Cav. and a few others may be Hydrophyllaceous plants.

ORDER CLXVII. SOLANACEiE (this order contains plants agreeing with *Solanum,* or the potatoe tribe, in particular characters.) Solanese, Juss. gen. p. 124. ed. Usteri, p. 138. R. Br. prod. p. 443. ed. Nees, p. 299. Bartl. ord. nat. pp. 122. 193.

Calyx usually 5-cleft, rarely 4-cleft, permanent, inferior.

Corolla monopetalous, hypogynous ; limb 5-cleft, rarely 4-cleft, regular, or a little unequal, deciduous, with the aestivation plicate in the legitimate genera ; but imbricate in the spurious ones. Stamens epipetalous, equal in number to the segments of the corolla, and alternating with them, one of which is sometimes abortive. Ovarium 1-2-3-4-celled, many-seeded. Style one ; stigma obtuse, rarely lobed. Fruit or pericarp 2-4-celled ; a capsule with a parallel or duplicate dissepiment; or a berry having the placentas adnate to the dissepiment. Seeds numerous, sessile. Albumen fleshy. Embryo inclosed, more or less arched, usually excentrical, with the radicle tending to the umbilicus.—Herbs or * shrubs. Leaves alternate, undivided or lobed: floral ones placed nigh together, often twin. Inflorescence variable, usually extra-axillary ; pedicels bractless.

This order is distinguished from *Scrophuldrince,* particularly in the arched or spiral embryo ; in the plicate aestivation *of* the corolla, and in the flowers being generally regular, and the stamens equal.—Perhaps those genera, having the aestivation of the corolla not plicate, and the embryo straight, should be excluded, or combined into a separate order with those having the aestivation of the corolla imbricate, the embryo arched, and the stamens didynamous.

The *Deadly Nightshade* represents this order, which participates very generally in its qualities, although they are very frequently hidden beneath a fairer form, and often much mitigated. Many of the *Solanums* are very handsome. The root of *S. tuberosum* is the common potatoe. The *Verbdscums, Daturas, Soldndras,* and *Brunfelsias,* &c. are all plants of great beauty, although the former, on account of their frequency, are despised in gardens. *Capsicums* are famous for their pungent fruits and seeds ; the Cayenne pepper being the pulverized fruit of several species ; *Brunfelsias* for their fragrance and beauty ; and *Nicotianas* or *Tobacco* for their fetor. The leaves of the whole order have a disagreeable smell. The usual effect of solanaceous plants is narcotic ; but it is thought that this has been exaggerated on account of the intense and deleterious properties of *A'tropa Belladonna.* These, according to the observations of Vauquelin, depend upon the presence of a bitter, nauseous matter, which is soluble in spirits of wine, forming with tannin an insoluble compound; and giving out ammonia when decomposed by fire. Notwithstanding the narcotic power of the roots of *Mandrake,* the *Belladonna,* and others, those of the potatoe are found to contain an abundant fecula, which is among the most valuable food for man. The leaves of many Solanaceous plants are exciting and narcotic, but in very unequal degree, as in *Tobacco, Physalis, Henbane, &cc.* ; those of the *Nightshade* excite vertigo, convulsions, and vomiting. The juice *of Stramonium* is given in North America in doses of from 20 to 30 grains, in cases of epilepsy. The fruit of *Physalis Alkekengi* is a veterinary diuretic ; those of *P. edulis, pubescens,* and others, are used in tarts; that of *Lycopersicum vulgare,* and that of the *Solanum Melongena,* are served at tables in various forms, under the name *of Tomatoes* and *Aubergines.*

Synopsis of the genera.

TRIBE I.

SOLA'NE*:. Limb of corolla plicate in aestivation. Stamens equal in number to the segments of the corolla. Anthers dehiscing lengthwise, except in the genus *Solanum.* Embryo much curved. Fruit baccate. Placentas usually adnate to the dissepiment.

1 SOLA'NUM. Calyx 5-cleft, rarely 4-cleft. Corolla rotate, rarely campanulate, usually 5-cleft. Anthers connivent, dehiscing by pores at apex. Berry 2, rarely 4-celled.

2 LYCOPE'RSICUM. Calyx 5-6-parted. Corolla rotate, 5-6-cleft. Anthers conniving, membranous at top, dehiscing lengthwise. Berry 2-3-celled. Seeds villous.

3 PELTANTHE'RA. Calyx 5-parted. Corolla rotate. Anthers hamately-sagittate, dehiscing lengthwise, furnished each with a peltate, sessile appendage on the back.

4 CA'PSICUM. Calyx 5-toothed. Corolla rotate. Anthers conniving, dehiscing lengthwise. Berry *2,* rarely 3-celled, chartaceous, hollow, naked.

5 PHYSA'LIS. Calyx 5-toothed. Corolla campanulately rotate. Anthers connivent, dehiscing lengthwise. Berry 2-celled, hidden by the inflated calyx.

6 SARA'CHA. Calyx 5-cleft. Corolla campanulately rotate, reflexed. Stamens bearded. Anthers separate, dehiscing lengthwise. Berry 2-celled, covered by the calyx to the middle.

7 WITHERI'NGIA. Calyx 4-5-cleft. Corolla rotate, 4-5-cleft. Anthers connivent, dehiscing lengthwise. Berry 2-celled, propped by the calyx.

8 NETOU'XIA. Calyx 5-parted. Corolla salver-shaped ; throat furnished with an entire, tubular, short corona. Anthers dehiscing lengthwise.

9 MANDRA'GORA. Calyx turbinate, 5-cleft. Corolla campanulate. Stamens dilated at the base, and connivent. Ovarium biglandular at the base. Berry solid, 1-celled.

10 A'TROPA. Calyx loose, 5-cleft. Corolla campanulate, ventricose. Stamens usually exserted. Stigma depressed. Berry 2-celled ; placentas free.

• 11 ANISODUS. Calyx campanulate, unequally 5-lobed. Corolla campanulate. Stamens straight. Berry 2-celled, inclosed in the inflated calyx, operculate.

12 NICA'NDRA. Calyx 5-parted, inflated; segments sagittate. Corolla campanulate. Stamens incurved. Berry fleshy, dry, 3-5-celled, covered by the calyx.

13 LY'CIUM. Calyx 5-toothed, or 3-5-lobed. Corolla funnel-shaped or tubular. Stamens usually exserted. Stigma depressed. Berry 2-celled.

14 ACNISTUS. Calyx 5-toothed. Corolla funnel-shaped ; limb imbricate in aestivation, reflexed. Stamens exserted. Stigma funnel-shaped. Berry 2-celled.

15 JABAROSA. Calyx 5-cleft. Corolla campanulate or tubular; limb induplicate in aestivation. Stamens short, inserted towards the top *of* the tube. Berry 2-3-celled.

TRIBE II.

NICOTIA'NE^. Limb of corolla plicate in sestivation. Stamens equal in number to the segments of the corolla, rarely fewer. Fruit capsular, 2-celled, usually 2-valved ; valves bifid at apex. Calyx and corolla 5-cleft. Embryo much curved.

16 NICOTIA'NA. Calyx tubular. Corolla funnel-shaped, or salver-shaped ; limb equal. Stamens rather unequal, inclosed or exserted. Capsule dehiscing by 4 parts at apex ; placentas free.

17 SAIRA'NTHUS. Calyx campanulately ventricose, unequal. Corolla funnel-shaped; tube ventricose above, a little curved ; limb subringent, rather unequal. Stamens unequal, a little exserted. Capsule as in *Nicotiana.*

18 LEHMA'NNIA. Corolla ringent, with a narrow, incurved tube ; limb campanulate. Stamens exserted, unequal, recurved. Capsule covered by the calyx ; placentas free.

19 PETU NIA. Segments of calyx foliaceous, spatulate. Corolla with a short tube, and a dilated, rather unequal limb. Stamens unequal, inclosed. Placentas adnate.

20 NIEREMBE'RGIA. Calycine segments foliaceous, lanceolate, or spatulate. Corolla with a long slender tube ; and an equal, dilated limb. Stamens exserted ; filaments combined at the base. Stigma transverse or peltate. Placentas adnate.

21 SALPIGLOSSIS. Calyx 5-angled, 5-cleft. Corolla funnel-shaped, 5-lobed; lobes 2-lobed. Stamens didynamous, with the rudiment of a fifth between the 2 longer ones. Style tongue-shaped at apex; stigma truncate, transverse.

22 SCHIZA'NTHUS. Calyx 5-parted. Limb of corolla 4-parted, lobed, irregular. Stamens 4, 2 upper ones sterile. Stigma compressed, obtuse.

23 SCOPOLIA. Calyx and corolla both campanulate, equal. Stamens approximate, bent towards the* lower side of the corolla. Capsule operculate ; placentas adnate.

24 PHYSOCLGE'NA. Calyx ventricose. Corolla campanulate, regular. Stamens inclinate. Capsule hidden by the calyx, operculate ; placentas adnate.

25 HYOCY'AMUS. Calyx ventricose. Corolla campanulately funnel-shaped ; limb unequal, with one of the segments larger than the rest. Stamens inclinate. Capsule immersed in the calyx, operculate ; placentas adnate.

TRIBE III.

DATU'REJE. Limb of corolla plicate in sestivation, repandly 5-toothed. Stamens equal in number to the teeth of the corolla. Capsule coriaceous, succulent, 2-celled, 4-valved at apex. Placentas septiform, free. Seeds reniform. Stamens inclosed.

26 DATU'RA. Calyx angular, 5-toothed, deciduous. Corolla conically funnel-shaped. Stigma 2-lobed. Capsule smooth, or echinated.

27 BRUGMA'NSIA. Calyx ventricose, angular, 2-3-cleft, or entire, spathaceous, bursting lengthwise, on one side. Corolla clavately funnel-shaped. Stigma thickened, 4-furrowed. Capsule smooth.

28 SOLA'NDRA. Calyx tubular, angular, 3-5-cleft, bursting on one side. Corolla clavately funnel-shaped; lobes fringed. Capsule smooth, 4-cefled.

29 ULLOA. Calyx inflated, large, 5-parted, permanent. Corolla clavately funnel-shaped, gibbous under the throat, and contracted above, short; limb small, with roundish, spreading segments. Berry girded by the calyx.

TRIBE IV.

FRANciscE^s. Limb of corolla plicate in aestivation, 5-lobed, rather unequal. Stamens 4, didynamous, that is, 2 long and 2 short, without any rudiment of a fifth, inclosed. Ovarium girded by a cupulate disk. Capsule 2-celled, 2-valved ; valves bipartible at top. Placentas inserted into the dissepiment. Seeds numerous, angular. Embryo terete, straight.

30 BRUNFE'LSIA. Calyx 5-toothed- Corolla salver-shaped ; imbricate ? Stigma bilabiate. Fruu ^cate; dissepiment contrary, placentiferous.

31 FRANCISCEA. Calyx 5-toothed. -olla salver-shaped. Stigma 2-lobed. Capsule 2-celled; disst ^ent parallel with the valves, separating from the parietes at the base.

32 BROWA'LLIA. Calyx 5-toothed. Corolla salver-shaped, resupinate. Stigma 2-lobed, 4 tubercled. Capsule 2-celled. Dissepiment contrary ; placentas fleshy.

TRIBE V.

ANTHOCE'RCEJE. Corolla regular, not plicate. Stamens 4, didynamous, with the rudiment of a fifth. Embryo arched. Pericarp capsular, or baccate, 2-celled, 2-valved.

33 ANTHOCE'RCIS. Calyx 5-cleft. Corolla campanulate; limb equal. Stamens inclosed. Fruit capsular, having the margins of the valves bent in, and inserted in the parallel placentas. Seeds reticulated.

34 DUBOISIA. Calyx bilabiate. Corolla campanulately funnel-shaped ; limb 5-parted, nearly equal. Stamens inclosed. Fruit baccate. Seeds sub-reniform.

TRIBE VI.

NOLANIE^£:. Corolla plicate in aestivation, 5-lobed. Stamens equal in number to the lobes of the corolla. Ovaria 1 to 5, or more, crowded, seated on a fleshy annular disk. Stigma capitate. Drupe solitary, or 5 together, containing each a 2-4-celled bony nut, marked by 3-4 grooves, and 3-4 little holes beneath. Embryo filiform, gyrate, somewhat perepheric.

35 NOLA'NA. Calyx 5-cleft. Corolla campanulate, regular. Drupes Visually 5, containing each a 3-4-celled bony putamen. Seeds roundish,

36 TRIGUERA. Calyx 5-cleft. Corolla campanulate ; limb somewhat bilabiate, the 2 superior segments sub-reflexed. Drupe solitary, containing a 4, rarely a 2-celled putamen. Seeds ovate, 2 in each cell, compressed,

37 CRABOWSKIA. Calyx 5-toothed. Corolla funnel-shaped ; lihR> convolute in aestivation, reflexed. Drupe solitary, containing £* 2-celled bony putamens; cells 1-seeded.

TRIBE VII.

CESTRINEA:. Limb of corolla plicate, valvate, or induplicate in aestivation. Calyx 5-toothed. Corolla funnel-shaped, 5-lobed, regular; tube elongated ; limb usually spreading. Stamens equal in number to the lobes of the corolla. Anthers dehiscing lengthwise. Ovarium seated on a cupulate disk. Pericarp capsular, or baccate, 2-celled. Placentas adnate to the dissepiment, or free. Embryo nearly straight.

§ 1. *Fruit baccate,*

38 CE'STRUM. Limb of corolla conduplicate in aestivation, ex Schotte, plicate, ex Kunth. Stamens inclosed. Berry 1-celled, few-seeded. Placentas central, free.

39 DUNA'LIA. Limb of corolla plicate in aestivation. Stamens inclosed ; filaments tripartite. Berry 2-celled ; placentas adnate. Seeds many, lenticular.

40 MEYE'NIA. Corolla clavately tubular; limb 5-toothed, contracted, conduplicate in aestivation. Stamens inclosed. Berry 2-celled ; seeds irregularly ovate. Embryo straight.

41 DA'RTUS. Calyx 5-cleft. Corolla with a globose tube, and a 5-cleft limb. Stamens inclosed. Stigma 5-lobed. Berry excoriate, diaphanous, 1-celled, many-seeded. Seeds small, unequal.

§ 2. *Fruit capsular.*

42 VE'STIA. Limb of corolla valvate in aestivation. Stamens exserted, bearded at the base. Capsule 2-celled, 4-valved, many-seeded. Placentas adnate. Embryo straight.

43 SE'SSEA. Limb of corolla plicate in aestivation; tube globose. Stamens villous, curved at the base. Capsule cylindrical, 2-celled, 4-valved at apex. Seeds oblong-compressed, with membranous edges.

44 FABIA'NA. Limb of corolla short, revolute, plicate in aestivation. Stamens unequal, 2 longer. Capsule 2-celled, 2-vaiWed. Seeds dotted.

45 LAURE'RIA. Calyx 5-parted, alately pentagonal. Limb of corolla plicate? short, straight. Stamens inclosed, villous at the base. Capsule 2-celled, 2-valved. Seeds copious, full of impressed dots; placentas adnate, lamelliform. Embryo cylindrical, incurved.

46 LAMA'RKIA. Calyx tubular, pentagonally-prismatic, half 5-cleft. Corolla somewhat funnel-shaped ; limb spreading, equal, blunt. Stamens equal in length to the tube. Capsule oblong, terete, coarctate at top, many-seeded.

Tribe I.

SOLA'NEJE. Limb of corolla plicate in aestivation. Stamens equal in number to the segments of the corolla. Embryo curved. Fruit baccate.

I. SOLA'NUM (a name given by Pliny, but the derivation is uncertain, some derive it from *Sol,* the sun ; others say it is *Sulanum,* from *Sus,* being serviceable in disorders of swine ; and others from *Solor,* to comfort, from its soothing narcotic effects; all these conjectures are, however, improbable.) Tourn. inst. p. 149. t. 62. Lin. gen. no. 251. Schreb. gen. no. *837.* Juss. gen. 126. ed. Usteri, p. 141. Gaertn. fruct. t. 131. Moench. meth. p. 473. R. Br. prod. 444. Dunal. mon. sol. 115.—Melongena, Tourn. inst. p. 151. t. *65.*—Pseudo-capsicum, Moench. meth. p. 476.—Nycterium Vent. jard. malm. p. 85.—Aquartia Jacq. amer. p. 15. t. 12.

LIN. SYST. *Pentdndria, Monogynia.* Calyx permanent, 5 rarely 4-cleft. Corolla rotate, rarely campanulate, 5 rarely 4-cleft. Anthers oblong, connivent, dehiscing by 2 pores at the apex. Berry almost globose, 2-3-4-celled, but usually 2-celled.—Herbs or shrubs, unarmed, or prickly, rarely spiny. Leaves undivided, sinuated, lobed, impari-pinnate, or decompound, usually alternate, but in many species twin, rarely tern. Peduncles solitary or numerous, simple or multifid, axillary, or extra-axillary, 1, or many-flowered, opposite the leaves, or scattered, or terminal. The pedicles in *Sol. tuberosum* are articulated under the flower. The fruit of *S. esculentum* is large and 5-celled. In some species the flowers are sometimes 6-9-cleft.

SECT. I. INE'RMJS^ Unarmed shrubs or herbs.

SUBSECT. 1. POTATOE. *Leaves impari-pinnate, pinnatifid, ternate or entire. Flowers corymbose or racemose, terminal, lateral, and axillary.*

§ 1. *Leaves impari-pinnate. Racemes corymbose, terminal.*

1 S. TUBEROSUM (Lin. spec. ed. 1st. p. 185.) root bearing tubers; stems herbaceous ; leaves unequally pinnate ; leaflets entire ; pedicels articulated. %. H. Native of South America, on the west coast every where. Bergeret, phyt. 1. p. 231. icon. Blackw. t. *523.* Lycopersicum tuberosum, Mill. diet. Sol. tuberosum esculentum, Bauh. pin. 167. Tourn. inst. 149. Papas Americanum, Bauh. hist. 3. p. 621. icon. Batata Peruviana, Park, theatr. ger. hist. 927. Papas Peruanorum, Besl. hort. eyst. 3. p. 1. f. 1. Clus. hist. 2. book. 4. p. 79. icon. The common potatoe varies much in the leaves, colour of the flowers, shape and colour of the roots, &c.

The potatoe is called *Pomme de Terre* in France, *Cartoffel* in Germany, *Porno de Terra* in Italy, *Openauk* in Carolina, and *Papas* in Peru. It has been found wild in Chili, on the mountains near Valparaiso and Mendosa ; and also near Lima, Quito, and Santa Fe de Bogota; and lately in Mexico, on the Pic d' Orizaba, by Deppe and Schiede. Sir Joseph Banks considers that the potatoe was first brought into Europe from the mountainous parts in the neighbourhood of Quito, where they were called *Papas,* to Spain in the early part of the 16th century. From Spain, where they were called *Batatas,* they appear to have found their way first to Italy, where they received the same name with the truffle, *Taratoufli.* The potatoe was received by Clusius, at Vienna, in 1598, from the governor of Mons, in Hainault, who had procured it the year before from one of the attendants of the Pope's legate, under the name of *Taratoufli,* and learned from him that it was then in use in Italy. In Germany it received the name of *Cartoffel,* and spread even rapidly in the time of Clusius. To England the potatoe found its way by a different route, being brought from Virginia by the colonists sent out by Sir Walter Raleigh in 1584, and who returned in July, 1586, and "probably," according to Sir Joseph Banks,

"brought with them the potatoe." Thomas Herriot, in a report on the country, published in De Bry's collection of voyages, vol. 1. p. 17, describes a plant called *Openawk*, with "roots as large as a walnut, and others much larger: they grow in damp soil, many hanging together, as if fixed on ropes; they are good food either boiled or roasted." Gerarde in his herbal, published in 1597, gives a figure of the potatoe, under the name of the potatoe of Virginia, whence he says he received the roots; and this appellation it appears to have retained, in order to distinguish it from the Batatas, or sweet potatoe (the *Batatas edilis*), till the year 1640, if not longer. "The sweet potatoe," Sir Joseph Banks observes, "was used in England as a delicacy long before the introduction of our potatoes; it was imported in considerable quantities from Spain and the Canaries, and was supposed to possess the power of restoring decayed vigour. The kissing comfits of Falstaff, and other confections of similar imaginary qualities with which our ancestors were duped, were principally made of these said eryngo roots." It appears from Gough's edition of Camden's Britannia, that the potatoe was first planted by Sir Walter Raleigh on his estate at Youghall, near Cork, and that it was "cherished and cultivated for food in that country long before its value was known in England, for though they were soon carried over from Ireland into Lancashire, Gerarde, who had this plant in his garden in 1597, under the name of *Batata Virginiana*, recommends the roots to be eaten as a delicate dish, not as common food. Parkinson mentions that the tubers were sometimes roasted, and steeped in sack and sugar, or baked with marrow and spices, and even preserved and candied by the comfit makers. In 1663 the royal society took some measures for encouraging the cultivation of the potatoe, with the view of preventing famine. Still, however, although their utility as a food was better known, no high character was bestowed on them: in books of gardening, published towards the end of the 17th century, a hundred years after their introduction, they are spoken of rather slightingly. "They are much used in Ireland and America as bread," says one author, "and may be propagated with advantage to poor people." "I do not hear that it hath been yet essayed," says another author, "whether they may not be propagated in great quantities for food for swine or other cattle." Even Evelyn seems to have entertained a prejudice against them. "Plant potatoes," he says, writing in 1699, "in your worst ground. Take them up in November for winter spending, there will enough remain for a stock, though ever so exactly gathered." The famous nurserymen, London and Wise, did not consider the potatoe as worthy of notice in their complete gardener, published in 1719; and Bradley, who about the same time wrote so extensively on horticultural subjects, speaks of them as inferior to skirrets and radishes. But the use of potatoes gradually spread, as their excellent qualities became better understood. It was near the middle of the 18th century, however, before they were generally known over the country; since that time they have been most extensively cultivated. In 1795 it was found that in the county of Essex alone about 1700 acres were planted with potatoes for the supply of the London market. This must form, no doubt, the principal supply; but many fields of potatoes are to be seen in other counties bordering on the capital, and many ship-loads are annually imported from a distance. In every county in England it is now more or less an object of field culture.

The cultivation of potatoes in gardens in Scotland was very little understood till about the year 1740, and it was not practised in fields till about 20 years after that period. It is stated in the general report of Scotland, vol. 2. p. 111, as a well ascertained fact, that in the year 1725–6 the few potatoe plants then existing in gardens about Edinburgh were left in the same spot of ground from year to year, as recommended by Evelyn; a few tubers were perhaps removed for use in the autumn, and the parent plants were then well covered with litter to save them from the winter's frost. Since the middle of the 18th century, the cultivation of potatoes has made rapid progress in that country, so that they are now to be seen in almost every cottage garden, and fields of them on every farm. "The potatoe is now considered the most useful esculent that is cultivated, and who," Neill asks, "could *a priori* have expected to have found the most useful among the natural family of the *Luridæ* (Solanaceæ) most of which are deleterious, and all of which are forbidding in their aspect."

Use.—The tubers of the potatoe, from having no peculiarity of taste, and consisting chiefly of starch, approach nearer to the nature of flour, or farina of grain, than any vegetable root production, and for this reason it is the most universally liked, and can be used longer in constant succession by the same individual without becoming unpalatable than any other vegetable, the seeds of grasses excepted. "So generally is it relished, and so nutritious is it accounted," Neill observes, "that on many tables it now appears almost every day in the year. It is commonly eaten plainly boiled, and in this way it is excellent. When potatoes have been long kept, or in the spring months, the best parts of each tuber are selected and mashed before going to table. Potatoes are also baked, roasted, and fried. With the flour of potatoes puddings are made nearly equal in flavour to those of millet. With a moderate proportion of wheat flour bread of excellent quality may be formed of it, and potatoe starch, independently of its use in the laundry, is considered an equally delicate food as sago or arrow-root."

Varieties.—These are very numerous, not only from the facility of procuring new sorts by raising from seed, but because any variety cultivated for a few years in the same soil and situation, as in the same garden or farm, acquires a peculiarity of character or habit which distinguishes it from the same variety in a different soil and situation. The varieties being so numerous, we shall only mention those generally cultivated. They may be distinguished in regard to precocity, largeness, form, size, colour, and quality. The earliest varieties are, 1. Hogg's early frame, a small watery potatoe, fit only for very early forcing. 2. Royal dwarf, a mealy potatoe, much grown at Perth. 3. Early Manchester, waxy and red. 4. Common early frame, waxy. 5. Fenn's yellow seedling, similar to the last, but rather larger, waxy. 6. American early, much esteemed at Edinburgh. 7. Early dwarf, waxy. 8. Early ash-leaved, dry. 9. Earl champion, large. 10. M'Leod's early, dry. None of the above sorts, when true, produce blossoms; they are roundish in form, small sized, white, and not of the best quality.

The latest sorts are, 1. The round purple. 2. The oblong purple. 3. The speckled purple or tartan, commonly grown on mossy soils in Scotland. 4. The American red, grown to a great extent in Scotland.

The form of potatoes is either round, oblong, or kidney shaped; of the round the most esteemed are, 1. The champion, late and early varieties. 2. The oxnoble, very large, and of a peculiar flavour, not generally esteemed. 3. The round-red, middle-sized, smooth. 4. The round-rough red, or Lancashire. 5. The small American. 6. The leather-coat, with a rough, brownish coat. Of the oblong the most esteemed are, 1. The red-nosed oval, often confounded with the red kidney. 2. The oblong-red, variegated with white. 3. The oblong white. 4. The American red, long and thick. 5. The Irish red, or pink, oblong and entirely red, with hollow eyes. 6. The bright red, blood-red, or apple potatoe, ovate, with small full eyes, much grown in Cheshire and Lancashire. The kidney-shaped sorts are as follow. 1.

The Swinton white kidney, of a peculiar flavour, esteemed by many. 2. The red kidney, reckoned somewhat more hardy. 3. The black kidney.

In size the early sorts are the least, and the ox-noble and the champion the largest. In colour the earliest sorts are in general white, the oblong sorts red, and the latest sorts purple.

In quality potatoes are either watery, as the very early sorts; waxy, as the American and Irish reds; or mealy, as the ash-leaved early, the champion, the kidney, &c.

The following sorts for forcing in frames, or for the first crop in the open garden are recommended by London nurserymen.

1. Pease's seedling. 2. Early mealy. 3. Early mule. 4. Brazelton dwarf.

For general cultivation in the open garden or field.

1. Early kidney, good flavour and very early, keeps well. 2. Norwich, early, prolific. 3. Early straw, good early sort for general use. 4. Small American, small white, much esteemed.

For main crops the following sorts are arranged in order of their ripening.

1. Early champion, very generally cultivated, prolific and hardy. 2. Red-nose-kidney. 3. Large kidney. 4. Bread-fruit, prolific, white, and mealy. 5. Lancashire pink-eye, good. 6. Black skin, mealy, white, and good. 7. Purple, very mealy, productive, and keeps well. 8. Red apple, keeping the longest of any. 9. Red American, keeps well.

In general every town and district has its peculiar and favourite varieties, so that, excepting as to the best early kinds, and the best for a general crop in all soils, any list, however extended, could be of little use. Dr. Hunter, in his geological essays, has limited the duration of a variety to fourteen years, and Knight, Hort. trans. vol. 1, concurs with him in opinion. There are some excellent sorts of party coloured potatoes in Scotland, which degenerate when removed from one district to another; and most of the Scotch and Irish varieties degenerate in England. The best mode, therefore, to order potatoes for seed is to give a general description of the size, colour, form, and quality wanted, and whether for an early or late crop.

Propagation.—The potatoe may be propagated from seed, cuttings or layers of the green shoots, sprouts from the eyes of the tubers, or portions of the tubers containing a bud or eye. The object of the first method is new, or improved varieties; of the second little more than curiosity, or to multiply as quickly as possible a rare and excellent sort; and of the third to save the tubers for food. The method by portions of the tubers is the best, and that almost universally practised for the general purposes both of field and garden culture. One good eye to each set is sufficient, and in making the sets reject the extreme watery end of the tuber, as apt to run too much to haulm; reject also the extreme portion of the dry end, as more likely to be tardy in growth, and produce the curl. The middle portion is therefore the best.

When grown from seed the quality of the kinds cannot be ascertained till the end of the second summer. The earliest varieties of potatoes, it has been already remarked, do not produce flowers or seed. T. A. Knight, desirous of saving seed from one of these sorts took a very ingenious method of inducing the plants to produce flowers. "I suspected the cause," he says, "of the constant failure of the early potatoe to produce seeds to be the preternaturally early formation of the tuberous root, which drawn off for its support that portion of the sap which in other varieties of the same species affords nutriment to the blossoms and seeds, and experiment soon satisfied me that my conjectures were perfectly well founded. I took several methods of placing the plants to grow in such a situation as enabled me readily to prevent the formation of the tuberous roots, but the following appeared the best. Having fixed strong stakes in the ground I raised the mould in a heap round the bases of them, and in contact with the stakes; on their south sides I planted the potatoes from which I wished to obtain seeds. When the young plants were about 4 inches high, they were secured to the stakes with shreds and nails, and the mould was then washed away by a strong current of water from the bases of their stems, so that the fibrous roots only of the plants entered into the soil. The fibrous roots of this plant are perfectly distinct organs from the runners which give existence, and subsequently convey nutriment to the tuberous roots; and as the runners spring from the stems only of the plants, which are, in the mode of culture I have described, placed wholly out of the soil, the formation of tuberous roots is easily prevented; and whenever this is done numerous blossoms will soon appear, and almost every blossom will afford fruit and seeds." Knight considering that the above facts, which are more fully explained in the philosophical transactions for 1806, were sufficient to prove that the same fluid or sap gives existence alike to the tuber, and the blossom, and seeds, and that, whenever a plant of the potatoe affords either seeds or blossoms, a diminution of the crop of tubers, or an increased expenditure of the riches of the soil, must necessarily take place, succeeded in producing varieties of sufficiently luxuriant growth and large produce for general [illegible] which never produced blossoms. The paper from which we quote is concluded by some excellent observations on this subject, chiefly relative to field culture, and which ought to be studied carefully by whoever intends to attempt producing new varieties from seed.

Quantity of sets.—Abercrombie directs "for a plot of early and secondary crops 8 feet wide by 16 in length, planted in rows 15 inches asunder by 9 inches in the row, a quarter of a peck of roots or cuttings. For full-timed sorts, and main crops, a compartment 16 feet wide by 32 in length, planted in rows 2 feet distant, by 12 inches in the row, half a peck of roots or cuttings will be required."

Soil and Manure.—The best soil for the potatoe is light, fresh, unmixed loam, where they can be grown without manure. Here they have always the best flavour. In a wet soil they grow sickly, and produce watery tubers, infected with worms and other vermin. To a poor soil dung must be applied; fittery dung will produce the earliest and largest crop, but mellow dung, rotten leaves, or vegetable earth, will least affect the flavour of the tubers.

Season for Planting.—"The last fortnight of March, and the first fortnight of April, is the most proper time for planting the main crops, a little earlier or later as the spring may be forward, the ground dry or wet. Occasional plantings may be made in May, or even the beginning of June."—Abercrombie.

Methods of Planting.—The sets of whatever kind, or the plants forwarded in pots to be turned out with their balls entire for producing an early crop in the open air, should always be inserted in regular rows, the object of which is to admit with greater facility the stirring the earth between, and the earthing up of the plants. The rows may be 15 inches apart for the small early sorts, and for the larger 20 inches, or 2 feet, according to the poorness or richness of the soil. In the lines traced make holes for the sets at 8, 12, or 15 inches distance, letting their depth not be less than 3, nor exceeding 5 inches. In light soil it is performed by a dibble with a blunt end, and a short cross iron shoulder, about 4 or 5 inches from the bottom, as a guide to make the holes of an equal depth; one person making the holes, and another dropping a set into each hole. Strike the earth in upon them fully with a dibble, hoe, or rake, either as each row is planted, or when the whole planting is finished. On strong heavy land the planting ought to be on raised beds, with alleys, or in drills on the crown or parallel

HHHH

ridges. The beds may either be raised by previous digging, throwing on good earth till the terrace rise to the desired height, or in the different method described below. To plant in drills trace them at the medium distance above specified ; form them to a proper depth with a narrow spade, or large hoe; in these place the sets a foot, or 15 inches apart, and earth over. In wet ground, however, potatoes are hardly worth growing.

Subsequent culture.—" From the March or April planting the stems generally rise fully in May : after the plants have appeared, give an effectual hoeing on dry days, cutting up all the weeds, and stir the ground about the rising stalks of the plants. When advanced from 6 to 12 inches high, hoe up some earth to the bottom of the stems, to strengthen their growth, and promote the increase below; continue occasional hoeing to eradicate weeds till the plants cover the ground, when but little farther care will be required. Permit the stalks to run in full growth, and by no means cut down, as is sometimes practised ; the leaves being the organs for transmitting the beneficial influence of the rain and air to the roots, which is most necessary to the free and perfect growth of the tubers." Abercrombie. It is now generally admitted, that a certain advantage in point of produce is obtained by pinching off the blossoms as they appear on the plants. The fact has been repeatedly proved and satisfactorily accounted for by Mr. Knight, who imagines that it may add an ounce in weight to the tubers of each plant, or considerably above a ton per acre.

Taking the crop.—Clusters of roots in the early planted crops will sometimes by June or July be advanced to a sufficient size for present eating, though still small. Only a small portion should be taken up at a time, as wanted for immediate use, as they will not keep good above a day or two. In August and September, however, they will be grown to a tolerable good size, and may be taken up in larger supplies, though not in quantities for keeping a length of time. Permit the main crops to continue in growth till towards the end of October or beginning of November, when the stalks will begin to decay, an indication that the potatoes are fully grown, then wholly dig them up, and house them for winter and spring use before severe frosts set in.

Housing and Preserving the Crop.—Abercrombie recommends housing potatoes in a close, dry, subterranean apartment, laid thickly together, and covered well with straw, so as to exclude damps and frosts. There they are to be looked over, and any that are decayed picked out. In spring, when they begin to shoot, turn them over, and break off the sprouts or shoots from each tuber perfectly close, in order to retard their future shooting as much as possible. Potatoes so stored will continue good all the winter and spring till May and June. Pieing as it is called in some places is a good method of preserving potatoes in winter. They are piled on the surface of the ground in a ridged form, of the width and length at pleasure, according to the quantity, but commonly *5-6* feet wide. This is done by digging a spit of earth, and laying it round the edge a foot wide, (if turf the better,) filling the space up with straw', and then laying on a course of potatoes ; dig earth on the outside, and lay it upon the first earth. Put straw a few inches along the inside edge, then put in more potatoes, and so on, keeping a good coat of straw all the way up between the potatoes and the mould, which should be about 6 inches thick all over ; beat it close together, and the form it lies in with the trench all round will preserve the potatoes dry, and the sharpest frost will hardly affect them, in a severe time of which the whole may be covered thickly with straw. In the spring look over the stock, and break off the shoots of those designed for the table, and repeat this business to preserve the potatoes the longer good."

Curl disease,—The disease called curl has in many places proved extremely troublesome and injurious. It has given rise to much discussion, and to detail all the various opinions would be a useless task. It may, however, be remarked, that the experiments of J. Dickson (Caled. hort. mem. 1. p. 55.) show, that it arises from the vegetable powers in the parts of the tuber planted having been exhausted by over ripening, he has shown that cuts taken from the waxy end of the potatoe produce healthy plants, while those from the dry or best ripened end either did not vegetate at all, or produced curled plants, John Shirreff (Caledon. hort. mem. 1. p. 60.) takes a general and philosophical view of the subject, applying to the potatoe the doctrine by which Mr. Knight had accounted for the disappearance of the fine cedar fruits of the seventeenth century. " The maximum of the duration of the life of every individual, vegetable as well as animal, is pre-determined by nature, under, whatever circumstances the individual may be placed : the minimum, on the other hand, is determined by these very circumstances. Admitting, then, that a potatoe might re-produce itself from tubers for a great number of years in the shady woods of Peru, it seems destined sooner to become abortive in the cultivated champaign-of Britain, insomuch that not a single healthy plant of any sort of potatoe that yields berries, and which was in culture 20 years ago, can now be produced." Mr. Shirreff concludes, therefore, that the potatoe is to be considered as a short-lived plant, and that though its health or vigour may be prolonged by rearing it in elevated or in shady situations, or by cropping the flowers, and thus preventing the plants from exhausting themselves, the only sure way to obtain vigorous plants, and to ensure productive crops, is to have frequent recourse to new varieties raised from seed. The same view, it may be remarked, had occurred to Dr. Hunter. The fact ascertained by Mr. Knight deserves to be noticed, is that by planting late in the season, perhaps in June, or even in July, an exhausted good variety may in a great measure be restored ; that is, the tubers resulting from the late planting when again planted at the ordinary season produce the kind in its pristine vigour, and of its former size. Mr. Crichton (Caled. mem. 1. p. 440.) who has made a variety of experiments on the effects of exposure to the air in hampers and open floors, and on exclusion of the air by covering with earth, concludes, " That the curl in the potatoe may often be occasioned by the way the potatoes are treated that are intended for seed. I have observed wherever the seed stock is carefully pitted, and not exposed to the air, in the spring the crop has seldom any curl, but where the seed stock is put into barns and out-houses for months together, such crop seldom escapes turning out in a great measure curled; and if but few curl the first year, if they are planted again it is more than probable the half of them will curl next season."

Forcing the Potatoe.—The potatoe is forced in a great variety of ways; but for a fair crop of tubers, which shall be somewhat dry and floury, and of the size of hens' eggs, plant sets of the ash-leaved variety in single pots, filled one-third with light earth, in January. Place them in a hot-house or hot-bed, earth them up as they appear, and about the middle or end of February, transplant them, with their balls entire, into a pit prepared as for asparagus. Distance from plant to plant 1 foot each way. Give water occasionally, and admit as much air as possible at all times. Potatoes so managed will produce a fair crop the end of March or beginning of April.

Forcing potatoes in hot-beds.—Abercrombie says, " A $ ..g crop is easily obtained soon in spring, by planting the early dwarf, or the sort called mules, on a slight hot-bed. Put in the sets pretty thickly, at 6 or 8 inches square distance, as the potatoes are not to grow large. If planted successively in January and February, they will produce young crops for use early in

April and May, to be taken up in small portions as wanted for present eating. During the growth of the plants, open the lights fully in the middle of fine dry days, but shut at night, to guard against frost. Water attentively, as the mould and weather may require. Nicol's plan is the same as that of Abercrombie. Mr. Hogg, a market-gardener in the neighbourhood of London, prepares an old cucumber or melon-bed, by removing the earth from its surface, and laying on instead an inch deep of fresh mould, on which he sets the potatoes, in rows 6 inches apart, and the potatoe sets the same distance from each other, which are then covered 4 inches deep with mould, and the frames and glasses placed upon the bed, and carefully protected from frost. At the end of the fifth day, the outside of the old dung should be cut away close to the frame, in a slanting direction inwards ; and strong linings of hot dung applied instead, which should be renewed if necessary at the end of three weeks. Air and water must be carefully given. The potatoes grown in this way are generally ready for use seven weeks nfter planting. The variety thus cultivated by Mr. Hogg is *Foxe's yellow seedling,* Mr, Knight's mode is to plant the potatoes in pots 6 inches in diameter, in January, one set in each pot ; and the pots are then set in the ground and covered with litter, to protect them from frost, and in this situation they remain till the hot-bed is ready to receive them, in which the pots are afterwards plunged.

Forcing potatoes in pots or boxes.—This is sometimes attempted in stoves. One set is placed near the bottom of a large pot, and gradually earthed up. When nearly full grown, it is taken to the cherry or peach-house, for the sake of more air. Another mode of planting in pans or boxes is thus described by Abercrombie: " Plant potatoes of the growth of the season before the last^ that is, the produce of 181G to be planted in December, 1817, or January, 1818. Potatoes so kept will appear as if surrounded by a brood of new potatoes in contact with the seed or parent potatoe. The leaf buds are removed, and the potatoes planted in a circle, and in layers, in earthen pans or wooden boxes, with alternations of fine loose earth. Such pans or boxes may be put into sheds or in shelves in the kitchen. By this treatment no leaves will emerge above the soil, and young potatoes may be reared at any required period. A similar mode has been described by Mr. Sherbrook. The boxes, containing alternate layers of light earth, and potatoes of the preceding year, are placed in a dry, covered place, free from frost; they receive no water, and produce " good, fine, young potatoes in December/' For a succession, the process is to be repeated.

Incidental forcing of potatoes.—" Small young spring potatoes are likewise obtained from some of the winter store of old potatoes, as they lie in the house ; especially where they have been mixed with sand, and permitted to shoot as they lie, when ^they produce a few small button potatoes in spring, some of which are occasionally brought to market, but only for immediate use. T. Moffat grows early potatoes thus : " A compost consisting of equal quantities of loam, sand, and coal ashes, with an addition of lime in powder, equal to about one-fifth of the whole, was formed into a bed four feet wide, and four inches deep, on the floor of a dark fruit room. Upon this bed, early in September, large potatoes, *of* the preceding year's growth, were laid, *3* inches apart every way, with their best eyes downwards ; these produced young potatoes, which became fit for use about Christmas."

Forwarding to raise a crop in the open garden.—for this purpose some spread a layer of sets on hot dung, or in boxes placed In anv warm situation, whether in the light or in the dark. After'they have sprung 3 or 4 inches, they are to be transplanted into the open ground, which should not be sooner than May, unless they have some protection at night ; such as iromis of fern, spruce-fir branches, &c. But the best method is to grow the sets one in each pot, and to plant them out with the balls entire, in May.

Substitutes for forcing potatoes. — Dr. Nochden describes the mode by leaves and layers of earth at length (in Hort. trans. 3. p. 48.), and subjoins a method of preserving young potatoes as such for winter use ; but this method we consider not worth farther notice, as it appears of no practical utility.

Field culture of the potatoe.—Notwithstanding the value of the potatoe as an article of human food, it is doubtful vvhether they can be placed so high in the scale as several other articles of produce, when the profit and loss account of the agriculturist- is to be ascertained. They require a great deal of manure from the farmer, while, generally speaking, little is returned by them ; they are a bulky unhandy article, troublesome in the lifting and carrying processes, and interfering with the seed season of wheat, the most important one to the farmer. After all, from particular circumstances they cannot be vended unless when raised in the vicinity of large towns ; hence they are, in most respects, an unprofitable article to the agriculturist. To him the real criterion is the profit which potatoes will return in feeding beasts ; and here we apprehend the result will be altogether in favour of turnips and ruta-baga, or Swedish turnip, as the most profitable articles for that purpose, although potatoes are admitted to be more nutritious, and to fatten cattle much quicker.

The varieties of potatoes cultivated in fields are innumerable. The early fiejd varieties are: 1. The early kidney. 2. The nonsuch. 3. The early straw. 4. The early Champion. The last is the most generally cultivated round London. Early varieties with local names are cultivated near most large towns. The late field varieties in most repute are : 1. The red-nose kidney. *2.* Large kidney. 3. Bread-fruit, an excellent white, mealy, good-tasted sort, raised from seed in 1810. 4. The Lancashire pink-eye, good. *5.* The black-skin, white interior, and good. 6. Purple, very mealy, productive, and keeps well. 7. The red apple, mealy, keeps the longest of any. 8. The Tartan, or purple and white-skinned, an esteemed Scotch potatoe, prolific, mealy, exceedingly well tasted, and keeps well. The varieties grown exclusively as food for live stock are : 1, The Yam or Surinam potatoe, large, red and white-skinned, and the interior veined with red ; flavour disagreeable, and not such as to admit of its being used as human food. It succeeds best on heavy lands. This is a most valuable sort for the farmer; as, with this variety *he* has an excellent assistant to his turnip crop, or rather a succedaneum, which is of material benefit when turnips are consumed, in feeding live stock ; its produce is 12-15 tons per acre. *2.* The oxnoble ; large, yellow without and within, very prolific, unfit for human food. 3. The late Champion ; large and prolific, white-skinned, and may be used as human food.

The soil in which the potatoe thrives best is a light loam, neither too dry nor too moist; but if rich it is so much the better. They are, however, grown on many other kinds of soil, where they are free from stagnant moisture, with a reasonable portion of manure added. The best flavoured table potatoes are almost always produced from a newly broken-up pasture ground, not manured, or from any new light soil. Repeated on the same soil, they very generally lose their flavour.

In preparing the soil for field potatoes, it is of much importance to free the soil as much as possible from weed roots; both because the horse-hoe must be excluded altogether when the vegetation is vigorous, and because at no period of their growth is it safe to work so near the plants, especially after they have made some progress in growth. The first ploughing is given

soon after harvest; and a second, and commonly a third, early in spring; the land is then laid up into ridglets, from 24 to 30 inches broad, as for turnips, and manured in the same manner.

The best manure for the potatoe appears to be littery farm-yard dung; and the best mode of applying it, immediately under the potatoe sets. Any manure may be applied ; and no plant will bear a larger quantity *of* it, or thrive in coarser or less prepared manure.

The season of planting early potatoes in the fields depends much on the soil. Where the soil is very dry, the potatoe sets may be planted in March ; but for a full crop April is the best time. Potatoes, indeed, are often planted in the end of May, or even in June; but the crops, although often as abundant, are neither so mellow or mature as when the sets are planted in April or in the first 8 or 10 days in May.

The time of cutting the sets should always be some days before planting, that the wounds may dry up; and no harm will result from performing the operation several weeks beforehand, provided the sets are not exposed too much to the drought. The sets ought to be large, rarely smaller than the fourth part of the potatoe. At all events, rather err in giving over large than in making them too small; because by the first error, ^reat loss can be sustained, whereas, by the other, a feeble J. late crop may be the consequence.

The modes of planting the potatoe are various; but the best are either to plant them by dibber on a plane surface in 1 or by spade in digging, or in drills, in the manner of

after culture of potatoes consists in harrowing, hoeing, lim'g> and earthing up. All potatoes require to be earthed or ^tending 6 or 7 inches round their stem. The reason of ^IS, that the tubers do not, properly speaking, grow under -\ soil, but rather on, or partially bedded in its surface. The oh may be thrown up by a spade, draw-hoe, or with a small ugh, drawn by one horse. Pinching off the whole of the po-oe blossoms is a part of after culture not unworthy of the ention of the farmer, for the reasons given by Mr. Knight.

A mode of taking part of the crop suited to cottagers and thers, especially in years of scarcity, deserves to be mentioned. Taving ascertained that some of the tubers have attained an table size, go along the rows, and loosen the earth about each lant with a blunt stick, taking 2 or 3 of the largest tubers from ach plant, and returning the earth carefully. By this means the tubers which remain will increase in size, having now the lourishment destined to complete the growth of those re-noved.

Potatoes intended for seed should be taken up a fortnight or 3 'eeks before fully ripe, for the reasons already given under arden culture.

Potatoes are stored and preserved in houses, cellars, pies, and imps. Whatever mode is adopted, it is essential that the tbers be perfectly dry, otherwise they are certain of rotting; md a few rotten potatoes will contaminate a whole mass. Put-"ng them into close houses, and covering them well up with sudw, is the most effectual mode, and that which is generally adopted. In some parts of Scotland, it is a common practice to dig pits in the potatoe-field, when the soil is dry and light, and putting in potatoes to the depth of *3* or 4 feet, to lay a little dry straw over them, and then cover them up with earth, so deep that no frost can affect them. Another method, which is prac-:ised in England as well as in Scotland, is to put them together n heaps, and cover them up with straw, and afterwards cover *ith earth, and so closely packed together as to exclude frost. Dry weather is absolutely necessary in storing potatoes, as they do not keep well when stored in a wet state ; and all cut potatoes should be carefully picked out. Pieing is also a good means of preserving potatoes, which is described under garden culture. Several other modes of preserving potatoes are in use in different places. Capping is a method similar to pieing.

The produce of the potatoe varies from 5 to 8, and sometimes 10 or 12 tons per acre ; the greatest produce is from the yam, which has been known to produce 12 tons, or 480 bushels per acre. The haulm is of no use but as manure, and is very generally burned for that purpose, being slow of rotting.

The application of the potatoe crop is of the greatest importance as human food ; and is the only root grown in Britain which may be eaten every day in the year, without satiating the palate ; they are, therefore, the only substitute that can be used for bread, with any degree of success, and indeed they often enter largely into the composition of the best loaf bread, without at all either injuring its nutritive qualities or flavour.

Among the extraordinary applications of the potatoe may be mentioned cleansing woollens, and making an ardent spirit.

Cleansing rvoollens.—The refuse of potatoes used in making starch when taken from the sieve, possesses the property of cleansing woollen cloths, without hurting their colour ; and the water decanted from the starch powder is excellent for cleansing silks without the smallest injury to the colour.

Wine of considerable quality may be made from frosted potatoes, if not so frosted as to have become soft and waterish.

Ardent spirits.—Potatoes that have been injured by the frost produce a greater quantity of spirit, and of a much finer quality than those that are fresh ; they require a proportion of malt-wash to promote the fermentation. About one-fourth part of malt-worts, or wash, ought to be fermented at least 6 hours before the potatoe-wash is joined to it; otherwise the potatoe-wash, having an aptitude to ferment, will be ripe for the still before the malt-wash is ready ; hence the effect will be to generate an acid which renders the spirit coarse, and when diluted with water, of a milky or bluish colour. When the spirit is strong, the acid is held in solution, but appears as above when diluted with water. (Farmer's Mag. 17. p. 325.)

In the application of potatoes as food for live stock, they are often joined with hay, straw, chaff, and other similar matters ; and have been found useful in many cases, in the later winter months, as food for horses, cows, and other sorts of live stock. With these substances, as well as in combination with other materials, as bean or barley-meal, and pollard, they are used in the fattening of neat cattle, sheep, and hogs. Potatoes are most nutritious when boiled ; they were formerly cooked in this way, but are now very generally steamed, especially in the North. The practice has been carried to the greatest extent by Curwen in feeding horses. He gives to each daily 1^ stone of potatoes, mixed with a tenth of cut straw. An acre of potatoes, he considers, goes as far in this way as four of hay. 120 stones of potatoes require *2*\ bushels of coals to steam them. The baking of potatoes in an oven has also been tried with success. They°are also given raw to stock of every description, to horses and hogs washed, but not washed to cows or oxen. Washing was formerly a disagreeable and tedious business ; but it is now rendered an easy matter, whether on a large or small scale, by the use of the washing machine.

Frosted potatoes may be applied to various useful purposes ; for food by thawing in cold water, or being pared, then thawed, and boiled with a little salt. Salt and saltpetre, chaff, or bruised oats, boiled with them, will render them fit food for cattle, swine, poultry, &c. Starch and paste for weavers, book-binders, and shoemakers, may be made from them, when too sweet to be rendered palatable.

The diseases of potatoes are chiefly the scab, the worm, and the curl. The scab, or ulcerated surface of the tubers, has never been satisfactorily accounted for. Some attributing it to the ammonia of horse-dung, others to alkali, and some to the use of coal ashes. Change of seed, and of ground are the only resources known at present for this malady. The worm and grub both attack the tuber; and the same preventative is recommended. The only serious disease of the potatoe is the curl ; and this is now ascertained to be produced by the concentration of the sap in the tuber ; and this concentration, or thickening, is prevented by early taking up. This discovery was first made by the farmers near Edinburgh observing that seed potatoes procured from the moors, or elevated cold ground, never suffered from the curl ; and it consequently became a practice, every 3 or 4 years, to procure a change of seed from these districts. On inquiry, it was found that potatoes of these upland grounds continued in a growing state till the haulm was blackened by the first frosts of October. They were then taken up, when, of course, they could not be ripe. Subsequent experiments has established the fact, that the curl is prevented by using unripe seed. It is also a safe practice frequently to change the seed, and also to change the variety.

Tw6erous-rooted Nightshade, or Common Potatoe. FI. May, Sept. Clt. 1597. PL 1 to 2 feet.

2 S. ETUBERÒSUM (Lindl. hot. reg. 1712.) rhizoma thick, subterraneous, without tubers ; stem herbaceous; leaflets unequal, complicate, much undulated, approximate : alternate ones minute; pedicels articulated ; calyxes and corollas 5-angled, glabrous. %. H. Native *of* Chili. Habit *of S. tuberbsum;* but the roots are without tubers: the flowers larger, on shorter pedicels ; the calyx glabrous and shining, not hispid. Corollas purple. There is a variety of *S. tuberbsum* with long, creeping rhizoma, without tubers, and white flowers, in the botanic garden of Chelsea, from Chili, which renders the present rather doubtful as a species. We suspect that this and *S, Commersbnii* are only varieties of *S. tuberosum.* The *S. stolomferum*, Cham, in Linnaea, 8. p. 255. a native of Mexico, also appears to be a variety *of S. tuberòsum.*

Tuberless Nightshade, or Potatoe. Fl. July, Oct. Clt. 1833. PL 1-2 feet.

3 S. COMMERSÒNI (Poir. suppl. 3. p. 746. Dun. sol. ed. 2d. ined. t. 133. syn. p. 5.) herbaceous; leaves pinnate, sublyrate, pilose; pedicels articulate ; corollas 5-cleft. 2/. H. Native of America, about Monte Video, Commerson. Hort. trans. 5. t.] 0. Very nearly allied to *S. tuberòsum;* but the root is unknown ; it differs, however, from that plant, in the leaves being more profoundly pinnatifid ; but the leaflets are sessile, and not alternate, unequal; the terminal leaflet very large ; and the corolla is 5-cleft, not 5-angled.

Commerson's Nightshade, or Potatoe. FL May, Oct. Clt. 1822. PL 1 to 2 feet.

4 S. APPENDICULÀTUM (Dun. syn. p. 5. H. B. et Kunth, nov. gen. 3. p. 19.) shrubby? or herbaceous? scandent; leaves quinately impari-pinnate, stipulate at the base; leaflets oblong, acuminated, beset with adpressed hairs above, but downy on the veins beneath; corymbs terminal, few-flowered. J? . ? *sj.* G. Native of Mexico, near La Puente de La Madre de Dios, between Totonilco el Grande and Actopan. Branchlets puberulous. Leaflets opposite, terminal one large. Corymbs puberulous. Corolla 5-cleft, white, glabrous, with oblong, acute segments. Calyx half globose, 5-lobed.

4ppendiculate-\eavet Nightshade. FL June, Aug. Clt. 1823.

S_r S ^ S u M (Cav. icon. 5. p. 23. t. 439. f. 1.) stem herbaceous, furrowed; leaves impari-pinnate; leaflets decurrent; flowers terminal, corymbose. *11.* II. Native of Chili, near Coquimbo. Stem almost winged from the decurrent leaves. Leaves with 3 pairs of leaflets. Branches *of* corymbs dichotomous. Corollas deep yellow. Berry glabrous, black, size of a pea.

Pinwate-leaved Nightshade. PL 2 feet.

§ 2. *Leaves impari-pinnate. Racemes corymbose, lateral.*

6 S. CALDAXSII (Dun. syn. p. 6. H. B. et Kunth, nov. gen. amer. 3. p. 19.) herbaceous; leaves impari or unequally pinnate, soft from tomentum, whitish beneath ; racemes dichotomous, cymose. %. H. Native of Quito, near Chillo. Dun. sol. ed. 2d. ined. t. 85. f. 2. This species differs from *&. ochrdnthum,* which it is very like ; in the stem being herbaceous ; in the leaves being smaller; the leaflets being 3-pair ; and in the racemes being spreading and cymose above; in the cymes being longer; and in the flowers being larger.

Caldass Nightshade. PL climbing ?

7 S. JAMÉsn (Torrey, in ann. lye. 2. p. 227.) herbaceous, rather pilose; stem unarmed, erect ; leaves impari-pinnate; leaflets ovate-lanceolate, abruptly narrowed at the base, obsoletely sinuated ; racemes extra-axillary, few-flowered. ©. H. Native of the Arkansas ? Racemes about 4-flowered. Flowers white.

James's Nightshade. PL \ to f foot.

8 S. OCHRA'NTHUM (Dun. syn. p. 6. sol. ed. 2d. ined. f. 1. H. B. et Kunth, nov. gen. 3. p. 20.) shrubby, scat leaves interruptedly pinnate, hairy above, but clothed white tomentum beneath; leaflets oblong, nearly entire, rymbs lateral, subdichotomous, on long peduncles, about in length to the leaves. J? . ^. G. Native of Quito, Chillo. Leaflets opposite, 4 pairs. Corymbs hairy. C 5-cleft, yellow, hairy outside ; segments acutish, rather equal.

Ye I low-flowered Nightshade. Shrub climbing.

9 S. JUGLANDIFÒLIUM (Dun. syn. p. 6. sol. ed. 2d. ined 86.) shrubby, scandent ; leaves impari-pinnate, rough frd hairs above, but clothed with soft hairs beneath ; lean oblong, subcordate, quite entire; corymbs lateral, dichotomof divaricate. J?. ^. S. Native of New Granada, in the pr vince of Pasto, in humid places near Tusa et Cuesaca. H. et Kunth, nov. gen. 3. p. 20. Leaflets opposite, 3 pairs, short petioles : terminal one rather the largest. Corym pilose. Corolla 5-parted, white ? pilose outside.

Walnut-leaved Nightshade. Shrub climbing.

§ 3. PTEROI'DEA (from *7CT£pov, pteron,* a wing; and *etSog, eidos,* form; in reference to the pinnate leaves.) *Leaves impari-pinnate or ternale; leaflets quite entire, acuminated. Pedunclk axillary, aggregate, racemose.*

10 S. MI'TE (Ruiz, et Pav. fl. per. 2. p. *38.* t. 173. f. r stem herbaceous, radicant; leaves impari-pinnate; leaflets ol long; racemes axillary, aggregate; berries globose. ©. H Native of Peru, in the province of Panatahua, in forests at Pozuzo and Chincao, in humid places. Glabrous. Sterr, bluntly angular. Flowers small, secund, white. Berry white, size of a pea. Leaves 8-10 inches long.

Mild Nightshade. PL *2* feet, creeping.

11 S. CONICUM (Ruiz, et Pav. 1. c. t. 172. f. b.) stems herbaceous ; leaves impari-pinnate ; leaflets oblong-lanceolate ; peduncles axillary, usually 3 together, spicate ; berry conical ©. H. Native of Peru, in groves at Chincao and Cuchero Stem pilose, and angular at top. Peduncles solitary, twin oi tern, almost the length of the petioles, recurved at top.

Flowers small, secund, whitish-blue. Corolla 5-lobed, Berry white, size of an olive.

CowicaZ-fruited Nightshade. PL 2 feet.

12 S. DIFFU^SUM (Ruiz, et Pav. 1. c. p. *37.* t. 171. f. b.) stem suffruticose; branches twiggy, diffuse; leaves impari-pinnate; leaflets oblong; racemes axillary, few-flowered. T?. S. Native of Peru, in groves in the province of Huanuco. Plant with the habit of *Jasmine.* Stem branched, angular. Petioles and peduncles downy. Corollas violaceous, 5-lobed.

Diffuse Nightshade. Shrub.

13 S. SEAFORTHIA'NUM (Andr. bot. rep. t. 504. Dun. syn. p. 7.) suffruticose, scandent; leaves pinnate, undulated : superior ones simple, lanceolate; racemes racemosely-panicled, sometimes longer than the petioles. ^ ; w- S- Native of Barbadoes. Flowers pink. Leaves sometimes ternate.

SeafortKs Nightshade. Fl. July, Sept. Clt. 1804. Shrub climbing.

14 S. TERNA'TUM (Ruiz, et Pav. 1. c. p. 38. t. 172. f. a.) stem suffruticose, tetragonal, scandent, radicant; leaves ternate; peduncles few-flowered. ^ . *yj,* S. Native of Peru, in humid parts of woods. Plant glabrous. Leaves on long petioles. Leaflets oblong-lanceolate : middle one large. Peduncles many together. Flowers sub-umbellate. Calyx 5-crenated, small. Corolla purplish-violet. Deeply 5-parted.

Ternate-leaved Nightshade. Shrub climbing.

§ 4. *Leaves pinnatifid and entire.*

15 S. LACINIA'TUM (Ait. hort. kew. 1. p. 247.) shrubby or herbaceous, quite glabrous ; leaves pinnatifid ; segments linear-lanceolate : terminal one elongated ; or the leaves are entire, linear-lanceolate, elongated; racemes lateral, corymbose, simple or bipartite, shorter than the leaves ; calyx half 5-cleft; segments of corolla emarginate ; berry oval. %. G. Native of New Zealand ; New South Wales, about Port Jackson ; and of Van Diemen's Land. Curt. bot. mag. t. 349. R. Br. prod, p. 445. S. pinnatifidum, Lam. diet. 4. p. 292. Poir. diet. 4. p. 287. but not of Ruiz, et Pav. S. aviculare, Pers. syn. 1. p. 225. Forst. prod. no. 107. ? pi. esc. no. 12.? S. reclinatum, Hort. Plant quite glabrous, as in *Lactuca perennis.* Stem juicy. Racemes corymbose. Corollas blue, size of those of *Geranium pratense.* Anthers separated, not cohering, as in the rest of the species. Berry nearly globose, depressed, greenish-yellow, edible, size of a plum.

Far. a ; shrubby ; leaves pinnatifid.

Var. /3 ; shrubby ; leaves undivided.

Var. y ; herbaceous ; leaves pinnatifid.

Jagged-leaved Nightshade. Fl. July, Aug. Clt. 1772. PI. 2 t j 3 feet.

16 S. QUERCIFOLIUM (Lin. spec. p. 264.) stem sub-herbaceous, angular, flexuous, scabrous ; leaves pinnatifid; racemes corymbose or cymose. 2£. H. Native of Peru; and of Chili, about Valparaiso. Dun. sol. 139. Pers. ench. 1. p. 225. exclusive of the syn. of Fl. per.—Feuill. obs. 2. p. 722. t. 15. ? Habit of *S. Dulcamhra.* Stem erect. Branches angularly winged ; wings minutely toothed. Leaves ciliated a little, with usually 5 ovate segments, scabrous beneath, pilose in the young state. Corolla violaceous, with 2 green marks at the base of each segment. Berry ovate. Feuille's figure is referred to *Witheringia multifida* by Poir. in his encyl. 4. p. 287. and suppl. 3. p. 739. According to Dunal, S. runcinatum, Ruiz, et Pav. fl. per. 2. p. 36. agrees well with this species, but is perhaps distinct.

0ak4eaved Nightshade. Fl. June, July. Clt. 1787. PI. 3 to 5 feet.

17 S. TRIFLORUM (Nutt. gen. amer. 1. p. 128.) stem unarmed, herbaceous, procumbent; leaves denticulately-pinnatifid, glabrous ; segments acute, subundulated, having the margins more or less revolute ; peduncles opposite the leaves, 2-3-flowered. ©. H. Native near Fort Mandan, and elsewhere ; and on the banks of the river Platte, commencing near the Pawnee village, and continuing to the mountains. Flowers small, white, revolute. Fruit size of a cherry, green in the mature state. Stems very hairy, diffuse. Leaves subruncinate.

Three-flowered Nightshade. PI. procumbent.

18 S. RADI'CANS (Lin. fil. dec. 1. t. 10. Dun. sol. p. 140.) stem herbaceous, smooth, nearly terete, prostrate, radicant; leaves deeply pinnatifid; racemes cymose, about equal in length to the petioles. 1/. S. Native of Peru. S. quercifdlium, Ruiz, et Pav. fl. per. p. 36. exclusive of the syn. of Lin. and Feuille. Stems at length ascending, and angularly winged from the decurrent petioles. Leaves with 5 ovate, acute, or lanceolate segments. Racemes sometimes opposite the leaves, but not always. Corollas small, violaceous. Berry globose, size of a pea, red.

Rooting-stemmed Nightshade. Fl. July, Aug. Clt. 1771. PI. creeping.

19 S. GLABE'RRIMUM (Dun. sol ed. 2d. ined. t. 133. syn. p. 9.) stem quite glabrous, furrowed ; leaves rarely entire, usually pinnatifid: the terminal segment elongated ; racemes aggregate, many-flowered ; segments of corolla acute. %. S. Native of the Island of Timor. Habit of *S. Iaciniatum ;* but differs in the racemes being larger; in the flowers being more copious ; in the calyxes being 5-parted; and in the segments of the corolla being acute, not emarginate.

Quite glabrous Nightshade. PL 2 to 3 feet.

20 S. RECLINA'TUM (Lher. ined. ex bot. cult. ed. 2. vol. 3. p. 168. Dun. syn. p. 8.) stem quite glabrous, thick, juicy ; leaves pinnatifid, sometimes entire ; racemes lateral, shorter than the leaves ; corolla semiquinquefid, with emarginate segments. h_c . S. Native of Peru, Dombey. S. pinnatifidum, Lam. ill. t. 115. f. 4. Cav. descr. 111. S. Iaciniatum, Dun. sol. p. 139. exclusive of the syn. Stem furrowed. Leaves tapering into the petioles ; segments linear. Peduncles 2-3-flowered. Calyx deeply 5-toothed. Corollas azure-blue. Berry green, globose, edible, an inch in diameter.

Reclinate Nightshade. Shrub 3 feet.

21 S. SEPTE'MLOBUM (Bunge, in mem. acad. petersb. 2. p. 122.) stem herbaceous, erect, angular; leaves pinnatifid; lobes ovate-oblong, obtuse, entire, or deeply toothed, downy on both surfaces ; panicles dichotomous, divaricate, lateral, exceeding the leaves; corollas 5-cleft. %. H. Native of China, in waste places about Pekin. Leaves obscure, green, with usually 7 lobes. Corollas deep violet, like those of *S. Dulcamara.*

Seven-lobed-leaved Nightshade. PL 1 to 2 feet.

§ 5. *Leaves ternate or simple. Leaves and leaflets ovate or ovate-lanceolate.*

22 S. HEBE'PHORUM (Dun. syn. p. 7. H. B. et Kunth. nov. gen. 3. p. 21.) herbaceous, much branched; branches angular, puberulous; leaves ternate, clothed with silky down on both surfaces; leaflets oblong, acute, entire; peduncles long, lateral? flowers subracemose. *1J.* H. Native of Peru, near Caxamarca, in frigid places, at the altitude of 460 hexapods. Leaflets about 2 inches long. Flowers subumbellate, ex Bonpl. Calyx 5-parted. Corolla quinquefid. The hairs in this and the 4 following species are simple.

Down-bearing Nightshade. PL 2 feet.

23 S. MURICA^TUM (Ait. hort. kew. 1. p. 250. Dun. sol. p.

162. syn. p. 8. H. B. et Kuntb, nov. gen. 3. p. 21.) stem suffruticose, radicant, ascending ; young branches rouricated ; leaves oblong-lanceolate, entire, downy, but sometimes ternate; racemes terminal, bifid. J? . G. Native of Peru, common in cultivated places, ex Feuille; Teneriftē, in gardens, ex Broussonet; near the city of Mexico, ex Bonpl. S. scābrum, Lam. ill. no. 2344. S. variegatum, Ruiz, et Pav. fl. per. 2. p. 32. t. 162. f. a. Melongena laurifolia, fructu turbinato variegato, Feuill. per. 2. p. 735. t. 26. The plant is called *Pepo,* and *Pepino de la Tierra,* in Peru. Branches trigonal. Leaves 15-24 lines long, furnished with 2 small stipulas at the base. Racemes extra-axillary. Corollas size of those of *S. Dulcamara,* white, painted with violaceous veins, puberulous outside; segments ovate, roundish. Calyx 5-parted, silky. Berry ovate, variegated with purple, drooping, edible ; sarcocarp yellow, very thick.

Muricated Nightshade. Fl. July, Aug. Clt. 1785. Shrub 2 to 3 feet.

24 S. DIVERSIFŌLIUM (Dun. syn. p. 8. sol. ed. 2d. t. 88. H. B. et Kunth, nov. gen. 3. p. 22.) shrubby ; branches puberulous ; leaves impari-pinnate, ternate or entire, downy ; leaflets sessile, oblong, acuminated, entire : terminal one large ; racemes extra-axillary, simple ; calyx large, equal in length to the corolla. ^2 • S. Native near Caraccas. Branches glandular and hairy. Racemes shorter than the leaves. Corolla rotately subcampanulate, 5-cleft, white, size of those of *Borago qfficindlis;* segments ovate, acute.

Diverse-leaved Nightshade. Fl. June, July. Clt. 1825. Shrub 2 to 8 feet.

25 S. CARIPE'NSE (Dun. syn. p. 8. sol. ed. 2d. ined. t. 89. H. B. et Kunth, nov. gen. amer. p. 22.) shrubby, scandent; branches villous; leaves simple and ternate, elliptic-oblong, acutish, rounded at the base, quite entire, clothed with silky hairs, biauriculate at the base; racemes extra-axillary, and nearly terminal, simple, or bifid. 7? . *KJ.* S. Native of the province of Cumana, near the monastery of Caripe. Leaves 1| to 2 inches long. Flowers unilateral, size of those of *Verātrum r.igrum.* Pedicels articulated. Calyx 5-parted, pilose. Corolla rotate, white, ? sinuately 5-lobed.

Caripe Nightshade. Shrub climbing.

26 S. BULBOCA'STANUM (MOC. et Sesse. fl. mex. icon. Dun. syn. p. 8. sol. ed. 2d. ined. t. 3.) root tuberous; stems herbaceous ; leaves ovate, repand, auricled ; peduncles 1-flowered, subumbellate. %. H. Native of Mexico. Root solitary, globose, like that of *S. tuberbsum,* mucronate below, without any other radicle. Stem terete. Leaves undulated. Petioles auricled, from *2* sessile leaflets. Peduncles villous, violaceous. Corolla white, with lanceolate, bluntish segments.

Bulbocaatanum Nightshade. PI. 1 foot ?

27 S. OLIGA'NTHUM (Dun. syn. p. 8. vol. ed. 2d. ined. t. 90.) shrubby, scandent ? ; branches clothed with hoary tomentum ; leaves perhaps always simple, unequal, and cordate at the base, quite entire, glabrous above, but clothed with soft, yellowish, hoary tomentum beneath, auricled at the base ; peduncles terminal, few-flowered. F? . ©. ? S. Native near Maypure, on the banks of the Orinoco. H. B. et Kunth, nov. gen. amer. 3. p. *23.* Hairs on the plant stellate. Leaves 2 inches long. Auricles sessile, obliquely ovate-sublunate, similar to the leaves.

Few-flowered Nightshade. Fl. ? Clt. 1824. Shrub 3 feet.

§ 6. PACHYPHY'LLA (from Trax^C, *pachys,* thick ; and <*j*>*v*\-*ov* , *phyllon,* **a leaf.)** ***Leaves pinnate, pinnatifid, or entire, /eaves and leaflets cordate, acute, thick, beset with short simple hairs. Racemes cymose, pendulous. Corollas 5-parted. Berries oval.***

28 S. PENDULUM (Ruiz, et Pav. fl. per. 2. p. *39.* t. 174. f. a.) stem shrubby; leaves simple and irregularly pinnate ; leaflets 2-6, obliquely cordate ; racemes pendent, forked. *ḥ* . S. Native of Peru, in the province of Panatahua, particularly in shady places about Munna. Dun. sol. p. 168. syn. p. 7. Branches hairy, dichotomous. Leaves pubescent on both surfaces. Corolla elongated, downy, purple, with acute, reflexed segments. Berry large, ovate, yellow, *size of* a middling pear.

Pendulous-racemed Nightshade. Shrub 10 feet.

29 S. OBLĪQUUM (Ruiz, et Pav. fl. per. 2. p. 35. t. 165. f. a.) stem suffruticose; leaves cordate, oblique, acute ; racemes cymose, revolute, secund. T? • $• Native of Peru, in groves at Chincao. Shrub glabrous. Leaves shining above, and downy beneath. Peduncles lateral. Calyx 5-cleft. Corolla purplish violet. Berry oblong, acutish at both ends.

Oblique-leaved Nightshade. Shrub 5 to 10 feet.

30 S. VIRIDIFLŌRUM (Ruiz, et Pav. fl. per. 2. p. 38. t. 173. f. b.) shrubby ; leaves cordate-ovate, simple, villous ; racemes dependent, about equal in length to the leaves. ^ . S. Native of Peru, in groves. Dun. sol. p. 169. Plant villous. Calyx semiquinquefid. Corolla green, almost 5-parted, with reflexed segments. Berry large, oblong, turbinate, villous, yellowish.

Green-flowered Nightshade. Shrub 6 feet.

31 S. BETA'CEUM (Cav. icon. 6. p. 599. t. 524. ann. d'hist. nat.* 1. p. 44.) shrubby; branches and stem thick, succulent; leaves large, cordate, ovate-oblong, rather downy on both surfaces, with undulated margins ; racemes cymose, pendulous, about equal in length to the petioles. fj . G. Native of New Spain. Dun. sol. 169. Andr. bot. rep. t. 511. S. crassifōlium, Ort. dec. p. 117. Leaves a foot long. Petioles spotted. Racemes axillary and supra-axillarvi many times bifid, sometimes simple and trifid. Calyx 5-cleft, spotted at top. Corolla white, tinged with red, small, thick, 5-parted. Anthers yellow. Berry ovate, size of a walnut, 2-celled at first, yellowish green, marked with longitudinal brown spots, afterwards reddish. The whole plant has an ungrateful scent, like that of *Stramonium* **or** ***Henbane.***

^eMeaved Nightshade. Fl. June, July. Clt. 1803. Shrub 3 to 5 feet.

SUBSECT. ***2. Leaves lobed, sinuated, angular, toothed, or entire.***

§ 1. ***Leaves lobed, and entire.***

32 S. LEPTA'NTHUM (MOC. et Sesse. icon. mex. ined. Dun. syn. p. 9. Sol. ed. 2d. ined. t. 28.) stem terete, herbaceous, glabrous ; leaves oblong, undulately repand, running into the petioles; racemes dichotomous, cymose at top; corolla pentagonal. %. G. Native of Mexico. Flowers small. Teeth of calyx acute. Berry small, globose, from red to violet. Allied to *S. corymbbsum.* Piant glabrous, erect, or procumbent.

Far. j3, parvifblium (H. B. et Kunth, nov. gen. *3.* p. 24.) leaves smaller, nearly sessile; racemes and pedicels shorter; corollas pale violet, not white. %. S. Native of Peru, between Caxamarca and Magdalena.

Slender-flowered Nightshade. PI. procumbent.

33 S. LĪNKII ; leaves lanceolate, sub-sinuated, rather tomentose, green ; peduncles few-flowered ; calycine segments ovate, acute. *V}* . S. Native country unknown. S. oligānthutn, Link, enum. 1. p. 182, but not of Dun. Branches glabrous; petioles clothed with minute, stellate hairs. Leaves undulated, acute, with 1-3 deep recesses, beset with stellate hairs on both surfaces, which are most dense beneath. Pedicels drooping, and are, as well as the calyxes, rather tomentose. Corolla semi-quinquefid, sub-plicate, white.

Link's Nightshade. Fl. ? Clt. 1824; * Shrub 3 to 4 feet.

34 S. CORYMBOSUM (Jacq. colL 1. p. 78. icon. rar. t. 40.) stem suffruticose ; leaves ovate-lanceolate, entire, or a little lobed ; racejnes cymose, opposite the leaves ; corollas 5-parted. T? . S. Nsaive of Peru, in cultivated places, through the provinces of Lima and Chancay. Dun. mon. 142. S. corymbiferum, Gmel. syst. 384. S. parvifldrum, Nocca, in Usteri, ann. 6. p. 61. Vittm. summ. suppl. *283.* Habit of *S. Dulcamara.* Branches some erect, and some weak and procumbent, angular. Leaves glabrous, fetid. Racemes 2-3-4-cleft. Corolla small, blue, or violaceous, 5-cleft. Berry of a reddish orange colour, size of a pea.

Corymbose-ftovteredi Nightshade. Fl. July, Aug. Clt. 1786. Shrub 2 to 3 feet.

*35'*S* CIRRHOSUM (Dun. syn. p. 9. sol. ed. 2d. ined. t. 91. H. B. et Kunth, nov. gen. 3. p. 24.) shrubby, scandent, tendrilled ; leaves oblong, entire, or 3-Iobed, acuminated, glabrous : middle lobe large; racemes terminal, panicled. F? . vy. S. Native near Cumana, in shady places. S. salignum, Willd. rel. ex Rcem. et Schultes, syst. 4. p. *663.* Habit of *S. Dulcamara.* Shrub glabrous. Tendrils spirally revolute, extra-axillary. Leaves entire, ternate, or 3-lobed.' Flowers rose-coloured, size of those of *S. nlgrum.* Calyx small, angularly 5-toothed. Stamens sometimes 6.

Tendrilled Nightshade. Shrub climbing.

36 S. DULCAMA'RA (Lin. spec. p. 264.) shrubby, scandent, flexuous ; leaves ovate-cordate : superior ones jagged ; corymbs almost opposite the leaves. Tj . y. H. Native of Europe, Asia, and North America, in hedges and among bushes; plentiful in Britain. Smith, engl. bot. t. *565.* Pursh. fl. amer. sept. 1. p. 156. Curt. fl. lond. 1. t. 14. FL dan. t. 607. Bull, herb. t. 23. Reit. et Abel, t. 72. Dreves et Heyne, t. 60. Guimpel. t. 12. Plenck, off. t. 119. Svensk. bot. t. 20. Woodv. med. bot. *97.* t. *33.* Sav. mat. med. p. 47. t. 14. Stev. et Church, med. bot. icone. S. scandens, Neck, gallob. 119. Dulcamara flexudsa, Mcench. meth. p. 514. Sol. scandens seu Dulcamara* Tourn. inst. p. 149. Amara dulcis, Gerard, emac. 350. Dfilcis amara, Trag. 816. Glycipicros seu Dulcamara, Bauh. hist. 2. p. 109. icone. La Morelle. Grimpante, Regnault bot. icone. Shrub glabrous. Leaves cordate : superior ones hastate, all quite entire. Corymbs panicled. Corolla violaceous, with reflexed segments, each segment furnished with 2 green spots at the base. Berries elliptic, red. The roots and stalks of this, the *Woody Nightshade,* upon being chewed, first cause a sensation of bitterness, which is soon followed by a considerable degree of sweetness ; whence it has oV ^iined the names of *Dulcamara,* or *Bittersweet.* The berr excite vomiting and purging. Floyer says, thirty of them killed a dog in less than 3 hours, remaining undigested on the stomach. As they are common in hedges, and may be mistaken by children for red currants, this circumstance is the more worthy of notice. In such a case it is advisable to pour down as much warm water as possible, to dilute the poison, and provoke vomiting. The old botanists recommend the plant as a medicine in many diseases. Ray informs us, that the inhabitants of Westphalia make use of a decoction of the whole plant as their common drink with success against scurvy. Boerhaave says, it is a medicine far superior to China and Sarsaparilla, as a sweetener and restorative : and Linnaeus, that an infusion of the young twigs is an admirable medicine in acute rheumatisms, inflammations, fevers, and suppression of the lochia. Dr. Hallenberg advises it in ischiatic and rheumatic pains, jaundice, scurvy, and lues venerea. They direct a pint of boiling water to be poured upon 2 drachms of the stalks, sliced and dried; after standing half an hour it must be boiled 10 or 15 minutes. The dose is 2 tea-cups full or more morning and evening. Murray and Bergius regard it as promoting all secretions. Dr. Cullen says, " We have only employed the slender twigs, but some parcels of these were very mild, and most others considerably acrid. In the latter state we have employed a decoction of these in the cure of rheumatism sometimes with advantage, but at other times without effect. The *Dulcamara* is inserted in the catalogue of diuretics, but this property it hardly, if at all, possesses. The twigs when gathered in autumn or spring will be most powerful ; if used dry a somewhat larger dose must be taken. The plant is generally given in decoction or infusion, and to prevent it exciting vomit it should be diluted with milk : small doses also are recommended at the beginning, for large ones have been found to produce convulsion, delirium, and palsy of the tongue, ex Woodv.

Far. a, violdceum; corollas violaceous.—Hort. eyst. p. *385.* t. 384. no. 3.

Far. /3, *album;* corollas white.—Lin. fl. suec. p. *66.*

Far. y, *cdrneum;* corollas flesh-coloured.—Cels. ups. 32. Lin. fl. suec. 1. c.

Far. S, plenum; corollas double.—Tourn. inst. 149. Hort. eyst. 1. c.

Far. e, variegdtum ; leaves variegated.—Munt. fig. 156. Tourn. inst. 149.

Far. TJ, *hirsiitum;* plant hairy, or downy. Flowers violaceous. —On the sea-coast.

Far. t, rupestre (Schmidt, fl. boh. p. *96,)* stem erect; leaves ovate, quite entire ; racemes few-flowered, dichotomous.—Native of Bohemia.

Bitter-sweet, or Woody Nightshade. Fl. June, July. Britain. Shrub climbing.

37 S. KIESERILZKII (Meyer, verz. pfl. p. 113.) stem shrubby, unarmed, erect; leaves nearly glabrous, scattered, petiolate, ovate-oblong, quite entire, acuminated, attenuated at the base ; racemes lateral, few^flowered; segments of corolla 5, reflexed, each marked with 2 spots at the base. *? . H. Native of Caucasus, in woods near Lenkeron.

Kieserilzki's Nightshade. Shrub.

38 S. PE'RSICUM (Willd. mss. Ledeb. fl. alt. 1. p. 237.) stem terete, scandent; leaves rather downy, ovate-lanceolate, cordate, quite entire; racemes cymose, lateral, glabrous; corolla *6*-parted ; berries ovate. ^ . w. H. Native of Persia, and of Siberia, frequent on the banks of rivers and rivulets, in humid places near Uimon and Barnaoul. S. Dulcamara, Patrin, fl. barn. ined. Similar to *S. Dulcamara* in habit, inflorescence, flowers, and berries; but the leaves are always entire, never hastate or auricled. Calyx 5-toothed. Corolla pale violet. Berries red.

Persian Woody Nightshade. Shrub climbing.

39 S. TEGORE (Aubl. guian. 1. p. 212. t. 84.) shrubby, very hairy ; lower leaves pinnatifidly sinuated: upper ones cordate. J?. S. Native of Guiana, in cultivated places near the habitations of the natives. Dun. sol. p. 142. syn. p. 10. . Lower leaves large, with acute lobes : upper ones smaller. Flowers small, greenish, corymbose in the forks of the branches. Berry yellowish, globose, size of a filbert. *Tegore* is the native name.

Tegore Nightshade. Fl. June, July. Clt. 1823. Shrub 5 to 6 feet.

40 S. LYRA'TUM (Thunb. jap. p. 92.) stem herbaceous, erect, tomentose, as well as both surfaces of the leaves : lower leaves lyrate : superior ones hastate. %. G. Native of Japan, near Nagasaki, where it is called *Fijodori Diogo* by the natives. Dun. sol. p. 143. Segments of the leaves nearly opposite, 4 or more, entire : the terminal one larger. Flowers panicled, axillary, and terminal. Panicles sub-dichotomous.

LyrateAewed Nightshade. PI.

41 S. PYGMXUM (Cav. icon. 5. p. 23. t. 439. f. 2.) stem herbaceous, an inch in height; leaves ovate, 3-lobed : middle lobe elongated, obtuse. ©. H. Native of Buenos Ayres, in the plains called Pampas. Dun. sol. p. 145. Stem simple, usually terminating in two flowers. Leaves small. Peduncles at first erect, but afterwards deflexed. Corolla pale blue, 5-parted. Berry small, villous, globose.

Pygmy Nightshade. Fl. June, July. Clt. 1819. PI. 1 inch.

§ 2. *Leaves sinuated, angular, or toothed.*

42 S. GRANDIFL6RUM (Ruiz, et Pav. fl. per. *2.* p. *35.* t. 168. i. b.) stem arboreous, woolly ; leaves ovate, sinuated, or quite entire, hispid above, and woolly beneath; racemes cymose, recurved, short; flowers secund. J?. S. Native of Peru, in groves at Pozuzo. Dun. sol. p. 143. t. 30. syn. p. 10. Stem clothed with stellate fulvous wool. Calyx increasing after florescence. Corolla large, violaceous, 5-parted, with 5 woolly zones outside. Berry large, woolly, yellowish, dependent.

Great-flowered Nightshade. Tree 15 to 30 feet.

43 S. QUITOE'NSE (Lam. ill. no. 2326. Poir. encycl. 4. p. *285.)* stem suflfruticose ; leaves subcordate, sinuately angular, tomentose on both surfaces ; racemes lateral, very short, hairy. £. S. Native of Peru, in the gardens of Quito and Lima, where it is oalled *Narangtas de Quito* by the natives. Dun. sol. p. 144. ed. 2d. ined. t. 92. f. 6. syn. p. 10. Hook. bot. mag. t. 2739. S. angulatum, Ruiz, et Pav. fl. per. 2. p. *36.* t. 170. f. b.—Feuill. obs. 3. p. 61. t. 46.—Burm. pi. amer. 219. t.^224. f. 2. ? exclusive of the syn. of Dill, and Lin. Lycospermum arborescens foliis angulatis, fructu aureo, Plum. cat. p. 4. Tourn. inst. p. 150. Plant very hairy. Leaves large, with acute segments, and having the petioles and nerves purplish. Calycine segments acute. Corolla large, white inside, and violaceous outside. Berry globose, size and colour of a small orange, when young clothed with short wool. The natives of Peru call this species *Narangitas de Quito,* and some drops of the juice are mixed with the drink called matte.

Quito Nightshade. Fl. June, Aug. Clt. 1825. Shrub 6 feet.

44 S. TWEEDIA'NUM (Hook. bot. mag. 3385.) plant clothed with clammy down; leaves cordate, angularly-toothed at the base, on long petioles; racemes umbellate; flowers nutant. %. G. Native of Buenos Ayres, Tweedie. Corollas 5-cleft, large, pale blue. Peduncles opposite the leaves.

Tweedie's Nightshade. Fl. June, July. Clt. 1833. PI. ½ foot.

45 S. SANDWICE'NSE (Hook, et Arn. in Beech, voy. pt. bot. p. *92.)* stem shrubby ; branches terete; branchlets canescent; leaves angularly sinuated, ovate, glabrous above, clothed with hoary down beneath ; racemes corymbose, terminal or lateral; corolla minute, 5-cleft ; stamens equal. J?. G. Native of the Sandwich Islands.

Sand?vich-ls\and Nightshade. Shrub.

46 S. TOPIRO (Dun. syn. p. 10. sol. ed. 2d. t. 92. f. 1. H. *B.* et Kunth, nov. gen. amer. 3. p. 25.) stem herbaceous, tomentose ; leaves somewhat ovate, acute, sinuately angular, unequal at the base, beset with adpressed pili above, and fine hoary tomentum beneath; flowers extra-axillary, aggregate ; berry ovate. %- S. Native in humid places on the banks of the Orinoco, near San Fernando de Atabapo, &c, where it is called *Topiro** Leaves 9-10 inches lon^, and 6 broad, with acute angles. Calyx tomentose. Corolla greenish, with rather unequal ovate-oblong, acute segments, clothed with stellate tomentum outside. Berry 4-celled, edible, propped by the calyx.

Topiro Nightshade. PI. 6 feet.

47 S. MACROCA'RPUM (Lin. mant. p. 205.) stem herbaceous, glabrous ; leaves cuneated at the base, sinuajed, quite glabrous ; peduncles few-flowered, short. %. S. Native of Peru. Mill, fig. t. 294. Willd. spec. 1. p. 1033, exclusive of the syn. of Feuill, and Plum. Lam. ill. no *2325.* Dun. sol. p. 144. syn. p. 10.—Plum. spec. 4. icon. t. 224. f. 2.*? Leaves large, repandly sinuated, sometimes obtuse, and sometimes acute. Calycine segments very long. Corollas large, blue, sub-campanulate, half 5-cleft, many sterile. Berry fleshy, globose, yellow, size of an apple.

Large-fruited Nightshade. Fl. May, Sept. Clt. 1759. PI. 1 to *2* feet.

48 S. PENTADA'CTYLUM (G« Don, in Loud. hort. brit., p. *72.)* stem erect, orilexuous, glabrous; leaves runcinately sinuated, with acute segments, glabrous, shining above ; corymbs short, terminal, or in the forks of the stem ; fruit large, ovate, furnished with 5 regular protuberances at the base. T?. S. Native of Trinidad, about St. Ann's and the Port of Spain. Leaves large. Fruit large, yellow. Flowers middle-sized, blue.

Five-fingercd-fruited Nightshade. Fl. June, Aug. Clt. 1818. Shrub 2 to 3 feet.

49 S. CALYCINUM (Moc. et Sesse. icon. mex. ined. Dun. syn. p. 10. sol. ed. 2d. t. 29.) stem twisted, glabrous, thick; leaves sinuately repand ; peduncles short, 1-flowered, solitary; calyx increasing after florescence. %. *G.* Native of Mexico. Habit of *S. macrocdrpum.* Plant glabrous. Calycine segments with many sinuated nerves. Corolla blue, 5-angled. Berry globose, yellow, size of a small apple.

Large-calyxed Nightshade. Fl. June, July. Clt. 1820. PI. 1 foot.

50 S. BAUERIAVUM (Endl. fl. norf. p. 54. Bauer, icon. t. 158.) stem shrubby; leaves oblong, acuminated, angularly-toothed, glabrous; corymbs terminal, rather loose ; peduncles drooping. ^. G. Native of Norfolk Island. Leaves^ 1-2 inches long. Corollas white, size of those of *S. tuberosum.* Berry ovate-oblong, of a vermilion colour.

Bauer s Nightshade. Shrub 1 to 2 feet.

§ 3. PSEUDO-CAPSICA (false capsicums.) *Leaves angularly repand, or entire. Corollas somewhat 5-parted. Berries spherical, torulose, or smooth.*

51 S. RACEMIFLORUM (Dun. *sp\.* 147. syn. p. 11.) stem herbaceous, scabrous ; leaves ovate, repandly angular, scabrous ; racemes lateral; berries furrowed. ©. H. Native country unknown. S. scabrum, Jacq. schcenbr. 3. p. 45. t. *333,* but not of Vahl. Plant scabrous from numerous pungent hairs or strigae. Stem green, suffused with purple. Leaves thickish. Racemes many-flowered, more or less than an inch long. Calyx scabrous. Corolla white, rose-coloured beneath. Berry like that of *S. Mthiopicum,* but smaller.

Raceme-flowered Nightshade. Fl. July, Sept. Clt:s 18. Plant 2 feet.

52 S. MTHIOPICUM (Lin. amoen. 4. p. 307.) stem herbau*>us ; leaves ovate, repandly angular, glabrous ; peduncles usually 1-flowered, drooping; berries torulose. ©. H. Native of iEthiopia, China, and Japan. Jacq. hort. vind. t. 12. Thunb. jap. p. *92.* Dun. sol. p. 148. syn. p. 11. Pseudo-capsicum torulosum, Mcench. meth. p. 477. Lycopersicum iEthiopicum, Mill. diet. no. 3.—Barrel, icon. 1108. Nussubi, or Ka and Kja of the Japanese ex Kcempf. amcen. p. 810. Fokke, or Fokkes of the Dutch, ex Thunb. Leaves a hand long. Fruit large, red, depressed. Corymbs few-flowered. Corollas white. One of the pedicels in each corymb bears a fertile flower, the rest are usually sterile.

Far. (3, violdceum; unarmed ; flowers violaceous ; berries white, or purple. ©. H. Native of China. S. Mthiopicum, Lour. coch. 1. p. 130. The name is *Ca Tien* in China. Flow-

ers solitary. Calyx and corolla 6-cleft. Berry spheroid, 6-lobed, large, edible. Perhaps a proper species.

Var. y, aculeatum (Dun. sol. p. 148.) ©. H. Native of Europe, in gardens. Stem prickly. Leaves rather tomentose beneath; umbels axillary. Calyx unarmed. S. integrifolium, Lam. diet. 4. p. 301. Poir. suppl. 3. p. 740. Mala iEthiopica, Ray. hist. 673.—Dod. pempt. p. 459. icon. S. pomiferum herbariorum, Lob. icon. 264.—Mor. hist. sect. 3. p. 525. sect. 13. t. 2.—Plukn. phyt. t. 226. f. 4. Lycopersicum fructu striato duro, Tourn. inst. p. 150. Perhaps a species. Berries small, yellow, size of peas.

.Ethiopian Nightshade. Fl. July, Sept. Clt. 1597. PL | to 1 foot.

53 S. ZUCCAGNIA'NUM (Dun. sol. p. 149. t. 11. syn. p. 11.) stem* sub-herbaceous ; leaves ovate, angularly repand, glabrous, unequal at the base; peduncles usually 1-flowered, drooping; berries nearly globose. 1/ . H. Native country unknown, but cultivated in the gardens of Florence and Montpelier. S. scabrum, Zuccag. cent. no. 50, but not of Vahl. or Jacq. Plant green, beset with minute crystalline warts when examined by a lens. Corolla 5-parted, white, with acute segments. Berry cherry shaped, round, sub-umbilicate, mucronate, red when ripe. Peduncles* solitary, or twin, 1 rarely 2-flowered. Habit of *S. /Ethiopicum,* from which it differs in the leaves being minutely warted, in the berries being much smaller, smooth, or deeply furrowed. It also comes near to *S. racemiflorum.*

Zuccagni's Nightshade. Fl. June, July. Clt. 1823. PI. 2 feet.

54 S. TRIQUETRUM (Cav. icon. 3. p. 30. t. 259. descr. p. 110.) stem frutescent, triquetrous ; leaves cordate-deltoid, acuminated, glabrous ; umbels opposite the leaves, pedunculate. J? . S. Native of New Spain. Dun. sol. 147. syn. p. 11. Stems slender, sometimes erect, and sometimes trailing, triquetrous in the young state. Peduncles very short; pedicels 3-4 umbellate,*drooping. Corollas small, white, somewhat 5-parted, with linear curled segments. Berry nutant, globose, red, size of a pea.

Triquetrous-stemmed Nightshade. Fl. June, July. Clt. 1820. Shrub 2 to 4 feet.

55 S. MICROCA'RPUM (Vahl, symb. 2. p. 40.) stem shrubby ; leaves oblong-lanceolate, somewhat repand ; racemes lateral. J?. G. Native of Egypt. Dun. sol. p. 149. t. 10. S. pseudo-capsicum, var. microcarpum, Pers. ench. 1. p. 224. S. diphyllum, Forsk. pi. cat. aegypt. p. 63. no. 134. Leaves 3-4 inches l°ng> green, glabrous. Racemes extra-axillary, 1 inch long. Flowers sub-cymose. Corolla white, 5-parted, pilose outside. Berries smooth, red, size of pepper berries.

Small-fruited Nightshade. Shrub 2 to 3 feet.

56 S. PSEUNDO-CA'PSICUM (Lin. spec. p. 263.) stem shrubby ; leaves lanceolate, or oblong-lanceolate, sub-repand ; peduncles generally 1-flowered, extra-foliaceous. \/ . G. Native of Madeira ; and in gardens almost every where. Dun. sol. 150. syn. p. 11. Pseudo-capsicum undulatifolium, Mcench. meth. p. 477,—Sabb. hort. rom. p. 12. t. 59. S. fruticosum baccifera, Tourn. inst. 149. Mor. hist. 3. p. 526. S. arborescens, Ceesalp. p. 215. Strychnodendros, Bauh. hist. 3. p. 614. Besl. hort. eyst. p. 317. t. 316. Pseudo-capsicum, Dod. pempt. 718. icon. S. Americanum, Dalech. lugd. p. 599. icone. In Spain the fruit is called *Guindas de las Indias* ; in France *Morelle cerisette, petit ceresier d'hiver, Amome des Jardiniers;* in England *Winter Cherries,* or *Tree Nightshade.* Plant glabrous. Corolla small, white, 5-parted. Berry globose, red, or scarlet, size of a cherry.

Var. /3, luteum ; berries yellow, ex Poir. encycl. 4. p. 281.

False-Capsicum, or Tree Nightshade. Fl. June, Sept. Clt. •1596. Shrub 3 to 4 feet.

57 S. PSEUWQUINA (St. Hil. pi. usuell. bras. t. 21.) stem arboreous, unarmed; leaves lanceolate-oblong, narrow, acute, quite entire, glabrous above, but with fascicles of villi in the axils of the nerves beneath ; racemes extra-axillary, short, bearing 1, or few-fruit; calyx glabrous. Tj. G. Native of Brazil, in the district of Curitiba in St. Paul, without the tropic. The bark is very bitter, and the inhabitants use it with great success in the cure of fevers, and for that reason is called by them *Quina,* from considering it the same as the Quina of Peru.

False-qidna Nightshade. Shrub.

§ 4. MORE'LLA (Morelle is the generic name of *Solanum* in French ; and is from the Celtic word *mor,* black. In old French *mor* is the root of many names, expressing dark or black things.) *Stem herbaceous, or sub-herbaceous. Leaves acuminated at both ends. Racemes short, panicled, intra-foliaceous; pedicels subumbellate, or panicled, drooping. Flowers small, white, or pale violet. Berries small, globose.*

58 S. NODIFLORUM (Jacq. coll. 2. p. 288. icon. rar. 2. t. 326.) stem suffruticose; branches terete, and are, as well as the leaves, glabrous; leaves ovate, quite entire; flowers sub-umbellate. J? . S. Native of India, Lin. ; Guiana, Aubl.; Brazil, Piso ; Mauritius, Jacq. &c. Dun. sol. 151; S. strictum, Zucc. cent. 1. p. 49. S. nigrum, /3, patulum, Lin. spec. p. 267. Willd. spec. 1. p. 1035. Branches thickened at the nodi. Leaves halfea foot long. Calycine segments oblong, obtuse. Corollas white, with a yellow base ; segments lanceolate, acute. Berry small, black.

Knot-flowered Nightshade. Fl. June, July. Clt. 1822. PL 10 feet.

59 S. DESVA'UXII (Hamilt. prod. p. 26.) stem about *2* feet high, erect; leaves ovate-lanceolate, quite entire, or sub-repand ; berries small, globose, black. ©. H. Native of the Island of Nevis. S. nodiflorum, Desv. herb. Stem herbaceous.

Desvauxs Nightshade. PI. 2 foot.

60 S. DILLE'NII (Schultes, oestr. fl. ed. 2d. 1. p. 393. Roam, et Schultes, syst. 4. p. 586.) stem and branches terete, glabrous ; leaves ovate, spreading horizontally, glabrous; peduncles filiform; fructiferous cymes erectly spreading. 0. H. Native of Hungary, in the woods of Matra, Kitaibel. S. nigrum, /3, patulum, Willd. spec. 1. p. 1035. Roth, catalect. 2. p. 23.—Dill. elth. *367.* t. 275. f. *S55.* Nearly allied to *S. patulum,* Ruiz, et Pav. Flowers white, much smaller than those of *S. nigrum.* Berry marked with small white dots before maturity.

Dillenius's Nightshade. Fl. June, Sept. Clt. 1818. PI. 2 feet.

61 S. MICROSPE'RMUM (Dun. syn. p. 12. sol. ed. 2d. t. 93. ined.) stem terete, herbaceous, glabrous; leaves solitary, or twin ovate, subcordate, entire, glabrous, shining ; racemes subumbellate. 0. H. Native country unknown.

Small-seeded Nightshade. PI. 1 to *2* feet.

62 S. GUINEF/NSE (Lam. ill. no. 2339. Mill, diet.) stem herbaceous ; branches glabrous, angularly-toothed ; leaves ovate, glabrous, quite entire ; flowers numerous, somewhat umbellate. 0. H. Native of Guinea. Dun. sol. p. 152. syn. p. 12. S. nigrum, 5, Guineense, Lin. spec. p. 266 Willd. spec. 1. p. 1035.—Dill. elth. 360. t. 274. f. 354.—Boerh. lugdb. 2. p. 68. Bross. icon. t. 13. S. Memphiticum, Mart, mss. Nearly allied to *S> nigrum.* Angles of the stem toothed. Corolla whitish, or pale violet. Berry globose, size of a small cherry, black and shining at maturity.

Guinea Nightshade. Fl. June, Sept. Clt. 1817. Pl.^1J to 3 feet.

63 S. NIGRUM (Lin. spec. p. *266.* mat. med. *66,)* stem herbaceous, angular ; leaves ovate, toothed, nearly naked ; flowers sub-umbellate. ©. H. Native throughout Europe; a weed in cultivated ground ; as well as of Africa and Asia, in like situations. Dun. sol. p. *152.* syn. p. 12. Willd. enum. 1. p. *236.* S. nigrum, a, vulgatius, Lin. 3pec. 266. Smith, engl. bot. t. *566.* Curt. lond. fasc. *2.* t. 14. Plench, icon. t. 120. Oed. fl. dan. t. 460. Bull. herb. t. 67. Sturm, fl. germ. fasc. 1. icon. Hayne, term, bot. t. *28.* Schkuhr, handb. t. 46. S> officinàrum acinis nigricantibus et acinis luteis, Tourn. inst. p. 148. S. officinárum, Zanich. venez. t. *268.* S. hortênsis, Blackw. t. 107. &c—-Mor. hist. 3. p. 520. sect. 13. t. 1. f. 1. —Lob. icon. 262.—-Tab. icon. 577. *Yerba mora* of Brazil, Peru, and Spain. *Morelle a frutts noir* and *Morelle creve chien* of the French. Plant downy. Stem branched, and is, as well as the branches, angular-toothed. Common peduncles short. Flowers few, *5-6* together, white. Berries size of currants, black, rarely yellow. The herb is fetid, and diuretic ; it also promotes perspiration. Too large a quantity occasions violent sickness, with headache, giddiness, drowsiness, and other dangerous symptoms, in short its effects on the nervous system are so uncertain, and sometimes so considerable, that it must ever be administered with the greatest caution. S. nigrum, Thunb. jap. p. 92, and Ruiz, et Pav. fl. per. p. 32, are probably distinct varieties.

Var. /3, *melanocérasum* (Dun. sol. 153.) branches angularly toothed; leaves ovate, toothed, angular, glabrous ; racemes sub-umbellate, extra-foliaceous. ©. H. Native of the South of Europe. S. melanocérasum, Willd. enum. p. 237.

Var. y, *atriplicifdlium;* leaves sinuated, angular. 0. H. S. atriplicifôlium, Desportes in herb. D. C.

.B/acA>fruited Nightshade. Fi. June, Sept. Britain. PI. 1 to 1± foot.

64 S. FISTULOSUM (Rich. herb. Dun. syn. p. 12. sol. ed. 2d. ined. Nees in Lin. trans. 17. p. 37.) branched, herbaceous ; stern fistular, angular; leaves ovate, with a blunt acumen, somewhat repand, running into the narrow petioles at the base; pedicels when bearing the fruit equal in length to the common peduncle; pollen yellow. ©. H. Native of the Mauritius, East Indies, and cultivated in America. Very like *S. nodiflôrum,* and *S. Guineênse,* but differs from them in the peduncles being stronger and shorter, in the leaves being repand, and the stems being angular and more blunt, in the flowers being smaller, the anthers shorter, and in the pollen being yellow, not violaceous.

Far. a; berries black. ©. H. S. fistulosum, Rich. 1. c. Dun. syn. p. *12.* S. Rhinocerdtis, Blum, bijdr. p. *695.* ? S. nigrum, Wall. cat. no. 2615.

Far./3; berries red. ©. H. S. rubrum, Gmel. syst. p. 384. Willd. spec. 1. p. 1034. S. erythrseum, Dun. sol. *238.* S. nigrum fructu rubro, Hamilt. herb. Wall. cat. no. 2615.

Fistular-itemmed Nightshade. PI. 1 to 2 feet.

65 S. INCE'RTUM (Dun. sol. 155. syn. p. 13. Nees in Lin. trans. 17. p. *38.)* branched, diffuse, herbaceous; stem angular; angles smooth, or denticulated ; leaves deltoid, or deltoid-oblong, triangularly acuminated, sinuately toothed in the middle ; fructiferous pedicels reflexed, equal in length *to* the common peduncle. 0. H. Native of India, in sandy places, Silhet, Wallich. Flowers sub-umbellate, small, white. Berries round, size of peas.

Var. a; leaves narrower, sharply and sinuately toothed ; fruit red, or yellow ; stem rather scabrous. ©. H. S. nigrum, Wall. cat. no. 2615, from Oude and Rungpur.

Var. /?; leaves broadly deltoid, sparingly angular, or somewhat bastately angular.

Berries red, or copper-coloured. 0. H. Native of India, Arabia, and the South of Europe. S. nigrum, Forsk. fl. cegypt. p. 46. Wall. cat. no. 2615. C. N. S. miniàtum, Bernl?. ex Willd. enum. 1. p. 236. Dun. sol. p. 156. S. nigrum, /3, Judàicum, Lin. spec. p. 266. ? S. officinarum acinis puniceis, Tourn. inst. p. 148. S. puniceum, Cord. hist. 158. Nelan Tsjunda, Rheed. mal. 10. p. 145. t/73. Mesaelleha hadie of the Arabs, ex Forsk. 1. c.

* * Berries black. 0. H. Native of Nipaul. S. nigrum, var. melanocérasum, Wall. cat. no. 2615. F.

Uncertain Nightshade. Fl. June, July. Clt. 1823. PI. ¾ to 3 feet.

66 S. RUWUM (Mill. diet. no. 4. Ait. hort. kew. 1. p. 249. Dun. sol. p. 155.) herbaceous, branched, diffuse; stem angular, with the angles and ribs of leaves denticulated; leaves ovate-oblong, attenuated at the base and apex, repandly toothed; fructiferous pedicels divaricate, shorter than the common peduncle, which is slender ; pollen yellow. ©. H, Native all over India in cultivated places; and of Java, Amboyna; California (but with broader leaves). This species differs from *S. nigrum* and *S. incertum,* in the stem being more elongated, in the angles of the stems, petioles, and ribs of the leaves on the under side being muricated, and furnished with strigulose down when young, in the leaves being attenuated at both ends, narrower and softer, never deltoid ; in the umbels being smaller, and also the berries.

Var. a; berries red, or copper-coloured ; flowers smaller ; stem and leaves smoothish. ©. H. S. rubrum, Roxb. fl. ind. 2. p. 216. S. nigrum, r/, rubrum, Willd. spec. 1. p. 1036. S. Rumphii, Dun. sol. p. 157. S. nigrum, Wall. cat. part. S. asperum, Horn. herb. Gunth. from California. S. nigrum, fructu rubro, Wall. cat. no. 2615. A. B. Halicacabus Indicus minor niger, Rumph. amb. 6. t. 26. f. *2.*

Var. /3 ; berries red, or copper-coloured; flowers smaller ; stem and leaves hairy, both erosely toothed. ©. H. India. S. Rumphii, Blum, bijdr. p. 693, but not of Dun. S. chenopodioides, Lam. ill. no. 234. Dun. sol. p. 157.—Feuill. per. 2. t. 14. Berries pale, or whitish, and watery. S. nigrum, herb. Heyne, part. Stems clothed with hoary villi, having the angles more muricated than in var. a, and the leaves are more rhomboid, and erosely toothed to the top, villous, obscure.

Var. y ; berries black, flowers larger. ©. H. Native of tropical America. S. oleraceum, Richard, herb. Dun. syn. p. 12. S. nigrum, Blum, bijdr. p. 694. S. nigrum fructu nigro, Wall. cat. no. 2615. H. Aquara-Quiya, Piso, lib. 4. cap. 50. f. 3. Branches downy at top.

/?ec?-berried Nightshade. Fl. June, July. Clt. 1817. PI. 1 to 3 *feet.*

67 S. ERYTHROCA'RPUM (Meyer, esseq. p. 109.) stems permanent ; leaves oblong-ovate, acuminated at both ends, quite entire; racemes subumbellate, interfoliaceous. %. S. Native in plantations about the Essequibo. S. rùbrum, Lin. syst. veg. p. 173. ed. 15.? Habit and stature of *S. nigrum.* Stem branched, obsoletely angular, puberulous, as well as the branches. Leaves twin, or solitary, sometimes downy, sometimes glabrous. Corolla white, downy; segments oblong, acute. Berry pendulous, smaller than a pea, yellowish, and shining.

Red-fruited Nightshade. PI. 2 to 3 feet.

68 S. FURCA'TUM (Poir. suppl. 3. p. 750. Dun. syn. p. 13. sol. ed. 2d. ined. t. 135.)'stem herbaceous, somewhat dichotomous, angularly-toothed ; leaves ovate, toothed ; racemes forked. ©. H. Native of Peru. The flowers are said to be the largest of its congeners.

Var. a, *glàbrum;* plant glabrous.

Var, /3, *pilbsum ;* plant pilose.

Forked Nightshade. PI. 1 to 2 feet?

69 S. PTEROCAU'LUM (Dun. sol. p. 153. syn. p. IS.) stem*

herbaceous, and is, as well as the branches, angular and toothed ; leaves subovate, sinuately angular ; flowers subumbellate. ©. H. Native of South America, in various places; and of New Holland. H. B. et Kunth, nov. gen. 3. p. 25. S. nigrum, var. e, Virginicum, Lin. spec. 266. Aubl. guian. 1. p. 215. Swartz, obs. p. 83. R. Br. prod. p. 445. S. scabrum, Mill, diet. no. 6, but not of Vahl. nor Jacq. S. alatum, Moench. meth. p. 474.—Dill. elth. p. *367.* t. *275.* f. *256.* Branches puberulous ; angles somewhat ciliated, rather prickly at the base of the cilia. Leaves glabrous. Calyx downy. Corolla white, ex H. B. et Kunth, 1. c. pale violet at first, at length pale, ex Dun. Berries roUnd, black at maturity, size of peas. Anthers yellow.

Wing-stemmed Nightshade. Fl. June, Sept. Clt. ? PI. 1 to 2 feet.

70 S. JUDVICUM (Schultes, sestr. fl. ed. 2d. vol. 1. p. 393. Bess. fl. gall. p. 183. no. 278. Roem. et Schultes, wsyst. 4. p. 589.) stem herbaceous, almost unarmed; branches angular, muricated ; prickles incurved ; leaves ovate, sinuately-angular ; corymbs distich, nutant. ©. H. Native of Austria and Galicia, &c. by way-sides. S. nigrum, 3, Judaicum, Willd. spec. 1. p. 1035. S. nigrum Virginicum, /3, Judaicum, Pers. syn. 1. p. 224. Stem nearly terete. Leaves almost glabrous. Corollas white. Anthers distinct, yellow, connivent. Pedicels deflexed. Berries black.

T *vish* Nightshade. Fl. June, Aug. Clt. 1816. PI. 1 to 2 t.

1 S. SUFFRUTICOSUM (Schousb. ex Willd. enum. p. 236. Lun. sol. *p.* 154. syn. p. 13.) stem unarmed, sufFruticose; leaves ovate, dentately angular, nearly glabrous, ciliated; flowers sub-panicled, ex Dun. ; umbels extra-foliaceous, pedunculate, ex Willd. *Vi* . H. Native of Barbary. Branches 2-edged, or quadrangularly-winged from the decurrence of the petioles ; angles toothed. Leaves large, glaucous, covered with soft hairs above while young. Flowers white. Berries black. Very like *S. nigrum,* but the stem is shrubby, the leaves larger, and the flowers more numerous, &c.; it also differs from *S. quadrangulare,* in the leaves being always dentately angular, and in the flowers being white, not violaceous.

Suffruticose Nightshade. Fl. May, Sept. Clt. 1804. Shrub 4 feet.

72 S. QUADRANGULA^RE (Thunb. prod. 36. Lin. suppl. p. 147.) stem shrubby, tetragonal; leaves ovate, entire, and angular ; flowers panicled. J?. G. Native of the Cape of Good Hope. This species is readily recognized by its tetragonal, hairy, scabrous stem ; angles curled. Branches scabrous. Leaves glabrous. Flowers terminal, bluish.

Var. fi ; leaves lanceolate, entire.

Quadrangular-stemmed Nightshade. PI. 2 to 3 feet.

73 S. TRIANGULA^RE (Lam. ill. no. 2342.) stem herbaceous, trigonal ; leaves oblong-ovate, quite entire, naked ; flowers panicled. ©. H. Native of the East Indies. Poir. encycl. 4. p. 290, exclusive of the synonyme of Rumph. S. quadrangul&re, var. triangulare, Pers. ench. 1. p. 225. Stem trigonal, not winged. Leaves soft, acute. Corolla small, pale violet, with reflexed segments. Berries size of peas, greenish.

Triangular-stemmed Nightshade. Fl. June, Aug. Clt. 1800. PI. 1J to 2 feet.

74 S. BRACTEATUM (Thunb. in act. gorensk. 1812. fl. cap. 2. p. 57.) stem unarmed, shrubby, tetragonal; leaves ovate, serrated ; racemes leafy. I?. G. Native of the Cape of Good Hope. Stem stiff, glabrous ; angles curled. Leaves glabrous. Bracteas similar to the leaves, convolute, serrulated. Calyxes acute. Berries black. It differs from *S. quadrangulare* in the calyx, inflorescence, and leaves.

Bracteate Nightshade. Shrub.

75 S. HU'MILE (Bernh. ex Willd. enum. p. 236. Dun. sol. p. 156.) stem herbaceous ; branches rather angular, toothed, downy ; leaves ovate, sub-repand : superior ones almost entire ; flowers subumbellate. 0. H. Native of the South of Europe. S. officinarum acinis e luteo-virescentibus, Tourn. inst. p. 148. Stems prostrate. Leaves rather downy, with a few teeth. Alternate pedicels drooping. Corolla small, white. Berry nearly globose, size of a pea, green, or yellowish green, smaller than in *S. nigrum.*

Humble Nightshade. Fl. June, July. Clt. 1823. PI. pros.

76 S. FLA'VUM (Kit. in Schuhes, austr. ed. 2d. vol. 1. no. 871.) stem herbaceous ; branches angular, toothed, clothed with strigose down ; leaves ovate-oblong, angularly-sinuated, rather hairy ; flowers subumbellate. ©. H. Native of the South of Hungary, and of France, about Andegaveny. S. ochroleucum, Dun. syn. p. 14. Bast, in Desv. journ. bot. 3. 1814. p. 20. D. C. fl. fr. suppl. p. 418. Dun. sol. ed. 2d. ined. Nearly allied to *S. villosum,* but the leaves are narrower, and more sinuately-toothed ; the corollas are cream-coloured ; the umbels fewer-flowered. Berries yellowish, at length dark brown.

Yellow-fruited Nightshade. Fl. June, July. Clt. 1817. PI. 2 feet.

77 S. VILLOSUM (Lam. ill. no. 2338. Dun. sol. 157. syn. p. 14.) stem herbaceous, villous ; leaves ovate, angularly-toothed, villous; flowers subumbellate. 0. H. Native of Europe, in cultivated and waste places. Willd. enum. 1. p. *236.* S. luteum, Gmel. fl. bad. 1. p. 521. Mill. diet. no. *3.* S. nigrum, y, villosum, Lin. spec. *266.* Willd. spec. 1. p. 1035. Bieb. fl. cauc. 1. p. 165. S. nigrum villosum mosehatum, Pers. ench. 1. p. 224. S. ^Egyptiacum, Forsk. descr. p. 46 — Hall. helv. no. *576.*—Sabb. hort. rom. 2. p. 12. t. 61.—Dill, elth. *366. t. 274:.* f. *353.* S. officinarum acinis luteis, Tourn. inst. p. 148. The whole plant is canescent from soft hairs. Berries at first green, but of a dirty copper colour, or almost red at maturity, nearly globose. Corollas white, larger than those of *S. nigrum,* to which it is nearly allied.

Villous Nightshade. Fl. June, Sept. Clt. 1820. PL 1 to 3 feet.

78 S. HIRSUTUM (Dun. sol. p. 158. syn. p. 14.) stem and branches terete, hairy; leaves quite entire, hairy ; flowers subumbellate. ©. H. Native of Egypt, in gardens. S. nigrum, d, hirsutum, Vahl. symb. 2. p. 40. S. JEgyptiacum, b. Forsk. fl. aegypt. p. 46. S. Memphiticum, Gmel. syst. p. *385. S.* nigrum hirsutum, Forsk. descr. p. 46. Enab eddib. i. e. Fox grape in Arabic. Umbels nutant. Berries edible. This species differs from A£. *villosum* in the berries being black, and the leaves quite entire.

Hairy Nightshade. Fl. June, Sept. Clt. 1817. PI. 1 to 2 feet.

79 S. KITAIBE^U (Schultes, fl. austr. ed. 2d. vol. 1, p. 395.) stem herbaceous, and is, as well as the leaves, clothed with tomentose pubescence; corymbs few-flowered. 0. H. Native of Hungary, Kitaibel. S. inc&num, Kit. mss. This species differs from *S. hirsutum,* in the leaves being hardly an inch long, and sinuated only at the base. Berries fuscescent, 4-5 together.

KitaibeVs Nightshade. Fl. June, Sept. Clt. 1822. PI. 1 foot.

80 S. BESSE^RI (Weinm. ex Rcem. et Schultes, syst. 4. p. 593.) stem herbaceous, rather angular ; leaves ovate, acuminated, quite entire, downy ; racemes subumbellate, extra-foliaceous, pendulous. 0. H. Native of America. Leaves 5-6 inches long. Calyx 5-toothed. Corolla white or bluish, with reflexed segments. Berries size and colour of those of *S. nigrum.*

Besser's Nightshade. Fl. June, Aug. Clt. 1820. PI. 1 foot.

SUBSECT. III. HOLOPHY'LLA (from *6\OQ, holos,* entire ; and <*pv\\oy, phyllon,* a leaf; in reference to the entire leaves.) ***Leaves quite entire, solitary. Calyx 5-parted. Stamens equal.***

§ 1. *Racemes terminal.*

81 S. SE'SSILE (Ruiz, et Pav. fl. per. *2.* p. *35.* t. 167. f. a. Dun. sol. p. 159. syn. p. 14.) stems shrubby, glabrous; leaves oblong-spatulate, acuminated, sessile, quite glabrous; racemes recurved. *h.* S. Native of Peru, in waste places about Munna. Shrub glabrous. Leaves a foot long. Corolla white. Anthers dark purple. Berry white, size of a cherry. Peduncles terminal, solitary, a span long.

Sessile-leaved Nightshade. Shrub 10 to 12 feet.

82 8..ALLOGONUM (Bernh. mss. ex Schlecht, in Linnsea, 8. p. 252.) corolla greenish, physaloid, furnished with a large spreading calyx, remaining under the berry; and is, as well as the stem, angularly winged. ©.? H. Native of Mexico, at Jalapa and Hacienda de La Laguna. Perhaps a proper genus.

Diverse-angled Nightshade. PI.

83 S. ANON^EFOAUM (Dun. syn. p. 15. sol. ed. 2d. t, 95. H. B. et Kunth, nov. gen. amer. 3. p. 27.) arboreous, glabrous; leaves oblong, acuminated, acute at the base, quite entire, glabrous, blistered above, and pilose in the axils of the veins beneath ; corymbs terminal, branched. J?. S. Native of New Granada, on the banks of the river Magdalena, between Tenenffe and Monpox. Branches terete. Leaves 5 inches long. Corollas white ? with ovate-oblong, obtuse segments.

^nova-leaved Nightshade. Tree.

84 S. PABULUM (Pers, ench. 1. p. 223. Dun. sol. 162. syn. P- 15.) stem shrubby ; branches powdery ; leaves oblong-lanceolate, acute, powdery on both surfaces, and particularly on the under side ; racemes loose, spreading; pedicels twin. I?. o. ' Native of Peru, in groves at Munna and Tambo-nuevo, P" lance ola T tum, Ruiz, et Pav. 2. p. *33.* t. 164. f. a. but not of ^av. Reaves subpetiolate, about 5 inches long. Calyx powdery. Corolla large, violaceous, glabrous, powdery outside. Berry black, size of a cherry.

Spreading Nightshade. Fl. June, Sept. Clt. 1818. Shrub 4 to 5 feet.

85 S. PULVERULE'NTUM (Pers. ench. 1. p. 223.) stem shrubby ; branches powdery; leaves lanceolate-linear, nerved beneath, undulated; racemes rameal, powdery; pedicels twin. h. S. Native of Peru, in groves of Huanuco, at Acamago. Dun. sol. p. 163. syn. p. 15. S. angustifolium, Ruiz, et Pav. fl. per. 2. p. *33.* t. 163. f. b. but not of Lam. Stem much branched. Leaves powdery. Corolla whitish-violet, powdery outside. Berry black, subovate, size of a *chick-pea.*

Powdery Nightshade. Shrub.

86 S. LONGIFLORUM (Vahl, eclog. 1. p. 20.) stem shrubby; leaves oblong or elliptic, attenuated, rather tomentose on both surfaces; racemes bifid, cymose; corolla 5-parted. F2 • S, Native of Guiana. S. longifolium, Dun. sol. p. L63. t. 9. syn. p. 15. S. salvifdlium, Lam. ill. no. 2308. ? S. subenerme, Jacq. ? Branches terete, rather tomentose from minute starry hairs at top, as well as the peduncles, pedicels, leaves, and calyxes. Leaves unequal, 2-9 inches long, reflexed, undulately repand, green above. Corolla bluish-violet, with narrow, blunt segments, tomentose outside. Teeth of calyx subulate. The young branches are said by Link, ex enum. 1. p. 184. to be furnished

[illegible] Aug. Clt. 18,3.

Shrub 4 87 S ^ . S (Ruiz- et Pav. fl. per. *2.* p. 33. t. 163.) stem shrubby; branches glabrous, shining; leaves **ovate-lanceolate**, acute ; racemes subcymosc, clothed with powdery tomentum. Jj. S. Native of Peru, in groves of Tarma, where it is called *Rapace* by the natives. Leaves entire or repand. Corolla whitish-violet, powdery outside. Berry black, size of a chick-pea.

Shining-branched Nightshade. Shrub.

88 S. ANGUSTIFOLIUM (Lam. ill. no. 2343. Dun. syn. p. 15.) stem shrubby ; branches subherbaceous ; leaves narrow-lanceolate, quite glabrous, bluntish ; flowers corymbose. *?. G. Native of Buenos Ayres, in fields. Dun. sol. ed. 2d. ined. t. *32.* Branches smooth. Leaves petiolate, similar to those of the *Laurel.* Peduncles long, branched. Corolla white ? with ovate, blunt segments. Anthers large, yellow.

Narrow-leaved Nightshade. Shrub.

89 S. STENOPHY'LLUM (Dun. syn. p. 15. H. B. et Kunth, nov. gen. arner. 3. p. 27.) stem sub-herbaceous, clothed with powdery tomentum; leaves narrow, oblong-linear, almost sessile, quite glabrous above, but clothed with powdery tomentum beneath ; racemes coarctate. %. ? S. Native of Peru, on the Andes, near Olleros and Yanto. Dun. sol. ed. 2d. t. 97.

Narrow-leaved Nightshade. PI. 2 feet ?

90 S. LOXE'NSE (Dun. syn. p. 16. H. B. et Kunth, nov. gen. 3. p. 28.) stem tomentose, scandent; leaves subcordate, ovate-lanceolate, hairy, and woolly beneath ; racemes terminal, divaricate. 2^.^. S. Native of Quito, frequent between Loxa, Gonzanama, and the banks of the river Catamayo, at the altitude of 1060 hexapods. Dun. sol. ed. 2d. ined. t. 98. Stem angular, a little winged, downy at base. Tomentum stellate, whitish-yellow. Leaves on short petioles, unequal fit the base. Panicles terminal. Calycine segments truncate, mucronate. Corolla small, with oblong, acute segments.

Loxa Nightshade. PI. climbing.

91 S. CRI'SPUM (Ruiz, et Pav. fl. per. 2. p. 31. t. 158. f. a. Dun. sol. 159. syn. p. 16.) stem shrubby; leaves ovate and subcordate, undulately curled, acuminated, quite entire ; flowers corymbose, terminal. *?. G. Native of Chili, in waste places. Plant very bitter, and called by the natives *Natre.* Stem glabrous. Calyx 5-toothed. Corolla pale blue, slightly puberulous. Berry pale yellow, globose, size of a pea.

Curled-lewed Nightshade. Fl. June, July. Clt. 1824. Shrub 12 to 15 feet.

92 S. AU'REUM (Dun. syn. p. 16. H. B. et Kunth, nov. gen. 3. p. 28.) stem shrubby, twining; leaves petiolate, ovate, shining above, and rather pilose ^beneath ; racemes dichotomous, clothed with brownish-yellow tomentum. *?. w. G. Native of America, in frigid places at the bottom of Mount Chimborazo, near Calpi and Yanaurcu, at the altitude of 1620 hexapods. Stem clothed with powdery, brownish-yellow tomentum, as well as the pedicels, racemes, calyxes, &c. Racemes paniculately corymbose. Corolla violaceous; segments lanceolate, with revolute edges.

Golden-haired Nightshade. Shrub twining.

93 S. PYRIFOLIUM (Lam. ill. p. 2345. Dun. sol. p. 160. syn.. p. 16.) stem sub-herbaceous; leaves ovate, entire, acute, naked on both surfaces, on long petioles; racemes panicled, terminal ; calycine segments obtuse, mucronate. *h* • • *• Native of Martinico. Dun. sol. ed. Sd. ined. t. 34. Allied to *S. quercifblium ;* but differs in the leaves being entire, and the flowers larger. Corolla white; with oval, obtuse segments. Calyx glabrous ; segments blunt.

Pear-leaved Nightshade. Shrub 2 to 3 feet (

94 S. MACRANTHE RUM (Moc et Sesse. pi. mex. icon. ined. Dun. syn. p. 16. sol. ed. 2d. ined. t. 100. H. B. et Kunth, nov. gen. 3. p. 28. t. 195.) shrubby, scandent; leaves on long petioles, ovate, acuminated, acute at the base, quite entire, hairy or downy ; panicles terminal, branched; flowers subcorymbose.

V} . yj. G.* Native of Mexico, near Cuernavaca. S. dulcamaroides, Poir. suppl. 3. p. 750. Branches rather angular, downy. Leaves 3 or 3| inches long. Panicles downy. Calyx downy, sinuately 5-lobed. Corolla violaceous, size of those of *S. tuberosum,* glabrous; with ovate, acute segments. Berry globose, red, an inch in diameter. Nearly allied to *S. pyrifolium.* Anthers large, sessile, approximate.

Large-anther'ed Nightshade. Shrub climbing.

95 S. BOMBE'NSE (Jacq. p. 49. eclog. t. 24. H. B. et Kunth, nov. gen. 3. p. 29. -Dun. sol. p. 160. ed. 2d. ind. t. 101. syn. p. 16.) shrubby ; leaves petiolate, lanceolate-oblong, attenuated at both ends, acute, subundulated, glabrous ; corymbs extra-axillary, trifid. *?. S. Native of the Island of Tierra Bomba, about Carthagena ; and of Mexico, near Moran, Regla, and Omitla. Plant glabrous. Leaves about 3 inches long. Peduncles opposite the leaves, an inch long, racemosely umbellate, ex Dun. Corollas white, size of those of *S. nigrum,* green outside; segments ovate-oblong, acute, downy towards the margins. Calyx 5-toothed, a little ciliated.

Tierrd-Bomba Nightshade. Fl. June, July. Clt. 1822. Tree 12 feet.

96 S. PUBI'GERUM (Dun. sol. 160. t. 6. syn. p. 16.) stem erect, shrubby; leaves ovate-lanceolate, attenuated at both ends, downy ; racemes di-triehotomous. T? . G. Native of Mexico. Moc. et Sesse, icon. mex. ined. Poir. suppl. 3. p. 751. S. microcarpum, Cerv. elench. hort. matr. 1803. Brouss. cat. hort. monsp. 1804. S. Cervantesii, Lag. gen. et spec. nov. p. 10. no. 145. Stem marked with small tubercles. Young branches green, downy, rather angular. Leaves undulately repand. Racemes corymbose, downy. Flowers small, white, drooping. Calyx 5-toothed. Segments of corolla ovate, reflexed. Berry black, size of a pea. This species differs from *S. Bomhense* in being clothed with silky tomentum ; and from *S. terminate,* in the stems being erect, not decumbent; and in the flowers being cymose, not umbellate.

Down-bearing Nightshade. Fl. May, June. Clt. 1818. Shrub 3 to 5 feet.

97 S. TERMINABLE (Forsk. segypt. p. 45. Vahl, symb. 2. p. 40.) stem shrubby, decumbent; leaves ovate-lanceolate, almost quite entire, pilose ; umbels terminal, villous. T? . F. Native of Arabia Felix, on the higher mountains of Yemen, and shady places at Mocha. Dun. sol. 161. syn. p. 17. Stems warted, downy at top. Leaves villous beneath, acute at both ends, with undulately denticulated, ciliated edges. Calyx 5-toothed; segments lanceolate, obtuse. Corolla white. Berries taste of those of *S. Dulcamara.* Anthers yellow.

*Terminal-flow*ered Nightshade. Shrub decumbent.

98 S. A'SPERUM (Vahl, eclog. 2. p. 17. Dun. sol. p. 164. t. 7. syn. p. 17.) stem shrubby ; leaves ovate-lanceolate or elliptic, rough ; cymes on long peduncles, *ly* • S. Native of South America, Vahl; Cayenne, Rich ; Guadaloupe, D. C. herb. Branches scabrous from stellate hairs. Leaves 6 inches long, approximate towards the tops of the branches, attenuated at both ends, scabrous from minute, stellate hairs. Peduncles dichotomous, clothed with yellowish-white, stellate pili, as well as the peduncles, calyxes, and corollas. Segments of corolla oblong, acute. Berry almost globose.

Rough Nightshade. Shrub.

99 S. RA'DULA (Vahl, eclog. 2. p. 16.) stem shrubby; leaves oblong-elliptic, acuminated at both ends, quite entire, very scabrous above, but clothed with canescent down beneath ; corymbs terminal, dichotomous, hairy, ex Kunth ; tomentose, ex Vahl. Pj . S. Native of Cayenne ; and on the banks of the river Magdalena, near Badilla. Dun. sol. p. 164. ed. 2. ined. t. 35. syn. p. 17. H. B. et Kunth, nov. gen. amer. 3. p. 29. S. salvifolium, Lam. ill. no. 2308. S. asperum, Rich, in act. soc. p. 19. Branches clothed with stellate pili, as well as the leaves, &c. Leaves 2-4 inches long, scabrous and green above. Cymes clothed with starry down, twice or thrice bifid. Corollas small, white ; with ovate segments,

/fasp-leaved Nightshade. Shrub.

100 S. LEPIDOTUM (Dun. syn. p. 17. sol. ed. 2d. t. 102. H. B. et Kunth, nov. gen. 3. p. 30.) stem arboreous, terete ; leaves ovate-lanceolate, falcate, rather scabrous above, and clothed with scaly tomentum beneath, shining on both surfaces; racemes subdichotomous. J?. S. Native of New Granada. Branches, peduncles, pedicels, calyxes, and corollas, rubiginose from minute, scale-like, stellate hairs, as well as the under sides of leaves. Berry globose.

Scale-dotted Nightshade. Tree.

101 S. LAURIFOLIUM (Lin. suppl. p. 148. Dun. sol. p. 165. t. 8. syn. p. 17.) stem arboreous; leaves ovate-oblong, acute, glabrous above, and tomentose beneath ; panicles dichotomous ; pedicels cymose. T? . S. Native of South America, in woods. Branches tomentose. Leaves on short petioles, quite entire, yellowish-brown beneath. Panicles tomentose. Calycine segments mucronulate. Corolline segments ovate.

Laurel-leaved Nightshade. Fl. June, \July. Cult. 1820. Tree.

102 S. RIPA'RIUM (Pers. ench. 1. p. 221.) stem shrubby; leaves oblong-acuminated, hoary from powdery, white tomentum; corymbs terminal, dichotomous, many-flowered, pedunculate. J? • S. Native of Peru, in the province of Huanuco, on the edges of waterfalls. Dun. sol. p. 163. syn. p. 17. S. dichotomum, Ruiz, et Pav. fl. per. 2. p. 34. t. 166. f. b. but not of Lour. Almost all parts of the plant are canescent from powdery tomentum. Flowers small. Corolla violaceous. Berry yellow, size of a filbert.

River-side Nightshade. Shrub.

103 S. VERBASCIFOLIUM (Lin. spec. 184. Mill. diet. no. 22.) shrubby ; leaves ovate-oblong, acuminated, quite entire, tomentose, white beneath, without any leaves in the axils; corymbs nearly terminal, dichotomous; calyx semiquinquefid. h_L . S. Native of Asia, America, tropical parts of New Holland, &c. R. Br. prod. p. 444. Dun. sol. 165. syn. 17. Jacq. hort. vind. 1. t. 13. Willem. herb. maur. p. 17. S. pubescens, Roxb. fl. ind. 2. p. 244. Blum, bijdr. 698. S. erianthum, D. Don, prod. fl. nep. p. 96. S. adulterinum, Hamilt. herb. S. bicolor, Willd. rel. ex Roem. et Schultes, syst. 4. p. 661.—Burm. amer. p. 241. t. 245. f. 2.—Plukn. aim. 351. t. 316. f. 1. Every part of the plant is clothed with powdery, white tomentum. Leaves broad, greenish-yellow above, and of a whitish-yellow colour beneath. Corollas small, white. Berries size of small cherries.

Far. /3, adulterinum (Hamilt. herb.) leaves a little broader, more ovate, and less tomentose. ^ . S. India.

Mullein-leaved Nightshade. Fl. June, July. Clt. 1749. Shrub 6 to 7 feet.

104 S. AURICULA'TUM (Ait. hort. kew. 1. p. 246.) shrubby; leaves ovate-oblong, acuminated, quite entire, tomentose, of the* same colour on both surfaces : axils furnished with oblique small leaves ; corymbs subterminal, dichotomous, pedunculate ; calyx semiquinquefid. T? . S. Native of the Islands of Madagascar, Mauritius, and Bourbon. Dun. sol. p. 166. syn. p. 17. Vahl, symb. 3. p. 38. Wall, in Roxb. fl. ind. 2. p. 245. S. Mauritianum, Scop. del. 3. p. 16. t. 8. Lam. ill. no. 2307. Leaves 6-7 inches long. All parts of the plant are clothed with yellowish tomentum. Corolla villous outside, violaceous inside. Berry globose, yellowish. Nearly allied to *S. verbascifolium.*

Aurkled-leaved Nightshade. Fl. ? Clt. 1773. Shrub 6 to 7 feet.

105 S. UMBELLIFERUM (Eschscholtz, in mem. acad. st. pe-

tersb. 10. p. 286. Hook, et Am. p. 152.) plant clothed with hoary down ; stem suflfruticose ; leaves petiolate, ovate, acutish, quite entire ; racemes umbellate, terminal, few-flowered ; calyx urceolate, 5-cleft: with acute segments; corolla 5-cleft, 3 times longer than the calyx. J?. H. Native of California. Corolla at first campanulate. Anthers biporose at the apex, with a tendency to split.

Umbelliferous Nightshade. Shrub.

106 S. BAHAME'NSE (Mill. diet. no. 24.) shrubby ; leaves lanceolate, sinuately toothed, glabrous ; umbels erect. J? . F. Native of the Bahama Islands, Catesby. Dill. elth. t. *363.* Bark brown. Leaves *3*\ inches long, and \\ broad, acuminated, pale green. Umbels small, lateral. Flowers large, white ; segments acuminated.

Bahama Nightshade. Shrub 4 to 6 feet.

§ *2. Racemes, cymes, or corymbs, lateral, rameal, not axillary nor opposite the leaves.*

107 S. VANGUM (Heyne, ex Wall. cat. no. 2624. Nees, in Lin. trans. 17. p. 48.) shrubby ; leaves ovate-oblong, repandly sinuated, clothed with powdery tomentum beneath while young, as well as the young branches ; cymes lateral, bifid; calycine segments long-acuminated ; berries small, globose. F?, S. Native of the East Indies. S. corymbdsum, Wight, herb. This is a very distinct species, nearly allied to *S. longifblium,* and *S. Bombense,* or *pubigerum,* Dun. ; but differs in the leaves being repandly angular ; from the first it differs in the flowers being smaller, and white ; and from the last in the calycine segments being long-acuminated.

Common Nightshade. Shrub.

108 S. LUXTEO-A'LBUM (Pers. ench. 1. p. 221. Dun. sol. 168. syn. p. 18.) stem shrubby ; leaves ovate, acute, downy on both surfaces; racemes cymose, lateral ; flowers secund. J? . S. Native of Peru, in groves at Cuchero. S. pubescens, Ruiz, et Pav. fl. per. 2. p. 36. t. 169. f. b. Corolla pale yellow. Berry globose, shining, orange-coloured, size of a cherry. Habit of *S. pubescens;* but differs in the flowers being cymosely branched, less umbellate, and not opposite the leaves. Calycine segments deflexed, acute.

Yellow-wfo'te-flowered Nightshade. Shrub.

109 S. CHLORA'NTHUM (Spreng. syst. 1. p. 682.) leaves oblong, attenuated at the base, shining above, and quite glabrous, but clothed with stellate tomentum beneath ; peduncles sub-umbellate ; corollas minute, green ; calyx 5-parted. F? . S. Native of Brazil.

Green-flowered Nightshade. Shrub.

110 S. LA'XUM (Spreng. syst. 1. p. *682.)* leaves ovate, acute, glabrous, veiny; branches cirrhiferous, scandent; peduncles racerllose, loose ; «alyx 5-parted. h_L . ^,. S. Native of Monte Video, Sello.

Loose Nightshade. Shrub climbing.

111 S. DICHOTOMUM (Lour. coch. 1. p. 160.) stem suffruticose, pilose ; leaves cordate-lanceolate, quite entire, tomentose ; peduncles dichotomous. J? . G. Native of China. Dun. sol. p. 167. syn. p. 18. Stem diffuse, branched. Berry small, globose, red.

Forked-yeduncled Nightshade. Shrub.

112 S. FILIFORME (Ruiz, et Pav. fl. per. 2. p. 31. t. 159.) stem suffruticose ; leaves ovate and cordate, obtuse, pubescent; peduncles filiform, bifid, subumbellate. \J . S. Native of Peru, on hills at Lomas de Atiquipa. Dun. sol. 171. syn. p. 18. Habit of *Salvia.* Stem granular. Flowers drooping. Corolla pale blue, thrice as large as the calyx.

TWorm-peduncled Nightshade. Shrub.

113 S. VI'RIDE (R. Br. prod. p. 445.) suffruticose; leaves ovate-oblong, acute, entire, flat, membranous, glabrous ^ racemes corymbose, simple or bipartite; calyx and corolla 5-cleft. J? . G. Native of New Holland, within the tropic, on the sea shore. Perhaps the same as *S. viride.* Forst. pi. escul. p. 42. Spreng. mant. 1. p. 37.

Green Nightshade. Shrub.

114 S. SERI'CEUM (Ruiz et Pav. fl. per. 2. p. *33.* t. 161. f. b. Dun. sol. p. 181. syn. p. 19.) stem shrubby; branches slender; leaves small, ovate-lanceolate, silky, quite entire; peduncles 2-flowered, or few-flowered, cymose. h_c . S. Native of Peru, at Huassen-huassi, in woods. Branches silky. Leaves hoary. Corolla bluish-violet, silky outside. Berry red. Ruiz. et Pav. say that this species agrees with *S. eleagnijolium,* and probably, like it, prickly at the base.

Silky Nightshade. Shrub *4>\ feet.*

115 S. LINKIANUM (Rcem. et Schultes*, syst. 4. p. 601.) stem shrubby, much branched ; branches twiggy, thickish, strigose; leaves ovate-lanceolate, strigose on both surfaces, somewhat repand ; peduncles 2-flowered. J? . S. Native of Brazil. S. diffusum, Link, herb. Leaves lj inch long, and ^ an inch broad. Peduncles extra-foliaceous, nearly an inch long, deflexed. Calyx 5-parted, hairy, with lanceolate segments. Berry glabrous, size of a pea.

Link's Nightshade. Shrub.

§ 3. *Racemes opposite the leaves, or almost so, tomentose, downy, or clothed with leprous-like silvery, powdery down.*

116 S. NU'TANS (Ruiz, et Pav. fl. per. *2.* p. 34. t. 166. f. a.) shrubby; leaves oblong-ovate, acuminated, woolly beneath; racemes very short, opposite the leaves, cymose, recurved, many-flowered ; flowers secund, drooping. ^ . S. Native of Peru, in waste places on the road to Pillao, where it is called *Chuculate* by the natives. Dun. sol. p. 167. syn. p. 19. Shrub rusty ; branches granular. Leaves quite entire, granular above, and nearly glabrous. Corollas small, white. Calyx woolly. Berry yellow, globose.

Drooping -lowered. Nightshade. Shrub.

117 S. VENOSUM (Dun. syn. p. 19. sol. ed. 2d. t. 105. H. B. et Kunth, nov. gen. amer. 3. p. *32.)* arborescent; branches floccosely pilose; leaves lanceolate-oblong, acuminated, acute at the base, quite entire, rather pilose above, and hairy beneath; corymbs opposite the leaves. J? . S. Native of New Granada, on the Andes of Quindiu. Leaves floccose on the midrib beneath, 5 or 5\ inches long; petioles floccose. Calyx small, with roundish segments. Berry nearly globose, size of a sloe.

Feiny-\eaved Nightshade. Shrub or Tree.

118 S. SWARTZIA'NUM (Rcem. et Schultes, syst. 4. p. 602.) shrubby ; leaves petiolate, ovate-lanceolate, quite entire, coriaceous, glabrous, clothed with stellate hairs, beset with orbicular, golden-yellow scales beneath ; racemes solitary, terminal. J?. S. Native of Brazil, near Villa Ricca. S. aureum, Swartz, in litt. Branches terete, beset with rusty scales. Racemes 5-flowered; pedicels deflexed, scaly. Calyx pentagonal, scaly outside. Corolla beset with scales outside, dark purple inside, with acuminated segments. Anthers purple.

Swartz's Nightshade. Shrub.

119 S. GNAPHALIOIDES (Pers. ench. 1. p. 223.) stem shrubby; leaves lanceolate, repand, glabrous,- shining; umbels opposite the leaves, tomentose; berries drooping. J? . S. Native of Peru, in shady places at Tarma ; and in hedges about Acabamba, where it is called *Nununya* by the natives. Dun. sol. p. 173. syn. p. 19. S. calygnaphalium, Ruiz, et Pav. fl. per. *2.* p. 31. The calyxes being clothed with tomentum, the plant has much the appearance of a species of *Gnaphalium.* Corollas violaceous. Berries dark red, saponaceous, size of a filbert.

Gnaphalium-Vike Nightshade. Shrub 10 to 12 feet.

120 S. VELLOZIA'NUM (Dun. sol. 236. ed. 2d. ined. t. 37. syn. p. 19.) branches leprosely tomentose, rufescent; leaves large, oblong-lanceolate, leprously tomentose beneath, but quite glabrous above ; racemes short, almost opposite the leaves, multifid, cymose. *?. S. Native of Brazil. Vand. spec. fl. bras, p. 13. and in Roam, script, hisp. p. 86. Poir. suppl. 3. p. *754>*. Leaves petiolate, a foot long, dark green above, and rufescent beneath, like the racemes. Calyx deeply 5-eleft, with obtuse segments. Corolla small, deeply 5-cleft. Style villous.

VellozVs Nightshade. Shrub.

121 S. ARGE'NTEUM (Dun. syn. p. 19. sol. ed. 2d. t. 39.) branches leprously silvery; leaves ovate-oblong, shining on both surfaces, leprously silvery beneath, but green and glabrous above : they are twin on the primary branches, and solitary on the secondary ones. T2 . S. Native about Rio Janeiro. Poir. suppl. 3. p. *755.* Peduncles twin or tern, very short, 1-flowered, silvery, like the calyxes and outside of the corolla. Flowers small. Calyx 5-toothed. Segments of corolla oblong, acute.

Silvery Nightshade. Fl. June, July. Clt. 1824. Shrub 3 to 4 feet.

§ 4. *Glabrous trees or shrubs. Leaves glabrous, rarely pilose in the axils of the nerves. Racemes simple, cymose, cymosely umbellate, opposite the leaves. Corolla somewhat* 5-*cleft.*

122 S. TJRCEOLATUM (Pers. ench. 1. p. 223. Dun. sol. p. 171. syn. p. 20.) stem shrubby; leaves oblong, acuminated, undulately repand ; peduncles opposite the leaves, few-flowered, very short. *Vi* . S. Native of Peru, in woods at Vitoc. S. oppositifdlium, Ruiz, et Pav. fl. per. 2. p. *35.* t. 168. f. a. Shrub glabrous. Leaves shining above. Peduncles 2-4-flowered. Calyx 5-toothed, in the floriferous state small, but large in the fructiferous state. Corolla 5-cleft, with hooked segments.

(Trceotoe-calyxed Nightshade. Shrub 6 feet.

123 S. L/EVIGA'TUM (Dun. syn. p. 20. sol. ed. 2d. ined. t. 106. H. B. et Kunth, nov. gen. 3. p. 32.) shrubby ; branches and leaves glabrous, but pilose in the axils of the veins beneath ; leaves on short petioles, elliptic-oblong, acuminated, cuneated at the base, quite entire; umbels opposite the leaves; pedunculate, few-flowered, f?. S. Native of New Granada, near Fusagasuga. Leaves 4| inches long, and 2 broad. Calyx 5-cleft, puberulous, with short, ovate, acutish segments. Allied to *S. triste,* ex Kunth.

Smooth Nightshade. Shrub 4 to 6 feet ?

124 S. OBOVATUM (Dun. syn. p. 21. sol. ed. 2d. ined. t. 112. H. B. et Kunth, nov. gen. 3. p. *35.)* arboreous ; branchlets angular, clothed with fuscous tomentum ; leaves elliptic-oblong, acuminated, somewhat cuneated at the base, quite entire, glabrous, but pilose in the axils of the veins beneath; flowers opposite the leaves, umbellate, polygamous. T?. S. Native of Peru, on the Andes of Quito, near Cuenca. Branches terete, glabrous. Leaves petiolate, 3 or 3j inches long. Umbels sessile, many-flowered; and in each umbel there are 3-4 fertile flowers, which stand on long pedicels; the rest are small and abortive, and stand on short pedicels. Pedicels and calyxes clothed with fuscous tomentum. Calyx 5-lobed : lobes bluntish, unequal. Corolla smoothish, white? segments of the limb linear-oblong, acute, equal, mucronately tubercled under the apex.

ObovateAeaved Nightshade. Tree.

§ 5. *Racemes or cymes axillary, solitary or twin.*

125 S. INCURVUM (Ruiz, et Pav. fl. per. 2. p. 34. t. 164. f. b. Dun. sol. p. 171. syn. p. 21.) pubescent; stem angular, herbaceous ; leaves ovate, acuminated ; racemes twin, one shorter than the other ; pedicels incurved, secund. 1/. ? S. Native of Peru, in woods at Munna. S. recurvum, Poir. suppl. 3. p. 755. Stem thickened at the nodi, glabrous; the rest downy. Pedicels cymose, violaceous. Calyx campanulate, deeply 5-toothed. Corolla whitish-violet, 5-parted.

incurved-pediceWed Nightshade. PI. 2 feet.

126 S. A'NCEPS (Ruiz, et Pav. fl. per. *2.* p. *36.* t. 169. f. a. Dun. sol. 171. syn. p. 21.) stem herbaceous; leaves oblong-lanceolate ; peduncles axillary, very short, 2 or 3 together; berries conical, 2-edged. ^. ? S. Native of Peru, in woods at Cuchero. Leaves quite entire, downy. Calyx and corolla 5-parted. Peduncles cymose. Flowers secund, small, green. Berry whitish, many-angled towards the top.

Two-edged-berried Nightshade. PL 3 feet.

127 S. BASSOVIA (Rich. herb. ined. Dun. syn. p. 22.) stem shrubby ; leaves ovate-oblong, attenuated at both ends, glabrous ; cymes small, axillary, solitary. T? • S. Native of Guiana, in woods, Richard. Poir. suppl. 3. p. 754. no. 132. S. rugosum, Rich. herb. Bassdvia sylvatica, Aubl. guian. p. 217. t. 85. Lam. ill. t. 102. Willd. spec. 1. p. 1065. Leaves large, petiolate, shining ; nerves rough above. Cymes shorter than the leaves. Calyx 5-toothed ; teeth obtuse. Corolla pubescent, greenish ; anthers yellow. Berry conical, somewhat compressed, wrinkled, greenish-white. This differs from its nearest ally, *S. dnceps,* in the stem being shrubby, and the cymes being solitary.

Bassovia Nightshade. Shrub 3 to 4 feet.

§ 6. *Peduncles axillary, ^-flowered, solitary, twin, or many together.*

128 S. BREVIFOLIUM (Dun. syn. p. 22. sol. ed. 2d. ined. t. 113. H. B. et Kunth, nov. gen. 3. p. 36.) suffruticose, scandent ; branches and leaves glabrous; leaves ovate, obtuse, obsoletely cordate; peduncles almost opposite the leaves, 1-flowered, solitary. \ . w. S. Native of Quito, near the town of Ibarra, climbing on trees. Stems radicant; branches rather angular. Leaves 9-10 lines long, furnished with a small twin or solitary leaf in the axils. Calyx 5-toothed. Corolla pale violet; segments lanceolate. Berries globose, red, size of those of *S. nlgrum;* Fructiferous calyx 5-cleft. Perhaps a species of ***Withermgia.***

Short-leaved Nightshade. Shrub climbing.

129 S. HAVANE'NSE (Jacq. amer, p. 49. t. *35.* ed. pict. t. 48. Dun. sol. 147. syn. p. 22.) shrubby ; branches angular, and are, as well as the leaves, glabrous ; leaves oblong-lanceolate, acute, shining, quite entire, narrowed at the base, rather coriaceous; peduncles sub-axillary, 1-flowered, solitary; berries oval. J?. S. Native of Martinico, Jamaica, Peru, in shady parts of woods by the sea side ; and of Cuba, near Havana, Regla, and Guanavacoa. H. B. et Kunth, nov. gen. 3. p. *36.* Swartz, obs. 82. Ruiz, et Pav. fl. per. 2. p. *39.* Leaves sometimes twin, but very seldom, 2\ inches long. Corollas blue, an inch in diameter ; segments broad, short, emarginate. Berry ovate, deep blue, shining, ex Jacq. ; globose, red, ex Kunth. Peduncles 2-3-flowered, ex Jacq. ; 1-flowered, ex Kunth. Calyx 5-parted.

Havana Nightshade. Fl. July, Aug. Clt. 1793. Shrub 5 to 8 feet.

130 S. MONTEVIDE'NSE (Spreng. syst. 1. p. 684.) leaves oblong, attenuated at the base, sub-repand, scabrous on both surfaces ; branches powdery; peduncles erect, 1-flowered. T?. S. Native of Monte Video.

Monte Video Nightshade. Shrub.

131 S. CORIA'CEUM (Hook. bot. mag. 2703.) shrubby, glabrous ; leaves petiolate, oblong, coriaceous, shining, .entire, rather veiny ; peduncles terminal and axillary, generally 1-flowered ; corolla 5-lobed : lobes blunt, and plicae mucronate, and longer than the lobes ; calyx 4-5-parted. F? . G. Native of Mexico. Corollas bluish-purple ; anthers yellow beyond the throat.

Coriaceous-leaved Nightshade. Fl. July, Aug. Clt. 1820. Shrub 2 to 4 feet.

SUBSECT. IV. GEMINA'TA (from *geminus,* twin ; in reference to the leaves being twin.) *Leaves quite entire, twin, and sometimes solitary on the same branch, rarely aggregate. Calyx 5-parted. Stamens equal,*

§ 1. *Peduncles axillary, l-flowered, solitary, twin, or aggregate,*

132 S. CONOCA'RPUM (Rich. herb. Dun. syn. p. 22. sol. ed. 2d. ined. t. 30.) stem shrubby ; leaves twin or tern, unequal, entire, obtuse, nearly sessile; peduncles solitary or twin, 1-flowered; berries oval, very acute. T?. S. Native of the Island of St. John, Richard. Poir. suppl. 3. p. 748. Habit of a species of *Cestrum.* Branches wrinkled, yellowish. Leaves coriaceous, obovate or elliptic. Calycine segments ovate. Corolla blue, deeply 5-parted. Berry twice the size of a cherry, edible. Very nearly allied to *S. Havanense ;* and perhaps only differs in the colour of the berry, which is blue in *S. Havanense.*

Cone-fruited Nightshade. Shrub.

133 S. MEMBRANA'CEUM (Wall. cat. no. 2625, A. B. Nees, in Lin. trans. 17. p. 41.) stem herbaceous, dichotomous; leaves twin, ovate and oblong, acuminated at both ends, oblique at the base, unequal, hairy above ; flowers usually twin, axillary; calyx 5-toothed : teeth subulate. ^.? ©. S. Native of the Neelgherry Mountains, Noton, along with *S. bigemindtum.*

Membranous-leaved Nightshade. PI.

134 S. LiE'VE (Dun. syn. p. 22. sol. ed. 2d. t. *36.)* plant herbaceous, glabrous; leaves twin, one much smaller than the other, ovate, acute at both ends, acuminated, entire; peduncles usually twin, axillary ; calyx 5-toothed : teeth subulate. 1/. S. Native of the East Indies. S, membranaceum, Wall. cat. no. 2625. B. Peduncles short. Calyx coriaceous, with 5 linear teeth. Berry globose. Seeds subtriangular, dotted.

• *Sleek* Nightshade. Shrub.

135 S. AGGREGA'TUM (Jacq. coll. 4. p. 124. icon. rar. t. *323.)* stem shrubby; leaves somewhat ovate, obtuse, aggregate; peduncles 1-flowered, slender, many from the same bud, interfoliaceous ; corollas campanulate. J?. S. Native of Africa, on the sea shore ; in Guinea; and at the Cape of Good Hope. Dun. sol. p. 146. syn. p. *22,* Lam. ill. no. 2320. S. Guinee'nse, Lin. spec. p. 263. S. sempervirens, Mill. diet. no. *25.* Lin. spec. ed. 1. p. 185. Saracha Guinee'nsis, Pers. ench. 1, p. 219. A'tropa solanacea, Lin. mant. 205. Willd. spec, l! p. 1018. Vogel. icon. rar. t. 16. ex Lam. 1. c.— Commel. hort! *2.* p. 191. t. 96. Shrub glabrous. Leaves many from the same bud, quite entire, petiolate, shining, an inch long. Fructiferous pedicels drooping ; all length of leaves. Corolla pale purplish-violet, an inch in diameter, with lanceolate segments. Berries globose, yellow, shining, 2-celled, size of peas.

Aggregate-leaved Nightshade. Fl. June, July. Clt. 1821. Shrub 4 to 6 feet.

136 S. HYGRO'PHILUM (Schlecht, in Linnsea, 8. p. 254.) shrubby ; branches villous ; leaves twin, on short petioles, lanceolate, yellowish-green, acute at both ends', pilose above, and rather villous beneath ; flowers forming umbels, on very short peduncles, opposite the leaves, few-flowered ; teeth of calyx broad-ovate, acute; corollas white, 5-cleft, at length reflexed, pilose outside; berries globose, glabrous. *2. G. Native of Mexico, in humid woods about Jalapa. Corolla white. Stamens regular. Leaves unequal in size, larger one 3 inches long, and 1| broad.

Water-loving Nightshade. Shrub.

§ 2. *Glabrous trees or-shrubs. Leaves glabrous, but sometimes pilose in the axils of the veins beneath. Racemes simple, cymose, or cymosely umbellate, opposite the leaves. Corollas 5-parted.*

137 S. NU'DUM (Dun. syn. p. 20. sol. ed. 2d. ined. t. 107. H, B. et Kunth, nov. gen. amer. 3. p. *33.)* shrubby; braflches and leaves glabrous ; leaves twin, one much smaller than the other, elliptic oblong, acuminated at both ends, quite entire ; umbels nearly opposite the leaves, on short peduncles, few-flowered ; pedicels at length reflexed. J? . G. Native of Mexico, near Jalapa, in humid places. Leaves 3 or *3* inches long, and about 1| broad. Corolla white, size of those of *S. nigrum.* Berry globose, glabrous, size of a large pea. Very like *S. diphyllum;* and hardly differs from it, unless in the leaves being all acute, deeper green: and in the pedicels being deflexed.

Naked Nightshade. Shrub.

138 S. DIPHY'LLUM (Lin. spec. 2C4. Aubl. guian. 1. p. 215.) stem shrubby; leaves twin: the larger one oblong, attenuated at both ends, obtuse ; the smaller one obovate-elliptic, sometimes emarginate; cymes small; umbels short, opposite the leaves ; floriferous pedicels drooping, fructiferous ones erect. *?. S. Native of tropical America. Jacq. coll. 2. p. 231. icon, rar. 2. t. 322. Dun. sol. p. 172. syn. p. 20.—Pluck, aim. p. 349. phyt. t. 111. f. 4. An evergreen, fetid shrub. Stem blackish, terete. Leaves nearly sessile. The larger leaf 2 to 4 inches long. Corolla white, with lanceolate, acute segments. Berries globose, succulent, pale orange-coloured, size of a chick pea.

Two-leaved Nightshade. Fl. June, July. Clt. 1696. Shrub 2 to 4 feet.

139 S. ARBOREUM (Dun. syn. p. 20. sol. ed. 2d. ined. t. 198.) arboreous ; branches flexuous, and are, as well as the leaves, glabrous; leaves twin, oblong, acuminated, cuneated at the base, quite entire, one of which is very small, and nearly sessile ; cymes small, opposite the leaves. I?. S. Native of the province of New Andalusia, near Cumanacoa. Branches angular, glabrous, or a little downy. Leaves shining above, 7-8 inches long, and 3 broad: upper ones twin, the smaller one roundish, ovate, an inch long. Cymes very minute, simple. Calyx 5-toothed ; teeth ovate, acute. Corolla white, with oblong, acute segments, 6 times as long as the calyx.

Tree Nightshade. Fl. June, July. Clt. 1819. Tree 40 feet.

140 S. ACUMINA^TUM (Ruiz, et Pav. fl. per. 2. p. 34. t. 159. f. a. Dun. sol. 172. syn. p. 20.) shrubby; leaves twin, ovate-oblong, and elliptic, acuminated : the point straight or twisted ; racemes cymose, opposite the leaves, many-flowered; flowers secund. ^ . S. Native of Peru, in woods at Chincao. Plant glabrous. Leaves on short petioles, quite entire, shining above. Racemes recurved at apex; pedicels slender, but thickened

at top. Corollas small, white. Berry black, globose, size of a chick pea.

Acuminated-leaved Nightshade. Shrub.

141 S. FCE'TIDUM (Ruiz, et Pav. fl. per. 2. p. 34. t. 165. f. b. Dun. sol. p. 173. syn. p. 20.) stem shrubby; leaves usually twin, ovate, dependent; cymes short, umbellate, drooping, opposite the leaves. ^ • S. Native of Peru, about Tarma, in the fissures of rocks, and in waste places. Plant glabrous, very fetid when bruised. Leaves veiny beneath. Corolla whitish blue, or pale blue; anthers declinate. Berry golden yellow, size of a small walnut. The leaves mixed with the flowers of *Sambucus* are used for bathing ulcers in Peru.

Fetid Nightshade. Shrub 6 feet.

142 S. TRI'STE (Jacq. amer. p. 50. t. 40. ed. pict. t. 49.) stem shrubby; leaves twin, lanceolate-oblong, somewhat repand, acuminated; cymes short: flowers secund. *fy* . S. Native of Martinico, among bushes on the banks of rivers; and of Peru, in woods at Pillao. Vahl. symb. 3. p. 38. Willd. spec. 1.p. 1031. Dun. sol. p. 170. syn. p. 21. S. oblongum, Ruiz, et Pav. fl. per. 2. p. 34. t. 165. f. 6. Dun. sol. p. 172. Leaves petidlate, a hand long, dark green. Peduncles lateral, an inch long, many-flowered. Corollas small, white, ex Jacq., whitish violet, ex Ruiz et Pav. with lanceolate segments. Berry globose, dusky yellow, size of a chick pea. Calyx 5-toothed, ex Ruiz, et Pav. Calycine segments roundish, ex Jacq.

Sorrowful Nightshade. Fl. June, July. Clt. 1820. Shrub 8 feet.

143-S. SPIRA'LE (Roxb. fl. ind. 2. p. 247. Wall. cat. no. 2619.) stem shrubby; branches compressedly angular, glabrous; leaves twin, the one 2 or 3 times smaller than the other, oblong-lanceolate, attenuated at the base, glabrous, quite entire; racemes sub-cymose, almost opposite the leaves, secund, revolute at apex; calyx beset with glandular dots. ~*fy* • S. Native of Silhet, and Gualpara. S. Naratida, Hamilt. herb. This species is nearly related to *S. triste,* Jacq. but differs from it in the branches being angular; in the leaves being cuneated a long way at the base, acute, not acuminated, always entire; in the flowers being larger and white; and in the calyxes being glandular. Though rather fetid this species is still ornamental, on account of its smooth deep green foliage, spiral racemes of pretty white flowers, and numerous small round yellow berries.

Spiral Nightshade. Shrub.

144 S. CORNIFOLIUM (Dun. syn. p. 21. sol. ed. 2d. ined. t. 110, H. B. et Kunth, nov.-gen. amer. 3. p. 34.) shrubby; branches and leaves glabrous; leaves elliptic-oblong, acuminated, acute at the base, quite entire, somewhat parallelly veined, twin, one of which is very minute; umbels opposite the leaves, on short peduncles. ^ • S. Native of New Granada, in the valley of the river Cauca, betwixt Palace and Popayan. Branches angular. Larger leaves about 3 inches long, downy when young: the smaller ones obovate, almost sessile. Calycine segments obtuse. Corollas white, size of those of *Lysimachia vulgaris,* with ovate, acuminated segments. Ovarium villous.

Dogwood-leaved Nightshade. Shrub.

145 S. LEUCOCA'RPUM (Rich. herb. Dun. syn. p. 21. sol. ed. 2d. ined. t. 38.) branches twiggy; leaves twin,, one 3 times smaller than the other, nearly orbicular, the other elliptic-lanceolate; cymes unilateral, few-flowered, opposite the leaves. J? . S. Native of the Island of St. Martha, Richard. Nearly allied to *S. triste,* but differs particularly in the leaves, in the unilateral cymes, and colour of the berries. Shrub glabrous. Branches terete. Leaves shining on both surfaces. Calyx coriaceous, small, 5-crenate. Corolla white, rather large, with acute segments. Berry spherical, shining, white.

White-fruited Nightshade. Shrub.

146 S. PSYCHOTRIOIDES (Dun. syn. p. 21. sol. ed. 2d. ined. t. 111. H. B. et Kunth, nov. gen. amer. 3. p. 35.) arboreous; branches glabrous, suberosely warted, angular; leaves twin, lanceolate-oblong, or obovate-oblong, acuminated, acute at the base, quite entire, glabrous, but pilose in the axils of the veins beneath; umbels opposite the leaves, nearly sessile. T?. S. Native of New Granada, on the banks of the river Magdalena near Morapox, and TenerifFe. Larger leaves 3-4 inches long. One of the leaves smaller than the other. Umbels 3-4-flowered. Flowers size and structure of those of *S. cornifolium.* Fructiferous pedicels thickened at top, suberose.

Psychotria-like Nightshade. Shrub or tree.

§ 3. *Racemes lateral, rameal, not axillary, nor opposite the leaves.*

147 S. CROTONIFOLIUM (Dun. syn. p. 18. sol. ed. 2d. ined. t. 103. f. b. H. B. et Kunth, nov. gen. 3. p. 30.) shrubby; branches tomentose; leaves twin, oblong, narrow-acuminated, rounded and unequal at the base, somewhat repand, clothed with canescent down above, and soft white tomentum beneath; racemes supra-axillary, bifid; flowers unilateral. ^ • S. Native of New Granada, near the port of Carthagena, in hot places. Hairs stellate. One of the leaves is twice the size of the other, the largest 4-5 inches long. Calyx and corolla tomentose outside; segments of the latter linear-lanceolate. Berry globose, smoothish, size of a pea.

Croton-leaved Nightshade. Shrub.

148 S. NARE'NSE (Dun. syn. p. 18. sol. ed. 2d. ined. t. 103. f. 8. H. B. et Kunth, nov. gen. 3. p. 31.) shrubby; branches tomentose; leaves twin, ovate, acute, cordate at the base, and unequal, clothed with canescent down above, and with white soft tomentum beneath; lower leaves sinuately angular; racemes lateral, bifid; flowers unilateral. T? . S. Native of New Granada, in shady places on the banks of the river Magdalena, between Nares and Honda. Tomentum and down stellate. One of the leaves smaller than the other, petiolate. Larger leaves 7-8 inches long, and 5-6 broad. Flowers size of those of the preceding, pale yellow, ex Bonpl. Very like the preceding species, and only differs in the tomentum being more dense, in the leaves being broader and cordate, and in the lower ones being sinuately angular.

Nares Nightshade. Fl. June. Shrub 6 to 12 feet.

149 S. TRACHYPHY'LLUM (Dun. syn. p. 18. sol. ed. 2d. ined. t. 104.) shrubby; branches tomentose; leaves twin, oblong, acuminated, rounded at the base and unequal, quite entire, roughish above, but clothed with soft hoary tomentum beneath; racemes lateral, dichotomous; flowers unilateral. T? . S. Native of the province of Popayan, between Buga and Carthage. Branches terete. One of the leaves smaller than the other. Tomentum and down stellate. Larger leaves 5-6 inches long, and 2 or 2j broad. Flowers like those of *S. crotonifolium,* but a little smaller. Very nearly allied to *S. crotonifolium,* but the tomentum is more dense; the leaves green and roughish above, and the flowers a little smaller.

Rough-leaved Nightshade. Shrub 6 to 10 feet ?

150 S. TETRA'NDRUM (R. Br. prod. p. 445.) suffruticose, erect; leaves generally twin, oblong-ovate, entire, membranous, beset with a few scattered hairs; racemes corymbose, simple; flowers quadrifid. J? . S. Native of New Holland, within the tropic, on the sea-shore. Dun. syn. p. 18. no. *98.*

***Tetrandrous-fiowered* Nightshade. Shrub.**

151 S. GEMINIFOLIUM (Schlecht, et Cham, in Linnaea, 5, p. 112.) shrubby; branches, inflorescence, and under sides of

leaves clothed with cream-coloured tomentum ; upper surfaces *of* leaves green, but beset with stellate hairs ; leaves twin, unequal in size, obovate, obtuse : the larger one ovate, acuminated, rounded at the base, 2 J inches long; cymes terminal and lateral, pedunculate, many-flowered ; calyx suburceolate, 5-toothed : teeth rounded ; berry globose. f?. G. Native of Mexico, at Jalapa. Flowers hardly larger than those *oVS. nigrum.*

Twin-leaved Nightshade. Shrub.

§ 4. *Racemes terminal.*

152 S. PTERÒPODUM (Dun. syn. p. 14. sol. ed. 2d. ined. t. 94. H. B. et Kunth, nov. gen. amer. 3. p. 26.) stem herbaceous, winged ; leaves twin, sessile, decurrent, elliptic-oblong, sub-acuminated, very narrow at the base, undulately repaad, smoothish above, but clothed with fine powdery down beneath ; * corymbs opposite^ the leaves, dichotomous ; peduncles winged. %. ? S. Native of South America, near the city of Quito, at the altitude of 1500 hexapods. Leaves 8-10 inobes long, and 3f bfoad. Peduncles many-flowered, one-half shorter than the leaves ; branches and pedicels clothed with powdery down. Calycine lòbes truncate, mucronate. Corolla white, with oblong acute segments. Ovarium glabrous, nearly globose. Said to be nearly allied to *S. sessile,*

Wing-peduncled Nightshade. PL 2 to 3 feet ?

153 S. OBLONGIFÒLIUM (I?Un' SVn* P* ^' S0^ e^' ^d. t. *95.* H. B. et Kunth, nov. gen. amer. 3. p. 27.) herbaceous ; leaves twin, elliptic-oblong, acute, narrowed at the base, almost quite entire, glabrous, downy on the veins beneath; racemes nearly terminal, bifid. %. S. Native of New Granada, on the Andes of Quindiu. Branches terete, glabrous. One of the leaves one-half smaller than the other, green above ; larger ones 6-7 inches long, and 2| to 3 inches broad : the smaller ones nearly orbicular. Pedicels thickened under the top, and are, as well as the branches, villous. Calycine segments obtuse. Corolla white, glabrous; with ovate, obtuse segments.

Oblong-leaved Nightshade. PL ?

154 S. PU'LCHRUM (Dun. syn. p. 15. sol. ed. 2. ined. t. *35.)* stem shrubby ; branches rugose ; leaves oblong-ovate, ending in the petioles ; racemes large, terminal, sub-dichotomous. T? . S. Native of Brazil. Poir. suppl. 3. p. 750. Branches terete, glabrous. Leaves usually twin, acute, or obtuse, rather downy beneath. Pedicels cymose. Segments of corolla lanceolate, acute. Berry globose. Nearly allied to *S. crispum,* but the leaves are less cordate, and the racemes are larger.

Fair Nightshade. Shrub.

SUBSECT. 4. *Branches spinescent. Leaves solitary, entire. Peduncles axillary, filiform, \-flowered, solitary, or aggregate. Calyx 5-toothed, or 5-cleft. Stamens unequal. Seeds bony.*

155 S. LYCIOI'DES (Lin. mant. 45. Jacq. icon. rar. 1. t. 46.) shrubby; branches spinescent, numerous; leaves elliptic, or oblong, obtuse, cuneated at the base, or acute at both ends, glabrous, or hairy; peduncles extra-axillary, solitary, 1-flowered, *h* • S. Native of Peru. Dun. sol. p. 172. syn. p. 22. Branches terete, glabrous ; branchlets angular, hairy. Leaves *7-8* lines long. Pedicels solitary. Calyx urceolate, truncate, 5-toothed ; teeth linear, subulate, remote. Corolla pale violet; limb angularly *5-ldbed* ; throat yellow. Anthers yellow, a little arched. Berry globose, glabrous, red, size of a pea.

Far. /J; leaves hairy. J?. S. S. lycioides, var. *(1,* Dun. syn. p. 23. H. B. et Kunth, 1. c.

Lycium-like Nightshade. Fl. May, June. Clt. 1791. Shrub 3 to 4 feet.

156 S. CANDI'CANS (Dun. syn. p. *23.)* shrubby ; branches spinescent ; leaves obovate-cuneiform, obtuse, clothed with white tomentum beneath, but scabrous above; peduncles filiform, 1-flowered, solitary. ? F? . S. Native of Peru, on argillaceous rocks of Huanuco and Tarma. S. lycioides, Ruiz, et Pav. fl. per. 2. p. 41. t. 177. f. 6, exclusive of the synonymes, but not of Lin. S. lycioides * tomentosum, Dun. sol. p. 174. Stem much branched; branches ending in floriferous leafy spines. Calycine segments appendiculate. Corolla blue, with a yellowish bottom. Anthers free. Berry globose, of a reddish copper colour.

Whitish-leaved Nightshade. Shrub 3 to 5 feet.

SUBSECT. V. HOLOCLA'INA (from *o\og, holos,* entire; and *yXaiva, chlaina,* an outer cloak; in reference to the entire calyx.) *Leaves quite entire, solitary, or twin. Calyx truncate, entire. Flowers twin, or fascicled at the sides of the leaves.*

157 S. BIGEMINA'TUM (Nees in Lin. trans. 17. p. 42.) stem suffruticose ;. lower leaves solitary : superior ones twin, densely clothed with bristles above, elliptic-oblong, acuminated at both ends, unequal in size ; flowers usually twin at the sides of the leaves ; calyx quite entire, smooth ; peduncles erect while bearing the fruit. J? . S. Native of Travancore. S, flexu6sum, and S. angulòsum, Herb. madr. Fruit size of a pea, seated on an erect, thick peduncle.

Twice-twin-f\owered Nightshade. Shrub.

158 S. NEESIA'NUM (Wall. cat. suppl. 248. Nees in Lin. trans. 17. p. 42.) stem suffruticose; branches tetragonal, roughish towards the^summit; lower leaves solitary ; superior ones twin, scabrous above from rough dots, oblong-lanceolate, acuminated at both ends, unequal in size; flowers fascicled at the sides of the leaves; calyx quite entire, smooth ; -peduncles spreading in the fruit-bearing state. I? . S. Native of the mountains of Silhet. Corolla white, glabrous ; segments lanceolate. Berry round, smaller than a pea.

Nees's Nightshade. Shrub.

159 S. BLU'MII (Nees in Blum.Jbijdr. 696, in Lin. trans. 17. p. 45.) leaves twin, of two forms, smaller on« ovate, clothed with dense bristles on the upper surface ; stem violaceous ; flowers many in a fascicle, fc. S. Native of Java. Calvx quite entire.

*Blume*s* Nightshade. Shrub.

160 S. PARASI'TICUM (Blum, bijdr. p. 697.) stem nodose; leaves all solitary, glabrous ; calyx entire. ^ • S, Native of Java.

Parasitical Nightshade. Shrub.

SUBSECT. VI. POLY'MERIS (from *TTOXVQ, polys,* many; and /xeptc, *meris,* a part ; the divisions of the calyx are numerous.) *Leaves quite entire, solitary, or twin. Calyx 10-toothed, or* 10-*cleft. Peduncles \-flowered, axillary, or interfoliaceous.*

S 1. *Leavertwin. Corolla plicate, 5-angled. Stamens sometimes unequal**

161 6. UNIFLÒRUM (Dun. syn. p. *33.* sol. ed. *2d.* ined. t. *42.)* stem dichotomous ; branches glabrous, rough from dots ; leaves usually twin, ovate, bluntish, glabrous, and shining above, but clothed with leprous tomentum beneath ; peduncles solitary. J? • S. Native of St. Domingo. Poir. suppl. 3. p. *757.* S. dichòtomum, Richard. Shrub elegant; branches brown, angu-

lar. Peduncles glabrous. Calyx glabrous, 10-cleft; the alternate segments smaller. Corolla with a 5-rayed star. Stamens equal. Berry globose, mucronate, size of a small cherry.

One-flowered Nightshade. FL May, July. Clt, 1820. Shrub 2 to 3 feet.

162 S. MONANTHUM (Roem. et Schultes, syst. 4. p. 608.) leaves usually twin, almost sessile, elliptic; peduncles axillary, 1-flowered; calyx 10-cleft. %. S. Native of New Spain. S. uniflorum, lag. ge*i. et. spec. nov. p. 10. no. 142. Herbaceous, roughish from scattered, short, stellate hairs. Corolla dark purple, or blue, 3. times as long as the calyx. Calycine segments oblique, short. Berry ovate, quite smooth, size of a small hen's *egg.*

One-flowered Nightshade. Fl. June, July. Clt. 1818. PI. 2 to 3 feet?

163 S. SPECIOSUM (Dun. sol. p. 179. syn. p. 23.) arboreous ; branches flexuous; leaves oblong, acuminated, solitary, or twin ; peduncles solitary, axillary ; margins of corolla crenulated. Tj . S. Native of the Caribbee Islands.— Burm. amer. p. 242. t. 245. f. 5.—Plum, cat. p. 4. Tourn. inst. p. 150. Leaves veiny : superior ones twin. Flowers showy. Corolla large, expanded, semiquinquefid, rather pentagonal. Berry spherical, erect, drooping at maturity.

Showy Nightshade. Tree.

164 S. NEGLECTUM (Dun. sol. p. 177. syn. p. 23.) stem shrubby; leaves ovate, undulated; peduncles solitary and twin ; calycine segments reflexed. I? . S. Native of the West India Islands.—Burm. amer. p. 242. t. 245. f. 4.—Plum. mss. vol. 4. f. 34. ex Aubl. guian. 1. p. 217.—Tourn. inst. p. 150. Much branched. Leaves quite entire. Lower peduncles solitary: upper ones twin, or tern. Calyx denticulated, according to the figure 10-16-toothed. Berry roundish, scarlet. This species is nearly allied to *S. geminatum,* but differs In the stem not climbing, and in the more numerous retroflexed calycine teeth.

Neglected Nightshade. Fl. June, July. Clt. 1824. Shrub 4 to 5 feet ?

165 S. TRICOLOR (Moc. et Sesse. pi* mex. icon. ined. Dun. syn. p. 24. sol. ed. 2d. ined. t. 41. Poir. suppl. 3. p. *756.)* stem terete, dichotomous ; leaves twin, one of them smaller than the other, ovate, acutisU, clothed with shining tomentum ; peduncles 4, together ; anthers 5, one of which is twice as long as the others. *2. S. Native of Mexico. Nearly allied to *S. lentum,* but differs in there being 3 green spots at the base of each segment of the corolla, and in the anthers being unequal, &c. Stem woolly. Peduncles villous. Calyx 10-toothed. Corolla white, somewhat reflexed, with a violaceous star in the middle. Berry globose, red.

Three-coloured- flowered Nightshade. Shrub.

166 S. PAUCIFLORUM (Vahl. eclog. 1. p. 21. Dun. sol. p. 176. syn. 24.) branches villous, tomentose above; leaves ovate, quite entire, glabrous above, tomentose beneath : rameal ones twin, unequal; peduncles twin, unequal, f?. S. Native of Martinico. Branches herbaceous, clothed wjth rusty tomentum, as well as the under sides of the young leaves. Leaves 2-3 inches long. Flowers drooping, clothed with rusty tomentum. Calyx short, truncate, 10-toothed; teeth linear. Corolla glabrous, length of peduncles.

Few-flowered Nightshade. PI. ?

167 S. SYLVATICUM (Dun. syn. p. 24. sol. ed. 2d. ined. t. 11*. H. B. et Kunth, nov. gen. amer. 3. p. 37.)«shrubby, scandent>; leaves ovate, acuminated, rounded at the base, subrepand, glabrous, but hairy on the veins beneath : superior ones twin, unequal; flowers extra-axillary, usually by threes ; calyx 10-toothed: teeth subulate. ^ • *KJ'* S- Native near Cumana and Bordones, in woods. Branchlets hairy. Leaves about 2 inches long. Corolla large, pentagonal, marked by a 5-rayed star. Stamens 5, one longer than the others. Berry globose, glabrous, size of a sloe.

Wood Nightshade. Shrub climbing.

168 S. LYSIMACHIOIDES (Wall, in Roxb. fl. ind. 2. p. 257. cat. no. 2609. Nees in Lin. trans. 17. p. 44.) herbaceous ; stem creeping at the base, but ascending at the top, as well as the branches; leaves usually twin, nearly equal, ovate, acute at both ends, quite entire, pubescent; flowers solitary, smoothish, placed between the leaves ; calyxes 8-10-toothed : teeth subulate, equal in length to the fruit. %. G. Native of Sheopore, Chundragiri, and Chitlong. Corollas white. Berries globular, size of a gooseberry, scarlet, or red.

Loostrife-like Nightshade. PI. creeping, 1 foot long.

169 S. RETROFRACTUM (Vahl. eclog. 1. p. 21. Dun. sol. 176. t. 5. syn. p. 24.) stem shrubby, flexuous; axillary branches retrofracted; leaves ovate, glabrous : upper ones twin, unequal; peduncles filiform, many together, umbellate, axillary and terminal ; calyx truncate, toothless, glabrous. J? . S.- Native of tropical America. Shrub twining. ? Leaves petiolate, quite entire, 1| inch long. Calyx 10-cleft; segments linear, subulate, unequal, joined by a pellucid membrane, whence it appea'rs toothless. Corolla as in *S. virgatum,* but smaller^, 3 times longer than the calyx. Stamens equal.

Retrofracted Nightshade. Shrub twining ?

170 S. GLANDULOSUM (Ruiz, et Pav. fl. per. 2. p. 35. t. 167. f. b. Dun. soi. p. 180. syn. p. 25.) stem suffruticose, scandent ; leaves twin, ovate-cordate ; peduncles 3-5 together, interfoliaceous; calycine teeth gland-formed. J? . ^,. S. Native of Peru, in groves at Vitoc, in the province of Tarma. Leaves on short petioles, very veiny, unequal at the base. Calyx turbinate, angularly striated, usually 10, rarely 12-14-toothed. Corolla white, spreading; limb plicate. Berry globose, pale red.

Glandular-toothed-calyxed Nightshade. Shrub climbing.

171 S. CUTACENSE (H. B. et Kunth, nov. gen. amer. 3. p. 38.) shrubby, scandent ?; branches clothed with downy tomentum ; leaves twin, ovate, sub-acuminated, quite entire, clothed with silky hairs on both surfaces, canescent beneath; flowers extra-axillary, twin, or terminal, by threes; calyx 10-toothe<L J? . w. S. Native of Peru, in woods near Ayavaca and Rio Cutaco. Branchlets angular. Leaves petiolate, one a little smaller than the other. Corolla sinuately 5-lobed, white, with a violaceous star, dovvniy outside. Hairs simple, not stellate.

Cutaco Nightshade. Shrub climbing.

172 S. MACRODON (Wall. cat. no. 2621.) shrubby, erect; lower leaves solitary : superior ones twin, the one 2 or 3,times smaller than the other, oblong-lanceolate, acuminated at both ends, quite entire, hairy above, as well as the branchlets ; flowers solitary, or in fascicles placed between the leaves ; calyx furrowed, 10-toothed : teeth subulate, longer than the fruit. *2 . S. Native of the Pundua mountains. Similar to *S. denticulatum* in habit, but differ* in the teeth of the calyx being very long.

Long-toothed-ca\yxe& Nightshade. Shrub.

173 S. DECEMDENTATUM (Roxb. fl. ind. 2. p. 247. Wall, cat. no. 2614.) herbaceous, erect, perennial; lower leaves solitary : superior ones twin, ovate, acute at both ends, hairy, the one smaller than the other; flowers fasciculately aggregate at the sides^of the leaves; calyx 10-toothed, and is, as well as the pedicels, glabrous : teeth linear-subulate, equal. ©. *G.* Native of China and Singapore. Berries the size of a pea, smooth, bright red when ripe.

Ten-toothed Nightshade. PL 2 to 3 feet.

174 S. CRASSIPE'TALUM (Wall, in Roxb. fl. ind. 2. p. 256. cat. no. 2618. Nees in Lin. trans. 17. p. 42.) shrubby; lower leaves solitary: superior ones twin, ovate-oblong, acuminated at both ends, ciliated, hairy above, one smaller than the other; flowers fasciculately aggregate at the sides of the leaves; calyx somewhat 10-toothed; teeth subulate: alternate ones shorter. J? . G. Native of Nipaul. S. denticulatum, var. a, Blam. bijdr. p. 697. S. biflorum, D. Don, prod. fl. nep. p. 96, exclusive of many synonymes, and probably of Lour. coch. 1. p. 159. ? Corolla purple, or white. Berry globular, scarlet, ¼ an inch in diameter.

Thick-petalled Nightshade. Shrub 2 to 3 feet.

175 S. MOLLISSIMUM (Blum, bijdr. p. 698.) flowers fascicled at the sides of the leaves; teeth of calyx equal in length to the tube; leaves of two forms, tomentose beneath, the one ovate, and the other oblong. J?. S. Native of Java.

Very-soft Nightshade. Shrub.

§ 2. *Leaves solitary. Corolla plicate, 5-angled. Stamens sometimes unequal.*

176 S MOCINIANUM (Dun. syn. p. 23. sol. ed. 2d. ined. t. 43.^ stem herbaceous, pilose; leaves almost sessile, ovate-lanceolate, acute, pilose; peduncles solitary; calyx 10-cleft. ©.? H. Native of Mexico. Poir. suppl. 3. p. 757.—Moc. et Sesse, pi- mex. icon. ined. Nearly allied to *S. viridiflorum.* Peduncles axillary, longer than the leaves. Corolla violaceous, with acute angles. Anthers nearly sessile. Berry ovate-oblong, yellowish green.

Mocino's Nightshade. PI.

177 S. FI/GAX (Jacq. coll. 4. p. 123. icon. rar. t. 324. Dun. sol. 178. syn. p. 2Aj|ttem shrubby, dichotomous, divaricate; leaves lanceolate,jHoothish; peduncles solitary; calyx 10-toothed. ^2 • ˢ«-% Native of Caraccas. Lam. diet. 4. p. 282. Bark blackish, Toughish with dots. Peduncles from the divarication of the branches, or opposite the leaves. Calyx small, truncate, 10-striped. Corolla large, white, with a yellow 5-rayed star, as in *S. stellatum,* expanding about 5 in the morning, but closes in a short time afterwards, hence the specific name.

Fugacious-flowered Nightshade. Fl. May, July. Clt. 1816. Shrub 5 to 6 feet.

178 S. STELLA'TUM (Jacq. coll. 3. p. 254. and 5. t. 5. f. *2.* icon. rar. t. 325. Dun. sol. p. 178. syn. p. 24.) stem shrubby, scandent, flexuous; leaves ovate-lanceolate, glabrous, acuminated; peduncles generally twin; calyx unequally toothed. T?. w. S. Native country unknown. Shrub evergreen, glabrous, *green.* Peduncles sometimes solitary, and by threes. Corollas el^fent, large, blue, marked by a 5-rayed star, which is green-isjprand protuberant beneath, stretched out beyond the limb #Fthe corolla into acute points, as in *S.fugax, S. virgatum,* 4*id others. Berry globose, orange-coloured. Nearly allied Jo *S. geminatum,* and *S. retrofrdctum,* but differs in the larger Jfiowers and unequally-toothed calyx.

Starry-flowered Nightshade. Fl. June, July. Clt. 1805. Shrub climbing.

179 S. GEMINATUM (Vahl. eclog. 1. p. 21. Dun. sol. 177. syn. p. 24.) stem scandenU; leaves ovate, quite entire, glabrous, as well as the calyxes and pedicels; peduncles axillary, usually twin; calyx 10-toothed: teeth linear-subulate. f? . ^. S. Native of Cayenne. Branches terete, powdery, when examined by a lens. One of the peduncles is longer than the other. Corolla glabrous.

TWflowered Nightshade. Shrub climbing.

180 S. BIFLORUM (Lour. coch. 159.) stem shrubby; leaves ovate, villous; peduncles twin; calyx 10-cleft. f? . G. Native of China and Cochinchina, where it is called *Thicn-phao.* Dun. sol. p. 177. syn. p. 24. Leaves quite entire. Calycine segments subulate. Berry small, roundish, red.

Two-jlowercd Nightshade. Shrub 3 to 4 feet.

181 S. PHILLYREOI'DES (Dun. syn. p. 24. sol. ed. 2d. ined. t. 115. H. B. et Kunth, nov. gen. 3. p. 37.) stem shrubby, erect, dichotomous; leaves oblong, or lanceolate-oblong, tapering to both ends, acuminated, quite entire, glabrous above, and downy beneath; flowers alar, and lateral, 2 to 4 together; calyx somewhat 10-toothed. \ . S. Native of New Granada, in the valley of the river Magdalena, near Teneriffe and Badilla. Branchlets angular, downy. Leaves glabrous, and green above, but pale and downy beneath. Corollas size of those of *S. lycioides.* Teeth of calyx linear-subulate, remote: the alternate ones very small, and placed in the middle of the tube. Corolla sinuately 5-angled, marked by a violaceous star. Berry globose.

Phillyrea-like Nightshade. Shrub.

182 S. VIRGATUM (Lam. ill. no. 2310. Dun. sol. p. 174. t. 4. syn. p. 25.) stem shrubby; branches twiggy; leaves ovate-oblong, acute, tomentose beneath, as well as the peduncles and calyxes; peduncles numerous, filiform, axillary, and in the forks of the branches; filaments unequal. *? . G. Native of the Canary Islands. Tomentum stellate. Leaves quite entire. Calyx 10-cleft; segments joined by a pellucid membrane: alternate ones short. Corolla violaceous, marked by a 5-rayed star, tomentose outside. Stamens 5, one of which is longer than the others.

Twiggy Nightshade. Fl. June, Sept. Clt. 1820. Shrub 4 feet?

183 £. LE'NTUM (Cav. icon. 4. p. 4. t. 308.) shrubby, scandent; branches and under sides of the leaves clothed with starry hoary tomentum, but clothed with stellate down above; leaves ovate, acute, quite entire; extra-axillary flowers twin, and the terminal ones numerous; calyx 10-toothed: teeth linear-filiform. T?. w. S. Native of New Spain, Cav.; in the province of Caraccas, near Cura, in the valley of Aragua. Dun. sol. 175. syn. p. 25. H. B. et Kunth, nov. gen. amer. 3. p. 38. Solanum scandens, foliis tomentosis, Plum. cat. p. 4. ? Tourn. inst. p. 150. ?—Plum. ed. Burm. p. 242. t. 245. f. 3. ? Superior leaves twin. ? Corolla sinuately 5-lobed, violaceous, with a white star, downy outside. One of the stamens is twice as long as the other 4.

Pliant Nightshade. Fl. June, Sept. Clt. 1823. Shrub cl.

§ 3. *Leaves twin. Calyx slightly 10-toothed. Flowers fascicled, or twin at the sides of the leaves.*

184 S. DENTICULA'TUM (Blum, bijdr. p. 697. Nees in Lin. trans. 17. p. 41.) stem suffruticose; lower leaves solitary: superior ones twin, smoothish, the larger one oblong, acuminated at both ends, the smaller one subovate; flowers fasciculately aggregate at the sides of the leaves; calyx minutely 10-toothed, furrowed. J?. S. Native of Silhet; Java, in shady places on the higher mountains of Gede and Burangrang. There is a var. of this plant described by Blum, having the leaves, peduncles, and calyxes hairy; and another variety having the peduncles solitary, and the flowers tetrandrous from abortion.

Denticulated-calyxed Nightshade. Shrub.

§ 4. *Leaves solitary, rarely twin. Corollas 5-parted. Stamens equal.*

185 S. SCA'NDENS (Lin. suppl. 147. amoen. acad. 8. p. 253.) stem herbaceous, twining; leaves cordate, ovate, dependent,

very soft beneath; flowers sub-umbellate, terminal. Tj. ^ S. Native of Surinam. Dun. sol. p. 179. syn. p. 25. Racemes compound. Corolla rotate, with lanceolate, recurved segments. Berry globose, size of a cherry.

Climbing Nightshade. Fl. July, Aug. Clt. 1820. Shrub twining.

186 S. SIDEROXYLOIDES (Schlecht. in Linnaea, 8. p. *253.)* shrubby; branches flexuous, tomentose; leaves ovate, or oblong-ovate, entire, acute, or sub-acuminated, bluntish at the base, roughish above, and clothed with rough tomentum beneath; tomentum stellate, of a rusty yellow colour ; calyx hemispherical, 10-toothed: teeth short, obtuse; corollas white, downy outside ; berries globose, glabrous, *fy* • G. Native of Mexico, near Hacienda de La Laguna. Umbels sessile, axillary. Anthers regular. Pedicels and calyxes tomentose. Leaves very similar to those of the pear tree. There is an unnamed species very like this from Hayti. in Willd. herb. no. 4410.

Iron-wood-like Nightshade. Shrub.

187 S. LANUGINOSUM (Dun. syn. p. 25. sol. ed. 2d. ined. t. 116. H. B. et Kunth, nov. gen. amer. 3 p. *36.)* shrubby; branchlets tomentose; leaves ovate, acutish, subcordate, quite entire, beset with stellate hair above, but clothed with hoary, villous tomentum beneath ; peduncles tomentose, opposite the leaves, twin, or 3 together ; calyx 10-toothed, tomentose. *1?* . S. Native of Quito, near Mulalo, at the altitude of 1690 hexapods. Tomentum stellate. Berry size of a sloe, globose.

Woolly Nightshade. Shrub.

188 S. CHRYSOPHYLLUM (Dun. syn. p. 25. sol. ed. 2d. ined. t. 117. H. B. et Kunth, nov. gen. *3,* p. 39.) shrubby, scandent ; branches tomentose ; leaves elliptic, acute, quite entire, clothed with stellate pubescence above, and fuscescent tomentum beneath, of a golden rusty colour when young, as well as the branchlets ; peduncles subaxillary, solitary ; calyx 5-toothed. T2 . y^. S. Native of the kingdom of Quito. Tomentum stellate. Leaves 2 inches long : superior ones twin, unequal in size. Corolla 5-parted, with ovate, oblong segments.

Golden-leaved Nightshade. Shrub climbing.

189 S. LASIOPHYLLUM (Dun. syn. p. 25. sol. ed. 2d. t. 118. H. B. et Kunth, nov. gen. 3. p. 39.) shrubby; branches somewhat dichotomous, hispid from pili; leaves twin, oblong, subacuminated at both ends, quite entire, hispid above, but yellowish and softer beneath; peduncles alar and subaxillary, solitary or twin ; calyx 10-toothed. J?. S. Native of New Granada, on the Andes of Pasto, between Menezes and Zeindala, at the altitude of 1400 hexapods. Hairs simple. Calyx hispid ; teeth linear, filiform ; alternate ones a little shorter. Corolla whitish-violet, pilose outside ; with oblong-lanceolate segments.

Woolly-leaved Nightshade. Shrub 2 to 3 feet.

190 S. LINEATUM (Ruiz, et Pav. fl. per. 2. p. 31. t. 158. f. b.) stem shrubby ; leaves twin, ovate, acuminated, lined, villous beneath ; berries inclosed within the segments of the corolla, peduncled, interfoliaceous; calyx 10-toothed. J?. S. Native of Peru, in groves at Munna. Dun. sol. p. 180. Peduncles hairy. Calyx 10-cleft, hairy ; segments linear. Corolla white, length of calyx. Berry fuscous, size of a chick-pea.

Lined-leaved Nightshade. Shrub.

191 S. BIFORMIFOLIUM (Ruiz, et Pav. fl. per. 2. p. 32. 1.161. f. a.) stem suffruticose, flexuous ; leaves twin, oblong-lanceolate : the smaller ones orbicular; peduncles interfoliaceous ; calyx 10-toothed; berry inclosed within the segments of the calyx. >2 • S. Native of Peru, in groves at Chincao. Dun. sol. p. 180. syn. p. *26.* Peduncles usually twin, but sometimes 3-4-5 together. Calyx hispid; teeth long-linear. Corolla purplish-violet. Berry yellowish-red, size of a pea.

Two-formed-leaved Nightshade. Shrub.

192 S. ACUTIFOLIUM (Ruiz, et Pav. fl. per. 2. p. *S3.* t. 162. f. b. Dun. sol. p. 180. syn. p. 26.) stem suffruticose, flexuous ; leaves twin, or 3 together, lanceolate; peduncles interfoliaceous ; calyx 10-toothed. Tj • S. Native of Peru, in groves at Munna. Plant hairy. Leaves rather hispid on both surfaces, deflexed. Corolla white, 5-parted. Berry roundish, orange-coloured.

Acute-leaved Nightshade. Shrub.

SECTION II. ACULEATA. Prickly shrubs and plants.

SUBSECT. I. *Leaves entire, repand, or sinuately angular. Peduncles or racemes simple, or nearly so.*

§ 1. LEPROPHORA (from *Xewpog, lepros,* rough; and *(jjoptw, phoreo,* to bear.) Dun. sol. p. 181. *Stems and leaves white from leprous, powdery tomentum. Racemes lateral, seldom axillary or opposite the leaves, few-flowered. Prickles straight, acerose.*

193 S. ELEAGNIFOLIUM (Cav. icon. 3. p. 22. t. 243.) stem shrubby ; leaves discoloured : lower ones sinuated and prickly : superior ones entire, unarmed ; peduncles few-flowered. T? . G. Native of Chili. Dun. sol. p. 181. syn. p. 26. Old stems prickly : young ones unarmed. Prickles short. Leaves white beneath, and greenish-yellow above. Calyx 5-cleft. Corolla blue, large, clothed with powdery tomentum outside, like the rest of the plant. Berry globose, yellow, glabrous, size of a chick-pea. Leaves very like those of *Eledgnus angustifblius.*

Eleagnus-leaved Nightshade. Fl. June, July. Clt. 1823. Shrub 4 to 6 feet.

194 S. DEALBATUM (LindL hort. trans. 7. p. 52.) suffruticose, hoary from stellate, leprous tomentum all over; leaves oblong-lanceolate, obtuse, having the petioles and midrib prickly beneath ; lower leaves subsinuated : superior ones entire; racemes axillary, few-flowered; calyxes prickly. F? • @. Native of Chili. Corolla pale lilac. Allied to *S. eleagnifbliumi* and *S. le prd sum.*

Whitened Nightshade. Fl. June. Clt. 1824. Shrub 2 to 3 feet.

195 S. LEPROSUM (Ortega, dec. 9. p. 115. Dun. sol. 182. syn. p. 26.) stem shrubby; leaves discoloured, all sinuated, and prickly on both surfaces, hoary beneath ; peduncles few-flowered ; calyx prickly. % . G. Native of Chili. The whole plant is canescent from short tomentum. Stem prickly. Prickles small, reddish-yellow ; those on the calyx sometimes stellately pilose at top. Corolla large, pale blue, clothed with powdery down outside. Berry yellowish, size of a cherry. This species differs from *S. eleagnifolium* in the leaves being all sinuated and prickly ; and in the branchlets, peduncles, and calyxes being also prickly.

Leprous Nightshade. PI. 2 feet.

196 S. OBTUSIFOLIUM (Dun. syn. p. 26. sol. ed. 2d. t. 119. H. B. et Kunth, nov. gen. amer. 3. p. 40.) stem shrubby; branches prickly, and are, as well as the leaves, clothed with silvery tomentum; leaves oblong, obtuse, sinuately repand, prickly along the middle nerve beneath ; peduncles lateral, solitary, few-flowered, and are, as well as the calyxes, prickly. J? . G. Native of Mexico, near Regla; and Totonilco el Grande, at the altitude of 1200 hexapods. Tomentum stellate. Prickles yellow, short. Calyx 5-6-cleft. Corolla clothed with white tomentum outside, and blue inside, size of those of the potatoe ; segments oblong, acutish. Stamens *5-6.* Fruit unknown.

Obtuse-leaved Nightshade. Shrub.

197 S. FLAVIDUM (Torrey, in ann. lye. 2. p. 227.) suffruti-

cose, densely clothed with yellowish tomentum all over : branches and caly>es prickly ; leaves solitary, oblong, bluntish, sinuately repand : superior ones obsoletely sinuated; racemes opposite the leaves, usually 3-flowered. T? . G. Native of North America, but the exact locality is unknown. Stem armed with simple, scattered prickles. Racemes at the extremities of the branches. Calycine segments subulate. Corolla large ; lobes triangularly-lanceolate.

Yellowish Nightshade. Shrub.

§ 2. LEPROPHORIS AFFINIA. *The plants contained in this division are very like those of the last.*

198 S. FURFURA'CEUM (R. Br. prod. p. 446.) stem shrubby; prickles acerose ; leaves narrow-lanceolate, quite entire, furnished with a few prickles above, or unarmed, glabrous, smooth, but clothed with cinereous tomentum beneath ; umbels lateral, 2-4-flowered, sessile ; calyx unarmed. T? . S. Native of New Holland, within the tropic. Dun. sol. 182. syn. p. *26.*

Furfuraceous Nightshade. Shrub.

199 S. PARVIFOLIUM (R. Br. 1. c.) stem shrubby; prickles acerose ; leaves narrow-lanceolate, quite entire, flat, glabrous above, and furnished with a few prickles, but tomentose beneath, and unarmed, as well as the calyxes; umbels lateral, 2-4-Howered, sessile. *? . S. Native of New Holland, on the sea shore, within the tropic.

Small-leaved Nightshade. Shrub.

200 S. ORBICULA'TUM (Dun. syn. p. *27.* sol. ed. 2d. ined. t. 44. Poir. suppl. 3. p. 762.) stem prickly; prickles acerose, red ; leaves nearly orbicular, clothed with leprous tomentum on both surfaces, small; flowers twin or solitary, on short pedun-cles. ,11' ^ * 9' Native of New Holland. Branches greyish-yellow. Prickles long, tomentose at the base, one to each petiole. Leaves somewhat petiolate, unarmed, cream-coloured neiow, and greenish-grey above. Peduncles and calyxes clothed vwth rusty tomentum.

OrWcWar-leaved Nightshade. Shrub.

201 S.STELLI'GERUM (R. Br. prod. p. 445.) stem shrubby; prickles few, acerose; leaves entire, almost unarmed, lanceolate, glabrous above, smooth, grey and tomentose beneath; corymbs lateral, subumbellate, simple, nearly sessile; calyx unarmed. *?. G. Native of New South Wales, about Port Jackson. Dun. sol. p. 201. syn. p. 27. Flowers pale blue. Fruit red. Tomentum stellate.

Far. a; prickles of the stem much curved. J?. G. Stem and branches tomentose. Corolla pale purple. Stamens equal. Berry globose, scarlet. S. stelligerum, Smith, exot. bot. 2. p. 57. t. *88.*

Far.fi; prickles of the stem straight, f? . S. Native of New Holland, within the tropic, on the sea shore. Dun. sol. ed. 2d. ined. t. *57.* Tomentum on the under sides of the leaves rusty. Corolla villous outside, pale blue. Berry small, scarlet.

Star-bearing Nightshade. Fl. June, Aug. Clt. 1823. Shrub 3 feet.

202 S. DISCOLOR (R. Br. prod. p. 445.) stem shrubby; prickles setaceous, straight; leaves elliptic, subrepand, glabrous above, and tomentose beneath, cinereous, and are, as well as the calyxes, unarmed ; racemes lateral, many-flowered, undivided. J? . S. Native of New Holland, on the sea shore, within the tropic. Dun. sol. 183. syn. p. *27.*

Two-coloured leaved-Nightshade. Shrub.

203 S. DIANTHOPHORUM (R. Br. 1. c. but not of Lour.) nearly unarmed ; stem furnished with a very few acerose prickles, and sometimes there are no prickles ; leaves oblong-ovate, entire, tomentose, unarmed; peduncles lateral, 2-flowered or twin • calyx 5-cleft, acuminated. ^ . S. Native of New Holland', within the tropic, on the sea shore. Dun. sol. 183. syn. p. 27. Branches clothed with rusty-yellow, stellate tomentum, as well as the under sides of leaves. Leaves often twin, dark green above. Calyx woolly, longer than the corolla ; anthers violaceous.

Pink-bearing Nightshade. Shrub.

204 S. ELLI'PTICUM (R. Br. 1. c.) stem shrubby; prickles straight, tomentose at the base ; leaves oblong-oval, obtuse, entire, tomentose on both surfaces, and are, as well as the calyxes, prickly ; peduncles usually 3-flowered. J? . S. Native of New Holland, within the tropic, on the sea shore.

Elliptic-\eaved Nightshade. Shrub.

205 S. HORRIDUM (Dun. syn. p. *28.* sol. ed. 2d. ined. t. 46.) stem terete, pilose, prickly; leaves on long petioles, ovate-oblong, entire, villous on both surfaces, and prickly, as well as the peduncles, which are 1-flowered. T? . G. Native of New Holland. Poir. suppl. 3. p. 763. The whole plant is clothed with stellate hairs. Leaves greyish-green above, and cream-coloured beneath. Segments of corolla acute. Berry globose, size of a large cherry.

Horrid Nightshade. Shrub.

206 S. ECHINA'TUM (R. Br. prod. p. 447.) stem erect; prickles setaceous, straight, acerose ; leaves ovate-oblong, entire, unarmed, tomentose on both surfaces ; racemes opposite the leaves, simple; berry somewhat 4-celled, inclosed in the echinated calyx. *?. S. Native *of* New Holland, on the sea shore, within the tropic.

Echinated-calyxed Nightshade. Shrub.

207 S. RODSCHIEDII (Meyer, prim, esseq. p. 111.) stem shrubby ; leaves oblong, sinuated or entire, subcordate at the base, or attenuated, tomentose beneath, and prickly ; racemes lateral; calyxes mutic. T?. S. Native about the Essequibo, on the American continent. The whole plant, except the adult branches and genitals, is beset with elegant stellate hairs. "Branches, petioles, and leaves prickly; prickles solitary, compressed, yellow : rameal ones curved, the rest straight. Calycine segments short, bluntish. Corolla like that of *S. mammosum,* violaceous, clothed with tomentum outside, as well as the calyx. Berry size of a cherry.

Rodschiede's Nightshade. Shrub.

§ 3. PERSICVRUE (SO named from the leaves of most of the species resembling those of *Persica,* or the peach.) Dun. sol. 183. Leaves entire or repand, narrow, oblong-lanceolate. Racemes simple, elongated, extra-foliaceous ; pedicels secund, erect in the flowering state, but drooping in the fruit-bearing state. Corollas 5-parted.

208 S. RACEMOSUM (Jacq. amer. p. 50. t. *36.* ed. pict. t. 50. Lin. mant. 47.) stem unarmed, shrubby ; leaves lanceolate, repand, undulated, acute; corollas 5-parted. J?. S. Native of Martinico, on the declivities of mountains, Jacquin ; Surinam, Lin. Leaves shining, petiolate. Racemes length of leaves. Corolla white; segments deep, oblong-lanceolate. Berry red, size of a small pea.

Racemose-flowered Nightshade. Fl. July, Aug. Clt. 1781. Shrub 3 to 4 feet.

209 S. I'GNEUM (Lin. spec. p. 270.) stem shrubby ; leaves lanceolate, acuminated, revolute on both sides at the base ; corollas 5-parted. >?. S. Native of the Caribbee Islands', and Guiana. Jacq. hort. vind. t. 14. Aubl. guian, 1. p. 207. exclu-

sive of the syn. of Plum.—Burm. amer. 241. t. 245. f. 1.—Sloane, jam. 1. p. 38. t. 11. f. 3.—Plukn. aim. 350. pbyt. t. 225. f. 5. Solanum fruticbsum, lauri foliis, aculeatum, Plum, cat. p. 4. Tourn. inst. p. 149. Shrub sometimes prickly, and sometimes unarmed. Leaves clothed with stellate villi on both surfaces, but most so beneath. Prickles long, of a reddish, fiery colour, subulate, straight. Corolla white or purplish ; with long, narrow, reflexed segments. Berry red, size of a cherry, ex Poir ; yellowish, size of a pea, ex Jacq.

Far. fl, parvifōlium (Vahl. eclog. 1. p. *23.)* J? . S. Native of the Island of Santa Cruz. This differs from the species in habit; in the stem and branches being more slender ; in the leaves being much smaller, less acuminated ; and in the prickles being *2* or 3 times longer.

Fiery-spined Nightshade. Fl. March, Nov. Clt. 1714. Shrub 5 to 6 feet.

210 S. SUBARMATUM (Willd. enum. p. 240.) stem shrubby, rather prickly; leaves lanceolate, downy beneath, quite entire, having the margins revolute at the base ; racemes simple. T?. S. Native country unknown. Dun. sol. p. 185. syn. p. 28. Down stellate. Leaves glabrous above, having the midrib sometimes furnished with one prickle beneath. Corolla white, with lanceolate segments. This plant is sometimes to be found in the gardens under the name of *S. Bahamēnse.* According to Poiret it is perhaps a mere variety of *S. igneum.*

Half-armed Nightshade. Fl. May, June. Clt. 1820. Shrub 5 to 7 feet.

211 S. PERSICIEFŌLIUM (Dun. sol. p. 185. syn. p. *28.)* stem shrubby ; leaves oblong-lanceolate, narrow ; racemes simple ; corollas 5-cleft. P? . S. Native of the Caribbee Islands.—Burm. amer. p. 240. t. 244.—Plum. cat. 4. Stem scabrous, unarmed. Leaves prickly on the middle nerve beneath. Calyx unarmed. Berry globose, drooping. This species differs from *S. igneum* in the leaves being narrower.

Peach-leaved Nightshade. Shrub 4 to 6 feet.

212 S. BAHAME'NSE (Lin. spec. ed. 1st. p. 188. ed. 2d. p. 270.) stem shrubby ; leaves lanceolate, repand or sinuated, obtuse, with reflexed margins ; corollas 5-parted. T? . G. Native of Providence, one of the Bahamas. Dun. sol. p. 186. syn. p. 28.. S. fruticōsum, Mill. diet. no. 18.—Sloan, hist. p. 236. t. 145.—Dill, elth, 263. t. 271. f. 250. Stem and leaves prickly. Leaves villous. Prickles brownish, straight. Corolla bluish-purple, with narrow, reflexed segments. Berry size of a pea, yellowish. Said to be nearly allied to *S. polyacdnthum;* but the leaves are broader, and the flowers racemose, not solitary, &c.

Bahama Nightshade. Fl. June, July. Clt. 1732. Shrub 5 to 6 feet.

213 S. GRACILIFLŌRUM (Dun. syn. p. 29. sol. ed. 2d. ined. t. 47.) branches smoothish, prickly ; prickles straightish ; leaves ovate-oblong, unequal at the base, sinuated, prickly on both surfaces, rather pilose ; pili very minute, stellate, distant; racemes short, cymosely umbellate. J? • S. Native of Java. Prickles yellowish, rather villous at top. Pedicels and flowers slender. Calyx small, 5-toothed.

Slender-flowered Nightshade. Shrub.

214 S. DUNALIA'NUM (Gaud, in Freyc. voy.pt. bot. p. 448. t. 58.) shrubby ; leaves elliptic, acute, running into the petioles at the base, quite entire, glabrous, spiny on the middle nerve beneath, as well as on the branches and petioles; flowers corymbose, tetrandrous ; calyx glabrous, with ovate, acute lobes ; corolla clothed with powdery tomentum outside, with ovate-lanceolate segments; berries globose, *h* . S. Native of the Moluccas.

DunaVs Nightshade. Shrub.

215 S. MŌLLE (Dun. syn. p. 28. sol. ed. 2d. ined. t. 120. H. B. et Kunth, nov. gen. amer. 3. p. -40.) stem suffruticose, prickly ; branches unarmed, clothed with hoary tomentum, as well as the under surfaces of the leaves, but the upper surfaces of the leaves are clothed with canescent down, they are oblong, acuminated, sinuated, prickly on the nerve beneath; racemes almost opposite the leaves, subdichotomous, and are, as well as the calyxes, unarmed. T? . S. Native of the province of Caraccas, near St. Geronimo del Pyrital, on the banks of the river Guarico. Prickles straight, yellowish. Down stellate. Corolla white, clothed with hoary tomentum outside. Berry round, variegated with white and green, ex Bonpl.

%* Nightshade. Fl. June, Sept. Clt. 1818. Shrub 4 to 5 feet.

§ 4. POLY'GAMA (from *TTOXVQ, polys,* many ; and *yafxog, gamos,* a marriage; in reference to the greater number of male flowers than of hermaphrodite ones.) ***Flowers small: hermaphrodite ones solitary, on short peduncles: male ones racemose. Leaves entire, or repand.***

216 S. POLYACA'NTHUM (Lam. ill. no. 2377. Poir. diet. 4. p. 304.) very prickly ; prickles acicular ; leaves linear-lanceolate, nearly sessile, obtuse, villous on both surfaces; peduncles axillary, 1-flowered. T? . S. Native of the Island of Dominica. Vahl, eclog. 1. p. 24. Dun. sol. p. 186. syn. p. 29. S. parviflōrum, Cav. icon. 3. p. 19. t. 236.—Burm. amer. p. 218. t. 224. f. 1. exclusive of the syn. of Lin. and Dill.—Plum, mss. 5. p. 51. ex Burm. 1. c. Villi stellate, yellowish. Prickles straight, yellowish-brown at top. Corollas small, white ; segments linear, villous outside. Berry globose, glabrous, shining, size of a coriander seed.

Many-spined Nightshade. Fl. June, Sept. Clt. 1821. Shrub 3 to 4 feet.

217 S. MICROPHY'LLUM (Dun. sol. p. 187. syn. p. 29.) stem branched ; leaves small, ovate, entire, rather tomentose; flowers quadrifid, tetrandrous. J?. S. Native of the Caribbee Islands. Aquartia microphylla, Lam. ill. no. 1604. t. 82. f. 2. Poir. suppl. 1. p. 410. Habit of *S. lycioides.* Prickles acicular, sometimes solitary, and sometimes twin at the base of the branches, or infrafoliaceous. Leaves size of those of wild thyme, or hardly larger, acute or obtuse. Peduncles extrafoliaceous, very short, solitary or twin. Segments of corolla linear.

Small-leaved Nightshade. Shrub.

218 S. AQUA'RTIA (Dun. sol. 187. syn. p. 29.) stem branched, prickly; leaves subovate, obtuse, entire, tomentose ; flowers 4-cleft, tetrandrous. J? . S. Native of St. Domingo, at Bayaba, on rocks by the sea side. Aquartia tomentdsa, Lam, ill. no. 1603. t. 62. f. 1. Poir. diet. 1. p. 217. Aquartia aculeata, Jacq, amer. t. 15. Branches armed with short, subulate prickles, but almost unarmed in the young state. Peduncles lateral, 1-flowered, very short. Calyx tomentose; segments unequal. Corolla white, tomentose outside; segments linear, bluntish. Berry globose, yellow, shining, size of a small pea.

AquarVs Nightshade. Fl. ? Clt. 1819. Shrub 4 feet.

219 S. CROTONOIDES (Lam. ill. no. 2383. Poir. diet. 4. p. 306.) stem shrubby; leaves discoloured, elliptic-lanceolate, glabrous above, and tomentose beneath, unarmed ; racemes short; flowers quadrifid, tetrandrous. \ . S. Native of the Caribbee Islands. Dun. sol. p. 188. t. 13. syn. p. 29. Branches tomentose, rusty at top. Prickles acicular, few, straight. Peduncles lateral, clothed with rusty tomentum, forked and cymose at top. Segments of corolla linear.

Croton-like Nightshade. Shrub 3 to 4 feet.

220 S. RETICULA'TUM (Dun. syn. p. *29.* sol. ed. 2d. ined. t. 48.) branches tomentose at top, powdery; leaves ovate-lanceolate, unequal, quite glabrous and reticulated above, nerved be-

neath, and clothed with leprous tomentum ; peduncles 1-flowered ; flowers quadrifid ? J?. S. Native of St. Domingo. Poir. suppl. 3. p. 764. Habit of *S. crotonoides,* prickly or unarmed. Berries globose, mucronate.

Reticulated-leaved Nightshade. Fl. June, July. Clt. 1820. Shrub 3 to 4 feet.

221 S. POLY'GAMUM (Vahl, symb. 3. p. 39. t. *55.* Dun. sol. 188. ed. 2d. ined. t. 49. syn. p. 39.) stem shrubby; leaves ovate-oblong, nearly entire, rather scabrous above, but tomentose beneath. J?. S. Native of the Island of Santa Cruz. Branches, and under surfaces of leaves, and peduncles, clothed with rusty tomentum. Prickles straight, reddish-yellow. Leaves subcordate at the base, unequal, 2-3 incites long. Flowers small, cymose. Calyx and corolla tomentose outside, 4-5-parted. Stamens 4-5. Some of the flowers are male, and some hermaphrodite, as has been observed by D. West, ex Vahl.

***Polygamous-ftowered* Nightshade. Shrub.**

222 S. INTEGRIFÒLIUM (Poir. diet. 4. p. 301. Dun. sol. p. 189.) stem shrubby; leaves ovate, subrepand, rather tomentose beneath; umbels axillary. *?. S. Native of the Mauritius. Stem prickly, as well as pilose. Leaves sometimes twin, sometimes aggregate, smoothish above, but furnished with distant, minute pili, and prickles ; prickles few, small. Calyx villous, 5-toothed. Corolla small, whitish. Berry globose, yellowish, size of a grape, ex Poir.

Entire-leaved Nightshade. Shrub.

§ 5. ERIOPHY'LLA (from *epiov,erion,* wool; and <*f*>*v**ov*ƒ *phyllon,* a leaf; leaves woolly.) Dun. sol. p. 189. *Leaves repand,* ***angular or sinuated, woolly on both surfaces. Peduncles solitary, many-flowered; or aggregate,* 1 *-flowered, short. Flowers small.***

223 S. HI'RTUM (Vahl, symb. 2. p. 40. icon. 3. t. 21.) stem shrubby ; leaves cordate, angular, tomentose, prickly; peduncles lateral, aggregate, and are, as well as the calyxes, hairy. *? . S. Native of Trinidad. Dun. sol. p. 189. syn. p. 30. Prickles small, straight, acicular. Stem tomentose at top. Leaves a hand long, whitish beneath. Peduncles supra-foliaceous, 1-flowered. Calyx and corolla hairy outside; three of the segments of the corolla are longer than the other two.

Hairy Nightshade. Fl. June, July. Clt. 1821. Shrub.

224 S. CORDIFÒLIUM (Dun. syn. p. 30. sol. ed. 2d. ined. t. 135.) stem hairy, prickly ; leaves on long petioles, cordate, angularly repand, villous on both surfaces, unarmed; racemes simple, lateral. T? • S. Native of Brazil, at Rio Janeiro. Poir. suppl. 3. p. 764. The whole plant is clothed with stellate and simple, soft, rust-coloured hairs. Leaves unequal at the base. Segments of corolla equal. This species differs from *S. Mr turn,* in the leaves being unarmed ; in the flowers being racemose ; and in the corolla being regular.

Heart-leaved Nightshade. Shrub.

225 S. ERIOPHY'LLUM (Dun. syn. p. 30. sol. ed. 2d. ined. t. 50.) branches clothed with white tomentum, prickly; leaves clothed with white tomentum on both surfaces, ovate, sinuated, obtuse, on short petioles ; calyxes woolly, subcampanulate. J?. G. Native of New Holland. S. lasiophýllum, Poir. suppl. 3. p. 764. Prickles small, slender. Segments of calyx obtuse, **rarely prickly. Corolla blue, pentagonal, the star villous outside. Berry globose.**

***Woolly-leaved* Nightshade. Shrub.**

226 S. TOMENT6SUM (Lin. spec. ed. 1st. p. 188. ed. 2d. p. *<>69~)* stem shrubby, prickly ; prickles acerose; leaves cordate, subrepand, undulated, densely tomentose on both surfaces ; tender parts clothed with purplish powder. *hc* . S. Native of North America, ex Lin. spec. ed. 1st.; Ethiopia, ex Lin. spec ed. *2d.*; Guiana, ex Aubl.; Peru, where it is called *Hormis,* ex Ruiz, et Pav. ; Cape of Good Hope, ex ThunB. pro. p. *36.* Aubl. guian. 1. p. 216. Ruiz, et Pav. fl. per. 2. p. 4. Dun. sol. p. 190. syn. p. *30.*—Sabb. hort. rom. 2. t. 58. Triumf. prael. 46. t. 6.—Bocc. sic. 8. t. 5.—Plukn. aim. 351. t. 316. f. 2. ? The whole plant is densely clothed with greenish-yellow tomentum. Leaves usually 3 inches long, and about 1 inch broad, sometimes unarmed, sometimes prickly beneath. Prickles straight, yellowish-green. Racemes shorter than the petioles, at length drooping. Corolla bluish-violet. Berry subglobose, rather tomentose while young; but glabrous, and of a dirty orange colour, and about the size of a gooseberry when mature.

Tomentose Nightshade. Fl. June, July. Clt. 1662. Shrub 2 to 3 feet.

227 S. HY'BRIDUM (Jacq. vind. 2. t. 113. Dun. sol. 191. syn. p. 30.) stem shrubby, prickly; leaves ovate, almost unarmed, acute, repand ; the tender parts clothed with violet powder on the back and margins. J? . S. Native of Guinea. Leaves repandly angular, pale green, undulated, unequal at the base. Peduncles clothed with violet tomentum : some umbellate, and others 1-flowered. Corolla pale blue; segments 5-10. Some of the flowers are sterile. Berry roundish, depressed, orange-coloured, pendulous. Prickles strong, straight or recurved, sometimes wanting on the leaves. Perhaps only a variety *of S.* ***tomentdsum.***

Hybrid Nightshade. Fl. June, July. Clt. 1815. Shrub 2 to 3 feet.

228 S. COCCINEUM (Jacq. misc. 2. p. 239. icon. rar. 1. t. 43.) stem shrubby, prickly; leaves ovate, somewhat cordate, repand, tomentose ; berries scarlet. \ • S. Native country unknown, and probably of garden origin. Dun. sol. 191. syn. p. 31. S. tomentòsum, var. coccineum, Willd. spec. 1. p. 1045. Pers. ench. 1. p. 228. Prickles straight, subulate, brown. Leaves green, sometimes prickly on the middle nerve and petioles. Racemes opposite the leaves, simple, tomentose. Corolla white or purplish. Calycine segments ovate-lanceolate, acute. Berry pea-shaped, red at first, but at length dirty white, ex Jacq. It is very like *S. tomentdsum,* but smaller in all its parts, and less tomentose.

Scarlet-herried Nightshade. Fl. June, July. Clt. 1810. Shrub 2 to 3 feet.

229 S. BREVI'PILUM (Dun. sol. p. 191. t. 21. syn. p. 31.) stem shrubby ; leaves twin, sessile, obtuse-angled, tomentose on both surfaces; calyx 5-parted. T?. S. Native of the West Indies ; as of St. Thomas and Porto Rico. This species differs from *S. Jamaicense* in the peduncles, pedicels, and calyxes being unarmed ; and in the calyx being 5-parted, not 5-toothed. Every part of the plant is clothed with stellate tomentum. Leaves of a rusty yellow colour on both surfaces, often unarmed.

Short-haired Nightshade. Shrub 4 to 6 feet.

230 S. JAMAICE'NSE (Swartz, fl. ind. occ. 1. p. 454.) stem shrubby; leaves twin, cuneated, broadest in the middle, and obtuse-angled, tomentose on both surfaces, as well as the rachi and calyxes ; calyx 5-toothed ; prickles reflexed. T?. S. Native of Jamaica and Hispaniola, among rubbish. Dun. sol. 191. syn. p. 31. Stem and midrib of leaves beneath furnished with strong prickles. Racemes lateral, much shorter than the leaves, simple, many-flowered ; flowers pedicellate, subcymose. Corolla small, pale blue or white, with reflexed segments, tomentose beneath. Berry round, black when ripe, size of a red currant.

Jamaica Nightshade. Fl. June, July. Clt. 1818. Shrub 6 feet.

231 S. TOXICA'RIUM (Lam. diet. 3. p. 309. Dun. sol. 193. ed. 2d. ined. t. 50. syn. p. 31.) stem shrubby, prickly; leaves lobately angular, tomentose, oblique at the base, emarginate,

furnished With scattered prickles on both surfaces; racemes sessile, cymose; segments of corolla sub-lanceolate. J?. S. Native of Guiana. Richard, act. soc. par. ex Poir. suppl. 3. p. 764. S. Juripēba postĕrior, Pis. bras, book 4. chapt. 41.? Prickles of the stto large, recurved. Leaves usually twin. Peduncles, pedicels^ calyxes, and outside of corollas clothed with stellate tomenitum, like the under surfaces of the leaves. Root poisonous.

Poisonous Nightshade. Shrub.

232 S. CUNEIFŌLIUM (Dun. sol. p. 193. t. 22. syn. p. 31.) stem shrubby; leaves twin, long-cuneated, sinuately angular above; angles acute, but sometimes the leaves are nearly entire, ^ with obtuse angles; racemes short. P?. S. Native of Cayenne: S. crdceum, Dun. sol. 241. S. dubium, Dun. sol. p. 240. S. Jamaicense, Mill. diet. no. 71.—Sloan, hist. p. 236. t. 144. f. 3. —Plukn. phyt. t. 226. The whole plant clothed with rusty stellate tomentum. Branches and base of midrib of leaves prickly; prickles strong, reflexed, tomentose at the base. Leaves unequal: largest ones 4-5 inches long, and the smaller ones 2-3 inches long. Pedicels longer than the peduncle, slender. Flowers small. Calycine segments long, subulate, prickly. Corolla white, 5-cleft. Berry globose, reddish yellow.

Wedge-leaved Nightshade. FL June, July. Clt. 1818. Shrub 3 to 4 feet.

233 S. HETERŌTRICHUM (Dun. sol. p. 192. t. 20. syn. p. 31.) stem tomentose; leaves twin, sessile, ovate, rather angular, tomentose from stellate pili; nerves bullate, beset with simple hairs. ^. S. Native of tropical America. Branches clothed with long yellowish hairs, which are stellate at top. Prickles slender, recurved. Leaves yellowish beneath, and rather rusty above; nerves furnished with a few small prickles beneath. Racemes short, simple, many-flowered, beset with stellate tomentum, as well as the outside of the corollas and calyxes. Calycine segments linear-lanceolate, long. Corolla 5-parted, with almost linear segments. Berry globose.

Variable-haired Nightshade. Fl. June, July. Clt. 1824. Shrub 3 to 4 feet.

234 S. WILLDENOVIA^NTTM; tomentose; stem shrubby, prickly; leaves twin, angular, cuneated; umbels extra-foliaceous, sessile; peduncles and calyxes hispid. T?. S. Native of Porto Rico, Desf. S. cuneifōlium, Willd. herb, ex Roam, et Schultes, syst. 4. p. 623, but not of Dun.

Willdenow's Nightshade. Shrub.

§ 6. MICRACA'NTHA (from *jMKpog, micros,* small; and ακανθα, *akantha,* a spine; in reference to the small, short, recurved prickles.) Dun. sol. p. 193. *Stem shrubby, prickly; prickles small, short, recurved. Leaves lanceolate, entire, or sinuately angular; the middle nerve prickly beneath. Racemes simple, cymose, extra-axillary,*

235 S. SCA^BRUM (Vahl. eclog. 1. p. 22.) stem shrubby; branches flexuous, prickly, glabrous; leaves usually by threes, oblong, acute, sinuately angular, clothed with stellate down above, and stellate pili beneath, having the nerve prickly; racemes lateral, few-flowered, and are, as well as the calyxes, prickly. P?. S. Native of Caraccas, near San Juan, and other parts of tropical America. Dun. sol. p. 193. ed. 2d. t. 121. syn. p. 31. H. B. et Kunth, nov. gen. 3. p. 41. S. adhsĕrens, Willd. rel. ex Rcem. et Schultes, syst. 4. p. 669. Prickles scattered, recurved, yellowish. Calyx 5-cleft. Corolla white, tomentose outside; segments lanceolate-linear. Berry small, globose.

Scabrous Nightshade. Shrub.

236 S. HETEROPHY'LLUM (Lam. ill. no. 2360. Poir. diet. 4. p. 301. no. 64.) leaves by threes, unequal, scabrous above, and rather tomentose beneath; racemes and calyxes unarmed. J?. S. Native of Guiana. Dun. sol. p. 205. ed. 2d. t. 62. syn. p. 32. S. acanthifōlium, Hort. Prickles strong, sub-recurved. Leaves large, with blunt lobes, prickly on the midrib. Pedicels and calyxes villous. Calycine segments ovate, obtuse. Corolla large, divided to the base into lanceolate-linear, obtuse segments. Fruit-bearing peduncles reflexed. Berry round, size of a pea.

Variabletifyved Nightshade. Shrub.

237 SJHA-TURE'NSE (Dun. syn. p. 32. sol. ed. 2d. ined. t. 122. H. Bv«e*-Kunth, nov. gen. amer. 3. p. 41.) shrubby; branches prickly, and clothed with rusty tomentum; leaves twin, elliptic-oblong, acuminated, quite entire, beset with stellate hairs above, and stellate pili beneath; midrib of leaves, as well as the calyxes, prickly; racemes extra-axillary, simple, unarmed. J?. S. Native on the banks of the Orinoco, near the cataract of Ature. Prickles compressedly conical, subulate, and recurved at top, shining. Leaves unequal in size, greenish above, and fuscescent beneath, 6 inches long. Racemes clothed with rusty tomentum, as well as the calyxes and outside of corolla. Calyx prickly.

Ature Nightshade. Shrub.

238 S. NEMORE'NSE (Dun. sol. p. 194. syn. p. 32.) stem shrubby, scandent; leaves petiolate, twin, the larger one oblong, sinuately angular, and the smaller one ovate, lanceolate, quite entire; racemes filiform, very long. J?. ^. S. Native of Peru, in groves at Chincao and Cuchero, where it is called *Rocotito de Monte.* S. laciniatum, Ruiz, et Pav. fl. per. 2. p. 40. t. 177. f. a. Pers. ench. 1. p. 228, but not of Ait. Branches angular, prickly; prickles small, recurved, yellowish. Leaves nearly sessile, prickly on the back. Peduncles prickly, hanging in the fruit-bearing state. Calyx small. Corolla blue. Berry ovate-globose, size of a small pear, golden yellow.

Grove Nightshade. Shrub climbing.

239 S. VOLU'BILE (Swartz. fl. ind. occ. 1. p. 458. Pers. ench. 1. p. 226, exclusive of the syn. of Lam. and Jacq.) stem shrubby, scandent; leaves angular, with denticulated margins; racemes lateral; calyxes prickly. T?. $_{KJ}$. S. Native of Hispaniola, in woods. Dun. sol. p. 195. syn. p. 32. S. scandens, Swartz. prod. p. 47, but not of Lin. Plum. mss. t. 4. f. 32. ex Aubl. guian. 1. p. 217.? Stem prickly; branches terete. Leaves 3-4 inches long, or a span, ovate-lanceolate, rough above, and hispid from rusty hairs beneath; petioles and midrib prickly; prickles small, recurved. Calyx 5-toothed, clothed with rusty down, prickly, reflexed. Corolla large, bluish, 5-parted, tomentose outside, with long segments. Berry umbilicate.

Twining Nightshade. Fl. June, July. Clt. 1823. Shrub climbing.

240 S. LANCEZEFŌLIUM (Jacq. icon. rar. 2. t. 329. coll. 2. p. 286.) stem shrubby, scandent; leaves twin, lanceolate-oblong, attenuated at both ends, rather roughish, prickly on the midrib and petioles beneath; racemes short, unarmed. P2. S. Native of tropical America. Dun. sol. p. 195. syn. p. 32. S. sarmentdsum, Lam. ill. no. 2385. Poir. diet. 4. p. 307, exclusive of the syn. of Swartz. Branches sarmentose, green and shining, rather villous, as well as the stem and both sides of the leaves; hairs obsolete, starry. Leaves unequal in size, 4-8 inches long, sometimes entire, and sometimes sinuately angular, shining above, but paler beneath. Prickles solitary, or by pairs, yellowish, small, recurved. Racemes rather villous, as well as the outside of the calyxes and corollas. Pedicels cymose, approximate. Calyx 4-5-parted, with subulate segments. Corolla white, 4-5-parted, with lanceolate, acute segments. Anthers 4-5, yellow.

Var. /3, tetrdndrum; flowers tetramerous, tetrandrous. J?. $_{w}$. S. Native of Cayenne, S. flexudsum, Vahl. eclog. 1. p, 22.

Lance-leaved Nightshade. Fl. July, Aug. Clt. 1816. Shrub climbing.

241 S. AMBIGUUM (Dun. syn. p. 32. sol. ed. 2d. ined. t. 123.) branches scandent, pilose ; lower leaves solitary : superior ones twin, ovate-elliptic, angular, a little sinuated, rather scabrous from pili on both surfaces, having the midrib prickly; racemes simple, unarmed. I? . ^. S. Native country unknown.

Ambiguous Nightshade. Shrub climbing.

242 S. MICRACA'NTHUM (Lam. ill. no. 2382. Poir. diet. 4. p. 306.) stem shrubby ; leaves ovate-lanceolate, acuminated, rather tomentose beneath; prickles small, few, recurved; racemes short. Tj • S. Native of Guadaloupe, Brazil, and Cayenne. Dun. sol. p. 196, exclusive of the syn. of Vahl, syrnb. p. 32. Branches rather villous, or tomentose at top. Down stellate. Leaves green above, but rough from minute stellate hairs, but tomentose beneath, as well as the petioles, peduncles, and outside of the corollas and calyxes. Branches, petioles, and midrib of leaves beneath prickly ; prickles sometimes twin. Racemes lateral; pedicels cymose. Calyx .5-toothed. Corolla deeply 5-cleft. Berry size of a chick pea.

Small-spined Nightshade. Shrub.

243 S. BRACHYA'NTHUM (Dun. syn. p. *32.* sol. ed. 2d. ined. t. 124. H. B. et Kunth, nov. gen. amer. 3. p. 42.) arboreous; branches prickly; branchlets tomentose; leaves twin, elliptic, acute at both ends, quite entire, puberulous above, but clothed with hoary fuscescent tomentum beneath, and prickly on the midrib ; racemes lateral, simple ; pedicels and calyxes prickly. *?. S. Native of New Andalusia, on the declivity of Mount Cocollar, at the altitude *of* 480 hexapods. Down and tomentum stellate. Prickles short, recurved. Pedicels long, unilateral, and are, as well as the calyxes, prickly. Racemes, outside of corollas, and calyxes clothed with hoary tomentum. Calyx 5-parted ; segments obovate, cuspidate, cohering. Corolla 5-parted, with linear-oblong, acute segments, about the size *of* those of *Ornithogalum luteum.* This species differs from *S. micracdnthum,* Lam. in the leaves being tomentose beneath, and in the pedicels and calyxes being prickly.

Short-flowered Nightshade. Tree 30 feet.

244 S. JUSSIJE'I (Dun. syn. p. *33.* sol. ed. £d. ined. t. 52.) leaves solitary, ovate-lanceolate, smoothish above, but rather tomentose and prickly on the midrib beneath ; racemes simple, cymose longer than the petioles. Tj . S. Native of Rio Janeiro, Commerson. Poir. suppl. 3. p. *767.* Prickles short, recurved. Down and tomentum stellate. Peduncles, pedicels, and calyxes woolly. Calyx 5-toothed. Corolla deeply 5-cleft; segments ovate-lanceolate. Ovarium tomentose, powdery.

Jussieu's Nightshade. Shrub.

245 *S. JAVITE'NSE (H. B. et Kunth, nov. gen. amer. 3. p, 42.) shrubby ; branches prickly; branchlets clothed with fine hoary tomentum; leaves solitary, oblong, acute, quite entire, clothed with stellate down on both surfaces, rather prickly on the midrib beneath; racemes lateral, simple ; pedicels and calyxes unarmed. J?. S. Native on the banks of the Orinoco, and the Tuamino, near Carichana and Javita. S. monachophyllum, Dun. syn. p. 33. sol. ed. 2d. ined. t. 125. Hairs and tomentum stellate. Prickles conical, recurved at top, shining, yellowish. Pedicels unilateral, clothed with stellate down, as well as the calyxes. Calyx 5-parted ; segments subobovate, cuspidate. Corolla and stamens like those of *S. brachydnthum.* It differs from *S. Jussiafi* in the leaves being on short petioles, entire, oblono- downy *on* both surfaces, often unarmed, with the middle nerve° rather prickly ; the prickly racemes and flowers smaller.

Javita Nightshade. Shrub.

246 S. UMBROSUM (Dun. syn. p. *33.* sol. ed. 2d. ined. t. 126. H. B. et Kunth, nov. gen. amer. 3. p. 43.) shrubby scandent; branches prickly, and are, as well as the under surfaces of the leaves, clothed with hoary villous tomentum: upper surfaces villous; leaves solitary, or twin, oblong, acuminated, quite entire ; racemes extra-axillary, bifid ; peduncles and midribs of leaves beneath prickly ; pedicels and calyxes unarmed. ^ . S. Native of New Andalusia, in bushy places near Cumanacoa". Hairs and down stellate, simple. Prickles scattered, small, subulate, yellowish, recurvedly reflexed. Pedicels unilateral. .Calyx villous, 5-parted ; segments obovate, cuspidate, cohering. Corolla hispid from stellate pili outside, with linear, acutish segments.

Shaded Nightshade. Fl. June, July. Clt. 1825. Shrub cl.

247 S. JURIPE'BA (Rich. act. soc. par. p. 107. Dun. sol. p. 196. t. 15. syn. p. 33.) shrubby; branches prickly, rather pilose; leaves solitary, elliptic-oblong, acute, almost quite entire, clothed with stellate pili on both surfaces, prickly on the midrib beneath : superior leaves twin; racemes lateral and terminal, almost sessile, and are, as well as the calyxes, unarmed. J? . S. Native of Cayenne; and *of* the Island Pararumo, in the Orinoco, and near the cataract of Ature, on the banks of the Orinoco. S. obscurum, Vahl, symb. p. 41. Willd. spec. 1. p. 1046. Juripeba prior, Pis. bras. lib. 4. cap. 41. S. styracifolium, Willd. rel. ex Rcem. et Schultes, syst. 4. p. 663.—Plum. mss. t. 4. f. *32,* ex Dunal. Hairs or down stellate. Leaves canescent beneath. Flowers unilateral. Corolla violaceous, ex Bonpl. white inside, and purple outside, ex Plum. Prickles on the branches recurved, on the midribs of leaves straight. Calyx 5-cleft, with broad, mucronulate segments. Corolla 5-parted, with long, linear segments.

Juripeba Nightshade. Shrub.

248 S. RUBIGINOSUM (Vahl. eclog. *2.* p. 17. icon. t. 13.) shrubby, clothed with rusty stellate tomentum all over ; prickles recurved ; leaves elliptic, acute, quite entire, glabrous above, and tomentose beneath ; cymes terminal. T? . S. Native of Cayenne. Dun. sol. p. 197. syn. p. *33.* Branches, petioles, and midribs of leaves beneath prickly. Leaves 3-4 inches long, obscure green above. Peduncles bifid; pedicels reflexed at first. Calyx 5-cleft, with linear-lanceolate segments. Corolla 5-cleft, with sublinear segments.

Rusty Nightshade. Fl. June, July. Clt. 1821. Shrub.

249 S. VELUTINUM (Dun. syn. p. *33.* sol. ed. 2d. ined. t. *53.)* stem scandent, ? tomentose ; leaves ovate-oblong, unequal at the base, acute, clothed with silky tomentum, furnished with a few prickles beneath ; racemes terminal, few-flowered. J? . *Ky,* ? S. Native of Cayenne. This species differs from *S. rubigindsum* in the leaves being silky on both surfaces, in the hairs being simple, but yellowish. Prickles short, recurved. Leaves yellowish green above, but whiter beneath. Racemes villous. Calycine segments oblong, acute, and are, as well as the corolla, villous outside.

Velvety Nightshade. Shrub climbing.

250 S. CORIVCEUM (Dun. sol. p. 197. t. 14. syn. p. *33.)* shrubby, scandent; leaves glabrous, lanceolate-elliptic, acute; racemes lateral, simple, equal in length to the leaves. I? . w. S. Native of Cayenne. Branches terete, powdery, as well as the young leaves, peduncles, and pedicels. Leaves sometimes twin, on short petioles 4 inches long, coriaceous, sometimes prickly on the midrib. Prickles short, recurved. Peduncles sometimes bifid ; pedicels secund. Corolla large, blue. Calyx coriaceous, 5-toothed ; teeth roundish, mucronate. Stigma 2-lobed.

Coriaceous-leaved Nightshade. Shrub climbing.

SUBSECT. II. SUBINE'RMIA. *Stem prickly at the base. Leaves sinuately angular•, or entire. Racemes many-parted; pedicels cymose. Flowers numerous, many of which are abortive; in the fertile /lowers the style is longer than the anthers; in the*

sterile flowers the style is the length of the filaments. Corollas 4>-5-6-cleft. Berries 4-celled. a. Anthers unequal.

251 S. BONARIE'NSE (Lin. spec. 264, exclusive of the syn. of Plum.) shrubby, almost unarmed; leaves ovate-oblong, sinuately repand, smoothish ; racemes corymbose, lateral, or extrafoliaceous. ^ • H. Native of Buenos Ayres. Dun. sol. 198. syn. p. 34.—Dill. elth. p. 364. t. 272. f. 351. Stem green, prickly at the base: adult ones unarmed. Leaves sometimes entire, rarely prickly. Corymbs large. Calyx 4-5-cleft; segments subulate. Corolla large, white, downy outside. Berry gk bose, yellow ? 4-celled, size of a chick pea. Root creeping.

Buenos-Ayrean Nightshade. Fl. June, Sept. Clt. 1727. Shrub 6 to 10 feet.

252 S. FASTIGIA'TUM (Willd. enum. p. 235.) shrubby, almost unarmed ; leaves ovate-oblong, entire, or sinuately repand, downy ; racemes corymbose, terminal. ^ . G. Native country unknown. Dun. sol. p. 198. t. 16. t. 2. p. D. syn. p. 34. Poir. suppl. 3. p. 770. Jacq. eclog. t. 6. Stem usually unarmed, but sometimes prickly. Branches green. Leaves rarely prickly, sometimes entire, scabrous from short stellate pili. Flowers large, some fertile, and some sterile. Calyx 4-5-6-cleft; segments acute. Corolla large, 4-5-6-cleft, pale blue, marked by a yellow star inside. Anthers 4-5-6, yellow. Berry globose, 4-celled, orange yellow at maturity, size of a chick pea.

Fasligiate-fiowered Nightshade. Fl. June, July. Clt. 1818. Shrub 4 to 5 feet.

253 S. P6KA (Dun. syn. p. 34. ed. 2d. ined. t. *56.)* branches nearly glabrous, prickly; leaves ovate-lanceolate, almost entire, or sinuately angular, scabrous on both surfaces, rather tomentose beneath, unarmed ; racemes short, lateral, few-flowered. T?. S. Native of Java, Leschenault. Branches prickly towards the top; prickles short, straight, slender, rarely recurved. Racemes bifid, unarmed, beset with rusty hairs. Calyx 5-cleft. Corolla woolly outside, 5-cleft; with lanceolate, acute segments. Down and hairs stellate.

Poka Nightshade. Shrub.

254 S. OPORINUM (Willd. enum. 1. p. 238. Poir. suppl. 3. p. 768.) stem shrubby, prickly at bottom ; leaves oblong-lanceolate, repandly angular, or entire ; racemes cymose, lateral, and terminal. 1?. G. Native of Mexico. ? S. macrophyllum, Hort. monsp. Dun. sol. p. 199. t. 16. syn. p. 34. S. grandifldrum, Desf. arb. 1. p. 169, but not of Ruiz, et Pav. S. cymosum, Ort. dec. 1. p. 12.—Zucc. cent. 1. p. 47. Tops of branches beset with powdery tomentum; hairs short, stellate, cinereous. Prickles somewhat recurved at apex. Leaves large, a foot long, unequal, somewhat cordate at the base, having the midrib and petioles sparingly prickly: upper leaves nearly entire : young ones canescent beneath, with convolute edges. Peduncles 2-3-parted, green, scabrous from short stellate hairs, as well as the pedicels, and calyxes, and outside of corollas. Calyx 5-parted; segments broad at the base, and subulate at the apex. Corolla large, blue, marked with a yellow star inside, 4-5-cleft, plicate, spreading, afterwards reflexed. Stigma somewhat 2-lobed. Berry globose, 4-celled, yellowish when ripe, size of a chick pea. This species differs from *S. fastigidtum* in all its parts being larger and more pilose ; corollas deep blue ; racemes leafy.

Autumnal Nightshade. Fl. July, Sept. Clt. 1820. Shrub 5 to 6 feet.

255 S. SUBINE'RME (Jacq. amer. p. 50. t. 40. f. 3, a leaf only.) stem shrubby, nearly unarmed ; leaves lanceolate, elliptic, quite entire, glabrous above, but rather tomentose beneath ; cymes mealy ; calycine segments obtuse. *?. S. Native of the West Indies, among bushes; Mexico, &c. Dun. sol. p. 200. syn. p. 34. Swartz. prod. 1. p. 453, Lin. mant. 8. p. 253. S. laurifdliu«i, Mill. diet. no. 20. Leaves 3-4 inches, glabrous above, and more or less tomentose beneath. Racemes cymose. Calyx 5-cleft, with obtuse segments. Corolla blue, with lanceolate segments. Berry globose. This species differs from *S. lanceoldtum* in the racemes being smaller, and in the calycine segments being obtuse.

Nearly-unarmed Nightshade. Fl. July, Aug. Clt. 17i>#. Shrub 4 to 6 feet.

256 S. ELA'TUM (Link. enum. 1. p. 186.)"Stem furnished with reflexed prickles, which are tomentose at the base ; leaves lanceolate, rather tomentose, unarmed, when young hoary beneath ; peduncles lateral, bifid ; calycine segments linear, f? . S. Native country unknown. Prickles numerous, short. Leaves acute, repand. Tomentum stellate. Pedicels crowded, tomentose, as well as the calyxes. Corolla blue, tomentose outside.

Tall Nightshade. Fl. June, July. Clt. 1820. Shrub 6 to 8 feet.

257 S. OCHRONEU'RUM (Link. 1. c) stem furnished with recurved prickles ; branches clothed with rusty tomentum ; nerves of leaves prickly ; cymes terminal; calycine segments short; corolla 5-parted. ^ • S. Native of Brazil. Leaves tomentose, not hoary. Tomentum stellate. Corolla blue. Anthers distant.

Far. (3 ; stem furnished with more numerous, larger prickles. Leaves smaller, and more finely tomentose, and the nerves more prickly on both sides. 1? . S. Native of Brazil.

Yellow-nerved-\eaved Nightshade. Clt. ? Shrub.

258 S. ASTROITES (Jacq. eclog. t. *65.* Link. enum. 1. p. 186.) stem almost unarmed ; or the branches are furnished with a few short, recurved prickles ; leaves ovate-oblong, sinuated or repand, beset with stellate hairs on both surfaces ; corymbs intrabliaceous, dichotomous ; calyxes acuminated, clothed with stellate pili. T2, G. Native of Chili or Peru. Leaves 9 inches long. Corollas 5-lobed, of a violaceous blue colour. Petioles furnished with 1 or 2 short, recurved prickles. Berry globose, orange-coloured, 2-celled. This species comes very near to ***S. Bonariénsis* and *S. fastigidtum.***

Star-like Nightshade. Fl. June, July. Clt, 1818. Shrub 3 to 4 feet.

259 S. MEXICA^NUM (MOC. et Sesse, fl. mex. icon. ined. Dun. syn. p. 34. sol. ed. 2d. ined. t. *56.)* stem shrubby, tomentose, unarmed, or nearly so ; leaves ovate-oblong, tomentose, canescent beneath ; racemes subcymose ; calycine segments subulate ; corolla 5-cleft, with acute segments. J? . S. Native of Mexico. Stem prickly at the base. Racemes lateral and terminal. Corolla violaceous. Berry globose, orange-coloured, size of a pea.

Mexican Nightshade. Fl. June, July. Clt. 1825. Shrub 3 to 4 feet.

260 S. LANCEOLVTUM (Cav. icon. 3. p. 23. t. 245.) stem shrubby, tomentose, prickly at the base; branches clothed with hoary tomentum; leaves lanceolate-oblong, quite entire, clothed with canescent down on both surfaces, unarmed: lower ones sinuate; racemes cymose, lateral, almost terminal; calycine segments subulate ; corolla semiquinquefid, angularly plicate. J?.G. Native of Mexico. Dun. sol. p. 200. syn. p. 34. Pseudocapsicum lancifolium, Moench. meth. suppl. p. 180. Down and hairs stellate. Leaves greenish above. Corolla pale blue. Berry globose, 4-celled, size of a chick pea, orange-yellow.

LanceolateAedived Nightshade. Fl. June, July. Clt. 1800. Shrub 5 to 6 feet.

261 S. GLUTINOSUM (Dun. syn. p. *35.* sol. ed. 2d. ined. t. 54.) stem shrubby, erect, sparingly prickly; leaves oblong-lanceolate, cordate at the base, acute, tomentose, clammy and soft on both surfaces ; racemes cymose, lateral, clammy. J? • S. Na-

tive country unknown. Prickles straight, acerose; hairs stellate and glandular at apex; the leaves, peduncles, and calyxes clothed with similar hairs; the upper parts of the hranches clammy. Leaves undulated, quite entire, or sinuated, yellowish *on* both surfaces, prickly on the midrib beneath. The hairs on the petioles, peduncles, nerves of leaves, and calyxes, are clammy, and of a rusty-yellow colour. Flowers pentamerous. Cafycine segments oblong, acute. Corolla blue, with the star in the centre villous; lobes mucronate. Berry globose, size *of* a cherry, 4-celled, yellow.

Clammy Nightshade. Fl. June, July. Clt. 1810. Shrub 3 to 5 feet.

262 S. FORMOSUM (Dun. syn. p. *35.* sol. ed. 2d. ined. t. 127. H. B. et Kunth, nov. gen. amer. 3. p. 44.) stem shrubby, very prickly, hairy; leaves rather cordate, ovate-lanceolate, acuminated, clothed with woolly tomentum, almost unarmed; racemes lateral, many-flowered, very hairy. *?. S. Native on the banks of the Orinoco, in woods near Maypures. Branches very hairy. Prickles straight, acerose. Hairs rufescent, stellate and simple, intermixed. Leaves sinuately-repand, undulated, unarmed, of a pale rufescent colour beneath, and greenish-yellow above. Calyx 5-parted, clothed with pale rusty hairs. Corolla large, plicate, 5-angled, violaceous, with a star in the centre, which is woolly outside. Stigma capitate.

Showy Nightshade. Shrub.

263 S. BROWNII (Dun. sol. p. 201. syn. p. 35.) stem shrubby; prickles straight, subacerose; leaves entire or repand, long-lanceolate, almost unarmed, rather scabrous above, but clothed with grey tomentum beneath; corymbs lateral, subumbellate, on short peduncles, simple; corolla 3 times as long as the calyx. T? . G. Native of New South Wales, within the tropic. S. violaceum, R. Br. prod. p. 446. Leaves often twin. Calyx of a greyish-purple colour, with long subulate segments. Corolla violaceous.

Brown's Nightshade. Fl. June, Aug. Clt. 1820. Shrub 2 to 4 feet.

264 S. ELEGANS (Dun. syn. p. *35.* sol. ed. 2d. ined. t. *58.)* stem tomentose, prickly; leaves oblong, acuminated, tomentose on both surfaces, prickly, sinuately repand, *whitish-yellow beneath; racemes simple, tomentose, prickly. ^ • G. Native of New Holland. This species differs from *S. Brownii* in the stem, leaves, racemes, and calyxes, being prickly. Prickly, small, acute, straight, yellow at the base, and brown at top, tomentose, like the rest of the plant. Leaves often twin, prickly on the middle nerve beneath. Calyx 5-parted; with subulate segments, greyish-brown, afterwards bluish. Corolla violaceous. Style incurved.

Elegant Nightshade. Shrub.

SUBSECT. III. TORVUM (from *torvus,* grim or stern; in allusion to the shrubs bearing prickles.) *Prickly shrubs. Leaves entire, sinuated, or lobed. Flowers corymbose, or yaniclcd. Anther* equal.*

265 S. GIGANTEUM (Jacq. coll. 4. p. 125. icon. rar. 2. t. 328.) stem shrubby; prickles tomentose at the base; leaves elliptic-lanceolate, acute, unarmed, entire, glabrous above, but clothed with hoary tomentum beneath; racemes dichotomous, cymose, lateral, many-flowered, clothed with white tomentum. *b*. G. Native of the Cape of Good Hope. Dun. sol. p. 202. syn. p. 36. Sims, bot. mag. 1921. S. niveum, Vahl, symb. 2. p. 41. Thunb. prod. p. *36.* S. papilionaceum, Dumont de Courset bot. cult, suppl. p. *153. 1* S. farindsum, Wall, in Roxb fl ind. *2.* p. *Mo.* S. argenteum, Heyne, herb. The whole plant is clothed with mealy tomentum, except the upper surfaces of the leaves. In the axils of the leaves, which are large, rise other small ones. Pedicels pendulous when bearing the flowers. Calyx small, at first 5-toothed, but afterwards 5-cleft. Corolla purplish-violet, small, deeply 5-cleft. Berry roundish, red, shining, size of a pea.

Far. /3 ? stem unarmed ? leaves thinner, and on longer petioles; tomentum finer, and more hoary; calyx deeply divided. }?. S. Native of Dindygul, in the East Indies. Nees, in Lin. trans. 17. p. 47. S. farindsum, Wall. cat. no. 2610. b.

Far. y ? leaves nearly a foot long, and 4 inches broad, form of those of the var. /3, as well as the tomentum. J? . G. Native of the Neelgherry mountains. Nees, 1. c. S. farindsum, Wall. cat. no. 2510. c.

Giant Nightshade. Fl. June, July. Clt. 1792. Tree 10 to 15 *feet.*

266 S. TORVU* (Swaftz, prod. p. 47. fl. ind. occ. 1. p. 456.) stem shrubby; prickles recurved, tomentose at the base; leaves twin, subeordate, ovate, sinuated and lobed, ox angular, tomentose, having the midrib prickly; peduncles exfra-foliaceous, corymbose, many-flowered, and are, as well as the calyxes, unarmed; segments ovate, acuminated. J?. S. Native of Jamaica; Hispaniola; Cuba; Bermudas; and in many parts of the East Indies, in hedges. In Cuba it is called *Pendejera.* Dun. sol. p. 203. t. 23. syn. p. *36.* exclusive of the syn. of Jacq. S. I'ndicum, Lin. spec. ed. 1st. p. 187. S. stramonif61ium, Ait. hort. kew. 1. p. 2j52. ? Lam. ill. no. *2365.* exclusive *of* the syn. of Jacq. Poir. diet. 4. p. 300. exclusive of the syn. of Jacq. S. ficifolium, Ort. dec. 9. p. 116. S. acanthifdlium, Desf. hort. par. ex Lam. S. scabrum, Ruiz, et Pav. fl. per. 2. p. *39. t.* 175. f. a. S. pseudosaponaceum, Blum, bijdr. p. 702.—Plukn. aim. p, 350. t. 225. f. 6,? Stem tomentose, branched, armed with a *few* prickles. Tomentum or down stellate, pale yellow or rusty. Leaves often twin. Prickles tomentose at the base. Racemes lateral, bifid or trifid, many-flowered; pedicels cymose. Calyx 5-cleft. Corolla white, 5-cleft, marked with a yellow, shining star in the centre; segments lanceolate, acute, with undulated edges. Anthers yellow. Style in the sterile flowers length of filaments; in the fertile flowers longer than the anthers. Berry globose, green, 4-celled, size of a chick-pea. This species is nearly allied to *S. I'ndicum;* but differs from it in the leaves being hardly prickly; in the racemes being multifid; and in the peduncles, pedicels, and calyxes, being unarmed.

Far. jo ; unarmed; leaves repand. Jj. S. Native of the East Indies. Nees in Lin. trans. 17. p. 54. S. Silanum, Ham. herb, ex Wall. cat. no. 2627. D. S. multiflorum, Roth, nov. spec. p. 1*30.* *

Grim Nightshade. Fl. June, July. Clt. 1816. Shrub 6 feet.

267 S. FERRUGINEUM (Jacq. hort. schoenbr. 3. p. 46. t. 334.) stem shrubby; prickles glabrous; leaves ovate, lobed or sinuated, prickly on the midrib and petioles beneath, acute, tomentose; racemes corymbose. ^ . S. Native country unknown. Willd. enum. 1. p. 239. Dun. syn. p. *36.* sol. ed. 2d. ined. Young leaves and branches clothed with rusty tomentum. Corolla pale blue or white. Nearly allied to *S. torvum,* but differs in the racemes being shorter and fewer-flowered. Tomentum rusty, stellate. Prickles of the stem glabrous, rarely recurved. Said by Nees, Lin. trans. 17. p. *53.* to be the same as *S. torvum.*

Rusty Nightshade. Fl. July, Aug. Clt. 1816. Shrub 4 to 6 feet.

268 S. HERNANDE'SII (MOC. et Sesse, fl. mex. icon. ined. Dun. syn. p. *36.* sol. ed. 2d. ined. t. 59.) stem shrubby, prickly, tomentose; leaves twin, deeply sinuated, acute, tomentose; racemes lateral; pedicels umbellate; berry 6-celled. T? . G. Native of Mexico. Prickles few, recurved. Leaves ovate-oblong, subeordate. Petioles and peduncles prickly. Calyx villous,'

with deep, acute segments. Corolla white, with ovate-oblong, bluntish segments. Berry globose.

Hernandez's Nightshade. Shrub.

269 S. TRICUSPIDATUM (Rich. herb, ex Dun. syn. p. 36. sol. ed. 2d. ined. t. 60.) stem shrubby, sometimes prickly; leaves sinuately angular at top, acute, scabrous above, and tomentose beneath, and rather prickly on the midrib beneath; cymes simple, tomentose. ^ • S- Native of Guiana. Poir. suppl. 3. p. 771. Branches tomentose, rusty at top. Leaves large, ovate-oblong, on long petioles, subcordate. Hairs and tomentum stellate. Calycine segments 5, acute. Corolla large, deeply 5-cleft. It differs from *S. torvum* in the form of the leaves, and simple racemes.

Tricuspidate-lezved Nightshade. Shrub 4 to 6 feet.

270 S. MACCA'I (Rich. herb, ex Dun. syn. p. 37. sol. ed. 2d. t. 61.) stem shrubby, hardly prickly ; leaves subcordate at the base, sinuately lobed, canescent beneath : sinuses rounded ; lobes sinuately angular; cymes simple. J?. S. Native of Cayenne. Poir. suppl. 3. p. 771. Maccai, Merian, surin. t. 6. Branches white, powdery. Prickles straight. Leaves on long petioles, broad, furnished with a few prickles on the midrib beneath, beset with distant, stellate pili above. Peduncles, pedicels, calyxes, and under surfaces of leaves tomentose. Inflorescence and flowers similar to those of *S. tricuspidatum.* Berry red, globose, edible.

Maccai Nightshade, Shrub 4 to 6 feet ?

271 S. OVALIFOLIUM (Dun. syn. p. 37. sol. ed. 2d. ined. t. 128.) stem shrubby, prickly; branches villously tomentose, unarmed ; leaves obovate-elliptic, acute, rounded at the base, and almost unarmed, clothed with stellate tomentum beneath ; racemes lateral, subdichotomous, shorty and are, as well as the calyxes, unarmed, J?. S. Native of New Granada, in the valley of the Magdalena, near Honda. Leaves repand, and somewhat undulated, furnished with 1 or 2 straight prickles on the midrib beneath, 3-4 inches long. Racemes, outside of calyxes and corollas clothed with white, stellate tomentum. Calyx 5-parted; segments obovate, acute. Segments of corolla oblong, linear, acute.

Oval-leaved Nightshade. Shrub.

272 S. HI'SPIDUM (Pers. ench. 1. p. 228. Dun. sol. p. 204. syn. p. 37.) stem shrubby, prickly, very hairy ; leaves lobed, acuminated ; racemes lateral, dichotomous, unarmed. 1?. S. Native of Peru, among rubbish at Pillao and Panao, where it is called *Campucasa* and *Huircacasa.* Plant beset with stellate, rusty hairs all over. Some of the supejpor leaves are ovate, and quite entire, acute, and a few are repand; the rest are cordate, 7-11-lobed: lobes acutish, a span long, very hairy. Racemes axillary and terminal, many-flowered. Calyx 5-cleft. Corolla white, clothed with rusty, stellate tomentum outside, somewhat 5-parted. Berry globose, yellowish.

Hispid Nightshade. Shrub 10 to 12 feet.

273 S. LANATUM (Dun. sol. p. 305. syn. p. *37.)* stem prickly, arboreous; leaves oblong, solitary or twin ; corymbs rameal, subdichotomous. J? . S. Native of Peru, at Huassanassi. S. asperum, Pers. ench. 1. p. 229. but not of Vahl. S. asperolanatum, Ruiz, et Pav. fl. per. 2. p. 39. t. 174. f. b. Shrub clothed with rough, stellate, rusty wool. Leaves oblong-lanceolate, angular, shining. Calyx 5-cleft. Corolla white, woolly outside. Berry yellow, about the size of a filbert.

Woolly Nightshade. Shrub 5 to 6 feet.

274 S. PANICULATUM (Lin. spec. 267.) stem and petioles prickly ; leaves sinuately angular, glabrous above ; flowers panicled, terminal. T?. S. Native of Brazil, and the West India Islands, where it is called *Croc de Chien* by the French. Aubl. guian. 1. p, 216.. Dun. sol. p. 203. syn. p. *37.* Stems and petioles clothed with white tomentum. Prickles few, straight, naked. Leaves tomentose, broad, cordate, unarmed, glabrous above. Panicles terminal, compound, tomentose, and are, as well as the calyxes, unarmed.

Panicled-fiowered Nightshade. Shrub.

27.5 S. ACUTILOBUM (Dun. syn. p. 37. sol. ed. 2d. ined. t. *6S-)* branches almost unarmed, clothed with powdery tomentum ; leaves on long petioles, cordate, sinuately angular, clothed with powdery tomentum on both surfaces ; racemes cymose, almost terminal. Fj • S. Native of Para, in Brazil. Poir. suppl. 3. p. 772. Nearly allied to *S. paniculatum;* but differs from it in the leaves being clothed with powdery tomentum. Branches almost unarmed ; prickles few, small, and acute. Tomentum yellowish, stellate. Leaves greenish-yellow above, and whitish beneath. Racemes multifid, tomentose, as well as the calyxes. Corollas large.

Acute-lobed-\ea.ve& Nightshade. Shrub.

276 S. A'LBIDUM (Dun. sol. p. 206. syn. p. 37.) stem arboreous, prickly ; leaves sinuated: lower ones lobed, hoary beneath ; racemes axillary, many-flowered, subcorymbose. ^ • S. Native of Pern, among broken rocks on the edges of torrents; at Huanuco, Acomayo, Chulquillo, and Camuha, where it is called by the inhabitants *Yurahuacta* and *Yurahusa.* S. incanum, Ruiz, et Pav. fl. per. 2. p. 40. t. 175. f. b. but not of Lin. spec. ed. 1st. Young leaves 7-9-lobed: adult ones sinuated, glabrous above. Racemes tomentose. Calyx small. Corolla white. Berry globose, small, yellow, sometimes black.

Whitish Nightshade. Shrub *20* feet.

277 S. SAPONACEUM (Dun. sol. p. 206. syn. p. *37-)* stem shrubby, prickly ; leaves sinuately angular, scabrous ; corymbs lateral, dichotomous ; flowers secund. I? . G. Native of Peru and Chili, in waste places. S. scabrum, Ruiz, et Pav. fl. per. 2. p. 39. t. 175. f. a. but not of Vahl. In Peru the plant is called *Casiamuru.* Prickles few, remote, straight, fulvescent. Leaves solitary, J?ut sometimes twin, beset with small stellate hairs on both surfaces. Calyx deeply 5-cleft. Corolla bluish-violet, with acute segments. Berry orange-yellow, size of a chick pea. Said by Nees in Lin. trans. 17. p. 54. to be the same as *S. torvum,* Swartz. The *S. saponaceum,* Hook. bot. mag. t. 2697. is *S. dealbatum,* Lindl.

Soapy Nightshade. Fl. July. Clt. 1825. Shrub 4 to 6 feet.

278 S. PLATYPHY'LLUM (Dun. syn. p. 38. sol. ed. 2d. ined. t. 130,) suffruticose ; branches prickly? leaves broad-oblong, sinuately lobed, rounded at the base, beset with stellate pili on both surfaces, prickly on the midrib beneath ; flowers racemose; pedicels and calyxes unarmed, and are, as well as the corollas, clothed with fuscous tomentum. I? . S. Native in woods on the banks of the Orinoco, between the confluence of the Meta and the Cataract of Maypures. S. undecimangulare, Willd. rel. ex Roem. et Schultes, syst. 4. p. 669. Leaves purplish beneath, ex Bonpl., 7-8 inches long, and *5-6* broad. Flowers unilateral. Calyx 5-cleft; lobes acute. Corolla violaceous, white inside ; segments ovate-lanceolate, acuminated. Perhaps only a var. of *S. saponaceum,*

Broad-leaved Nightshade. Shrub.

279 S. VAILLA'NTH (Dun. syn. p. *38,* sol. ed. 2d. ined. t. 64.) stem glabrous, prickly ; prickles reversed; leaves ovate, acuminated, sinuately-lobed, pilose above, scabrous beneath; racemes bifid, cymose. J? . S. Native country unknown. Poir. suppl. 3, p. 772. This species differs from *S. saponaceum* in the characters indicated above ; and in the leaves being beset with simple hairs on the upper surface, instead of stellate ones ; and in the flowers being fewer.

VaillanCs Nightshade. Shrub.

280 S. PROCU'MBENS (Lour. coch. ed. Willd. 1. p. 163.) stem shrubby, procumbent, prickly; prickles recurved; leaves small, twin, on short petioles, ovate, obtuse, repandly lobed, clothed with stellate tomentum on both surfaces, glaucous,

prickly on the midrib ; peduncles lateral and terminal, few-flowered; flowers reflexed, quadnfid, tetrandrous. Jj . S. Native of Cochinchina, in fields and hedges. Dun. sol. p. 207. svn p 38. Nees, in Lin. trans. 17. p. 58. Habit of *S. trilobatum.* Corolla small, pale violet, with lanceolate, obtuse segments. Berry red, size of a pea, smooth, globose.

Procumbent Nightshade. Shrub procumbent.

281 S. LICHTENSTE'INII (Willd. enum. 1. p. 239. Dun. sol. p. 207. syn. p. 38.) stem prickly, shrubby, scandent; leaves oblong-cordate, sinuately angular, tomentose, white beneath, prickly on the middle nerve on both surfaces. T? . w. G. Native of the Cape of Good Hope. Fruit size and colour of those of *Capsicum dnnuum.* Leaves in the young plants 4 inches long, green above. Perhaps belonging to a different section.

JAchtensteins Nightshade. Shrub climbing.

SUBSECT. IV. MELONGENA (altered from the Arabic name of the Egg-plant, bydendjan, ex Forsk. p. 63.) Tourn. inst. p. 152. *Peduncles shorter than the leaves, sometimes solitary and \-flowered, but usually bifid below ; the lower pedicel rising from the stem, and bearing afertile flower•, drooping after florescence; the other part of the peduncle bearing many usually sterile flowers; in the fertile flower the calyx is prickly, and increasing after florescence; and the style is longer than the anthers; in the sterile flower the calyx is unarmed, or hardly at all prickly, and the style is as long as the f laments. Corollas quinquefid, undulately plicate. Berry 2-3-celled; placentas* 2-3, *convexo-concave, fixed to the axis on both sides of dissejnment of the intermediate longitudinal lamina. Leaves sinuated, angular, or lobed.*

282 S. MELONGE'NA (Lin. syst. 1. p. 188. Wall. cat. no. 2628. Nees, in Lin. trans. 17. p. 48.) herbaceous, woody at the base, perennial, clothed with stellate tomentum ; leaves ovate, unequal at the base, angularly sinuated ; flowering peduncles reflexed ; fertile peduncle solitary : sterile one racemose; calyx campanulate, with linear-lanceolate segments ; corolla angular. ©• S. Native of the East Indies, and Arabia? Leaves canescent from stellate tomentum, but most so beneath. Calyx 6-9-cleft. Corolla large, violaceous, 6-9-cleft, marked by a yellow star inside, tomentose outside ; segments broad, acute. Stigma 4-5-cleft. Berry large, smooth, shining, shape of an *egg,* blunt and umbilicate at apex, white ; cells vanished ; placentas fleshy, white, as well as the seeds, which are small and compressed.

Melanzana nigra, Rauw. itin. ex C. Bauh. I, c. et Mor. hist. 1. c. 5. Berries round. Melongena fructu rotundo, Tourn. inst. 1. c. The egg-plant, *Melongene* in French, *Tollapfel* in German, and *Malanzana* in Italian. The berries are large, oval, and generally white in colour, much resembling a hen's egg, and in large specimens that of a swan. In French and Italian cookery it is used in stews and soups, and for the general purposes of the Love-apple or Tomato. The following varieties are cultivated for culinary purposes. 1. The oval-shaped white. 2. The globular-shaped white, and the purple or violet-coloured of both forms. In cultivating the plants for use, they should be reared on a hot-bed in light rich earth. After they have grown *two* or three proper leaves, *they* may either be pricked out into another hot-bed, or planted in small pots, to be shifted in rotation till in size no. 16. in which they will produce their fruit. If the plants instead of being shifted into fruiting pots are planted against a wall, or in a warm bor-' der in June, they will fruit in the open air, if the season is not unusually wet and cold.

Melongene Egg-plant, Mad-apple, and Jews'-apple. Fl. June, July. Clt. 1597. PI. *2* to 3 feet.

283 S. INCA'NUM (Lin. spec. ed. 1. p. 188. Dun. sol. p. 213. but not of Ruiz, et Pav.) alUas in *S. melongena,* except that the fertile peduncles are racemosely corymbose, 3-4-flowered: stem, leaves, and calyxes prickly ; fruit smaller, ovate or subglobose, and more inclosed in the calyx. 0. S. Native of the East Indies, everywhere; Mauritius, &c. S. incanum, Roxb. fl. ind. 2. p. 249. exclusive of the syn. of Rumph. S. undatum, Lam. diet. 4. p. 301. Blum, bijdr. p. 700. S. Corolla bluish-violet. Berry roundish, yellow or white, egg.-shaped.

Var. ft ; flowers 6-7-cleft. G- S. Native of the Mauritius. S. argyracantha, Dum. Courset. bot. cult. ed. 2d. vol. 3. p. 162. S. marginatum argyracantha, Pers. ench. 1. p. 228.

Hoary Egg-plant. Fl. July, Aug. Clt. 1820. PL 2 *to 3* feet.

284 S. HETERACA'NTHUM (Dun. syn. p. 39. sol. ed. 2d. ined. t. 65. Nees in Lin. trans. *17.* p- 51.) herbaceous, woody at the base, perennial, clothed with stellate hairs ; prickles of the

stem, which is angular, thick and hooked; leaves oval, sinuated, hoary beneath, furnished with strong straight prickles on both surfaces ; segments of the leaves angular; peduncles corymbose, many-flowered, with one fertile flower at the base; calyx a little increased after florescence ; corolla quinquefid: with oblong-lanceolate segments. ©. S. Native of the East Indies, and Africa. ? This species differs from *S. Melongena,* which it is very like, in*idie strong, recurved, more crowded prickles of the stem, and in the leaves being more deeply sinuated, having the lobes angular on both sides, and in the corolla being 5-cleft to the middle.

Variable-spined Egg-plant. PI. *2* to 3 feet.

285 S. MELANOXYLUM (Link, enum. 1. p. 188.) leaves cordate-oblong, rather unequal at the base, sinuated, prickly, tomentose, green above, and canescent beneath. ©. H. Native country unknown. Prickles fuscescent. Peduncles axillary, solitary. Calyx tomentose, prickly, with obtuse segments. Corolla violaceous, 6-parted. Anthers separate.

Black-wooded Egg-plant. Fl. June, July. Clt. 1821. PL 2 to 3 feet.

286 S. FUSCATUM (Lin. spec. 268.) stem shrubby; leaves ovate-oblong, sinuately lobed, obtuse, rather tomentose ; peduncles lateral, bifid at the base ; berries globose. Tj. S. Native of tropical America. Dun. sol. p. 212. syn. p. 39. S. Campechiense, /3, fuscatum, Lin. mant. 340. Branches prickly, fuscescent on the side towards the sun, beset with short, scattered, stellate hairs. Leaves prickly on both surfaces, rather roughish above, but tomentose beneath. Prickles recurved. Calyx prickly in the fertile flowers, but unarmed in the sterile flowers, 5-cleft. Corolla pale violet. Berry variegated with white and green, sometimes yellow.

Far. a, *violaceum;* prickles violaceous. Tourn. inst. p. 149.

Far. /3, *luteum;* prickles yellow, or greenish white. ©. S. fuscfctum, Jacq. coll. 1. p. 51. icon. rar. t. 42. Melongena fructu rotundo, cum spinis ex albo virentibus, Tourn. inst. p. 152.?

Fuscous Egg-plant. Fl. June, July. Clt. 1817. Shrub 3 to 4 feet.

287 S. SODOMEUM (Lin. spec. 268.) stem shrubby, diffuse ; prickles straight, dilated at the base ; leaves oblong, sinuately-pinnatifid, shining above, and rather scabrous and prickly on both surfaces, as well as the calyxes; lobes of leaves obtuse, angular, or sinuated; peduncles bifid. ©.? J?.? G. Native of the North of Africa, and South of Europe, from which it has been probably introduced to New Holland, Cape of Good Hope, and Brazil. Lam. ill. no. 2358. t. 115. f. 1. R. Br. prod. p. 446. Sibth. et S.uith, fl. graec. t. *235.* Thunb. prod. 1. p. 37. S. Fabr. Helmst. p. 348, ex Willd.—Tourn. inst. 249. Stem and branches usually fuscous, or purplish ; branches beset with minute stellate hairs at top. Leaves deep green. Prickles yellow, subulate, brown at the base. Calyx prickly in the fertile flowers, and unarmed in the sterile ones. Corolla purple, 5-cleft. Berry size of a walnut, globose, variegated with white and green, at length yellow.

Sodom Egg-plant, or Apple of Sodom. Fl. June, July. Clt. 1688. Shrub 3 to 4 feet.

288 S. INDICUM (Lin. spec. 268.) shrubby, prickly; prickles of the stem compressed, recurved; leaves solitary, or twin, oblong, or ovate, tomentose, discoloured, sinuately lobed, or pinnatifid, unequal at the base ; racemes interfoliaceous, subcymose ; calyx prickly, with straight, linear, reflexed segments ; berries globose ; corolla quinquefid. i? . S. Native of Barbadoes. Dun. sol. p. 228. syn. p. 40.—Dill. elth. 362. t. 270. f. 349.—Rob. t. 28. Tourn. inst. p. 149. exclusive of the syn. of Mor.—Plukn. aim. 350. phyt. t. 225. f. 9.—Rumph. amb. 5. p. 240. t. 86. f. 1.? Leaves prickly on both surfaces, green above, and paler beneath. Down stellate. Prickles straight; those of the stem shorter, and brown ; and those of the leaves pale green. Peduncles lateral, simple, 5-6-flovvered. Corolla large, bluish-purple, undulated, semi-5-cleft, somewhat pentagonal. Berry pear-shaped. ? This species is said to differ from *S, Caroliniense* in the leaves being more deeply sinuated, in the segments being sinuately-toothed, in the racemes being shorter, and in the calycine segments being reflexed, and in the corollas being larger.

Far. a ; leaves cuneiform, or truncate at the base, sinuately lobed. J? . S. Native of Silhet and Sirinagur, Penang, &c. S. rndicum, Lin. Roxb. fl. ind. 2. p. 252. ex Nees in Lin. trans. 17. p. *55.* S. violaceum, Jacq. fragm. p. *82.* t. 133. f. 1. Dun. sol. p. 128. S. canescens, Blum, bijdr. p. 701. S. Soddmeum, Russel, herb. Far. (Z ; leaves truncate at the base, or cuneate, erosely pinnatifid. Jj. S. Native of Penang and Bengal. Nees, 1. c. S. pinnatifidum, Roth, nov. spec. 129. S. Heynei, Rcem. et Schultes, syst. 4. p. *669.* S. I'ndicum, Wall. cat. no. 2626. D. E.

Far. y; leaves smaller, cordate at the base, sinuately lobed. *? . S. Native of the East Indies. Nees, 1. c. S. agreste, Roth. nov. spec. 130. Roem. et Schultes, syst. 4. p. *55.* S. I'ndicum, Wall. cat. no. *2626.* G. suppl. no. 240.

Far. B; leaves smaller, truncate, or subcordate at the base, repandly angular; stem sparingly prickly; racemes usually 1-4-flowered. T? • S. Native of the East Indies. Nees, 1. c. S. pubescens, Heyne, herb. Wall. cat. no. 2629. hort.

Indian Egg-plant. Fl. July. Clt. 1732. Shrub 3 to 4 feet.

289 S. COAGULANS (Forsk. fl. segypt. arab. p. 47. Vahl. symb. 2. p. 41.) stem shrubby; leaves ovate-oblong, sinuately repand, rather tomentose, whitish beneath, prickly on the middle nerve beneath ; prickles smoothish. ^ • G. Native of Arabia, Felix, where it is called *Beikaman.* Jacq. hort. schoenbr. 4. p. 35. t. 469. Delile, descr. p. 63. t. 23. f. 1. Dun. sol. p. 214. t. 2. Stem sparingly prickly, clothed with white tomentum at top. Leaves clothed with short stellate tomentum, greenish above: lobes obtuse. Prickles straight, or a little recurved, suUulate at first, rather tomentose, but at length smoothish. Peduncles bifid, tomentose. Flowers as in *S. Sodbmeum.* Berry roundish, ovate, yellow at maturity.

Curdling Egg-plant. Fl. July. Clt. 1802. Shrub 3 to 4 feet.

290 S. SANCTUM (Lin. spec. 269.) stem shrubby, tomentose ; leaves ovate, repand, oblique at the base, clothed with hoary tomentum on both surfaces ; prickles rather tomentose ; berries nearly globose. J?. S. Native of Palestine. Vahl, symb. 2. p. 49. Dun. sol. p. 215. syn. p. 40. S. incanum, Forsk. fl. aegypt. arab. p. 46, but not of Lin. S. coccineum, Hort. par. Melongena spindsa, fructu rotundo croceo, Tourn. inst. p. 152. Pomum de Hiericho melongenis congener, Bauh. hist. 3. p. 619. with a bad figure. P6ma Hierachuntica, Imp. p. 878, with a bad figure. Every part of the plant is clothed with white, short, stellate tomentum, the prickles also. Leaves sinuately repand, obtuse, or acute, obliquely cordate at the base. Prickles compressed, broad at the base, subulate at apex, at length glabrous. Petioles prickly beneath. Racemes and flowers as in *S. codgulans.*

Holy Egg-plant. Fl. June, July. Clt. 1818. Shrub 3 feet.

291, S. DITBIUM (Fres. pi. segypt. p. 166.) prickly, and

clothed with stellate tomentum ; stem shrubby ; leaves ovate-oblong, unequally cordate at the base, sinuately repand, prickly ; prickles acicular, very straight; peduncles 3-5-flowered ; calyx almost unarmed, clothed with stellate tomentum. J? . G. Native of Egypt. Very nearly allied to *S. sanctum,* and *S. incanum.*

Doubtful Nightshade. Shrub.

292 S. CONGE'NSE (Link. enum. 1. p. 137.) stem tomentose, furnished with straight prickles; leaves ovate, sinuated, prickly, tomentose ; peduncles lateral, very short, many-flowered ; calyx tomentose, with oval, obtuse segments; corolla deeply 5-parted. *V}* . S. Native of Africa, on the banks of the Congo, or Zaire river. Prickles broad at the base, those on the nerves of the leaves long, and straight. Corolla blue, downy outside. Anthers separated, equal.

Congo Egg-plant. Fl. June, July. Clt. 1821. Shrub 2 to 3 feet.

293 S. VE'LLEUM (Swartz. in litt. ex Roam, et Schultes, syst. 4. p. 643.) stem shrubby, prickly; leaves ovate, acute, quite entire, unarmed on both surfaces, clothed with woolly tomentum, reticulated beneath ; racemes dichotomous, flexuous. J?. S. Native of tropical America. Prickles straight, scattered. Branchlets tomentose. Leaves opposite, one smaller than the other, rusty, *2-3* inches long. Racemes terminal from the divisions of the branches, very long, tomentose, many-flowered. Flowers crowded, nearly sessile. Calyx tomentose. Corolla blue, tomentose outside, with obtuse segments. Stigma obtuse.

Woolly Egg-plant. Shrub.

294 S. MARGINA'TUM (Lin. suppl. p. 147. Murr. comm. goctt. 1783. p. 11. t. 4. Jacq. coll. 1. p. 50. icon. rar. 1. t. 45.) stem shrubby ; leaves subcordate, sinuately lobed, clothed with hoary powdery *tomentum* beneath, margined with white above ; berry 3-celled, globose. J? . G. Native of Palestine. Dun. sol. p. 215. t. 8. A. syn. p. 40. Sims. bot. mag. 1928. S. niveum, Allioni, auct. misc. and S. Abyssinicum, Jacq. hort. vind. ex Vittm. summ. p. 492. Stem prickly, tomentose at top, as well as the branches; tomentum powdery. Leaves sinuately repand, obtuse, prickly on both sides, when young white on both surfaces, but green above in the adult state. Prickles straight, subulate, yellow, fuscous at the base. Petioles, peduncles, pedicels, outsides of calyxes, and corollas clothed with white tomentum. Calyx 5-6-cleft. Corolla *5-6*-cleft, large, white, marked by a purple star in the centre. Berry large, S-celled, globose, yellow, drooping, ex Poir.

Whitc-edged-leaved Egg-plant. Fl. June, Sept. Clt. 1775. Shrub 3 *to* 4 feet.

295 S. CAMPECHIE'NSE (Lin. spec. *267.)* stem herbaceous, very prickly, hairy; leaves cordate-oblong, lobed : lobes toothed ; calyxes of the fertile flowers very prickly ; berries cherry shaped. ©. H. Native of the Bay of Campeachy, Willd. spec. 1. p. 1059, exclusive of the syn. Lin. mant. Dun. sol. p. 216. S. acanthifolium, Mill. diet, no 14.—Dill. elth. p. 316. t. *268.* f. 347. Stem brown on the side next the sun, hairy like the leaves ; hairs all stellate. Leaves prickly beneath, somewhat 5-lobed, green above, and greenish white beneath. Prickles straight, whitish, yellowish, or brown. Peduncles, pedicels, and fertile calyxes hairy, and very prickly. Corolla hairy outside, pale violet, 5-cleft. Berry form and size of a cherry, whitish when ripe.

Campeachy Egg-plant. Fl. July. Clt. 1732. PI. 1 to 2 feet.

296 S. TRONGUM (Poir. diet. 4. p. 308. Dun. sol. p. 217. syn. 40.) stem suffruticose, prickly ; leaves angularly sinuated, prickly on both surfaces; flowers solitary, extra-foliaceous; berries globose. ©. ? S. Native of the Moluccas. Trongum agreste spinosum, Rumph. amb. 5. p. 240. t. 86. f. 1. Root hard, long. Prickles recurved. Leaves obscure green. Calyx prickly. Corolla purple. Berry globose, size of a cherry. Perhaps only a var. of *S. Melongena,* ex Nees.

Trongum Egg-plant. Fl. June, July. Clt. 1818. Shrub J to 1 foot.

297 S. PRE'SSUM (Dun. *sol.* p. 217. syn. p. 41.) stem almost unarmed; leaves ovate, attenuated at both ends, prickly ; berries glabrous, nearly globose, flat on the top. ©. ? S. Native of the Moluccas. Trongum pra rubrum, Rumph. amb. 5. cap. 48. p. 241. t. *86.* f. 2. Stem usually dwarf; branches sparingly prickly. Leaves twin, acute, obscure, green, with brown nerves. Prickles short. Calyx prickly. Corolla white, or pale red. Berries size of a pigeon's *egg, green,* marked with white spots. Perhaps a var. of *S. Melongena,* ex Nees.

Pressed-fruited Egg-plant. PI.

298 S. A'LBUM (Lour. coch. 1. p. 129.) stem suffruticose, almost unarmed ; branches prostrate ; leaves oblong, angular, sparingly prickly ; peduncles many-flowered; berries globose. J? . G. Native of Cochinchina, where it is called *Ca-Co* by the natives; and of Amboyna. Dun. sol. p. 217. syn. p. 41.—Rumph. amb. 5. p. 241. cap. 48. Root extended, with the smell of a turnip. Leaves 9-10 inches long, on long petioles, powdery, like the branches, petioles, and fruit; the powder yellow. Prickles small, short. Peduncles many-flowered, *6-7.* Calyx bearded. Corolla white. Anthers yellow. Berry globose, green, marked with white spots. Perhaps a var. of *S. Melongena,* ex Nees.

White-Lowered Egg-plant. PI. 3 to 4 feet.

SUBSECT. V. ACANTHOPIIORA (from *cLKavdoQ, acanthos,* a spine; and *cpopeu), phoreo, to* bear ; the species contained in this section bear spines.) Dun. sol. p. 218. *Stem prickly. Leaves sinuately angular, toothed or pinnatifid, almost glabrous, or villous from simple, silky hairs, or tomentose from stellate hairs. Racemes short, few-flowered. Corollas 5-parted.*

§ 1. *Berries glabrous. Leaves smooth, or villous from usually simple silky hairs.*

299 S. ACERIFOLIUM (Dun. syn. p. 41. sol. ed. 2d. ined. t. 131. H. B. et Kunth, nov. gen. amer. 3. p. 46.) suffruticose ; branches and both sides of leaves prickly, and hispid from pili; leaves hastately 3-lobed, cordate, on long petioles; peduncles few-flowered ; calyx unarmed. 1? . S. Native of New Andalusia, at the monastery of Caripe. Prickles subulate, straight, elongated, yellow. Leaves about 4 inches long; lobes acuminated : lateral ones diverging, obsoletely angled outside at the base : middle one large. Peduncles prickly. Corolla violaceous. Calyx 5-lobed.

Maple-leaved Nightshade. Shrub 8 feet.

300 S. MYHIACA'NTHUM (Dun. sol. p. 218. t. 19. syn. p. 41.) stem very prickly, hairy ; prickles soft, acicular; leaves cordate, sinuately angular, acute, very villous and prickly *on* both surfaces. J? . S. Native country unknown. Hairs cinereous. Prickles straight. Peduncles slender, 2-3-flowered, nearly opposite the leaves, almost unarmed. Calycine segments oblong-subulate, villous outside, with ciliated margins. Corolla pilose outside, with linear-lanceolate, acute segments. This species differs from *S. aculeatissirnum,* in the leaves being very villous and sinuately angular, not lobed, and in the prickles being smaller and more slender.

Many-spined Nightshade. Fl. July, Aug. Clt. 1822. Shrub.

301 S. ACULEATI'SSIMUM (Jacq. coll. 1. p. 100. icon. rar. t. 41.) stem shrubby, very prickly; leaves subcordate, lobed, villous and prickly on both surfaces ; lobes acute, toothed. ^ .

S. Native of tropical America, and Ceylon. Dun. sol. 219. syn. p. 41.—Lin. fl. zeyl. p. 38. exclusive of the syn. of Dill, and Plukn.—Ray. 3. p. 353. Prickles subulate, unequal, mixed with villi. Peduncles almost unarmed, very short, few-flowered. Flowers usually abortive. Corolla white, with acute segments. Berry globose, size of a small cherry, at first spotted with green and white, but at length pale yellow.

Very prickly Nightshade. Fl. April, July. Clt. 1816. Shrub 2 to 4 feet.

302 S. PLATANIFŌLIUM (Hook, in bot. mag. t. 2618.) stem hairy, sparingly prickly ; prickles straight; leaves 5-lobed : lobes deeply toothed, acute ; peduncles lateral, aggregate, generally 1-flowered, drooping; berry variegated. J? . S. Native of South America. Corolla deeply 5-cleft, revolute, pale violet, with hairy margins. Stem hairy. Leaves downy. Berry large, almost globular, beautifully variegated with green and white. The plant is said to have considerable affinity with ***S. Campechiense*** **and** ***S. aculeatissimum,*** **but differs from both** in being less prickly.

Plane-leaved Nightshade. Fl. July. Clt. 1823. Shrub 2 to 4 feet.

303 S. INCARCERA'TUM (Ruiz, et Pav. fl. per. 2. p. 40. t. 176. f. a.) stem prickly, villous, suffruticose; leaves usually twin, cordate, sinuately-angular, acuminated, prickly ; flowers secund; berry clasped by the segments of the calyx. J?. S. Native of Peru, in groves at Chincao. Dun. sol. p. 219. syn. p. 41. Prickles unequal, broad at the base, and subulate at the apex, and others filiform, minute. Leaves unequal in size, clothed with white hairs. Peduncles villous, nearly unarmed; pedicels cymosely umbellate. Calyx villous, with linear, reflexed segments. Corolla pale violet. Berry white, oblong, size of a cherry.

Incarcerated-fruited Nightshade. Shrub 3 to 4 feet.

304 S. MAMMŌSUM (Lin. spec. p. 267. Aubl. guian. 1. p. 216.) herbaceous; stem villous, sparingly prickly ; leaves subcordate, lobed, villous, prickly on both surfaces ; berry large, teated at the base. ©. S. Native of Virginia, Guiana, and the West India Islands, Cape of Good Hope, ex Thunb. prod. 1. p. *36.* fl. cap. 2. p. 58. Dun. sol. p. 220. syn. p. 41. Pursh. fl. amer. sept. 1. p. 156. S. villosissimum, Zuccag. cent. 1. no. 48. Pdmum Sodómae Merian, sur. 27. t. 27, ex Sloane. S. Americanum molle, foliorum nervis et aculeis flavescentibus, fructu mammoso, Tourn. inst. p. 149.—Sloan, hist. p. 38. t. 12. f. 1.—Plum. mss. t. 4. f. 37.—Plukn. aim. p. 350. phyt. t. 226. f. 1. The plant is called by the French *Pomme à* ***chauve-souris, Pomme teton,*** **and** ***Poire de Bachelier.*** **Prickles** compressed, yellow, broad at the base, subulate at the apex, straight, or incurved. Leaves large, the breadth almost equal to the length; lobes acute, sinuately-toothed. Peduncles unarmed, 3-4-flowered, short. Calyx very villous. Corolla violaceous, or blue, with almost linear segments. Anthers corniculate. Berry large, yellow, teated, or mammose round the base, conical.

Teated-fruited Nighishade. Fl. June, Aug. Clt. 1699, PI. 2 to 4 feet.

305 S. ACICULA'RE (Swartz. in litt. ex Rcem. et Schultes, syst. 4. p. 647.) stem prickly, shrubby ; prickles subulately acerose ; leaves roundish-cordate, repandly acute-angled, prickly on both surfaces, clothed with stellate hairs above, and tomentum beneath ; peduncles axillary, terminal, very long, many-flowered. J?. S. Native of Brazil. Prickles straight. Peduncles solitary, length of leaves, pilose, bifid at apex. Flowers large, blue. Calyx beset with bristly hairs.

Acicular-spined Nightshade. Shrub.

306 S. CILIA'TUM (Lam. ill. no. 2360.) stem herbaceous ; leaves subcordate, sinuately lobed, ciliated : lobes obtuse ; peduncles short, few-flowered ; corollas 5-parted ; berries globose, almost dry. ©. H. Native country unknown. Dun. sol. p. 221. t. 18. syn. p. 41. S. ciliare, Willd. enum. 1. p. *M7.* S. capsicoides, Hort. par. ex Lam. This species differs from *S. Campechiense* in the leaves not being toothed, in the hairs being simple, in the stem being prickly, not hispid. Corymbs 2-3, rarely 5-flowered. Flowers white, nutant. Berry smaller than a walnut, globose, brick coloured. It is distinguished from *S. Soddmeum* in the racemes being small, and always 2-3-flowered.

Ciliated-leaved Nightshade. Fl. June, July. Clt. 1820. PI. li to 2 feet.

307 S. LI'VIDUM (Willd. herb, ex Link, enum. 1. p. 188.) leaves subcordate, sinuately-pinnatifid, rather tomentose above, but green : tomentose, and canescent beneath; prickles dilated at the base. Tj . S. Native country unknown. Branches and petioles tomentose. Leaves equal, or unequal at the base, furnished with prickles on the nerves. Peduncles 4-5-flowered, tomentose. Calyx tomentose, and furnished with long prickles. Corolla white.

Livid Nightshade. Fl. June, July. Clt. 1819. Shrub.

308 S. BARBISE'TUM (Nees, in Lin. trans. 17. p. 51.) fascicu lately hairy; stem herbaceous, prickly; prickles straight; leaves twin, elliptic, sinuated, rather hairy on both surfaces, and prickly, having the segments angular ; racemes lateral, simple, many-flowered, secund, prickly ; berry glabrous, covered by a bristly calyx, ©.? H. Native of Silhet; on the banks of the river Atran, in Martaban, and Tavoy. S. Melongena, Wall, cat. no. 2628. e. part. Habit of *S. aculeatissimum,* but is easily distinguished from that species in the racemose inflorescence, and in the berry being covered by the calyx.

Bristly-bearded Nightshade. PI. ?

§ 2. *Leaves villous, or tomentose from usually stellate hairs. Berries hairy.*

309 S. STRAMONIFŌLIUM (Jacq. misc. 2. p. 298. icon. rar. 1. t. 44.) stem shrubby, prickly; leaves cordate, sinuated, or acutely lobed, vilious, and prickly on both surfaces ; peduncles and calyxes unarmed. I? . S. Naiive of the East Indies. Dun. sol. p. 222. syn. p. 42. Willd. spec. 1. p. 1044. exclusive of the syn. of Ait. but not of Lam. nor Poir. S. mammosum, Lour. coch. 1. p. 162. exclusive of the syn. of Burm. Leaves a foot long, on long petioles, soft, beset with large, straight, and recurved prickles. Pedicels cymose. Calycine segments small, roundish. Corolla white, or purplish, with lanceolate segments. Stigma subcapitate.

Stramonium'leaved Nightshade. Fl. June, Sept. Clt. 1778. Shrub 6 feet.

310 S. FLAVE'SCENS (Dun. syn. p. 42. sol. ed. 2d. ined. t. 67. f. 2.) stem shrubby, prickly, canescent; leaves cordate, sinuated, obtuse, prickly, and tomentose on both surfaces, yellowish beneath ; peduncles, calyxes, and bracteas very hairy. J? , S. Native of Trinidad. S. ferox, *j3,* flavescens, Nees in Lin. trans. 17. p. 52. Stem very prickly. Prickles on the leaves long and strong, and the pili stellate; but the pili on the pedicels, calyxes, and berries are simple. Berry yellowish-brown., Segments of the calyx ovate, acute. Nearly allied to *S. lasiocdrpum,* but differs in the leaves being sinuated, and in the recesses and lobes being very blunt.

Yellowish-fruited Nightshade. Fl. June, July. Clt. 1826. Shrub 4 to 6 feet.

311 S. FE'ROX (Lin. spec. 267. Nees in Lin. trans. 17. p. 52.) stem perennial, prickly, herbaceous, woody at the base, clothed with woolly tomentum; leaves cordate, sinuately-angular, clothed with woolly tomentum, and prickly; peduncles intrafoliaceous, and are, as well as the pedicels, short; berry hairy, covered by the hairy calyx. %• S. Native of the East

Indies. Dun. sol. 223. ed. 2d. ined. t. *68.* syn. p. 42. S. involucratum, Blum, bijdr. p. 701. S. lasiocarpum, Dun. sol. p. 222#syn. p. 42. Blum, bijdr. p. 701. Wall, in Roxb. fl. ind. 2. p. 255. S. hirsutum, Roxb. fl. ind. *2.* p. 253. S. mammdsum, Lour. coch. 1. p. 131.—Burm. zeyl. p. 218.—Mor. hist. 3. p. *525.* no. 12. sect. 13. t. 2. f. 12. Anachundri, Rheed. mal. 2. p. *65.* t. *35.* There are varieties of this plant having the calyxes and peduncles more or less prickly ; prickles small, subulate, sometimes lying under the hairs. Stature of *S. Melongena.* Leaves large, villous above, but tomentose beneath, as well as the racemes and calyxes, which are also prickly. Peduncles axillary, simple, short. Corolla white. Berry yellow when ripe.

Fierce Nightshade. Fl. Aug. Sept. Clt. 1795. PI. 2 to 3 feet.

3J2 S. ORINOCE'NSE (Dun. sol. p. 42. sol. ed. 2d. ined. t. 132. H. B. et Kunth, nov. gen. p. 4G.) stem herbaceous, very prickly ; leaves cordate, sinuately angular, tomentose and prickly on both surfaces; calyx unarmed ; berries hispid, almost covered by the calyx. *%.l S.* Native on the banks of the rivers Orinoco and Atabapo, very frequent. Stem and leaves clothed with pale yellow, stellate tomentum. Prickles long, subulate, rather compressed, straight, brown, and rather woolly at the base, and rusty, or yellow at top. Racemes lateral. This species differs from *S.ferox,* in the stem being very prickly, in the leaves being tomentose on both surfaces, and in the racemes being unarmed.

Orinoco Nightshade. PI. 2 to 3 feet.

313 S. WI'GHTII (Nees in Lin. trans. 17. p. 51.) clothed with fascicled or stellate hairs ; stem suffruticose, terete, armed with acicular prickles ; leaves solitary, subcordately-ovate, or elliptic, sinuated, acute, rather prickly; fascicles few-flowered ; peduncles elongated in the fruit-bearing state ; berry glabrous, globose, covered by the unarmed, hairy calyx. ^ • S. Native of the East Indies. ? This species differs from *S. barbisetum,* and *S.ferox,* in the fruit-bearing pedicels and calycine segments being more elongated.

Wight's Nightshade. Shrub *2* to 3 feet.

Acanthophoris affinia?

314 S. CAMPAHLAXTUM (R. Br. prod. p. 446. Dun. sol. p. 223.) stem herbaceous ; prickles crowded, straight, subulate; leaves ovate, angularly-lobed, hairy, very prickly on both surfaces, as well as the calyxes ; racemes simple, armed; corollas campanulate. ©. H. Native of New South Wales, about Port Jackson.

Campanulate-fiowered Nightshade. Fl. June, Sept. Clt. 1819. PI. 1 to 2 *feet.*

315 S. ARMVTUM (R. Br. prod. p. 446. Dun. sol. p. 224. ed. 2d. ined. t. 69.) stem herbaceous, diffuse ; prickles much crowded, setaceously subulate; leaves oblong, sinuately pinnatifid, glabrous on. both surfaces: lobes angular, or sinuated prickly, as well as the calyxes; racemes 2-3-flowered ; peduncles solitary. ©.*H. Native of New South Wales, about Port Jackson. Prickles orange-coloured. Leaves often twin. Down stellate. Berry globose.

Armed Nightshade. Fl. Aug. Sept. Clt. 1819. PL 2 feet.

316 S. PUNGE'TIUM (R. Br. 1. c.) stem herbaceous; prickles straight, acerose ; leaves ovate-oblong, pinnatifkl, or repandly sinuated, membranous, pilose on both surfaces, and the same colour, and are, as well as the calyxes, prickly; peduncles lateral, solitary, or twin, 1-flowered. ©. H. Native of New South Wales, about Port Jackson. Dun. sol. ed. 2d. ined. t 70. Corolla bluish violet. Down stellate.

Pungent Nightshade. Fl. Aug. Sept. Clt. 1823. PI. 1 to 2 feet.

317 S. CINE'REUM (R. Br. 1. c. Dum sol. 1. c.) stem herbaceous ; prickles straight, subulately-setaceous ; leaves oblong, pinnatifidly-sinuated, glabrous above, smooth, but clothed with cinereous tomentum beneath, and prickly on both surfaces, as well as on the calyx ; peduncles 2-3-flowered. ©. H. Native of New South Wales, about Port Jackson.

Cinereous Nightshade. Fl. Aug. Sept. Clt. 1823. PI. i to 2 feet.

318 S. LATIFOLIUM (Poir. diet. 4. p. 303. Dun. sol. p. 231. ed. 2d. ined. t. *66.* syn. p. 43.) stem suffruticose, prickly; leaves petiolate, cuneated, ovate, very large, sinuately pinnatifid, pilose and prickly on both surfaces : lobes acute, and the recesses obtuse ; racemes lateral, few-flowered. ^ • &• Native of tropical America. Nearly allied to 5. *rigidum,* but less rigid, the stem taller, the leaves larger, and the flowers less terminal. Stem green, smooth ; branches villous at top. Leaves green, soft. Prickles stiff, rather villous. Flowers both fertile and sterile. Calyx villous, sometimes prickly, usually unarmed in the sterile flowers. Corolla white ; segments ovate, obtuse, hardly mucronate.

Broad-leaved Nightshade. Shrub.

319 S. CRINMTUM (Lam. ill. no. 2356. Poir. diet. 4. p. 297.) stem shrubby, prickly ; leaves ovate, sinuately angular, tomentose, prickly on the midrib; petioles, peduncles, and calyxes beset with capillary prickles ; berries villous. ^ • S. Native of Cayenne. Dun. sol. p. 224. ed. 2d. ined. t. 71. syn. p. 43. Stem very villous, and very prickly, some of the prickles are strong, and others are more numerous and capillary, usually ending in a 5-6-rayed star. Leaves large, cream-coloured, whitish beneath, and furnished with strong prickles, but almost unarmed above. Flowers disposed almost in a spicate panicle. Calyx inclosing the fruit. Corolla large, white, villous beneath, divided even to the middle into ovate, obtuse segments. Berry ovate.

Long-haired Nightshade. Shrub.

320 S. MACRA'NTHUM (Dun. syn. p. 43. sol. ed. 2d. ined. t. 72.) stem prickly, woolly; leaves large, subcordate, acuminated, angularly-lobed, woolly on both surfaces, prickly beneath; racemes cymose, woolly. ^ • S. Native of Brazil. Down or wool stellate, greyish brown. Prickles yellowish brown, straight. Leaves sometimes twin, greyish green above, rufescent beneath, with red nerves. Racemes simple, or bifid, unarmed, or furnished with a few prickles. Corolla large, with a large star in the centre, which is silky outside.

Large-flowered Nightshade. Shrub.

321 S. SESSILIFLORUM (Dun. syn. p. 43. sol. ed. 2d. ined. t. *73.)* branches tomentose, almost unarmed; leaves subcordate, large, sinuately angular, clothed with silky tomentum on both surfaces ; flowers sessile. 1?. S. Native of Para, in Brazil. Poir. suppl. 3. p. *775.* Tomentum rusty. Leaves ciliated, when young rusty. Flowers 3-4 together. Calyx tomentose outside. Corolla tomentose outside. Berries eaten in Para, where they are called *Cubios.*

Sessile-flowered Nightshade. Shrub.

SUBSECT. VI. LATIIYROCA'RPUM (from *Xadvpog, lalhyros,* chick-pea ; and *Kapiroe, karpos,* a fruit; in reference to the size and shape of the berries.) *Stem prickly. Leaves sinuated, or lobed. Racemes simple, or almost so. Corollas quinquefd. Berries small, globose.*

322 S. MILLE RI (Jacq. coll. 4. p. 209. icon, rar, *2.* t. 330.) stem suffruticose, prickly; leaves nearly glabrous, lobed, bluntish, prickly ; peduncles generally twin. J?. G. Native of the Cape of Good Hope, ex Jacquin; on the higher mountains of Caramania, ex Ortega. Dun. sol. 225. syn. p. 43. Lam. ill. no. *2376.* Poir. diet. 4. p. 304. exclusive of the

synonymes. S. trilobâtum, Lin. spec. ed. 1st. p. 188. S. trilobâtum, floribus parvis albis, Lin. spec. 270. S. subbifldrum, Orteg. dec. 9. p. 118. S. Schiru Schuna, Mill. diet. no. 32. This species differs from *S. trilobâtum* in the leaves being pinnatifidly 5-lobed ; in the flowers being much smaller, and white. Stem shining, glabrous. Cauline prickles a little recurved. Peduncles 1-flowered, solitary, twin, or tern. Lobes of leaves repand, obtuse. Berry roundish, glabrous, reddish-yellow, drooping, size of a pea, ex Jacq.; but the plant of Miller is annual, and the berries are red, and size of a pea.

Miller's Nightshade. Fl. July, Aug. Clt. 1762. Shrub 2 to 3 feet.

323 S. TRILOBA[X]TUM (Lin. spec. 270.) stem frutescent, scandent, prickly ; prickles hooked ; leaves panduriformly 3-lobed, or 3-lobed, obtuse, glabrous, and are, as well as the petioles and peduncles, prickly ; racemes subumbellate, terminal and lateral; corollas deeply 5-cleft. ^ . ^. S. Native of the East Indies ; as of Coromandel, Java, &c.; and of Jamaica, ex Plukn. Dun. sol. p. 225. Burm. ind. p. *57.* t. 22. f. 2. Roxb. fl. ind. 2. p. 253. Nees, in Lin. trans. 17. p. 59. Berries small, globose, red, drooping.

Three-lobed-\e2ive& Nightshade. Fl. Aug. Clt. 1?59. Shrub climbing.

324 S. SARMENTOSUM (Nees, in Lin. trans. 17. p. 58.) herbaceous ; stem procumbent, sarmentose, prickly ; leaves geminately sub-opposite, oblong, repandly sublobed, rather prickly, clothed with stellate hairs ; peduncles extra-foliaceous, usually 1-flowered, prickly, as well as the calyxes ; calyx turbinate, 5-cleft, with subulate segments. ©. ? S. Native of Penang. S. Melongëna, Wall. cat. no. 2628. ? F. Leaves a little cut, and nearly opposite. It differs from *Melongëna* in the inflorescence and leaves.

Sarmentose Nightshade. PI. sarmentose.

325 S. RIGE'SCENS (Jacq. schoenbr. 1. p. 19. t, 42.) stem prickly, suffruticose; leaves sinuately-lobed, rough from fascicles of stellate pili, prickly ; prickles straight; racemes few-flowered. T? . G. Native of the Cape of Good Hope, Dun. sol. p. 226. exclusive of the syn. of Lam. and Poir. suppl. p. 44. S. hûmile, Lam. ill. no. 2374. Branches rather villous. Leaves green ; lobes obtuse. Prickles straight, long, subulate, shining, yellow. Racemes lateral, simple. Pedicels drooping. Peduncles, pedicels, and calyxes, rather ttfmentose, sometimes unarmed, and sometimes prickly. Corollas violaceous. Berry globose, size of a pea, glabrous.

Stiffish Nightshade. Fl. June, July. Clt. 1823. Shrub 2 *feet*

326 S. ANGUI'VI (Lam. ill. no. 2375. Poir. diet. 4. p. 304.) stem shrubby, prickly ; leaves ovate, sinuately angular, tomentose beneath ; racemes short; calyx unarmed* T? . S. Native of Madagascar. Dun. sol. p. 227. syn. p. 44. sol. ed. 2d. ined. t. 74. Berries small, glabrous, red, esculent.

Anguivi Nightshade, or Madagascar Potatoe. Fl. May, Sept. Clt. 1818. Shrub 2 to 3 feet.

327 S. CAHOLINE'NSE (Lin. spec. 268.) stem prickly, herbaceous; leaves ovate-oblong, tomentose, sinuately lobed, acuminated; racemes simple, loose. %. H. Native of Carolina; and on the banks of the Missouri, along the Platte to the mountains. Jacq. coll. 2. p. 287. icon. rar. t. 331. Michx. fl. bor. amer. 1. p. 150. Dun. sol. p. 227. syn. p. 44. but not of Mill, which is *S. Dillenii.—T>* elth, p. 362. t. 269. f. 348. Root creeping. Stem pale green, beset with stellate pili. Segments of leaves acutish. Leaves prickly on the midrib above, and on the principal veins beneath. Prickles straight, subulate, yellow. Racemes simple, lateral and terminal, elongated. Corolla white or pale blue. Berry globose, larger than a chick-pea, yellow at maturity. Calycine segments lanceolate, acuminated.

Carolina Nightshade. Fl. July, Sept. Clt. 1732. PI. 1 to [9] feet.

328 S. VIOLA[V]CEUM (Jacq. fragm. p. 82. t. 132. f. 1.) stem shi bby, prickly ; leaves lobately sinuated, tomentose, unequal at th base: superior ones twin; racemes nearly simple; calyxes prickl) T? . S. Native of Ceylon, Malabar, China, New South Wales, ^rtega, dec. 5. p. *56.* Dun. sol. p. 228. syn. p. 44. Poir. suppi. 3. p. 743. S. cuneâtum, Moench. meth. p. 476. S. I'ndicum, Lam. ill. no. 2336. S. frutiedsum rndicum, fructu rubro, Tourn. inst. p. 149. Scheru-Schunda, Rheed. mal. 2. t. *36.* This species differs from *S. Tndicum* in the leaves ; in the sinuses being obtuse, larger, and less numerous; lobes entire, not dentately angular; cauline prickles compressed, recurved ; calycine segments not reflexed; corollas smaller; berries globose. Leaves green above, and oanescent beneath. Down stellate. Prickles brown at the base, and yellow at top ; those of the leaves straight, unequal. Racemes few-flowered, tomentose, prickly, sometimes forked at the base ; the other division 1-flowered. Corolla pale violet; segments lanceolate, acute, spreading. Berry copper-coloured, size of a chick-pea.

Violaceous-flowered Nightshade. Fl. June, July. Clt. 1817. Shrub 3 to 4 feet.

329 S. PYRACA'NTIIUM (Lam. ill. no. 2364. Poir. diet. 4. p. 299.) stem shrubby, prickly; leaves oblong, narrow, acute, sinuately pinnatifid, tomentose, prickly; prickles straight, red. h_c . S. Native of Madagascar. Cav. descr. p. 114. Willd. enum. 1. p. 238. Dun. sol. p. 229. syn. p. 44. S. pyracântha, Smith, exot. hot. 2. p. 9. t. 64. S. runcinâtum, Wendl. obs. p. 43. ex Willd. 1. c. S. pyracanthon, Jacq. schoenbr. 4. p. 30. t. 470. S. spinosissimum, Lodd. cat. ? Young branches tomentose. Down all stellate. Leaves having the middle nerve red above ; lobes almost entire, acutish ; recesses obtuse. Prickles straight, subulate, red. Petioles, peduncles, pedicels, and calyxes, dotted with white tomentum, pAckly. Racemes simple, many-flowered. Calyx rusty, with ovate-subulate segments. Corolla bluish-violet, marked by a paler star inside in the centre, and by a pale green star outside. Berry globose, yellowish-green, at length fuscous, twice the size of a pea. A specimen received from Agardh by Schultes, under the name of *S. undcltum,* does not differ from *S. pyracdnthum,* unless in the prickles being yellow, not red.

Far. /3, *inermis* (Sims, bot. mag. 2547.) peduncles and calyxes unarmed. F? . S. Native of Madagascar.

Fire-spined Nightshade. Fl. Aug. Oct. Clt. 1789. Shrub ^to 4 feet.

330 S. VIRGINIA[X]NUM (Lin. spec. 267.) stem annual, erect, prickly; leaves pinnatifidly sinuated, prickly on both surfaces, glabrous, with ciliated margins: lobes sinuated, obtuse; racemes prickly, simple. ©. H. Native of North America, from Virginia to Carolina. Dun. sol. p. 230. syn. p. 45. but not *of* Jacq. Pursh, fl. amer. sept. p. 156.—Dill. elth. p. 350. t. *267.* f. 346.—Plukn. aim. p. 351. phyt. t. 62. f. 3. Tourn. inst. p. 149. Stem rather angular. Leaves green. Prickles strong, subulate, straight, whitish. Racemes 6-7-flowered. Calyx prickly. Corolla large, violaceous. Berry small, ron-<dish-oblong, variegated with white and green before matun[v].

Virginian Nightshade. Fl. May, Aug. Clt. 1662. PI. 1 to 2 feet.

331 S. JACQUI[V]NI (Willd. spec. 1. p. 1041.) stem decumbent,

diffuse, prickly ; leaves sinuately pinnatifid, prickly on both surfaces, glabrous, with naked margins ; racemes simple, and are, as well as the calyxes, prickly. ©. H. Native of the East Indies. Dun. sol. 231. syn. p. 45. S. Virginiānum, Jacq. icon. rar. t. 332. coll. 2. p. 235. exclusive of the syn. of Dill. S. diffūsum, Wall. cat. no. 2613. S. Jacquini, /J, Nees, in Lin. trans. 17. p. *57.* Kandung Kattiri of the Tamuls. This species differs from *S. Virginianum* in the stem being decumbent, not erect; and in the margins of the leaves being naked, not ciliated. Prickles subulate, straight, long, white ; lobes of leaves acutish, sinuated ; recesses obtuse. Corolla bluish-purple.

Jacquiris Nightshade. Fl. Sept. Nov. Clt. 1804. PI. procumbent.

332 S. XANTHOCA'RPUM (Schrad. et Wendl. sert. hannov. 1. p. 8. t. 2.) stem herbaceous, prickly ; lower branches procumbent, divaricate; leaves pinnatifidly ciliated, prickly on both surfaces, and clothed with stellate down : segments sinuated, acute, with naked margins; racemes few-flowered, drooping. ©. H. Native of the Cape of Good Hope, East Indies, and Mauritius. Dun. sol. p. 231. exclusive of the syn. of Lam. syn. p. 45. S. diffūsum, Roxb. fl. ind. 2. p. 250. S. Jacquini, var. a, Nees, 1. c. Very like *S. Jacquini;* but differs in the cauline prickles being fewer ; in the young branches and leaves being clothed with stellate down. Prickles long, yellow. Peduncles 3-4-flowered, lateral and terminal. Corolla large, blue, flat, marked with a purple star in the centre, which is downy outside. Berry globose, size of a cherry, yellow, shining, 1-celled.

Yellow-fruited Nightshade. Fl. June, July. Clt. 1824. PI. i foot.

3S3 S. RICHA'RDI (Dun. syn. p. 45. sol. ed. 2d. ined. t. 67. f- 1.) stem prickly, and scabrous from tomentum, as well as the leaves, on both surfaces, cinereous beneath ; flowers panicled. t? . S. Native country unknown. Leaves ovate-oblong, beset with stellate pili on both surfaces; the prickles on the upper surface straight, and those on the under surface recurved. Racemes simple, beset with stellate hairs, and prickly as well as the calyxes and pedicels. Corolla large, with a 5-rayed star in the centre, villous outside.

Richard's Nightshade. Shrub.

334 S. HK'STRIX (R. Br. prod. p. 446. Dun. sol. 232. syn. p. 45.) stem herbaceous, diffuse; prickles much crowded, subulate, straight; leaves oblong, pinnatifidly sinuated, glabrous, and are, as well as the calyxes, very prickly; corolla armed. ©. S. Native of New Holland, on the south coast.

Porcupine Nightshade. PI. ?

SECT. VII. CRYPTOCA'RPUM *(tcpviTTU), krypto,* to hide ; and καρπός, *karpos,* a fruit; fruit hidden by the calyx.) Dun. sol. 232. syn. p. 45. Nyctērium species of authors. *Leaves pinnQf tifid, bipinnatifd, and pinnate. Corollas 5-cleft. Berry covered by the increased prickly calyx.*

§ 1. *Anthers equal.*

335 S. BALBI'SII (Dun. sol. 232. t. 3. D. syn. 45. Ker. hot. reg. 140.) stem shrubby, villous, prickly; leaves pinnatifid, pilose, prickly : segments acute, sinuately toothed; racemes cymose, lateral and terminal, and are, as well as the calyxes, prickly; anthers nearly equal. J?. G. Native of Peru, on the Andes, near Ayavaca ; and on the banks of the river Cutaco, at the altitude of 900 to 1400 hexapods. S. decurrens, Balb. icon, et descript. fasc. 1. p. 17. £ 1. S. viscōsum, Lag. gen. et spec. nov. p. 10. no. 145. D. C, hort. monsp. S. sisymbrifōlium, Lam. ill. no. *2386.* Poir. diet. 4. p. 307. S. inflātum, Horn. hort. hafn. 1. p. £21. S. brasicaefōlium, Jacq. eclog. p. 14. t. 7. S. formōsum, cat. hort. Dorp. S. Mauritānum velins du gard. de paris, p. 21. t. *66.* Roth, nov. spec. S. viscidum, Schweigg. enum. p. 67. Mart. enum. hort. erl. p. 64. S. Thouini, Gmel. cat. carlsr. p. 254. The whole plant is clothed with simple pili, which are tipped by glands. Leaves soft, clammy, prickly. Petioles prickly. Calyx sometimes unarmed, and sometimes prickly. Prickles straight, subulate, slender, yellow, or reddish-yellow. Corollas large, white, semiquinquefid. Berry ovate, size of a cherry, copper-coloured. This is a beautiful plant when in blossom.

Far. /3, purpūreum (Hook. bot. mag. t. 2828.) Mowers purple. *? . S. Native of Brazil. S. Balbisii, Ker. bot. reg. t. 140. Berry large, yellow, covered by the calyx. There is also another variety with pale blue flowers.

Balbis's Nightshade. Fl. April, Sept. Clt. 1816. Shrub 3 to 4 feet.

336 S. TE'CTUM (Pers. ench. 1. p. 228. Dun. sol. p. 233. syn. p. 46.) stem shrubby, terete, prickly ; leaves bipinnatifidly sinuated, villous, prickly on both surfaces ; berry covered by the villous calyx. J? . G. Native of Mexico. S. sinuātum, Willd. spec. 1. p. 1043. Pers. ench. 1. p. 227. S. fructu tecto, Cav. icon. 4. p. 5. t. 309. S. villdsum, Dietr. gart. lex. 9. p. 341. Plant villous. Leaves bipinnatifid ; lobes obtuse, curftd. Prickles thick, whitish: the slenderer ones brown. Corolla yellow, tomentose outside. Stamens alternating with the crense in the throat. Berry globose, glabrous. Racemes cymose, extrafoliaceous. Peduncles and calyxes very prickly.

Covered-berried Nightshade. Fl. April, Sept. Clt. 1824. Shrub *2* to 3 feet.

§ 2. *Anthers unequal.*

337 S. CORNU TUM (Lam. ill. *2.* p. 25. no. 2387. Poir. diet. 4. p. 308.) stem prickly, glabrous, subherbaceous ; leaves pinnate, prickly: segments pinnatifid, obtuse ; prickles strong; anthers declinate, horn-formed : the lower one large, and much drawn out. h_c . G. Native of Mexico; also of Brazil. Juss. ann. mus. 3. p. 120. t. 9. Dun. sol. p. 234. syn. p. 46. S. heterāndrum, Juss. Nyctērium cardaminifōlium, Vent. jard. malm, no. 85. Nyctērium cornūtum, Link, enum. 1. p» 189. Leaves large, glabrous. Peduncles and calyxes villous and prickly at the base. Prickles subulate, yellow, fuscescent at the base ; those of the calyx setaceous. Racemes simple, lateral. Corollas large, yellow, irregular, semiquinquefid, with reflexed segments.

//orwecf-anthered Nightshade. Fl. June, Aug. Clt. 1823. Shrub 2 to 4 feet.

338 S. HETERA'NDRUM (Pursh, fl. amer. sept. 2. p. 731. t. 7.) annual; stem and leaves prickly and hairy; leaves ovate, obtuse, pinnatifid, hairy on both surfaces : segments obsoletely crenated and undulated ; anthers declinate, distant: lower one horn-formed, and drawn out; berry inclosed in the echmated calyx. ©. H. Native on the banks of the Missouri, Arkansas, &c. Pursh, 1. c. 1. p. 156. Androcēra lobāta, Nutt. gen. amer. 1. p. 129. Nycterium lobātuin, Sweet. N. luteum, Donn. Corollas yellow. Peduncles lateral, many-flowered.

Variable-anthered Nightshade. Fl. June, July. tit. 1813. PI. 1 to 2 feet.

339 S. ROSTRA TUM (Dun. sol. p. 234. t. 24. syn. p. 46.) stem prickly, pilose ; pili stellate at apex; leaves pinnatifid: segments obtuse; corollas irregular; anthers declinate, horn-formed: lower one large, and much drawn out. ©. H. Native of Mexico. Leaves beset with cinereous, stellate, and simple hairs, and very prickly on both surfaces. Prickles unequal, straight, subulate, yellowish. Racemes lateral, simple.

Calyx villous, prickly. Corollas large, yellow, pilose outside, semiquinquefid. Berry globose, size of a pea.

Beaked-anthered Nightshade. Fi. June, Aug. Clt. 1823. PL 2 to 3 feet.

340 S. FONTANESIA^NUM (Dun. syn. p. 46. sol. ed. 2d. ined. t. 76.) stem rather woody, annual, prickly, pilose; leaves deeply pinnatifid : segments sinuated ; corollas almost regular ; anthers small: lower one a little curved at apex, brown. ©. H. Native of Brazil ? Poir. suppl. 3. p. 777. Ker. bot. reg. t. 177. Nyctèrium Fontanesianum, G. Don, in Loud. hort. brit. p. 74.—An intermediate plant between *S. rostrdtum* and *S. heterodoxum;* but differs from both in the prickles being recurved, and more robust; in the leaves being more deeply pinnatifid; in the segments being more deeply sinuated and curled ; in the flowers being smaller, and more regular, although also yellow.

Desfontaine's Nightshade. Fl. July, Sept. Clt. 1813. PI. 2 to 3 feet.

341 S. HETERODÓXUM (D. C. hort. monsp. mss. with a drawing, ex Dun. sol. p. 235. t. 25. syn. p. 46.) herbaceous; branches and leaves pilose and prickly ; leaves bipinnatifid ; segments sinuately 3-lobed, or runcinate; peduncles lateral, few-flowered, and are, as well as the calyxes, prickly; anthers declinate : lower one large, and much drawn out. ©. H. Native of Mexico, near Zelaya and Molino de Sarabia, at the altitude of 940 hexapods. Nyctèrium heterodóxum, Link, enum. 1. p. 189. Segments of leaves acute. Hairs simple, clammy, glanduliferous at top. Prickles subulate, yellow. Corollas small, blue, downy outside. Berry globose, size of a sloe.

Variable Nightshade. Fl. June, Aug. Clt. 1820. PI. *2* to 3 feet.

SUBSECT. VIII. NYCTE'RIUM (from *vvKrepig, nycteris,* a bat; form of leaves?) Dun. sol. p. 202. *Leaves cordate, entire ; or* ***oblong, sinuated. Corolla rather irregular, quinquefid; segments acute, reflexed. Anthers unequal. Berry globose, propped by the calyx, but not covered by it.***

342 S. PUBE'SCENS (Willd. phyt. p. 5. no. 17. t. 3. spec. 1. p. 1026.) shrubby, unarmed, clothed with hairy down all over; leaves ovate, acute, quite entire, or subrepand; racemes corymbose at the sides of the leaves ; lower anthers drawn out. ^. S. Native of the East Indies. Dun. sol. p. 167. syn. p. 19. Nees, in Lin. trans. 17. p. 60. Corollas large, purplish. Very nearly allied to *S. vespertilio* of Ait; but the stem in that species is prickly, and the leaves cordate, and the flowers are often, quadrifid.

Downy Nightshade. Fl. June, July. Clt. 1820. Shrub 5 to 6 feet.

343 S.cALYc'NUM (Nees, in Lin. trans. 17. p. 60.) shrubby? unarmed, clothed with hairy stellate pubescence ; leaves ovate, quite entire, or a little repand ; racemes terminal; calyx and corolla funnel-shaped ; one of the anthers drawn out. F? /? S. Native of the East Indies. S. pubescens, var. Herb. madr. Wall. cat. suppl. no. 237. This is a singular species.

Large-calyxed Nightshade. Shrub.

344 S. VESPERTILIO (Ait. hort. kew. 1. p. 252.) stem shrubby ; leaves cordate, entire; corollas rather irregular, usually quadrifid ; lower anther elongated. f?. G. Native of the Canary Islands, where it is called *Realgera* and *Permenton.* Dun. sol. p. 202. syn. p. *35.* Wendl. hort. harr. p. 5. t. 21. Nyctèrium cordifólium, Vent. malm. p. 85. t. 85.—Pluk. phyt. t. 316. f. 3. aim. 351. mant. 173. Stem prickly. Leaves scabrous above, and tomentose beneath ; petioles and midrib prickly. Hairs and tomentum stellate. Racemes extra-axillary, prickly, tomentose. Flowers tetramerous or pentamerous. Corolla blue, tomentose outside. Anthers 4-5, one of which is long and arched. Berry glabrous, size and form of a cherry.

Bat-winged-leaved Nightshade. Fl. April, July. Clt. 1779. Shrub *2* to 3 feet.

345 S. TRIDYNA'MUM (MOC. et Sesse, fl. mex. icon. ined. Dun. syn. p. 35. sol. ed. 2d. ined. t. 75.) stem herbaceous? prickly, rather tomentose, leaves sinuated, bluntish, tomentose ; racemes simple; calyxes prickly on the ribs ; corollas irregular; 3 of the anthers are recurved, and longer than the other two. ©.? G. Native of Mexico. Stem of a rusty-yellow colour. Racemes terminal and axillary. Calycine segments 5, acute; and the corolla large and violaceous, as well as the tops of the anthers. Berry globose.

Three-powered Nightshade. PI. 2 feet.

346 S. AMAZ6NIUM (Ker, in bot. reg. t. 71. Dun. syn. p. *36.* sol. ed. 2d. ined.) stem shrubby, tomentose, unarmed; leaves oblong-ovate, repand, or sinuately-lobed; racemes cymose, scorpioid; flowers polygamous, monoecious ; calyxes of the fertile flowers prickly at the base: the segments unarmed ; corollas irregular; 3 of the anthers longer than the other 2. J? . 1. Native *o^* Mexico. Nyctèrium Amazóniura, Link, enum. 1. p. 189. G. Don, in Loud. hort. brit. p. 74. N. Lamberti, Sweet. The whole plant is clothed with hoary down. Flowers large, beautiful blue, corymbose.

Amazonian Nightshade. Fl. June, Aug. Clt. 1800. Shrub *2* to 3 feet.

"f *Species not sufficiently known.*

§ 1. *Unarmed species.*

**** Leaves entire or repand.***

347 S. CAJUNUME'NSE (H. B. et Kunth, nov. gen. amer. *S.* p. 47.) stem shrubby ; branches hairy; leaves solitary, roundish-ovate, short-acuminated, cordate, quite entire, hairy; racemes supra-axillary, trifid ; flowers unilateral. J? . S. Native of New Granada, in the woods of Cajunuma and Untusinga, near Loxa, at the altitude of 1040 hexapods. Corolla subrotate, violaceous, glabrous; segments ovate-oblong, acute, with inflexed margins. Berry 2 inches long, ovate, acute, 1-ceiled, many-seeded, ex BonpL Perhaps this species belongs to section *S. crotonoldes,* or is, and perhaps with more correctness, a species of *Cdpsicum.*

Cajanuma Nightshade. Shrub 10 to 12 feet.

348 S. ADENÓTRICHUM (Dun. sol. *236.* syn. p. 46.) stem unarmed, shrubby; leaves cordate, acuminated, clothed with glanduliferous hairs on both surfaces, quite *o^-**; flowers racemose. T?. S. Native of Brazil. Van spec. fl. bras, in Roem. script, de pi. hisp. p. 86.

Gland-haired Nightshade. Shrub.

349 S. DI'DYMUM (Dun. sol. p. 236. syn. p. 47.) stem frutescent, flexuous; leaves ovate; calyxes, stem, and leaves, beset with branched hairs ; the upper surfaces of the leaves tubercled ; flowers cymose. J? . S. Native of Brazil. Vand. spec, fl. bras, in Roem. script, pi. hisp. p. 86.

Didymous Nightshade. Shrub.

350 S. CLADÓTRICHUM (Dun. 1. c.) stem unarmed, frutescenr, flexuous ; leaves ovate; calyxes, stem, and leaves, beset with branched hairs ; upper surface of the leaves tubercled ; flowers cymose. P? . S. Native of Brazil. Vand. spec fl. bras, in Rcem. script, de pi. hisp. p. 85.

Branch-haired Nightshade. Shrub.

351 S. INTEGE'RRIMUM (Dun. sol. p. 236. syn. 47.) stem unarmed, shrubby; leaves broad-lanceolate, quite entire ; lower

surfaces of the leaves tomentose ; racemes terminal. h_c . S. Native of Brazil. Vand. spec. fl. bras, in Room, script, pi. hisp. p. 85.

Quite-cntireAeaxed Nightshade. Shrub.

352 S. FORSKA'LII (Dun. sol. p. 237. syn. p. 47.) leaves villous, oval, oblique at the base, with repand margins.—Native of Arabia. S. villosum, Forsk. fl. arab. p. 47. but not of Lam. Bockoeme is the Arabic name of the tree.

ForskceVs Nightshade. Shrub ?

353 S. RErA NDIM (Forst. prod. p. 105. Willd. spec. 1. p. 1032. Dun. 1. c.) stem unarmed, sub-herbaceous, flexuous, smooth ; leaves ovate, repand, tomentose ; peduncles axillary, cymose. ©. ? H. Native of the Society Islands.

Bepand-\ea\ed Nightshade. PI.

354 S. PLUKENETII (Dun. 1. c.)—Native of? Soldnum I'ndicum, lauriniis angustioribus foliis maximum. Plukn. phyt. t. 227. f. 2.

PlukeneVs Nightshade. Shrub ?

355 S. ERIOCALYX (Dun. 1. c.) stem unarmed, shrubby; leaves ovate, quite entire, tomentose beneath ; umbels erect, terminal; calyxes obtuse, woolly. *? . S. Native of America, about Carthagena. S. racemosum, Mill. diet. no. 28. ex Houst. mss. but not of Lin. Umbels large. Corollas large, white. Berry globose, yellow, size of a small cherry. Leaves 4 inches long, and \\ broad.

Woolly-calyxed Nightshade. Shrub.

356 S. UMBELLA'TUM (Mill. diet. no. 17. ex Houst. mss. Dun. 1. c.) stem frutescent, unarmed ; leaves lanceolate, quite entire, pilose beneath ; umbels erect, terminal. T? . S. Native of Mexico, about Campeachy. Leaves 5 inches long, and 1£ broad. Flowers small. Corolla white. Anthers purple. Berry yellow, size of a pea.

Umbellate-Cowered Nightshade. Shrub 10 to 12 feet.

357 S. AMERICA^NUM (Mill. diet. no. 5.) stem unarmed, herbaceous ; leaves ovate, acuminated, glabrous; umbels erect. ©. H. Native of Virginia. S. Americanum vulgari simile, flore parvo purpurascente, acinis nigricantibus minoribus, Rand, ex Mill. Stem angular ; branches slender, spreading. Leaves dark green, a little toothed. Flowers few, small. Calycine segments narrow, acuminated, white, purplish outside. Berries small, black.

American Nightshade. PL 2 to 3 feet.

358 S. AXILIFLORUM (Dun. sol. p. 238. syn. p. 47.) stem unarmed, frutescent, flexuous ; leaves ovate, tomentose beneath ; flowers solitary, alar. *J?* . ^. S. S. scandens, Mill. diet. no. 19. ex Houst. mss. Leaves 2 inches long, and lj broad. .Corolla large, pentagonal, blue ; angles mucronate. Berry size of a pea, red. Perhaps belonging to section *Pohjmeris.*

Axillary-jlowered Nightshade. Shrub 10 to 12 feet.

359 S. WILLDENOWII (Rcem. et Schultes, syst. 4. p. 661.) unarmed, herbaceous, quite glabrous; leaves ovate-elliptic, obtuse, quite entire ; peduncles solitary or twin. ©. H. Native country unknown. S. obtusifolium, Willd. enum. suppl. p. 11.

Willdenows Nightshade. PI. 1 to 2 *feet.*

360 S. MEMPHI'TICUM (Mart. enum. hort. erlang. p. *63.)* stem herbaceous, unarmed, erect, denticulately angular; leaves ovate ; peduncles erect, many-flowered : fructiferous ones droopincr. 0. H. Native country unknown. Leaves petiolate, rath?: downy, purplish, having the veins violaceous on the under side. Peduncles corymbose, 5-7-flowered. Calycine segments obtuse. Corollas size of those of *S. nlgrum,* violaceous ; the segments cut even to the calyx, with a yellowish claw; anthers brown Berry black. Aspect of the plant lurid, from the stem beinc purplish, and the veins of the leaves dark purple.

MempLic Nightshade. **PI. 1 to 1{ foot.**

361 S. DICTYO'TICUM (R«m. et Schultes, syst. 4, p. 661.) stem shrubby, tomentose ; leayes ovate, truncately cordate at the base, unequal, angular towards the base, toothed, densely tomentose beneath ; cymes axillary. I? . S. Native country unknown. S. reticulatum, Willd. herb mss.

Netted Nightshade. Shrub.

362 S. CITRIFOLIUM (Willd. herb, ex Rcem. et Schultes, syst. 4. p. 662.) &tem shrubby ; leaves oblong, acuminated, shining, clothed with white tomentum beneath ; spikes terminal, dichotomously corymbose. I? . S. Native of South America, on the banks of the river Magdalena.

Citron-leaved Nightshade. Shrub.

363 S. STIPULACEUM (Willd. 1. c.) stem shrubby; leaves lanceolate, quite entire, tomentose; cymes pedunculate, alar; stipulas semilunate. ^ • S. Native of Brazil, Hoffmannsegge.

Stipulaceous Nightshade. Shrub.

364 S. CUMANE'NSE (Rcem. et Schultes, syst. 4. p. *662.)* stem shrubby ; leaves roundish-ovate, acute, glabrous, a little t*>tbed ; umbels terminal. h . S. Native of Cumana, Humb. et Bonpl. S. umbellatum, Willd. herb. 1. c.

Cumana Nightshade. Shrub.

365 S. DUMETORUM (Willd. herb. 1. c.) stem shrubby, branched; leaves ovate, downy above, but pilosely tomentose beneath; peduncles axillary, 1-flowered. J? . S. Native courttry unknown.

Bush Nightshade. Shrub.

366 S. CAMPANIFORME (Roem. et Schultes, syst. 4. p. 662.) shrubby ; leaves lanceolate, acuminated, glabrous ; racemes axillary, on long peduncles. J? . S. Native of Brazil. S. campanulatum, Willd. herb. 1. c. Racemes axillary and extra-foliaceous, longer than the leaves, erect. Corolla deeply 5-parted, campanulate.

Bell-formed-fiowered Nightshade. Shrub.

367 S. PEDUNCULATUM (Willd. herb. 1. c.) shrubby; leaves lanceolate, petiolate, bluntish, pilosely strigose ; umbels pilose, pedunculate. ^ • S. Native country unknown.

Pedunculate-dowered Nightshade. Shrub.

368 S. PRUNIFOLIUM (Willd. 1. c.) shrubby; leaves elliptic, acuminated, serrated, on long petioles ; panicle terminal. T? . S. Native of Caraccas, Bredemeyer. Leaves lj inch long, acuminated at both ends, erosely-toothed. Panicle divaricate.

Plum-leaved Nightshade. Shrub.

369 S. FLEXUOSUM (Willd. herb. 1. c.) stem shrubby, flexuous, retrofracted; leaves ovate, tomentose beneath; peduncles solitary, axillary, filiform, elongated. *V}.* S. Native of St. Domingo, Desfontaincs.

Flexuous Nightshade. Shrub.

370 S. MICRA'NTIIUM (Willd. herb. 1. c.) stem shrubby; leaves oblong, attenuated at both ends, scabrous and green beneath ; corymbs shorter than the petioles. Jj . S. Native of South America. Humb. et Bonpl.

Small-jlorvercd Nightshade. Shrub.

371 S. MODE'STUM (Roem. et Schultes, syst. 4. p. *665.)* stem frutescent, unarmed, glabrous ;. leaves lanceolate, attenuated at the base, veiny, with subundulated margins, glabrous ; flowers terminal, corymbose. J? . S. Native of Mexico. S. Mexicanum, Willd. herb. 1. c.

Modest Nightshade. Shrub.

* * *Leaves toothed, sinuated, lobed, and pinnate.*

372 S. AFRICA NUM (Tourn. inst. p. 149. Dun. sol. p. *238.* syn. p. 48.)—Native of Africa. S. bacciferum vulgari simile Africanum; foliis frequentius et profundius crenatis, Tourn. 1. c.

African Nightshade. Pl. ?

373 S. LEUCOCA'RPUM (Dun. sol. p. 228. syn. p. 45.) ♃. H. S. *Leucánicum* perenne; foliis amplis profunde crenatis; fructu rubro. Tourn. inst. p. 149.

Portugal Nightshade. Pl.

374 S. PSEUDO-CA'PSICUM (Hemsl. meth. suppl. p. 72. Dun. sol. p. 256. syn. p. 45.) stem shrubby, clammy; leaves large, cordate, sinuated, clammy; stalks elevated. ♄. S. *Native country* Unknown. Stem terete, branched at top. Leaves petiolated; lobes roundish, pubescent. Peduncles lateral, shorter than the petioles, bearing each 3-4 pedicels, which are reflexed in the fruit-bearing state. Corolla white. Berry roundish, yellow, striated.

Clammy Nightshade. Shrub 4 feet.

375 S. AVICULA'RE (Forst. prod. no. 107. pl. esc. no. 18.) stem unarmed, shrubby; leaves sinuately pinnatifid; corymbs terminal. ♄. G. Native of New Zealand.

Knot-Grass Nightshade. Shrub.

376 S. NODIFLO'RUM (Dun. sol. p. 238. syn. p. 45.) stems herbaceous, pilose, tetragonal, membranous, creeping; leaves petiolate, ovate, quite entire, pilose; racemes simple. ♃. H. Native of Brazil. Vand. spec. fl. bras. in Roem. script. pl. hisp. p. 86.

Creeping Nightshade. Pl. creeping.

377 S. VERRUCU'LOSUM (Palacio, mem. min. 2. p. 340. Dun. syn. p. 45.) root bearing tubers; leaves unequally pinnate; racemes few-flowered; pedicels articulated; berries glabrous, oblong, compressed. ♃. H. Native of New Grenada, at the river Malave, Eloy Valenzuela. Stalons bearing white, nearly round, flattened, tapid tubers. Stems procumbent, much branched. Corolla with revolute segments. A variety of *S. tuberosum*.

Valenzuela's Potatoe. Pl. procumbent.

378 S. CA'VAE (Mol. chil. p. 109.) stem herbaceous; leaves pinnate, entire; nectarium campanulate, exceeding the petal. ♃. ? H. Native of Chili. This is certainly no *Solanum*, and perhaps even does not belong to the order.

Cavi Nightshade. Pl. ?

379 S. SERPENTI'NUM (Willd. herb. l. c.) stem suffruticose, branched; leaves lanceolate, sublobed, naked, obtuse; pedunculus opposite the leaves, sub-trilobed. ♄. G. Native of Buenos Ayres.

Subfalcate-leaved Nightshade. Shrub.

380 S. CARACASA'NUM (Roem. et Schultes, syst. 4. p. 654.) stem shrubby; leaves pinnate, ternate and simple, quite entire; flowers racemose. ♄. S. Native of Caracas. Bredemeyer. *S. heterophyllum*, Willd. herb. l. c. Shrub 10 feet high, branches dichotomous, divaricate. Peduncles from the axils of the leaves, elongated into twin, pendulous racemes. Corolla purple, violaceous.

Caracas Nightshade. Shrub.

381 S. VESPERTI'NUM (Roem. et Schultes, l. c.) shrubby; leaves interruptedly pinnate, tomentose beneath; stipules falcate; flowers corymbose; pedicels. ♄. S. Native of South America. Humb. et Bonpl. *S. pinnatum*, Willd. herb. l. c.

Pinnate Nightshade. Shrub.

382 S. HYPOLEU'CUM (Willd. herb. l. c.) stem frutescent; leaves pubescent, auricled at the base almost sessile; peduncles axillary, 1-flowered. ♄. G. Native of Buenos Ayres.

Thyme-leaved Nightshade. Shrub.

¼ 2. *Prickly plants.*

* *Leaves entire.*

383 S. BONA'RIENSE (Vand. fasc. p. 10. Roem. script. pl. hisp. p. 55.) stem shrubby, tomentose, rather prickly; leaves ovate-oblong, quite entire, tomentose beneath; racemes lateral, drooping. ♄. S. Native of Brazil. *S. Bonariánum*, Dun. sol. p. 229. Prickles few, very short. Calyxes, peduncles, and petioles tomentose. Leaves unequal at the base, glabrous above. Berry glabrous.

Estelle's Nightshade. Shrub.

384 S. BRASILIA'NUM (Dun. sol. p. 262. syn. p. 48.) ♄. S. Native of Brazil. *Solánum Brasilianum*, folio integro non sinuato, fructu, Papas Americani, floribus in summitate capilli. Plukn. amalth. append. t. 434. f. 2. Leaves ovate, acuminated, unarmed. Flowers corymbose. Corolla pentagonal; anthers divaricate.

Brazilian Nightshade. Fl. Cl. Shrub.

385 S. CORDA'TUM (Forsk. fl. arab. p. 47. no. 30.) stem shrubby, rather prickly; leaves roundish-cordate, entire, unarmed. ♄. S. Native of Arabia, where it is called *Hadak*. Leaves [illegible] long, glabrous. Corolla violaceous, deflexed. [illegible] grey, teal, size of a pea.

Cordate-leaved Nightshade. Shrub.

386 S. SICORIS'FOLIUM (Lag. gen. et spec. nov. p. 16. no. 143.) stem prickly, shrubby; leaves obliquely cordate-oblong and oblong, acute, unarmed, subundulated, very clammy. ♄. S. Native country unknown.

Tobacco-leaved Nightshade. Shrub.

387 S. RHIZOLA'TUM (Herm. ind. t. 12. f. 2. Gmel. syst. p. 386. Vitm. summ. 1. p. 493.) stem shrubby; leaves ternate, ovate, quite entire. ♄. S. Native of Coromandel. Stem quite glabrous. Prickles few, incurved. Leaves alternate, petiolate, glabrous.

Trifoliate Nightshade. Shrub.

388 S. DOMINGE'NSE (Willd. herb. ex Roem. et Schultes, syst. 4. p. 665.) stem shrubby, rather prickly, flexuous; leaves elliptic, petiolate, quite entire, tomentose beneath; flowers axillary, aggregate. ♄. S. Native of St. Domingo.

St. Domingo Nightshade. Shrub.

* * *Leaves dentated, lobed, and pinnatifid.*

389 S. CHINE'NSE (Dunal sol. p. 240. [illegible] Native of China. *Solanum inermum* [illegible] floribus parvis, fere umbellatis, fructu [illegible] phyt. t. 62. f. 1. Tourn. inst. p. 149. In the figure the leaves are represented as twin: the one smaller than the other, sinuated, having the midrib prickly; the peduncles are numerous, aggregate, almost opposite the leaves, and hardly longer than the petioles; and the flowers are small. Said to be nearly allied to *S. violaceum*.

China Nightshade. Shrub.

390 S. INCE'RTUM (Dun. l. c.) stem prickly, shrubby; leaves prickly, oblong, dentately-sinuated, glabrous; calyx glabrous; corolla violaceous, reflexed; berry globose. ♄. G. Native of Arabia, at Surdud. *S. Bahamense*, Forsk. egypt. p. 46. no. 32.

Glabrous Nightshade. Shrub.

391 S. ARMA'TUM (Dun. l. c.) stems procumbent, annual, very prickly; prickles straight; peduncles opposite; flowers racemose. ☉. H. Native of Arabia, where it is called *Bachmé*, or *Bakm*. *S. armatum*, Forsk. fl. arab. p. 47. no. 33, but not of R. Br. Perhaps only a variety of *S. [illegible]* with which it agrees in the leaves and [illegible] and figure of the corolla. Prickles numerous, white, straight, spreading. Stem, petioles, nerves of leaves, calyxes, and peduncles very prickly. Fruit fleshy, obscure green, veined with white.

Arabian Nightshade. Pl. procumbent.

392 S. [illegible] (Vand. fasc. p. 10. Roem. script. pl. hisp. p. 55.) stem shrubby, strigose; leaves ovate, sinuated, rather

prickly on the midrib, tomentose; calyxes strigose; berry smooth. ♄. S. Native of Brazil. Dun. sol. p. 241. syn. p. 49. Stem, petioles, and calyxes beset with long, yellowish strigæ. Leaves cordate at the base; prickles yellowish. Panicles lateral, branched. Corolla tomentose outside. Berries small.

Sinuate Nightshade. Shrub.

393 S. SINUATUM (Dun. sol. p. 241. syn. p. 49.) stem frutescent, dichotomous, shrubby, prickly, tomentose; prickles recurved; leaves sinuately-angular, rather tomentose, spiny on the midrib; flowers solitary. ♄. S. Native of Brazil. S. dichotomum, Vand. fasc. p. 9.; Roem. script. p. 54, but not of Lour. Stem green, yellow. Tomentum stellate. Prickles few, yellow at top. Leaves sub-petiolate. Spikes revolute, as in *Heliotropium*. Calyx tomentose. Corolla white.

Vandelli's Nightshade. Shrub.

394 S. MACRONUM (Dun. sol. p. 242. syn. p. 49.) stem herbaceous, pilose, prickly, scabrous; pili white, stellate; leaves sinuated, acute, rather pilose, the midrib prickly on both sides; peduncles erect, terminal, 1-3-flowered, longer than the petioles. ♃. S. Native country unknown. S. stellatum, Marsch. meth. p. 475, but not Jacq. Stems simple. Prickles yellow, distant. Peduncles and calyxes pilose, and furnished with a very few prickles. Corolla white, large. Anthers dilute. Style white; stigma green. Berry smooth, yellow.

Marsh's Nightshade. Pl. ? fig.

395 S. BERTERIANUM (Dun. sol. p. 242. syn. p. 49.) stem shrubby, tomentose, prickly; leaves deeply and sinuately angular, tomentose, rather prickly; flowers corymbose. ♄. S. Native of Brazil. *S. Berteri*, Vand. fasc. p. 10. Roem. script. p. 56. Prickles few, very short, straight. Leaves petiolate, unequal at the base. Prickles slender. Corymbs lateral. Calyx pilose.

Belfort's Nightshade. Shrub.

396 S. RANCEANUM (Vand. fasc. p. 10. Roem. script. p. 53. Dun. sol. p. 242.) stem prickly, pilose, herbaceous; lower leaves cordate, ovate; superior ones pinnatifidly-sinuated, acute, as well as prickles straightish on both surfaces. ♃. S. Native of Brazil, where it is called *Relambabou*. Prickles thick, recurved, yellow at top. Berry yellow, nearly dry, size of a cherry.

Bonda's Nightshade. Pl.?

397 S. ATURIANUM (Dun. sol. p. 243. syn. p. 50.) ♄. S. Native of India. Solanum Indicum spinosum stroviceo, et hodiepno glabrum, folio branchæ ursinæ divisuris. Pluckn. phyt. t. 92. f. 2. S. pomiferum spinosum Indicum, fructu echinato, foliis cardui seu acanthi spinosi. Breyn. prod. p. 1.?

Dark-green Nightshade. Shrub.

398 S. CARAGUM (Thunb. prod. 37. Lin. suppl. 147.) stem prickly, shrubby, erect; leaves sinuately-pinnatifid, prickly, naked; divaricate segments entire, obtuse. ♄. G. Native of the Cape of Good Hope. Dun. sol. p. 243. syn. p. 50. Plant armed with copious yellow, recurved prickles. Leaves ovate, sinuate, glabrous. Peduncles solitary, 1-3-flowered, drooping. Calyx prickly. Corolla blue. Berry glabrous.

Dwarf Nightshade. Shrub 1 foot.

399 S. HUMILE (Dun. sol. p. 243. syn. p. 50.) stem shrubby, prickly; leaves oblong, sinuately pinnate, prickly; umbels sessile. ♄. S. Native of Vera Cruz. *S. parviflorum*, Mill. fig. t. 7. S. ex Houst. mss. Prickles recurved. Flowers pale. Berries red, size of juniper berries.

Houstan's Nightshade. Shrub 5 or 6 feet.

400 S. HOUSTANUM (Dun. l. c.) stem shrubby, prickly; leaves pinnatifidly-lyrate, tomentose, prickly on both surfaces; peduncles axillary, few-flowered. ♄. S. Native of Vera Cruz. *S. angustifolium*, Mill. dict. no. 13. ex Houst. mss. Stem procumbent, tomentose. Prickles long, yellow. Leaves almost 3 inches long, and 2 broad. Peduncles 2-3 inches long. Calyx very prickly. Corollas large, yellow. Berry globose, size of a pea, variegated with green and white.

Aegeria-leaved Nightshade. Shrub procumbent.

401 S. VITIFOLIUM (Vand. in Roem. script. p. 55.) stem suffruticose, prickly, rather pilose; leaves pinnate, cut, prickly on both surfaces; racemes lateral, compound. ♄. S. Native of Brazil. Dun. sol. p. 243. syn. p. 50. Stem green. Prickles long, straight, red, very sharp. Leaves rather pilose. Petioles, peduncles, and calyxes prickly and pilose.

Valadares Nightshade. Shrub.

402 S. ROTTERIANUM (Barte. et Schultes, syn. 4. p. 648.; Dun. sol. p. 243. syn. p. 50. The berry on being opened, or bruised, exhales an intolerable smell, which excites nausea and cephalalgia.

Rottboll's Nightshade. Shrub.

403 S. SIERRENSE (Lam. ill. no. 2573. Poir. dict. 4. p. 380. Pers. euch. 1. p. 228.) a dwarf prickly shrub; leaves ovate, sinuately angular, prickly, almost naked, beset with white prickles on both surfaces. ♄. S. Native country unknown. Stem very stiff, hardly a foot long, erect, a little branched. Leaves acute, rather villous; prickles short, straight. Leaves acute, undulated; lobes acute, sub-mucronate, rather ciliated, pale or yellowish green. Prickles numerous, naked, subulate, stiff, purplish at the base. Racemes terminal. Peduncles short, a little villous. Calyx villous; with lanceolate, very acute segments, sometimes prickly, and sometimes unarmed.

Soft Nightshade. Shrub 1 foot.

404 S. AQUARIENSE (Hort. par. Dum. Courset, bot. cult. ed. 2d. suppl. p. 152.) stem shrubby, prickly, thick, villous; leaves cordate, deeply and sinuately lobed, prickly on both surfaces, as well as the petioles, villous, soft. ♄. S. Native country unknown. Stem straight, simple, or branched, dark purple. Prickles strong, a little recurved. Leaves large, 8-9 inches long, pale green.

Aquatic Nightshade. Shrub.

405 S. AQUATICUM (Willd. herb. ex Roem. et Schultes, syst. 4. p. 662.) stem shrubby; leaves 3-angled, hairy, and as well as the petioles, beset with subulate prickles; peduncles generally 2-flowered. ♄. S. Native of Caracas, Bredemeyer. *Five-angled-leaved* Nightshade. Shrub.

406 S. PENTAGONIFOLIUM (Willd. l. c.) stem shrubby, and is, as well as the peduncles, prickly; leaves roundish-ovate, angulately toothed, downy and prickly on both surfaces; calyxes covered with prickles bristly. ♄. S. Native on the banks of the Orinoco, Humb. et Bonpl.

Bearded Nightshade. Shrub.

N.B. In Salt's abyss. append. p. 475, there are 2 species mentioned, but without any diagnosis of either, viz. *S. cinereum*, R. Br. and *S. variabile*, R. Br.

What are the following species. 1. *S. æthiopicoides*, Car. 2. *S. agreste*, Brouss. 3. *S. aracdiacum*, Bess. Krasn. 4. *S. nigellifolium*, Brouss. 5. *S. sestrifolium*, Fisch.

Cult. All the species of *Solanum* thrive best in a rich, light soil, and are readily increased by seed, or cuttings planted in sand under a hand-glass root readily. A great number of the species are very handsome, and therefore worth cultivating for ornament. They are treated like other stove greenhouse and hardy plants. The seeds of annual species, natives of tropical countries, require to be raised on a hot-bed, and the plants to be set out in the open ground about the end of May in a sheltered, dry situation.

II. LYCOPE'RSICUM (from \VKOQ, *lyJcos,* a wolf; and *TepaiKov, persicon,* a peach ; Wolf-peach.) Tourn. inst. p. 150. t. 63. Adams, fam. 2. p. 218. Mill. diet. Mcencli. meth. p. 515. Dun. sol. p. 109. H. B. et Kunth, nov. gen. amer. 3. p. 17.—Lycopersicum and Psolanum, Neck. elem. bot. 2. p. 60. —Solanum species. Lin. gen. no. 251. Juss. gen. p. 126. &c.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-6-parted. Corolla rotate, with a very short tube, and a 5-G-cleft limb. Stamens 5. Anthers conical, joined by a membrane, which is elongated at apex, dehiscing lengthwise inside. Stigma sub-bifid. Berry 2-3-celled. Seeds villous.—Herbaceous, unarmed, procumbent herbs. Leaves impari-pinnate. Peduncles solitary, extra-axillary, many-flowered, sometimes leafy; pedicels articulated under the flowers, reflexed when bearing the fruit. Corollas yellow. Fruit of various shapes and sizes, usually red and glossy. In most of the species the hairs are glandular at the base.

1 L. PIMPINELLIFOLIUM (Mill. diet. no. 4. Dun. sol. p. 111.) stt herbaceous, glabrous ; leaves pinnate; leaflets entire, glabuus; racemes simple. ©. H. Native of Peru, and Brazil. Solanum pimpinellifolium, Lin. amcen. 4. p, 268. spec, p. 265. Vellozo. spec. fl. bras, in Rcem. script, p. 85. L. inoddrum, Juss. Leaflets cordate, not cut or toothed in any way. There are no hairs on this species.

Burnet-leaved Love Apple, or Tomato. Fl. May, July. Clt. ? PI. proc.

2 L. PERUVIA'NUM (Mill. diet. no. 5. Dun. sol. p. 111.) stem sub-herbaceous, tomentose ; leaves unequally pinnate, tomentose, canescent, stipulate ; leaflets cut; peduncles and pedicels bracteate. %. S. Native of Peru, in arid and waste places, very common in the provinces of Lima and Chancay, ex Ruiz, et Pav. ; cultivated in Cochinchina, ex Lour. Solanum Peruvianum, Lin. spec. ed. 1st. 186. ed. 2d. p. 267. Jacq. icon. rar. 2. t. 327. Ruiz, et Pav. fl. per. 2. p. 37. Lour, coch. 1. p. 162.—Feuill. per. 3. p. 37. t. *25.* In Peru the **plant is called *Tomatle Cimarron,* i. e. *Wild Golden Apple,* and** in China it is called *Cd iau Fang,* Root permanent. Stems woody at the base ; branches villous. Leaflets bluntish. Racemes villous, sometimes simple, sometimes bipartite, lateral, and terminal. Calyx 5-parted. Corolla the largest of the genus. Berry size of a pea, rather villous. Plant with a pleasant smell.

Peruvian Love Apple, or Tomato. Fl. May, June. Clt. 1823. PI. proc.

3 L. PYRIFORME (Dun. sol. p. 112. t. 26.) stem herbaceous, pilose ; leaves unequally-pinnate, pilose ; leaflets cut, glancescent beneath ; racemes often leafy ; calyeine segments about equal in length to the corolla; berries obconical. ©. H. Native country unknown. Solanum pomiferum, Cav. descr. p. 112. Pers. syn. 1. p. 226. Racemes large: superior ones rarely leafy: lower ones usually terminated by a leafy branch. Berry pear-shaped, 2-celled, as in the 4 following species. Hairs simple, unequal. This and all the following species exhale a heavy smell.

Pear-formed-ftuited Love Apple, or Tomato. Fl. July, Sept. Clt. 1823. PI.

4 L. HUMBOLDTII (Dun. sol. p. 112.) pilose; pili diverse; stem herbaceous ; leaves unequally pinnate, pilose; leaflets cut, glaucescent beneath ; peduncles and pedicels bractless; calyeine segments about half as long as the corolla. 0. H. Native of South America, on the banks of the Rio Negro. L. lycopersicum, Wall. cat. no. 2611. Roxb. fl. ind. 2. p. 245. Solanum Humboldtii, Wilkl. hort. berol. 1. p. *21.* t. 27. enum. p. 235. This is very like *L. ccrasiforme,* but differs in the racemes of flowers being smaller, the calyeine segments being never the length of the corolla; and the berries being one-half smaller, size of a cherry, and red. Berry 2-3-celled, smoothish, and, when cultivated, not less angular than those of *L. esculentum,* **ex Nees.**

Humboldt's Love Apple, or Tomato. Fl. July, Sept. Clt. 1822. PI. 2 to 3 feet.

5 L. REGULA'RE (Dun. syn. p. 3. sol. ed. 2d. ined. t. 81.) plant rather villous; stem almost herbaceous ; leaves regularly pinnate, canescent; segments or leaflets almost entire; peduncles and pedicels often bractless. 0. H. Native country unknown.

Regular-leaved Love Apple, or Tomato. Fl. May, July. Clt. ? PI. *2* to 3 feet.

6 L. DENTATUM (Dun. syn. p. 4. sol. ed. 2d. ined. t. 82.) plant rather villous; stem herbaceous ; leaves stipulate, unequally pinnate ; leaflets oblong-acuminated, toothed ; peduncles and pedicels often bracteate ; segments of the calyx shorter than the corolla. ©. H. Native country unknown.

Tooled-leaved Love Apple, or Tomato. PI. 2 to 3 feet.

7 L. HIRSUTUM (Dun. syn. p. 4. sol. ed. 2d. ined. t. 83. H. B. et Kunth, nov. gen. amer. 3. p. 18.) hairy ; stem sub-herbaceous ; leaves stipulate, unequally pinnate; leaflets dentately crenated ; pedicels sometimes bracteate ; calyeine segments about equal in length to the corolla. 0. H. Native of New Granada, near Loxa. Peduncles unibracteate in the middle. Corollas yellow like the other species. Fruit unknown.

Hairy Love Apple, or Tomato. PI. *2 to 3* feet.

8 L. CERASIFORME (Dun. sol. 113. syn. p. 4.) pilose; hairs diverse ; leaves unequally pinnate ; leaflets cut, glaucescent beneath; calyeine segments rather shorter than the corolla; berries spherical. ©. H. Native of Peru, by the sea-side, and in gardens. Solanum lycopersicum, var. /3, Lin. spec. ed. 1st. p. 185. Solanum pseudo-lycopersicum, Murr. syst. 183. Jacq. vind. 1. t. 11. Ruiz, et Pav. fl. per. 2. p. 37. Solanum spurium, Gmel. syst. 384. Lycopersicum Galeni, Mill. diet. no. 2.—Rumph. amb. 5. p. 416. cap. 49. Very like *L. esculentum,* and *L. pyriforme,* but differs in the berries being cherry-formed, 2-celled, size of a plum, but not furrowed lengthwise, rather villous. *Tamatta Bontal* is the Malay name of this species, and *Tornate redondo* the Peruvian name.

Far. a ; berries red. Q. H. Lycop. fructu cerasi rubro, Tourn. inst. p. 150. Cerasa amoris racemosa, rubra, Bauh. prod. p. 90.

Cherry-formed- fruited Love Apple, or Tomato. Fl. July, Sept. Clt. 1800. PL 2 to 3 feet.

9 L. ESCULE'NTUM (Mill. diet. no. 2. Dun. sol. p. 113; t. 3. f. 3. syn. p. 4.) herbaceous, pilose ; pili diverse; leaves unequally pinnate ; leaflets cut, attenuated at the apex, glaucescent beneath; flowers many, joined; berries torulose. ©. H. Native of South America. Solanum Lycopersicum, Lin. spec, p. 150. Lam. ill. t. *115.* f. 2. Lour. coch. 1. p. 162.—Plenck, off. t. 122.—L. pomum amoris, Moench. meth. p. 515. L. Galeni, Tourn. inst. p. 150. t. *63.*—Sabb. hort. rom. p. 12. t. 62. Pomum amoris, Blackw. t. 133. Rumph. amb. 5. p. 416. t. 154. f. 1.—Mor. hist. sect. 13. t. 1. Mala aurea, Chabr. icon. 525. La Pomme d' amour, Regn. bot. p. 54. Many flowers are joined in one, which makes them appear of many parts, having from 2 to 5 joined pistils, and as many bundles of stamens. Calyx longer than the corolla.

The Love Apple, or Tomato, is called *La Pomme d' amour,* and *La Tomatte* in France, *Liebes Apfel* in Germany, and *Porno d' oro* in Italy ; it is a tender annual. The stem, if supported, will rise to 6 or 8 feet, and exhales, like the leaves, when handled, a

disagreeable smell. The flowers appear in bunches in July and August. The fruit is smooth, depressed at both ends, and furrowed on the sides; it varies in size, but seldom exceeds that of an ordinary golden-pippin apple.

IT5e.—When ripe, the fruit, which has an acid flavour, is put in soups and sauces, and the juice is preserved for winter use, like ketchup ; it is also used in confectionary, as a preserve, and when green as a pickle. Though a good deal used in England in soups, and as a principal ingredient in a well-known sauce for mutton, yet our estimation and uses of the fruit are nothing to those of the French and Italians, and especially the latter. Near Rome and Naples whole fields are covered with it, and scarcely a dinner is served up in which it does not in some way or other form a part.

Varieties.—Those in general cultivation are called, the large, and small, cherry and pear-shaped red, and the large and small, or cherry-shaped yellow. The first sort is in most estimation for domestic purposes, and should be cultivated accordingly, while a few plants of the other kinds may be raised for variety of the fruit.

Propagation and Culture,—The plants must be raised and forwarded in a hot-bed, under glass from about the vernal equinox till May. Sow in any general hot-bed about the end of March, or beginning or middle of April, and as to quantity of seed one ounce will produce 60 plants. As soon as the plants are about 2 inches high, if they are immediately pricked out into another hot-bed, or into that where raised, or singly into small pots placed in the hot-bed, they will grow more stocky, and can be more successfully transplanted. About the middle or end of May transplant them each with a ball of earth into a south border, to have the full sun, that the fruit may ripen to perfection. Some may be planted close *to* a south wall, if vacant spaces can be had ; but as they draw the ground exceedingly, do not set them near choice fruit trees. Give water. During the first week, or fortnight, if the nights be cold, defend them with hand-glasses, or by inverting a large garden pot over each plant, or transplant upon holes filled with hot dung, earthed to 6 inches depth, and cover with hand-glasses. When they begin to run train them to stakes, or, where planted near a wall or pales, nail up the branches. J. Wilmot plants at the foot of a bed sloping steeply to the south, and trains the stems and branches on it by pegging them down ; they frequently strike root at the joints; he tops them as soon as their branches meet, clears off all the lateral shoots, and thins the leaves, by which the fruit is exposed, and well ripened. In the fine season of 1818 each plant so treated produced on an average twenty pounds weight of fruit. The fruit begins *to* ripen in August; gathered in October, and hung up in bunches in any dry apartment it will continue good for use in November.

To save Seed.—" Gather some of the best ripe fruit in autumn, clear out the seed, wash and cleanse it from the pulp, and dry it thoroughly, then put it up in papers or bags for use next spring." Abercrombie.

Fingerhuth diss. cap. Nees in Lin. trans. 17. p. 62.

LIN. SYST. *Pentdndria, Monogynia.* Calyx permanent, 5-toothed. Corolla rotate ; ..limb plicate, 5-cleft. Anthers connivent, 2-celled, dehiscing lengthwise. Stigma obtuse. Berry dry, inflated, and hollow, of a papery consistence, 2-4-celled, many-seeded, naked. Placentas adnate to the dissepiment.—Shrubs, or sub-shrubs, rarely herbs. Leaves scattered, solitary, or twin, and quite entire. Peduncles extra-axillary, and alar, 1-flowered. Flowers greenish white, or violaceous.

§ 1. *Peduncles solitary. Fruit erect, or pendulous.*

* *Annual. Berries pendulous.*

1 C A'NNUUM (Lin. spec. p. 270.) fruit oblong, pendulous, and erect; petioles glabrous ; stem herbaceous ; calyx obsoletely 5-toothed. 0. H. Native of South America. Woodv. med. bot. 391. t. 144. Stev. and Church, med. bot. 1. t. 44. Plenck. off. t. 107.—Knor, del. 2 1.1. 6.—Rheed. mal. 2. t. *35.* Corollas white. Fruit red, yellow, variegated with red and yellow, and dark green, variable in shape.

Capsicum is called *Pimcnt* in French, *Spanischr P/effer* in German, *Pcberonc* in Italian, *Chilli* in Mexico, and *Tsvhili* in Hindostan. There are 3 species in cultivation. 1. C. *dnnuiun,* the Guinea pepper, though a native of India, endures our

climate in summer. The fruit varies much in shape and colour, either long-podded, red, or yellow, or short-podded, red and yellow, or heart-shaped, red and yellow. 2. *C. cerasiforme,* the cherry-pepper, is also an annual standing our climate in summer; is known by its small, cherry-shaped fruit, which is sometimes heart-shaped or angular, in colour red or yellow. 3. *C. grossum,* the bell-pepper, a stove biennial; the berries of this kind are large, red or yellow. It will endure the open air in summer, but will require a place in the stove in winter and spring months. The well known preparation called Cayenne-pepper is the pods of the smaller kinds of capsicum dried in the sun, pounded, and mixed with salt; it is then kept stopped in bottles. When used in moderation it is not unwholesome, especially to those of cold leucophlegmatic habits. In such temperaments, as well as in paralytic cases, it is used medicinally in small quantities, as one of the highest stimulants. A mixture of sliced cucumbers, shalots, or onions, cut very small, a little lime juice and Madeira wine, with a few pods of bird-pepper, well mashed and mixed with the liquor, seldom fails to provoke the most languid appetite in the West Indies. It is there called Man-dram. Gathered fresh from the plant, the pods of all the species are liberally used in all tropical countries to assist digestion and correct flatulencies.

Far. a, *longicdrpum ;* fruit long, pendant. Tourn. inst. 152.

Annual Capsicum, or Chilli, or Guinea Pepper. Fl. June, July. Clt. 1548. PI. 1 to 2 feet.

2 C. LONGUM (D. C. hort. monsp. 1813. p. 86.) fruit oblong, acuminated, a little incurved; petioles glabrous; stem herbaceous. ©. H. Native country unknown. C. annuum, Hort. —Mor. hist. sect. 13. t. 2. f. 2. no. 6.—Clus. cur. post. p. 101. f. 9—10.—Dod. pempt. 716. f. 3.—Bauh. hist. 2. p. 943. f. 1. — Fuchs. icon. *7 S3.* Capsicum fructu tereti spithamaeo, Tourn. inst, p. 152. ? C. annuum, var. a, Ait. hort. kew. 2. p. 405.

Long-fruited Capsicum, or Chilli Pepper. Fl. June, July. Clt. 1548. PI. 1 to 2 feet.

3 C. CORDIFORME (Mill. diet. no. 2.) fruit heart-shaped; stem herbaceous. ©. H. Native of India. Capsicum siliqua propendente oblonga et cordiformi, Tourn. inst. p. 152. Fruit yellow and red, variable in shape. The following varieties of this species are mentioned: 1. Fruit pendent, round or heart-shaped, Tourn. 2. Fruit broader and rounder,. Tourn. 3. Fruit large, round, Tourn. 4. Fruit erect, round, Tourn. 5. Fruit erect, heart-shaped. In all these varieties the fruit varies from yellow to red.

Far. /3, *majus,* Fing. diss. t. 9. f. c. C. annuum, Wall. cat. suppl. no. 222.

Heart-shaped-fruited Capsicum, or Chilli pepper. Fl. June, July. Clt.? PI. 2 feet.

4 C. ANGULOSUM (Mill. diet. no. 4.) fruit heart-shaped, angular; stem herbaceous. ©. H. Native of India ? Capsicum siliquis surrectis cordiformibus angulatis, Tourn. inst. p. 153. Fruit large, pendulous, of 2 forms, obtuse, angular, rather compressed, usually retuse and bifid at apex. Besser, cat. krzem. 1811. p. 27. Leaves wrinkled. Fruit red or scarlet, sometimes formed like a mitre at top, and sometimes campanulate. More tender than the other annual kinds.

Angular-fruited Capsicum, or Chilli Pepper. Fl. June, July. Clt. ? PI. 1 to *2* feet.

5 C. MILLE'RI (Roem. et Schultes, syst. 4. p. *563.)* stem herbaceous; fruit round, glabrous. 0. ? H. Native of New Spain, Miller. C. cerasiforme, Mill. diet. no. 5. Capsicum siliquis surrectis cerasiformis, Tourn. inst. 153. Leaves fascicled, pale green, on long petioles. Fruit red, size and shape of a pea. Perhaps only a variety of *C. annuum.*

Miller's Capsicum, or Chilli Pepper. Fl. June, July. Clt. ? PI. 1 foot.

6 C. CONICUM (Meyer, esseq. p. 112.) herbaceous; branchle downy, terete; fructiferous calyx almost quite entire; ped' nicies twin; fruit oblong-conical, erect; leaves solitary, ra.ely twin, ovate, acuminated, on short petioles, roughish on both surfaces, downy on the veins beneath, as well as the petioles. ©. H. Native about the Essequibo, in plantations. C. frutescens, Rodschied, obs. p. 38. but not of Lin. Peduncles alar and axillary. Flowers drooping. Fruit croceous, shining.

Conical-fruited Capsicum, or Chilli Pepper. PL ?

7 C. TETRAGONUM (Mill. diet, no. 3.) herbaceous; fruit large, angular, obtuse. ©. H. Native of both Indies. Fing. diss. t. 10. f. d. Wall. cat. no. 224. Capsicum fructu longo ventre tumido, per summum, tetragono, Tourn. inst. p. 153. C. cydoniforme, Hort. Berries always red, crowded, 1-2 inches long, subtetragonal at top, usually pendulous, rarely erect.

Tetragonal-fruited Capsicum, or Chilli Pepper. Fl. June, July. Clt. ? PI. 1 to 2 feet.

* * *Shrubby. Berries pendulous.*

8 C. SPILE'RICUM (Willd. enum. 1. p. 241.) fruit globose; petioles glabrous; stem shrubby. \. S. Native of India ? Fing. diss. t. 9. f. a. C. cerasiforme, Wall. cat. no. 221. Shrub middle-sized; branches dichotomous. Leaves ovate, acuminated, glabrous. Fruit size of a cherry. Said to differ from *C. cerasiforme* in the fruit being pendulous.

Spherical-fruited Capsicum, or Chilli Pepper. Fl. April, July. Clt. 1807. Shrub 2 feet.

9 C. OVA'TUM (D. C. cat. hort. monsp. 1813. p. 86.) fruit ovate, acuminated; petioles and leaves glabrous; stem shrubby. J? . S. Native country unknown. Peduncles shorter than the petioles. Calyx bluntly 5-toothed. Berry colour and size of a cherry, but ovate, pendulous. It differs from *C. sph&'ricum* only in the shape of the fruit.

Ovate-fruited Capsicum, or Chilli Pepper. Fl. June, Sept. Clt. 1824. Shrub 2 to 3 feet.

10 C. PE'NDULUM (Willd. enum. 1. p. 242.) fruit oblong; petioles downy; stem shrubby. fj . S. Native country unknown. C. grossum, *j3,* Schultes, obs. no. 299. Fruit an inch long, red.

Pendulous-fruited Capsicum, or Chilli Pepper. Fl. April, July. Clt. 1804. Shrub 2 to 3 feet.

11 C. LU'TEUM (Lam. ill. 2. no. 239.2.) fruit ovate, 3-celled; branches and petioles hairy; stem shrubby, flexuous. \/. S. Native of the East Indies. Stem subtetragonal. Leaves glabrous, twin, or 4-5 in a fascicle. Flowers solitary or fascicled, supra-axillary. Corolla small, white, with short acute segments. Fruit yellow, oblong, middle-sized, on hardly recurved peduncles, downy.

Yellow-fruited Capsicum. Fl. June, Aug. Clt. 1820. Shrub 2 to 3 feet.

12 C. C,

Petioles ciliated on the margins ; peduncles longer than in *C. baccatum,* ex Willd. Fruit a little smaller than in *C. baccalum.*

Small-fruited Capsicum, or Chilli Pepper. Fl. April, July. Clt. 1820. Shrub 2 feet.

25 C. MINIMUM (Mill. diet. no. 10.) stem shrubby; fruit small, ovate, erect. T? . S. Native country unknown. C. baccatum, var. *P,* Poir. suppl. 5. p. 326.

Smallest-fruited Capsicum, or Chilli Pepper. Fl. April, July. Clt. ? Shrub 1 to 2 feet.

26 C. BACCATUM (Lin. syst. p. *226.* Mill. diet. no. 9.) frutescent; branches angular, striated; leaves oblong, glabrous, as well as the petioles ; calyx urceolate, obsoletely 5-toothed ; peduncles twin ; fruit erect, almost globose. J?. S. Native of tropical America, and now cultivated in India and Guinea. Willd. spec. 1. p. 1050. H. B. et Kunth, nov. gen. 3. p. 49. Afz. rem. guin. coll. 2. p. 12. C. frutescens, *(i9* Lin. spec. 271. —Sloane, hist. 1. p. 240. t. 116. f. 2.—Rumph. amb. 5. p. 147. t. 88. f. 2. Flowers greenish. Fruit small, ovate. The calyx is said to have 5 subulate teeth according to Lin.; but according to H. B. et Kunth it is obsoletely 5-toothed; there are, therefore, probably two distinct species, confounded under the name of *C. baccatum.*

Berried Capsicum, or Bird Pepper. Fl. June, Sept. Clt. 1731. Shrub 2 to 4 feet.

27 C. MICRANTHUM (Link, enum. 1. p. 190.) calyxes very blunt ; leaves ovate, acuminated ; petioles ciliated. T?. S. Native of Brazil. Leaves as in *C. microcdrpum,* and with the calyx always entire, and the fruit cylindrical, 6 lines long. Peduncles twin.

Small-flowered Capsicum, or Chilli Pepper. Fl. May, June. Clt. 1824. Shrub 2 to 3 feet.

* * *Shrubby. Berries pendulous.*

28 C. SINENSE (Jacq. hort. vind. 3. t. 67.) frutescent ; branches flexuous, divaricate, angular; leaves large, ovate, acuminated, on slender, filiform, downy pedicels; calyx entire ; fruit ovate, pendulous, twin, f? . G. Native of China. Willd. spec. 1. p. 1051. Lam. ill. 2394. Flowers 4-5 in a fascicle in the spontaneous plant, supra-axillary, but twin or solitary in the cultivated plant. Corolla dirty white. Berry yellow, glabrous, mucronate by the style.

China Capsicum, or Chilli Pepper. Fl. June, Sept. Clt. 1807. Shrub 2 to 3 feet.

f *Species hardly known.*

29 C. VIOLACEUM (H. B. et Kunth, nov. gen. 3. p. 49.) suffruticose; branchlets angular, rather scabrous, downy while young ; but the branches are terete; leaves ovate-oblong, acuminated, puberulous ; flowers solitary or twin, drooping ; calyx urceolate, hairy, with 7 acute teeth ; berries oblong. T? . S. Native near the city of Quito, in cultivated places, at the altitude of 1500 hexapods, where it is called *Aji* by the natives. C. Quitense, Willd..herb, ex Rcem. et Schultes, syst. 4. p. 809. Shrub much branched. Leaves solitary ? twin, ex Bonpl., running into the petioles at the base ; petioles puberulous. Flowers extra-axillary. Corolla violaceous, hairy outside ; throat white ; limb 7-cleft; segments ovate, acuminated, equal. Stamens 7, inserted in the upper part of the tube. Stigma somewhat 2-lobed. Berry dry, oblong, red, *3-6* inches long.

Violaceous-Rowered Capsicum, or Chilli Pepper. Shrub.

30 C. HAMILTONII ; stem shrubby, biennial, about 3 feet high, erectish, violaceous; leaves dark violet; immature berries red, of a dark violet colour when mature, short, bluntly conical. £ . S. Native of the Island of Nevis, in gardens. C violaceum, Desf. cat. hort. par. Hamilt. prod. p. 25, but not of H. B. et Kunth.

Hamilton's Capsicum, or Chilli Pepper. Fl. Year. Shrub *3* feet.

31 C. CJERULESCENS (Bess. cat. hort. Krzem. p. 27.) Said to be nearly allied to *C. bicolor;* but differs in the stem and leaves being green ; in the fruit being one half shorter, and difFormed, bluntly angular, retuse, and at length orange-coloured.

Bluish Capsicum, or Chilli Pepper. Shrub ?

32 C. AGGREGATUM (Willd. rel. ex Rcem. et Schultes, syst. 4. p. 809.) peduncles aggregate, pubescent; leaves downy above, but clothed with hoary tomentum beneath. *2 • S. Native country unknown.

Aggregate Capsicum, or Chilli Pepper. Shrub.

33 C. WILDENOWII ; peduncles twin ; fruit globose, small; branches and petioles downy ; stem shrubby. T? . S. Native of South America. Humb. et Bonpl. C. microcarpum, Willd. rel. ex Rcem. et Schultes, syst. 4. p, 808.

Willdenows Capsicum, or Chili Pepper. Shrub.

Use.—The" green pods, or inflated berries, of all the species and their varieties, are used for pickling. They are sometimes also used in their ripe state, when they form a spice of the hottest quality, known by the name of Cayenne-pepper. The fruit of *C. grossum* are deemed better for pickling than the others, the skin being thick, pulpy, and tender..

Culture.—All the species, with their varieties, are raised from seed : a small parcel, or the produce of two pods, will be a sufficient quantity of each, or of any one variety, for ordinary supply. Sow all the annual sorts at the end of March, or beginning or middle of April, in a moderate hot-bed, under a frame. Cover the seed a quarter of an inch deep. When the plants are 2 or 3 inches in growth, prick some into a new, moderate hot-bed, to forward them for final transplanting; or, in default of this, prick them into a bed of natural earth, at the beginning of May, if fine, settled, warm weather : defend them with a frame or awning of mats at night, or in cold weather. Give water lightly at planting, and occasionally afterwards in moderate supplies, to assist their fresh rooting and subsequent growth. At the beginning of June, when the weather is settled warm, transplant them into the open garden, in beds of light rich earth, from 12 to *18* inches apart, giving water. They will thus advance freely, flower in July or August, and produce plenty of pods from August till the end of September. Under the deficiency of a hot-bed or stove, or for succession, annual capsicums may be raised in a bed of light rich earth, under a hand-glass; but the sowing must be deferred to fine warm weather in May. Give the plants air in the day, but cover them close at night, till danger from frost is over. At the close of June transplant as above. The perennial and shrubby species may be wintered in the stove.

To save seed.—Leave one or two of the largest and handsomest shaped pods to ripen in autumn; after gathering them, the best way is to hang them up in a dry place, and not take out the seeds till wanted for sowing in spring.

V. PHYSALIS (from *(pvaa, physa,* a bladder ; in reference to the inflated calyx.) Lin. gen. no. 250. Schreb. gen. no. 336. Gaertn. fruct. 2. p. 238. t. 131. Juss. gen. p. 126. ed. Usten, p. 140. H. Somniferous Winter Cherry. Fl. July, Aug. Clt. 1759, /3. 1796. Shrub 2 to 3 feet.

2 P. ARBORE'SCENS (Willd. herb. Lin. spec. p. 261. ? Willd. spec. 1. p. 1020. ?) stem arborescent; leaves repandly toothed ; flowers aggregate, pendulous ; corolla 5-parted. J? . S. Native of Mexico, about Campeachy. Mill. diet. no. 8. t. 206. f. 2. Leaves canescent, tomentose. Corolla tomentose outside, fuscous. This is the species described by Nees, in Linnaea ; but the plant is described by Linnaeus as follows : " Stem fruticose; leaves ovate, pilose; flowers solitary or twin ; corollas revolute." The leaves are also said to be dark green above, and woolly beneath : upper ones twin. Corolla is said to be yellow, marked with brown spots inside, and the berry round, red, and the calyx becoming dark purple in the fructiferous state. The plant of Nees, and that of Linnaeus, are, however, probably the same, notwithstanding the apparent difference in the characters given to it by them.

Arborescent Winter Cherry. Fl. July, Aug. Clt. 1700. Shrub 4 to 12 feet.

SECT. H- EUROSTORHIZA (from *EV^GTOQ, eurostus,* robust; and *«v ,hiza,* a root; in reference to the strong roots of the *P/Xd* ' \ Frurescent or herbaceous, with strong roots, and species ; bases of the stems. Flowers solitary. Alabastra permanent ^ the size of the corolla, ventricose. while cloS6 d jarre VgA (Lin. hort. cliff, p. 496. spec. p. 261.) herbace-

3 P. Pennsylvania, America. .Pursh, fl.**

Lin. spec. 1670. Pursh, 1. c. p. 167.—Dill. hort. elth. *V* 41. t. 10. f. 10. The whole plant is beset with short, 2-S-4-forked bristles, seated on minute tubercles : upper leaves twin, unequal. Corolla yellow, marked with a paler star in the centre. Berry ovate, or turbinate, umbilicate, smooth, viscid, orange-coloured, rather acid, and not disagreeable *to* tlie taste.

Far. ft, Jacquini; leaves ovate, repandly toothed, often acutish, smaller. *%,W.* Native from Pennsylvania to Carolina. P. viscosa, Jacq. vind. 2. t. 136. P. Jacquini, Link, enum. 1. p. 180. P. Pennsylvania, Lin. spec. 1670. Mill. diet. no. *3.* P. tomentdsa, Walt. fl. carol, p. 99. In *P* P^J' sylvanica* the stems are said to be procumbent, the flowers twin, and the berries small, red, size of a pea.

Clammy-berried Winter Cherry. Fl. July, Aug. Clt. 1699, B. 1726. PI. 1 to 3 feet.

4 P. LANCEOLA^TA (Michx. fl. bor. amer. 1. p. 149. Pursh. fl. 1. p. *157.)* plant dwarf, downy ; leaves almost sessile, ova-lanceojate, almost entire, green on both surfaces, and rather downy; calyx villous ; stem dichotomous. 3|1.?H. ^a" tive of Lower Carolina. P. Virginiana, Mill. diet. no. 4. t. 206. f. 1.? Leaves tapering gradually into the petioles at the base. Corolla sulphur-coloured, with a dark purple bottom. Berry yellow, ex Mill.

Lanceolate-leaved Winter Cherry. PI. 1 to 2 feet.

5 P. WALTE'RI (Nutt. in journ. acad. nat. sc. phil. 7. p- H^.) perennial, clothed with powdery tomentum, much branched, dichotomous ; leaves twin, broad, ovate, obtuse, on long petioles, entire; peduncles solitary, nutant ; fructiferous calyx smoothish. %• H. Native of South Carolina. P. lanceolata, Elliott, but not of Michx. Leaves green above.

Walter's Winter Cherry. PI. 1 foot ?

6 P. ANGUSTIFOLIA (Nutt. 1. c. p. 1] 3.) perennial, quite glabrous, prostrate, dwarf; leaves very long, linear, fleshy, solitary ; peduncles nutant, filiform, i;. H. Native of West Florida. Leaves 3 inches long.

Narroyv-leaved Winter Cherry. PI. prostrate.

7 P. CURASSA'VICA (Lin. hort. cliff, p. *62.* spec. 261.) shrubby, clothed with viscid down; down simple, articulated ; stem erect; leaves ovate, repand ; flowers solitary, spotless ; calyx hairy, with subulate segments. *If.* S. Native of Curaçoa. Mill. diet. no. 5. P. origanifolia, Lam. ill. gen. no. 2398.—Mor. hist. 3. p. 527.—Plukn. phyt. t. 111. f. 5. Calyx cylindrically campanulate, not angular, densely hairy. Corolla sinuately 5-angled, yellow. Berry greenish-yellow. This species differs from *P. viscosa,* in the down being simple, not forked, in the calyx being densely hairy and smaller, and in its segments being short and subulate, and in the bottom of the corolla being pale.

Curaçoa Winter Cherry. Fl. June, Sept. Clt. 1699. PI. \\ foot.

8 P. ALKEKEVGI (Lin. spec. p. 262.) herbaceous, downy from simple hairs ; root perennial, creeping ; stem almost simple; leaves ovate-deltoid, acuminated, repand ; flowers spotless ; fructiferous calyx ovate, coloured : segments subulate. *If* . fj% Native of Europe, on exposed parts of hills ; and of Japan ? Willd. spec. 1.p. 1022. Sibth et Smith, fl. graec. t. 234. Schkuhr handb. t. 45. P. Halicacabum, Scop. fl. cam. ed. 2d. no# *286,* Alkekengi officinarum, Tourn. inst. p. 151. 2rpvvvoc a\tm# *KafioQ,* Diosc. lib. 4. chap. 72.—Plench, off. t. 124.—Blackw 161. Corolla dirty white. Calyx reddish yellow inrlndn scarlet berry. The berries of the *Alkekhm,* or *Winter* were well known to the ancients, and are describp Tf n des. They have an acidulous, and not unpleasant flavour, followed by a slight bitterness, which they are said to deIVG from the investing calyx. Though estopm *JA* the fruit is chiefly recommended as a diuretic. From 6 to 12

berries, or an ounce of the expressed juice, is given as a dose. In some parts of Germany the country people eat the fruit by handfuls, and in Spain and Switzerland they frequently supply the place of other eatable fruits. Instances are related of their good effects in dropsical and calculous disorders, but at present they are wholly disregarded. In some parts they are esteemed as good as gooseberries for tarts.

Alkekengi, or Common Winter Cherry. Fl. July, Sept. Clt. 1548. PL 1 to 1½ foot.

P. CHENOPODIFOLIA (Lam. ill. no. 2401. Poir. suppl. 2. p. 348.) herbaceous, perennial, tuberous at the base, clothed with hoary, simple tomentum; stem erect, dichotomous; leaves deltoid-ovate, angularly-toothed; corolla spotted; anthers violaceous; fructiferous calyx ovate, angular, pale. %. S. Native of Peru. P. tuberosa, Willd. enum. 1. p. 232. P. incana, Mat. hort. par. Root thick, branched. Leaves small for the size of the plant: superior ones twin, unequal. Flowers drooping. Calyx pubescently tomentose, bifid to the middle, with the segments unequal. Corolla downy outside, yellow, marked with 5 square, dark, violaceous spots at the bottom. Berry yellow, clammy. This species often occurs in gardens under the name of P. *viscosa.*

Coosefoot-leaved Winter Cherry. Fl. July, Aug. Clt. 1798. Stem 2 to 3 feet.

10 P. HETEROPHYLLA (Nees, in Linnsea, 6. p. 463.) herbaceous, villous, with a perennial root; branches diffuse, angular, flexuous; leaves twin, very unequal in size, ovate, or cordate, acute, toothed; corollas spotted; anthers yellow; fructiferous calyx ovate, angular, pale. %. H. Native of North America, on argillaceous hills in Pennsylvania, Poeppig. P. Pennsylvánia, Willd. herb. P. tomentósa, Walt. fl. car. p. *99.1* P. nutans, Walt. fl. car. p. 99. ? Root creeping. Stems procumbent. Flowers nutant. Calyx hairy, 5-cleft, unequal. Corolla downy outside, with a repand margin, yellow, marked by 5 obscure, brownish-violet spots. Leaves almost orbicular, cordate, ovate, or repand in various ways.

Variable-leaved Winter Cherry. Pl. procumbent.

11 P. PERUVIANA (Nees in Linnaea, 6. p. 464. and Lin. trans, 17. 67.) herbaceous, perennial, densely and pubescently villous; stems procumbent; branches ascending; stem erect, branched a little; leaves ovate, acuminated, entire, or dentately sinuated, rather tomentose; corolla spotted; anthers violaceous; fructiferous calyx ovate, angular, pale. V. G. Native of Peru, about Lima; Plant as in Indies; New Holland, at Port Jackson; Madeira, size of the last. Leaves downy down. Leaves twin. Calyx downy. Corolla spots at the throat of *P. Alkekengi* S. yellow, marked with 5 brown scented • the throat. Berry globose, viscid, yellow, sweet-ttiakino- ... an excellent substitute for gooseberries in *Var.* ... which they are used in many places.

P. ACUTIFOLIA, *esculenta;* leaves more or less toothed. %. G. tomentose, Willd. in act. nat. car. berol. 4. p. 197. P. Roykeana, Medic. act. Pal. 4. p. 184. t. 4. P. Peruviana, Lab. fl. ind. 2. p. 241. Wall. cat. no. 2644.

Yellow Winter Cherry. PL ?

31 P. RAMOSA (Forsk. fl. arab. p. 204.) leaves solitary and twin, broadly ovate, acute, sinuately toothed, rather villous. ©. H. Native of Arabia, at Uahfad. Habit of *P. alkekengi,* but the calyx is much inflated and pentagonal. Corolla yellow. Berry dry, red.

Branched Winter Cherry. PL ?

32 P. NU'TANS (Walt. fl. carol, p. 99.) leaves alternate, ovate, and are, as well as the stem, which is rather angular, tomentose; flowers solitary, drooping. ©. ? H. Native of Carolina.

Drooping Winter Cherry. PL ?

33 P. MUCRONA^TA (Willd. enum. suppl. p. 11, without any diagnosis.) Nothing is known of this plant but the name.

Mucronate Winter Cherry. PL 1 foot.

34 P. MICRA'NTHA (Link, enum. 1. p. 181.) hairy; leaves cordate, acute, toothed ; peduncles axillary, at length refiexed ; calyx angular, with acute segments. ©. H. Native country unknown. P. parvifldra, Willd. enum. suppl. p. 11. Nearly allied to *P. pubescens,* and probably only a variety of it. Corolla small, yellow.

Small-jlowered Winter Cherry. FL July, Aug. Clt. 1826. PL 1 to 2 feet.

Cult. For culture and propagation see *Solanum,* p. 442.

VI. SARA'CHA (named by Ruiz, and Pavon, after Fsodore Saracha, a Benedictine monk much attached to the study of botany, and who enriched the royal gardens at Madrid with many rare plants.) Ruiz, et Pav. fl. per. 2. p. 42. t. 178. prod. p. 349. Bellinia, Roem. et Schultes, syst. 4. p. lvi. and p. *687.*

LIN. SYST. *Pentdndria, Monogynia.* Calyx campanulate, 5-angled, 5-cleft; segments ovate, permanent. Corolla campanulately rotate: with *5* equal, reflexed lobes, and furnished with *5* nectariferous pits at the base. Anthers cordate, straight, dehiscing lengthwise. Stigma capitate. Berry globose, 1-2-celled, half inclosed in the hardly inflated calyx, almost to the middle; placenta fleshy. Seeds many, compressed, reniform.—Usually herbaceous, procumbent, or erect plants. Leaves alternate, petiolate, entire, usually twin, especially the upper ones. Peduncles from the forks of the stem, or axils of the leaves, %> or many flowered, usually umbellate and drooping. *Saracha* only differs from *Solanum* in the filaments being woolly at the base, and closing up the mouth of the tube of the corolla; and by its cordate anthers, with the cells opening lengthwise.

* *Annual Plants.*

1 S. PROCU'MBENS (Ruiz, et Pav. fl. per. *2.* p. 43. t. 180. f. b.) herbaceous, procumbent; leaves- twin, unequal, ovate, quite entire, glabrous in the adult state, but when young villous on the margins and back ; flowers umbellate, drooping ; filaments glabrous. ©. H. Native of Peru, in the valley of Canta. A'tropa procumbens, Cav. icon. 1. p. 53. t. 72. Jacq. hort. schoenbr. t. 492. A'tropa plicata, Roth, catalect. 2. p. 24. Physalis solanacea, Mentens ex Roth, 1. c. Solanum procumbens, D. C. fl. fr. 3. p. 611. Bellinia procumbens, Roem. et Schultes, syst. 4. p. 687. Stem dichotomous, furrowed, downy, angular. Leaves rarely solitary. Peduncles axillary, 2-3-4-flowered ; pedicels and calyxes villous. Corolla cream-coloured, with a green centre, and downy margin. Berry shining, size of a pea.

Procumbent Saracha. Fl. June, July. Clt. 1822. PL proc.

2 S. UMBELLA'TA (D. C. cat. hort. monsp. 1813. p. 142.) herbaceous, erect, hairy, much branched; leaves ovate, wrinkled, entire, shining, acute, scabrous : floral ones twin ; flow-

ers umbellate, drooping; filaments bearded at the base. ©. H. Native of Peru. Sweet, fl. gard. t. 85. A'tropa umbellate, Roth, catal. 2. p. «6. Jacq. schoenbr. t. 493. A'tropa Rdthii, Poir. suppl. 1. P- *b10,* Bellinia umbellata, Rcem. et Schultes, syst. 4. p. 688. Stem solitary, dichotomous. Leaves canescent beneath, green above, entire, and sometimes slightly angular. Umbels pedunculate, 7-10-flbwered, axillary, solitary. Corolla plicate, cream-coloured, or greenish-white, smaller than those of *S. procumbens.* Berry dark purple.

Umbellate-flowered Saracha. Fl. June, July. Clt. 1822. PL *2* to 4 feet.

3 S. CONTORTA (Ruiz, et Pav. fl. per. 2. t. 180. f. a.) herbaceous, erect; leaves ovate, angularly toothed, downy, and quite entire : upper floral ones twin ; flowers umbellate drooping, pedunculate ; filaments villous at the base. 0. H. Native of Peru, from Canta to Obragillo. Bellinia contorta, Roem. et Schultes, syst. 4. p. 689. A'tropa contorta, Spreng. syst. 1. p. *699.* Stem furrowed, glabrous, branched, of a livid violaceous colour at bottom ; branches dichotomous, downy. Peduncles and pedicels twisted. Umbels 6-10-flowered. Corolla cream-coloured, rather large. Berry black, globose, size of a pea.

Twisted-pedicelled Saracha. PI. 3 to 4 feet.

* * *Shrubby Plants.*

4 S. PUNCTATA (Ruiz, et Pav. fl. per. 2. p. 42. t. 178.) suffruticose, erect; leaves ovate-oblong, quite entire, glabrous above, and powdery beneath ; pedicels 1-flowered, unequal, aggregate, axillary and terminal; corollas spotted. T? . G. Native of Peru, in elevated places. Bellinia punctata, Roem. et Schultes, syst. 4. p. *688.* A'tropa punctata, Spreng. syst. 1. p. 698. Branches angular, downy while young. Pedicels a little longer than the corollas. Calyx glabrous. Corolla large, campanulate, powdery outside, yellowish, and marked with small purple spots.

Dotted-Bowered Saracha. Shrub *2* to 3 feet.

5 S. ZUCCAGNIANA ; frutescent, erect; stem villous, 4-5-angled ; leaves solitary or twin, ovate-cordate, rather villous, entire ; common peduncle villous, between the petioles of the twin leaves, bearing an umbel of pedicellate drooping flowers. F? . G. Native of America ? A'tropa erecta, Zucc. cent, in Roem. coll. p. 129. no. 41. Angles of stem violaceous. Leaves glabrous above, but the margins and nerves beneath are villous. Umbels 2-3-4-flowered. Segments of calyx ciliated. Corolla greenish-yellow, rotate, marked by 10 twin green spots at bottom ; limb pentagonal, ciliated, revolute. Filaments villous at the base. Berry globose, glabrous, 2-celled.

Zuccagni's Saracha. Shrub.

6 S. VILLOSA ; stem frutescent; leaves cordate-ovate, acuminated, quite entire, very villous : rameal ones twin, unequal; umbels axillary, many-flowered, drooping; limb of corolla 5-cleft. Ij . G. Native of Peru ? A'tropa villosa, Zucc. in Roam, coll. p. 130. no. 42. Roem. et Schultes, syst. 4. p. 684. Stem pentagonal, violaceous at the base, furrowed, villous, as well as the branches, which are tetragonal. Common peduncle horizontal, solitary, between the petioles of the twin leaves; pedicels *8-9* papillose. Corolla greenish-yellow, rotate ; limb pentagonal ; segments ciliated. Evidently a species of *Saracha.*

Villous Saracha. Shrub erect.

7 S. DENTATA (Ruiz, et Pav. fl. per. 2. p. 176. f. b.) herbaceous, procumbent, downy ; leaves entire and toothed, ovate, twin • peduncles usually 4-flowered, subumbellate, lateral and terminal, inclinate. %. G. Native of Peru, along with *S. punctata.* Bellinia dentata, Ram. et Schultes, syst. 4. p. *689.* A'tropa dentata, Spreng. syst. I. p. 699. Pedicels unequal, short - Corolla whitish-violet, villous, campanulate, marked by 5 green spots. Berry copper-coloured, size of a pea.

Toothed-leaved Saracha. PL procumbent.

8 S. BIFLORA (Ruiz, et Pav. fl. per. 2. p. 42. t. 179.) herbaceous, erect, downy ; leaves ovate, usually twin ; peduncles axillary, 2, rarely 3-flowered ; flowers pendulous. %. G. Native of Peru, in corn-fields. Bellinia biflora, Room, et Schultes, syst. 2. p. 689. Branches angular. Corolla greenish-yellow. Stamens twice as long as the corolla. Berry white, size of a pea, a little compressed.

Two-Jlorvered* Saracha. PL 2 *feet.

9 S. VISCOSA (Schrad. cat. sem. hort. goett. 1832. D. *Don,* in Sweet, fl. gard. n. s. t. *323.)* clothed in every part with glandular pubescence, and viscid; stem erect, suffruticose; leaves twin, cordate, acuminated, sinuately toothed, and sometimes entire; peduncles umbellate ; throat of corolla woolly; fructiferous calyx coloured. 1? . G. Native of Mexico, Spangenberg. Umbels solitary, nearly sessile. Calyx 5-cleft, large. Corolla large, with acute lobes, valvate in aestivation, cream-coloured, and marked towards the base with numerous olive-coloured spots. Anthers cordate, violet. Berry globose, size of a cherry, scarlet.

Clammy Saracha. Fl. June, Sept. Clt. 1835. PI. 1 to 2 feet.

10 S. PUBESCENS (Willd. rel. ex Rcem. et Schultes, syst. 4. p. 689.) shrubby, downy ; leaves ovate, acute ; umbels pedunculate, terminal. J?. G. Native of Peru. Humb. et Bonpl. Bellinia pubescens, Roem. et Schultes, syst. 4. p. 689.

Downy Saracha. Shrub ?

N.B. What are Saracha micrantha, D. C. hort. monsp. 1813. and S. Peruviana, Dietr. gart. lex. 8. p. *522.* ?

Cult. The shrubby species of *Saracha* require protection m a frame or greenhouse in winter ; but they may be planted out in open ground in summer ; they are increased by cuttings and seeds. The seeds of annual species only require to be sown m the open ground in spring.

VII. WITHERI'NGIA (named by L. Heritier, in honour of William Withering, M.D., author of "A Botanical Arrangement of the Vegetables of Great Britain." 2 vols. 8vo. Birmingham, 1776. First edition.) Lher. stirp. 1. p. 33. t. 1. Dun. sol. p. 107. H. B. et Kunth, now gen. 3. p. 13. Mart. bras. 3. p. *73.*—Solanum species of Lin, and other authors.

LIN. SYST. *Penldndria, Monogynia.* Calyx urceolately campanulate, 4-5-cleft. Corolla rotate; tube short; limb 4-5-cleft. Stamens 4-5 ; anthers conniving, dehiscing lengthwise. Stigma subcapitate. Berry 2-celled, propped by the permanent calyx, many-seeded ; placentas adnate. Seeds lenticular. Trees, shrubs, or herbs, with soft wood, and large medulla, having the habit of *Solanum.* Branches opposite or alternate, thickened at the nodi. Leaves alternate, usually twin, (one in each pair smaller than the others,) quite entire, or sinuately-toothed, rarely pinnatifid. Inflorescence umbellate, racemose, or panicled, rarely having the flowers solitary. Peduncles lateral or extra-axillary. Corollas whitish, rose-coloured, yellow, greenish, or bluish.

* *Stems shrubby.*

1 W. STRAMONIIFOLIA (H. B. et Kunth, nov. gen. 3. p. 13.) arboreous ; branches angularly winged ; branchlets downy ; leaves ovate, acuminated, unequally cordate, dentately angular, hairy, twin ; umbels extra-axillary, sessile; filaments bearded at top. \i. S. Native *of* Mexico, near La Bandarilla ; and the city of Xalapa, at the altitude of 750 hexapods, where it is called *Oja Peluda* by the natives. Leaves 4-5 inches long, and *2-8* broad. Umbels many-flowered. Flowers nutant, pentamerous and pentandrous. Corolla yellowish, hairy outside, size of those of *Capsicum fruteacens.* Berry globose, red, size of a pea.

Str'amonium-leaved Witheringia. Fl. May, Aug. Clt. 1823. Trec 10 to 20 feet.

by\W* oRASSIFOLIA (Du«- sol. p. 108. syn. p. 2.) stem shrub-angnl[lY]\ / arfer sarmentose ; leaves ovate, entire, or sinuately-Nati'ar, Jr'luntish 5 panicles subdichotomous, reclinate. \?. G. Long-leaved Witheringia. Shrub.

7 W. CILIATA (H. B. et Kunth, nov. gen. amer. 3. p. *]5.)* shrubby ; branches terete, glabrous ; leaves oblong, acute, narrowed at the base, quite entire, ciliated, glabrous, twin; peduncles extra-axillary, solitary or twin, elongated. T?. S. Native of New Granada, on the Andes of Pasto, near Tulcan, at the altitude of 1580 hexapods. Young branchlets downy. Flowers size of those of *Solanum nigrum.* pentamerous and pentandrous. Calyx downy, 5-toothed. Corolla white ; limb angularly 5-lobed ; lobes acute. Filaments glabrous ; anthers oblong, obtuse. This species has much the habit of *Solanum phillyreoides,* with which at first sight it might be readily confounded.

Ciliated-leaved Witheringia. Shrub.

8 W. MOLLIS (H. B. et Kunth, 1. c.) shrubby ; branches terete, clothed with hoary tomentum ; leaves ovate, acuminated at both ends, quite entire, downy above, clothed with soft tomentum beneath, and canescent, twin ; peduncles 2-3-4 together, elongated. F? . S. Native of Peru, near the town of Caxamarca, at the altitude of 1500 hexapods. Leaves l£ to 2 inches long. Flowers drooping, size of those of *Solanum nigrum,* pentamerous and pentandrous. Calyx 5-toothed, hoary. Corolla hairy outside ; limb angularly 5-toothed : teeth acute. Anthers oblong, obtuse, on glabrous filaments. Berry size of pepper, globose. Very like the two preceding, but differs in the form of the leaves.

Soft Witheringia. Shrub.

9 W. RHOMBOIDEA (Dun. syn. p. 1. H. B. et Kunth, 1. c.) shrubby; branches terete, tomentose; leaves ovate, acutish, rounded at the base, and unequal, quite entire, clothed with soft pubescence above, and hoary tomentum beneath, twin ; umbels sessile, 4-G-flowered, longer than the petioles ; filaments glabrous. *2. S. Native on the Andes of Quindiu, on El Machin, at the altitude of 1030 hexapods. Leaves an inch long, green above. Flowers size of those of *Solanum nigrum,* pentamerous and pentandrous. Calyx clothed with hoary tomentum, 5-toothed : teeth linear, remote. Corolla glabrous, 5-cleft, with oblong, acute segments, which are hairy at top. Anthers linear-oblong.

Rhomboid-leaved Witheringia. Shrub climbing.

10 W. DUMETORUM (Dun. sol. p. 1. sol. ed. 2d. ined. t. 7i). H. B. et Kunth, 1. c. p. 16.) shrubby ; branches rather angular, tomentose while young; leaves ovate, subacuminated, cuneated at the base, hairy above, clothed with hairy tomentum beneath, and canescent: superior ones twin; peduncles twin or tern, 1-flowered, much longer than the petioles; filaments glabrous. *2 . S. Native of New Granada, among bushes in the province of Pasto, between Chumban and Tusa, at the altitude of 1500 hexapods. Leaves 12-16 inches long. Flowers size of the preceding, pentamerous and pentandrous. Calyx like that of the last species, from which it is principally distinguished in the form of the leaves.

Bush Witheringia. Shrub.

11 W. RIPARIA (H. B. et Kunth, 1. c. p. 16.) shrubby; branches angular ? hispid from pili; leaves somewhat obliquely obovate-oblong, acuminated, acute at the base, glabrous, pilose on the nerves beneath, twin ; flowers extra-axillary, crowded, about equal in length to the petioles; filaments pilose at the base. *2 • S. Native of New Granada, on the Andes of Quindiu, near the river Toche, at the altitude of 1050 hexapods. Leaves %\ to ?>\ inches long. Flowers extra-axillary, size of those of *Lycium Bdrbarum.* Calyx obsoletely 5-toothed, glabrous. Corolla greenish-white, glabrous ; tube funnel-shaped ; limb 5-parted.

River-side Witheringia. Shrub.

1£ W. ANGUSTIFOLIA (Dun. syn. p. 2. sol. ed. 2d. ined. t. 80. H. B. et Kunth, 1. c. p. 17.) shrubby; branches flexuous,

terete ; branchlets tomentose ; leaves lanceolate, acuminated, acute at the base, glabrous ; racemes few-flowered, twin ; filaments glabrous. \ . S. Native of New Granada, at the foot of Mount Catopaxo, in sandy places, at the altitude of 1600 hexapods. Leaves solitary, *2* to *2^* inches long, clothed with canescent tomentum while young. Racemes extra-axillary, solitary or twin. Flowers size of the preceding. Calyx 5-cleft, clothed with hoary tomentum ; with subovate acute segments. Corolla blue, clothed with hoary tomentum outside ; limb 5-parted, with oblong segments. Anthers linear-oblong. Berry globose, size of those of *Soldnum nigrum.* Perhaps a distinct genus.

Narrow-leaved Witheringia. Shrub 4 to 6 feet.

13 W. PE'NDULA (Rcem. et Schultes, syst. 3. p. *522.)* frutescent ; leaves ovate, entire, acuminated, glabrous above, but clothed with downy tomentum beneath ; racemes terminal; peduncles long, reflexed. J? . S. Native of Brazil. Solànum pendulum, Link. herb. Stems angular, and pubescently villous at top. Leaves 3 inches long, and \\ broad, thickish, subrepand, ciliated. Peduncles 3 inches long, downy. Calyx smoothish, hemispherical, obsoletely 4-5-cleft. Corolla 4-5-parted ; segments linear-lanceolate, obtuse. Anthers 4-5, generally unequal.

Pendulous-Cowered Witheringia. Shrub.

* * *Stems herbaceous.*

14 W. SOLANA'CEA (Lher. stirp. 1. p. *S3.* t. 1.) root composed of fusiform tubers ; stem subherbaceous, pilose, rather angular ; leaves ovate-oblong, or ovate-lanceolate, rather pilose : superior ones twin ; umbels axillary, sessile, longer than the petioles. 3/. G. Native of South America. Lam. ill. t. *82.* Leaves acute, entire, rather pilose. Calyx 4-toothed. Corolla pale yellow, 4-cleft. Stamens 4 ; filaments white, glabrous outside, and hairy inside. Tube of corolla suburceolate, with 4 gibbosities, bluntly tetragonal.

Solanaceous Witheringia. Fl. May, Sept. Clt. 1742. PI. 1 foot.

15 W. UMBELLA'TA (Dun. syn. p. *2.* sol. ed. 2d. ined. t. *27.)* stem herbaceous, winged, pilose; leaves ovate, attenuated at both ends, sinuately toothed, pilose ; racemes axillary, usually solitary ; pedicels umbellate. 1/. S. Native of St. Domingo. Poir. suppl. 5. p. 505. Calycine segments 5, acute. Nearly allied to *W. montana.*

Umbellate-Cowered Witheringia. PI. 1 foot.

10 W. MONTAVA (Dun. syn. p. *2.* Poir. suppl. 5. p. 505.) root tuberous; stems herbaceous, pilose; leaves pilose, ovate, entire, or dentately repand, or sinuated ; peduncles 1-flowered. %. G. Native of Peru, on hills, where it is called Papa montàna. Solanum montànum, Lin. spec. *266.* Dun. sol. p. 145.—Solànum tuberòsum minus, Atriplicis folio vulgò Papa montàna, Feuill. per. 3. p. *62.* t. 46. Root ovate. Stem bifurcate. Leaves on long petioles, subcordate. Flowers in the fork of the stem. Corolla campanulate, 5-cleft, rose-coloured. Stamens purple.

Far. /3, arenària (Dun. sol. p. 146.) peduncles many-flowered, bracteate; leaves lobed. %. G. Native of Peru, on sandy hills, and among rocks about Lima and Chancay, where it is called Papas de Loma. Solànum montànum, Ruiz, et Pav. fl. per. *2.* t. 160. f. b. This variety is nearly allied to *W. phyllantha.* Stem larger than in var. a, hispid. Calyx 5-parted. Corolla flat, blue. Perhaps a distinct species.

Mountain Witheringia. Fl. May, Aug. Clt. 1822. PL ± to ¡ foot.

17 W. PHYLLA'NTHA (Dun. syn. p. *2.* Poir. suppl. 5. p. 505.) stem herbaceous, winged; leaves pilose, cuneiform, a little lobed at apex, decurrent; racemes rising with the leaves. ©.? %*A* G. Native of Peru, in cultivated fields near the town of La Magdalena, Cav.; sandy places of Lima, Chancay? and Lurin, Ruiz, et Pav. SoVanum phyllànthum, Cav. icon. 4. p. *35.* t. 359. f. 1. Ruiz, et Pav. fl. per. *2.* p. *32.* Root fusiform. Leaves 5-lobed at top; lobes ovate, acute. Peduncles rising from the decurrent disk of the leaves. Calyx 5-cleit. Corolla pale blue, marked by a 5-rayed star, spreading, 5-angled. Berry round, red, size *of* a pea.

Leaf-flowered Witheringia. Fl. July, Aug. Clt. *1822.* W. 1 foot.

18 W. PINNATI'FIDA (Dun. syn. p. *2.* Poir. suppl. 5. p. *ovo.)* stem herbaceous, winged ; leaves rather pilose, decurrent, pinnatifid: segments obtuse, sinuated ; peduncles bractless; flowers panicled. %. G. Native of Peru : in sandy places in the provinces of Lima and Chancay; plentiful in Torre blanca ana Jequan, on hills. Solànum pinnatifidum, Ruiz, et Pav. fl. per. *2.* p. *37.* t. 170. f. b. Dun. sol. 138. but not of Lam. Flowers drooping. Calyx 5-parted, with linear, obtuse segments. Corolla pale blue or white, flat. Berry yellow, size *of* a pea.

Pinnatifid-leaved Witheringia. Fl. June, Aug. Clt. *1822.* PL 1 foot.

19 W. MULTI'FIDA (Dun. syn. p. 3. Poir. suppl. 5. p. 506.) stem herbaceous ; leaves rather pilose, bipinnatifid, running into the petioles ; petioles stem-clasping ; peduncles long, panicled, leafy beneath the middle. 1/. G. Native of Peru, on hills at Pungo, in the province of Cumana. Solànum multifidum, Ruiz. et Pav. fl. per. *2.* p. 37. t. 17. f. a. but not of Lam. Dun. sol. p. 138. Stem juicy, furnished with a few simple hairs, as well as the leaves. Segments of the leaves blunt, toothed. Peduncles multifid, terminal and lateral, very long, furnished each with an entire or trifid leaf, which is clasping beneath the middle. Corolla blue. Berry larger than the calyx.

Multifid Witheringia. PI. 1 to *2 feet.* ?

Cult. For culture and propagation see *Soldnum,* p. 442.

VIII. NETOU'XIA (named by Kunth, in honour of H. Netoux, author of" Dissertationes de Cassiis Egyptiacis.") H. B. et Kunth, nov. gen. amer. 3. p. 10. t. 193.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted, regular, with linear segments. Corolla salver-shaped ; limb 5-parted ; throat furnished with a tubular, short, entire, or obsoletely-toothed corona. Stamens 5, inclosed; anthers dehiscing lengthwise. Stigma emarginate. Fruit baccate ?.—A fetid erect herb. Leaves scattered : superior ones twin, cordate, quite entire. Peduncles extra-axillary, solitary, 1-flowered. Corolla yellow, becoming blackish on drying. This genus is more nearly allied to *A'tropa* and *Petunia* than any other; but it differs from them, as well as all others of the order, in the corolla being furnished with a corona faucis.

1 N. FORMOSA (H. B. et Kunth, I.e.) %. G. Native of Mexico, in woods near Real del Monte. A'tropa arenaria, Willd. rel. ex Roem. et Schultes, syst. 4. p. *686.* Flowers size of those of *Finca major.*

Beautiful Netouxia. PI. £ to § foot.

Cult. This singular plant will grow in any light rich soil; and may be readily increased by cuttings or divisions.

IX. MANDRA'GORA (The English name Mandrake is a corruption of the Greek appellation *Mavdpayopog,* compounded of yuaj/^pa, *mandra,* an ox-stall, something relating to cattle ; and *ayavpog, agauros,* cuiel; from its effects on cattle when accidentally gathered with their fodder in the countries where the plants abound. It is a venomous plant, and was an important engine in the days of medical charlatanry, from the roots being supposed to bear a resemblance to the human form.)

Tourn. Inst. 76. t. 12. Lin. hort. cliff. p. 51. Blackw. t. 364. Schk. handb. rom. 1B. L. Juss. Gen. P. 125. Gaertn. fruct. 9. P. 87. *U. ISU.* f. 1. D. C. syn. fl. gall. p. 236. A'tropa species, Lin. gen. and most other authors.

Gen. Ch. Calyx turbinate, 5-angled. Corolla campanulate, 5-cleft. Stamens 5. Filaments hairy at the base and connivent, but filiform and divaricate at the apex. Ovarium furnished with a circular gland round the base. Style drawn out into 2 horns. Stigma capitate, having the rudiments of 2 valves. Berry globose, apple-shaped, fleshy, solid, 1-celled, Uniform in texture. Placentæ rather prominent inside. Seeds many, fetid. Hilum peripheric, disposed in a simple series.—Stemless, forked roots. Leaves broad radical leaves; lanceolate, ovate, usually always cauline; and numerous side-flowered scapes, which are shorter than the leaves.

1. A. OFFICINA'RUM (Lin. spec. ed. 1st. P. 1810. leaves obovate and ovate, acute, a foot long, undulated, quite entire, at first erect, then spreading; root and flowers white; segments of corolla lanceolate, linear, acuminated; segments of calyx lanceolate, acuminated; &c. Bart. Veg. Native of Spain, Switzerland, Italy, &c. Bot. mag. t. 1824. P. 6. M. officinalis, Mill. dict. no. 1. Bot. hort. bon. 1824. P. 6. M. officinalis, Mill. dict. no. 2. Curt. bot. mag. t. 131. f. *Curt. U 175.* M. acaulis, Gsertn. fruct. 2. p. 236. Specific name, vernalis. Spreng. A'tropa Mandragora, Lin. spec. 2. p. 258. Willd. herb. fc. 145. Plenk. off. t. 126. Corolla bluish, pale. Root white, fleshy, usually bifid, 3-4 feet long. The roots are supposed to bear a resemblance to the human figure, and are figured as such in old herbals, being with a forked root the male with a long beard, and the female under a head of hair. It has been fabled to grow where the matter falling from the dead body gave the root the space of a man's utter a shriek or groan at digging up; and it was asserted that he who would dig to it for the purpose should in common prudence tie a dog to it for the purpose, for a man should do it himself he would surely die soon after, ex Linnaeus. The whole plant is reputed poisonous, though in small doses it was used medicinally, and particularly as an opiate.

Officinal. Common Mandrake. Fl. May, June. Clt. 1548. Pl. 2 foot.

2. A. OBTUSIFO'LIA (Sweet, fl. gard. t. 1198.) leaves lanceolate-oblong, at the same time wrinkled, villously pubescent, rising acute, keeled, with the flowers; calycine segments lanceolate, apes agare, segments of Corolla spreadingly reflexed, acute; Mandragfea fl. f. Native of Switzerland. A'tropa Mandragora, var. *feminea*, Bull. herb. t. 146. M. officinalis, *wooly* of a yellowish-brown, tinged with blue. This plant also much smaller than *Mt vernalis*, spreng. and is

3. A. MANDRAGO'RA, Mandrake. Fl. March, April. Clt. 1819. Pl. \ foot. D. (Bertol. el. pl. hort. bon. 1820. p. 6. D. wrinkled, undulated, *A. gard.* n. s. fc. 325. leaves oblong, pilose, face, as well as the calycine segments lanceolate, acuminated, keeled, obtuse, sewed; corolla spreading, with elliptic, obtuse segments; berry globose, smooth, ripening in the South of Europe, likewise found in Italy; and Greece, about Athens and Elis, and in some of the Islands of the Archipelago.

4. A. MACROCA'RPA, Bertol. Shapes pale purple, shorter than the *V^^dwred*, not unlike those of a species of Campanula. This plant is chiefly distinguished from M. officinalis by its much larger berry. It is moreover, altogether a larger plant. This is probably the Mandrake mentioned in the Scriptures, in the 30th chapter of Genesis.

Autumnal Mandrake. Fl. Dec. Clt. 1548. Pl. \ foot.

Cult. The species of Mandrake thrive best in a deep light soil, in a shady situation. They are only to be increased by seed. The roots are extremely apt to rot during winter.

X. A'TROPA (from *arponog, atropos,* one of the destinies; derived from *a* priv.; and *Tpeirw, trepo,* to turn; in reference to the poisonous effects of the species.) Lin. gen. no. 249. Schreb. gen. no. *335.* Juss. gen. *125.* ed. Usteri, p. 140. Gaertn. fruct. *2.* p. 240. t. 131. Lam. ill. t. 114. f. *2.* H. B. et Kunth, nov. gen. amer. 3. p. 11.—Belladonna, Tourn. inst. t. 13.

LIN. SYST. *Pentandria, Monogynia.* Calyx loose, 5-cleft, permanent. Corolla campanulate; limb usually 5-cleft, rarely 10-cleft, spreading. Stamens 5, generally exserted, conniving at the base; anthers dehiscing lengthwise. Stigma peltately depressed. Berry globose, propped by the permanent spreading calyx; placentas free, and distant from the dissepiment. Seeds numerous, reniform.—Caulescent shrubs or herbs. Leaves scattered, twin, entire. Peduncles extra-axillary, 1-2, or many-flowered. Corolla violaceous or greenish.

§ 1. *Limb of corolla 10-cleft or 10-toothed; the alternate lobes or teeth smaller.*

1 A. VIRIDIFLO'RA (H. B. et Kunth, nov. gen. amer. 3. p. 11. t. 196.) stem suffruticose, twining; leaves twin, elliptic-ovate, subacuminated, quite entire, hairy; peduncles 2-flowered; flowers, drooping; limb of corolla 10-cleft. F?. ^. S. Native of New Granada, between the town of Pasto and Chilanquer, at the altitude of 850 hexapods. A'tropa flexuosa, Willd. rel. ex Rcem. et Schultes, syst. 4. p. *686.* Corolla tubularly funnel-shaped, green, 3-4 times longer than the calyx, hairy, furnished with 5 tubercles on the outside at the base. Filaments glabrous, dilated at the base. This and *A. dspera* of Ruiz, et Pav. might probably form a distinct genus.

FIG. 39.

Green-flowered Deadly Nightshade. Shrub twining.

2 A. A'SPERA (Ruiz, et Pav. 2. p. 45.) stem herbaceous, angular, pilose; leaves twin, unequal, oval-oblong and lanceolate, quite entire or subsinuated, hairy; peduncles 1-flowered, drooping; limb of corolla 10-cleft. %. S. Native of Peru, on hills about Lima. Stem dichotomous, branched. Peduncles extra-axillary, or in the forks of the stem. Corolla yellowish-blue, violaceous in the centre, with 5 of the segments acute, and the alternating 5 emarginate. Filaments hairy, violaceous. Berry white, size of a pea. Seeds red.

Rough Deadly Nightshade. Pl. 2 feet.

3 A. HIRTE'LLA (Spreng. syst. 1. p. 699.) herbaceous; leaves ovate, acute, scabrous; branches rough; peduncles elongated, 1-flowered, filiform. ©. H. Native of Brazil.

Hairy Deadly Nightshade. Pl. ?

§ 2. *Limb of corolla 5-cleft. Stems frutescent.*

4 A. UMBELLA'TA (Ruiz, et Pav. fl. per. 2. p. 44. t. 181. f. a.)

stem frutescent; leaves ovate and cordate, quite entire and angular ; peduncles many-flowered, umbellate, drooping ; limb of corolla 5-cleft. J?. S. Native of Peru, on hills about Lima. A. revoluta, Dietr. lex. 1. p. 422. Stem glabrous ; branches dichotomous, downy. Leaves solitary or twin, downy. Peduncles short, axillary, downy, bearing 8-12 pedicellate flowers. Corolla yellow, melliferous; tube cylindrical, purple; limb reflexed, ciliated. Stamens inclosed. Style exserted. Berry whitish, globose, size of a pea.

Umbellate-Cowered Deadly Nightshade. Shrub 4 feet.

5 A. BIFLORA (Ruiz, et Pav. fl. per. 2. p. 44. t. 181. f. b.) stem frutescent; leaves ovate, acute, quite entire: upper ones twin; peduncles 2-flowered, drooping?; limb of corolla 5-cleft. h_c . *S.* Native of Peru, in humid places. Shrub rather downy. Branches pendulous, rather angular. Corolla suburceolate, villous, striated ; tube greenish, white, or purplish ; limb greenish-yellow, erect. Anthers and stigma blue. Berry white, size of that of *Belladonna,* a little compressed.

Tivo-fiowered Deadly Nightshade. Shrub *2* feet.

6 A. BICOLOR (Ruiz, et Pav. fl. per. 2. p. 45.) stem frutescent ; leaves ovate, angular, glabrous ; peduncles 3-4-flowered ; limb of corolla 5-cleft. ^ . S. Native of Peru, in shady places. Branches angular. Leaves acute, usually twin. Corolla tubular, reddish green ; limb green.

Two-coloured-fiowered Deadly Nightshade. Shrub 6 to 7 feet.

7 A FRUTE'SCENS (Lin. spec. p. *260.* Lam. ill. t. 114. f. 2.) stem shrubby; leaves ovate-cordate, obtuse, downy ; flowers 1-3 together, pedicellate, axillary; limb of corolla 5-cleft to the middle, reflexed. J? . G. Native of Spain. Physalis suberosa, Cav. icon. *2.* p. 1. t. 102. Physalis frutescens, D. C. fl. fr. 3. p. 611. Belladonna frutescens, rotundifolia, Hispanica, Tourn. inst. p. 77.—Barrel, icon. p. 1173. Habit of *Physalis somnifera,* but differs from it in the calyx being 5-cleft, and in the flowers being 6 times larger, and campanulate, and in the leaves being smaller, and in the berry not being inclosed in the calyx. Leaves solitary. Corollas yellowish, divided into 5 reflexed segments beyond the middle. Anthers not exserted, ex Lam. Perhaps this will form a new genus.

Frutescent Deadly Nightshade. Fl. June, July. Clt. 1787. Shrub 4 to 6 feet.

8 A. ARISTVTA (Poir. suppl. 1. p. 609.) stem frutescent; leaves oblong, entire, almost glabrous ; branches, petioles, and peduncles woolly; peduncles solitary, 1-flowered, hardly as long as the petioles ; limb of corolla 5-cleft. T? . G. Native of the Canaries. Physalis aristata, Ait. hort. Kew. 1. p. 244. Willd. spec. 1. p. 1020. Branches compressed, somewhat angular. Leaves solitary, or twin, ovate-lanceolate, acuminated. Corolla yellow, campanulate, with lanceolate, acuminated segments. Calycine teeth or segments awned. Berry globose.

4wned-ca\yxed Deadly Nightshade. Fl. June, Aug. Clt. 1779. Shrub 3 to 4 feet.

§ 3. BELLADONNA. Limb of corolla 5-cleft. Stems herbaceous.

9 A. BELLADONNA (Lin. spec. 260.) herbaceous, erect; leaves twin, ovate, quite entire, glabrous ; peduncles solitary, 1-flowered. 2f. H. Native throughout Europe, frequent in woods ; with us it is not very common. Smith, engl. bot. t. *\92.* Oed. fl. dan. t. *758.* Curt. fl. loud. fasc. 5. t. 16. Jacq. fl.austr. 4. t. 309. Mill. icon. t. 62.—Plenck. icon. 125.—Bull, herb. t. *29.*—Heyne, getr. darst. t. 43. Belladonna baccifera, Lam! fl. fr. 2. p. *255.* Bell, trichotoma, Scop. earn. ed. 2d. no. *255.* Solanum melanocerasus, Bauh. pin. p. 166. Belladonna, majoribus foliis et floribus, Tourn. inst. p. 77.—Blackw. t. 564.—Sabb. hort. 1. t. *3.* Solanum lethale, Clus. hist. 2. p. 86. Mor. hist. sect. 13. t. 3. f. 4. Root thick, branching. Stem trichotomous, tinged with purple ; the branches dichotomous. Leaves rather large, soft to the touch, a little hairy *on* both surfaces. Corolla large, lurid, dusky purple within, and streaked, with a yellow variegated base, but greenish-red, or dusky brown outside. Berry size of a cherry, black when ripe, full of purple juice. The plant inhabits churchyards, dunghills, and gloomy lanes, and uncultivated places in England, but in other countries it is said to be common in woods and hedges.

When this plant was found to differ *from* the genus *Solanum,* it assumed the Italian name of *Belladonna,* which was given to it, according to some, because it was used as a wash among the ladies, to take off pimples from the skin ; or, according to others, from its quality of representing phantasms or beautiful women to the disturbed imagination. The qualities of the plant are malignant, and it is extremely poisonous in all its parts* Numerous instances have occurred of the berries proving fatal, after causing convulsions and dilirium. Buchanan relates the destruction of the army of Sweno, the Dane, when he invaded Scotland, by the berries of this plant, which were mixed with the drink which the Scots, according to truce, were to supply the Danes. The Danes became so inebriated that the Scottish army fell on them in their sleep, and slew such numbers, that there were scarcely men enough left to carry off their king. The case related by Ray is remarkable, that is, the dilatation of the pupil of the eye caused by a part of the leaf applied outwardly, and which took place successively on the repetition *of* the experiment. With respect to the berries, they have been frequently known to have been fatal to children, and also to adults, if a considerable number be eaten. The symptoms are said to occur in half an hour after taking them, and consist of vertigo, great thirst, dilirium, swelling, and redness *of* the face, difficulty of breathing. The general sensibility *of* the system is said to be weakened to a great degree, so that the stomach will bear a far larger dose of emetic medicines than it would otherwise have done. Vinegar liberally drank has been found efficacious in obviating the effects of the poison. A remarkable instance of the malignant powers of the young shoots occurred in the presence of Professor Martyn, in the botanic garden at Cambridge, which fully proved that they are not less deleterious than the berries.

The leaves are said io have been sometimes successfully applied to cancerous tumours. Belladonna, notwithstanding its deleterious nature, is not totally excluded from medicine ; some diseases, and those of the most malignant kind, have been known to yield to the anodyne and anti-spasmodic virtues of the plant when administered with caution. Bergius relates, that he has often given relief in epilepsy and convulsions, by the internal use of the powder of the dried leaves, taken in doses of from one to four grains: and Gesner, in his medical epistles, recommends the expressed juice of the berries boiled with sugar into a syrup, and given by a teaspoonful at a time, as excellent in every case requiring an opiate, and as peculiarly efficacious in the cure of dysentery.

Belladonna has been best analyzed by Mr. Brandes, an apothecary at Salz Uffelm, who has discovered a new alkaloid upon which its narcotic virtues depend, which he calls atropia. He urges the necessity of caution in the examination of atropia and its salts. Even the vapour of their solutions causes dilatations and paralyses of the pupil; and during the whole time of the experiments Mr. Brandes experienced violent headach, vertigo, pain of back, and nausea, so that he could scarcely continue them. On tasting a small quantity of sulphate of atropia, which was rather salt than bitter, he had extreme confusion of head, trembling in all his limbs, pulse weak, and at last retching. But the most severe of these symptoms abated in half an hour.

Medical use of Deadly Nightshade.—Under proper manage-

Reside[illegible] virulent poison may become an excellent remedy. [illegible]s exhibited in narcotic power> it promotes all the secretions; but continuiPH [illegible] requires the greatest caution, for it is apt, when [illegible] dr[illegible]ynes[illegible] A[illegible]an[illegible]? length of time> even in small doses> to cause When [illegible] and tension in the throat, vertigo, dimness of sight. for som^f- [illegible] symptoms occur its use must be suspended Nifhtsli[illegible]ri[illegible] u[illegible] and afterwards resumed in smaller doses. Deadly obstinat[illegible] has been exhibited in several febrile diseases, in in Palsy [illegible] loss of speech from apoplexy, in chorea, epilepsy, dice[illegible] [illegible]o me^ancholy, mania, dropsies, and obstinate jaun- antidot[illegible] to be amaurosis» ophthalmia, scirrhus, and cancer; and as an best exhibited in contagion of scarlatina. Deadly Nightshade is the leaves "* Substance, beginning with a very small dose of root ever [illegible] or root# ^n hydrophobia Munch gave the powdered grains tn\^ond morning to the extent of from one to five The war [illegible]en> and from fourteen to fifteen grains to adults. *Belial.* Inflislon is als<> a powerful remedy.

July. B ^ £ or Common Deadly Nightshade. Fl. June, [illegible] [illegible] [illegible]

dehiscing lengthwise. Stigma peltately-depressed, or capitate, bisulcate, ex Juss. or 2-lobed. Berry roundish, 2-celled, propped by the permanent calyx ; placentas adnate. Seeds numerous, reniform.— Trees or shrubs usually spinose. Leaves entire, or nearly entire, alternate, solitary, or in fascicles. Peduncles extra-axillary, or terminal, solitary, twin, or umbellate, rarely corymbose. Corollas white, yellow, rose-coloured, purple, blue, or scarlet.

SECT. I, EULY'CIUM (from *ev, eu,* well or good; and *Lycium;* this section contains the true species of the genus.) Calyx urceolate, irregularly 3-6-cleft. Corolla tubularly funnel-shaped ; with a 5-parted, spreading, or reflexed limb. Genitals exserted.—Shrubs or trees, usually spinose. Flowers extra-axillary, solitary, twin, or umbellate.

1 L. EUROPIUM (Lin. syst. 228. mant. p. 47.) branches erect, loose ; buds spinescent; leaves.fascicled, obovate-lanceolate, obtuse, or spatulate, bent obliquely ; flowers twin, or solitary ; corolla funnel-shaped; stamens exserted, but shorter than the limb, f? . H. Native *of* the South of Europe; and the North of Africa; in the Grecian Islands, common in hedges, but scarcely indigenous. Willd. enum. 1. p. 246. Sibth. et Smith, fl. graec. t. 236. L. salicifblium, Mill. diet. no. 3.—Mich. gen. p. 224. t. 105. f. 1.—Mill. fig. t. 171. f. 2. Calyx 5-cleft, ruptured at the side. Corollas pale violet, reticulated with red veins ; tube greenish. Clusius says, that the young shoots are eaten in Spain with oil and vinegar.

Var. a ; berries yellow or fulvous.

Var. j3 ; berries red.

European Boxthorn. Fl. May, Aug. Clt. 1730. Shrub 10 to 12 feet.

2 L. BA'RBARUM (Lin. spec. *277.)* branches dependent; buds spiny ; leaves lanceolate, flat,* glabrous, acute : flowers twin, extra-axillary, pedicellate ; corolla funnel-shaped ; stamens exserted, about equal in length to the limb. fj . H. Native of the North of Asia, Africa, and South of Europe. Willd. spec, exclusive of Shaw, and the syn. of Lam. Wats, dendr. brit. t. 9. L. hali mi folium, Mill. diet. no. 6. L. Barbarum a vulgare, Ait. hort. kew. 1. p. 257. Schkuhr, handb. 1. p. 147. t. 46. Hayne, term. bot. t. 10. f. 5.—Dun. arb. 1. p. 306. t. 121. f. 4.—Mich. gen. t. 105. f. 1. Branches angular. Buds often without spines. Calyx 2-3-lobed. Corolla with a purple limb, and yellowish base. Stigma 2-lobed. Berry ovate, yellow. Stamens bearded near the base. There is a variety of this, having livid or pale corollas, and reddish yellow berries.

Barbary Boxthorn. Fl. May, Aug. Cit. 1696. Shrub cl.

3 L. CHINE'NSE (Mill. diet. no. 5.) branches pendulous, prostrate, striated; buds spinescent; leaves by threes, ovate, acute, attenuated at the base; peduncles much longer than the calyx, which is entire; stamens exserted. *?. H. Native of China, about Pekin and Canton ; and of Cochinchina. Bunge in mem^ acad. petersb. 2. p. 123. Lam. ill. t. 112. f. 2. Wats. dend. brit. t. 8. L. Barbarum, /3, Chinense, Ait. hort. kew. 1. p. 257. L. ovatum, Duh. arb. ed. nov. p. 117. L. Barbarum, Lour, coch. 1. p. 165.? Said by Bunge to be nearly allied to Z. *Ruthenicum,* but differs in the leaves being broad-ovate. Corollas purple. Berries orange-coloured. Shoots very long, ex Mill. The Chinese use a decoction in wine, or an infusion in water of the berries, as a tonic, analeptic, and cephalic. We know not whether the plants described by Miller and Bunge be the same; the plant here meant is that of Bunge.

Chinese Boxthorn. Fl. May, Aug. Clt.? Shrub climbing.

4 L. RUTHE'NICUM (Murr. comm. goett. 1779. p. 2. t. 2.) branches dependent; buds spinescent; leaves linear-lanceolate, fleshy, obtuse, attenuated at the base, solitary, or subfasciculate; peduncles longer than the calyx ; calyx with 5 unequal teeth , stamens exserted, equal to the limb. F? . H. Native *ot* Siberia, in nitrous places; and at the Volga ; and in Hyrcania. Bieb. fl. cauc. 1. p, 166. L. Tata'ricum, Pall. fl. ross. 1. P-. '». t. 49. Calyx usually irregularly 5-toothed, rarely 2-3-lobed, as in *L. Bdrbarum.* Corolla with a white tube, and purple limb. Leaves grey, like those of *L. A'frum.*

Var. /?, Cdspicum (Pall. fl. ross. t. 49. f. A.) leaves shorter, buds more spinose ; flowers smaller. f? . H. Native a the Caspian Sea.

Russian Boxthorn. Fl. ? Clt. 1804. Shrub climbing.

5 L. SHAVII (Rcem. et Schultes, syst. 4. p. 693.) branches dependent, rather tomentose at apex; buds spinescent; leaves ovate-lanceolate, thickish. ^. H. Native of Barbary. Europoeum, Mill. diet. no. 4.—Shaw. afr. p. 349. *t.* Branches scattered. Prickles strong. Leaves short, tn > scattered. Flowers lateral, small, white.

Shaw's Boxthorn. Fl. June, July. Clt. 1700. Shrub / 8 feet.

6 L. TREWIA^NUM (Duh. abr. nov. ed. p. H6- t. *30.* under L. Chinense, as in Pers. ench. 1. p. 231.no. 9.) erect; branch diffuse, angular; buds spinose; leaves petiolate, lanceolate, acute; peduncles 1-flowered, solitary, or twin, extra-axillary, calyx 2-3-cleft; corolla funnel-shaped ; stamens exserte H. Native of China. L. Barbarum, Lam. diet. 3. p. Poir. suppl. 3. p. 427.—Trew. Ehret. t. *68.* exclusive of the synonymes. This species differs from *L. Chinense,* Mill, in tn spines, and from *L. Barbarum* in the leaves. Branches rutes cent. Spines *few,* Corolla fine purple, with a white star in tn centre. Filaments pilose at the base. Berry ovate.

Trew's Boxthorn. Fl. May, Aug. Clt. 1818. Shrub 6 feet.

7 L. LANCEOLA TUM (Poir. suppl. 3. p. 429.) branches dependent, reflexed ; buds spinescent; leaves lanceolate, nearly sessile, acute at both ends; flowers solitary, extra-axillary, pedicellate; corolla funnel-shaped ; stamens exserted. J? . H. Native of the South of Europe, as of Naples, Greece, &c. L. Europium, *(3,* D. C. fl. fr. no. 2699. Pers. ench. 1. p. 231. no. 8. —Duham, arb. nov. edit. p. 123. t. *32.* Calyx unequally 5-toothed. Corolla purple, with a white bottom. Berry oblong, red.

Lanceolate-leaved Boxthorn. Fl. May, Aug. Clt. ? Shrub climbing.

8 L. TURBINA'TUM (Duh. arb. nov. edit. p. 119. t. 31. Pers. ench. 1. p. 231, exclusive of the syn. of Lam. no. 3.) stems erect, fascicled; branchlets dependent, terete; buds spiny; leaves sessile, lanceolate, acuminated ; flowers aggregate, pedicellate, extra-axillary ; corolla funnel-shaped ; stamens exserted; calyx trifkl; berry turbinate. P? . H. Native of China. L. halimifolium, Mill. diet. no. 6. ? L. Barbarum, /3, D. C. fl. fr. no. 2700. Corolla violaceous, with a white bottom. Berries red.

Turbinate Boxthorn. Fl. May, Aug. Clt. 1709. Shrub climbing.

9 L. CILIA'TUM (Schlecht. in Linnaea, 8. p. 69.) branches elongated, subscandent; branchlets sometimes spiny ; leave* alternate, broad-ovate, acute, denticulately ciliated, glabrous ; flowers axillary, solitary, on short pedicels ; calycine segments linear, acute, exceeding the berry, which is globose ; corolla funnel-shaped, puberulous ; genitals exserted. J?. G. Native of the South of Brazil, at the Rio Negro, Sello. Calyx deeply 5-cleft. Filaments villous, as in *L. Barbarum.* Corolla beset with glandular down, purple ?

Ciliated-leaved Boxthorn. Shrub climbing.

10 L. OBOVA'TUM (Ruiz, et Pav. fl. per. 2. p. 46. t. 183. f. c.) branches spreading; spines stiff, leafy while young ; leaves obovate, obtuse, petiolate, scattered, or fascicled; peduncles

limb h* extra-axillary 1-flowered, drooping ; corolla tubular : Peru. T. fr. ; cal. villous. 5-cleft. J. G. Native of Calvcin. ges at Tarma. Stem cinereous, much-branched, small. K. 6gments reflexed. Corolla purplish violet. Berry *OhS*, orange-coloured. Old spines naked.

J^«te-leaved Boxthorn. Shrub.

SALSUM (Ruiz* et Pav. L c* *. 183, f. b.) branchies long, pr. spines leafy ; leaves flowers. obovate-oblong, sessile ; corolla ^xtra-axi^lary, drooping, solitary, on short pedicels; per. j^nnel-shaped; stamens exserted. ^. n. ar. ma. E. uB. (Willd< enum. !• P. 242 0 erect> spiny; ^aves l. late> solita. J'm fascicles 5 flowers almost axillary, pedi. en. oth to thp r. pooping; corolla tubular; stamens equal in S. e. t. pros. of corolla. F. Native count. ry unS. e. a^d sho. aWy of the Cape of Good Hope. Leaves narthe calvx. n an in *L. Afrum*. Pedicels a little longer y*. Calyx 5-toothed; teeth adpressed. The corolla is said by Willd. to be nearly like that of *Z. Bârbarum,* and the stamens a little longer than the limb, and, therefore, probably belongs to the last section.

Slender Boxthorn. Fl. June, July. Clt. 1819. Shrub 5 to 6 feet.

16 L. PROPINQUUM ; leaves linear-elliptic; branches strict; peduncles longer than the leaves. 1?. H. Native of the Cape of Good Hope. L. AYrum, Thunb. prod. *37.* and in Lin. trans. 9. p. 158. but not of Lin. Stem stiff, erect; branches spinescent, somewhat verticillate, short, strict. Leaves fascicled, glabrous, a nail in length. Peduncles capillary, 1-flowered, about equal in length to the flowers. Corolla short, campanulate.

Allied Boxthorn. Shrub.

17 L. RIGIDUM (Thunb. prod. *37.* Lin. trans. 9. p. 153. t. 14.) erect, spiny ; leaves linear, obtuse, in fascicles ; peduncles shorter than the leaves and flowers ; corolla tubular ; stamens inclosed ; calyx 5-toothed ; teeth ciliated. T?. F. Native of the Cape of Good Hope, about Cape Town. Willd. enum. 1. p. 245. L. carnôsum, Dub. arb. ed. nov. p. 111. Pers. ench. 1. p. 231. Poir. suppl. 3. p. 427. L. A^frum, /3, Lam. diet. 3. p. 509. L. Italicum, Mill. diet. no. 2. ?—Trew. ehret. t. 24. f. 1. Stem flexuous, glabrous, grey; branches rugosely angular, cinereous, spiny at top. Leaves glabrous, curved, a nail in length. Flowers solitary, pedunculate, drooping. This species' hardly differs from *L. A'frurn,* unless in the pedicels being very short, the much dwarfer habit of the shrub, in the fewer spines, and in the leaves being paler. Pedicels solitary, or by threes. Calyx campanulate, 5-toothed ; teeth acute. Corolla tubular, violaceous. Berry globose, size of a pea, and 2-celled.

Stiff Boxthorn. Fl. April, May. Clt. 1795. Shrub 3 to 4 feet.

18 L. ? MICROPHY'LLUM (Dub. arb. nov. ed. p. 112. Pers. ench. 1. p. 231.) erect, spiny, stiff, quite smooth ; branches reflexed ; leaves solitary, or in fascicles, parabolic ; flowers axillary, solitary, pedicellate, drooping ?; corolla funnel-shaped ? ; stamens inclosed ?. T?. F. Native of the East of Africa, and in India. Branches cinereous, terminated each by a strong spine. Leaves glaucous, small, linear ?. Berry globose, dark blue. Perhaps not belonging to the present section.

Small-leaved Boxthorn. Fl. June, July. Clt. 1795. Shrub.

19 L. CINE'REUM (Thunb. prod. 1. p. 37. in Lin. trans. 9. p. 154. t. 16. Willd. spec. 1. p. 1059. enum. 1. p. 245.) branches terete, spreading, filiform; branchlets spiny, short; leaves lanceolate, obtuse, glaucous, glabrous, in fascicles; flowers axillary, solitary, drooping; corolla tubular; stamens inclosed. *hc*. F. Native of the Cape of Good Hope. Pedicels shorter than the calyx, and twice as short as the leaves. Corolla purple ?

Cinereous Boxthorn. Fl. June, July. Clt. 1818. Shrub.

20 L. HORRIDUM (Thunb. prod. *37.* in Lin. trans. 9. p. 154. t. 17. Ait. hort. kew. ed. 2d. vol. 2. p. 4.) branches strict; leaves obovate, fleshy, glabrous ; flowers nearly sessile. Tj. F. Native of the Cape of Good Hope, in Saldanha Bay. Stem stiff, much branched, 3 feet high ; branches nodulose, grey, spinescent. Leaves fascicled, *3-7* in each fascicle, flat above, and convex beneath, white, small. Flowers solitary, pedicellate. Pedicels terete, glabrous, a line long.

Horrid Boxthorn. Fl. July, Aug. Clt. 1791. Shrub 3 to 4 feet.

21 L. TETRA'NDRUM (Thunb. prod. p. *37.* Lin. suppl. 150. Thunb. in Lin. trans. 9. p. 154. t. 15.) spiny, erect; branches angular, strict; leaves fascicled, ovate, obtuse ; flowers nearly sessile ; corollas quadrifid, tetrandrous. ^. F. Native of the Cape of Good Hope, about Cape Town. Stem twisted, glabrous, angular, grey, stiff; branches horizontal, spiny. Leaves a line long. Flowers solitary, rising from the fascicles of leaves on short pedicels. Very like *L. Afrum,* but is distinguished

from that species in the leaves being more fleshy, and in the flowers being tetramerous and tetrandrous. It is also, perhaps, the *L. capense,* Mill. diet. no. 7, of which he gives the following description. " Leaves oblong-ovate, thickish, crowded ; spines strong, leafy. Leaves scattered, solitary, or fascicled, thick, pale green, permanent." This shrub has stood the open air **throughout the winter in Chelsea botanic garden, but did not** flower.

Tetrandrous-flowered Boxthorn. Fl. June, July. Clt. ? Shrub 6 to 7 feet.

SECT. III. ANISODÒNTIA (from *avtoog, anisos,* unequal; and *oBovg O^OVTOC, odous odontos,* a tooth ; in reference to the irregularly 5-toothed, or 5-cleft calyx.) Calyx urceolate, generally irregularly 5-cleft, or 5-toothed. Corolla tubular; limb erect, plicate, 5-10-toothed, rarely 5-cleft, or 5-lobed. Genitals inclosed, or nearly so.—Unarmed trees or shrubs. Leaves scattered. Flowers sub-axillary, or terminal, fasciculately umbellate.

§ 1. *Calyx 5-toothed, 5-cleft, or 5-lobed.*

22 L. FUCHSIOI'DES (Humb. et Bonpl. pi. sequin. 1. p. 147. t. 42. H. B. et Kunth, nov. *gen.* amer. 3. p. *52.)* branchlets puberulous ; leaves obovate-oblong, bluntish, glabrous; umbels extra-axillary and terminal, sessile; corollas tubular, with a 5-toothed limb, glabrous; stamens hardly exserted. J?. G. Native of the province of Quito, in cold places near Delay, Cumbe, and Cuenca, at the altitude of 1400 hexapods. Branches angular. Flowers pedicellate, pendulous. Calyx campanulate, 2-lobed, one of the lobes bidentate, and the other tridentate, or entire. Corolla purple. Filaments dilated and villous at the base. Stigma 2-lobed. Berry ovate, 1-celled, many-seeded, girded by the calyx.

Fuchsia-like Boxthorn. Fl. Aug. Shrub 6 to 8 feet.

23 L. GESNERIOÌDES (H. B. et Kunth, nov. gen. amer. 3. p. *53.)* branchlets villously tomentose ; leaves ovate, acute, glabrous above, and clothed with powdery pubescence beneath ; umbels sub-axillary and terminal, sessile ; corollas tubular, with a 5-lobed limb, downy ; stamens hardly exserted. J? . G. Native of the Andes of Quito, in temperate places near El Machin, and in the valley of the river Toche. Branchlets terete, glabrous. Pedicels villous. Calyx 5-toothed, downy. Corolla yellow ; limb 5-lobed and plicate, downy. Berry girded by the calyx. Filaments a little dilated, and downy at the base. Stigma sub-capitate, 3-lobed.

Gesneria-like Boxthorn. Shrub 6 to 8 feet.

24 L. UMBELLA^TUM (Ruiz, et Pav. fl. per. *2.* p. 45. t. 182. f. b.) branchlets downy; leaves oblong-lanceolate, glabrous, but powdery beneath ; umbels axillary, on short peduncles ; corolla tubular, with acute segments ; stamens inclosed. J?. S. Native of Peru, in the valley of Canta, in hedges by way sides. Leaves 6 inches long. Pedicels unequal. Corolla violaceous ; segments of the limb acute. Filaments glabrous. Berry globose, orange-coloured, size of a pea. Seeds reniform.

Umbellate-flowered Box-Thorn. Shrub 10 to 15 feet.

25 L. CESTROI'DES (Schlecht, in Linnaea, 8. p. 70.) branches spinescent; leaves alternate, and falsely fascicled, broad, lanceolate, acute at both ends, glabrous ; flowers pedicellate, rising in fascicles from the axils of the upper leaves, hence they are sometimes falsely umbellate; calyx tubular : teeth short, triangular, very acute ; corolla tubular, glabrous, with downy margins ; genitals inclosed ; stamens unequal; berry nearly globose, exceeding the calyx a little, which is cleft at the side. *fy . H.* Native of the South of Brazil, near San José do Uruquay, Sello. Largest leaves *2* to *2* inches long. Flowers large. Calyx downy, 5-toothed, at length cleft at the side. Limb of corolla bluntly 5-lobed. Berry globose, red. Seeds compressed. Embryo annular.

Cestrum-like Boxthorn. Shrub.

§ *2. Calyx 10-toothed.*

26 L. LOXE'NSE (H. B. et Kunth, 1. c.) arboreous; branchlets pubescently tomentose ; leaves ovate, somewhat acuminated, downy on both surfaces ; umbels nearly axillary, and terminal, sessile ; corollas tubular, with an obsoletely 10-toothed limb* downy ; stamens inclosed. T? . G. Native of Peru, near Loxa, at the altitude of 1050 hexapods. Branches terete. Leaves 3-*3* inches long. Pedicels clothed with hoary tomentum. Calyx campanulate, 5-toothed, downy. Corolla yellow, downy ; hmu plicate ; alternate teeth very minute. Filaments a little dilated, and downy at the base. Stigma capitate. Berry ovate-oblong, girded by the calyx, 1-celled.

Loxa Boxthorn. Shrub 10 to *12 feet.*

27 L. CORNIFÒLIUM (H. B. et Kunth, 1. c. p. 54.) arboreous; branchlets clothed with hoary tomentum ; leaves roundish-ovate, sub-acuminated, complicate, puberulous above, but clothed with soft rufescent tomentum beneath ; umbels almost axillary, and terminal, sessile; corollas tubular, with a 10-toothed limb, downy; stamens inclosed. J?. G. Native *of* the province of Quito, in bushy places between Tiscan and Alausi, at the altitude of 1300 hexapods. L. ovàle, Willd. rel. ex Rcem. et Schultes, syst. 4. p. 698. Leaves *3* inches long. Pedicels tomentose. Calyx downy, tubularly campanulate, 5-cleft. Corolla downy; limb plicate, the alternate teeth very minute. Filaments downy at the base. Stigma sublobate. Berry girded by the calyx.

Dogwood-leaved Boxthorn. Shrub 15 to *18 feet.*

28 L. UMBRÒSUM (H. B. et Kunth, 1. c.) arboreous ; branchlets clothed with hairy down ; leaves oblong, acuminated, smoothish: floral ones ovate-rhomboid ; umbels almost axillary and terminal, sessile ; corollas tubular, with a 10-toothed limb, hairy ; stamens almost inclosed. ^ • Gr. Native of New Granada, in shady places near La Vega de St. Lorenzo, and Almaguer, at the altitude of 1200 hexapods, where it is called by the inhabitants *Upaquanda.* Branches rather angular. Leaves 6 inches long. Pedicels hairy. Corolla scarlet, widened at top, a little curved; the teeth of the limb obtuse and fimbriately ciliated. Filaments membranous at bottom and downy. Stigma obsoletely 3-lobed. Berry ovate, 1-celled, many-seeded. The plant is used in the cure of erysipelas.

Shaded Boxthorn. Shrub 12 to 16 feet.

** Species hardly known.*

29 L. CAPSULA'RE (Lin. amcen. acad. 4. p. 308.) leaves lanceolate, thin, glabrous ; peduncles and calyxes downy ; pericarp capsular. f? . G. Native of Mexico, Miller. Willd. spec. 1. p. 1061. Lam. diet. 3. p. 510. Branches terete, furnished with spreading, axillary, simple spines. Leaves on short petioles. Peduncles simple, axillary, 1-flowered, shorter than the leaves. Calyx downy. Corolla rotate. Stigmas 2, straight, slender. Capsule ovate, mucronate, 2-celled. Certainly not a species of *Lycium,* from the capsular fruit and rotate corolla.

Capsular Box-Thorn. Shrub.

30 L. CAROLINIA^NUM (Walt. fl. carol, p. 84. Michx. fl. bor. amer. 1. p. 95.) unarmed; leaves narrow, spatulate-oblong; flowers quadrifid, tetrandrous, bluish. ^ • H. Native of Carolina, Georgia, Florida, by the sea shore, among rushes.

Caroline Box-Thorn. Fl. July, Sept. Clt. 1806. Shrub 4 to 5 feet ?

XV. JABORO'SA (a name given by Jussieu, derived from the Arabic word Jaborose, which was applied to the Mandrake, from its affinity to it.) Juss. gen. 125. ed. Usteri, p. HO. Lam. t. 114. Gill, et Hook. bot. misc. 1. p. 347. t. 71.

LIN. SYST. *Pentdndria, Monogynia,* Calyx short, 5-cleft; segments acute. Corolla campanulate or tubular, 5-cleft; segments acute. Stamens 5, inserted towards the top of the tube ; filaments short, flat. Stigma capitate. Berry globose, 3-celled, ex Cav., 2-celled, ex Hook.; placenta fixed to the longitudinal dissepiment.—Herbs natives of Chili and Buenos Ayres. Leaves radical. Scapes 1-flowered. Corollas white.

1 J. CAULE'SCENS (Gill. et Hook, in bot. misc. 1. p. 347, t. 71.) stems many, decumbent; leaves lyrately pinnatih'd, spinulosely-toothed, petiolate ; bracteas subulate, verticillate ; corolla narrow, campanulate, hairy inside. %, G. Native of Chili, in the valleys *of* the Andes towards Mendoza. Root long, descending, nearly fusiform. Limb of corolla spreading, with acute segments. Capsule globose ; receptacle fixed to a longitudinal dissepiment. Seeds numerous, black.

Caulescent Jaborosa. PI. prostrate.

2 J. INTEGRIFOLIA (Lam. diet. 3. p. 189. ill. t. 114.) stemless ; leaves petiolate, oval, nearly entire ; corolla with a long tube and acuminated segments. <• %, G. Native of Buenos Ayres. Hook. bot. mag. t. 3489. J. Bonariensis, Gmel. syst. 1. p. 380. Leaves radical, *3-6* inches long. Scapes length *of* petioles. Corolla 2 inches long.

Entire-leaved Jaborosa. PI. \ to \ foot.

3 J. RUNCINA'TA (Lam. dict. 1. c. Link, et Otto. pi. sel. p. 103. t. 48.) usually stemless ; leaves petiolate, oblong-obovate, sinuately pinnatifid ; corolla campanulate, with acute segments. % . G. Native of Monte Video, and Buenos Ayres, in the flats called Pampas. Leaves like those of *Tarâxacum,* 2-4 inches long, and hardly H broad. Scapes a little shorter than the

leaves. Corolla hardly an inch long; segments of the limb spreading or reflexed. The specimens collected by Dr. Gillies [illegible] stem 4-5 inches high, from which both the leaves and flowers arise; but in Gillies's specimens the leaves and flowers spring at once from the root.

* *Buzzleaved* Jaborosa. PL \ to ± foot.

*Cult** For culture and propagation see *Petunia,* p. 454.

TRIBE II. NICOTIA'NEJE. Limb of corolla plicate in aestivation. Stamens equal in number to the segments of the corolla. Fruit capsular, 2-celled. Calyx and corolla 5-cleft.

XVI. NICOTIA'NA (this genus takes its name of Jean Nicot, of Nismes in Languedoc, agent from the king of France to Portugal, who procured the seeds from a Dutchman, who had brought them from Florida, and sent them to France.) Tourn. inst. 1. p. 117. t. 41. Lin. gen. no. 248. Schreb. gen. no. 334. Juss. gen. 125. ed. Usteri, 139. Vent. tabl. 2. p. 369. St. Hil. fam. nat. 1. p. 286. t. 46. Lam. ill. 2. p. 6. t. 113. LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-cleft. Corolla funnel-shaped or salver-shaped ; limb 5-lobed, plicate, spreading. Stamens 5, length of the tube of the corolla. Anthers dehiscing lengthwise. Stigma capitate. Capsule 2-celled, covered by the permanent calyx, 2-valved ; valves bipartite, therefore the capsule opens by 4 parts at the apex; placentas free, distant from the dissepiment. Seeds very numerous, minute.—Usually herbs, rarely subshrubs, generally clothed with clammy hairs or down. Flowers terminal, racemose or panicled, white, greenish or purplish.

SECT. I. TA'BACUM (the name Tobacco, which has superseded all others, is the appellation of a district in Mexico.) Leaves large. Flowers funnel-shaped, red; limb of corolla spreading, acuminated or acute; throat inflately ventricose.—Plants clothed with clammy down. Flowers disposed in short, many-flowered racemes, the whole constituting terminal subcorymbose panicles.

1 N. TA'BACUM (Lin. spec. 258.) herbaceous; leaves sessile, oblong-lanceolate, acuminated : lower ones decurrent; throat of corolla inflately ventricose ; segments of the limb acuminated. ©. H. Native of America. Desf. fl. atl. 1. p. 109. Pursh, fl. 1. p. 141. Ruiz, et Pav. fl.per. 2. p. 15. Lam. ill. t. 113. Woodv. med. bot. p. 162. t. 69. Stev. et Church, med. bot. 1. t. 37. N. Havanensis, Lag. elench. pi. hort. reg. madr. 1796.—Bull, herb. 3. t. 285.—Blackw. 1.1. 146.—Sabb. hort. rom. 1. t. *89.* —Regn. bot. 1.1. 31. Plant downy, clammy. Leaves half stem-clasping. Calyx oblong, with lanceolate, acute, unequal segments. Corolla downy outside ; limb rose-coloured. Capsule length of calyx, or a little longer.

The Spaniards are said to have first become acquainted with tobacco in the West Indies. It early attracted the notice of the English settlers in Virginia, especially after the founding of James Town in 1607. Shortly after this, it appears that tobacco was introduced in lieu of specie, as the tavern-keepers were compelled to exchange a dinner for a few pounds of tobacco; and government officers were paid in the same commodity—180.

The species of Nicotiana, principally grown as tobacco, are *N. Tdbacum, N. macrophylla* and *N. rustica.* The two first are, however, generally preferred. The popular narcotic which it furnishes is probably in more extensive use than any other, and its only rival is the betel of the east. According to Linnaeus, tobacco was known in Europe from 1560, being brought by the Spaniards from America, and was cultivated at Lisbon in the same year. It was brought to England from Tobago, in the West Indies, or from Tobasco, in Mexico (and hence the name), by Sir Ralph Lane, in 1586, but only the herb for smoking. Afterwards, according to Hakluyt, seeds were introduced into the same quarter. Sir Walter Raleigh first introduced smoking in the house in which he lived at Islington were his arms, on a shield, with a tobacco plant on the top. Smoking has, consequently, been common in Europe for upwards of two centuries. Pallas, Rumphius, and Loureiro, are of opinion, that in China the use of tobacco is more ancient than the discovery of the world.

Tobacco, from being the solace only of the Red Indians of America, has become one of the luxuries *of* the rich, and a necessary of life for the poorer inhabitants of a great portion of the globe. The Hindoo, slow to adopt strange customs, has been caught with the general infection, though some religionists abstain from its use: their nobles, as well as their women, may be seen inhaling it in the midst of perfumed essences ; while labouring bearer, and hard-working boatmen, seem to derive fresh vigour from their ever-in-hand hooqqas: the Mongol tribes, finding it inconvenient to carry such an apparatus over their rugged roads, makes a hole in the ground, through which he smokes. " Tobacco, as used by man," says Du Tour (Nouveau cours d'Agriculture, &c.) " gives pleasure to the savage and the philosopher, to the inhabitant of the burning desert and the frozen zone. In short, its use, either in powder, to chew, or smoke, is universal; and for no other reason than a sort of convulsive motion (sneezing) produced by the first, and a degree of intoxication by the two last modes of usage. A hundred volumes," he adds, " have been written against it, *of* which a man has preserved the titles. Among those books is that of James Stuart, king of England, who violently opposed its introduction. The grand duke of Moscow forbade its entrance into his territory under pain of the knout for the first offence, and death for the next. The emperor of the Turks, the king of Persia, and Pope Urban VIII., issued similar prohibitions, all of which were as ridiculous as those which attended the introduction of coffee or Jesuits'bark. At present, all the sovereigns of Europe, and most of those of other parts of the world, derive a considerable part of their revenue from tobacco."

Tobacco is cultivated in Europe as far north as Sweden; and is also grown in China, Japan, and other eastern countries. The sort preferred is *N. Tdbacum,* which is an elegant plant, grown also in gardens as a border flower. *N. rustica,* the fausse tabac of the French, Bauern taback of the Germans, and "Dacca cimarosa of the Spanish, is also frequently cultivated, especially in Europe, it being considered hardier than the Virginian sort. Parkinson says he has known Sir Walter Raleigh, when prisoner in the Tower, prefer it to make good tobacco, « which [illegible] so rightly to cure." Tobacco has been successfully [illegible] and [illegible] in this country ; but [illegible] courage our commerce with America. It is [illegible] a curiosity, or for border flowers, or by [illegible] struction of insects. In Germany, and other northern countries, most families who have gardens grow enough of *rustica* for their own use ; but as they do not know how to cure it, it is not much valued, and is never made into chewing tobacco. The cultivation of tobacco for commerce » «»efly carried on in Virginia, Maryland, &C or almost from 35° to 40° north latitude. The other places of America celebrated for tobacco are Cuba, Vera Cruz and Cumana ; but in these places it is always grown

these i- te(l S round> where the temperature alone suits it in beds. In the cu ture of tobacco in America, the plants are reared on thev m Sp ring; and when they have acquired about 4 leaves, feef d-, are P lanted in the field> in well prepared earth, about *3* •stance every way. Every morning and evening the plants *ejo* be looked over, in order to destroy a worm, which invades the bud. from any earth ture of tobacco, the leaves are first cleansed Moistened *with* or decay ed Pai ts; next they are gently other inured Sa an(water » or water in which salt along with the fabricator^T^8 be€n diss olved» according to the taste of °peration is ^S liquor is called tobacco sauce. The next are rnixed to riemo Ve the rnidrib of the leaf 5 then the leaves may be the fial - n order to render the quality of whatever for smoking- b pplication equal. It is then cut into small shreds cords for ^e ? a mac hine like a straw-cutter,or formed into small snuffs. Xhe W n^ Or dried and ground for numerous varieties of Scotch or Sn -le princiPal sorts of snuffs are called Rappees, Panish, and Thirds. The first is only granulated, the second is reduced to a very fine powder, and the third is the siftings of the second sort. The large Havannah cigars are probably made from the leaves of *N. macrophylla,* or Oronoko tobacco ; the smaller, or Queen's, are said to be made from those of *N. repånda.* The Indians of the rocky mountains of North America use the leaves of *N. quadrivålvis* and *N. nãna,* and the Indians on the banks of the Columbia use those of *N. multivdlvis. N. rustica* is the tobacco of Salonica, and probably also that of Latakkia, which is so much esteemed. Manilla has long been celebrated for its tobacco. Niebuhr describes it as very fine. Many smokers prefer Manilla cheroots to any other. The next tobacco which has obtained reputation in England is that of Darabjird in Fars, (Shiraz,) *N. Persica.* Still farther north, the tobacco commonly denominated Turkish, the produce of *N. rustica,* and grown on the coasts of the Mediterranean, is highly valued in India. There is an excellent kind of tobacco called Arracan, or Martaban. Dr. Ainslie states, that the finest tobacco in India, and perhaps in the world, is grown near the village of Woodanum, in the northern circars, in some of those low sandy islands formed at the mouth of the river Krishna (from which is made the famous Masulipatam snuff) ; also in the Delta of Godavery, where the soil is particularly rich and fertile. The Chunar and Bhilsa tobaccos are also celebrated in India.

The active constituents of tobacco are supposed to be an essential oil; for by long boiling, the decoction and extract *of* tobacco become inert, and by distillation an oil is obtained from it so active, that small animals are almost instantly killed when wounded by a needle dipped in it. Vauquelin has analysed tobacco, both in its fresh and prepared state. The expressed juice is manifestly acid, and contains a great quantity of albuminous matter, supermalate of lime, acetic acid, nitrate and muriate of potass, muriate of ammonia, and a red matter soluble in alcohol, and an acrid principle called narcotin, which is also soluble in alcohol and water. Narcotin is obtained in a state nearest to purity in the distilled water of the infusion of the dry, or of the expressed juice of the fresh plant.

Tobacco is capable of producing deleterious effects on the living body, whether taken into the stomach in substance or solution, or into the lungs in the form of smoke, or applied to abraded surfaces. The system, however, becomes easily habituated to the action of tobacco ; and many people use very large quantities of it in several ways as a luxury, without experiencing any other bad effect than what arises from their being unable to relinquish it after the habit is confirmed. In medicine it is exhibited in various forms ; when chewed, it causes an increased flow of saliva, and sometimes relieves the toothache ; and reduced to powder, it proves an excellent errhine and sternutatory when snuffed up the nostrils. An infusion of it in water and wine, in small doses, so as to have little effect on the stomach, proves powerfully diuretic, and is employed with great success in dropsy and dysuria. The infusion is also applied externally for the cure of psora, tinea, and other cutaneous diseases. It is employed both in infusion and smoke, in the form of clysters in cases of obstinate constipation. An infusion of the leaves forms a powerful lotion for obstinate ulcers. The oil applied to a wound is said by Redi to be as fatal as the poison of a viper. The decoction, powder, and smoke *of* tobacco are used in gardening to destroy insects, and in agriculture for the same purpose, and to cure cutaneous eruptions in domestic animals.

Far. a, *attenudtum* (Schrank, in Hoppe's bot. zeit. 1807. p. *260.)* flowers attenuated ; leaves lanceolate, acute, subdecurrent, attenuated at the base : lower ones large. ©. H. Flowers red.

Far. /J, *macrophijllum* (Schrank, 1. c.) corollas obtuse, flatly mucronate at the angles ; petioles short, winged, at length

dilated and stem-clasping. 0. H. Flowers pale red, suborbicular, or with the margin obsoletely pentagonal. Perhaps not distinct from the species under the same name.

Far. y, *pallescens* (Schrank, 1. c.) corollas acute; leaves ovate, acuminated, attenuated at the base, sessile, subdecurrent. ©. H. Corolla white, with a rose-coloured margin, white beneath.

Var. $, dlipes (Schrank, 1. c.) angles of corolla acuminated ; teaves ovate, acuminated, attenuated into the petioles at the base, which are broadly winged ; wings reflexed, at length half stem-clasping, and a little decurrent. ©. H. Flowers pale red. Leaves all large. Perhaps the same as *N. macrophylla,* Spreng.

Var. t, *serotinum* (Schrank, 1. c.) leaves ovate, short-acuminated, subpetiolate, auriculately stem-clasping, and a little decurrent. ©. H. This is the latest flowering of all the sorts.

Var. f, *gracilipes* (Schrank, 1. c.) flowers acute; leaves lanceolate, acute, very much attenuated at the base, running into a short-winged petiole. ©. H. Flowers as in var. a, and the leaves as in var. *6.*

Var. t), Verdan (Schrank, 1. c.) leaves petiolate, ovate-lanceolate, longish, acute; petioles semi-terete, two-edged, somewhat decurrent at the base. ©. H. Flowers late.

Var. 6, linqua (Schrank, 1. c.) corollas long, acute ; leaves ovate, petiolate, longish, acute ; petioles long, obsoletely margined, auricled at the base.

Common *Tobacco,* or Virginian or Sweet-scented Tobacco. Fl. July, Aug. Clt. 1570. PL 4 to 6 feet.

2 N. LOXE'NSIS (H. B. et Kunth, nov. gen. amer. 3. p. 3.) leaves sessile, decurrent, oblong, acuminated, clammy and pilose ; corolla 3 times longer than the calyx, greenish-white; lobes acuminated. ©. H. Native of New Granada, in shady places between the town of Loxa and Mount Uritusinga, at the altitude of 1060 hexapods. N. Tabacum, var. ?. Herb clammy and pilose. Leaves 5 inches long, and *2* broad. Calyx 5-cleft, rather unequal. This hardly differs from *N. Tabacum,* unless in the colour of the flowers.

Loxa Tobacco. PL 3 to 4 feet.

3 N. FRUTICOSA (Lin. spec. 258.) stem suffruticose, almost simple; leaves ^petiolate, lanceolate, obliquely acuminated ; throat of corolla inflately ventricose: segments of the limb acuminated. *2 • G. Native of the Cape of Good Hope. Lehm. nicot. p. 23. no. 5. N. frutescens, Cav. elench. pi. hort. madr. 1807. Plant pubescent and viscid. Axillary branches short. Leaves tapering into the petiole at the base. Calyx ovate, with unequal, lanceolate segments. Limb of corolla rose-coloured. Capsule conical, longer than the calyx.

Var. /3, angustifblia (Ehrh. beytr. 5. jfc 169. Mill. icon. t. 185. f. 1.) leaves lanceolate, acute, sessile; calyxes acute; tube of corolla long. h_c . G. In Mill. diet. no. 5. there is mentioned a var. alba, which has broad leaves and white flowers, which is now unknown.

Shrubby Tobacco. Fl. July, Aug. Clt. 1699. Shrub 3 to 4 feet.

4 N. MACROPHY'LLA (Spreng. ind. hort. hal. 1807. p. 45. 16 N. HinviiLis (Link, enum. 1. p. 178. but not of Ehret.) stem nearly simple; leaves ovate, obtuse, repand, equal at the base; corolla with a cylindrical tube, which is twice as long as the calyx, and hairy, and the limb 4 times shorter than the tube. ©. H. Native country unknown. Very like *N. rustica;* but differs in the proportions of the corolla, and in the more slender habit.

Humble Tobacco. Fl. July, Sept. Clt. ? PI. | to 1 foot.

17 N. PULMONARIOIDES (H. B. et Kunth, nov. gen. amer. 3. p. 2.) leaves petiolate, oblong, acute, running into the petioles at the base, rather pilose; flowers panicled; corollas salver-shaped, exceeding the calyx a little: limb obtuse. ©. H. Native of the Province de Los Pastos, near Rio Blanco, between Guachucal and Tulca, at the altitude of 1620 hexapods. Plant clammy and hairy. Calyx 5-cleft, with ovate, acute segments. Corolla green; tube ventricose at top. Capsule subglobose, acute, glabrous, inclosed in the calyx.

Lungwort'like Tobacco. Pi. 3 feet.

18 N. ANDICOLA (H. B. et Kunth, nov. gen. 3. p. 1.) herbaceous; leaves sessile, lanceolate, acutish, narrowed at the base, smoothish; panicles terminal, nearly simple, spreading, clammy, and pilose; corolla somewhat salver-shaped, exceeding the calyx a little: lobes of limb obtuse, emarginate. ©. H. Native of the Andes of Peru, near Micuipampa, at the altitude of 850 hexapods. Herb clammy, and rather pilose. Calyx 5-cleft, with ovate, obtuse segments. Corolla green; tube ventricose at top. Stamens pilose at the base. Capsule glabrous, covered by the permanent calyx.

Andicolous Tobacco. PI. 3 to 6 feet.

SECT. III. PETUNIOIDES. Corollas salver-shaped, white; tube subcylindrical; segments of the limb obtuse or acute. Plants densely clothed with clammy villi. Flowers disposed in racemes or panicles, terminating the stem and branches.

19 N. SUAVEOLENS (Lehm. nicot. p. 43.) stems herbaceous, nearly simple; leaves subpetiolate, ovate-lanceolate, undulated; tube of corolla cylindrical, much longer than the calyx; segments of the limb rather unequal, roundish, obtuse. ©. H. or 1/. G. Native of New Holland. N. undulata, Vent. malm. t. 10. Jacq. fragm. t. *56.* Sims, botv mag. t. *673.* R. Br. prod. p. 447. Stem villous at the base, and smoothish at top. Leaves with a few scattered soft hairs on the veins and midrib; radical ones subspatulate, bluratish, rosulate. Calyx deeply 5-cleft; segments acute, unequal. Limb of corolla white. Capsule ovate, obtuse, glabrous, inclosed in the calyx.

Sweet-scented Tobacco. Fl. May, Sept. Clt. 1800. PI. 1 to 2 feet.

20 N. VINCTEFLORA (Lag. hort. madr. ex Link, enum. 1. p. 179.) leaves nearly sessile, oblong-lanceolate, attenuated at both ends, a little serrulated, glabrous; calycine segments equal, acuminated; tube of corolla elongated; segments of the limb blunt; stem rough at top. %. G. Native of South America. Very nearly allied to *N. suaveolens;* but differs in the plant being glabrous, and in the stem being warted at top.

Periwincle-flowered Tobacco. Fl. July, Sept. Clt. 1820. PI. 2 feet.

21 N. LONGIFLORA (Cav. descr. p. 106. D. Don, in Sweet, fl. gard. n. s. no. 196.) scabrous; cauline leaves stem-clasping, cordate-lanceolate, acuminated; tube of corolla long, filiform, 5 times longer than the subfoliaceous calyx; lobes of corolla ovate-lanceolate, acute. ©. H. Native of Chili and Buenos

Ayres. Corolla at first of a dirty white, afterwards tinged with purple, greenish-yellow, and pubescent outside ; inside of limb pure white. The whole plant is said to be villous, and the lower leaves petiolate, by Cavanilles.

Long-flowered Tobacco. Fl. July, Oct. Clt. 1832. PI. *2* to 3 feet.

22 N. NOCTIFLORA (Hook. bot. mag. t. *2785.* Sweet, fl. gard. t. *262.)* glandular and clammy, and beset with adpressed hairs; leaves petiolate, oblong-lanceolate, acute, undulately curled ; tube of corolla cylindrical, much longer than the calyx; segments of corolla equal, obcordately emarginate. %. F% Native of Chili. Flowers disposed in terminal panicles. Corollas white, purple beneath, sweet-scented.

Night-flowering Tobacco. Fl. Aug. Clt. *182G.* PL *2* to 3 feet.

23 N. PE'RSICA (LindL bot. reg. 1592.) clothed #'ith clammy down; radical leaves oblong-spatulate : cauline ones sessile, half stem-clasping, acuminated, hardly repand ; calyx acutely 5-toothed; corolla salver-shaped, with a long clavate tube, and ovate, obtuse, emarginate, rather unequal segments. ©• H. Native of Persia. Radical leaves cordate at the base. Flowers racemose, extra-axillary, on short pedicels, sweet-scented at night. Tube of corolla green, ventricose at top; limb green outside, and white inside. This kind of Nicotiana furnishes the far-famed Shiraz tobacco. The *N. Tdbacum* is, however, also cultivated in Persia.

Persian or Shiraz Tobacco. Fl. Sept. Oct. Clt. ? PI. \\ to 3 feet.

24 N. ACUMINA'TA (Sims, bot. mag. 2919.) downy; leaves broad-lanceolate, acuminated, undulated, on longish petioles ; panicles few-flowered; calyx clothed with glandular down ; calycine segments narrow ; corolla with an elongated tube, and roundish obtuse segments. ©. H. Native of Valparaiso. Petunia acuminata, Graham, in edinb. phil. journ. July, 1828. Corolla with a spreading white limb.

Acuminated-lesLved Tobgcco. Fl. June^, Sept. Clt. 1827. PI. 2 feet.

25 N. ANGUSTIFOLIA (Ruiz, et Pav. fl. per. 2. p. 16. t. 130. f. a. Lehm. nic. p. 25.) herbaceous, branched ; leaves petiolate : superior ones linear ; tube of corolla widened and subventricose at top : segments of the limb spreading, acute. ©. H. Native of Chili, about Conception. Horn. hort. hafn. 1. p. 215. Pers. ench. 1. p. 218. Plant pubescent, clammy! Branches slender. Flowers disposed in diffuse, terminal panicles. Calycine segments unequal, lanceolate-linear, acute. Limb of corolla milk-coloured, nearly equal; tube greenish. Capsule conical, obtuse.

Narrow-leaved Tobacco. PI. 2 to 3 feet.

26 N. DILATA'TA (Link, erwm. 1. p. 179.) stem herbaceous, rather tomentose, clammy ; leaves sessile, lanceolate, attenuated towards the base, but dilated at the base, repand; tube of corolla much longer than the calyx, subclavate ; segments of the limb acute. ©. H. Native country unknown. Lower leaves afoot long, and more than 3-4 inches broad; cauline leaves smaller, dilated at the base, all long-acuminated, and rather tomentose. Limb of corolla white. Link received this species **under the name of *N. angustifolia.***

Dilated-leaved Tobacco. Fl. July, Sept. Clt. 1820. PI.

27 N. PLUMBAGINIIFOLIA (Viv. elench. pi. hort. dinegro, p. 26. t. 5.) stem herbaceous ; leaves sessile : lower ones obovate-spatulate, bluntish : superior ones half stem-clasping, undulated; tube of corolla very long, subclavate; segments of the Jimb ovate, acute. 0. H. Native country unknown, but probably of South America. Lehm. nicot. p. 41. N. crispa, Jacq. frao-m. p. *57.* t. 84. Desf. cat. hort. par. 1804. p. *67.* N. certnthoides, Vittmann. Plant rather scabrous and hairy. Branches slender. Superior leaves oblong, the [illegible] fanceolate-linear. Racemes disposed in a ter[illegible] Calyx 5-cleft, 10-stnped; segments unequal. Limb [illegible] white above, and fuscescent beneath. Capsule ovate, glabrou length of calyx.

Plumbago-leaved Tobacco. Fl. May, June. Clt. 1810. 1 to 2 feet.

28 N. [illegible] (Willd. herb, ex Lehm. nicot. p. 40. t. 3.) stem herbaceous ; leaves stem-clasping, repandly undulated, sometimes lyrate ; tube of corolla very Ion- : segments of the limb ovate, tive of Cuba, near Havannah. Sims hot. H. B. et Kunth, nov. gen. amer. 3. p. 4. brous, except the young leaves, which are downy, distant, disposed in terminal, elongated racemes, on being examined by a lens, 5-cleft; segments equal, of corolla clavate at top ; limb white above. Capsu, obtuse, shorter than the calyx. The small Havannai or queen's, are said to be made of this species.

Repand-lesLved Tobacco. Fl. June, July. Clt. i»~i•

29 N. VISCOSA (Lehm. nicot. p. 28.) clammy ; leaves sessile, somewhat cuneiform, ODI[illegible] wards the base, half stem-clasping; tube of corolla cal, twice as long as the calyx: segments [illegible] tuse. 0. H. Native of Buenos Ayres. Stem an illary branches short, terminated by flowers. Corolla long. Calycine segments unequal, short, obtus. white ? tube widened a little at top.

Clammy Tobacco. Fl. July, Sept. Clt. 18~i. feet?

30 N. BONARIE'NSIS (Lehm. nicot. p. ~'- [illegible] ceous; leaves sessile, lanceolate, acute, broader base, subrepand; tube of corolla cylindrical; segm limb ovate, obtuse. ©. H. Native of Buenos Ayres pubescently pilose. Leaves half [illegible] Flowers racemose, terminating the stem and Corolla cine segments nearly equal, narrow-lanceolate, a downy, white ; tube a little dilated at top.

Buenos Aijrean Tobacco. Fl. July, Sept. W*- to 3 feet.

SECT. IV. POLYDI'CLIA (from TTOXVC, V[illegible] ti?Ziy, a valve ; in reference to the capsule being valved.) Corolla tubular, ventricose at the and livid outside. Capsule 4 or many-valved. lary, solitary.

31 N. QUADRIVA'LVIS (Pursh, fl. amer. sept. 1- Spreng. syst. p. 48. no. 95. Lehm. nicot. p. 45. herbaceous, branched ; leaves petiolate, oblong; tu twice as long as the calyx ; segments of the limb o ish ; capsule 4-valved, nearly globose. ©• North America, at the Missouri river. Sims, bot. mag. The whole plant is clammy and pilose, with a bad sme rior leaves nea% sessile. Calyx deeply 5-cleft; se equal. Corolla tubular, white inside.

iW-t;«fo«?tf-capsuled Tobacco. Fl. July, Aug. PI. 1 to 1| foot.

32 N. NANA (Lindl. bot. reg. t. 833.) plant lanceolate, pilose : radical ones longer than the solitary corolla longer than the calyx, with obtuse segments. Native of North America, among the rocky mountains. turbinate, clothed with glandular hairs. Corolla outside. Flowers rising from the axils of the leaves. dians are said to prepare the finest of their tobacco trom leaves of this species.

JW/Tobacco. Fl. June. Clt. 1823. PL \ foot.

The seeds [w]hen th[p]^[1]^[t0] be reared on a hot-bed in spring, and are grown with 2 or 3 leaves, they should be planted separately into small pots, and placed again in the frame ; and about the end of May those which are intended for the flower border should be planted out in conspicuous situations, and those intended for leaves in rows 3 feet distant, with the balls entire.

XVII. SAIRA'NTHUS (from (raipw, *sairo,* to clean; and *avdoc, antJios,* a flower ; with reference to the ringent corolla which separates this genus from *Nicotiana.)* Nicotiana glutinosa, Lin.

LIN. SYST. *Didyndmia, Angiosperma.* Calyx campanulately ventricose, sub-bilabiate ; limb 5-cleft, with linear-lanceolate, acutish, unequal segments. Corolla somewhat funnel-shaped, twice as long as the calyx ; tube ventricose above, a little curved ; limb 5-lobed, rather ringent, spreading a little ; lobes ovate, acutiah, nearly equal. Stamens 5, inserted in the tube, exserted a little, unequal, directed all to one side of the flower; filaments filiform, dilated and downy at the base. Anthers dehiscing lengthwise inside. Style curved at top. Stigma capitately thickened, green. Capsule roundish-ovate, acute, covered by the permanent calyx, and hardly exceeding it, 2-celled, 2-valved; valves at length bipartible at top. Placentas free, remote from the dissepiment. Seeds very minute, oblong, angular, verrucosely warted.—An erect, branched, villously clammy herb. Leaves petiolate, ovate-cordate, acuminated. Racemes terminal, erect, secund. Corollas rose-coloured, clothed with clammy hairs outside.

1. S. GLUTINOSUS ; ©. H. Native of Peru, in temperate places near Guancabamba, and elsewhere in South America. Nicotiana glutinosa, Lin spec. 259. Andr. bot. rep. 484. Ruiz, et Pav. fl. per. 2. p. 16. Lehm. nicot. 32. N. militaris, Lin. act. holm. 1753. vol. 15. p. 44. t. 2. Tabacus viridis, Mcench. meth. p. 448. The whole plant is clammy and villous.

Clammy Sairanthus. FL July, Sept. Clt. 1759. PL 2 to 4 feet.

Cult. For culture and propagation see *Petunia* below.

XVIII. LEHMA'NNIA (named in honour of Professor John George Christian Lehmann, of Hamburgh ; author of Aperifoliae nuciferse, and Generis Nicotianarum Historia, and many other botanical papers.) Spreng. anleit. ed. 2d. 1817. 1. p. 458. Nicotiana species, Ruiz, et Pav.

LIN. SYST. *Pentdndriay Monogynia.* Calyx 5-cleft, bilabiate ; segments nearly equal, spreading. Corolla irregular; with a very narrow incurved tube, which exceeds the calyx a little ; throat thickened; limb campanulate, with acute segments. Genitals exserted, recurved. Capsule ovate, half covered by the calyx.^ Seeds angular, wrinkled.—An erect, woody, rather clammy shrub, divided into many angular branches. Leaves scattered, lanceolate, decurrent, acute, quite entire, white, with purple veins. Panicles large, diffuse, clammy, villous. Corolla glabrous, purple.

1 L. TOMENTOSA (Spreng, 1. c.) T?. G. Native of Peru, in corn fields, and in waste places. Nicotiana tomentosa, Ruiz, et Pav. fl. per. 2. p. 16. t. 129. f. a. Poir. suppl. 4. p. 94.

Tomentose Lehmannia. Shrub 15 to 20 feet.

Cult. For culture and propagation see *Petunia* below.

XIX. PETIPNIA (Petun or Petum is the name of tobacco in Brazil; the name is given to this genus on account of its affinity with *Nicotiana.)* Juss. in ann. mus. 2. p. 215. t. 47. f. 2. Pers. ench. 1. p. 218. Sweet, fl. gard. 119.—Nicotiana species of authors.

LIN. SYST. *Pentandria, Monogynia.* Calyx deeply 5-cleft; segments oblong, subspatulate. Corolla salver-shaped, with a cylindrical tube, which is a little widened at top, and a spread-

ing, dilated, 5-lobed, obtuse, unequal limb. Stamens unequal, inclosed ; anthers roundish, dehiscing lengthwise. Stigma capitate, slightly 2-lobed. Capsule girded by the calyx below, 2-celled, 2-valved at apex, many-seeded. Seeds minute.—Diffuse, pubescently villous, evergreen, herbaceous plants. Leaves alternate, on short petioles. Flowers axillary, pedicellate, white, shape of those of *Mirdbilis dichotomus.*

1 P. NYCTAGINIFLORA (Juss. 1. c. p. 216. t. 47. f. 2.) herbaceous, diffuse, clothed with clammy, glandular villi ; lower leaves alternate, ovate-oblong, obtuse, pubescent, attenuated into the petioles at the base : floral leaves sessile, cordate-ovate, opposite ; flowers axillary, pedunculate ; corolla large, having the tube 3-4 times longer than the calyx, and the limb broad and obtuse. 1£. F. Native of South America, at the mouth of the river Plata. Poir. suppl. 4. p. *375.* Tratt. tab. t. 72. Sweet, fl. gard. 119. Sims, bot. mag. t. 2552. Nicotiana axillaris, Lam. ill. no. 2287. Nicotiana nyctaginiflora, Lehm. nicot. p. 20. Branched. Stem hairy. * Leaves pubescent. Pedicels villous, furnished with 2 opposite leaves at the base. Calyx pubescently villous, with unequal, oblong, obtuse, spreading, foliaceous segments. Corollas large, white, clammy, downy outside, similar to those of *Mirdbilis,* hence the specific name.

Marvel-of-Peru-flowered Petunia. Fl. June, Oct. Clt. 1823. PI. 2 to 4 ieet.

2 P. PARVIFLORA (Juss. 1. c. p, 21G. t. 47. f. 1.) herbaceous, prostrate; leaves sessile, oblong, obtuse, thickish ; corollas small, hardly longer than the calyx ; segments of the limb obtuse. %. F. Native of South America, at the mouth of the river Plata. Pers. ench. 1. p. 218. Stems many from the same root, rather villous. Leaves small, size of those of a species of *Cerdstium,* downy. Segment of calyx oblong, bluntish, foliaceous, spreading. Corolla coarctate in the middle, red ; limb plicate. Capsule inclosed in the calyx.

Small-flowered Petunia. PL prostrate.

3 P. INTERMEDIA ; clothed with short, glandular, clammy, hoary pubescence; leaves linear, obtuse ; peduncles opposite the leaves, or terminal ; corolla funnel-shaped, having the tube hardly longer than the calyx, and the segments emarginate ; style clavate; capsule 5-ribbed ; calycine segments foliaceous, unequal. ^ • or "}/. F. Native of Buenos Ayres, on the banks of the Parana. Nierembergia intermedia, Graham, in edinb. phil. journ. 1833. D. Don, in Sweet, fl. gard. n. s. t. *237.* Salpiglossis linearis, Hook, in bot. mag. no. 3256, in a note. Tube of corolla yellow, striated ; throat ventricose, yellow within ; limb 5-lobed, of a rich purple.

Intermediate Petunia. Fl. Aug. Sept. Clt. 1832. PI. \ foot.

4 P. VIOLATE A (Lindl. bot. reg. t. 1626.) prostrate, clothed with clammy hairs or down ; leaves ovate, on short petioles, acute; corolla ventricose, with ovate, acute segments ; flowers solitary, axillary, pedunculate. %. F. Native of Buenos Ayres, on the Uruquay. Nierembergia punicea, D. Don, in Sweet, brit. fl. gard. n. s. t. 193. Salpiglossis integrifolia, Hook. bot. mag. t. 3113. Calycine segments linear-spatulate, obtuse, foliaceous. Corollas large, of a rose purple colour; limb irregular. Stamens inserted in the middle of the tube. Embryo short, straight; albumen copious.

Far. /3, Atkinsiana (D. Don, in Sweet, fl. gard. n. s. t. *268.)* leaves ovate, acutish ; calycine segments ligulate; tube of corolla twice as long as the calyx. %. F. A hybrid between *P. nyctaginiflora* and *P. violacea.* In habit it is much like the former, but the flowers are nearly intermediate between the two parents, but the colour is almost that of the latter.

Violaceous-flowered Petunia. Fl. July. Clt. 1831. PI. 1 foot.

Cult. The species are all exceedingly elegant plants when in blossom. In the open border they succeed very well from xMay to September ; and large patches of them have a very gaudy appearance. In autumn a few plants of each species should be put into pots, and removed to the greenhouse, so as they may be preserved from the frost of winter. All succeed best in a light rich soil, and are readily propagated from cuttings. Seeds of them are also sometimes ripened in this country, by which they may be increased.

XX. NIEREMBERGIA (named in honour of John Eusebius Nieremberg, a Spanish Jesuit; author of Historic Naturae maximè peregrinae. 1. vol. in folio. Antwerp, 1635.) Ruiz, e Pav. fl. per. 2. p. 13. t. 123. H. B. et Kunth, nov. gen. amer. 3. p. 8. t. 198.

LIN. SYST. *Pentdndria, Monogynia.* Calyx tubular, 5-cJett, segments lanceolate, acute. Corolla somewhat salver-shaped; with a very long, cylindrical, slender tube ; and a 5-lobed, plicate, equal, blunt limb. Stamens 5, exserted; filaments connate at the base; anthers dehiscing lengthwise. Stigma pel" tately 2-lobed. Capsule 2-celled, 2-valved in the bottom *ot* the permanent calyx ; dissepiment parallel with the valves, at length *free.*—Stems suffruticose, or herbaceous, filiform, pr°" cumbent, and often creeping. Leaves scattered, solitary, sometimes twin, entire. Flowers extra-axillary, or opposite the leaves, solitary, almost sessile, white, and tinged with blue or red.

1 N. CALYCINA (Hook. bot. mag. t. 3371.) clothed with glandular pubescence ; stems herbaceous, procumbent; leaves opposite and alternate, roundish-obovate, petiolate; peduncles lateral, 1-flowered, extra-alar, short; calyx large, campanulate, with obovate, 3-nerved, foliaceous segments ; corolla with a very long, slender, cylindrical tube, and a 5-lobed, campanulate limb. 1/. F. Native of Buenos Ayres, on the Uruquay. Sweet, fl. gard. n. s. t. 319. Corolla rising from the broad calyx ; limb white, its base alone yellow.; tube yellowish. Habit *of Petunia.*

Large-calyxed Nierembergia. Fl. Sept. Oct. Clt. 1834. PI. procumbent.

2 N. SPATULATA (H. B. et Kunth, nov. gen. amer. 3. p. 8.) stems woody, creeping; leaves petiolate, elliptic-spatulate, glabrous, rather downy, and somewhat ciliated while young ; calycine segments lanceolate, acute : lower ones a little smaller and reflexed ; capsule few-seeded. J?. F. Native of New Granada, near Santa Fe de Bogota, and Loxa, at the altitude of 1000 and 1300 hexapods. Stems filiform, prostrate; branches short, erect, puberulous. Leaves solitary or twin, obtuse or rounded at apex. Flowers pedicellate. Calyx pilose at bottom, a little arched. Corolla glabrous ; tube slender, half an inch long, 4 times longer than the calyx ; limb campanulately £innel-shaped. Stamens glabrous, membranous, linear. Capsule in the bottom of the ventricose calyx.

Spatiilate-\eaved Nierembergia. PI. creeping.

3 N. REPENS (Ruiz, et Pav. fl. per. 2. p. 13. t. 123. f. c.) stems creeping at the base, but erectish at top, and filiform; leaves in fascicles of 5 or 6, oblong, obtuse, rather pilose; flowers sessile. %. F. Native of Chili, about Conception, in dry sandy pastures. Leaves \ an inch long, and 2-3 lines broad. Corolla white, with, a yellow throat, and with 3 purple lines on each of the segments of the limb.

Creeping Nierembergia. Fl. Cult. PI. 1 foot.

4 N. ANGUSTIFOLIA (H. B. et Kunth, nov. gen. 3. p. 9. t. 198.) stems herbaceous tufted, diffuse ; leaves sessile, linear-lanceolate, glabrous; calycine segments linear, acute, equal; capsule many-seeded. %. F. Native of Mexico, near Real del Monte, at the altitude of 1430 hexapods. Flowers opposite the leaves, on short pedicels. Corolla glabrous, white; tube longer than the calyx ; limb campanulately urceolate, not plicate.

Narrow-leaved Nierembergia. PI. diffuse.

LIN, SVST. ***Didndria,*** *Monogtjnia.* Calyx 5-parted, nearly equal. Corolla **with** a narrow, short tube, and a **4-parted,** irregular, shapeless limb, **which** is plicate in aestivation. Stamens 4, the 2 upper ones sterile ; filaments altogether adnate ; anthers inserted by the base, 2-celIcd ; celJs confluent at apex, Ovarium 2-cclled, seated on a fleshy disk ; stigma compressed, obtuse : lobes connate. Capsule 2-celled, many-seeded ; valves bifid. Dissepiment parallel. Placentas 2, spongy. Seeds cochleate, tubercled. Albumen fleshy. Embryo arched, with a cylindrical, obtuse radicle, which is twice as long as the cotyledons.—Annual glandular herbs, natives of Chili. Leaves bipinnatifid. Flowers somewhat racemose, variegated. A peculiar acid secretion is given out by the glandular hairs, first pointed out by Miss Murray, a young lady of eminent botanical taste and knowledge.

1 *B.* PiNNA'ius{Ituiz. et Pav. fl. per. 1. p. 13. t. 17.) fructiferous peduncles inflexed at top, secund ; lateral segments of the lower lip of the corolla longer than the intermediate one, which is obcordate : upper segment of the corolla **cuneate,** emarginate. ©. H. Native of Chili. Hook. exot. fl. 73. Ker. bot. reg. 725. Hook. bot. mag. t. 2404. Corolla rose-coloured, almost approaching to white towards the centre ; the 2 lateral segments cut into blunt, spatidate, sometimes emarginato lobes ; the **lower** iip deep, red dish-purple ; the lower part of the upper segment yellow and spotted.

Far. ($, humilis (Lind!. bot. reg. 1562. D. Don, in Sweet fl. gaTd, t. 197.) stature more humble; leaves lyrate : segments roundish, crenated, or entire ; racemes crowded, 0 H. Corollas as in the species.

PhnatcAcaved Schizanthus. Fl. June. Oct. C!t. 1..32. PI 2 feet.

2 S. roRRiGENS (Graham, in Hook. exot. fl. t. 86.) fructiferous pedicels spreading, straightish; tube of corolla shorter than the calyx; lateral segments of the lower lip longer than the middle one: upper segment oblong, obtuse. 0. H. Native of Chili. Hook. bot. mag. 2521. **Lateral** segments of corolla doubly lobed ; lobes bifid, obtuse, but not deep. Lower lip of flower violet or purple ; **the** rest of the corolla pale red, except the centre of the upper segment, which is yellow.

*Spreadhig-nci]*uncled Schizanthus. Fl, June, Oct. Clt. 1822. PI. 2 feet.

3. S. RETITSUS (Hook. bot. mag. 3045. Lindl. bot. reg. 1544. D. Don, in Sweet, fl. gard. n. s. t. 201.) fructiferous peduncles erect; tube of corolla longer than the calyx; lateral segments of the lower lip shorter than the middle one, which is sagittate; upper segment rhomboid-oblong, retuse. ©. H. Native of the Andes *of* Chili, Dr. Gillies. Plant lively green. Leaves like those of the other species, deeply and interruptedly pinnatifid, almost pinnate, similar to those of *Tansy ;* the segments lanceolate, rather blunt; and the primary ones deeply pinnatifid. Corolla pale violet; the lateral segments of an uniform lake colour, doubly 2-lobed ; the lobes blunt, unequal, and divaricate ; lower lip of a deep reddish purple, tripartite; the lateral segments linear, obtuse : the upper segment of the corolla yellow, marked with dark brown spots, veiny beneath, the edges revolute, with a cucullate base ; the ends lilac.

Betuse-fiowered Schizanthus. Fl. June, Oct. Clt. 1831. PI. *2* feet.

4 S. HOOKE'RI (Gillies, mss. Graham, in edinb. phil. journ. 1830. Hook, in bot. mag. 3070.) pedicels erect; tube of corolla much longer than the calyx, and about equal in length to the limb ; middle segment of the lower lip bicornute, much longer than the lateral ones, which are linear ; upper segment, or upper lip long-acuminated. ©. H. Native of Chili. The whole corolla is of a pale rose-colour, except the middle of the upper segment, which is yellow. Leaves interruptedly bipinnatifid, like those of the other species.

Hooker's Schizanthus. Fl. June, Oct. Clt. 1828. PI. 2 feet.

5 S. GRAHA'MII (Hook, in bot. mag. 3044.) fructiferous peduncles erect; tube of corolla equal in length to the calyx; lateral segments of the lower lip equal in length to the middle one, which is bifid: upper lip or segment ovate, acuminated. 0. H. Native of Chili, Dr. Gillies. Lateral segments of the corolla doubly bifid, obtuse, like those of other species, *of* a lilac coleur, as well as the lower lip: upper lip or segment yellow, tipped with lilac. Leaves like those of the other species.

Graham's Schizanthus. Fl. June, Oct. Clt. 1831. PI. *2* feet.

Cult. Schizanthus is a genus of the most elegant, most handsome, and showy annual plants. They succeed well if the seed be sown in the open border early in spring; or the plants may be reared in autumn, and preserved in a greenhouse or frame during winter if they are wanted to blossom early in summer; they may also be reared on a hot-bed in early spring, and the sets in part planted out in the open border, and the remainder grown singly in pots, and placed in the greenhouse. A light fresh earth, not too rich, will be found to suit the species best; and if they are to be kept in the greenhouse, a free admission of air and light is absolutely necessary to preserve them in health and vigour, and to give the flowers their proper tints of colour.

XXIII. SCOPO'LIA (named in honour of John Anthony Scopoli, a celebrated professor, and author of Methodus Plantarum, in 8yo. Vienna, 1754, Flora Carniolica, 1 vol. 8vo. Vienna, 1760, and a second edition in 1772, and several other botanical works.) Jacq. obs. 1. p. *32.* t. 20.—Scopolina Schultes, cestr. fl. ed. 2d. vol. 1. p. 335.—Hyoc^amus Scopolia, Lin.

LIN. SYST. *Pentdndria, Monogynia.* Calyx campanulate, 5-cleft, miuic. Corolla campanulate, 5-cleft, 3 times longer than the calyx; segments obtuse, rather deep. Stamens approximate, bent towards the lower side of the corolla. Capsule circumcised, or opening transversely. Seeds reniform, scabrous. —An erect, glabrous plant, with many stems rising from the same root, which are bifid at top. Leaves petiolate, wrinkled a little, alternate, solitary, or twin. Flowers shc~n have a ver) pedunculate, drooping, rising from the two as the campanulate, dingy, or dusky purple. -»ceed best.^lf^'

1 S. CARNIOLICA (Jacq. obs. 1. p. 32. t. 20.) ,ttings. St *of* Carniola, Hungary, Bavaria, &c. in woods., Scopolia, Lin. spec. St. Hil. 20. t. 6. Sims, 1126. Scopolina atropoides, Schultes, cestr. fl 844. Rcem. et Schultes, syst. 4. p. 312. Leaves entire: cauline ones alternate, solitary; but those fork of the stem are 3 in a whorl, or 3 together : on the branches they are twin, having a solitary, pedunculate, drooping flower rising from between each of the pairs *of* leaves.

Carniolian Scopolia. FL April, May. Clt. 1780. PL 1 foot.

Cult. A light dry soil, and a shady situation suit this plant best. It is very desirable, as it flowers early in spring when very few hardy herbaceous border flowers are in blossom. It is easily increased by divisions *of* the root.

XXIV. PHYSOCHLATNA (from *tyvo*, physa,* a bladder ; and *yXaiva, chlaina,* an outer garment ; in reference to the inflated calyx.) Hyoc^amus species of authors.

LIN. SYST. *Pentandria, Monogynia.* Calyx sub-inflated, 5-toothed; teeth ovate, obtuse. Corolla campanulately funnel-shaped, widening gradually to the mouth, slightly 5-lobed; lobes short, obtuse. Stamens *5,* exserted ; filaments fixed to the bottom of the corolla, hairy at the base. Stigma dilated. Anthers dehiscing lengthwise at the sides. Capsule similar to that of *Hyocijamus.*—Herbaceous perennial plants. Stems simple, many from the same root. Leaves alternate, solitary, entire. Flowers fascicled, capitately corymbose, terminal. Corollas dark purple.

1 P. PHYSALOI'DES ; leaves petiolate, ovate, acute, somewhat repand, or quite entire; flowers pedicellate, terminal, capitately corymbose ; genitals a little shorter than the corolla; fructiferous calyx inflated, angular, glabrous, mutic, much larger than the capsule. %. H. Native of several parts of Siberia, as among rocks on the mountains at the river Tscharysch and Irtysch ; and also on Mount Arkat, in the Kirghisean steppe. Hyoc^amus physaloides, Lin. amoen. acad. 7. t. 6. *f. I.* Curt, bot. mag. t. 852. Sweet, fl. gard. t. 13. A'tropa physaloides, Georgi, beschr. russ. Reichs. nachtr. p. 261.—GmeL fl. sib. 4. p. 93. no. 49. Root creeping a little. The whole plant glabrous. Stems simple or branched, scaly at the base. Leaves dark green, smoothish, ovate, truncate at the base, quite entire or repand. Corolla purplish-violet.

Physalis-Uke Physoclaina. Fl. March, April. Clt. 1777. PL 1 to U foot.

2 P. ORIENTALS ; leaves petiolate, deltoid-ovate, repand, or entire, acute, downy ; flowers pedicellate, fasciculately and capitately corymbose; genitals a little exserted ; fructiferous calyx tumid, downy, mutic, much larger than the capsule. %. H. Native of Iberia, in hidden places about Narzana. Hyocyamus orientalis, Bieb. fl. cauc. 1. p. 164. Sweet, fl. gard. t. 12. Sims, bot. mag. 2414. Hyocyamus orientalis betae folio tuberosa radice, Tourn. cor. p. 5. Stem villous. Corolla pale purplish-blue. This is very like *P. physaloides ;* but differs in the higher stature, and more robust habit; in the herb being pale green, and more downy ; the calyx being longer ; and in the tube of the corolla widening gradually to the top; in the genitals being usually exserted ; and in the calyx being less inflated, and hardly twice as long as the capsule.

Oriental Physoclaina. FL March, May. Clt. 1821. PL 1 to 1| foot.

Cult. The species of *Physochlaina* are extremely desirable plants; being early flowerers, and elegant when in blossom. They will grow in any soil, and are readily propagated by divi-

of the root, or by seed. They are well adapted for decoration; borders in early spring.

f. HYOCY^AMUS (from *hg hog, hys hyos,* a hog; and *amos*, a bean, hog-bean ; these animals, according to and u fi it, unless drenched with water without t. 109 T. gen. no. *24i7,* Schreb. gen. no. *333.* Juss. gen. Usteri, p. 139. Gsertn. fruct. 1. p. *369. t. 76.* Perm SYST, *Pentdndria* > *Monogynia.* Calyx tubular, 5-cleft, Ventricose at the base. Corolla campanulately fun- oblique, 5-cleft; segments obtuse, one than the rest. Stamens inclinate. Capsule immersed in the calyx, 2-celled, many- fixed to the dissepiment. Seeds clammy, downy, fetid, canes- decurrent, stem-clasping, sinuated. Flow- rows veined with purple, or yellow with a dark spec. 257. hort. cliff. *56.* fl. suec. no. branched ; leaves sessile, sessile ; corolla stem-clasping, sinuated ; flowers almost sessile ; calyx mucronate. *$* . Corollas pale beautifully reticulated with purple veins; and **bottom. Linnaeus says it is not touched by** perhaps the goat. The English name of derived from its being noxious to poultry. plant is called *Bthenhraut;* in Dutch *Buhen-* and *Honsebane;* in Swedish *Bolwort La Jusquame;* in Italian *Guisquiamo,* Spanish *Helena* and *Velena;* in Portuguese *amo ;* in Russian *Belena.*

The leaves have a strong and peculiar smell when like tobacco especially when burnt; and on as if they contained a nitrate. From the others, it appears to have been long of medicine. By Celsus it was applied ex- in ophthalmiae, for allaying the pain of internally as an anodyne. Its virtues principle discovered by M. Brandes, The use of henbane was for a long until revived by Dr. Stoerk, of where there are cases where an anodyne is requisite ; and to the use of opium, it is now much dose it often produces sweat, and pustules, generally sound sleep, suc- and recruited vigour of the body ; instead of these, it sometimes gives rise be, and general uneasiness. With some indi- vomiting, cholic pains, &c. In excessive of the eyes, convulsions, and death. it is powerful anodyne; and, like effects, having rather a employed in wandering rheumatic pains, in indurations of the mammae, painful swellings—whether schirrous or not, scrofulous and cancerous ulcers, &c.: under the form of a cataplasm of the bruised leaves, with bread and milk ; of an ointment made of powder of the leaves, with wax and oil; of a simple powder sprinkled on the sore, or of a decoction with milk as an injection. An infusion, prepared by digesting the bruised leaves in olive oil, is also usefully applied in inflammations of the bowels, kidneys, urethra, &c. An extract from the leaves, or from the seeds, is the form in which it is given internally ; and it has been used with advantage in a variety of nervous affections, as mania, melancholia, epilepsy, hysteria, &c. ; in glandular swellings ; in obstinate ulcerations ; to allay inordinate action, or to mitigate pain. Its dose may be gradually increased from half a grain : Cullen pushed it to the length of 30 grains to a dose.

The extract of henbane has lately been much used by oculists, for dilating the pupils of the eyes ; in order to facilitate the extraction or breaking down of the cataract; to diminish sensibility ; to destroy adhesions ; to reduce protrusions of the iris, and to dilate contraction of the pupil. The mode of application is by dropping a few drops of solution of the extract into the eye, or applying them with a camel's-hair pencil. The greatest effect is produced in about 4 hours, and it is generally over in *12* hours; and vision is not impaired during its action.

Black or Common Henbane. Fl. June, July. Britain. PL *2* to 4 feet.

2 H. AGRE'STIS (Kit. ex Schultes, oestr. fl. ed. 2d. p. *383.)* stem simple, downy ; leaves smoothish, sessile, semi-decurrent, sinuately toothed ; flowers sessile ; corolla reticulated. ©. H. Native of Bohemia, Austria, Hungary; as well as of the North of India, in corn-fields. Mart, et Koch. fl. germ. *2.* p. *225.* Sweet, fl. gard. 1. t. *27.* H. niger, Roxb. fl. ind. *2.* p. *237.* H. niger, /J, agrestis, Nees, in Lin. trans. 17. p. *77.* H. niger, /3, annuus, Sims, bot. mag. 2394. H. Bohemicum, Schmidt, fl. bohem. no. 230.? Flowers rather smaller than those of *H. niger,* and darker in colour.

Field Henbane. Fl. April, May. Clt. 1820. PI. 1 foot.

3 H. PA'LLIDUS (Waldst. et Kit. ex Willd. enum. 1. p. *228.)* leaves stem-clasping, angular; radical ones angularly toothed ; flowers sessile; corolla one colour. ©. H. Native of Hungary. Very like *H. niger;* but differs from it in the root being annual, and in the flowers being yellow, without any purple veins.

Pafe-flowered Henbane. Fl. April, May. Clt. 1815. PI. 1 to 2 *feet.*

4 H. A'LBUS (Lin. spec. *257.* hort. cliff. *56.)* leaves petiolate: lower ones orbicular, entire; the rest from cordate to ovate at the base, sinuated; flower sessile. ©. H. Native from the South of Europe to Tauria, among rubbish, on walls, and on road sides near the sea. Lam. ill. t. 117. f. 2. Mill, fig. t. 149. Sibth. et Smith, fl. grsec. t. 230. St. Hil. pi. fr. 45. t. 5.—Bull. herb. t. 99.—Sabb. hort. 1. t. 191.—Blackw. t. 111.—Besl. eyst. 8. t. 8. f. 2. Plant clothed with white hairs. Calycine segments ovate: lower ones the smallest. Corolla yellow, or greenish-yellow, with a white or greenish bottom. The corolla varies, with the base dark purple or green; hence Miller has made two species, *H. major* and *H. dlbus.* The first of these having the flowers on short pedicels, of a pale yellow colour, with very dark purple bottoms ; and growing naturally on islands of the Archipelago. This is the H. major, albo similis, umbilico floris atropurpureo, Tourn. cor. p. 5; the plant figured in Flora Grseca. The second has the flowers in larger bunches, sessile on the ends of the branches, of a greenish-yellow colour, with green bottoms. T us is a native

of the South of Europe ; and is the H. major albo similis, urabilico floris virente, Jussieu, and is the plant figured by Miller. There is also the var. minor. Clus. hist. 2. p. 84. f. 1.

White Henbane. Fl. July, Aug. Clt. 1570. PI. 1 to 2 feet.

5 H. VA'RIANS (Vis. in bot. zeit. 1829. p. 7.) plant woolly, viscid ; leaves petiolate, sinuately lobed, obtuse : lower ones subcordate: floral ones ovate, attenuated at the base, almost entire ; flowers racemose, secund, almost sessile : lower ones on long pedicels; tube of corolla incurved, dark purple inside, at length becoming green ; limb irregular ; the 3 superior lobes large and flat. ©. H. Native of Dalmatia, on walls, and in waste places.—An intermediate plant between *H. dlbus* and *H. aureus.* Anthers lilac, at length white.

Varying Henbane. PI. 1 to 2 feet.

6 H. AU'REUS (Lin. spec. 257. syst. 220. hort. cliff. *56.)* leaves petiolate, cordate-ovate, acute, angularly toothed ; flowers pedicellate ; the 3 larger segments of the corolla undulated. %. F. Native of the Levant, Candia, and the South of France. Curt. bot. mag. 87. Sibth. et Smith, fl. grsec. t. 231.—Bull, herb. t. 20. H. Creticus luteus major et minor, Tourn. inst. p. 118. H. Créticus, Park, theatr. 362. f. 8.—Mor. hist. sect. *5.* t. 11. f. 4.—Alp. exot. 99. t. 98. The whole plant is clothed with clammy hairs. Leaves undulated. Teeth of calyx short, roundish-ovate, mucronate. Corolla yellow, with a deep violaceous bottom ; limb cleft at the side. Stamens and anthers violaceous. Capsules drooping.

FIG. 41.

Golden-Cowered Henbane. Fl. March, Oct. Clt. 1640. PL 1 foot.

7 H. SENECIONIS (Willd. enum. 1. p. 228.) leaves petiolate, somewhat 3-lobed, deeply toothed; flowers pedicellate; segments *of* the limb of the corolla equal, flat. *2/.* F. Native of Egypt. The whole plant is clothed with clammy hairs. Calycine segments ovate, acute. Corolla yellow, purplish in the bottom, as well as the base of the stamens; limb not cleft at the side. Anthers white.

Groimdsel-like Henbane. Fl. March, Oct. Clt. 1812. PL 1 foot.

8 H. MI/TICUS (Lin. mant. p. 45. syst. 220.) leaves petiolate, ovate, acute-angled ; flowers pedicellate; calyxes mutic; bracteas undivided. *$* . H. Native of Egypt and Arabia ; and the Levant. H. albus jEgypticus, Alp. exot. 193. t. 192.? H. minor, Mill. diet. no. 4. H. betsefolius, Lam. diet. 3. p. 329. H. minor, albo similis, umbilico floris atropurpureo, Tourn. cor. p. 5. Plant downy. Corolla yellow outside, dark purple inside ; the 2 lower segments white, smaller, at length the whole becomes white ; limb cleft. Stamens purple.

Ato'c-calyxed Henbane. FL March, April. Clt. 18*2. PL 1 foot.

9 H. DAT6R;E (Forsk. a^gypt. arab. p. 45.) leaves petiolate, ovate-lanceolate, a little toothed ; flowers nearly sessile; floral leaves or bracteas entire, *fy* • *• Native of Egypt, in deserts about Cairo. Plant villous. Calyx 5-toothed. Flowers disposed in long secund spikes, 3 at the top of each stem. Corolla villous outside, and yellowish, violaceous inside, white between the lower segments. Stamens villous at the base. The corolla in the plant cultivated is yellow, with a dark purple bottom, very like those *of H. aureus.* It is perhaps the Nepenthes ot Homer.

Datora Henbane. Fl. May, July. Clt. 1829. Shrub *U* foot.

10 H. CANARIE'NSIS (Ker. bot. reg. t. 180.) shrubby, pilose; lower leaves petiolate, cordate-ovate, angular, obtuse: nora^ ones ovate or elliptic, entire ; flowers pedicellate. J? • G. Native of the Canaries. Corolla yellow, with a dark purple, o almost black eye or throat.

Canary Island Henbane. FL Year. Clt. 1816. Shrub Jj foot.

11 H. PUSI'LLUS (Lin. syst. 220. mant. p. 339.) leaves petiolate, oblong-lanceolate, a little toothed; flowers pedicellate; teeth of calyx mucronulately and spinosely-cuspidate. ©• Native of Persia. Lin. hort. cliff. *56.* ups. p. 44.—Plukn. phyt. t. 37. f. 5. Plant pilose. Leaves tapering into the petioles ; floral ones entire. Calyx nearly as long as the corolla. Corolla small, yellow, with a violaceous bottom ; the lower side divided beyond the limb, ex Lin.

Least Henbane. Fl. July. Clt. 1691. PL J to 1 foot.

12 H. MICRA'NTHUS (Ledeb. mss.) leaves petiolate, oblong: radical ones pinnatifid : cauline ones toothed, or entire; flowers nearly sessile; teeth of calyx mucronate. ©. H. Native of Altaia, on the dry and rocky mountains of Arkaul, and Dolenkara, Tschingis-tau; and on the mountains of Kalmy-Tologoi, in the Kirghisean Steppe, Falck. H. pusillus, Led. fl. alt. 1. p. *228f* but not of Lin. Stem simple, or branched, sparingly pilose. Leaves nearly glabrous. Calyx attenuated towards the base; teeth elongated, lanceolate, mucronate. Corolla small, hardly longer than the calyx, yellow, with a deep violet bottom; the lower side cleft even to the middle of the tube. Capsule shorter than the calyx.

Small-flowered Henbane. Fl. June, July. Clt. 1829. PL ± foot.

13 H. AURICULATUS (Tenore, fl. nap. prod. p. 16. syn. p. 38.) stem erect, simple ; leaves ovate, petiolate, sinuated, acute ; petioles winged, auricled at the base ; flowers sessile ; corollas yellow, reticulated with purple veins at bottom. 0. H. Native of Naples, in the fields of Abellino.

Auricled-petioled Henbane. FL June, July. Clt. 1823. PL 1 foot.

Cult. The species of Henbane are plants of the most easy culture. The seeds of the annual and biennial kinds only require to be sown in the open ground. The half shrubby, or herbaceous kinds are well fitted for decorating rockwork during summer; but in winter they need protection by being covered with haulm of other plants, or by being preserved in pots in the green-house ; and they are readily increased by cuttings and seeds.

TRIBE III. DATITREJE (the plants contained in this tribe agree with the genus Datura in the characters given below.) Limb of corolla plicate in aestivation, repandly 5-10-toothed. Capsule coriaceous, succulent, 2-celled, 4-valved ; placentas septiform, free. Seeds reniform. Stamens 5, inclosed.

XXVI. DATURA (said to be a corruption of the Arabic name of one of the species *tatorah.)* Lin. gen. 246. Schreb. gen. 332. Juss. gen. 125. ed. Usteri. p. 139. H. B. et Kunth, nov. gen. amer. 3. p. 5. Nees, in Lin. trans. 17. p. *73.* —Stramonium, Tourn. inst. 43, 44.

LIN. SYST. *Pentdndria, Monogijnia.* Calyx tubular, angular, 5-toothed, falling off at top, leaving only the orbicular base ; limb 5-cleft, irregular. Corolla conically funnel-shaped ; limb plicate, repandly 5-10-toothed ; teeth drawn out. Stamens

inclosed, Stigma 2-lobed. Capsule coriaceous, succu- free, 2-celled, 4-valved, many-seeded. Placentas septiform, ila ' ' reniformr—Poisonous annual herbs. Flowers ar, solitary, white, or violaceous.

Sagreeable **- ^ommon *Thorn-apple,* or *Stramonium* have a voi,. IV% smell and nauseous taste. Every part of the plant is a strong narcotic poison, producing vertigo, torpor, and death. Dr. Barton mentions the cases of two British soldiers, who ate it by mistake for *Chenopbdium álbum;* one became furious, and ran about like a madman; and the other died with all the symptoms of tetanus. The best antidote to its effects is vinegar. The seeds contain the narcotic principle which pervades the whole plant, but in a more uniform degree than the other parts, and hence are more to be depended upon for internal use. An excellent analysis of the seeds has been published by Mr. Brandes, in Buchner's repertorium for 1821, and in which it is shown that its peculiar properties depend upon a peculiar alkaloid called Daturia.

Dr. Stoerk first tried Stramonium as a remedy in mania and melancholia with considerable success. It has also been employed in convulsive and epileptic affections. Dr. Barton of Philadelphia gives it in powder, beginning with doses of a few grains, and increasing them in some days to the extent of 15 to *20* grains. In a case in which it was exhibited to the extent of 30 grains it dilated the pupil of one eye, and produced paralysis of the eyelids, which was removed by a blister. Hufeland gave it in the form of a tincture prepared of two ounces of the seeds in four ounces of wine, and one of diluted alcohol, in diseases of the mind. The inspissated juice of the leaves has been most commonly used, but its exhibition requires the greatest caution. At first a quarter of a grain is a sufficient dose. An ointment prepared from the leaves has been said to give ease in external inflammations and haemorrhoids. And the bruised leaves, according to Plenck, soften hard, inflamed tumours.

The smoke of *Stramonium* has been much extolled for the cure of asthma. Its use in this manner has been derived from the East Indies, where, however, other species of *Datura* are employed. It is the root and lower part of the stern which is used in this way. This is dried quickly, and cut into slips, and used in the manner of tobacco. The smoke excites a sense of heat in the chest, followed by copious expectoration, and sometimes attended with temporary vertigo and drowsiness. In some cases a perfect cure is effected, but more commonly the relief is only temporary. Dr. Marcet, med. chirurg. trans. 7. p. 551, used Stramonium in the form of extract, and the result of his experience is, that the most common effect of it, when administered in appropriate doses from -L to 1 grain, in cases of chronic disease, attended with acute pain, is to lessen powerfully, and almost immediately, sensibility and pain; and it almost always excites those symptoms which are produced by intoxication.

Stramonium, or Common Thorn-apple. Fl. July, Sept. Britain. PL *2* to 3 feet.

5 D. TRAPE'ZIA (Nees, in Lin. trans. 17. p. 74.) leaves ovate, trapezoid, acute, repandly-toothed, and are, as well as the stem, downy ; fruit furnished with nearly equal spines or prickles. 0. H. Native of the East Indies, on the banks of the Irrawaddy, Gomez. D. Stramonium, Wall. cat. suppl. no. 278.

Trapezoid-leaved Thorn-apple. PL 2 to 3 feet.

§ 3. *Corollas violaceous. Stems purplish.*

6 D. TA'TULA (Lin. spec. *256.* Mill. diet. no. *2.* Sweet, fl. gard. t. *S3.)* leaves cordate-ovate, angularly toothed, unequal at the base, glabrous; capsule furnished with nearly equal spines or prickles. ©. H. Native of America, but has now become naturalized in almost all the places along with *D. Stramonium,* but is less frequent. Pursh, fl. amer. sept. 1. p. 141. Stramonium Tatula, Moench, meth. p. 456. Stramonium fructu spinoso oblongo, flore purpureo, Tourn. inst. p. 119.

Tatula, or Purple Thorn-apple. Fl. July, Sept. Clt. 1629. PL 2 to 3 feet.

7 D. QUERCIFO'LIA (H. B. et Kunth, nov. gen. amer, 3. p. 7.) Jeaves sinuately pinnatifid, hairy on the veins beneath ; capsule furnished with unequal prickles : the upper prickles the largest. ©. H. Native of Mexico, in temperate places near Zelaya and Molino de Sarabia, at the altitude of 930 hexapods. Branches hairy.

Oak-leaved Thorn-apple. PI. 1 to 2 feet.

SECT. II. DU^NTRA (an alteration of the generic name.) Limb of calyx tubularly ventricose, angular, or terete, 5-lobed at apex. Margin of corolla 5-10-toothed. Stamens inclosed, or a little exserted ; anthers remote. Capsule nearly globose, more or less drooping, or reflexed, 2-celled at apex, but 4-celled below the apex, dehiscing irregularly. Seeds pale, or brownish opaque, compressed, flat in the disk, convex on the margin, surrounded by 3 wrinkled ribs.—Annual herbs. Flowers oblique, showy.

8 D. A'LBA (Nees, in Lin. trans. 17. p. *73.)* leaves ovate, acuminated, repandly toothed, unequal at the base, and are, as well as the stem, smoothish ; stamens inclosed ; fruit prickly. ©. H. Native every where in the East Indies ; as of Nipaul, Silhet, Tavoy. D. Me'tel, Roxb. fl. ind. 2. p. 238. Wall. cat. *2639,* Fleming, in asiat. res. 11. p. 165. Hardw. in asiat. res. 6. p. 351. under D. Stramonium. Stramdnia 1'ndica prima seu Du'tra alba, Rumph, amb. 5. p. 242. t. *87.* f. 1. Humalu, Rheed. mal. *2.* p. 47. t. 28. Corollas white.

Wh'te-flowered Thorn-apple. PI. 2 to 3 feet.

9 D. FASTUO'SA (Mill. diet. no. 6. Lin. spec. p. *256.)* leaves ovate, acuminated, repandly-toothed, unequal at the base, and are, as well as the stem, downy ; fruit tubercled. 0. H. Native of the East Indies, and Egypt, and of Caraccas. Roxb. fl. ind. 2. p. 238. Stramonium fastuosum, Mcench, meth. p. 456. D. Coutarena, Alp. exot. p. 181. icone. D. iEgyptiaca, Vesl. pi. aegypt. p. 203. icone.—Lob. icon. 264. Corolla violaceous outside, and white inside; teeth of the limb subulate.

Var. j3 ; corollas double and triple, purple outside, and white inside. 0. H. Native of Malabar. Stramonium Malabaricum, fructu glabro, flore duplici et triplici, Tourn. inst. 119. —Sabb. hort. rom. 1. t. 93. Mudela-Nila Hummatu, Rheed. mal. 2. p. 51. t. 30.

Var. y, rubra (Bernhardi, in Linnsea, 8. p. 142.) corolla violaceous ; fruit muricated ; leaves dentately sinuated. 0. H. Native of the East Indies. Stramonium fructu spinoso rotundo; flore violaceo simplici, Tourn. inst. 118. There is also a double flowered variety of this, the Dutra rubra, Rumph. amb. 5. p. 243. t. *87.* f. 2. Stramonium seu Datura iEgyptiaca flore pleno Ponse, Mor. hist. 3. p. 15. t. 2. f. 9. Stramonium fructu spinoso rotundo, flore violaceo duplici triplicive. Tourn. inst. 119.

Var. S, parviflbra (Nees, in Lin. trans. 17. p. 74.) corolla smaller; calyx more than twice as short as the tube of the corolla. ©. H. Native of the East Indies, at Prome, Gomez. Wall. cat. suppl. no. 278.

Proud Thorn-apple. Fl. July, Sept. Clt. 1629. PI. 2 to 3 feet.

10 D. DU'BIA (Pers. ench. 1. p. 216.) leaves quite entire, glabrous, as well as the stem; limb of corolla 5-6-toothed ; stamens inclosed; capsule smooth, unarmed. 0. H. Native of the East Indies. D. fastuosa, e>, capsulis muticis, Poir. diet. 7- P- 4^1 ' D. Tatula, />, Poir. 1. c. D. Hammatu, Bernhardi, in Linnsea, 8. p. 141. Stramonium Malabaricum, fructu glabro, flore simplici violaceo, Tourn' inst' 119' N,la Hummatu, Rheed. mal. 2. p. 49. t. *29.* Corolla violaceous. Perhaps a variety of *D. fastuosa.*

Doubtful Thorn-apple. PI. 2 to 3 feet.

11 D. MURICA'TA (Bernh. sem. 1818. gart. mag. 4. p. 163, with a figure. Link. enum. 1. p. 177.) leaves ovate, repand, when young toothed, glabrous ; fruit muricated with strong short prickles, erectish. ©. H. Native country unknown, but probably of America. D. hiimilis, Desr. hort. par. D. hybrida, Tenore. ? D. lseVis, Schkuhr, handb. 1. p. 140. under D. fastuosa. D. fastuosa, fl. albo, Mcench. meth. 456. D. Metel, and D. innoxia, Mill. diet. no. 3 and 5.—Knor. del. 1. t. s. 12—Besl. hort. eyst. 2. fol. 11. f. 1. a. Corolla Ions?, white. The whole plant green. Leaves unequal at the base. Perhaps the same as *D. alba,* Nees.

Muricated-fruited Thorn-apple. Fl. July, Sept. Clt. 1820. PI. 2 to 3 feet.

12 D. ME'TEL (Lin. spec. p. 256.) leaves cordate, quite entire, or a little toothed, and are, as well as the stem, downy; limb of corolla 10-toothed ; calyx terete; capsule furnished with prickles. 0. H. Native of the East Indies, in hot regions ; Africa, and the Canary Islands. Sims, bot. mag. t. 1440. D. Metel, and D. fruticosa, Horn. hort. hafn. 1. p. 212. D. Metel, et D. innoxia, Mill. diet. nos. 3 and 5, partly. Dutra nigra, Rumph. amb. 5. p. 243. Stramonium, fructu spinoso rotundo, flore albo, Tourn. inst. p. 118.—Ludw. ect. t. 158.—Knip. cent. 1. t. 24. D. Stramonium, Thunb. jap. p. 91, ex Lour. Corollas large, white.

Metel, or Hairy Thorn-apple. Fl. June, Sept. Clt. 1596. PL 2 feet.

13 D. GUAYAQUILE'NSIS (H. B. et Kunth, nov. gen. 3. p. 8.) leaves ovate, very unequal at the base, quite entire, or obsoletely and angularly toothed, downy, as well as the stem and branches ; limb of corolla angularly 10-toothed; stamens a little exserted; capsule muricately spinose. 0. H. Native of America, in humid places near Guayaquil. Stem and branches reddish. Calyx tubular, downy ; limb cleft on one side. Corolla large, white. Perhaps a variety of *D. Metel.*

Guayaquil Thorn-apple. Fl. July, Sept. Clt. 1826. PI. 2 to 3 feet.

SECT. III. CERATOCAI/LIS (from *Kspag KeparoQ, Jceras keratos,* a horn; and *KavXog, kaulos,* a stem; shape of stem.) Calyx nearly terete, entire, dehiscing by a lateral fissure at the apex. Limb of corolla 10-toothed. Stamens exserted a little ; anthers contiguous. Capsule obovate, unarmed, pendulous. Seeds compressed, subovate, fuscescent, shining, rather scabrous.—An annual herb. Leaves ovate-lanceolate, toothed, hoary beneath. Corollas white, purple outside.

14 D. CERATOCAU'LON (Ort. dec. p. 11. Jacq. hort. schoenbr. 3. p. 48. t. 309.) ©. H. Native of Cuba and Mexico. Hook, bot. mag. t. *3352.* D. macrocaulis, Roth, beitr. p. 159. Stem terete, purplish, dichotomous, horn-formed, pilose at the base. Corolla smaller than that of *Brug?ndnsia Candida,* with a green tube, white limb, and purplish outside, sweet-scented. Capsule size of a nut, glabrous, smooth.

Horn-stemmed Thorn-apple. Fl. July, Sept. Clt. 1805. PI. 2 to 3 feet.

Cult. The seed of all the commoner kinds of *Stramonium* only require to be sown in the open ground in April; but the rarer kinds answer better if reared on a hot-bed, and afterwards planted out in the open border about the middle of May, like other tender annuals.

XXVII. BRUGMA'NSIA (named in memory of Sebald Justus Brugmans, author of Dissertatio de plantis inutilibus et benenatis, 1. fasc. in *8vo.* Groningen, 1783.) Pers. ench. 1. p.

sv / A , in Sweet, fl< Sard- n* s- 272, Roem- et Schultes, *Y*- 4. p. xxiii. Datura species of authors.

INf SYST- *Pentdndria, Monogynia.* Calyx tubular, ventricose, permanent, coarctate at top, and 2-3-5-lobed. Stamens lunnel-shaped, 5-plicate, 5-lobed; lobes cuspidate. Germen thick, ovate, seeded, coarctate; anthers conglutinate. Stigma manlobed, revolute margins. Capsule 2-celled, smooth, on the outside, reniform, obsoletely trigonal, flat convex, and tuberculately wrinkled, a little ribbed on the opposite sides; testa corky, very thick.—Trees or shrubs natives of the warmer parts of the world. Flowers extra-axillary, pedunculate, or from the forks of the branches, as in *Datura,* large, white, or blood red, hanging. Fruit oval, pendulous, golden yellow.

1 B. SUAVEOLENS; leaves elliptic-oblong, quite entire, glabrous above, and scarcely downy beneath; points of corolla and capsule muricated. *h. S.* Native of Mexico, Chili, and the warmer parts of America. Datura suaveolens, Willd. enum. 1. p. 227. Flowers large, white, Sweet-scented Brugmansia. Fl. Aug. Sept. Clt. 1733. Tree 10 to 15 feet.

2 B. CANDIDA (Pers. ench. 1. p. 216.) leaves elliptic-oblong, entire, as well as the petioles and branches, glaucous with pubescence; points of corolla elongated, acute. Native of Granada, Peru, and Chili. Datura candida, Pers. ench. 1. p. 216. Ruiz, et Pav. fl. per. 2. p. 15. t. 128. Willd. enum. 1. p. 227.—Feuill. per. 2. p. 761. t. 46. Calyx 5-cleft. Corollas white, *7-8* inches long, Shrubby 7 to 10 feet.

3 B. SANGUINEA (Pers. ench. 1. p. 216.) leaves sinuately lobed, sub-tomentose, as well as the branches and petioles: points of corolla 1*, Granada, Peru, and Chili. Datura sanguinea, Ruiz, et Pav. fl. per. 2. p. 15. t. 129. Native of New Spain, whence it has been introduced to Chili. Datura sanguinea, Don, Sweet, fl. gard. n. s. t. 272. Datura Willdenowii, Schultes, syst. 4. p. 588. Pav. fl. per. 2. p. 15. H. B. et Kunth, nov. gen. et amer. 3. p. 26. In Peru the Plant is called *Floripondio* and *Campanillas encarnados,* and in New Spain it is called *Bovochevo.* From the bruised leaves an ointment is prepared which is said to possess superior healing properties. Pared, *Q'* and the fruit a highly narcotic liquor is prepared, inches long, pubescent, with 15 straight, pro- yellow, erect, thick and fleshy, with 5 blunt angles, orange Side 5 little furrows towards the base; throat inflated and pitted outside, scarlet, or orange red. Shrubby 10 to 12 feet.

All these species of *Brugmansia* are free flowerers, and are desirable plants for large conservatories, on account of their fine fragrant blossoms. The pet-shaped, white, orange, or scarlet pendulous flowers grow best in a rich soil and should have plenty of water given to them during winter, as they are during summer. They also succeed well in the open ground luxuriantly, and in a warm, sheltered situation; here they grow and flower freely, and the blossoms become larger, more speckled, and brighter than when grown under glass, but here they are liable to be destroyed by severe frosts or winter if not protected. All the species strike readily from cuttings if placed in a moist heat.

XXVIII. SOLANDRA. In honour of JONAS CHARLES SOLANDER, L.L.D. F.R.S., a Swede, and disciple of the celebrated Linnaeus; companion of Sir Joseph Banks in his voyage round the World, and the laborious collector of the botanical descriptions made during that celebrated expedition. His manuscripts are preserved among the mss. in the British Museum, and attest his learning, diligence, and skill.) Lin. fil. in Swartz. act. holm. 1787. t. 11. prod. 42. fl. ind. occ. 1. p. 387. t. 9. Schreb. gen. no. 1732. Correa de Serra, in ann. mus. 8. p. 389. t. 4. f. 1, but not of Lam. Poir. nor Willd.

LIN. SYST. *Pentdndria, Monogynia.* Calyx spathaceous, splitting on one side, 3-5-cleft at apex. Corolla large, clavately funnel-shaped; tube long; throat inflated; lobes fringed, a little acuminated. Berry or capsule globosely conical, 4-celled, many-seeded.—Erect or scandent trees, with broad, alternate leaves, and large, extra-axillary flowers, which are much like those *of Brugmansia.*

1 S. GRANDIFLORA (Lin: fil. in Swartz. act. holm, 1807. p. 300. t. 11.) leaves alternate, close together, viscid, and pubescent, petiolate, obovate-oblong, acuminated; flowers terminal, drooping, usually solitary, rarely *2-3*; anthers a little lunate, 4-cornered, pointed, a little cloven at the base. f?. w. S. Native of Jamaica; climbing and rooting on trees and rocks. Jacq. hort. schcenbr. 1. p. 21. t. 45. Sal. in Lin. trans. 6. p. 100. t. 6. Meen, exot. bot. t. 6. Sims, bot. mag. 1874. Tratt. tab. t. 352. Solándra scándens, Willd. rel. ex Rcem, et Schultes, syst. 4. p. 700. Swártzia grandiflóra, Gmel. syst. p. 360. Datúra sarmentósa, Lam. ill. 2. p. 9. no. 2295. Branches and stem radicant. Leaves, tender branches, and calyxes clothed with viscid down. Calyx and petioles pale, purplish green: the latter tubular, cornered, unequally cloven at 2-3 of the angles. Corolla 7-8 inches Long; tube pale, yellowish green, widening gradually above, 5-cornered; limb white, the undivided part indistinctly 10-cornered, 5 of the corners painted with a dusky purple fillet; the segments are of a purplish colour outside, having the interstices minutely suborbicular at the base, and very finely ciliated. Genitals exserted. Fruit pyramidal, pale, yellowish green, 4-celled almost to the top, then 2-celled. Seeds reniform, sessile. The fruit ripens in August and September, and is of a sweet, sub-acid flavour.

Great-flowered Solandra. Fl. March, April. Clt. 1781. Shrub climbing.

2 S. NITIDA (Zuccagn. cent, in Roem. coll. p. 128. no. 40.) leaves quite glabrous, shining, tapering into the petioles, crowded, oblong, acuminated, with revolute edges; flowers terminal, drooping, usually solitary, rarely 2-3-together; lateral anthers bicornute. J?. S. Native country unknown. Portlandia grandiflóra, Hort. batav. Datúra sarmentósa, /3, Lam. ill. 2. p. 9. no. 2295. Petioles violaceous, furnished with a few hairs. Calyx 4-cleft; segments unequal, with scarious brown edges. Corolla half a foot long, yellowish white, with *6-7* nerves, brown inside, green outside; tube 6-7-angled; limb 6-7-cleft, with roundish crenately-undulated segments, violaceous outside, at first erect, but at length revolute. Stigma capitate, green. This species differs from *S. grandiflóra* in the leaves being quite glabrous and shining, in the bicornute anthers, and the calyx and corolla being glabrous outside. Stem arborescent, with chinky bark; branches elongated, flexile, divaricate, with deciduous bark.

Shining-leaved Solandra. Fl. ? Clt. 1820. Tree or shrub.

3 S. VIRIDIFLORA (Sims, bot. mag. 1948.) leaves elliptic-oblong, attenuated at both ends, acuminated, glabrous; flowers terminal, solitary, pedunculate; calyx 5-cleft; the segments lanceolate, acute, and equal; tube of corolla suddenly swelling out into the throat, and again a little contracted; the segments elongated, and revolute. Fj. S. Native of Brazil, about Rio Janeiro. Leaves deciduous. Branches rugged from the elevated cicatrices occasioned by the falling of the leaves. Corolla green, drooping. Genitals much exserted.

Green-flowered Solandra. Fl. May, July. Clt. 1815. Shrub 2 to 3 feet.

4 S. GUTTATA (D. Don, in bot. reg. t. 155.) leaves broad, 3 p 2

elliptic-oblong, acute, downy beneath; flowers terminal, solitary ; segments of corolla crispately crenated, spreading ; tube about twice the length of the calyx, which is tubular and 3-lobed. I?. S. Native of Mexico. Tecomaxochitl, Hern, mex. p. 408, with a figure. Shrub erect, branched. Branches rugged from the elevated cicatrices occasioned by the falling of the leaves. Leaves acute, or short-acuminated, 3-6 inches long, and *2-3* broad, Flowers erect, on short peduncles. Lobes of calyx ovate, acute, the third smaller. Corolla large, funnel-shaped, pale yellow, but marked with purple spots in the throat; lobes of limb very broad, roundish. Stamens hardly drawn out beyond the throat of the corolla. Style exserted. Ovarium 4-celled. Stigma capitate.

Spotted-flowered Solandra. Fl. Clt. Shrub 10 to 12 feet.

f *A species not sufficiently known.*

5 S. OPPOSITIFOLIA (Hort. ex Loud. hort. brit. p. 71.) leaves opposite. Jj . S. Native of Ceylon. Corolla large, white.

Opposite-leaved Solandra. Fl. ? Clt. 1820. Shrub 6 to 10 feet.

Cult. The species of *Sol&ndra* are very handsome when in flower ; the foliage very fine, and the blossoms large, much like those of *Brugmdnsia.* If allowed plenty of space and moisture they grow rapidly, but produce no blossoms : the best way to avoid this is to plant them in loamy soil, and to encourage them to grow rapidly at first by giving plenty of water, and then withhold water altogether till their leaves drop off from drought, and they will then produce plenty of blossoms. Cuttings taken off from the plant, and planted in mould or tan will strike root without further care. The best way to have plants flower when small is to take the cuttings from flowering shoots.

XXIX. ULLO'A (named after Antonia Ulloa, a Spanish naturalist.) Pers. ench. 1. p. 218. Juanulloa, Ruiz, et Pav. fl, per. 2. p. 47. t. *85.*

LIN. SYST. *Pentdndria, Monogynia.* Calyx large, inflated, ovate, 5-parted ; segments concave, lanceolate, acute, coloured, permanent. Corolla tubular, gibbous under the throat, contracted above ; limb small, 5-lobed ; segments rounded, spreading. Stamens 5 ; filaments villous at the base. Stigma oblong, somewhat emarginate at apex. Berry ovate, girded by the large calyx, 2-celled, many-seeded. Seeds oblong, reniform.—A parasitical, frutescent, pendent plant, with oblong, acuminated, alternate, thickish leaves ; and dichotomous, hanging racemes of scarlet flowers and fruit.

1 U. PARASITICA (Pers. ench. 1. p. 218.) ^ • s- Native of Peru, in groves. Juanulloa parasitica, Ruiz, et Pav. fl. per. 2. p. 47. t. 185. Stems simple, woody, pendent. Berry size of a cherry. Said to be nearly allied to *Tancecium parasiticum.*

Parasitic Ulloa. Fl. ? Clt. 1824. Shrub parasitical.

Cult. This plant will grow well in decayed wood, or vegetable mould ; and may be increased by cuttings.

TRIBE IV. FRANCISCEA (this tribe contains plants agreeing with *Franciscea* in the characters given below.) Limb of corolla plicate in aestivation, 5-lobed, rather, unequal. Stamens 4, didynamous, that is, 2 long and 2 short, inclosed, without any rudiment of a fifth. Ovarium girded by a cupulate disk. Capsule 2-celled, 2-valved ; valves bipartible at top. Placentas inserted into the dissepiment. Seeds numerous, angular. Embryo straight, terete.

XXX BRUNFE'LSIA (SO named by Plumier, from Otho or Otto Briinfelsius, of Mentz, first a Carthusian monk, and afterwards a physician. He published the first good figures of plants in 1530, and died in 1534.) Plum. gen. *22.* Lin. gen. no. 260. Schreb. gen. 1013. Juss. gen. 127. ed. Uster. p. 142. Lam. ill. t. 548.

LIN. SYST. *Didynamia, Angiosperma.* Calyx campanulate, 5-toothed, short. Corolla large, funnel-shaped; with a long tube, and a flat, 5-lobed, obtuse, nearly equal limb. Stamens 4, didynamous, with the rudiment of a fifth ; anthers reniform. Stigma capitate. Capsule (berry, Lin.) larger than a cherry, 1-celled, ex Lin. but probably 2-celled, many^seeded ; placenta large, central, fleshy.—Shrubs with alternate, entire leaves, and solitary, axillary, or terminal numerous flowers.—" Pericarp baccate outside, 1-celled, 2-valved, but since it opens by a distinct suture from the top to the base, it is jather a capsule than a berry. Seeds many, compressed, convex on one side, angular on the other, wrinkled from dots. Receptacle fastened to the bottom of the capsule, chaffy ; palea coadunate, subulate at the tip, separating the seeds," ex Mart. Mill.

1 B. AMEIUCAYNA (Lin. spec. 276.) leaves obovate, elliptic, -acuminated, longer than the petioles; corolla with an erect tube and entire segments. T? . S. Native of the West Indies, in various islands. Swartz, obs. 90. t. 4. f. 2. Curt. bot. mag. 394. Brunfelsia flore albo, fructu croceo molli", Plum. gen. 12. icon, t. *65.* Catesbaea, &c. Browne, jam. 141. Leaves glabrous or downy. Axillary flowers solitary: terminal ones numerous. Corollas at first yellow, then white, very sweet-scented. There are broad and narrow-leaved varieties of this species.

American Brunfelsia. Fl. June, July. Clt. 1735. Shrub 4 to 6 feet.

2 B. UNDULATA (Swartz, prod. p. 90. fl. ind.occ. *2.* p. 1035.) leaves lanceolate-ovate, tapering at both ends ; petioles very short; corolla with a curved tube and undulated segments. J?. S. Native of Jamaica. Ker. bot. reg. 228. Andr. bot. rep. 167. Corolla at first yellow, then white.

Undulated-dowered Brunfelsia. Fl. Juno, July. Clt. 1780. Shrub 4 to 6 feet.

3 B. GRANDIFLORA (D. Don, in edinb. phil. journ. 1829. July.) leaves elliptic-oblong, acuminated ; flowers corymbose, terminal ; tube of corolla hardly longer than the limb. F? . S. Native of Peru, at Uchiza, Tafalla. Branches twiggy. Leaves pale green, *3-6* inches long, and 1J to 2 inches broad. Teeth of calyx acute. Limb of corolla 2 inches in diameter. Stamens nearly equal.

Great-Jlowered Brunfelsia. Shrub.

f *A species hardly known.*

4 B. VIOLACEA (Lockl. bot. cab. 792.) leaves and petioles deeply stained with purple. J? . S. Native of the West Indies. Corolla of a livid colour.

Violaceous Brunfelsia. Fl. July, Aug. Clt. 1815. Shrub *2* feet.

Cult. The species are elegant free flowering shrubs, and are worth cultivating for the beauty and fragrance of their blossoms. A light rich soil, or one composed of loam and peat, answers them well ; and cuttings of them strike root readily if planted in sand, with a hand-glass placed over them, in heat.

XXXI. FRANCFSCEA (named by Pohl, after Francis I. emperor of Austria, a great patron of botany.) Pohl, bras. 1. p. 1. Sims, bot. mag. 2828.

LIN. SYST. *Didyndmia, Angiosperma.* Calyx permanent, inflated, campanulate, 5-toothed ; teeth equal. Corolla salver-shaped ; limb 5-parted, nearly equal; lobes rounded, repand, with incumbent anthers ; tube inflated at the apex, incurved. Style thickened at top; stigma 2-lobed. Capsule ovate, 2-celled, 2-valved; valves indivisible ; dissepiment parallel with the valves, membranous, thin, separating at the base from the

of the capsule at maturity.—Erectish, middle-sized s. Leaves alternate, simple, oblong, entire. Peduncles permanent, somewhat geniculated, axillary and terminal, bracteates r lowers bracteate, usually crowded, cymosely racemose, ?»tary, violaceous or lilac, somewhat resupinate. Tube of rolla inflated. Receptacle nearly terete, spongy, scrobiculate, nate to the dissepiment. This genus is said to be nearly led to *Browallia;* but differs in the calyx being campanulate J inflated, equally 5-toothed, permanent, &c.

1 *; ^NIFLORA (Pohl, bras. 1. p. 1. t. 1.) branches diffuse, Pleading; leaves elliptic, acute; bracteas lanceolate, and are, tive f pf th^ calyxeSj g labrous ; flowers solitary. J?. S. Nath "raz il» among bushes in the province of Rio Janeiro, in road to Sumidorio and Governo, &c. F. Hopeana, Hook. with "fi" ~828, Lodd* bot, cab* 1532 Piso bras P- 85. n a figure—Margr. bras. p. 69. with same figure. Leaves ie green below. Branches greenish, hoary. Corolla with a tube, and bluish-violet or purple limb.

^flowered Franciscea. Fl. June, Aug. Clt. 1826. Shrub to 3» feet.

«hort P,IJA TM 5UA (Pohlj bras- lf P- *s- u* 2>) branc]>es ver y late, a Spr. In 8 5 leaves broad-elliptic, acutish ; bracteas lanceo- flower 0" ? 111 ^603, and are as well as the calyxes, quite **glabrous** ;; at i y , and not ^ar ^rom ^° Janeiro. Leaves canescent, viol? ueneatb> 6"7 inches long, and 2 to 2f broad. Corolla ^ceous or purple.

^ad-leaved Franciscea. Shrub 2 to 3 feet.

8 Pleadi ACUMINAVTA (Pohl bras. 1. p. 4. t. 3.) branches erectly base T/V leaves °blong, acuminated, attenuated a little at the We]l*a^ abrous; bracteas lanceolate, acuminated, and are, as terminal ty xes» quite glabrous; flowers few, subcymose, Janeiro * ^ • ^. Native of Brazil, in the province of Rio Leaves' ^ ° n ^ Pushes at Mandioca. Branches greenish-brown. ^latec^ when examined by a lens, yellowish-green be- corolla with a bluish-violet limb. Calyx brownish.

4 ^"^ed-leaved Franciscea. Shrub 1 to 2 feet.

Divaricate Franciscea. Shrub 1 to *2* feet.

7 F. HYDRANGE;EF6RMIS (Pohl, bras. 1. p. 7. t. 7.) stem a little branched ; leaves oblong, acute, cuneiform at the base, quite glabrous ; bracteas lanceolate, pilose, ciliated and scale-formed, aggregate ; calyx hairy ; cymes of flowers terminal, hemispherical, large. F? . S. Native of Brazil, in the province of Rio Janeiro, among bushes ; in shady places at Olana and Sumidorio, and on the way to Rio Parahybuna. This is the most elegant species of the genus, with the aspect of *Hydrangea hortensia.* Leaves yellowish-green beneath, subverticillately aggregate, broad, a foot long. Racemes corymbose, terminal. Corolla of a beautiful bluish-violet.

Hydrangea-like Franciscea. Shrub 1 to 3 feet.

8 F. MACROPHY^LA (Cham, et Schlecht. in Linnaea, *2.* p. 601.) leaves oblong, acuminated, cuneiform at the base, rugosely veined, downy beneath ; bracteas scale-formed, ciliated, and are, as well as the inflated calyxes, clothed with glandular down ; tube of corolla twice as long as the calyx ; cymes terminal, compound, many-flowered, rather loose. T? . S. Native of tropical Brazil. Very like *F. hydrangeceformis.* Leaves nearly a foot long, and 3j broad.

Long-leaved Franciscea. Shrub *2* to *3* feet.

9 F. PAUCIFLORA (Cham, et Schlecht. in Linnaea. *2.* p. GOO.) leaves obovate-oblong, acuminated, cuneated at the base, on short petioles, glabrous ; bracteas leaf-formed ; bracteoles scale-formed, and are, as well as the calyxes, inflated, loose, and clothed with glandular down ; tube of corolla hardly exceeding the calyx ; cymes terminal, few-flowered, simple. J? . S. Native of the South of Brazil, Sello. Leaves 6|- inches long, ciliated with glandular hairs in the young state.

Few-flowered Franciscea. Shrub 2 to 3 feet.

Cult, The species are much more showy than those of *Brunfelsia;* and are more free flowerers ; they are also more hardy, but require almost similar treatment.

XXXII. BROWA'LLIA (named by Linnaeus, in honour of John Browallius, bishop of Aboa, who defended the sexual system of Linnaeus, against Siegesbeck, in a book entitled "Examen epicriseos, &c." Aboa, 1739, and Leden, 1744. 8vo.) Lin. gen. no. 773. Schreb. gen. no. 103G. Gaertn. fruct. t. *53.* Juss. gen. 123. ed. Usteri, p. 138. Lam. ill. *535.* D. Don, in edinb. phil. journ. July, 1829.

LIN. SYST. *Didynamia, Angiosperma.* Calyx membranous, tubular, 10-ribbed, 5-toothed, more deeply cleft on both sides: teeth obtuse, keeled. Corolla salver-shaped, resupinate from the contortion of the peduncle; tube 15-nerved, ventricose at top; limb oblique, 5-lobed : lobes obtuse, emarginate, plicate in aestivation; upper segment (but more properly the lower one) larger, and 3-nerved; the others 1-nerved. Stamens 4, didynamous, without any rudiment of a fifth ; filament flattened] bearded at top. Anthers of the upper filaments reniform : of the lower ones parallel with the filaments, having the upper cell the smallest, and sometimes abortive. Ovarium surrounded at the base by a large, cup-shaped, fleshy disk. Stigma 2-lobed, 4-tubercled, with *2* excavations on the back for the reception of the upper anthers ; lobes glutinose, depressed at top. Capsule oblong, 2-celled, 2-valved, many-seeded ; valves bipartible ; dissepiment contrary. Placentas 2, fleshy, scrobiculate, inserted into the dissepiment. Seeds angular, scrobiculate from depressed dots. Albumen fleshy, white. Embryo terete, straight, with short rounded cotyledons.—Herbs or shrubs, with alternate leaves, and axillary and terminal blue or white flowers.

1 B.'VISCOSA (H. B. et Kunth, nov. gen. anier. *2.* p. 3$_{73}$,)

leaves roundish-ovate; peduncles axillary, 1-flowered ; branches, peduncles, and calyxes, clothed with clammy hairs. ©. G. Native of New Granada, near Loxa and Gonzanama, at the altitude of 1060 hexapods. Herb diffuse. Leaves obtuse, hairy, 1 to 1\ inch long. Peduncles crowded at the tops of the branches. Calycine segments lanceolate, acute. Limb of corolla violaceous, with obovate, emarginate segments ; the largest segment spotted with white at the base ; tube inflated at top, whitish.

Clammy Browallia. PI. 1 to 2 feet.

2 B. DEMI'SSA (Lin. spec. 879. hort. cliff. 318. t. 17. H. B. et Kunth, nov. gen. *2.* p. *373.)* leaves ovate-oblong, acuminated, oblique at the base ; peduncles axillary, 1-flowered, and are, sa well as the branches, downy ; calyx glabrous. 0. G. Native of Panama, and other parts of South America; on Mount Avita, between Caraccas and La Venta Grande, Humb. et Bonpl., where it js called *Botanera.* Sims, bot. mag. 1136.— Sabb. hort. rom. *2.* t. 100. Dalea, phil. trans, no. 452. Leaves rather hairy. Calycine segments lanceolate. Corollas of a bright but pale blue colour, sometimes inclining to a purple or red ; and often there are flowers of all three colours on the same plant. The segments are, like the rest, obovate, emarginate : the larger one white at the base.

Low Browallia. Fl. June, Sept. Clt. 1735. PI. \ to 1 foot.

3 B. ELA'TA (Lin. spec. 880.) leaves oval, acuminated; peduncles axillary, one or many-flowered. ©. G. Native of Peru. Curt. bot. mag. t. 34. This species is higher than the first, and has stronger stalks, and sends out a great number of branches. The flowers are of a deep blue, and the calyx is beset with glandular hairs. Linnaeus observes that the lower branches are almost the length of the stem, and that the floral leaves are almost smooth.

Tall Browallia. Fl. July, Sept. Clt. 1768. PI. l-£ foot.

4 B. ELONGA'TA (H. B. et Kunth, nov. gen. amer. *2.* p. *372.)* leaves ovate, acuminated, rounded at the base ; peduncles 1-flowered, axillary ; branchlets, peduncles, and calyxes, clothed with hairy pubescence. ©. G. Native of New Granada, between the town of Mariquita and the mine of Santa Ana. B. lactea, Hort. Herb much branched. Branches rather angular, downy. Leaves rather hairy. Teeth of calyx lanceolate, erect. Limb of corolla blue, with obovate, emarginate segments : the larger segment spotted with white at the base. Nearly allied to *B. demissa.*

Elongated Browallia. Fl. July, Sept. Clt. ? PL lj foot.

5 B. GRANDIFLORA (Graham, in 'bot. mag. 3069. but not of bot. reg.) leaves ovate, acute, attenuated into the petioles at the base; peduncles 1-flowered, axillary, racemose at the tops of the branches; branches and adult calyxes glabrous. ©. G. Native of Peru, near Yazo, in the valley of Canta. Leaves acuminated. Stem much branched. Calyx and peduncles beset with glandular villi while young, with unequal, spreading, linear segments. Corolla with a greenish-yellow tube, which is clothed with glandular villi, and a white or very pale lilac limb ; segments of the limb obovate and emarginate, like the other species.

Great-flowered Browallia. Fl. June, Dec. Clt. 1829. PI. 1 to *2* feet.

6 B. CORDATA ; leaves cordate-ovate, acuminated; peduncles 1-flowered, racemose at the tops of the branches ; branches and adult calyxes glabrous. ©. G. Native of Peru, near Yazo, in the valley *of* Canta. B. grandiflora, Lindl. bot. reg. t. 1384. but not of Graham. Leaves obscure green. Racemes secund," bractless. Limb of corolla pale blue, with obovate, emarginate segments, which are of a livid yellow colour beneath.

***Cordate-teaved* Browallia. Fl. July, Nov. Clt. 1829. PI. 1 to *2* feet.**

f' A doubtful species.

7 B. ALIENA'TA (Lin. syst. 478.) superior leaves opposite; stamens *2,* length of corolla. ©. G. Native country unknown. Browallia foliis lanceolatis petiolatis longis, caule ramoso, radice annua, Mill. icon. t. 68. Miller has omitted this species in the last edition of his dictionary.

Alienated Browallia. PI. 1 foot?

Cult. The seeds of all the species should be reared in a hot-bed frame ; and when the plants are large enough, they may be set in the greenhouse, where they make a showy appearance during the time the greenhouse plants stand out of doors.

TRIBE V. ANTHOCE'RCE.E (this tribe agrees with the genus *Anthocércis* in the characters given below.) Corolla not plicate, regular. Stamens didynamous, with the rudiment of a fifth. Embryo arched. Pericarp capsular or baccate, 2-celled, 2-valved.

XXXIII. ANTHOCE'RCIS (from *CLVQOQ, anthos,* a flower; and *KepKLCy kerkis,* a ray ; in reference to the radiated corolla.) Labill. nov. holl. *2.* p. 19. t. 158. R. Br. prod. p. 448.

LIN. SYST. *Didynamia, Angiosperma.* Calyx 5-cleft. Corolla campanulate ; tube coarctate at the base, staminiferous; limb 5-parted, equal. Stamens inclosed, didynamous, with the rudiment of a fifth. Stigma capitately emarginate. Capsule 2-celled, 2-valved ; valves bent in at the edges, inserted in the parallel placenta. Seeds reticulated. — Smoothish shrubs. Leaves alternate, attenuated into the petioles or base, articulated with the branches, thick, sometimes glandularly dotted. Flowers axillary, generally solitary, usually loosened at the points ; peduncles minutely bracteate. Corolla white or yellow, showy ; tube striated inside ; limb sometimes 6-8-parted f

1 LITTOREA (Labill. nov. holl. *2.* p. 19. t. 158.) leaves obovate, dotless, with smooth margins, quite glabrous on both surfaces, as well as on the branchlets ; segments of corolla longer than the tube; capsule oblong, twice as high as the calyx. ^. G. Native of New Holland, on the south coast. Ker. bot. reg. t. 212. Sweet, fl. austral, t. 17. Corollas pale yellow, large, streaked with purple inside the tube.

Sea-shore Anthocercis. Fl. May, Aug. Clt. 1803. Shrub 1 to 2 feet.

FIG. 42.

2 A. A'LBICANS (Cunningh. in Fields' New South Wales, append. 5. p. *335.* with a figure. Sweet, fl. austral, t. 16.) leaves oblong, obtuse, densely tomentose on both surfaces, as well as the branches ; segments of corolla longer than the tube. J?. G. Native of New South Wales, frequent upon pine hills in the interior, Cunningham. Flowers fragrant, white, streaked with bluish-purple inside the tube.

tVhitish-leaved Anthocercis. Fl. April, July. Clt. 1824. Shrub lj to *2* feet.

3 A. VISC6SA (R. Br. prod. p. 448.) leaves obovate, glandularly dotted, with rather scabrous margins ; young leaves and branches clothed with fine down; capsule ovate, equal in length to the calyx. ^ • *&'* Native of New Holland, on the south coast. Corollas large, white.

* *Clammy* Anthocercis. Fl. May, June. Clt. 1822. Shrub to 0 feet.

Leaves twin, rhomb-ovate, entire. Corolla pale blue. Drupes 2-4-celled.

Prostrate Nolana. FL July, Sept. Clt. 1761. PL prostrate.

5 N. PARADÒXA (Lindl. bot. reg. *865.* but not of Hook.) stems prostrate, hairy ; leaves ovate, obtuse, pilose ; segments of calyx triangular; corolla campanulately funnel-shaped ; drupes cumulated, 1-seeded. ©. H. Native of Chili, on the sea shore, about Conception. Corollas blue.

Paradoxical Nolana. FL Aug. Clt. 1825. PL prostrate.

6 N. TENE'LLA (Lindl. hort. trans. 7. p. 252.) clothed with viscid down ; stems filiform ; petioles ciliated ; leaves ovate, obtuse at both ends ; calyx campanulate, 2-lobed, 5-angled, one of the lobes emarginate, the other tridentate ; ovarium 5-lobed. ©. H. Native of Chili. N. paradòxa, Hook. bot. mag. t. 2604. but not of Lindl. Peduncles hairy, filiform. Corolla pale blue, with a paler eye. Stamens villous, inclosed. This species differs from *N. prostrata* in the want of spur-like processes to the calyx.

FIG. 43.

Slender Nolana. Fl. July, Sept. Clt. 1824. PL prostrate.

7 N. INFLA'TA (Ruiz, et Pav. fl. per. 2. p. 7. t. 112. f. a.) stem prostrate ; radical leaves on long petioles, ovate-lanceolate ; calyx inflated, ovate, striated. 0. H. Native *of* Peru, on sandy hills about Cumana. Stems purple, angular, branched. Leaves downy, sinuated : radical ones entire, rarely toothed, 4-5 inches long, and *3* broad; lower stem leaves solitary, subpetiolate, and rather oblique at the base : upper cauline ones twin, hardly petiolate, ovate, cordate, quite entire. Panicle terminal, leafy ; peduncles longer than the leaves. Corolla whitish-violet, *3* times longer than the calyx. Anthers blue. Drupes 4.

//z/foted-calyxed Nolana. PL prostrate.

8 N. REVOLUXTA (Ruiz, et Pav. fl. per. 2. p. 8. t. 113. f. b.)

stems procumbent; leaves crowded, linear, with revolute margins; calyx ventricose, ovate, with lanceolate segments. ©. H. Native of Peru, in sandy places. Stems white, angular. Leaves sessile, twin, unequal in size, white beneath, obtuse. Peduncles very short. Corolla bluish-violet, thrice as long as the calyx.

Revolute-leaved Nolana. Pl. procumbent.

Cult. All the species of *Nolana* are showy when in blossom, much like the more showy trailing species *of Convolvulus,* and are, therefore, well adapted for decorating flower borders, The seeds should be sown on a gentle hot-bed in spring; and the plants, when of sufficient size, or about the middle ot May, should be finally transplanted to the open ground, where they will flower and ripen seed; or the seeds may be sown at once in the open border, in a warm sheltered situation.

XXXVI. TRIGUEXRA (so named by Cavanilles after D. Triqueros, a Spanish botanist, first discoverer of the plant; Cav. diss. 2. t. A. Schreb. gen. no. 282. Juss. gen. p. 1^. ed. Usteri, p. 140. Lam. ill. t. 114.

LIM. SYS?/ *Pentdndria, Monogynia.* Ca yx £ d e f t to>th middle ; segments unequal, acute, permanent. Coiolla campanulate, irregular; threat dilated into short^e-ncose, subbilabiate, plicate limb, which is [illegible] than th unequal : 2 superior ones sub-reflexed, Stamens 5 ; filaments very short, [illegible] at the base by a 5-toothed, epipetalous membrane, which surrounds the ovarium. Anthers sagittate, conniving into a cone, delhiscing by 2 pores at the apex, ex Juss. Stig capitate. Drupe small, globose, half covered by the calyx, elled ; cells 2-seeded. Seeds ovate, compressed, usually only one in each cell coming to maturity.—A [illegible] herb -ox pre, 2-flowered peduncles.

Nuts form of those of *Coffea Arabica* on one side, marked by a slender furrow in the middle, at top, and perforated by 2 roundish holes at the hence it is tridentate, the first tooth from the back, the other 2 from the sides, sometimes, but only tion, 1-celled. Albumen copious, fleshy.

Borhaavia-leaved Crabowskia. Fl. April, May. U*. Shrub 6 to 10 feet.

• *Cult.* This singular shrub is of the most easy propagation. A light rich earth suits it best; and strike root readily under a hand-glass.

TRIBE VII. CESTRrNE^ (this tribe contains ing with the genus Cestrum in the characters given Limb of corolla plicate, valvate, or induplicate in Calyx 5-toothed. Corolla funnel-shaped, 5-lobed, tube elongated ; limb usually spreading. Stamens 5 ; filaments inserted on the tube. Anthers oblong, dehiscing lengthwise. Ovarium seated on a disk-like body. Pericarp capsular or baccate. Placentas adnate to the dissepiment. Embryo nearly straight, with a cylindrical radicle, and roundish leafy cotyledons.

§ 1. *Pericarp baccate.*

XXXVIII. CE'STRUM (from *Keorpoy,* Aesculus is name of betony, but for what reason unknown to us.) Lin. gen. no. 261. Juss. gen. p. 126. ed. Usteri, p. 141. Gaertn. fruct. 1. p. 378. t. 162.

LIN. SYST. ***Pentdndria, Monogynia.*** Calyx tubular, subcampanulate, 5-toothed, almost regular, valvate in aestivation. Corolla with an elongated tube, widening gradually upwards, limb 5-parted, subplicate, spreading, or revolute in aestivation. Genitals inclosed ; filaments attached to the base, or nished with a small tooth, or villi, where the parts are adnate to the corolla. Anthers bose, dehiscing lengthwise. Ovarium Stigma subcapitate, concave, or girded by the permanent calyx, the dissepiment having vanished, ex centas double, free, central. Seeds 3-sided, ish, with a cylindrical radicle, and dons.—Unarmed shrubs. Leaves and branches former quite entire, and usually racemes teas, or small leaves in their axils, flowers Vorvmbs, bracteate, axillary, elongated, or short, disposed spikes, or fescicL. Corollas never blue, nor red sweet-scented, having the sides of the segments mentose. Berries black, or blackish blue. The leaves exhale a fetid, nauseous smell when bruised.

y 1 • ***Filaments toothless and naked, and sometimes villous at their insertion.***

**** Flowers solitary, or aggregate, sessile,***

l C. BUXIFOLIUM (H. B. et Kunth, nov. gen. amer. 3. p. 57.) leaves approximate, elliptic, bluntish, rather cordate, glabrous, shining.; axillary flowers solitary : terminal ones crowded, sessile ; filaments naked and toothless. *?. S. Native of New Granada, near the monastery of Mont Serrat, at the altitude of 1200 hexapods. Branchlets clothed with fuscescent tomentum. Leaves 7-8 lines long. Corollas white.

Box-leaved Bastard Jasmine. Shrub.

C. MARIQUITE'NSE (H. B. et Kunth, 1. c.) leaves oblong, acute, glabrous; axillary flowers solitary: terminal ones crowded, nearly sessile; segments of corolla ovate, acute ; filaments naked and toothless. *2. S. Native of New Granada, near Santa Ana and Mariquita, at the altitude of 550 hexapods. C. Bonplandianum, Willd. rel. ex Roem. et Schultes, syst. 4. p. 807. Branches downy. Leaves 2-8 lines long. Corollas white. Berry ovate-elliptic, size of a pea.

Mariquita Bastard Jasmine. Shrub.

C. PENDULINUM (Jacq. schoenbr. 3. p. 42. t. 327.) branches flowering leaves ovate-oblong, sub-acuminated, rather hairy; flowers crowded at the tops of the branches, almost sessile ; segments of corolla oblong, obtuse, with reflexed edges ; filaments naked and toothless. *?. S. Native of New Granada, near Tunbaco and Mahates ; and of Caraccas. H. B. et Kunth, loc. cit. P. 57. Branches rather downy. Leaves 2 inches long. Corymbs terminal, few-flowered. Corolla greenish white. Berry elliptic, size of those of *Ficus alba,* blue. The branches are said to be pendulous.

Upright-branched Bastard Jasmine. Fl. June, July. Clt. 1804. Shrub 4 to 8 feet.

C. UCIFLORUM (Nees, et Mart, in act. bonn. 11. p. 79.) leaves ovate-lanceolate, acute, downy beneath; flowers axillary, sessile ; filaments naked, toothless, fj . S. Native of Brazil, at the river Uheos. Young branches muricated, downy at the tips. Leaves 3-4 inches long ; petioles short. Corymbs terminal, few-flowered, scabrous. Each flower is furnished with bracteole. Segments of calyx and corolla linear-lanceolate, keeled. Corolla yellowish, 4-5 lines long. Berry 2-celled, 4-seeded. *C. Mariquitensis* differs from this in having smaller and glabrous leaves, in the segments of the corolla being broader, glabrous, and ovate, and it differs from other species in the axillary, solitary flowers.

Privet-leaved Bastard Jasmine. Shrub.

C. LAURIFOLIUM (Schlecht. in Linnsea, 7. p. 57.) glabrous ; leaves rather coriaceous, ovate-lanceolate, cuneated at the base, with tri-nerved veins ; corymbs terminal, sessile ; calycine segments very short, bearded at the tip ; segments of corolla acute, villous at the adnate part; berries globose, rusty, of the size of a large pea.

Laurel-leaved Bastard Jasmine. Shrub, 6 to 8 feet.

C. FLORIBUNDUM (Lin. syst. 227.) glabrous ; leaves elliptic ; flowers naked, aggregate, sessile, terminal, and axillary; filaments villous. C. hirsutum, Willd. rel. ex Roem. et Schultes, syst. 4. p. 807. C. Jacquinianum, Schoenbr. dict. comm. P. 43. t. 328. Lher. stirp. 1. p. 72. Murr. nov. comm. Goett. 6. p. 41. t. 8. C. confertum, Mill. diet. no. 5. C. Patavinum, Sm. exot. bot. 1. p. 687. C. ramosissimum, Hort. ed. Bull. Cestrum, Sloane, hist. 2. p. 96. t. 204. f. 2. ? Plum, pict. 16. f. 177. f. 8. Ixora alternifolia, Jacq. amer. 157. t. 1. white, with acute segments ; tube long, filiform. Berry disposed in short, crowded spikes.

Evening Bastard Jasmine. Fl. May, July. Clt. 1759. Shrub 10 to 12 feet.

C. HIRSUTUM (H. B. et Kunth, 1. c. p. 59. t. 197.) leaves oblong, bluntish, clothed with soft down on both surfaces; peduncles axillary and terminal, ? 4-6-flowered ; flowers sessile, crowded into involucrated heads ; calyx tubular, 5-cleft, downy ; segments of the corolla ovate, narrow-acuminated ; filaments naked, toothless. J?. S. Native of Mexico, in frigid places, near Real del Moran and Hacienda de Regla, at the altitude of 1200 hexapods. Young branches clothed with villous down. Leaves 2 to 2| inches long. Calycine segments lanceolate, acute, unequal, reflexed at top. Corolla glabrous, rose-coloured. Segments of corolla reflexed. Berry unknown.

Rose-coloured-flowered Bastard Jasmine. Shrub 6 feet.

**** * Flowers spicate, or racemose. Spikes and racemes axillary and terminal.***

8 C. CALYCINUM (Willd. rel. ex Rcem. et Schultes, syst. 4. p. 809. H. B. et Kunth, 1. c. p. 58.) branches and under sides of leaves clothed with canescent, stellate tomentum ; leaves ovate-elliptic, glabrous and shining above, sub-acuminated, stiffish ; peduncles axillary and terminal, many-flowered, short, spicate ; flowers sessile; calyx elongated, 5-cleft; corollas tomentose ; filaments naked, toothless. ^2 • S. Native of Peru, near Gonzanama ; and of Brazil, Sello. Leaves 2-3 inches long. Calycine segments ovate-lanceolate, acuminated. Corolla pale green. Stamens inserted at the top of the tube, glabrous. Habit of *Sessea.* Very like *C. stipulalum,* Ruiz, et Pav.

Large-calyxed Bastard Jasmine. Shrub 10 feet.

9 C. PETIOLA'RE (H. B. et Kunth, 1. c.) branches and the nerves on the under sides of the leaves clothed with powdery tomentum ; leaves on long petioles, glabrous above, elliptic-oblong, sub-acuminated, costately veined ; peduncles axillary and terminal, few-flowered, very short, spicately approximate ; flowers sessile ; filaments naked, toothless. ? *fy* . S. Native of Peru, in shady places between Ayavaca and Yanta, at the altitude of 800 hexapods. C. venosum, Willd. herb. no. 4438. ex Roem. et Schultes, syst. 4. p. 807. Sessea petiolaris, Spreng. syst. 1. p. 584. Branches glabrous: floriferous ones clothed with fuscescent tomentum. Leaves 5-7 inches long, and 2-3 broad. Petioles of the upper leaves biauriculate at the base; auricles lunate. Peduncles spicately approximate at the tops of the branches, tomentose. Teeth of calyx short, acute.

Petfio/ate-leaved Bastard Jasmine. Shrub.

IOC. CONGLOMERA'TUM (Ruiz, et Pav. fl. per. 2. p. 29. t. 156. f. a. H. B. et Kunth, 1. c. p. 60.) leaves oblong-lanceolate, acute, reticulately veined, stiff, glabrous, having the veins beneath prominent; spikes axillary, short, sessile ; calycine teeth ovate, acute; filaments naked, toothless. Jj . S. Native on the western declivities of the Andes of Peru, among the debris of rocks. C. reticulatum, Willd. rel. ex Rcem. et Schultes, syst. 4. p. 808. Branches subtrigonal. Leaves 3"4 inches long. Spikes approximate at the tops of the branches. Corolla greenish yellow, with ovate, acute segments. The plant of Ruiz, et Pav. is probably the same as that of H. B. et Kunth, 1. c.

Conglomerate-ftowered Bastard Jasmine. Shrub.

11 C. AFFI'NE (H. B. et Kunth, 1. c.) leaves lancfeolate, or lanceolate-oblong, acuminated, membranous, glabrous; spikes axillary, short, sessile, approximate ; flowers sessile ; segments of corolla ovate, acute; filaments naked, glabrous. *h.* S. Native of Peru, on Mount Tinguragua: also near Ayavaca. C. Peruvianum, Willd. rel. ex Roem. et Schultes, syst. 4. p. 807. Branches trigonal, smooth. Leaves 5 inches long, and lj inch broad. Spikes approximate at the tops of the branches. Corolla whitish green, glabrous, leetn of calyx

ovate, acute, with pilose edges. There is also a variety of this having hexamerous, hexandrous flowers. Very nearly allied to C. *Pdrqui* and *C. conglomerate.*

Allied Bastard Jasmine. Shrub 10 to 12 feet.

12 C. PIU'RNUM (Lin. spec. 277. Lher. stirp. 1. p. 74.) leaves oblong, acute, membranous, glabrous ; spikes axillary, on long peduncles; flowers sessile, approximate ; segments of corolla ovate, obtuse, reflexed ; filaments naked, toothless. *I?* . S. Native of Cuba, near the Havannah. Jasminoides, Dill. elth. 186. t. 154. f. 180. Leaves 3 inches long. Flowers sweet-scented, small, white. Teeth of calyx acute, a little ciliated.

Day-smelMng Bastard Jasmine. Fl. Nov. Clt. 1732. Shrub 10 to 12 feet.

13 C. ODONTOSPE'RMUM (Jacq. schoenbr. 3. p. 44. t. 331.) glabrous ; leaves oblong, acute, rather coriaceous; racemes short, axillary and terminal; flowers nearly sessile; segments of corolla lanceolate, acute, revolute ; filaments naked, toothless. J? . S. Native country unknown. Nearly allied to *C. diurnum,* but the flowers are only sweet-scented at night, not in the day time. Seeds small, compressed, marked by a short tooth at the side. Leaves 3-4 inches long. Corolla white ; . tube cylindrical, with the mouth hardly dilated. Berry blackish, size of a small pea.

Tooth-seeded Bastard Jasmine. Fl. July, Aug. Clt. 1793. Shrub 6 feet.

14 C. FASTIGIA'TUM (Jacq. schcenbr. 3. p. 44. t. 330.) leaves ovate-oblong, acute, coriaceous, glabrous, shining above ; peduncles elongated, axillary, spiked at top, equal in length to the leaves ; corolline segments ovate, obtuse, reflexed, 5 or 6; filaments naked, toothless. T? . S, Native country unknown. Leaves pale beneath. Spurious stipulas small, obtuse. Flowers white, sessile, sub-fastigiate on the tops of the peduncles, sweet-scented both by day and night. Berry roundish, size of a pea, blackish.

Fastigiate-fiowered Bastard Jasmine. Fl. Nov. Clt. ? Shrub 4 to 6 feet.

15 C. FCETIDISSIMUM (Jacq. schcenbr. 3. p. 43. t. 329.) glabrous ; leaves ovate and lanceolate, acute, petiolate ; peduncles axillary and terminal, usually 3-6-flowered, racemose; flowers pedicellate, or sessile; teeth of calyx slender ; segments of corolla short, ovate, emarginate; filaments bearded at the base, toothless. *2 • S. Native of the West Indies. Stem rough from dots, much branched. Leaves 2-4 inches long, very fetid. Flowers sweet-scented at night. Corolla yellowish. Berry oblong-cylindrical, black, containing 2 oblong seeds.

Very-fetid Bastard Jasmine. Fl. May, Aug. Clt. ? Shrub 10 feet.

16 C. TENUIFLORUM (H. B. et Kunth, 1. c. p. 61.) leaves ovate, acuminated, membranous, rather tomentose on the veins beneath; spikes axillary, very short, sessile, 8-12-flowered; flowers sessile ; corolla with a very slender tube, and lanceolate, acuminated segments, having the edges revolute ; filaments naked, toothless. T? . S. Native of the Orinoco, on the declivities of Mount Duida, near Esmeralda ; and of Para, in Brazil. C. floribundum, Willd. herb, ex Rcem. et Schultes, syst. 4. p. *807.* C. ov&tum, Willd. rel. 1. c. A much branched, suffruticose shrub. Branches terete, clothed with powdery tomen-- turn. Leaves about 4 inches long. Petioles, branches, and rachis of spikes tomentose. Corollas sweet-scented, white, glabrous. Calyx glabrous, irregularly 4-5-toothed. Filaments pilose at the base.

Slender-flowered Bastard Jasmine. Shrub.

17 C. TINCTORIUM (Jacq. schcenbr. 3. p. 45. t. 332.) leaves ovate-lanceolate, glabrous, shining; racemes axillary and terminal; flowers on short pedicels ; segments of corolla lanceolate, acute, at length reflexed,but at first spreading; filaments naked, toothless, adhering the whole length of the tube of the corolla. T? . S. Native about Caraccas. Leaves coriaceous, 3 inches long. Corollas white, sweet-scented. Berry deep violet, roundish.

Dyer's Bastard Jasmine. Fl. April, June. Clt. 1823. Shrub 4 feet.

18 C. LATIFOLIUM (Lam. ill. 2. p. 5. no. 2275. Vahl, eclog. p. 25.) leaves elliptic, acute, glabrous above, clothed with powdery villi beneath; racemes axillary, very short; filaments toothless. J? . S. Native of the Island of Trinidad. Petioles and branches clothed with powdery villi, as well as the peduncles, pedicels, and calyxes. Corolla with a filiform tube, and lanceolate, acute segments. Stigma capitate. Vahl says this species differs from *C. hirtum* in the leaves not being cordate at the base, and in the segments of the corolla being acute, not obtuse, and in the stigma being capitate, not bifid.

Broad-leaved Bastard Jasmine. Fl. June, July. Clt. 1818. Shrub 6 to 12 feet.

19 C. L^VIGA'TUM (Schlecht. in Linnsea, 7. p. *58.)* glabrous ; leaves elliptic, acuminated, rather papery, and rather opaque, petiolate ; racemes subspicate, axillary, much shorter than the leaves, but sometimes these racemes are reduced to axillary fascicles ; calyx nearly glabrous, ciliated on the margin, with very short, or no teeth; corolla glabrous, 6 times longer than the calyx; segments of the limb obtuse; filaments inserted in the upper part of the tube, rather pilose in the middle of the tube; berry ovoid. Tj . S. Native of Brazil, near Rio Janeiro and elsewhere. Cestrum racerndsum, Ruiz, et Pav. ? Leaves 4-6 inches long. Spurious stipulas sometimes present. Corolla an inch long. Hairs on the filaments retrograde.

Far. a, *evolutum* (Schlecht. 1. c.) leaves larger, on longer petioles ; and the racemes axillary, and on longer peduncles than in var. /3.

Var. /3, *paupérculurn* (Schlecht. 1. c.) leaves smaller, on shorter^ petioles ; racemes short; flowers sometimes sessile in the axi s of the leaves.

Smooth Bastard Jasmine. Shrub.

20 C. AMI'CTUM (Schlecht. in Linnaea, 7. p. 64.) quite glabrous ; leaves lanceolate, acute at both ends, shining, petiolate ; racemes subspicate, short, bracteate; calyx glabrous, with acute teeth, which are ciliated at top; corolla with a wide, glabrous throat, 6 times longer than the calyx ; and the segments of the limb are ovate, acutish, with tomentose sides; filaments inserted in the upper part of the tube, furnished with fascicles of retrograde hairs at their insertion. f?. S. Native of Brazil, Sello. Spurious stipulas small, reniform. This is distinguished from C. *bractedtum* in the smoothness of the parts. Corollas greenish yellow, an inch long. Leaves almost 5 inches long.

Decked Bastard Jasmine. Shrub.

21 C. BRACTEA'TUM (Link, et Otto, abbild. 1. p. 11. t. 6. Graham, in bot. mag. t. 2974. Schlecht, in Linnsea, 7. p. 64.) leaves lanceolate, undulated, downy ; flowers fascicled, axillary and terminal, pedicellate; false stipulas obliquely cordate, reniform; bracteas spatulate; filaments bearded at the base. *2 • S. Native of Brazil, about Rio Janeiro and elsewhere. Length of racemes variable, but hardly ever exceeding the leaves. Nearly allied to *C. petioldre.* Branches covered with dense, greenish tomentum. Peduncles an inch long ; pedicels short. Corolla salver-shaped, pale yellow ; tube an inch long ; segments ovate, acute.

Bracteate-fiowered Bastard Jasmine. Fl. June, July. Clt. 1818. Shrub 8 to 10 feet.

22 C. SCHLECHTENDA^VHLII ; glabrous; leaves elliptic, acuminated at both ends, acute at apex, rather coriaceous, opaque, on short petioles ; racemes axillary, sub-spicate ; calyx gla-

brous, with short, obtuse teeth, which are densely ciliated on the margins ; corollas glabrous outside, 6 times longer than the calyx ; segments of the limb reflexed, triangular, acute; "laments inserted in the middle of the tube, where they are also villous; tube of corolla marked by a villous ring inside j* the base. J?. S. Native of Brazil, Sello. C. multinorum, Schlecht. in Linnsea, 8. p. 59. but not of Rcem. et kchultes. Leaves 3§ to 5 inches long. This species differs from £• *Icevigdtum,* in the shorter corolla, in the flowers being If C0P*0US> anc* in the leaves being coriaceous, &c.

Many-flowered Bastard Jasmine. Shrub.

* *Racemes compound, or panicled; or the peduncles are racemosely panicled.*

23 C. PA'LLIDUM (Lam. diet. 1. p. 688.) glabrous; leaves Ovate, acute; racemes compound, axillary ; filaments toothless • ; berry obovate. ^ • S. Native of Jamaica. C. venef^a tu! Mill. diet. no. 6—Plukn. aim. 35. t. 64. f. 5.—Sloane, hist. 2. p. 96. t. 204. Flowers small, like those of *C. laurifolium,* pale yellow. Leaves like those of *C. launfôlium,* fruit like that of *C. vespertinum.* Leaves \\ inch g^gj dark green. Racemes dense, shorter than the leaves. Segments of corolla short, bluntish. Berry, violaceous, or dark Due, poisonous, ex Sloane.

fate-flowered Bastard Jasmine. Shrub 7 to 8 feet.

24 C. PANICULA'TUM (H. B. et Kunth, 1. c. p. 62. Willd. rel. ttoem. et Schultes, syst. 4. p. 807.) twining; leaves twin, ate-joblong, acute, glabrous ; panicles terminal, simple; branches divaricate ; flowers pedicellate ; tube of corolla very nal? A" segments linear-lanceolate, acuminated ; filaments b f• toothless. J?. ^. S. Native in humid places, on the anks of the river Guayre, near Caraccas. Branches trian- ^abrous* Leaves sometimes solitary, 3-4 inches long, ao * b^ad. Flowers sweet-scented. Teeth of calyx ovate, " ed. Corolla greenish white.

Panicled-flowered Bastard Jasmine. Shrub twining.

25 C. SCANDENS (Vahl, eclog. 1. p. 24. Willd. spec. 1. p. branches scandent; leaves ovate, attenuated, glabrous ; erries axillary, rather compound; filaments naked, toothless. brou^' S. Native of St- Martha, Rohr. Branches terete, glaleaves petiolate, remote, solitary. Spurious stipulas Segments of the limb subulate.

Climbing Bastard Jasmine. Shrub climbing,

b.) 26 C. MACROSUM (Ruiz, et Pav. fl. per. 2. p. 29. t. 154. f. Com leaves lanceolate-ovate, acute, glabrous; racemes short, filam solitary, or by threes ; the middle one very long ; Trunt^ tOothless - ? *? S- Native of Peru, in groves, twisted gnarbOUSj H foot high; branches elongated. Petioles tain;„ f * Calyx small. Berry violaceous, globose, cori- ng 4 oblong brown seeds.

Cremo^-flowered Bastard Jasmine. Shrub.

27 C. LONGIFL6RUM (Ruiz, et Pav. fl. per. 2. p. 28. t. 154. f. a. WQolf^es ovate-oblong, acute, shining and glabrous above, but rac^ beneath while young; peduncles terminal, paniculately tnnfW? corolla with a very long, curved tube ; filaments down I S, Native of Peru, in Groves« Branches Br^' Branches of panicle bearing 4-6 pedicellate flowers. acte as solitary, lanceolate. Corolla \\ inch long, purplish; glns of limb woolly; tube glabrous. Berry rather large, ov te , obscure, purple, containing many small, angular seeds.

Long-florvered Bastard Jasmine. Shrub.

cloth 1 28 C. STRIGILLANTUM (Ruiz, et Pav. fl. per. 2. p. 29. t. 156.) pedun l With S*lOrt stri Sose tomentum ; leaves cordate, acute ; other «l tWin? racer«osely panicled, the one shorter than the grove; Tments naked, toothless. * • S, Native of Peru, in • Leaves pendulous, glabrous above. Flowers almost sessile, furnished each with 3 small bracteas. Corolla white, with a long, incurved tube, very like *Jasmine.* Berry truncate, ovate, obscure violet.

Strigillate Bastard Jasmine. Shrub 10 to 12 feet.

* * * * *Peduncles corymbose, axillary, or terminal.*

29 C. THYRSOI'DEUM (H. B. et Kunth, 1. c. p. 63.) leaves ovate-oblong, acute, glabrous above, but clothed with fine down beneath ; panicles terminal, corymbose, much-branched, leafy; flowers sessile ; tube of corolla scarcely exceeding the calyx; segments of corolla ovate, acute, with inflexed edges; filaments naked, toothless. ^ • G. Native of Mexico, in the high plains near the town of Chalco, at the altitude of 1170 hexapods. Branches trigonal, canescent from powdery down. Leaves 3-4 inches long, running into the petioles at the base. Teeth of calyx short, ovate, acute, unequal. Corolla white. Said to be nearly allied to *C. Pdrqui.*

Thyrsoid-fiowered Bastard Jasmine. Shrub.

30 C. AURICULA'TUM (Lher. stirp. 1. p. 71. t. 35. Ruiz, et Pav. fl. per. 2. p. 28. t. 155. f. a. H. B. et Kunth, nov. gen. 3. p. *63.)* leaves oblong, acuminated, glabrous ; petioles biauriculate; corymbs axillary and terminal, approximate ; corolla downy, with a very slender tube, and ovate-oblong, acute segments, having inflexed edges; filaments naked, toothless. J?. S. Native of Peru, in temperate places between Loxa and Malacates, at the altitude of 1040 hexapods ; and about Lima, where it is used by the natives externally to cleanse foul ulcers, and internally in the venereal disease ; they also look upon it as a pectoral; but it seems to be a plant of suspicious character, on account of its belonging to *Solanàcece.* Cestrum Hediùnda, Lam. diet. 1. p. *687.* Rcem. et Schultes, syst. 4. p. 551. C. auriculàtum afflne, Pers. ench. 1. p. 230. Hediùnda Jasminiano flore, Feuill. per. 2. p. 25. t. 20. f. 2. Branches terete, glabrous. Leaves 4 inches long. Calyx, peduncles, and pedicels downy. Corolla white.

Auricled-\eaved Bastard Jasmine. Fl. June, July. Clt. 1774. Shrub 10 to 12 feet.

31 C. MULTIFLÒRUM (Rcem. et Schultes, syst. 4. p. 553.) leaves ovate-lanceolate, acute, glabrous ; corymbs axillary, pedunculate, one-half shorter than the leaves ; filaments toothless. J?. S. Native country unknown. Branches quite smooth, green. Leaves rather membranous, 2| inches long. Peduncles downy; pedicels glabrous. Segments of corolla erect, acute, rather connivent.

Many-flowered Bastard Jasmine. Shrub.

§ 2. *Filaments furnished each with a sessile gland at the base.*

32 C. TOMENTÒSUM (Lin. suppl. p. 150. Ait. hort. kew. ed. 2d. vol. 2. p. 3.) leaves ovate-oblong, acuminated, smoothish above, but clothed with pilose down beneath, and canescent ; peduncles axillary, short, 4-6-flowered, approximating in the manner of a spike ; flowers sessile ; calyx tubular, 5-cleft, and is, as well as the branches, villously tomentose; filaments furnished each with a gland. J?. S. Native of Peru, between Vinayaca and the town of Loxa, at the altitude of 1060 hexapods. C. Granadénse, Willd. rel. ex Roem. et Schultes, syst. 4. p. 807. Branches terete, villously tomentose, hoary, as well as the peduncles. Leaves membranous, green above, glabrous, and rather scabrous, about 5 inches long, and 2 broad. Segments of corolla lanceolate, oblong, acute, nearly equal. Corolla glabrous, greenish ; segments ovate, acute, with reflexed edges. Stigma capitately peltate. Berry oval, bisulcate at top, 2-4-celled, many-seeded, small, almost covered by the permanent calyx.

Tomentose Bastard Jasmine. Fl. June, July. Clt. 1790, Tree 12 to 18 feet.

33 C. PA'RQUI (Lher. stirp. 1. p. 73. t. *36.)* leaves lanceolate, glabrous, attenuated at both ends, acute, or bluntish, subundulated ; peduncles terminal, corymbose ; filaments villous at the base, and furnished with a tooth. h_c . G. Native of Chili, and the South of Brazil. Schmidt, oestr. baumz. 3. p. 138. t. 15. Sims, bot. mag. 1770. C. Jamaicense, /3, Lam. diet. 1. p. 688. C. virgatum, Ruiz, et Pav. fl. per. 2. p. 27. Parqui, Feuill. per. 2. p. 72. t. 32. f. 1. Leaves *3-5* inches long, attenuated at both ends, glabrous. False stipulas narrow. Flowers whitish yellow, very fragrant at night. Berry black, nearly globose. " Peduncles and calyxes sometimes tomentose, but also sometimes truly naked, except the orifice of the calyxes. Corolline segments usually reflexed and tomentose on the edges." Schlecht, in Linnasa, 7. p. *56.*

Parqui Bastard Jasmine. Fl. June, July. Clt. 1787. Shrub 6 to 8 feet.

§ 3. *Filaments furnished each with a tooth or toothlet at their insertion.*

34 C. SALICIFOLIUM (Jacq. schcenbr. 3. p. 42. t. 326.) leaves lanceolate, acuminated, glabrous; racemes axillary, much shorter than the leaves ; flowers pedicellate ; filaments furnished each with a toothlet at the base. Tj. S. Native of America, in frigid places near La Venta Grande, between Caraccas and the port of La Guayra, at the altitude of 760 hexapods. Branches terete, glabrous. Leaves membranous, 5 inches Jong, and 1 broad. Racemes glabrous. Berry ovate-oblong, size of a berbery, girded by the calyx at the base. Calyx 5-toothed. Corolla greenish white, with a slender tube, and spreading, lanceolate, acutish segments. Filaments free only at top.

Willow-leaved Bastard Jasmin. Fl. April, June. Clt. ? Shrub.

35 C. EUA'NTHES (Schlecht. in Linnaea, 7. p. 60.) glabrous ; leaves elliptic, or oblong, attenuated at the base, acutish at the apex, shining, rather coriaceous, petiolate; racemes axillary, rather compound, leafy at the base; calyx puberulous, with short, obtuse teeth, which are tomentose at apex ; corollas glabrous, 6 times longer than the calyx; segments of the limb oblong, bluntish ; filaments inserted a little above the base of the tube, glabrous, rather denticulated. ^ • S. Native of the South of Brazil, Sello. Leaves 3-4 inches long. Margins of the segments of the corolla tomentose. Habit of *C. multiJldrum,* but differs from it in the racemes being sub-compound and leafy at the base, and in the filaments being glabrous and sub-denticulated.

Well-flowered Bastard Jasmine. Shrub.

36 C. HIRSU'TUM (Jacq. schoenbr. 3. p. 41. t. 324.) leaves oblong, acute, downy above, and tomentose beneath; spikes axillary, longer than the petioles ; flowers sessile ; filaments furnished with a little toothlet at the base. J? . S. Native country unknown. Branches and calyx beset with white hairs. Leaves acute at both ends, *3-5* inches long. False stipulas falcate. Flowers fascicled in small, axillary corymbs. Calyx 5-toothed. Corolla with a glabrous, green tube, and spreading, lanceolate, acute, yellowish segments. Stigma capitate. Filaments bearded at the base.

Hairy Bastard Jasmine. Shrub 8 feet.

37 C. ALATERNOIDES (Hort. par. ex Poir. suppl. 2. p. 183. Hamilt. prod. p. *25.* Reem. et Schultes, syst. 4. p. *555.)* leaves ovate-roundish, obtuse, or subelliptic undulated, coriaceous, shining, and glabrous above, and cinereous beneath, undulated ; flowers fascicled, sessile, axillary, lateral, and terminal; filaments tooth-letted at the base. J? . S. Native of the Antilles and Trinidad. Hook. bot. mag. *2929.* Said *to* be nearly allied to *C. macropkyllum* by Hamilt. 1. c. and the leaves size and shape of those of *Rhamnus alaternus.* Branches terete, cinereous. Leaves 1^ inch long. Corymbs shorter than the leaves. Corolla greenish yellow ; segments of the limb straight, acutish.

Alaternus-like Bastard Jasmine. Fl. Feb. April. Clt. 1824. Shrub 6 feet.

38 C. EXSTIPULA'TUM (Ledeb. in Schrad. nov. journ. 4. p. *65.)* leaves acuminated, villous; spikes terminal; filaments each furnished with a toothlet at the base. J? . S. Native country unknown. False stipulas none. Habit of *C. auriculatum.*

Exstipulate-leaved Bastard Jasmine. Shrub.

39 C. UNDULA^TUM (Ruiz, et Pav. fl. per. 2. p. *28.* t. 155.) leaves ovate, acute, undulated, glabrous ; peduncles axillary and terminal, few-flowered ; filaments each furnished with a tooth at the base. T? . S. Native of Peru, in waste places at the town of Huanaco. Trunk granular. Peduncles generally 8-flowered. Corolla yellow ; limb downy outside. Anthers tetragonal. Berry violaceous, 2-celled, about 6-seeded. Seeds angular, truncate.

Undulated-\e<ive& Bastard Jasmine. Fl. ? Clt. 1825. Tree 15 feet.

40 C. SUBEROSUM (Jacq. schcenbr. 4. p. 26. t. 452.) leaves oblong, acute, glabrous ; racemes axillary and terminal, compound ; flowers sessile, or nearly so, aggregate; filaments each furnished with a bifid tooth at the base. T?. S. Native country unknown. Trunk cinereous, corky. Leaves 3-4 inches long. Corollas pale yellow, sweet-scented. Stigma capitate, umbilicate.

Cor%-barked Bastard Jasmine. Fl. June, July. Clt. 1815. Shrub 5 to 6 feet.

41 C. HI'RTUM (Swartz, prod. p. 49. fl. ind. occ. 1. p. 478.) leaves subcordate, acute, glabrous above, but hairy beneath, as well as the branches; spikes axillary, short, subracemose, 4-6-flowered; filaments each furnished with a toothlet at the base ? *2. S. Native of Jamaica, in woods. Bracteas none. Corolla with a long slender tube, and ovate, obtuse, connivent segments, without any toothlets between. Berry black, ovate, downy, 2-seeded. Calyx 5-toothed. Said to be nearly allied to *C. nocturnum;* but is distinguished from it in the larger, broader, wrinkled leaves, and by the spicate crowded flowers.

Hairy Bastard Jasmine. Fl. June, July. Clt. 1800. Shrub 6 to 9 feet.

42 C. NOCTU'RNUM (Lher. stirp. 1. p. 70.) leaves ovate, or ovate-lanceolate, acute, glabrous; peduncles subracemose, axillary, about equal in length to the leaves ; filaments each furnished with a tooth at the base. F?. S. Native of Jamaica and Chili; and Mexico, near Jalapa, Schiede. Lam. diet. 1. p. 687. Jasminoides foliis pishaniinis, flore virescente, noctu odoratissimo, Dill. elth. p. 183. t. 153. f. 185.—Plukn. aim. t. 64. f. 3. ? Bark of trunk grey, corky at base. Branches terete, glabrous, dotted, green or greyish-brown. Leaves very like those of the orange. Corolla glabrous, greenish-yellow, with a slender, curved tube, and bluntish, rather irregular segments. Berry nearly globose, size of a pea, white, ex Lam.

Night-smelling Bastard Jasmine. Fl. Nov. Clt. 1732. Shrub 6 to 9 feet.

43 C. MACROPHY'LLUM (Vent, choix. t. 18.) leaves ovate-oblong, acuminated, quite glabrous ; flowers fascicled, sessile; filaments each furnished with a toothlet at the base. J? . S. Native of the Antilles, Porto Ricco, Riedle. Pers. ench. 1. p. 230. Poir. suppl. 2. p. 183. This is nearly allied to C. *laurifolium,* and is probably a variety of it; the leaves are, however, much larger, and less approximate, hardly coriaceous. The flowers are cream-coloured at the time of expansion, but at length pale yellow, or rusty, rising above the articulations of the petioles. Bracteas linear, clothed with rusty tomentum deciduous.

Long-leaved Bastard Jasmine. Fl. May, Aug. Clt. 1812. Shrub 6 to 7 feet/

44 C. VESTWDES (Scblecht, in Linnaea, 7. p. *65.)* branches downy; leaves oblong, nearly sessile, much attenuated at the base, bluntisb at apex, ratber coriaceous, glabrous above, and puberulous beneatb ; racemes terminal, leafy ; calyx glabrous, with short, broad, subbarbately mucronulate teeth; corollas glabrous, 3-4 times longer than the calyx: segments of the limb °vate, bluntish ; filaments furnished each with a villous tooth at ^heir insertion, villous upwards to the middle of the tube. T? . s- Native of Brazil, Sello. This is an elegant and showy species.

^ Bastard Jasmine. Shrub.

45 C, HIRTE'LLUM (Schlecht, in Linnaea, 4. p. 62.) branchlets hairy; leaves acute, and attenuated at the base, acuminated at the apex, membranous, shining, petiolate, downy on the primary nerves while young, but at length glabrous; racemes short, axillary, ^ubspicate; calyx hairy, with elongated, triangular, very acute teeth» having the edges ciliated ; corolla glabrous outside, 8 lines longer than the calyx: segments of the limb narrow, £cutish ; filaments inserted in the superior part of the tube, glabrous, each furnished with an emarginate or 2-lobed toothlet. ^* Ş. Native of Mexico, in the province of Jalapa, near the hacienda de La Laguna. Corolla slender, greenish-white.

Hat of *C.dumetorum.*

Hairy Bastard Jasmine. Shrub.

u\ri C. DUMETORUM (Schlecht, in Linnaea, 7. p. 61.) branches rather rigid; leaves elliptic, acuminated, acute at the base, and axillary petiolate; racemes axillary and terminal, usually twin ; ^ax villous, with acute, rather unequal segments, which are tomentose at top; corollas glabrous outside, 3 times longer than the calyx ; segments of the limb acute ; filaments inserted in the upper part of the tube, glabrous, furnished each with a short, broad scale. T. 10Wer part of tube clothed with retrograde down. ^ • PaKl'ebolive. of Mexico, among bushes near Vera Cruz and San Socio, bchiede and Deppe. Tube of corolla slender. Leaves 2-3 inches long. Fruit ovoid, conical, glabrous.

***h* Bastard Jasmine. Shrub.

leaves AURIFOLIUM (Lher. stirp. 1. p. 69. t. 34.) glabrous ; branches decussate, coriaceous, shining, ovate or elliptic, obtuse ; flowers fascicled, peduncled, axillary, and terminal, the peduncles much shorter than the petioles. Tube of corolla naked on the inside. Segments each furnished with a toothlet at the base. Lam. ex Willd. enum. 245. ^ • S. Native of South America. Smith, spicil. 2. t. 2. C. venenatum, Lam. ill. 688, no. 5t exclusive of the synonyms. C. aureola latifolia floribus albicantibus odoratis, Plukn. Phyt. t. 68, f. 4. ex Willd. ; but according to Lam. it refers to Cestrum. Leaves dark green, 1^ inch long; petioles rufescent. Flowers yellowish, in axillary, subsessile fascicles at the branches ; segments ovate, bluntish, spreading.

Willd-leaved Bastard Jasmine. Fl. May, Aug. Clt. 1691. 8 to 9 feet.

f *Species hardly known.*

C. FETIDUM (Medic, act. palat. 4. phys. p. 192.) corymbs terminating the branches. ^ • S- Perhaps the same

^d Bastard Jasmine. Shrub.

site, with NERVOSUM (Mill. dict. no. 3.) leaves lanceolate, opposite, with transverse nerves ; peduncles branched. F? . S. Native of Carthagena. Leaves 4 inches long, smooth, pale green beneath. Flowers white. Jasminoides Americanum lauri folio, flore albo odoratissimo Plum. Nov. gen. 6. t. 108. f. 2.

Broad-leaved Bastard Jasmine. Shrub 5 to 6 feet.

50 C. SPICATUM (Mill. dict. no. 4.) leaves ovate-lanceolate; flowers spicate, alar, and terminal. ^ . S. Native of Carthagena. Leaves 2\ inches long, and 1| broad. Flowers inodorous. Berry globose, purplish, size of a pea; pulp grateful to the taste. Seeds flat.

/Spicate-flowered Bastard Jasmine. Shrub 10 to 12 feet.

51 C. MUTI'SII (Willd. rel. ex Roem. et Schultes, syst. 4. p. 807.) leaves oblong, acuminated at both ends ; peduncles many-flowered, lateral, aggregate. Tj. S. Native of America, on Mount Quindiu. Humb. et Bonpl.

Mutis's Bastard Jasmine. Shrub.

52 C. PARVIFOLIUM (Willd. rel. ex Roem. et Schultes, 1. c. p. 808.) leaves elliptic, subundulated, glabrous, coriaceous, shining above ; flowers aggregate, sessile, nearly terminal. ^ • S. Native country unknown.

Small-leaved Bastard Jasmine. Shrub.

53 C. PAUCIFLORUM (Willd. rel. ex Roem. et Schultes, syst. 4. p. 808.) leaves oblong-ovate, downy ; heads terminal, few-flowered. ^2 • S. Native country unknown.

Few-flowered Bastard Jasmine. Shrub.

54 C. AUGUSTIFOLIUM (Lodd. bot. cab. 618.) J? . S. Native of the West Indies. Flowers white. This species is hardly known, and may be synonymous with some other species.

Narrow-leaved Bastard Jasmine. Fl. June, July. Clt. 1820. Shrub 6 feet.

Cult. These are shrubs of the most easy culture ; they grow well in any rich light soil; and are readily increased by cuttings, under a hand-glass, in heat.

XXXVI*ll(a).* ACOKANTHERA (fromak*w^,acocc, amucrone ; and *avdrjpa, anthera,* an anther; anthers mucronate.) Lycium species, Thunberg.

LIN. SYST. *Pentdndria, Monogynia.* Calyx divided even to the base into 5, segments. Corolla with a villous throat. Anthers terminated by a mucrone. Stigma elongated, papilliform, pilose. Ovarium 2-celled; cells 1-ovulate.—Shrubs, natives of the Cape of Good Hope. Leaves nearly opposite, as in *Apocynece.* Branches terminated by a spine, as in *Lycium.* Flowers in axillaryf sessile fascicles, rarely solitary.

1 A. VENENA'TA ; leaves lanceolate-oblong, coriaceous ; corymbs sessile, axillary, usually 8-flovvered? ^ • G. Native of the Cape of Good Hope. Cestrum venenatum, Thunb. prod. 1. p. 36. fl. cap. 1. p. 193. Cestrum citrifolium, Retz. phyt. bl. 1. p. *36.* Leaves shining, glabrous. Bracteas subulate. Corolla yellowish. Segments of corolla convolute, subulate, erect, tipped with brown, expanding in the afternoon. C. fascicularis, Hort. berol ?

Poisonous Aconanthera. Fl. Feb. April. Clt. 1787. Shrub 6 to 7 feet.

2 A. LAMA'RKII ; leaves lanceolate, nerved, rather coriaceous ; flowers in axillary sessile fascicles. \/ . G. Native of Africa Sonnerat. Cestrum oppositifolium, Lam. ill. 2. no. 2279. /. 112. f. 2. Poir. suppl. 2. p. 182. Branches terete, striated! Leaves nearly sessile, *2* inches and more long. Corolla small' with a slender tube, and short segments.

Lamark's Aconanthera. Shrub.

3 A. LYCIOIDES; leaves elliptic, obtuse, narrowed at the base, in fascicles ; flowers axillary, solitary, almost sessile. *h* G. Native of the Cape of Good Hope*. Cestrum lycioides, Lichtenst. spicil. fl. cap. mss. ex Roem. et Schultes, syst. 4. p. 558. Branches obsoletely tubercular, when young glabrous and leafy. Calyx 5-cleft; segments erect, linear, acute, hardly attaining the height of the middle of the corolla. Corollas white • tube an inch long; segments of the limb acute, revolute. Anthers incumbent, exserted. Stigma capitate.

Box-Thorn-like Aconanthera. Fl. June, Sept. Clt. 18°4 Shrub 5 to 6 feet.

4 A. PUBE'SCENS ; leaves oblong-lanceolate, obtuse, attenuated at the base in fascicles, pubescent; flowers axillary, solitary, nearly sessile. *2 • G- Native of the Cape of Good Hope. Cestrum pubescens, Licht. 1. c. Stature of the preceding ; but the branches are more rigid ; the branchlets short, and pungent at top, or leafy. Spines as those of some species of *Lycium.* Flowers size, colour, and shape of those of *A. lycioides;* but the calyx is downy, and more deeply divided.

Downy Aconanthera. Shrub 5 to 6 feet.

Cult. For culture and propagation see *Crabowskia,* p. 481.

XXXIX. DUNAXIA. (named in honour of Michael Felix Dunal, M.D. professor of botany at Montpelier; author of " Histoire Naturelle, Medicale, et Economique des Solanum, et des genres qui ont ét6 confondus avec eux." Paris, 1813 ; and several other works.) H. B. et Kunth, nov. sen. 3. p. *55.* t. 194.

LIN. SYST. *Pentdndria, Monogynia.* Calyx urceolate, 5-toothed. Corolla funnel-shaped ; tube elongated, nearly cylindrical; limb 5-cleft, plicate. Stamens 5, inclosed; filaments tripartite ; lateral segments capillary : middle one antheriferous. Anthers dehiscing lengthwise. Style exserted ; stigma capitate, emarginate. Berry globose, 2-celled, propped by the permanent calyx ; placentas adnate to the dissepiment. Seeds many, lenticular, reniform, compressed, smooth.—A shrub, with alternate, solitary, nearly entire leaves, floccosely tomentose from stellate down. Umbels extra-axillary, sessile. Corolla whitish.

1 D. SOLANA'CEA (H. B. et Kunth, 1. c. p. 56. t. 194.) J?, S. Native of New Granada, in shady places near Fusagasuga, at Hato del Quemado, at the altitude of 800 hexapods. Habit of *Witkerwgia;* but the structure of the flowers is that of *Cestrum ;* distinguished from all the other genera of the present order by the tripartite filaments. Branches glabrous. Leaves petiolate, ovate-oblong, acuminated, rounded and unequal at the base, glabrous and green above, nearly 10 inches long.

Solanaceous Dunalia. Shrub.

Cult. For culture and propagation see *Cestrum*^ p. 485.

XL. MEYE'NIA (meaning unknown to us.) Schlecht, in Linngea, 8. p. 251.

LIN. SYST. *Pentdndria, Monogynia.* Calyx campanulate, almost regular, 5-toothed, permanent, valvular in aestivation. Corolla clavately tubular ; limb 5-toothed, contracted, erect, conduplicate in aestivation. Genitals inclosed. Stamens 5, regular ; filaments free from the middle of the tube, naked; anthers oval-roundish, fixed by the back, 2-celled ; cells near each other. Ovarium girded by a fleshy ring ? Stigma sub-bilobed, subcapitate. Berry propped by the permanent spreading calyx, which is sometimes cleft lengthwise, 2-celled. Some of the seeds irregularly oval. Embryo straight, with roundish, foliaceous, flat cotyledons in the centre of the albumen, having the radicle pointing to the hilum.—Shrubs, natives of Mexico. Leaves alternate, quite entire, beset with articulated hairs. Flowers red, irregularly cymose.

1 M. FASCICULA'TA (Schlecht, 1. c.) shrub clothed with tomentose down ; flowers cymosely fascicled. T?. S. Native of Mexico, near Chiconquiaco. Leaves petiolate, broad, ovate, acute, very variable in size, usually 8-4 inches long, and 1½ to *2* broad. Flowers scarlet, forming fascicles or racemes at the tops of the branches. Berry cuneated at the base. Seeds variable in shape from position and compression, wrinkled longitudinally.

Fascicled-Bowered Meyenia. Shrub.

2 M. CORYMBO'SA (Schlecht, 1. c. p. *252.)* glabrous; flowers disposed in elongated corymbs. F?. S. Native along with the preceding, which it is very like ; but differing in being glabrous. Leaves variable, the largest one 5 inches long, and *2* broad, but generally smaller. Calycine segments nearly subulate. Corolla red or scarlet.

Corymbose-Cowered. Meyenia. Shrub.

Cult. For culture and propagation see *Cestrum* above.

XLI. DA'RTUS (from *ZapTog, dartos,* excoriated; bark of fruit deciduous.) Lour. coch. p. 124. ed. Willd. 1. P- 16/# Rcem. et Schultes, syst. 4. p. *55.*

LIN. SYST. *Pentandria, Monogynia.* Calyx 5-cleft; segments ovate, membranous. Corolla with a subglobose tube, which is longer than the calyx, and a 5-cleft limb; segmei ovate, spreading. Filaments inserted into the middle of the tube, inclosed. Style very short ; stigma 5-lobed. Berry small, round, excoriated, diaphanous, 1-celled, many-seeciea. Seeds small, unequal.—A shrub, with alternate, serrated, large leaves ; and small, axillary, oblong racemes of white flowers. Root reddish, rather aromatic.

1 D. PERLA^RIUS (Lour. 1. c.) \7 . G. Native of Cochinchina, in shady places on the banks of rivers. Perlanus alter, Rumph. amb. lib. 6. cap. 62. p. *122. t. 57.* Branches ascending. Leaves oblong-ovate, soft from tomentum beneath, witn oblique ribs ; petioles rufous.

iW/-berried Dartus. Shrub 6 feet.

Cult. For culture and propagation see *Cestrum,* p. 486.

§ *2. Pericarp capsular.*

XLII. VE'STIA (named after Dr. Vest, of Clagenfurth.) Willd. enum. 1. p. 208. D. Don, in edinb. phil. journ. 18^. Schlecht, in Linnaea, 7. p. *53.*

LIN. SYST. *Pentdndria, Monogynia.* Calyx campanulat^ regular, 5-toothed, permanent, valvular in aestivation. por? tubular; limb 5-parted, regular, conduplicate in sestivat'n* Genitals exserted : filaments free from the middle of the tu»» villous under the place of insertion, the rest glabrous, varioi sty curved before the expansion of the flowers ; anthers oval, d* hiscing lengthwise. Ovarium girded by a fleshy, glabrous, 5* tubercled ring, 2-celled, many-ovulate ; ovula fixed to a taicK central placenta. Stigma capitate ? hardly bifid. CapsU^ girded by the calyx, and hardly larger than it, cylindrical, yetf blunt, marked lengthwise by 4 smooth furrows, which are disposed crosswise, 2-celled, 2-valved ; valves at length bifid ; placentas *2,* adnate to the middle of the dissepiment, semi-globose* Seeds numerous.—A deciduous, erect, glabrous, fetid shrub, with ovate-lanceolate, entire leaves. Peduncles solitary, ^' flowered, terminal, and from the axils of the upper leaves, drooping. Corolla tubular, yellow, with a villous throat.

1 V. LYCIOI DES (Willd. 1. c.) *? . H. Native of Chili, about Conception, and elsewhere. Cantua ligustrifolia, Juss. ann. mus. 3. p. 118. Cantua foe'tida, Pers. ench. 1. p. 187. Periphragmos foe'tidus, Ruiz, et Pav. fl. per. *2.* p. 17. t. 132. Cestrum vespertinum, Hort. valent, Calyx violaceous. Capsule pendulous, 2-3-celled.

FIG. 44.

Box-Thorn-like Vestia. Fl. June. Clt. 1815.- Shrub 3 to 6 feet.

Cult. Vestia is a very pretty hardy shrub, growing freely in summer, but requiring a little protection in winter, if severe. It is readily propagated by cut-

tings, under a hand-glass, or by seeds, which ripen in plenty in this country.

XLIII. SE'SSEA (named in honour of Martin Sesse, formerly director of the botanic garden of Mexico.) Ruiz, et ^ay. fl. per. 2. p. 9. t. 115. f. b. and t. 116.

•LIN. SYST. *Pentdndria, Monogynia.* Calyx tubular, pentagonal, 5-toothed ; teeth ovate. Corolla funnel-shaped; tube twice as long as the calyx, with a globose orifice, and plicate limb ; segments straight, ovate, with convolute margins. Filaments curved at the base, villous. Stigma 2-lobed; lobes unequal. Capsule cylindrical, a little arched, twice as long as the calyx, 2-celled, 2-valved; valves bifid. Seeds numerous, imbricate, oblong, compressed, with membranous edges.—Branched, fetid shrubs, natives of Peru, with the habit of *Cestrum.* Leaves alternate, entire. Racemes axillary and terminal; pedicels corymbose. Corollas yellow.

1 S. STIPULA'TA (Ruiz, et Pav. fl. per. 2. p. 9. t. 115. fig. b.) Leaves lanceolate and cordate ; false stipulas large, ovate, obtuse, deciduous; racemes axillary and terminal; pedicels corymbose, T? . G. Native of Peru, on the mountains. Leaves petiolate : superior ones narrower, ovate, acuminated, *3-5* inches long, and 1-2 broad, glabrous above, and clothed with white tomentum beneath. Racemes and calyxes woolly. Corolla villous, yellow, twice as long as the calyx.

Stipulate Sessea. Shrub 5 to 6 feet.

* S. DEPE'NDENS (Ruiz, et Pav. fl. per. 2. p. 9. t. 116.) Leaves cordate-oblong; false stipulas wanting; racemes very often Pendulous; pedicels usually 3-flowered. J? . G. Native of Chili, on the banks of rivers« Branches pendent. Leaves like those of the preceding, but powdery beneath, 3-4 inches long, and 2 broad. Calyx powdery. Corolla yellowish, twice as long as the calyx.

Hanging-branched Sessea. Tree *25* to 30 feet.

Cult. For culture and propagation see *Cestrum,* p. 486.

XLIV. FABIANA (named in honour of Francisco Fabiano, a Promoter of botany in Spain.) Ruiz, et Pav. fl. per. 12, *U l22,* f* b, Hook, et Arn. in Beech, voy. pt. bot. p. 35'

LINt SYST. *Pentdndria, Monogynia.* Calyx tubular, 5-angled (or 5-toothed) Permanent. Corolla funnel-shaped, with a very long tube, and a short, 5-cleft, Plicate, revolute limb. Stamens inserted on the tube, unequal, one of the *3,* shorter than the other. Stigma capitate, emarginate. Capsule ovate, 2-valved, many-seeded. Seeds wrinkled, dotted.—A shrub, with a habit like *Tdmarix.* Leaves scattered, or in fascicles, ovate or linear. Flowers terminal, solitary, peduncu-late.

IMBRICA'TA (Ruiz et Pav. 1. c.) leaves small, ovate, sessile, concave, scale-formed, imbricate; flowers terminal, solitary; Nat. of Chili, in fields. Pers. ench. 1. p. 176. Poir. suppl. 2, p. 625. Shrub much branched. Corolla lilac, about an inch long.

Imbricate-leaved Fabiana. Shrub.

3 F. LANUGINOSA (Hook, et Arn. in Beech, voy. pt. bot. p. 35) Branches woolly from white tomentum ; leaves linear, very blunt, fleshy, spreading; calyx woolly; segments of Corolla oblong, reflexed. ^ . F. Native of Chili, at Coquimbo. Flowers axillary, pedunculate, hardly the length of the leaves. Calyx tubular, 5-cleft, with unequal, obtuse segments. Corolla glabrous. Stigma oblong, capitate.

Woolly Fabiana. Shrub.

F. VISCOSA (Hook, et Arn. in Beech, voy. pt. bot. p. 36) clothed with clammy down ; leaves scattered, narrow-linear, spreading, obtuse, channelled on the back ; peduncles terminal; fruit-bearing ones erect. T? . F. Native of Chili, near Barasca, where it is called Pichanilla. This comes very near *F. thymifolia,* St. Hil, Capsule 2-valved ; margins of the valves bent in so as to form 2 cells, and bifid at apex. Receptacle central, becoming free from the dissepiment, and split through the middle, entire at the summit.

Clammy Fabiana. Shrub.

4 F. THYMIFOLIA (St. Hil. in mem. mus. 12. p. 317. t. 9.) plant hairy and clammy ; leaves small, linear, nerveless, scattered, bluntish; peduncles subaxillary, at first erect, but at length bent. Tj . S. Native of Brazil in the province of Rio Grande do Sul. Corolla yellow at bottom, and dirty purple above.

Thyme-leaved Fabiana. Shrub \ to 1 foot.

Cult, These are very singular shrubs ; they will grow in any light rich earth. They are rather hardy, and may be grown in the open air during summer ; and they probably would stand our winters if protected by a mat, or the haulm of herbaceous plants, during frosts ; and they will be readily propagated by cuttings, under a hand-glass, or by seed.

XLV. LAURE^RIA (meaning unknown to us.) Schlecht, in Linnaea, 8. p. 513.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted, alately pentagonal, permanent. Corolla tubular, with a short, 5-lobed, straight limb. Stamens 5, inclosed, villous at their insertion ; anthers linear, fixed by the base. Stigma bilamellate. Capsule 2-celled, 2-valved ? Seeds numerous, full of impressed dots, fixed to short lamelliform processes or placentas, which are attached to the dissepiment. Embryo cylindrical, curved.—A shrub, with alternate leaves, beset with stellate hairs. Flowers lateral, solitary.

1 L. MEXICA'NA (Schlecht, 1. c.) *Vi* . G. Native of Mexico, at the Hacienda de La Laguna. Leaves ovate or broad-lanceolate, 4-6 inches long, and 2-3 broad.

Mexican Laureria. Shrub 6 feet.

Cult. For culture and propagation see *Cestrum,* p. 486.

XLVI. LAMA'RKIA (named in honour of Jean Baptist Monet de la Mark, author of " Flore Francaise." 3 vols. Paris, 1778. " Encyclopedic Methodique Botanique." 4 vols. 4to. Paris, 1783—1796, (but vol. 5 to 8 of this work is by Poiret, Paris, 1804—1808. He is author of many other works on botany, and other branches of natural history.) Roam. et Schultes, syst. 4. p. 28. Markea, Richard, in act. soc. hist, nat. par. J07.

LIN. SYST. *Pentdndria, Monogynia.* Calyx long, tubular, pentagonally prismatic, semiquinquefid. Corolla nearly funnel-shaped ; limb spreading, equally and bluntly 5-parted. Stamens equal, length of tube. Capsule oblong, terete, coarctate at top, many-seeded.—A glabrous shrub, with oblong-obovate, acuminated, shining leaves, which are bluntly rounded at the base. Corollas scarlet.

1 L. COCCINEA (Richard. 1. c. under Markea. Poir. suppl. 3. p. 293.) *2 • S. Native of Cayenne.

A Scarfcf-flowered Lamarkia. Shrub.

Cult. For culture and propagation see *Cestrum,* p. 486.

f *Addenda to Order Solanacece.*

1 SOLANUM QUERCIFOHUM (Schum. pi. guin. p. 121.) suffruticose, unarmed ; leaves twin, ovate, somewhat repand, clothed with stellate down ; racemes simple, infra-foliaceous, distich. *?.S. Native of Guinea. Stem 2 feet. Leaves 4-8 inches. Corolla white, size of those of *S. dulcamara;* segments ovate-lanceolate. Berry tomentose, 2-4- celled, size of a plum.

Oak-leaved Nightshade. Shrub.

2 SOLA^NUM DI'STICHUM (Schum. pi. guin. p. 122.) shrubby, unarmed, tomentose ; leaves ovate, subrepand; racemes simple, infra-foliaceous, distich. T? . S. Native of Guinea, at Aquapim. Leaves twin : tomentum stellate. Corollas size of those of *S. nigrum,* white. Fruit size of bilberries, globose, glabrous, scarlet.

Z)is^c/j-racemed Nightshade. Shrub 6 feet.

3 SOLA^NUM A'TROPO (Schum. pi. *gum.* p. 124.) sub-herbaceous, unarmed ; leaves obovate, cuneated, angularly-repand, acutish, glabrous ; peduncles opposite the leaves, usually twin, 1-flowered. ©. ? S. Native of Guinea. Stem branched, glabrous. Corollas pale blue, size of those of *S. tuberbsum;* limb entire, plicate, having the angles ending each in a subulate point. Berry size of an apple, dirty yellow. Leaves 3-6 inches long. *A'lropo* is the vernacular name of the plant. Allied to *S. Melongena.*

Atropo Nightshade. PL 2 feet?

4 SOLA'NUM EDU'LE (Schum. pi. guin. p. 125.) sub-herbaceous, unarmed; leaves ovate, repandly-toothed, oblique, clothed with stellate tomentum ; peduncles twin ; calyx rather prickly. 0. ? S. Native of Guinea. Stem beset with adpressed, stellate hairs. Racemes usually opposite the leaves. Corollas pale violet, size of those of *S. tuberosum;* limb of 5 acuminated angles. Berry size of an apple, nearly globose, yellow. Nearly allied to *S. Melongena* and *S. insanum.*

Edible Nightshade. PL 2 feet.

5 SOLA'NUM DASYPHY'LLUM (Schum. pi. guin. p. 126.) sub-herbaceous, rather prickly ; leaves broad-cuneated, angularly-lobed, hairy, and are, as well as the calyxes, prickly; racemes opposite the leaves, few-flowered. ©. S. Native of Guinea, where it is called by the natives *Atropo-Bah.* Leaves nearly sessile, almost a foot long. Prickles subulate, straight. Corollas rotate, blue, villous outside, size of those of *S. tuberosum ;* limb acutely 5-angled. Berry nearly globose, size of an apple. Allied to *S. Melongena.*

Thick-leaved Nightshade. PL 2 feet.

6 SOLA^NUM RUNCINA'TUM (Ruiz, et Pav. fl. per. 2. p. 36. D. Don, in Sweet, fl. gard. n. s. t. 177.) unarmed; leaves pinnatifid,'smoothish ; panicles cymose ; stigma clavate; calycine segments ligulate, recurved; stems herbaceous, diffuse. 2£f H. Native of Peru.—Feuill. per. 1. p. 722. t. 15. Corolla violaceous, 5-lobed. Perhaps the same as *S. pinnatum,* Cav.

RuncinateAeaved Nightshade. Fl. Sept. Oct. Clt. 1832. PL diffuse.

ORDER CLXX. VERBA'SCINJE (this order contains plants agreeing with the genus *Verbascum* in important characters.) Nees ab Esenbeck, in Lin. trans. 17. p. 78. Solaneae genera, Juss. gen. p. 123. edit. Usteri. p. 139. Scrophularineae, tribe A. Verbascese, Bartl. and Rchb.—See R. Br. prod. p. 444.

Corolla rotate, with a flat, 5-cleft, unequal limb, or ventricose, with a bilabiate limb. Stamens 5, of different forms ; of these the upper one is sometimes sterile or wanting. Anthers 1-celled, adnate to a hatchet-shaped connective. Carpels 2, joined into a capsule, which opens from the apex. Endocarp changing into a bipartible dissepiment. Placenta marginal, combined into a central column, which is free from the margins, and constituting the axis of the dissepiment, and which is rather prominent in the hollow of both carpels. Seeds many, reniform, albuminose. Embryo a little arched, central.—Perennial or biennial herbs, of a mucilaginous substance. Leaves alternate, usually decurrent or opposite, on a straight or twiggy stem. Flowers dispose[d] in terminal, usually elongated racemes or spikes, propped by [flo]decreasing leaves. Corollas white, yellow, or purple, A[*]ments usually bearded.

This order differs principally from *Solanacece* in the 1-celled[,] reniform, or oblong anthers, which are sometimes bent m[and] complicate, often unequal, and of different forms in the sa[me] flower ; it also differs from *Schrophuldrince* by the same reason.

Synopsis of the genera.

1 VERBA'SCUM. Calyx 5-parted. Corolla rotate or funnel-shaped. Stamens 5, inclinate, usually bearded, all antheriferous. Anthers lunate.

2 RAMONDIA. Calyx 5-parted, Corolla rotate, rather unequal. Stamens 5, all antheriferous, approximate, bearde[d] Anthers perforated at the apex.

3 CE'LSIA. Calyx 5-parted. Corolla rotate. Perfect stamens 4, didynamous, bearded ; anthers lunate.

4 ISANTHE^RA. Flowers polygamous. Corolla in the in[a]^ flowers rotate, in the female wanting. Stamens equal, glabrous, anthers reniform, dehiscing by a vertical chink.

I. VERBASCUM (of Pliny, who deduces it from *Verbena*; but according to others, it should have been *Barbdscum,* \ the bearded filaments. Hence it is called *Barbasso* in Italian, and one species is called *Thdpsus barbatus* by some old authors. Tourn. inst. t. 61. Lin. gen. no. 245. Schreb. *gen.* no. p. Juss. gen. p. 124. ed. Usteri, p. 139. Gaertn. fruct. Lam. ill. 117. f. 2. Schrad. verb, in colum. soc. goett. vd 1813. Nees, in Lin. trans. 17. p. 79.—Blattaria, Tourn.

LIN. SYST. *Pentdndria, Monogynia.* Calyx 5-parted. Corolla rotate or funnel-shaped. Stamens 5, all antheriferous, declinate, usually bearded. Anthers all or only some of them the same flower, lunate. Capsule 2-valved; valves bent i[n] Seeds fixed to the central placenta.—Usually strong, erect, p[e]rennial, or biennial herbs. Leaves broad, usually decurrefltj decreasing in size as they ascend the stem, until they becom[e] bracteas. Flowers yellow, white, purple, or coppcr-coloureu» disposed in elongated, dense or loose, racemes or spikes.

§ 1. *Leaves decurrent. Flowers disposed in dense spikes**

1 V. THA'PSUS (Lin. spec. p. 252.) leaves crenulated, cte[c]rent, lanceolate-oblong, tomentose : superior ones acute; [ac]cemes spicate, dense ; calycine segments lanceolate, [ob]mentose above, equal in length to the fruit; corolla su[bro]with oblong, obovate,* obtuse segments; anthers [near]$. H. Native throughout Europe, Siberia, Tauria, and [Cau]sus, in sterile and waste places, especially on a gravelly [or] careous soil ; plentiful in Britain, in like situations ; [as] Nipaul and Kamaon. Smith, engl. bot. t. 549. Oed. [fl.] t. 631. Schkuhr, handb. 1. p. 136. t. 42. Woodv. [med.] p. 342. t. 125. V. lychnitis, Schultz, starg. no. 185. lidum, Nees, in flora, 2. p. 295. V. I'ndicum, Wall. [cat.] 2630. B. C. and F.—Gmel. sib. 4. p. 91. no. 415.—Han[no.] no. 581.—Blackw. herb. t. 3.—Mor. hist. 2. sect. 5. [t.] —Lob. icon. 1. p. 561. Plant soft from tomentum [part.] Lower leaves a foot long. Racemes densely spi[cicled,] simple, or branched, often 3 feet long. Corolla *y*

The 3 smaller filaments densely clothed with white hairs; but the 2 larger ones but sparingly so in the middle. This plant is very apt to run into mules by the impregnation of other species. The leaves and whole herb are mucilaginous, and recommended as emollients, both internally and externally. A pint of cow's milk, with a handful of the leaves, either of this or any allied species, boiled in it to half a pint, sweetened with sugar, strained, and taken at bed-time, is a pleasant emollient, and nutritious medicine for allaying a cough, and more particularly for taking off the pain and irritation of haemorrhoids. It is often applied externally in this disorder ; and is used as an injection in tenesnius with advantage. In diarrhoeas of an old standing, a decoction of it is useful to ease the pains of the intestines : two ounces of the leaves are boiled in a quart of water, and 4 ounces are given every 3 hours. In pulmonary complaints of cattle it is found to be of great use ; and hence its name of Cow's Lung-wort. It is well known to the country cow-leeches under the name of Murrain-grass, which is a corruption of Mullien. The French call it Bouillon blanc, and use an infusion of the flowers in coughs, supposing them to possess anodyne and pectoral virtues. It does not seem to have much of the narcotic powers for which the *Solanacece* are distinguished. The seeds, however, are said to stupify fish so much that they may be taken with the Hand.--\Voodville. In the East Indies, the natives have the superstitious notion of the efficacy of this plant in protecting them from the visitation of evil spirits.

The plant has many names in English. Gerarde enumerates *Cotton,* or rather *Woollen, Hig-taper, Torches, Lung-woort, Bullock's Lung-woort,* and *Hare's Bearde.* Withering adds *Ladies' foxglove.* It is probable that Gerarde's correction *of Mullien* to *Woollen* is right, especially as it is called in Dutch *Wullkraut.* The French *nameMolene* is probably borrowed from our word Mullien. *Hig-taper* is altered to *High-taper* in all modern books, supposing it to have been so named from its high tapering stem ; but in the North it is called *Hag-taper,* probably from its supposed efficacy in sorcery.

1 V. *thapsiforme* Schrad. verb. p. 21. flowers white. $. H. V. elongatum, Willd. enum. p. 223. V. IL flore albo, Tabern. krauter. P. 956. with a figure.

2 V. *Thapsus* Linn. sp. 177. Mill. fig. t. 7 ; leaves narrower. $. H. V. angustius, Dodon. pempt. p. 143, with a figure.—Mor. hist. 2. sect. 5. t. 9. f. 7. Schrank, in Hoppe, taschen. 1809. p. 90.

Common Mullien. Fl. July, Aug. Britain, in dry pastures. Perennial. 3 to 6 feet.

3 V. INDICUM (Wall. in Roxb. fl. ind. 2. p. 436. cat. no. 2630. Verbascum Indicum Linn. sp. 177. Mill. fig. t. 80. fig. 2.) leaves decurrent, elliptic, crenated, undulated, clothed with woolly tomentum ; flowers spiked, dense; bracteas and calyxes woolly, cuspidate, about the length of the tube; corolla subrotate, with roundish segments; filaments nearly equal. $. H. Native of Nipaul. V. Thapsus, Roxb. fl. ind. 1. c. Flowers yellow. Nearly allied to *V. lapsus,* but perfectly distinct.

Indian Mullien. Fl. July, Aug. Clt. ? PL 3 to 4 feet.

4 V. MACROPHYLLUM (Tenore, fl. neap. prod. 5. ex Linnaea, 3. p. 18.) leaves decurrent, elliptic, crenulated, clothed with white tomentum ; spike very dense and very long, usually simple; bracteas ovate-lanceolate, about equal in length to the calyx ; corolla funnel-shaped, with orbicular segments, which are woolly beneath; filaments clothed with yellow wool; anthers about equal. $. H. Native of Calabria, at the foot of the mountains. This species differs from *V. Thapsus,* in the spikes being more crowded; in the flowers being altogether sessile, appressed ; in the corolla being twice the size: in the filaments being equal, and densely woolly.

Long-tailed Mullien. Fl. July, Aug. PL 3 to 4 feet.

5 V. CRASSIFOLIUM (Hoffm. et Link, fl. port. 1. p. 213. t. 26. Schrad. mon. p. 22.) leaves decurrent, obsoletely crenulated, densely tomentose: superior ones acutish; racemes spicate, dense ; filaments glabrous ; 2 of the anthers oblong. $. H. Native of Portugal, in sandy places. V. Thapsus, Brot. fl. lus. 1. p. 270. Plant densely clothed with rusty yellow tomentum. Stem simple. Lower leaves obovate-elliptic. Very like *V. thapsiforme,* and agreeing with it in the form of the anthers ; but it is readily distinguished, in the filaments being all glabrous. V. crassifolium, of D. C. fl. gall. no. 2670. exclusive of the synonymes, may be the same.

Thick-leaved Mullien. FL July, Aug. Clt. 1818. PL 2 to 3 feet.

6 V. CUSPIDATUM (Schrad. verb. p. *23.* t. 1. f. 1.) leaves decurrent, crenulated, tomentose : superior ones cuspidate ; fascicles of racemes remote ; 2 of the anthers oblong. $. H. Native about Vienna, in mountain groves. V. Thapsus, Bot. vindob. The stem is usually more dwarf than in *V. Thdpsus,* less thick, and the leaves and the tomentum thinner. The upper cauline leaves are drawn out into long taper points. The disposition and form of the flowers come near to *V. phlomoldes.* Fructiferous pedicels about equal in length to the calyx, not twice as short as in *V. Thdpsus.* Corolla exactly rotate, with obovate unequal segments, larger than those of *V. Thdpsus,* but smaller than those of *V. phlomoldes.* The colour of the plant is pale green, as is generally observed in *V. Thdpsus.*

Cuspidate-leaved Mullien. FL May, June. Clt. 1817. PL 3 to 4 feet.

7 V. NI'VEUM (Tenor, fl. neap. p. 90. t. 22. syn. p. 36. prod, p. 16. Gussone, pi. rar. 103.) leaves crenated, clothed with white floccose tomentum ; racemes spicate, dense; anthers equal. Schrad. verb. p. 23. Radical leaves petiolate, obovate, cuneated : cauline ones stem-clasping, elliptic, crenated, clothed with white tomentum on both surfaces ; spike simple, compact; filaments bearded with white hairs. $. H. Native of Naples, in the province of di Bari e di Lecce, in pastures; and of the mountains of Lucania, and of Calabria. The whole plant white from tomentum, except the upper surfaces of the adult leaves, which are green. Flowers yellow, nearly sessile, fascicled. Raceme simple, not branched. All the filaments clothed with white wool. Leaves never decurrent. There are varieties of this having the tomentum either white or yellowish.

Snow-white Mullien. Fl. April, May. Clt. 1823. PL 3 to 4 feet.

8 V. DENSIFLORUM (Bertol. pi. rar. ital. 3. p. 52. Schrad. verb. p. 24.) leaves tomentose : radical ones long-lanceolate, crenated, deeply serrated at the base : upper cauline leaves acuminated, dentate, semidecurrent; racemes spicate, dense; anthers equal ? $. H. Native of Italy, on the top of Mount Bruciana, which is situated between Carraria and Massa. Upper part of plant clothed with fulvous tomentum. Radical leaves more than lj foot long, green above, but paler beneath. Raceme simple, more than a foot long, fascicled. Corollas large,

yellow. Filaments clothed with white wool. Capsule tomentose.

Dense-flowered Mullien. PL 4 to G feet.

9 V. THAPSOIDES (Hoffm. et Link, fl. port. 1. p. 214. exclusive of the synonymes. Schrad. verb. p. 25. t. 5. f. 2.) leaves crenulated, tomentose : radical ones oblong-lanceolate: cauline ones oblong, acute, semidecurrent; racemes subspicate ; fascicles of flowers rather crowded ; anthers nearly equal. %. H. Native of Portugal. Stem branched at top ; branches floriferous. Plant clothed with canescent tomentum. Upper surfaces of the leaves green in the adult state, and less tomentose. Radical leaves a span to a foot and more long. One or two of the flowers in each fascicle usually fertile, the rest sterile. Corolla yellow, size of those of *V. Lychnilis.* Filaments clothed with white wool. Perhaps *V% Lychnitis,* Brot. fl. his. 1. p. 272.

Far. ft, simplex; stem simple, and more humble. %. H. V. simplex, Hoffm. et Link. fl. port. 1. p. 216. V. dubium, Room, et Schultes, syst. 4. p. 330.

Thapsus-like Mullien. Fl. July, Aug. Clt. 1819. PI. 4 to 6 feet.

10 V. PLANTAGI'NEUM (Mor. elench. sard, ex Bull. 14. p. 348.) plant clothed with fulvous tomentum ; leaves obsoletely crenulated, thick : cauline ones decurrent, crowded, oblong : radical and lower leaves attenuated into the petioles, ovate-elliptic, obtuse; racemes densely spicate; filaments clothed with coppery villi. $. H. Native of Sardinia, on the hills of Cala and D'Ostia, Pula, in arid pastures. Said to be nearly allied to *V. thapsoides.*

Plantain-lewcd Mullien. PI. 4 to 5 feet.

11 V. GOSSYVI'NUM (Bieb. fl. cauc. suppl. p. 152.) leaves decurrent, crenulated, green, and rather woolly above, but clothed with white wool beneath ; racemes simple, tailed; pedicels fascicled, rather shorter than the calyx. $. H. Native of Iberia. Habit of *V. gnaphaloides ;* the down, inflorescence, flowers, and capsules, are also the same; but the leaves are narrower, and the crenac more minute. Filaments copper-coloured; the 2 shorter ones clothed with white tomentum above the middle; the other 3 longer, and naked. Corollas yellow.

Woolly Mullien. Fl. July, Aug. Clt. 1820. PI. 4 to 6 feet.

12 V. MACRA'NTHUM (Hoffm. et Link. fl. port. 1. p. 215. t. 27.) leaves crenulated, tomentose: radical ones elliptic-oblong, attenuated at the base : cauline ones oblong, acute, semidecurrent ; fascicles of racemes remote ; two of the anthers oblong. $. H. Native of the North of Spain, by way sides. Schrad. verb. p. *27.* Plant tomentose. Leaves green above : radical ones 3-4 inches long. Racemes a foot long, or more. Corollas large, showy, yellow, with broad, obovate-roundish, unequal segments. Filaments clothed with copper-coloured wool; but the 2 longer ones only at the base.

Large-flowered Mullien. Fl. June, July. Clt. 1820. PI. 3 to 4 feet.

13 V. AUSTRA'LE (Schrad. verb. p. 28. t. 2.) leaves crenated, tomentose: radical ones oblong-lanceolate, tapering into the petioles : cauline ones oblong, acute, decurrent: uppermost ones broad-ovate, cuspidate, semidecurrent; fascicles of racemes remote ; 2 of the anthers oblong. $. H. Native of the South of Europe. Plant clothed with tomentum, like *V. phlomoides.* Radical leaves a foot and more long. Racemes simple, \\ foot long; but sometimes, as in strong plants, it is branched at the base. Flowers sweet-scented. Corolla, calyx, stamens, and stigma, size, colour, and structure of those of *V. phlomoides.*

Southern Mullien. Fl. July, Aug. Clt. 1815. PI. 4 to G feet.

U V. PHLOMOIDES (Lin. spec. *253.)* leaves crenated, totnentose : radical ones elliptic, or ovate-elliptic, petiolate : cauline ones oblong, acute : superior ones broad-ovate, cuspidate, stem-clasping, decurrent; fascicles of racemes rather remote ; 2 of the anthers oblong. $. H. Native of Europe, Tauria, Caucasus, and Turkey, in sterile and uncultivated places. Sibtn, et Smith, fl. gnec. t. 224. Bieb. fl. cauc. no. 398. exclusive ot the syn. of Tabern. and Dodon. Moench, hass. no. 170. t. 4. Mill. fig. t. 273. V. tomentdsum, Lam. fl. fr. 2. p. 260. V. rugulbsum, Willd. enum. 1. p. 224. V. pulveruléntum, Spreng. hal. no. 233. V. Thápsus, Plenck, med. t. 109. V. thapsoides, Vill. dauph. 1. p. 490. V. grandiflórum, Mill. diet. no. *5.* Stem branched at top, tomentose, as well as the leaves and calyxes. Leaves usually yellowish-green : radical ones 3-4 inches long. Racemes from a span to a foot, or longer, branched a little at the base. Flowers sweet-scented. Corolla yellow, showy, size of those of *V. macrdnthum,* with broad obovate-roundish, unequal segments. The 3 smaller filaments clothed with dense purple wool; the 2 longer ones, for the most part, naked, or but rarely furnished with a few hairs in the middle. Capsule roundish-ovate, blunt.

Var. ft, albiflbrum ; flowers white. Lob. icon. t. 560. f. 2.

Phlomus-lUce Mullien. Fl. June, July. Clt. 1739. PI. 3 to 4 feet.

15 V. CONDENSA'TUM (Schrad. verb. p. 31. t. 3.) leaves tomentose : radical ones elliptic-oblong, attenuated at the base, unequally and doubly crenated : cauline ones oblong, acute, simply crenated ; superior ones roundish-ovate, cuspidate, decurrent ; racemes dense, fascicled ; two of the anthers oblong. <? . H. Native of Austria, in sterile places. Stem, divided at top into floriferous branches. Radical leaves 1 to 12 foot long. Racemes a foot to 1£ foot long. Flowers and fruit agreeing with *V. phlomoides.*

Close-ftowered Mullien. Fl. July, Aug. Clt. 1820. PI./5 to 6 feet.

16 V. NEMOROSUM (Schrad. verb. p. 32. t. 1. f. 2.) leaves acute, crenated, tomentose: radical ones oblong, attenuate^ at both ends : lower cauline ones lanceolate, narrowed at the base • middle ones oblong-lanceolate: and the superior ones oblong and decurrent; fascicles of racemes rather remote; *2* of the an* thers oblong. £ . H. Native of Austria, in groves, Schott* Nearly allied to *V. phlomoides,* but with a different habit- Radical leaves a span and more long: lower cauline ones more than a foot long. Racemes solitary, simple. Calyxes, corolla* and fruit, as in the two preceding species.

Grove Mullien. Fl. July, Aug. Clt. 1820. PI. 4 to 5 feet.

17 V. MONTA'NUM (Schrad. hort. gott. fasc. 2. p. 18. t. 12. verb. p. 33.) leaves tomentose : radical ones oblong-elliptic, crenulated, petiolate: cauline ones oblong, acutish, obsoletely crenulated : superior ones acute, decurrent; raceme subspicate ; fascicles of flowers rather crowded ; anthers nearly equal. $ • H. Native of the Pyrenees ; also of Switzerland and Germany. V. phlomoides, Spreng. hal. no. 231. Schleich. pi. rar. cent. 1. no. 27. Stem simple, clothed with rusty yellow tomentum, as well as the leaves and other parts. Radical leaves *3-5* inches long. Racemes 3 inches to \ a foot. Flowers sometimes solitary, but usually fascicled. Corolla size, colour, and form of those of *V. Thdpsus.* The 3 smaller filaments clothed with white wool: the 2 larger ones beset with scattered hairs, rarely naked. Capsule ovate, obtuse, about equal in length to the calyx. In shady places this plant becomes 6 feet high, and branched at top; and the leaves shining, green above; but in dry exposed places not above 2 feet, and unbranched.

Mountain Mullien. Fl. July, Aug. Clt. 1819. PL 2 to 6 feet.

. 18 V. COLLINUM (Schrad. verb. p. 35. t. 5. f. 1.) leaves crenate, tomentose: lower ones elliptic-oblong, petiolate : middle cauline ones oblong-lanceolate, acutish, attenuated at the base : superior ones oblong, acute, decurrent; fascicles of racemes remote; anthers equal. %. H. Native of the North of Germany, on dry grassy hills. Stem simple, reddish-green at .bottom, tomentose. Leaves pale green above, and canescent beneath : radical ones 4 or 4j inches long. Racemes 1 to 1 \ foot Jong, solitary; but in strong plants there are sometimes 1-2 small branches at the base. Calyx and corolla almost as in *V, nigrum;* and the filaments are clothed with purple wool as in [11]; pollen red. Capsule small, oblong-ovate, obtuse.

Hill Mullien. Fl. July, Aug. Clt. 1820. PI. 3 to 4 feet.

!9 V. VERSIFLORUM (Schrad. verb. p. *36.)* leaves crenated, tomentose: lower ones elliptic-oblong, petiolate: cauline ones oblong, acute, decurrent: upper ones acuminated; racemes panicled ; fascicles remote, few-flowered; anthers equal. 3/.? Native near Prague, in sandy places, Tausch. This elegant species comes very near the V. rubiginosum, Waldst. et Kit, but differs in the colour of the flowers. Plant clothed with greenish-yellow tomentum. Stem divided into many floriferous Ranches towards the apex. Radical leaves 3^ to 6 inches long. Kacemes more than a foot long, panicled. Flowers size of those of *V. phorniceum,* sweet-scented. Corolla of a reddish copper-colour, verging to yellow towards the tube, with obovate-roundish segments, furnished with yellow wool at the base of the smaller ones, as in *V. Blattaria,* as well as the smaller filaments ; but the 2 longer filaments are clothed with purple wool. Pollen white. Capsule ovate, obtuse, a little larger than the ^alyx. Corollas sometimes twice the size of those of *V. phlo-'noides.*

Party-flowered Mullien. Fl. June, July. Clt. 1823. PI. 3 to 4 feet.

20 V. RAMI'GERUM (Link, in litt. ex Schrad. verb. p. *37.* t. [4]«) leaves clothed with fine tomentum : radical ones oblong-lanceolate : cauline ones oblong, acute, doubly crenated, semidecurrent: upper ones acuminated ; racemes panicled ; fascicles [illegible] many-flowered; anthers equal. *$.* H. Native of Germany. Habit of *V. Lychnitis.* Stem much branched, tomentose. Leaves canescent beneath : radical ones often a foot long* Calyx as in *V. phlomoules,* but one half smaller, nevertheless larger than that of *V. Lychnitis,* but the stamens are the same.

Branch-bearing Mullien. Fl. July, Aug. Clt. 1824. PI. 4 to 6 ft et.

21 V. BASTA'RDI (Roem. et Schultes, syst. 4. p. 335.) leaves [illegible] long-lanceolate, downy or villous, crenated, and subdectirrent; flowers two or three glomerate; stem much branched. *$* . H. Native on argillaceous hills about Mayenne, near Montreuil-Bel-*J?y.'* V. blattarioides, *ft.* caule ramosissimo, Bast, suppl. fl. Main, et Loire, p. 42. ? V. ramosissimum, D. C. fl. fr. suppl. P* 416. no. 4679. a. but not of Poir. Stem purplish at bottom, downy. Leaves villous, particularly beneath, half stem-clasping* Branches of panicle elongated. Flowers pedicellate. Corolla yellow ; hairs of stamens purple. . Said to be nearly allied to *V. ramigerum,* and probably only a variety of it.

dastard's Mullien. Fl. July, Aug. Clt. 1824. PI. 5 to 6 feet.

22 V. MUCRONATUM (Lara. diet. 4. p. 218. Schrad. verb. P* [3]8.) leaves crenated, clothed with hoary tomentum: radical ones oblong-lanceolate: cauline ones oblong, acute, semidecurrent* upper ones ovate, long-acuminated; spikes panicled; flowers glomerate. *$* . H. Native of Candia, Labillardiere. Verbascum orientale, maximum, candidissimum, ramis candelabrum aemulantibus, Tourn. cor. p. 8. ? The whole plant clothed with hoary tomentum. Stem branched at top. Radical leaves in the cultivated plant U to 2 feet long. Flowers almost sessile. Corolla large, ex Lam., yellow, middle-sized, ex Spec. Filaments all clothed with white wool.

Afwcro;m/e-leavcd Mullien. Fl. July, Aug. Clt. 1814. PI. 6 to 8 feet.

23 V. CANDIDI'SSIMUM (D. C. fl. fr. suppl. p. 413. no. 2G7O.) leaves and whole plant white from floccose tomentum: louver leaves petiolate, oblong-lanceolate, attenuated at both ends, acute : upper cauline ones ovate, acuminated, all decurrent and finely crenated; racemes panicled; fascicles many-flowered, remote. *$* . H. Native near Montpelier, at Port Juvenal. The upper part of the plant is sometimes deficient of floccose tomentum. Calyx small. Corolla yellow, middle-sized. Perhaps the same as *V. mucronatum* or *V. niveum.*

Far. ft ; flowers approximate ; stem rubiginose.

Very-white Mullien. Fl. July, Aug. Clt. 1823. PI. 4 to 5 feet.

24 V. AURICULA'TUM (Smith, prod. fl. graec. 1. p. 149. Sibth. et Smith, fl. graec. t. 223.) leaves crenulated, elliptic-oblong, tomentose on both surfaces, auricled at the base : upper ones half stem-clasping ; racemes panicled, flexuous ; fascicles many-flowered, remote ; anthers equal. *$* . H. Native of the Island of Samos. Verbascum orientale, maximum, candidissimum, ramis candelabrum aemulantibus, Tourn. cor. p. 8. Corollas yellow. Filaments beset with cream-coloured wool. Anthers fulvous.

Auricled-leaved Mullien. PI. 3 to 4 feet.

25 V. SINUA'TUM (Lin. spec. p. 254.) leaves clothed with powdery tomentum : radical and lower cauline ones sinuated : superior ones crenated, decurrent; spikes panicled ; flowers subglomerate ; anthers equal. *$* . H. Native of Italy, South of France, Portugal, and Barbary, in arid stony places; very common in Greece. Sibth. et Smith, fl. graec. t. 227. Verbascum nigrum foliis papaveris corniculati, Tourn. inst. p. 147. Verbascum crispum et sinuatum, Bauh. hist. 3. p. 860. with a figure.—Mor. hist. 2. sect. 5. t. 9. f. 6. V. intubaceum, Tabern. kraut, p. 956. with a figure. Stem tomentose, branched at top. Radical leaves *3-5* inches long, obtuse. Leaves naked on the upper surface in the adult state. Spikes 1 to 1| foot long. Flowers on short pedicels. Calyx small. Corolla yellow, like those of *V. Lychnitis,* but a little larger. Filaments all clothed with purple wool. Anthers all reniform ; pollen of a vermilion colour.

Sinuated-lewed Mullien. Fl. July, Aug. Clt. 1570. PL 3 to 4 feet.

26 V. HY'BUIDUM (Brot. fl. lus. 1. p. 170.) leaves tomentose : radical ones obovate-lanccolate, undulated, and subsinuated : cauline ones subdecurrent, cordate, oblong, acute, crenated ; racemes panicled; flowers glomerate, each glomerule furnished with 3 bracteas. *$* . H. Native of Portugal, in hedges, and in shady, gravelly places about Coimbra. This is said to be a hybrid between *V. sinuatum* and *V. pulverulentum.* Stem branched from the base to the apex, villous. Radical leaves li foot long, and 7 inches broad. Corollas yellow ; the throat striped with purple. Filaments all clothed with purple villi. The plant is green, though tomentose.

Hybrid Mullien. Fl. July, Aug. Clt. *2* PI. 4 to 5 feet.

27 V. CONOCA'RPUM (Mor! elench. sard, ex Linnsea, 5. p. *93.)* clothed with white tomentum ; leaves somewhat crenated: lower ones elliptic or oblong, petiolate: upper ones ovate, acuminated, somewhat decurrent; fascicles of flowers loosely racemose ; capsule oblong-conical, acutish. 7/. H. Native of Sardinia, in the fissures of rocks by the sea shore. Corolla yellow, with a deep violet centre. Filaments bearded with violaceous hairs, the 2 longest ones naked at top.

Cone-fruited Mullien. PI. 4 to 5 feet.

§ 2. *Leaves not decurrent.*

* *Flowers glomerate.*

28 V. SYRI'ACUM (Schrad. verb. 2. p. 6. t. 1. f. 1.) leaves quite entire, clothed with woolly tomentum : lower ones obovate-lanceolate : superior ones lanceolate ; spike simple. *If.*. H. Native of Syria, in sterile waste places. The whole plant is clothed with woolly tomentum. Stem 2-3 from the same root, woody at the base. Radical leaves 3 or 3| inches long. Spike longer than the stem ; bundles or glomerules 5-7-flowered. Corolla middle-sized, yellow. Filaments all woolly ; anthers equal. Nearly allied to *V. simplex,* Labill.

Syrian Mullien. PI. 1 to 2 feet.

29 V. UNDULVTUM (Lam. diet. 4. p. 221.) leaves densely tomentose : lower ones lyrately sinuated, undulated: cauline leaves subsinuated : superior ones oblong-ovate, sessile ; spike solitary. 2/. H. Native of the Levant. Stems woody at the base, simple, a little divided, pale, yellowish from tomentum, as well as the leaves. Radical leaves 3-4 inches long. Spike a foot and more long; bundles 3-4-flowered. Corolla yellow. Filaments all woolly.

Undulated-leaved Mullien. Fl. July, Aug. Clt. 1819. PL 2\ to 3 feet.

30 V. CERATOPHY'LLUM (Schrad. verb. p. 7. t. 1. f. 2.) leaves tomentose *on* both surfaces : lower ones sub-pinnatifid: upper ones entire ; spikes panicled ; outer bracteas quite entire. £ . H. Native of the Levant. Stem branched at top, tomentose. Radical leaves a span or more long: uppermost cauline leaves half-stem clasping, unequally serrated. Spikes a foot and more long ; bundles remote, 3-4-flowered. Corolla like that of *V. blattdria,* yellow. Filaments all clothed with yellow wool. Pollen yellow.

Buckhorn-leaved Mullien. PI. *2*\ to *3 feet.*

31 V. PINNATI'FIDUM (Vahl, symb. 2. p. *39.* Bieb. fl. cauc. 1. p. 404. Schrad. verb. 2. p. 8.) leaves tomentose beneath : lower ones bipinnatifid : upper ones pinnatifid ; spikes panicled ; outer bracteas serrated. *$* . H. Native of Tauria, in the sea sand ; and of the Islands of the Archipelago. Sibth. et Smith, fl. graec. t. 228. V. bipinnatifidum, Sims, in Curt. bot. mag. t. 1777. V. sinuatum, Habl. taur, p. 156. Stems sometimes branched *from* the base, clothed with hoary tomentum. Radical leaves 3-4 inches long. Spikes a span and more long, but those *of* the branches shorter. Corollas like those of *V. blattaria,* yellow. Filaments orange-coloured, clothed with white or fulvous wool; pollen vermillion. Anthers all reniform.

Pinnatifid-lesLved Mullien. Fl. July, Aug. Clt. 1788. PI. 2\ to 3 feet.

32 V. PLICVTUM (Sibth. et Smith, fl. grsec. t. 226.) leaves tomentose, plicately pinnatifid : upper cauline ones sessile ; spike simple, interrupted, leafy ; anthers equal. *$* . H. Native of the Island of Hydra; plentiful near Athens. V. sinuatum, /3, Lin. spec. p. 255. V. pinnatifidum, Ait. hort. kew. ed. 2d. vol. 1. p. *386,* but not of Vahl. V. Greecum fruticosum, folio sinuato candidissimo, Tourn. cor. p. 8. itin. 1. p. 128, with a figure. Plant densely clothed with woolly, cream-coloured tomentum. Leaves obovate-oblong, lyrately sinuated : radical ones a span long, petiolate. Filaments bearded with yellow hairs. Corolla yellow.

Plicate-leaved Mullien. PL 2 to 3 feet.

* # *Flowers fascicled.*

***33* V. CHRYSE'RIUM (Schrad. verb. 2. p. 9.) leaves quite entire, tomentose : lower ones obovate-lanceolate, obtuse, tapering into the petioles : cauline leaves oblong-lanceolate, acutish,** nearly sessile: uppermost ones broad-ovate, acuminated, half stem clasping ; racemes panicled; pedicels about equal in length to the calyx ; anthers equal. *$* . ? H. Native of Palestine, Sieber. Plant clothed with yellowish tomentum. Stem simple, or divided a little at top. Leaves thick: radical and lower cauline ones 4-5 inches long. Racemes about a span long. Corolla yellow ; ? filaments glabrous.

Golden Mullien. PL 2 to 3 feet.

34 V. SCHOTTIANUM (Schrad. verb. 2. p. 13. t. 3. i. /•; leaves crenated, tomentose : lower ones oval-oblong, acutisn, petiolate ; middle cauline leaves oblong, acute, sessile : superior leaves ovate, acuminated, subcordate, half stem-clasping; racemes panicled ; pedicels twice as long as the calyx. o • H. Native of Austria, in groves. Allied to the preceding. Stem simple, or divided a little at top. Radical leaves a span to 1 foot long. Racemes a span long; fascicles 5-10-flowered. Calyx and corollas as in *V% specibsum.* Filaments clothed with purple wool. Anthers all reniform ; pollen vermillion. The leaves are nearly naked in summer.

SchotCs Mullien. PL 3 to 4 feet.

35 V. LEPTOSTA'CHYUM (D. C. fl. fr. suppl. no. 2676.) leaves oblorg, tomentose : lower ones bluntish, crenulated, tapering into the petioles : cauline leaves acute, quite entire, sessile: superior ones ovate, acuminated, half stem-clasping ; racemes elongated ; pedicels shorter than the calyx. # . H. Native near Montpelier, in stony fields near Port Juvenal, D. C. Schrad. verb. 2. p. 14. Plant clothed with white tomentum. Stem simple, terete. Radical and lower cauline leaves *3-5* inches long: the middle cauline leaves 2-3 inches long. Raceme solitary ; fascicles 5-7-flowered. Calyx nearly the size of *V.phlomoides.* Corolla like that of *V. specibsum,* yellow. Filaments all woolly ; anthers equal. In strong plants the stem is furnished with a branch or two at top.*

Slender-spiked Mullien. Fl. July, Aug. Clt. 1825. PL 3 to 4 feet.

36 V. ROTUNDIFOLIUM (Tenore, prod, suppl. 2. p. *66.* syn. p. *37.* fl. neap. p. 92. t. 23.) leaves crenated, sub-undulated, clothed with hoary tomentum : lower ones oval, petiolate: cauline leaves ovate-elliptic, nearly sessile : uppermost ones roundish-ovate, acute, half stem-clasping ; racemes subspicate ; pedicels shorter than the calyx. *$.* H. Native of Sicily; and of Capra Island. Schrad. verb. 2. p. 50.—Micheli. in Till. hort. pis. p. 171. Habit of *V. gnaphalodez,* but the tomentum is finer, and hoary. Upper leaves clasping at the base, adnate, not free. Racemes 1 to 1 \ foot, simple, or furnished with 1 or 2 small branches at the base ; fascicles remote, few-flowered. Corolla yellow. Filaments clothed with purple wool.

Round-leaved Mullien. Fl. July, Aug. Clt. 1823. , PL 4 to 5 feet.

37 V. LONGIFOLIUM (Tenore, fl. neap. 1. p. 89. t. 21. prod, p. 16. syn. p. *31.* Gussone, pi. rar. p. 102.) leaves quite entire, tomentose; lower ones oval-lanceolate, petiolate : cauline ones oblong, acuminated, half stem-clasping ; racemes elongated ; pedicels twice as long as the calyxes ; two of the anthers oblong. £. H. Native of Abruzzo, plentiful in mountain pastures. Verbascum montanum, tomentosum longifolium luteum, foliis non serratis, flore parvo, caule rotundo, Micheli, in Till. hort. pis. p. 171. Plant clothed with yellowish fioccose tomentum. Stem branched at top. Radical leaves 1| foot long. Racemes 2 feet or more long ; fascicles remote, many-flowered. Corollas rather mealy, and covered with stellate pili outside, yellow, like those of *V. pyramidale.* Filaments clothed with purple wool, but the 2 longer ones only at the base inside. The lower leaves in the cultivated plant are repand inside, rarely sub-sinuated, and the superior ones are crenulated. There are

varieties of this species having the stem simple, or branched, and the tomentum sometimes white.

Long-leaved Mullien. Fl. July, Aug. Clt. 1824. PI. 4 to 5 feet.

38 V. MICRA'NTHUM (Moretti, dec. pi. itin. 3. p. 6, Guss. pi. rar. p. 103.) stem branched; radical leaves petiolate, oblong-lanceolate, acute, crenulated, canescent beneath : cauline leaves scattered, sessile, becoming gradually narrower as they ascend the stem ; racemes compound ; fascicles remote. $. H. Native of Abruzzo, in stony and shady places on the mountains called Morone, Magella, Aquila, Chiarino. Filaments copper-coloured : the 2 longer ones from the base to the middle, bearded by white villi: the 3 shorter ones all their length. Anthers equal, copper-coloured.

£ma//-flowered Mullien. PL 3 to 4 feet ?

39 V. SPECIOSUM (Schrad. hort. gcett fasc. 2. p. 22. t. 16. verb. 2. p. 12.) leaves tomentose, quite entire : lower ones oval-lanceolate, tapering into the petioles: cauline ones auriculately cordate, sessile; racemes panicled; pedicels twice or thrice as long as the calyx ; anthers equal. $. H. Native of Hungary, Austria, and France, in mountain groves. V. longifolium, D. C. fl. gall, suppl. p. 414. Stem angular, and branched at top. Plant clothed with white tomentum. Radical leaves 1 to 1| foot long. Racemes 1-2 feet long; fascicles ^any-flowered. Corolla yellow. Filaments copper-coloured, clothed with white wool. Pollen vermillion, rarely copper-coloured.

Var. j3; stem much branched. $. H. Native of Austria. V. thapsoides, Host, fl. austr. p. 115. V. caeruleum, Schanz, cat. sem. hort. vind. 1822. It should have been *V. caulescens,* instead of *F. cceruleum.*

Showy Mullien. Fl. July, Aug. Clt. 1818. PL 4 to 7 feet.

40 V. GNAPHALODES (Bieb. fl. cauc. suppl. p. 152. Schrad. verb. 2. p. 15.) leaves crenated, clothed with dense, floccose tomentum beneath : lower ones oval-oblong, petiolate : cauline ones oblong, acute, nearly sessile: upper ones roundish-ovate, long-acuminated, half stem-clasping ; racemes terminal, very long; pedicels about equal in length to the calyxes. $. H. Native of the South of Tauria. V. Stevenii, Cat. sem. hort. vind. 1821. Very like *V. floccdsum,* but the habit is more Robust, and the leaves evidently crenated. Racemes 3 feet long and more, sometimes furnished with a few short racemes ; lower fascicles remote: upper ones crowded. Corolla yellow. Plant clothed with white floccose tomentum, except the upper surfaces of the adult leaves.

Onaphalium-like Mullien. Fl. July, Aug. Clt. 1825. PL 6 feet or more.

41 V. FLOCCOSUM (Waldst. et Kit. pi. hung. 1. p. 81. t. 71.) leaves undulately-crenulated, densely clothed with floccose tomentum : lower ones oblong-oval, petiolate : cauline ones oblong, acute, sessile: uppermost ones roundish-ovate, long-acuminated, half stem-clasping ; racemes panicled ; pedicels equal in length to the calyx. $. H. Native of Portugal, France, Switzerland, Italy, Sicily, shores of Austria, Hungary, and Calabria, in sterile, sandy places. D. C. fl. fr. suppl. no. 2673. a* Schrad. verb. 2. p. 16. V. pulverulentum, Hoffm. et Link, fl- port. 1. p. 217, exclusive of the syn. of Villars. V. pulvin^tum, Thuill. fl. par. p. 109.—Hall. helv. no. 583.—Bauh. hist. 3. p. 872. and 873, with a figure.—Mor. hist. 2. sect. 5. t. 9- £ 3. Stem simple, or a little branched at top. Plant clothed with floccose tomentum. Radical and lower cauline leaves | a foot, or a span or more long ; uppermost leaves sometimes cordate, half stem-clasping. Flowers size, colour, form, and disposition of *F. Lychnitis jlava,* as well as the structure of the stamens.

Far. ft ; flowers larger. $. H. Native of England. V. pulverulentum, Smith, fl. brit. 1. p. 251. engl. hot. t. 487.

Far. y, *nigro-pulverulentum* (Schrad. verb. 2. p. 16.) V. pulverulentum, *[3,* Smith, 1. c. V. mixtum, D. C. fl. fr. no. 2674. Said to be a hybrid from *F. jloccdsum,* impregnated by the pollen of *F. nigrum.* *

Floccose Mullien. Fl. June, Aug. Clt. 1805. |3 and y, England. PL 4 to 6 feet.

42 V. PULVERULE'NTUM (Vill. dauph. 2. p. 490, exclusive of the synonymes. Schrad. verb. 2. p. 17.) leaves doubly crenated, tomentose beneath : lower ones oblong-oval, petiolate : cauline ones ovate-oblong, acutish, nearly sessile : upper ones roundish-ovate, acuminated; racemes panicled; pedicels equal in length to the calyxes. $. H. Native of Dauphiny. This species has been confused with *F, Lychnitis jlava,* and *F. jloccdsum,* but differs from both in the stem being more humble and terete, and in the leaves being naked above, and in the smaller calyxes, and in the leaves being doubly crenated, and in the tomentum being finer.

Powdery Mullien. FL June, Aug. Clt. ? PL 2 to 4 feet.

43 V. LYCHNI'TIS (Lin. spec. p. 253.) leaves crenated, smoothish above, but clothed with powdery tomentum beneath: lower ones oval-oblong, bluntish, tapering into the petioles: superior ones ovate-oblong, acute, nearly sessile : upper ones ovate, acuminated ; racemes panicled; pedicels twice as long as the calyx. £ . H. Native of Europe, North of Asia, and Noi;th America, among rubbish, in waste fields and groves. Jaume, St. Hil. pi. fr. 4. t. 392. V. pulverulentum, Bieb. fl. cauc. no. 400, and of other Floras. D. C. fl. fr. no. 2672. Stem more or less branched. Radical leaves half a foot long : middle cauline ones 2-4 inches. Racemes a span long, or longer ; fascicles 5-7-flowered ; the superior fascicles 2-3-flowered. Flowers middle-sized, sweet-scented. Corolla yellow. Filaments clothed with white wool, the 2 longer ones only at the base. Anthers equal; pollen vermillion. *F. Weldemi,* Morelli is only a var. of *F. Lychnitis.*

Far. (3; flowers white. $. H. Native along with the species, also in many parts of Britain. V. Lychnitis, *(3,* Lin. spec. p. 253. Willd. spec. 1003. *(3.* and y. o. b. Lychnitis, /3, Lam. diet. 4. p. 218. Smith, fl. brit. 1. p. 250. engl. bot. t. 58. Oed. fl. dan. t. 586. V. Mce'nchii, Schultz, starg. suppl. p. 14. V. thapsoides of English authors. V. album, Mcench, meth. p. 447. Bess. fl. gal. no. 267.— Hall. helv. no. 583. *fi.* — Mor. hist. 2. sect. 5. t. 9. f. 4.—Bauh. hist. 3. p. 873, with a figure.—Tabern. kraut, p. 956. icone.—Lob. icon. 1. p. 562.

Far. y ; flowers without petals. $. H.

Lychnitis Mullien. FL June, Aug. Britain. PL 2 to 6 feet.

44 V. RAMOSI'SSIMUM (Poir. suppl. 3. p. 718.) lower leaves ovate-oblong, crenated, nearly glabrous, on short petioles ; panicle much branched, beset with glandular hairs; flowers solitary, pedicellate; stem angular, nearly glabrous. $. H. Native country unknown ; probably of hybrid origin. Plant deep green. Leaves at least 8 inches long : upper ones stem-clasping. Panicle 1 to 2 feet; branches a foot long. Flowers shorter than the pedicels. Corolla yellow. Filaments bearded with purple hairs.

Much-branched Mullien. Fl. July, Aug. Clt. 1824. PL 4 to 6 feet.

45 V. MONSPESSULA'NUM (Pers. ench. 1. p. *215.* Schrad. verb. 2. p. 20. t. 2. f. 2.) leaves glabrous above, clothed with fine tomentum beneath : cauline ones ovate-oblong, acutish, unequal, crenately serrated, petiolate : upper ones ovate-lanceolate, acute, sessile ; racemes panicled ; pedicels twice as long as the calyx. $. H. Native about Montpelier. Stem sim-

pie, tomentose. Lower cauline leaves 2\ inches long. Terminal raceme half a foot: lateral ones shorter; fascicles remote, 5-7-flowered : upper ones 3-flowered. Flowers yellow, like those of *F. Ltjchnitis,* but a little smaller.

Montpelier Mullien. Fl. June, Aug. PL 2 to *3* feet.

-46 V. OVA^TUM (Schrad. hort. gott. fasc. 2. p. 21. t. 15. verb. 2. p. 21.) leaves ovate, crenated, glabrous above, and clothed with fine tomentum beneath : lower and cauline ones obtuse, petiolate : superior ones acute, sessile, half stem-clasping;, racemes panicled; pedicels twice as long as the calyx. *$* • H. Native of Spain. Stem usually branched from the base, beset with fascicles of stellate hairs, which constitute fine tomentum at top. Radical and lower cauline leaves 3-4 inches long. Lower racemes a span long, leafy at base : superior ones shorter. Flowers scentless, smaller than those of *F. Lychmtis,* yellow. Filaments clothed with purple wool. Anthers equal; pollen copper-coloured.

Ovate-leaved Mullien. Fl. July, Aug. Clt. 1824. PL 2 to 3 feet.

47 V. AUSTRI'ACUM (Roem. et Schultes, syst. 4. p. 341. Schrad. verb. 2. p. 22.) leaves crenated, glabrous above, and pubescent beneath: lower and cauline ones oblong-ovate, petiolate : superior ones ovate, acute, nearly sessile ; racemes panicled ; pedicels about equal in length to the calyx. %. H. Native of Austria, and Hungary, on mountains among bushes. V. nigrum, Plenck. icon. pi. off/t. 110. Habit of *V. Lychmtis.* Stem°simple, or branched, beset with fascicles of small hairs, brownish purple. Leaves deep green : radical ones 4 inches to a span long. Racemes a span or more long: lower ones leafy, and often divided ; fascicles 5-7-flowered : upper ones 3-flowered. Flowers sweet-scented. Calyx, corolla, and stamens as in *F. nigrum,* but the capsule is larger, and the down stellate.

Austrian Mullien. Fl. July, Aug. Clt. 1818. PL *3* to 4 ***feet.***

48 V. ORIENTA'LE (Bieb. fl. cauc. no. 401. and suppl. p. 154. exclusive of the syn. of Schrad. and D. C.) leaves crenated, glabrous above, but clothed with fine tomentum beneath : lower ones oblong, tapering into the petioles : cauline ones oblong-ovate, cordate, on short petioles : upper ones acuminated, nearly sessile ; racemes panicled ; pedicels hardly exceeding the calyx. 1/. H. Native of the Ukrain, along with *F. nigrum.* Schrad. verb. 2. p. *23.* V. nigrum, Pall. ind. taur. ex Bie*b. Stem flexuous and branched. Leaves opaque. Corolla yellow.

Eastern Mullien. FL June, July. Clt. 1821. PL 2 to *3* feet.-

49 V. ALOPE'CUROS (Thuill. fl. par. p. 110. D. C. fl. fr. no. 2626.) leaves crenated, downy above, clothed with hoary tomentum beneath: lower ones oblong-ovate, subcordate, petiolate : cauline ones oval-oblong, on short petioles : upper ones oblong-ovate, nearly sessile; racemes simple; pedicels longer than the calyx. 1/. H. Native of France, in arid places. Schrad. verb. 2. p. 26. Very nearly allied to *V. nigrum.* Stem tomentose, as well as all the plant, with the exception of the upper surfaces of the leaves. Radical and cauline leaves a span long, doubly crenated. Racemes usually simple, a span or more long. Filaments clothed with white wool. The rest as in ***V. nigrum.***

Fox-tail-racemed Mullien. Fl. July, Aug. Clt. 1820. PL *3* to 4 feet.

50 V. CHA'IXII (Vill. dauph. 2. p. 491. t. 13. exclusive of the synonymes. Schrad. verb. 2. p. 27.) leaves oblong-ovate, cordate, petiolate, crenated, clothed with fine tomentum : lower ones pinnatifid at the base ; racemes panicled; pedicels longer than the calyx. *$* . H. Native of Piedmont, Dauphiny, southern provinces of France, in rocky places. Lam. diet. 4. p. 220. D. C. fl. fr. no. 2680. and suppl. p. 480. Very like *V. nigrum,* but is less robust, and usually branched above. Leaves deep green. Racemes more numerous, smaller, and more slender, disposed in a panicle, and the flowers are a little smaller.

Far. /3, *urticcefolium ;* lower leaves less cut. *$.* H. V. urticsefolium, Lam. diet. 4. p. 220.

Far. y, *dentatum* (Rcem. et Schultes, syst. 4. p. 339. /3.) stem twiggy, branched at top ; flowers racemosely spicate; corollas villous outside ; leaves lanceolate, sessile, tomentose beneath, and rather villous above, serrated : radical ones petiolate, doubly toothed. *$.* H. Native of the Pyrenees. V. dentatum, Lapeyr. fl. pyr. p. 114. D. C. fl. fr. suppl. no. 2680. a.

Chains Mullien. FL June, Aug. Clt. 1821. PL 3 to 4 feet.

51 V. NI'GRUM (Dodon. hist. p. 144. icon. Lin. spec. p. 253.) leaves crenated, nearly glabrous above, but clothed with fine tomentum beneath, or pubescent: lower and cauline ones oblong-ovate, cordate, petiolate : superior ones ovate-oblong, nearly sessile ; racemes elongated; pedicels twice as long as the calyx. %. H. Native throughout Europe and Siberia, in waste places, way-sides, and in hedges; plentiful in some parts of Britain. Smith, engl. hot. t. 59. Oed. fl. dan. 1088. Schrad. verb. 2. p. 24.—Hall. helv. no. 584.—Mor. hist. 2. sect. 5. t. 9. f. 5.—Bauh. hist. 3. p. 873. icone.—Lob. icon. 1. p. 562. Stems simple, or divided a little at apex, brownish-purple, downy, or glabrous. Leaves opaque above. Racemes 1J foot long, simple, or furnished with 1 or 2 short branches at the base ; fascicles many-flowered : lower ones remote : upper ones crowded. Corolla yellow. Filaments clothed with purple wool. Anthers all reniform ; pollen vermillion. Down branched, or stellate.

Far. 13; racemes subpanicled. %. H. Native of France. V. Parisiense, Thuill. fl. par. p. 110.

Far. y, *gymnostemon* (Roem. et Schultes, syst. 4. p. 345.) stamens glabrous, or naked.

***Far. B9 albiflorum*; flowers white.**

Far. e ; flowers funnel-shaped, proliferous. %. H. Native of Siberia. Verbascum, Gmel. sib. 4. p. 91. t. 47.

Black-rooted Mullien. FL May, Aug. England. PL *si to* 4 feet.

52 V. BANA'TICUM (Schrad. verb. 2. p. 28.) lower leaves oval-oblong, petiolate, triply crenated, tomentose, pinnatifid at the base : cauline leaves oblong-ovate, doubly crenated, nearly sessile : superior ones broad-ovate, subcordate, smoothish, sessile ; racemes panicled ; pedicels longer than the calyx. *$* . H. Native of Banatu, near Alt-orsowa, and frequent about Topliz. V. sinuatum, Rochel, pi. ban. exsic. no. 136. V. sinuatum, /3, Banaticum, Rochel, in litt. and Schrad. Upper cauline leaves half stem-clasping, all glabrous above. Down stellate. Herb deep green. Disposition and structure of flowers that of *F. **sinuatum.***

Banatic Mullien. PL 2 to 4 feet ?

53 V. LANA^TUM (Schrad. verb. 2. p. 28. t. 2. f. 1.) leaves clothed with woolly tomentum beneath : lower and cauline leaves oblong, petiolate, somewhat triply crenated : upper ones oblong-ovate, sessile, acutely crenated; racemes simple; pedicels twice as long as the calyx. 1/. H. Native of Italy, Bassi; Carnea, Wulf; Carinthia, Bernhardi. Plant clothed with white woolly tomentum, except the upper surfaces of the leaves. Lower leaves 3-4 inches long. Racemes a span long, simple ; fascicles remote, 4-6-flowered : lower ones leafy. Flowers sweet-scented. Calyx and corolla as in *F. nigrum,* but the tube is sometimes spotted with purple. Stamens, structure, and colour of those of *V. nigrum.*

Woolly Mullien. Fl. July, Aug. Clt. 1825. PL 3 to 4 feet.

54 V. RUBIGINÒSUM (Waldst. et Kit. pi. hung. 2. p. 216. t. 197.) leaves crenated, pubescent beneath : lower ones oblong, obtuse, petiolate: cauline ones oblong-ovate, acutish, sessile: superior ones ovate, acute, sub-cordate, half stem-clasping; racemes panicled ; pedicels much longer than the calyx. $. H. Native of Hungary, about Pesth, Akazto, and elsewhere, Waldst. et Kit. ; south of Podolia, Besser; and of Caucasus, m high, grassy lands between Tyra and Borysthene; very rare at the river Terek, Bieb. Habit and flowers of *F.ferrugineum* ; and the leaves like those of *F. phceniceum.* Stem downy. -Leaves deep green: radical ones 3-4 inches long. Racemes [a] foot long, leafy at the base, generally simple; fascicles remote, 3-5-flowered, rarely 6-flowered : upper ones usually 2-flowered. Flowers scentless, size of those of *F. Blattària.* Corolla of a reddish rust colour outside, and of a yellowish rust colour Inside, spotted with red towards the tube. Filaments clothed with purple wool. Anthers equal; pollen copper-coloured.

[t0] ^sty-flowered Mullien. Fl. June, Aug. Clt. 1817. PI. 3 4 feet.

55 V. HYOSERIFÒLIUM (Schrad. verb. 2. p. 31. t. 3. f. 1.) Jeaves tomentose : lower ones linear-lanceolate, attenuated at [tn]e base : superior ones oblong, acutely-crenated, sessile : upper ones broad-ovate, auriculately cordate ; racemes panicled ; Pedicels twice as long as the calyx. $. ? H. Native of the Levant. Stem erect, simple, tomentose. Leaves greenish grey beneath : radical and lower cauline leaves a span long, sub-sinuated : upper cauline leaves half stem-clasping. Racemes a span to a foot long; fascicles 4-7-flowered : lower ones remote, yorolla middle-sized, yellow, a little larger than those of *V. Lychnitis.* Filaments all clothed with yellowish wool; anthers equal.

Hyoseris-leaved Mullien. PI. 3 to 4 feet.

[5 6] V. VIMINA'LE (GUSS. pi. rar. p. 101. t. 21.) stem simple ; weaves oblong-elliptic, crenulated, green, and beset with ad-pressed villi above, but clothed with white tomentum beneath; racemes rather crowded; lower fascicles remote; bracteas, [c]alyxes, and capsules densely clothed with mealy tomentum. £. H. Native of Japygia, on arid hills, as on Massafra, Cas-ellaneta, and Taranto. Stem tomentose, green, or purplish, 2-4 Leet high, tough, and serve for tying, hence the specific name. Radical leaves *5-6* inches long : cauline leaves sessile : upper ones half stem-clasping, drawn out at the base, and therefore somewhat decurrent. Racemes solitary, 1 to 1| foot long; lascicles 2-4-flowered, one of the flowers usually fertile. Corolla not seen.

Twiggy Mullien. PI. 3 to 6 feet.

* * * *Flowers twin and solitary.*

[57] V. ANGUSTIFÒLIUM (Tenore, prod, suppl. 2. p. 64. syn. p. •) leaves crenulated, tomentose : lower ones linear-lanceolate, [ta]pering into the petioles : upper ones oblong-ovate, sessile; ^ike simple; flowers solitary, sessile. $. H. Native of ^alabria, and Nicotera, in dry fields. V. Calàbricum, Richard, [111] Htt. Stem simple, clothed with canescent tomentum, dwarf, leaves calvescent above in the adult state. Radical and lower [c%]auline leaves length of stem : upper cauline ones half stem-[p.]asping. Corolla yellow, larger than those of *V. Lychnì'is.* Filaments beset with white hairs. Anthers reniform. The whole plant is densely clothed with canescent tomentum, which becomes loose, and falls off in part during summer.

Narrow-leaved Mullien. Fl. July, Aug. Clt. 1824. PI. 1 [to] 1| foot.

[5 8] V. SÌMPLEX (Labill. pi. syr. dec. 4. p. 10. t. 5.) leaves crenated, tomentose: lower ones obovate-spatulate, tapering into [le] P[eti]oles : upper ones ovate, sessile; racemes subspicate ; flowers twin and solitary. %. H. Native in sandy places near Damascus. Schrad. verb. 2. p. 32. Stems simple, many from the same root, which is woody, tomentose. Radical and lower cauline leaves 2^ inches long. Flowers nearly sessile : lower and upper ones solitary : the rest twin, but very rarely by threes. Corolla like that of *F. blattària,* but smaUer. Stamens all woolly : anthers all reniform. There is a variety of this having the superior flowers smaller and sessile.

Simple-stemmed Mullien. PI. 1 to 1| foot.

59 V. MAJA^LE (D. C. fl. fr. suppl. no. 2673. b. Schrad. verb. 2. p. 33.) leaves crenated, tomentose : lower ones ovate-oblong, and ovate, petiolate : upper ones oblong-ovate, sub-cordate, sessile ; racemes subspicate ; flowers twin and solitary; anthers equal. $. H. Native of the Pyrenees, Fliigge ; in sandy, sterile places near Nice, Rohde ; Montpelier at Cambrettes, and elsewhere, D. C. This is a very polymorphous plant, densely clothed with white floccose, caducous tomentum. Stem simple, purplish brown. Radical and lower cauline leaves 2 to 2§ inches long: upper ones half stem-clasping. Flowers on short pedicels. Corolla yellow, size of those of *V. Blattdria* and *F. phlomoides.* The 3 smaller filaments clothed with purple wool; the 2 longer ones pilose only in the middle.

Var. /3, longibracteàtum (Schrad. verb. 2. p. 34.) lower bracteas twice as long as the calyx; the plant is, however, less tomentose, and larger in all its parts than the species.

Hog Mullien. Fl. July, Aug. Clt. 1817. PI. 2 to 3 feet.

60 V. BUGUL;EF6LIUM (Lam. diet. 4. p. 226. Schrad. verb. 2. p. *35.* exclusive of the syn. of Lin.) lower leaves broad-ovate, crenated, glabrous, petiolate: superior cauline ones lance-olate, acuminated, deeply serrated, rather pilose ; racemes sub-spicate ; flowers solitary; anthers equal. *S* • H. Native about the Bosphorus. Blattària orientàlis, Bugulae folio, flore maximo virescente, lituris luteis in semicirculum striato, Tourn. cor. p. 8. itin. 2. p. 83. with a figure.—Buxb. cent. 5. p. 17. t. 32. Stem simple, rather villous. Radical leaves 1|; to *2* inches long, obtuse. Flowers on short pedicels. Corollas larger than those of *F. phlomoides,*pale green, verging to yellow, marked by 2 purple stripes. Filaments clothed with purple wool; the 2 larger ones only in the middle.

Bugloss-leaved Mullien. PI. 2 to 3 feet.

61 V. COMPA'CTUM (Bieb. fl. cauc. no. 399, exclusive of the syn.. of Till. pis. suppl. p. 151. Schrad. verb. 2. p. *35.)* leaves ovate, coarsely crenated, tomentose beneath : lower ones tapering into the petioles : cauline ones petiolate : upper ones sub-cordate, sessile ; spikes compact; flowers solitary; 2 of the anthers oblong. $. H. Native of Tauria and Caucasus; and Iberia, Bieb.; Lower Volga, Heming. Stem tomentose, simple, or divided a little at top. Leaves at length almost glabrous above. Tomentum of a greyish green colour. Lower leaves *2-3* inches long : upper cauline ones half stem-clasping. Spike | a foot to a span long, dense, interrupted a little at the base. Corolla yellow. Filaments copper-coloured, beset with orange-coloured wool, unequal; the 2 longer ones only pilose inside. Pollen vermillion. There is a variety having the radical leaves repandly crenated.

Compact-Rowered Mullien. Fl. July, Aug. Clt. 1820. PI. 2 to 3 feet.

62 V. OVALIFÒLIUM (Donn, hort. cant. ed. 4. p. 42. Sims, bot. mag. t. 1037.) stems simple; leaves oval, sessile, dentately crenated, tomentose beneath, and nearly glabrous above ; spike long, simple; flowers solitary? %. H. Native of Caucasus. Habit of *Cèlsia Crètica.* Each flower furnished with 3 bracteas : the middle one orbicular, acuminated : lateral ones small. Co-rolla large, orange-yellow. Filaments fulvous: the 3 smaller ones bearded, the other 2 naked. Capsule globose. Perhaps the same as *F. compdetum.* Leaves large.

Oval-leaved Mullien. Fl. July, Sept. Clt. 1804. PI. 2 to 3 feet.

63 V. FORMOSUM (Fisch. hort. gorenki, 1812. p. 25. Schrad. verb. 2. p. *36.)* leaves tomentose beneath : lower ones elliptic-ovate, somewhat triply crenated, and are, as well as the cauline ones,'petiolate : upper ones ovate, cordate, simply crenated; spikes elongated ; flowers solitary ; 2 of the anthers are oblong. £ . H. Native of Tauria, Caucasus, and Iberia. Steven and Ledebour. D. Don, in bot. reg. t. 558. Schrank, hort. mon. t. *22.* Stem simple, or branched at top. Spikes dense. Corolla large, yellow, with a dark purple centre. Filaments clothed with purple wool.

Handsome Mullien. Fl. July, Aug. Clt. 1818. PI. *2* to 4 feet.

64 V. BETONIC^FOLIUM (Desf. cor. de Tourn. p. 33. t. 23. and in ann. mus. 11. p. 54. with a figure. Schrad. verb. p. *37.)* leaves crenated, villous : lower and cauline ones oblong, cordate, petiolate : upper ones oblong-lanceolate, sessile ; raceme spicate ; flowers solitary; 2 of the anthers are oblong. %. H. Native of Armenia. Schrad. verb. 2. p. *37.* Stem simple, villous. Leaves deep green : lower and cauline ones 2-3 inches long. Racemes 2-3 inches long. Flowers crowded, on short pedicels. Corollas yellow, smaller than those of *V. Blattaria.* Three of the filaments are woolly, and the other two declinate and glabrous. Capsule roundish.

Betony-leaved Mullien. Fl. June, Aug. Clt. 1825. PI. 1J to 2| feet.

'65 V. PUNI'CEUM (Schrad. hort. gott. fasc. *2.* p. 20. t. 14. verb. *2.* p. *38.)* leaves doubly crenated, pubescent: radical and lower cauline ones ovate, cordate, petiolate : upper ones oblong-ovate, sessile; racemes elongated ; pedicels usually twin, twice as long as the bracteas. 1/. H. Native of the South of Europe. Stems many from the same root, branched at top, rarely simple, more or less downy. Leaves green : radical and lower cauline ones 4-6 inches long, obtuse; one of the lobes at the base longer than the other : upper ones half stem-clasping, acute, or acuminated. Racemes flexuous, drooping at top : terminal one 1 foot and more long; but the lateral ones are much shorter. Flowers twin, except the upper ones, remote. Corolla dirty red. Filaments clothed with purple wool. Anthers all reniform ; pollen copper-coloured. Down simple. There is a variety of this having the lower leaves subtriply crenate: the upper ones recurved at top, and the uppermost ones rounded at the base, not cordate.

Light-red-fiowered Mullien. Fl. June, Aug. Clt. 1820. PI. 2 to 4 feet.

66 V. SPECTA'BILE (Bieb. fl. cauc. suppl. p. 158) leaves oblong-ovate, cordate, doubly crenated, rather villous above, but villously tomentose beneath : lower and cauline leaves petiolate: superior ones sessile, half stem-clasping ; raceme terminal, elongated ; pedicels twin and solitary, about equal in length to the 'bracteas. %. H. Native of the South of Tauria, on mountains about Sobla ; at the fountains of the river Salgir; and on mountains above Utu-Usen, Bieb. Stem simple, and is, as well as the under sides of the leaves, tomentose. Leaves all cordate, green above, but paler beneath: radical and lower cauline ones *2* to *3* inches long. Raceme length of stem ; those of the branches, if present, shorter. Lower pedicels twin, beset with simple and glandular hairs. Corolla showy, yellow, spotted with purple in the bottom. Capsule downy, mucronate.

Eminent Mullien. Fl. June, July. Clt. 1820. PI. % to 4 feet.

67 V. TRI'STE (Smith, prod. fl. graec. 1. p. 151.) leaves pubescent: lower ones elliptic-ovate, cordate, subsinuated, unequally crenated, petiolate: superior cauline leaves sessile; racemes elongated; pedicels solitary, spreading, much longer than the bracteas. %. H. Native on Mount Athos. Schrad. verb. 2. p. 40. V. ferrugineum, Andr. bot. rep. t. 162. but not of others. Corollas rust-coloured, or yellowish-red.

,SW-flowered Mullien. Fl. July, Aug. Clt. 1788. PL « to 4 feet.

68 V. FERRUGI'NEUM (Mill. diet. no. 10. Ait, hort. kew. 1. p. 237.) leaves rather villous, wrinkled: cauline ones nearly sessile, equally crenated : radical ones oblong, cordate, doubly crenated ; racemes spicate ; pedicels twin and solitary: lower ones 3-4 together. 3/. H. Native of the South of Europe. Trew. ehret. p. 3. t. 16/ f. 1. Miller says the radical leaves are almost entire, dark green above and paler beneath, on long petioles : cauline leaves acute, sessile. Corolla rust-coloured.

/?wsty-flowered Mullien. Fl. May, Aug. Clt. 1683. PL 3 to 4 feet.

69 V. PHCENI'CEUM (Lin. spec, p, 254) leaves pubescent beneath : lower ones elliptic, or ovate-oblong, subcordate, crenated, petiolate : upper cauline leaves crenulated, sessile ; raceme terminal, elongated : pedicels solitary, much longer than the bracteas. %. H. Native of the South and East of Europe, on the margins of woods, and in stony grassy fields ; and of Caucasus and Siberia. Lam. ill. t. 117. Gsertn. fruct. \ p. 262. t. *55.* Jacq. fl. austr. 1. t. 125. Curt. bot. mag. t. 885. Ker. bot. reg. *637.*—Mor. hist. 2. sect. 5. t. 9. f. 1.—Bauh. hist. 3. p. *875.* with a figure.—Tab. kraut. 959. icone.—Lob. icon. 1. t. *565.* Stem downy, simple, or divided into a few floriferous branches. Leaves deep green, nearly glabrous above : radical ones 2-4 inches long : upper cauline ones half stem-clasping. Raceme length of stem. Flowers remote. Corolla deep purple, beset with small purple hairs at the base. Two of the filaments are clothed with purple hairs, and the other 3 with white hairs. Anthers all reniform; pollen copper-coloured. Down on the stem and lower leaves simple; of the other parts guttuliferous or glandular. Verb. Cisalpini, Bisol. is a var *of* this, ex Coll. in act. acad. taur. vol. 26. p. 507.

Purple-flowered Mullien. Fl. May, Aug. Clt. 1796. /PI- 2 to 4 feet.

70 V. CU'PREUM (Curt. bot. mag. t. 1226.) leaves cordate, wrinkled, crenated, woolly beneath; pedicels solitary, uniliracteate. %. H. Native country unknown. Corolla of a rust-colour. The 3 shorter filaments covered with long, glandular, purple hairs ; the 2 longer ones naked ; anthers of the long filaments moon-shaped and naked: of the shorter ones nearly cir-^ cular and hairy. Perhaps a hybrid between *V, ovalifblium* and ***V. phceniceum.***

***Copper-colour ed-fiowered* Mullien. Fl. May, Aug. Clt.** 1798. PI. 2 to 4 feet.

71 V. REPA'NDUM (Willd. enum. 1. p. 226. Schrad. verb. 2. p. 44.) leaves glabrous: lower ones obovate-oblong, attenuated at the base, somewhat sinuated : cauline leaves oblong, acute, crenated, sessile : superior ones broad-ovate, cordate, acuminated, acutely crenated, stem-clasping ; racemes elongated ; pedicels solitary : superior ones longer than the bracteas. $ •' H. Native country unknown. Celsia heterophylla, Pers. ench. 1. p. 161. This species differs from *V. Blaltaria,* in the superior leaves being always broader, and exactly cordate, stem-clasping, and acutely crenated ; in the bracteas being larger, broader, and serrulated. Racemes as in *V. blattarioides, 3 feet* long, and more. Flowers yellow, never white.

Bepand-le-dved Mullien. Fl. July, Aug. Clt. 1813. PL[4] to 6 feet.

72 V. BLATTVRIA (Lin. spec. p. 254.) leaves glabrous : lower ones obovate-oblong, attenuated at the base, somewhat sinuated: cauline ones oblong, acute, crenated, sessile: superior leaves subcordate, acuminated, half stem-clasping; raceme terminal,

elongated ; pedicels solitary, twice as long as the bracteas. # . *f • Native of Middle and South Europe, in gravelly places; J-auria, and Caucasus, Bieb. ; Palestine, Sieber; North Ame-"ca, Michx. ; plentiful in some parts of Britain. Jaume St. H»- pi. fr. t, 469. Smith, engl. bot. t. 393.—Sab. hort. 2. t. ?6—Mor. hist. 2. sect. 5. t. 10. f. 6. Bauh. hist. 3. p. 874. icone. Lob. icon. 1. t. 564. Lob. hist. p. 304. icone. Plant glabrous. Stem simple, or divided into floriferous branches at top. Leaves deep green. Calyx, peduncles, pedicels, bracteas, and ovarium, beset with very short guttuliferous hairs. Corollas yellow, larger than those of *V. phceniceum.* Filaments clothed with purple villi: the 2 longer ones only in the Middle, on the inner side. Anthers all reniform.

Var. ft, albiflorum; flowers white. £ . H. Native along with the species. V. glabrum, Mill. fig. t. 67. diet. no. 8.—parrel, icon. t. 1249.—Bauh. hist. 3. p. 874.—Lob. icon. 1. p.

Moth Mullien. Fl. July, Aug. Britain. PL 4 to 6 feet.

73 V. BLATTARIOI'DES (Lam. diet. 4. p. *225.* Schrad. verb. • p. 45.) leaves downy : lower ones elliptic-oblong, tapering »to the petioles, coarsely crenated: cauline leaves oblong, acute, sessile : superior leaves oblong-ovate, subcordate, acuminated, acutely crenated, half stem-clasping; raceme terminal, very long 5 pedicels usually twin, shorter than the bracteas, and are, as well as the calyxes, clothed with viscid hairs. *$* . H. Native of France, by way sides, and in waste fields, on gravelly soil. V. crystallostemon, Cat. sem. hort. dorp. 1818. V. glandulosum, Thore. V. viscidulum, Pers. ench. 1. p. 215. V. pbrum, WilM. enum. 1. p. *225.* Stem pubescent, like the eaves ; hairs simple, mixed with guttuliferous pili. Leaves glabrous on the upper surface in the adult state: radical and cauhne ones 4-6 inches long. Raceme twiggy, simple, or a mtle branched at base. Bracteas 3 to each flower. Corolla yellow; the smaller segments furnished with a few hairs at the base, as in *V. Blattdria.* Hairs of the longer filaments purple ; the rest purple on one side, and white on the other. Anthers as in *V. BlaMria.*

tar. ft, Lusitdnicum (Schrad. verb. *2.* p. 45.) larger in all its parts ; lower leaves a foot long: the stem ones acuter, and doubly and acutely crenated ; bracteas narrower. *$* . H. Native of Portugal. V. blattarioides, Brot. fl. lus. 1. p. *272.* "offm. et Link. fl. port. 1. p. 219.

Ulattaria-like Moth Mullien. Fl. July, Aug. Clt. 1805. Pl —^ to 6 feet.

55ot i"V" VIRGAXTUM (With, arrang. p. 250. Smith, engl. bot. t. •"0 leaves oblong-lanceolate, pubescent, toothed, sessile : radial ones sublyrate ; stem branched ; flowers in fascicles, nearly sessile. *$* . H. Native of Britain, in corn-fields and by way ^aes. V. blattarioides, *ft,* virgatum, Schrad. verb. 2. p. 45. t^attaria magno flore, Bauh. hist. 3. p. 859. Lob. icon. 1. t. ^64. Stem branched from the base. Leaves dentately cremated, pinnatifidly cut at the base, shining above : superior ones cordate, sessile. Flowers disposed in nearly sessile fascicles, yellow, large, with a purplish mouth. Perhaps only a variety °f*K blattarioides,* as considered by Schrader.

Twiggy Moth Mullien. Fl. July, Aug. Britain. PI. 5 to 6 feet.

75 V. GRANDIFLORUM (Schrad. hort. gött. fasc. 2. p. 19. t. lo. verb. *2.* p. 47.) leaves coarsely crenated, pubescent beneath: ower ones elliptic-oblong, attenuated into the petioles : cauline °nes oblong, acute, sessile : superior ones broad-ovate, cordate, acuminated, stem-clasping; racemes spicate, elongated; pedicels outary, shorter than the bracteas, and are, as well as the calyxes, ny. £ : H. Native country unknown, but probably of Syria. branches stems many from the same root, divided into floriferous vol. IV. leaves deep green, and glabrous above. Bracteas 3 to each flower. Racemes 1-2 feet long. Flowers crowded, but at length more remote. Corolla yellow. The 3 smaller filaments woolly: the 2 larger ones pilose on the inner side. Anthers of the longer filaments oblong.

Great-flowered Moth Mullien. Fl. July, Aug. Clt. 1820. PI. 4 to 6 feet.

76 V. PYRAMIDA^TUM (Bieb. fl. cauc. 1. p. 161. suppl. p. 155.) leaves downy beneath : lower ones oval-oblong, doubly crenated, petiolate: cauline ones oblong-ovate, cordate, acute, nearly sessile : superior ones broad-ovate, acuminated, sessile ; racemes panicled ; pedicels usually solitary, shorter than the bracteas. 1/. H. Native of Caucasus and Iberia; and of Hungary, in woods, hedges, and among bushes. Schrad. verb. 2. p. 48. Sweet, fl. gard. t. 31. V. Caucasicum, Hort. Stem downy, branched at top. Leaves at length canescent, smoothish above, a span to 1 foot long, wrinkled. Racemes subspicate, disposed in a panicle, like those of *V. Lychnitis* and *V.floccosum.* Flowers remote, sweet-scented : the lower ones sometimes twin. Pedicels a little shorter than the calyxes. Bracteas solitary. Corollas yellow, size of those of *V. Thdpsus.* * Filaments clothed with purple villi. Anthers equal ; pollen vermilion. Capsule downy.

Pyramidal-Rowered Mullien. Fl. July, Aug. Clt. 1804. PI. 5 to 8 feet.

77 V. SPINOSUM (Lin. amoen. acad. 4. p. 307.) stem frutescent, spiny. J? . F. Native of Candia, on the higher mountains, but never below the altitude of 300 hexapods ; but in sterile places about Alexandria. Lam. diet. 4. p. 222. Sibth. et Smith, fl. graec. t. 229. Verbascum Creticum, spinosum frutescens, Tourn. cor. p. 8.—Mor. hist. 2. sect. 5. t. 10. f. 8.—Alp. exot. p. *37.* t. *36.*—Clus. hist. p. 299. with a figure. Habit distinct from other species. Stem much branched ; bark scabrous. Branches tomentose, but naked in summer ; branchlets naked, flexuous, leafless, spinescent. Leaves linear-lanceolate, an inch long, obtuse, more or less sinuated, becoming gradually smaller and more entire as they ascend; with fascicles of smaller entire leaves in the axillae of the upper ones. Peduncles at the extremity of the branches, scattered, spinescent, propped each by a small bractea. Corollas small, yellow, tomentose outside. Filaments clothed with white wool. Anthers all reniform : pollen orange-coloured.

Spiny Mullien. Fl. May, June. Clt. 1824. Shrub 1 to lj foot.

f *Doubtful species.*

78 V. BOERHAA'VII (Lin. mant. 45.) leaves sublyrate ; flowers sessile. ©. H. Native of the South of Europe. Willd. spec. 1. p. 1002. V. luteum, Mill. fig. 273. V. blattariae foliis nigrum amplioribus, floribus luteis, apicibus purpurascentibus, Boerh. ludgb. 1. p. 228. Till. pis. t. 50.? Leaves sessile, a little decurrent, spatulate, narrowed at the base, sinuated, naked above, and tomentose beneath. Spike like that of *V. Thdpsus,* but not so crowded, and with numerous bracteas to each flower. Corolla yellow. Genitals purple, ex Lin. Perhaps a hybrid between *V.phlomoldes* and some allied species.

Boerhaaves Mullien. Fl. July. Aug. Clt. 1731. PI. 2 to 3 feet.

79 V. H^MORRHOIDA^LE (Ait. hort. kew. ed. 1. p. *236.)* leaves ovate-oblong, attenuated at the base, tomentose, obsoletely crenulated ; racemes spike-formed, elongated ; fascicles of flowers bractless. *$* . H. Native of Madeira. It is doubtful whether this is a true species of the genus, from the want of bracteas, and it is not enumerated in the second edition of Hort. kew.

Hcemorrhoidal Mullien. Fl. June, Aug. Clt. 1777. PI. 2 to 4 feet.

80 V. CORDVTUM (Desf. fl. atl. 1. p. 186.) leaves tomentose : radical ones cordate, petiolate, crenulated, obtuse : cauline ones stem-clasping, quite entire. $. ? H. Native of Mount Atlas, near Tlemsen. Stem simple, or a little branched, tomentose, erect, thickness of a finger. Flowers unknown.

Cordate-leaved Mullien. PL erect.

81 V. CLAYTONII (Michx. fl. bor. amer. 1. p. 148.) glabrous; stem very simple; cauline leaves nearly lanceolate-oblong, deeply crenated: the crense again crenated ; spikes like those of *V. Blattaria.* $. H. Native of Carolina. This is probably only a variety of *V. Blattaria.*

Clayton's Mullien. PL 4 to 6 *feet.*

82 V. STRICTUM (Clark, trav. ed. 2d. pt. *2.* sect. 1. p. *262.)* stem shrubby, erect; lower leaves spatulate-ovate, petiolate: superior leaves ovate-lanceolate, obsoletely toothed or quite entire, sessile; all canescent from stellate hairs ; racemes elongated ; pedicels divaricate, longer than the calyx. J?. F. Native of the Island of Rhodes. Plant tomentose. Leaves 1\ to *2* inches long and more. Racemes panicled. Flowers large, an inch in diameter, yellow.

Strict Mullien. Shrub 5 to 6 feet.

83 V. LAXIFLORUM (Presl. del. prag. 1. p. *76.)* leaves crenulated, densely clothed with stellate tomentum on both surfaces : radical ones oblong-ovate, mucronate : cauline ones sessile: upper ones ovate, acuminated; flowers panicled; fascicles many-flowered, loose. £. H. Native in the region of Mount ***JEtna.***

Loose-flowered Mullien. **PL** ?

84 V. BRACTEATUM (Presl. del. prag. 1. p. 214.) leaves ovate-oblong, toothed, green on both surfaces, rather tomentose beneath : radical ones acute : lower cauline ones acuminated, petiolate: upper ones lanceolate-linear, exceeding the aggregate fascicles of flowers. $. H. Native of Bohemia. Very nearly allied to *V. lychnitis,* and is probably only a variety of it.

Bracteate-Rowered Mullien. PL 3 to 4 feet.

85 V- GLABRUM (Delarb. in journ. de sant6 et d'hist. nat. bourd. 2. p. 166. and in journ. soc. pharm. par. 1. p. 154.) stem angular, branched ; leaves glabrous, obscure green: radical ones petiolate, elliptic, crenated: cauline ones subdecurrent, cordate, auricled ; fruit spicate, sessile, bracteate. $. H. .Native of France. If the cauline leaves of this species are truly subdecurrent, it is distinct from all others.

Glabrous Mullien. PL

86 V. ANNUUM (Mill. diet. no. 11.) radical leaves oblong, quite entire, deep green *on* both surfaces : cauline leaves acute, sessile ; flowers aggregate, pedicellate. #. ?©. ? H. Native of Sicily. Blattaria annua, flore majore luteo, capsula item majore, Mor. hist. *2.* p. 498. Lower leaves 10 inches long, rounded at apex. Raceme long, loose, terminal. Flowers fascicled, deep yellow. Capsule large, brownish. Perhaps V. glabrum, Willd.; the V. blattarioldes, Lam.

Annual Mullien. FL July, Aug. Clt. ? PL 4 to 9 feet.

Cult. The species of *Verbascum* are generally tall, robust - -nlants, they therefore should be grown at the back *of* flower pearance. or in shrubberies, where they will make a showy apfncreased by" They thrive in any common soil, and are all readily sions *of the* i\ seeds ; and some of the perennial kinds by divisport into hybnhoot. As there is hardly any genus more liable to it *is* difficult *to* sa)?s than *Verbascum* by promiscuous impregnation, gardens. These hyb.what is a hybrid, or what is a species in the abortive generally abounds we have found, however, to become that nature has its limits. * the third generation, plainly showing botanist, and traveller in the Pyrenees ; author of " Voyages au Mont Perdu/' 1 vol. *8vo.* Paris, 1801.) Richard in Pers. ench. 1. p. 216. Lam. et D. C. fl. fr. syn. 1. p. *236.* Mycdnia, Lapeyr. Chaixia, Lapeyr. Verbascum species, Lin.

LIN. SYST. *Pentdndria, Monogynia.* Calyx campanulate, 5-parted. Corolla rotate, 5-Iobed, or 5-parted, rarely 4-parted, rather unequal, hairy at the base of the sinuses of the lobes. Stamens approximate. Anthers perforated at the apex. Stigma roundish. Capsule 1-celled, 2-valved : valves bent in at the margins, forming dissepiments; placentas 2, parietal, many-seeded.—A stemless plant, with radical, rosulate, wrinkled, hairy leaves, and 1, or few-flowered scapes, and large purple corollas.

1 R. PYRENAICA (Rich, in Pers. ench. 1. p. 216.) %• H* Native of the Pyrenees and Piedmont, in groves. R. scapigera, Jaume St. Hil. fam. nat. 1. p. *280.* Verbascum Myconi, Lin. spec. p. *255.* Mill. icon. t. 277. Curt. bot. mag. *236.* Mycdnia borraginea, Lapeyr. abr. p. 115. Chaixia Myconi, Lapeyr. abr. suppl. p. *37.* Cortusa foliis ovatis sessilibus, Lin. hort. cliff, p. 50. Trew. ehret. p. 26. t. *57.* Auricula Ursi Myconi, Dalech. hist. p. 837. Leaves radical, ovate, tapering into the petioles, disposed in a rosulate manner, broadly and deeply crenated, clothed with long, rufous, silky hairs on the under side and along the margins, and white hairs above. Scapes naked, pubescent, 2-4 inches long, usually 1-flowered, rarely 2-5-flowered.

Pyrenean Ramondia. FL May. Clt. 1731. PL \ foot.

Cult. This is a pretty little alpine plant. It grows well in common garden earth, and is well fitted for the front of flower borders, or *to* be grown among other alpine plants. It is readily propagated by division.

II. **RAMO'NDIA (named in honour of L. Ramond, a French**

III. CE'LSIA (named by Linneus, in honour of Olaus Celsius, D.D. professor of the Greek language, and afterwards of theology, in the University of Upsal.) Lin. gen. no. 757. Schreb. gen. no. 1015. Juss. gen. p. 121, ed. Usteri. p. 139. Gaertn. fruct. 1. p. 262. t. *55.* Nees in Lin. trans. 17- p. *80.* Verbascum species, Tourn.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted Corolla rotate, 5-lobed. Perfect stamens 4, didynamous, that is 2 long and 2 short, all bearded. Anthers woolly.—Herbs. Leaves simple, or pinnate. Flowers disposed in loose, terminal*racemes, rising each from the axil of a bractea, or small leaf.

SECT. I. ARCTURUS (from *apxrog, arctos,* a bear ; and *ovoa, oura,* a tail; in reference to the long raceme of flowers, which has been compared to a bear's tail.) Benth. scroph. ind. p. 5. Herbs. Filaments all bearded ; anthers of all fixed by *the* middle, 2-celled, and, with the cells, confluent.

1 C. ORIENTALS (Lin. spec. 866. hort. ups. 179. t, 2.) lower leaves jagged: cauline ones bipinnate. ©. H. Native of Cappadocia and Armenia. Lam. ill. 1. t. 532. Sibth. et Smith, fl. graec. t. 605. Verbascum orientale Sophise folio, Tourn. cor, 8.—Buxb. cent. 1. p. 14. t. 20. and 5. p. 17. t. *33.* Plant glabrous or downy. Segments of leaves narrow. Calyx clothed with glandular down. Flowers shorter than the bracteas, of a rusty yellow colour outside, and yellow inside.

Eastern Celsia. FL June, July. Clt. 1713. PI. 2 feet.

2 C. PERSICA (Meyer, verz. pflanz. p. 111.) perennial, pubescent ; radical leaves bipinnatifid : cauline ones cut; pedicels much longer than the sublinear bracteas; calycine segments sublinear, one half shorter than the capsule, which is pear-shaped. %. H. Native of Caucasus, in dry stony places on the Talusch mountains.

Persian Celsia. PL 2 feet. ?

3 C. ARCTU'RUS (Lin. syst. 561. Vahl, symb. 3. p. 79.) radical leaves lyrate : superior ones oblong ; pedicels longer than the bracteas; calycine segments linear, quite entire. £ . H. Native of Candia. Curt. bot. mag. t. 1962. Verbáscum Arcturus, Lin. spec. 254. Jacq. hort. vind. 2. t. 117.—Column, ecphr. 2. p. 81. t. 82.—Alp. exot. p. 123. t. 122. Floral leaves sessile, cordate, serrately toothed. Corollas large, yellow. Filaments bearded with purple hairs.

Bear's Celsia. Fl. July, Sept. Clt. 1780. PL 4 to 6 feet.

4 C. COROMANDELIA'NA (Vahl, symb. 3. p. 79. Nees in Lin. trans. 17. p. 80.) clothed with hoary villi; lower leaves lyrate: floral ones cordate, half stem-clasping ; peduncles 3 times as long as the calyx ; calycine segments ovate, somewhat serrated. ©. H. Native of the East Indies. Flowers yellow, size of those of C. *Arcturus.*

Var. /3, hetcrophylla (Nees, 1. c. p. 81.) lower leaves pinnate: terminal leaflet large, ovate-lanceolate: upper leaves sessile, subcordate; stem much branched ; branches twiggy, racemose. O.? H. Native of the East Indies.? C. heterophylla, Pers. «ch. 1. p. 161. Flowers small, yellow.

Coromandel Celsia. Fl. July, Aug. Clt. 1783. PI. 4 to 6 feet.

5 C. VISCOSA (Roth, catalect. fasc. 2. p. 69. fasc. 3. p. 50. Nees, in Lin. trans. 17. p. 81.) clothed with clammy pubescence : lower cauline leaves lyrate : floral ones cordate, half stem-gasping; peduncles equal in length to the flowers; calycine segments oblong-lanceolate, quite entire. ©. H. Native of the East Indies, at Tanjore. Link. enum. 2. p. 146. C. Corottandeliana, Vahl, symb. 3. p. 79. diagnosis, but not the description. Willd. spec. 3. p. 280. Corolla yellow, like those of the preceding.

Clammy Celsia. Fl. July, Aug. Clt. 1816. PI. 3 to 4 feet.

SECT. II. PSEUDOTHA'PSUS (from ^*EVSTIQ, pseudes,* false ; and *tnapsus,* the name of the shepherd's club.) Benth. scroph. ind. P- 5. Herbs. The 2 longer stamens glabrous, with oblong adnate anthers : the 2 shorter stamens bearded, having the angers fixed by the middle, with the cells confluent.

6 C. CRE'TICA (Lin. syst. 469. Vahl, symb. 3. p. 80.) Radical leaves lyrate : upper ones oblong ; flowers nearly sessile, length of bracteas ; calycine segments ovate, serrated. £ . H. ^ative of the North of Africa and Candia. Curt. bot. mag. 64. Upper leaves or bracteas cordate, serrated, stem-clasping. The 2 lower filaments smooth. Corolla yellow, large, marked by 2 rust-coloured spots at the bottom on the upper side. Plant hoary.

Cretan Celsia. Fl. July, Sept. Clt. 1752. PL 5 to 6 feet.

7 C. BETONIC^FOLIA (Desf. fl. atl. p. *58.* Willd. spec. 3. p. ~°1.) hairy; leaves ovate-oblong, wrinkled, crenated: floral °nes lanceolate, half stem-clasping, shorter than the pedicels ; Calycine segments ovate, acute, with serrated or entire edges. £ . F. Native of Algiers, in waste fields. Blattària Hispánica Maximo flore, Dodart. icon. Shaw. afr. no. *78.* Stem simple, Or branched. Leaves glabrous, or scarcely hairy, often pinnate at the base. Corolla yellow, the 2 superior segments marked each by a purple spot. Lower filaments glabrous.

Betony-leaved Celsia. Fl. July, Aug. Clt. ? PI. 2 to 3 feet.

SECT. III. NEFFLE'A (meaning unknown to us.) Benth. 1. c. kmall shrubs. Filaments all bearded. Anthers all terminal, 1 -celled, dehiscing by 2 ovate-acute valves.

8 C. LANCEOLA'TA (Vent. hort. eels. t. 27.) rather tomentose; leaves lanceolate, serrated, attenuated at the base ; pedicels rather shorter than the floral leaves; calycine segments entire, Bequ16,, ^ * ^' Native at the mouth of the Euphrates. Corolla yell<>w, marked with purple spots at the base.

Lanceolate-leaved Celsia. Fl. July, Sept. Clt. 1816. Shrub 3 to 4 feet.

9 C. SUBLANA'TA (Jacq. fragm. 79. no. 247. t. 126. Ker. bot. reg. 438.) shrubby, clothed with woolly tomentum ; leaves oval-oblong, obtuse, crenated, wrinkled, soft. ^ • Gl. Native country unknown. Leaves doubly crenated, alternate, petiolate, or furnished with 1 or 2 pairs of sessile leaflets at the base. Bracteas sessile, acute, small, subserrated. Flowers sweet-scented.

FIG. 45.

Woolly Celsia. Fl. July, Sept. Clt. 1818. Shrub 1 to 2 feet.

10 C. PARVIFLORA ; radical leaves pinnatifidly runcinate, tomentose on both surfaces ; stem branched, nearly naked; flowers small. J? . H. Native country unknown. Verbáscum parviflórum, Lam. diet. 4. p. 222. Pers. ench. 1. p. 216. Radical leaves size of those of *Leontodon Taraxacum.* Segments ovate, or ovate-oblong, acutish, entire, or a little toothed. Flowers in fascicles. Ovarium tomentose. Flowers size of those of *Scopdria dúlcis.* Capsule size of *Coriander* seed.

Small-flowered Celsia. Shrub 1 to \\ foot.

f *Doubtful species.*

11 C. BERNADE'SII ; stem nearly naked; leaves lanceolate, dentately sinuated, glabrous; peduncles solitary. *$.* ? H. Native of Spain, on hills towards the town called Ortalezza. Verbáscum Bernadésii, Vahl, symb. 2. p. 39. Stem glabrous, simple. Radical leaves numerous, petiolate, hardly 3 inches long, somewhat pinnatifid, acute, with lanceolate toothed segments ; floral leaves small, cordate, cuspidate. Calycine segments unequal both in size and shape, all a little denticulated. Corolla yellow, Vahl. Peduncles an inch long.

Bernades's Celsia. PI. 1 to 2 feet.

12 C. LYRA'TA ; hairy; radical leaves lyrately-pinnatifid at the base, having the margins angularly-toothed: cauline leaves unequally toothed, nearly sessile ; calycine segments serrated. *$* . ? H. Native of Spain ?. Verbáscum lyrátum, Lam. diet. 4. p. 222. Stem weak, flexuous, leafy. Leaves glabrous above, or almost so, 3-4 inches long. Cauline leaves cordate, acute : upper ones stem-clasping. Flowers large, yellow, on short pedicels, solitary, disposed in a long raceme. Calycine segments unequal. Corolla 3 inches in diameter. The two lower filaments naked. Perhaps the same as C. *Crética.*

Lyrate-lesived Celsia. Fl. July, Aug. Clt. 1819. PL 2 to 4 feet.

Cult. The species of *Célsia* have much the habit of the species of *Verbascum,* and like them bear showy yellow flowers. The seeds of them should be reared on a gentle hot-bed ; and when the plants are of sufficient size they should be set separately in pots, as they require protection of a greenhouse or frame the first winter. In May of the second year they may be planted out into the open border in any warm, sheltered situation, where they will flower and ripen their seed. *C sublanata* and *C. parviflóra,* being shrubby, will require the same treatment as a geranium, or other common greenhouse shrub.

IV. ISANTHERA (from *HTOQ, isos,* equal; and a^pct, *anther a,* an anther ; in reference to the stamens being 5, and equal.) Nees, in Lin. trans. 17. p. 82.

LIN. SYST. *Polygdmia, Dicecia.* Flowers polygamous. Calyx 5-cleft. Corolla rotate. Stamens *5,* equal, straight, glabrous. Anthers reniform, 1-celled, opening by a vertical, longitudinal chink, clasping a semicircular connective. Stigma truncate. Capsule 2-celled, many-seeded. Seeds small, inserted in 4 lamelliform placentas. Female flowers without any corolla. Pistil as in the hermaphrodite flowers. Rudiments of stamens tubercle-formed.

1 I. PERMOLLIS (Nees, 1. c.)—Native of the East Indies, but in what particular part is unknown. Plant clothed with soft rusty wool. Leaves obovate-cuneiform, acute, tapering into the petioles, green above, white beneath, and rusty on the nerves and rib beneath. Flowers fasciculately glomerate in the axils of the leaves, nutant. Calyx woolly. Corolla glabrous, shorter than the calyx. Stem erect, filled with white medulla. Down simple.

Soft Isanthera. PL ?

Cult. For culture and propagation see *Celsia,* p. 499.

ORDER CLXIX. SCROPHULARINEiE (this order contains plants agreeing with the genus *Scrophularia* in particular characters.) R. Br. prod. p. 433. D. Don, in edinb. phil. p. 108. Benth. scroph. ind. p. 15.—Scrophulariae and Pediculares, part. Juss. gen. p. 99. & 117. Personatae part. Lin. nat. ord.

Calyx 4-5-parted, permanent. Corolla monopetalous, hypogynous, deciduous, irregular, bilabiate, personate, or ringent, imbricate in aestivation. Stamens usually 4, didynamous, sometimes only *2,* and sometimes with the rudiment of a fifth. Ovarium 2-celled. Style one ; stigma 2-lobed, or undivided. Fruit capsular, rarely baccate, 2-celled, 2-4-valved. Seeds small. Albumen copious. Embryo terete, erect, inclosed, straight. Radicle inferior looking to the umbilicus.—Herbs or shrubs, various in habit, usually with opposite leaves. Inflorescence various.

From the great diversity of form found in this order, and from its partaking, both in habit and structure, of those orders to which it is more immediately allied ; for example, the group *Scrophulariece* closely approximates them to *Verbdscince* and *Solandcece;* the *Gratiolece* connects them with *Lentibularece;* the *Aniirrhinece* and *Gerardiece* with *Chelbnece* and *Bignonidcece;* the *Calceoldrece* with *Gesneridcece;* the *Euphrasiece* with *Rhinanthdcece;* and their affinity to *Verbendcece* is clearly established through the *Buddleiece.* The *Verbdscince* approach so closejy to the first group as to be only distinguished by their symmetrical flowers.

The greater part of Linnaeus's *Didyndmia Angiospermia* are found in this orde-jr. Capstilar fruit and didynamous stamens being amongst the jnost obvious characteristics of the order. The species are natives of all parts of the world. Some of the plants of this order are highly ornamental, as *Digitalis, Calceolaria, Veronica, Russelia, Alonsba, Lindria, Maurdndya, Antirrhinum, Gerdrdia, Mimulus, Collinsia,* &c.; others are mere weeds. Most of them have a weak, unpleasant smell, a bitterish taste, and acrid and suspicious properties; the taste is refreshing in *Mimulus luteus,* which is a culinary plant in Peru, and the ordinary acrid properties become emollient in some *Antirrhinums.* The leaves and roots of *Scrophularia aqudtica, Gratiola officindlis,* and *Peruvidna* and *Calceolaria* act as purgatives, or, in strong doses, produce vomiting ; these properties exist in a high degree in *Digitdlis purpurea.* The leaves of this plant reduced to powder excite vomiting and vertigo, excite urine and saliva, and lower the pulse; in too strong doses they cause death ; in moderate doses they are useful in scrophula, dropsy, asthma, &c.

Synopsis of the genera.

TRIBE I.

SCROPHULARIE\E. Calyx deeply 5-parted ; segments dilated, with scarious edges, imbricate in aestivation. Corolla tubular, or campanulate, ventricose ; limb bilabiate, 5-lobed. Stamens 4, fertile, didynamous; cells of anthers confluent at apex, inserted in a fleshy connective. Stigma capitate, or 2-lobed. Capsule crustaceous ; dissepiment double, fixed to the inflexed margins of the valves, placentiferous on both sides. Testa of seeds thick, spongy, corrugated. Albumen fleshy. Embryo almost the length of the albumen.—Shrubs and herbs. Leaves opposite and alternate. Flowers terminal, racemose, yellow, purple or scarlet.

1 DIGITA'LIS. Corolla tubular, declinate; lower lip the longest.

2 ISOPLE'XIS. Corolla tubular, incurved ; upper lip the longest.

3 SCROPHULA'RIA. Corolla with a subglobose tube, and a very unequal limb.

4 ALONSOA. Corolla subrotate, resupinate from the twisting of the pedicels.

5 RUSSE'LIA. Corolla tubular, straight. Valves of capsule bipartible.

TRIBE II.

ANTIRRHI'NEJE. Calyx deeply 5-parted, imbricate in aestivation. Corolla personate, ventricose ; limb 5-lobed, bilabiate. Stamens 4, fertile, didynamous, sometimes with the rudiment of a fifth. Cells of anthers distinct at top. Stigma 2-lobed. Capsule crustaceous ; dissepiment undivided ; placentas spongy, adnate. Seeds with a thick, spongy, corrugated, or cellular testa. Albumen fleshy. Embryo almost the length of the seeds.—Herbs or sub-shrubs. Leaves opposite, or alternate. Flowers terminal, spicately racemose, or axillary solitary.

6 ANTIRRHI NUM. Corolla personate, saccate, or gibbous at the base. Capsule opening by *3* valvate pores under the apex, rarely by *2* irregular holes.

7 LINA'RIA. Corolla personate, spurred at the base. Capsule opening by *2* lids at top, or by 4-10-tooth-formed, or valve-formed parts.

8 ANARRHI^NUM. Corolla bilabiate, spurred, or spurless at the base ; throat open and naked. Capsule opening by *2* valve-formed lids at top.

9 GALVE'SIA. Corolla bilabiate ; throat naked ; tube elongated, gibbous at the base. Capsule bursting irregularly under the apex.

10 MAURA'NDYA. Corolla personate, gibbous at the base. Capsule dehiscing by 10 teeth at apex.

11 LOPHOSPE'RMUM. Corolla bilabiate ; tube wide, gibbous at the base. Capsule dehiscing irregularly under the apex.

12 NEME'SIA. Corolla personate, spurred at the base. Capsule compressed, truncate at apex.

13 LEUCOPHY'LLUM. Corolla tubularly campanulate, bilabiate, without any spur at the base ; palate convex. ?

TRIBE III.

GRATIOLE^:. Calyx usually tubular, 5-cleft. Corolla tubular, ventricose, sometimes personate ; limb 5-cleft, bilabiate. Stamens 4, didynamous, all, or only *2* of them, fertile ; cells of anthers diverging, distinct at apex. Stigma usually bilamellate. Capsule often membranous, 2-celled, 2-4-valved, rarely almost 1-celled; dissepiment membranous, fixed to the inflexed margins °f the valves ; placentas spongy, at length free. Testa of seeds somewhat crustaceous. Albumen fleshy. Embryo length of seeds.—Herbs rarely sub-shrubs. Leaves opposite, or verticillate. Flowers axillary or terminal, usually yellow or purple.

§ 1. *Stamens* 2, *or* 4, *when* 4, *2 of them are sterile.*

14 GRATI'OLA. Corolla tubular. Two upper stamens fertile. Capsule 4-valved.

15 BEYRI'CHIA. Corolla tubular. Two lower stamens fertile. Valves of capsule hardly cleft.

16 ACHETA'RIA. Corolla tubular. Two lower stamens fertile. Valves of capsule bipartible.

1? MONTI'RA. Corolla funnel-shaped; limb 5-cleft, almost equal. Capsule didymous, 4-valved.

18 DOPA'TRIUM. Corolla much longer than the calyx, with a wide throat. Two upper stamens fertile. Capsule 4-valved.

19 MICROCARP^XA. Corolla minute, hardly exceeding the Catyx. Stamens *2*9 none sterile. Capsule 2-valved.

20 PEPLI'DIUM. Corolla equal in length to the calyx. Stains 2, none sterile. Capsule dehiscing irregularly.

21 BONNA'YA. Stamens 4, *2* lower ones sterile. Capsule dehiscing valvately. Valves entire.

22 HYDROTRICHE. Corolla nearly regular. Stamens 2, Without any rudiments of sterile ones.

23 HEMIA'NTHUS. Calyx 4-toothed, cleft. Upper lip of coroll$_a$ obsolete : lower one tripartite. Stamens 2; lateral clefts antheriferous.

24 PTEROSTI'GMA. TWO upper stamens fertile ; upper segment of calyx the largest. Capsule with a loculicidal dehiscence ; valves bifid.

§ 2. *Stamens* 4, *all fertile, sometimes with the rudiment of a fifth.*

25 LINDENBE'RGIA. Cells of anthers separate. Calyx half 5-cleft.

26 STEMODIA. Cells of anthers separate. Calyx 5-parted.

27 DODA'RTIA. Calyx tubular; teeth straight. Lower lip °f corolla papillosely bigibbous at the base.

28 MA'SUS. Calyx campanulate ; teeth spreading. Lower *P of corolla papillosely bigibbous at the base.

29 LIMNOPHILA. Calyx tubularly campanulate. Lower lip of corolla glabrous, with flat segments.

30 MORGA'NIA. Calyx 5-parted, equal. Lower lip of corolla with obcordate, equal segments.

31 HERPE'STIS. Segments of calyx very unequal. Corolla bilabiate, with flat segments. Valves of capsule bipartite, with nat margins.

32 MECARDONIA* Segments of calyx unequal. Corolla tubular, sub-bilabiate. Stigma oblique, sub-capitate; valves of capsule entire, parallel.

33 BRA'MIA. Segments of the calyx unequal. Corolla campanulate, somewhat regularly 5-cleft. Ovarium girded by a toothed disk. Valves of capsule bipartite.

34 SPH^EROTHE'CA. Segments of the calyx nearly equal. Valves of capsule bipartite, with flat margins.

35 DI'CEROS. Segments of calyx equal. Corolla funnel-shaped : limb bilabiate. Anthers bicornute. Capsule globose ; valves entire.

36 LOXOPHY'LLUM. Calyx 5-parted, bilabiate. Corolla bilabiate ; upper lip emarginate, erect. Stamens exserted. Capsule globose; valves bipartite.

37 MATOU'REA. Calycine segments rather unequal. Valves of capsule nearly entire.

38 CACONA'PEA. Calycine segments unequal : upper one the largest. Stamens inclosed. Valves of capsule bipartite.

39 RANA'RIA. Calycine segments equal in length : the *3* outer ones the broadest. Limb of corolla 4-cleft, nearly equal. Valves of capsule bipartite.

40 VANDE'LLIA. Calyx nearly equal, 5-toothed, or 5-parted. Two lower filaments appendiculate, or gibbous at the base. Valves of capsules entire.

41 E'LLOBUM. Calyx equal. Corolla funnel-shaped : limb bilabiate; upper lip retuse. Stamens exserted; anthers connected, mutic. Capsule silique-formed, subulate.

42 ARTANE'MA. Calyx nearly equal. Tube of corolla furnished with 4 scales inside. Two lower filaments appendiculate, or gibbous at the base.

43 TORE'NIA. Calyx plicate, obliquely 5-toothed. Two lower filaments appendiculate, or gibbous at the base.

44 HETERA'NTHA. Anthers of the upper filaments large, and clasping the style. Calyx 5-cleft.

45 LINDE'RNIA. Anthers equal. Lower filaments bifid. Calyx 5-parted. Valves of capsule entire.

46 LIMOSE'LLA. Anthers equal. Calyx 5-toothed, or 5-cleft. Valves of capsule entire.

47 HYDRANTHE'LIUM. Calyx deeply 4-parted. Corolla funnel-shaped ; limb 3-lobed: the hind lobe large and emarginate. Anthers equal.

48 CONOBEA. Calyx 5-cleft. Capsule 1-celled, 4-valved. Anthers sagittate.

49 MIMULUS. Calyx 5-toothed.[fr] Corolla personate. Capsule 2-valved, with flattish margins.

50 LEUCOCA'RPUS. Calyx 5-toothed. Corolla personate. Fruit baccate.

51 UVEDA'LIA. Calyx 5-toothed. Corolla ringent. Capsule 4-valved, with flattish edges.

52 HEMIPHRA'GMA. Corolla tubular, sub-bilabiate. Capsule baccate, 2-valved ; valves bipartite.

53 COLLI'NSIA. Corolla gibbous above the base: limb very irregular. Capsule 2-valved ; valves bipartite.

TRIBE IV.

GERARDIE^JE. Calyx tubular, 5-toothed. Corolla campanu-

lately ventricose; limb 5-lobed, bilabiate. Stamens 4, didynamous, usually exserted; anthers 2-eelled, often bearded ; cells diverging, distinct at apex, usually spurred at the base. Stigma clavate, undivided. Capsule bipartible ; dissepiment composed of two combined lamina; placentas narrow, spongy. Seeds angular ; testa loose, thick, favosely cellular. Albumen fleshy. Embryo sub-foliaceous, nearly the length of the seeds ; radicle short, obtuse.—Herbs or subshrubs. Leaves opposite, scabrous. Flowers axillary, solitary, or terminal, and spicately racemose, yellow or purple.

§ 1. *Calyx tubularly campanulate, 5-toothed, or 5-cleft.*

54 GERA'RDIA. Calyx 5-toothed, or semi-5-cleft. Corolla campanulate, or tubularly campanulate ; tube longer than the calyx. Stamens inclosed. Cells of anthers equal.

55 SOPU'BIA. Calyx 5-toothed. Corolla campanulate ; tube shorter than the calyx. Stamens exserted, equal. Cells of anthers unequal.

56 SEYME^RIA. Calyx deeply 5-cleft. Corolla with a short tube, and a subrotate spreading limb. Stamens a little longer than the corolla ; cells of anthers nearly equal.

57 MACRANTHE'RA. Calyx 5-cleft, foliaceous; segments denticulate. Corolla cylindrically tubular, nearly equal, with a 5-toothed apex. Stamens exserted.

58 ESTERHAZIA. Calyx 5-toothed. Corolla tubularly funnel-shaped. Stamens much exserted.

59 GLOSSOSTYLIS. Calyx 4-5-toothed. Corolla oblique, campanulate. Stamens exserted.

60 PHTHEIROSPE'RMUM. Calyx 5-cleft. Corolla campanulate. Stamens inclosed. ? Stigma 2-lobed.

61 ESCOBE'DIA. Calyx tubular, pentagonal, 5-toothed. Corolla funnel-shaped. Stamens inclosed.

§ 2. *Calyx inflated, 5-toothed or 5-cleft.*

62 PHYSOCA'LYX. Calyx inflated, 5-toothed. Corolla funnel-shaped.

63 MELA'SMA, Calyx inflated, 5-cleft. Corolla campanulate.

64 GASTROME'RIA. Calyx inflated, 5-toothed. Corolla campanulate.

§ 3. Calyx compressed, cleft on one side, at length somewhat 4-lobed.

65 CENTRANTHE'RA, Character the same as that of the section,

TRIBE V.

VERONI'CE*:. Calyx 4-5 parted, imbricate in aestivation. Corolla rotate, 4-lobed, or tubular and sub-bilabiate. Stamens 2 or 4, exserted, distant; anthers incumbent; cells parallel, distinct. Stigma capitate. Capsule membranous ; dissepiment narrow, composed of two separable lamina; placentas very short, in the middle of the dissepiment. Seeds compressed, with a membranous testa. Albumen cartilaginous. Embryo minute, terete, located in the base of the albumen.—Herbs or subshrubs. Leaves usually opposite. Flowers axillary or terminal, solitary or racemose, blue, red or white.

$ 1. *Stamens 2.*

66 VERO'NICA. Calyx 4-5-parted. Corolla rotate, unequal.

67 DIPLOPHY'LLUM. Calyx of *2* sepals. Corolla rotate, unequal. Capsule 4-seeded.

68 LEPTA'NDRA. Corolla tubular, sub-ringent: lower segment the smallest.

69 P^EDEROTA. Corolla tubular, straight, bilabiate: upper lip entire, or emarginate.

70 CALORHA'BDOS. Corolla tubular, incurved, with an oblique, 2-3-cleft mouth.

71 WULFE^NIA. Corolla tubular, declinate ; limb 4-5-cleft. sub-

72 GYMNA'NDRA. Corolla tubular, straight, with a b bilabiate limb.

§ 2. *Stamens* 4, *didynamous.*

73 PICRORHI'ZA. Corolla campanulate, shorter than the calyx.

74 GEOCHORDA. Corolla funnel-shaped.

TRIBE VI.

BUCHNE'RE*:. Calyx tubular, striated, 5-cleft. Corolla salver-shaped ; limb nearly equal. Stamens 4, didynamous, inclosed. Anthers for the most part 1-lobed, from the cells being contiguous, seated on a thick, elevated connective. Stigma, undivided. Capsule with a simple dissepiment; placentas narrow, columnar, adnate longitudinally, or at length free. Seeds minute, smooth, scrobiculate, with a membranous testa. Albumen fleshy. Embryo much shorter than the seed.—Herbs or subshrubs. Leaves opposite or alternate. Flowers terminal, spicately racemose, white or red.

§ 1. *Valves of capsule entire.*

75 STRIGA. Tube of corolla abruptly incurved; limb bilabiate.

76 BUCHNE'RA. Calyx short, tubular, 5-toothed. Corolla salver-shaped. Capsule straight.

77 RHAMPHICA'RPA. Calyx campanulate, 5-cleft. Corolla salver-shaped. Capsule obliquely beaked.

78 CY'CNIUM. Calyx long, tubular, foliaceous. Corolla salver-shaped. Capsule straight, fleshy.

§ *Valves of capsule bifid.*

79 NYCTERI'NIA. Calyx bilabiate. Stamens *2,* inclosed ; with oblong-linear anthers ; the other 2 a little exserted, with short or abortive anthers.

80 POLYCARE'NA. Calyx bilabiate. Anthers all exserted, and similar.

81 PHYLLOPODIUM. Calyx 5-cleft. Anthers all exserted, and similar. Bracteas adnate to the pedicels.

82 SPHENA'NDRA. Calyx 5-cleft. Anthers similar, exserted. Corolla rotate.

83 CH^NOSTOMA. Calyx 5-cleft. Anthers similar, exserted. Bracteas free from the pedicels. Corolla campanulate or funnel-shaped.

84 LYPE^RIA. Calyx 5-cleft. Anthers all inclosed. Tube of corolla gibbous or incurved; limb bilabiate. Peduncles axillary, or disposed in leafy racemes or spikes.

85 MANX/LEA. Calyx 5-cleft. Anthers all inclosed. Corolla tubular ; limb nearly equal.

86 ERINUS. Calyx 5 parted. Corolla tubular, with a 5-

parted, nearly equal limb ; lobes obcordate. Stamens nearly equal, inclosed. Capsule ovate.

TRIBE VII.

BUDDLEIE**:. Calyx campanulate, 5-toothed. Corolla tubular ; limb 4-cleft, equal, spreading. Stamens 4, nearly equal, inclosed. Anthers composed of 2 parallel distinct cells. Stigma clavate, 2-lobed. Capsule crustaceous ; dissepiment constituted from the bent-in margins of the valves, inserted in the thick spongy placenta. Seeds angular, scobiform, with a loose, membranous testa. Albumen fleshy. Embryo almost the length of the seeds. Cotyledons oblong-compressed. Radicle very short—Shrubs with quadrangular branches, opposite, reticulately veined leaves; and terminal, capitate, spicate, or panicled nowers. Corollas generally orange-coloured.

87 BUDDLE'A. Character the same as that of the tribe.

TRIBE VIII.

CALCEOLARIE\E. Calyx 4, rarely 5-parted, valvate in aestivation. Corolla irregular, bilabiate. Stamens 2-4, inserted in the throat of the corolla. Cells of anthers diverging at the base, but confluent at the apex. Stigma undivided, capitate. Capsule membranous. Dissepiment constituted from the bent-in margins of the valves; placentas 2, stipitate, or adnate to the dissepiment. Seeds minute, with a mucrone-formed umbilicus ; testa membranous. Albumen fleshy. Embryo terete, half the le»gth of the albumen.—Herbs or subshrubs, usually clothed with glandular pubescence. Leaves opposite, usually undivided. Flowers terminal, for the most part corymbosely panicled, or racemose, yellow, rarely purple.

88 CALCEOLA'RIA. Lower lip of corolla incurved, calceolate : upper lip small. Stamens 2.

89 JOVELLA'NA. Both lips or lobes of corolla concave, nearly equal, spreading. Stamens *2.*

90 *B'JÈA.* Corolla spreading; lower lip 2-parted : upper 3-lobed. Capsule long, corniculate. Stamens 2.

91 HEMĪMERIS. Lower lip of corolla concave, blunt; upper lip cloven, with a kind of bag at the base. Stamens *2,* or didynamous.

92 THYLACA'NTHA. Lower lip of corolla large, saccate at the °ase, trifid : upper lip short, bifid. Stamens 4, didynamous. Capsule round, valveless.

93 ANGELLÒNIA. Lower lip of corolla saccate at the base, trifid: upper one smaller, bifid. Stamens 4, didynamous. Capsule 2-valved.

TRIBE IX.

EUPHRASIE\E. Calyx tubular, 5-toothed. Corolla bilabiate. Stamens 4, didynamous. Cells of anthers parallel, usually spurred at the base. Stigma undivided. Capsule crustaceous; dissepiment placentiferous on both sides. Seeds with a membranous testa. Albumen fleshy. Embryo terete, slender, straight, almost the length of the albumen.—Herbs with opposite leaves, and terminal, subspicate, bracteate flowers.

§ 1. *Cells of anthers spurred at the base.*

94 EUPHRAW. Calyx campanulate, 4-cleft. Superior lip °f corolla galeate, emarginate; lower lip large, spreading, with emarginate segments.

95 ODONTI'TES. Calyx campanulate, 4-cleft. Upper lip of corolla emarginate, galeate : segments of the lower lip equal, linear. Anthers oblong, a little exserted.

96 BA'RTSIA. Calyx campanulate or tubular, 4-cleft. Upper lip of corolla galeate, compressed, entire; segments of the lower lip quite entire, reflexed.

97 BU'NGEA. Calyx tubular, 4-cleft. Upper lip of corolla tridentate : lower one trifid.

98 SIPHONOSTE'GIA. Calyx funnel-shaped; tube elongated; limb 4-5-parted. Upper lip of corolla incurved ; lower one short, with entire segments.

99 LAMOUROU'XIA. Corolla tubular, compressedly ventricose ; upper lip galeate, entire : lower one with obtuse lobes.

§ 2. Cells of anthers mutic at the base.

100 CASTILLE'JA. Calyx compressed, bifid or quadrifid, cleft on one side. Upper lip of corolla linear, channelled, entire. Cells of anthers unequal.

101 ORTHOCA'RPUS. Calyx tubular or campanulate, 4-cleft. Upper lip of corolla small, compressed. Cells of anthers unr equal.

102 SCHWA'LBEA. Calyx compressed, obliquely 5-cleft. Upper lip of corolla arched. Cells of anthers equal.

103 LAFUE'NTEA. Calyx tubular, 5-parted. Cells of anthers equal.

TRIBE X.

TEEDIE^JE. Calyx 5-parted. Limb of corolla nearly equal. Fruit baccate.

104 TEE'DIA. Calyx 5-parted. Corolla salver-shaped.

105 FREYLI'NIA. Calyx 5-parted. Corolla funnel-shaped.

TRIBE XI.

HALLERIE\K. Calyx small, 3-lobed, unequal, permanent. Corolla large, funnel-shaped; throat ventricose; limb erect, oblique, 4-cleft, unequal; upper segment the largest, and emarginate. Stamens 4, didynamous. Fruit baccate, roundish, terminated by the style, 2-celled, many-seeded.—A shrub with opposite leaves, with the habit of *Vitex.*

106 HALLE'RIA. Character the same as that of the tribe.

•j- *Genera not sufficiently known.*

107 PI'KRIA. Calyx deciduous, 4-leaved, longer than the corolla. Corolla ringent, bilabiate. Stamens 4, didynamous; the *2* longer stamens bearing 1-celled anthers, and the 2 shorter stamens bearing 2-celled anthers. Berry ovate, 2-celled, many-seeded.

108 DIPLANTHE^RA. Calyx 3-cleft; hind segment entire: lateral ones bifid. Corolla bilabiate ; upper lip obcordate. Stamens 4, exserted, nearly equal. Cells of anthers diverging. Ovarium 2-celled; placentas 2, adnate in each cell. Stigma bilamellate.

109 GOMVRIA. Calyx 4-cleft. Corolla irregular; tube curved. Nectary cup-shaped. Stamens 4, didynamous. Capsule 2-celled.

110 RHYNCOGLŌSSUM. Calyx 5-cleft, bilabiate. Stamens 4, 2 sterile. Capsule 1-celled, 2-valved.

Tribe I.

SCROPHULARIE^E (this tribe contains plants agreeing with Serophularia in the characters indicated below.) D. Don, in edinb. phil. journ. 19. p. 110. July, Oct. 1835. Calyx deeply 5-parted ; segments usually dilated, with scarious margins, imbricate in aestivation. Corolla tubular or campanulate, ventricose ; limb 5-lobed, bilabiate. Stamens 4, didynamous, often with the rudiment of a fifth. Cells of anthers confluent at apex, inserted into a fleshy connective. Stigma capitate or 2-lobed. Capsule crustaceous ; dissepiment double, formed from the bent-in margins of the valves, placentiferous on both sides. Testa of seed thick, spongy, corrugated. Albumen fleshy, nearly the length of the albumen.—Herbs or shrubs, mostly natives of Europe. Leaves opposite and alternate. Flowers terminal, racemose, yellow or purple. This tribe comes near to *Ferbascinece* in habit more than in character.

I. DIGITA'LIS (so named from the resemblance of the flower to the finger of a glove, *digitate,* or from the adjective *digitalis,* of or belonging to a finger. Parkinson says, some thinking Foxglove to be a foolish name, do call them finger flowers', because they are like unto the fingers of a glove, the ends cut off.) Fuschs. hist. p. *892.* Tourn. inst. p. 165. t. *73.* Lin. gen. no.' 758. Schreb. gen. no. 1017. Juss. gen. p. 120. ed. Usteri. p. 135. Gaertn. fruct. 1. p. 247. t. *53.* Lindl. dig. mon.-Campanula, Trag. kreut. 2. cap. p. 125.—Virga regia Csesalp. pi. 348.—Gesneria spec. Lin. hort. cliff, p. 318.

LIN. SYST. *Didynamia, Angiospermia.* Calyx unequal. Corolla tubular at the base, funnel-shaped : limb obliquely 4-lobed : upper segment much shorter than the lower one or lip, and is, as well as it imbricate in aestivation. The rudiment of the fifth ; stamen hardly conspicuous. Stigma simple, or bilamellate. Capsule ovate, acuminated.—Herbs with alternate leaves, and terminal racemes of secund, bracteate, drooping flowers.

§ 1. *Corolla oblong-ventricose; upper segment transverse.*

Stamens shorter than the tube.

1 D. PURPU^REA (Fuschs. hist. 892. t. 893. Lin. spec. 866.) leaves oblong, rugose, crenated; calycine segments ovate-oblong; segments of corolla transverse, acute ; peduncles straight, about equal in length to the calyxes. 1/. H. Native of Europe, as of Denmark, Germany, Switzerland ; Britain, in sandy gravelly soils near London ; it grows plentifully about Charlton wood, Norwood, &c. Gaertn. fruct. 1. p. 247. t. *53.* Curt. fl. lond. fasc. 1. t. 48. Woodv. med. bot. 71. t. 24. Oed. fl. dan. t. 74. Hoffm. et Link, fl. port. p. 222. Lindl. dig. t. 2. Stev. et Church, med. bot. 1. t. 18.—Blackw. t. 16.—Riv. mon. t. 104.—Lob. icon. 1. p. *572.* f. 1, 2 —Mor. hist. sect. 5. t. S. f. 1. Plant pubescent. Corollas large, purple, marked inside with dark purple spots, which are edged with white. The colour, however, varies from dark purple *to* cream-colour and white.

Foxglove has been analysed by Destouches. Four ounces of the dried leaves yielded successively 9 drachms of watery and *78* grains of alcoholic extract. The first was brown, smooth, and *of* a consistence fit for making pills. The second had a very deep green colour, a virose and disagreeable smell, the consistence of tallow, but more tenacious, did not furnish ammonia by distillation, and was not acted upon by acids. The ashes contained salts of lime and potass. The effects of *Foxglove* when taken into the stomach are to diminish the frequency of the pulse, and the irritability of the system ; and to increase the action of the absorbents, and the discharge by urine. In excessive doses it produces vomiting, dimness of sight, vertigo, delirium, hiccough, convulsions, collapse, and death. For these symptoms the best remedies are cordials and stimulants. Internally *Digitalis* has been recommended. 1. In inflammatory diseases, from its very remarkable power of diminishing the velocity of the circulation. *2.* In active haemorrhages, and phthisis. *3.* In some spasmodic affections, as in spasmodic asthma, palpitation, &c. 4. In mania from effusion on the brain. 5. In anasarcous and dropsical effusions. 6. In scrophulous tumours. 7. In aneurism of the aorta, and hypertrophy *of* the heart. Externally it has been applied to scrophulous tumours. It may be exhibited—1. In substance, either by itself, or conjoined with some aromatic, or made into pills, with soap or gum ammoniac. Withering directs the leaves to be gathered before the plant comes into flower; he rejects the petioles and midrib, and dries the remaining part either in the sunshine or before the fire. In this state they are easily reduced to fine green powder, which is given in doses of one grain twice a day, and the dose is gradually increased until it acts upon the kidneys, stomach, pulse, or bowels, when its use must be laid aside, or suspended. 2. In infusion : the same author directs a drachm of dried leaves to be infused for 4 hours in eight ounces of boiling water, and an ounce of any spirituous water to be added to the strained liquor for its preservation. Half an ounce, or an ounce of this infusion may be given twice a day. 3. In decoction. Darwin directs that four ounces of the fresh leaves be boiled in two pounds of water, until they are reduced to one, and that half an ounce of the strained decoction be taken every two hours, for four or more doses. 4. In tincture, put one ounce of the dried leaves, coarsely powdered, into four ounces of diluted alcohol: let the mixture stand by the fire-side 24 hours, frequently shaking the bottle, and the saturated tincture, as Darwin calls it, must then be separated from the residuum by standing, or decantation. Twenty drops of the tincture were directed to be taken twice or thrice a day, but the dose is dangerous. The Edinburgh college use eight ounces *of* diluted alcohol to one of the powder, but let it digest seven days. 5. The expressed juice and extracts are not proper forms of exhibiting this very active remedy.—Woodville and Duncan.

Far. albijlhra; flowers white. %. H. Native along with the species.—Gerard, emac. 790. f. 2.

Pwr^/e-flowered, or Common Foxglove. Fl. Clt. PI. 3 to 5 feet.

2 D. THA'PSI (Lin. spec. 867.) leaves oblong, rugose, crenated, undulated, decurrent; calycine segments ovate; segments of corolla ovate-roundish ; peduncles slender, arched, much longer than the calyx. %. H. Native of Spain, Portugal, Savoy, &c. Smith, exot. bot. p. *83.* t. 43. Hoffm. et Link, fl. port, p. 223. t. 30. Lindl. dig. p. 10. t. 3. D. verbascifdlia, Bocc. mus. t. *85.* D. Hispanica purpurea minor, Tourn. inst. p. 165. —Barrel, icon. 1183. Plant tomentose, in habit much like *D-purpurea.* Corollas purple ; throat pale, marked with blood red dots.

Far. /3, intermedia (Lindl. dig. p. 11. t. 4.) stems simple, taller; segments of corolla obsolete. %. H. Native of Portugal about Cintra and Grandola. D. purpurea, Tab. icon. t. *568.* D. tomentosa, Hoffm. et Link, fl. port. p. 220. t, *20.* Sims, bot. mag. 2194.—Besl. hort. eyst. ord. 1. fol. 2. f. 2.

Mullien-Wke Foxglove. Fl. June, Sept. Clt. 1752. B. 1818. PI. 2 to 4 feet.

3 D. MI^NOR (Lin. mant. p. *567.* syst. ed. 13. p. 470.) radical leaves recurved to the ground, lanceolate, flat, denticulated; racemes few-flowered ; segments of corolla ovate-roundish, dilated, quite glabrous : superior one bifid ; peduncles 3-times longer than the calyxes. %. H. Native of Spain. Sims, bot. mag. 2160. Lindl. dig. p. 12. t. 5, 6. D. Hispanica purpurea, minor, Tourn. inst. p. 165. Stem glabrous, or downy. Leaves glabrous above, downy beneath : upper ones quite entire. Corolla purplish, large for the size of the plant, marked by many spots inside.

Smaller Foxglove. Fl. June, July. Clt. 1789. *VI* \ to f foot.

4 D. AMBI'GUA (Murr. comm. goett. p. 6. Lin. syst. p. *562.*)

leaves ovate-lanceolate, toothed, sessile, nerved ; lower bracteas about equal in length to the flowers ; corolla reticulated : with ovate, transverse, obtuse segments. %. H. Native of Austria, Switzerland, Germany, East of Siberia and Persia, in shady places. Schkuhr, handb. t. 174. Lindl. dig. p. 13. t. 7. R. Br. hort. kew. 4. p. 28. D. lutea, Guildst. reis. 1. p. 425. Poll. pal. no. 599. D. grandiflora, All. ped. 1. p. 70. Mill, diet. no. 4. Lam. fl. fr. 2. p. 332. D. media, Roth, catalect. 2- P. 60. D. intermedia, Pers. ench. 2. p. 162. Plant hairy, leaves downy beneath. Corollas large, yellowish, reticulated with brown. Genitals glabrous.

Ambiguous Foxglove. Fl. July, Aug. Clt. 1596. PL 2 to 3 feet.

5 D. OCHROLEU'CA (Jacq. austr. 1. p. 36. t. *57.)* leaves ovate-lanceolate, acuminated, toothed, and are, as well as the stem, villous ; bracteas lanceolate : lower ones twice as long as the flowers ; corolla villous, reticulated : segments ovate, acute : lip bearded. i£. H. Native of Austria, Germany, Croatia, wrpathian mountains. Lindl. dig. p. 14. t. 8. D. ambigua, kchrank, mon. 3, with a figure. D. lutea, Tabern. icon. t. *567.* Roth. fl. germ.]. p. *267.*—Besl. eyst. ord. 1. fol. 1. f. 3.—*nip. centf 6j witll a figUre> Corolla yellow, reticulated with brown.

Var. /j, *fuscescens* (Lindl. dig. p. 14.) flowers smaller, brown. H. Native of Croatia. D. fuscescens, Waldst. et Kit. 3. P- 304. t. 274.

Cream-coloured-flowered Foxglove. Fl. July, Aug. Clt. ? PI- 2 to 3 feet.

6 D. FU'LVA (Lindl. dig. p. 15. t. 9.) leaves lanceolate, ciliated ; bracteas all not half so long as the flowers ; corolla downy, reticulated : segments ovate, acute : lip bearded ; stamens about equal in length to the tube. %. H. Native county unknown. D. obscuro-ferruginea, Kcelr. in act. petrop. 2. p. 261—Park. par. 381. f. 5. ? Plant glabrous. Leaves ciliated and pilose on the veins beneath, smooth, bullate, and tainted with purple above. Calyx downy. Corolla fulvous, reticulated with rust-colour. Stamens glabrous. Perhaps a **hybrid between *D. obscura* and *D.ferruginea.***

Tawmj-ftowered Foxglove. Fl. July, Aug. Clt. ? PI. 2 to 3 feet.

§ 2. *Corolla roundisk-ventricose. Lip length of tube. Stamens equal in length to the tube.*

7 D. L^VIGA^TA (Waldst. et Kit. pi. hung. 2. p. 171. t. 158.) glabrous, branched ; leaves linear-lanceolate; flowers scattered, glabrous, i;. H. Native of Croatia, on calcareous rocks, ^ndl. dig. p. 16. t. 10. Radical leaves obovate-lanceolate, obscurely-toothed; upper ones recurved, 5-nerved. Corolla fulvous, reticulated ; lip ciliated, white ; segments obtuse.

Smooth Foxglove. Fl. July, Aug. Clt. 1816. PI. 2 to 3 feet.

8 D. SIBI'RICA (Mill. diet. no. 9. Lindl. dig. p. 16. t. 11.) villous, branched ; leaves ovate, distantly-toothed; flowers scattered, pilose. If. H. Native of Siberia, Tartary. Upper leaves quite entire. Calyxes villous. Corolla hairy ; segments ovate, transverse, acute ; lip drawn out. Corolla rust-coloured, reticulated.

Siberian Foxglove. Fl. June, July. Clt. ? PL 2 to 3 feet.

9 D. FERRUGINEA (Tab. icon. t. *573.* Lin. spec. 867.) raceme dense, pyramidal; calycine segments margined; lip of corolla ovate, entire, bearded. 1/. H. Native of Piedmont, kpain, Hungary, Caucasus, Iberia, and Persia. Bieb. cauc. 2. P- S;^ Lindl. dig. p. 17. t. 12. Sims, bot. mag. 1828. D. latifolia flore ferrugineo, Tourn. inst. p. 166.—Mor. hist. 1. p. 4 ™. sect. 5. t. 8. f. 2, 3.—Riv. mon. irr. t. 105.—Sabb. hort. rotm. 2. t. 86.—Ger. emac. 790. f. 4.—Park. par. 380. no. 1. f. 6. Stem glabrous, densely leafy. Leaves glabrous, or ciliated. Racemes long. Corolla rusty, reticulated inside, downy outside.

Var. /3, *parvijldra* (Lindl/dig. p. 17.) flowers about half the size of those of the species. %. H. Native of Persia and Caucasus.

/row-coloured-flowered Foxglove. Fl. July, Aug. Clt. 1597. PI. 4 to 6 feet.

10 D. AU'REA (Lindl. dig. p. 18. t. 13.) racemes many-flowered ; calycine segments marginate ; corolla arched : lip ovate, tridentate. 1/. H. Native of Mounts Parnassus and Olympus. D. ferruginea, Smith, prod. fl. graec. 1. p. 439. fl. graec. t. 606.—Mor. hist. 1. p. 478. sect. 5. t. 8.—Park par. 381. f. 6. Stem downy. Leaves distant, distantly-toothed, nearly glabrous : superior ones linear-lanceolate. Corolla fuscescent, brownish purple outside, yellow, and reticulated inside.

Golden-flowered Foxglove. Fl. July, Aug. Clt. 1816. PI. 2 to 3 feet.

11 D. LEUCOPH^A (Sibth. et Smith, prod. fl. graec. 1. p. 439. fl. graec. t. 607.) raceme dense, cylindrical, many-flowered; lip of corolla unguiculate, lunate ; bracteas linear, longer than the flowers. %. H. Native of Greece, on Mount Athos. Lindl. dig. p. 18. t. 14. Corolla rust-coloured; lip white.

GV^-flowered Foxglove. Fl. July, Oct. Clt. 1788. PI. 2 to 3/feet.

-42 D. LANA^TA (Ehrh. beitr. 7. p. 153. Waldst. et Kit. 1. p. 76. t. 74.) leaves oblong ; rachis woolly ; lip of corolla ovate. 1/. H. Native of Hungary, in vineyards. Sims, bot. mag. 1159. Lindl. dig. p. 19. t. 15. D. Winterli, Roth, catal. 1. p. 71. D. ferruginea, /3, Lam. diet. 2. p. 280. R. Br. hort. kew. 4. p. 29. D. orientalis, Elm. mon. 45. t. 1. D. eriostachya, Fisch. ex Loud. hort. brit. p. 251.? Leaves deep green, ciliated with wool. Racemes dense, many-flowered. Bracteas shorter than the flowers. Calycine segments villous, acute. Corolla downy, grey, reticulated ; lip white, naked, sometimes purplish.

#oo%-spiked Foxglove. Fl. July, Aug. Clt. 1789. PI. 2 to 3 feet.

13 D. ORIENTA'us (Lam. diet. 2. p. 280. but not of Mill.) quite glabrous ; leaves linear ; flowers scattered ; lip of corolla oblong. %. H. Native of the Levant. Lindl. dig. p. 19. t. 16. Ker. bot. reg. 554. Sims, bot. mag. 2253. D. orientalis, tragapogi folio, flore albido, Tourn. inst. p. 166. Stern glabrous. Leaves linear-lanceolate, recurved, 3-nerved. Rachis naked. Calycine segments obtuse, ciliated. Corolla campanulate, grey, pale outside, reticulated with purple inside, pilose : lateral and superior segments minute ; lip white, obtuse.

Eastern Foxglove. Fl. June, July. Clt. 1820. PL 2 to 3 feet.

§ 3. *Corolla funnel-shaped, a little ventricose; upper segment bifid. Stamens equal in length to the tube.*

14 D. PARVIFLORA (Jacq. vind. 6. t. 17. Ker. bot. reg. t. 257.) leaves oblong-lanceolate, undulated, deflexed, ciliated with wool, entire; racemes dense, cylindrical ; segments of corolla, as well as those of the calyx, roundish. 2/. H. Native country unknown. Lindl. dig. p. 20. t. 17. R. Br. in hort. kew. ed. 2d. vol. 4. p. 29. D. ferruginea, var. y, Lam. diet. 2. p. 280. Leaves margined with wool: radical ones obovate. Corollas small, brownish purple, pilose.

Small-flowered Foxglove. Fl. June, Aug. Clt. 1798. PI. 1J to 3 feet.

15 D. VIRIDIFLORA (Lindl. dig. p. 21. t. 18.) clothed with glandular hairs; leaves oblong, toothed ; segments of corolla ovate ; sepals subulate. %. H. Native of Greece, on Mount Athos. Racemes long, not dense. Corolla small, green ; segments ovate, veiny.

***Green-flowered* Foxglove.** Fl. June, July. Clt. ? PL 2 to 3 feet.

16 D. RI'GIDA (Lindl. dig. p. 21. t. 19.) plant clothed with glandular hairs; leaves, oblong-lanceolate, wrinkled, undulated, toothed ; racemes secund, many-flowered ; corolla downy, with ovate, obtuse, glandular segments. %. H. Native country unknown. Corolla small, yellow, purplish above.

Stiff Foxglove.'' Fl. June, Aug. Clt. ? PL 1| to 2 feet.

17 D. PURPURA'SCENS (Roth, catal. 2. p. 62. D. C. fl. fr. 5. p. 411. exclusive of the var. Lindl. dig. p. 22. t. 20.) leaves linear-lanceolate, serrated, glabrous ; racemes secund ; corolla glabrous, with roundish segments. *71.* H. Native of Germany and Italy, in stony places on mountains. D. erubéscens, Dryand. mss. R. Br. in hort. kew. 4. p. 29. Habit of *D. lùtea.* Radical leaves obovate, pilose on the nerves beneath. Corolla reddish, spotted inside; segments ciliated : upper one entire.

Pwr^/i^-flowered Foxglove. FL June, Aug. Clt. 1776. PL 2 to 3 feet.

18 D. LUTE'SCENS (Lindl. dig. p. 22. t. 21.) leaves cordate-oblong, flat, crenated, glabrous; racemes secund ; corolla glabrous, with very blunt segments ; bracteas all shorter than the flowers. %. H. Native country unknown. Stem slender, nearly naked. Bracteas, calyxes, and ovaria beset with a few hairs. Corolla long, tubular, glabrous ; segments ciliated; upper lip bifid. Anthers yellow, spotted with blood colour. Corolla pale yellow.

Yello?vish-flowered Foxglove. FL July, Aug. Clt. ? PL *2* to 3 feet.

19 D. TUBIFLÒRA (Lindl. dig. p. *22.* t. 22.) segments of corolla ovate, obtuse; flowers declinate. %. H. Native country unknown. Nearly allied to *D. lùtea.* Corolla pale yellow, long, narrow.

Tube-flowered Foxglove. FL June, Aug. Clt. ? PL 2 to 3 feet.

20 D. LU'TEA (Lin. spec. *867.)* leaves lanceolate, toothed, glabrous ; racemes secund ; corolla glabrous, with ovate, bearded segments ; lower bracteas longer than the flowers. %. H. Native of the temperate parts of Europe, as of France, Switzerland, Silesia, Carniola, Piedmont, Italy, &c. Bull. herb, t. *373.* Jacq. vind. 2. p. 47. t. 105. Ker. bot. reg. t. 251. R. Br. hort. kew. 4. p. 29. Lindl. dig. p. 23. t. 23. D. parviflora, All. pedem. 1. p. 70. D. C. fl. fr. 3. p. 597.-Riv. mon. t. 105. D. minor luteo parvo flore, Tourn. inst. p. 165.—Lob. icon. t. 573.—Mor. hist. 1. p. 479. sect. 5. t. 8.—Sabb. hort. rom. 2. t. *98.* Stem simple, smooth, angular, glabrous, or downy. Superior leaves subcordate at the base. Racemes dense. Peduncles glabrous, or downy. Corolla pale yellow, downy towards the top. Anthers pilose.

*Var. /*3, *micrdntha* (Lindl. dig. p. *23.)* calycine segments about equal in length to the corolla. %. H. Native of Europe. D. micrántha, Elm. mon. 46. t. 2.

Var. y, *hybrida* (Lindl. dig. p. *23.* t. 24.) flowers large, pale ; stem more erect. 2/. H. Native of Auvergne, and the Pyrenees. D. hybrida, Salv. nov. bull. 3. p. *337.* t. 6. Journ. phys. 1782. p. *285.* t. 1. f. 1, 2. D. intermedia, Lapeyr. abr. D. purpurascens, var. /3 and *B,* D. C. fl. fr. 5. p. 411. Elm. mon. p. 45.

Var. B, fucata (Lindl. dig. p. *23.* t. *25.)* flowers larger, brownish purple ; stem more erect. %. H. Native of Europe. D. fucàta, Ehrh. beitr. 7. p. 151. Pers. ench. 2. p. 162. *D.* purpurascens, D. C. fl. fr. 5. p. 411.

Yellow-fiowered Foxglove. Fl. July, Aug. Clt. lb~y. *ri.* 1| to 3 feet.

21 D. LACINIA'TA (Lindl. bot. reg. 1201.) leaves lanceolate, acuminated,* jagged, glabrous ; raceme subsecund ; corolla downy, with ovate, bearded segments : lower lobe or lip ovate, acute ; bracteas all much shorter than the pedicels. *11.* H. Native *of* Spain, on the mountains about Malaga, P. B. Webb. Corolla yellow. It differs principally from *D. lùtea* in the cut leaves.

JaggedAeaved Foxglove. Fl. June, July. Clt. 1827. PL l£ to 2 feet.

22 D. OBSCU'RA (Lin. spec. 867.) suffruticose; leaves linear-lanceolate, quite entire, glabrous; corolla ventricose. %• *G.* Native of Spain. Jacq. hort. vind. 1. p. 40. t. 91. Sims, bot. mag. t. 2157. Lindl. dig. p. 24. t. *25.* R. Br. hort. kew. 4. p. 30. D. Hispánica angustifdlia, flore nigricante, Tourn. mst. p. 166.—Bocc. mus. p. 136. t. *98.* Stem simple, glabrous. Leaves deep green. Racemes loose, few-flowered. Calyx downy. Corolla arched, downy, rufous outside, golden yellow inside, veined with dark brown lines ; upper lip emargmate, villous inside at the base. Anthers ciliated with glands.

Obscure Foxglove. FL July, Aug. Clt. 1778. Shrub 1 *to 2* feet.

t *Species hardly known.*

23 D. *1* COCHINCHINE'NSIS (Lour. coch. 378.) leaves lanceolate, rough ; flowers sessile, solitary, axillary ; calyxes acute; corollas obtuse, emarginate at top. 1/. G. Native of Cochinchina. Leaves quite entire, opposite. Calyx 5-cleft. Corolla pale violet, bell-shaped, ventricose at bottom ; segments obtuse : the upper one emarginate. Capsule ovate, acute, 2-celled. Certainly not a species *of Digitàlis.*

Cochinchina Foxglove. PL \\ foot.

24 D. ? SINE'NSIS (Lour. coch. p. *378.)* leaves ovate, hairy ; flowers solitary, axillary ; segments of calyx awl-shaped ; segments of corolla obtuse, all entire. *%.?* G. Native of China. Stems tufted, smooth. Leaves opposite, serrated. Upper segment of the calyx larger, and sometimes bifid. Corolla dusky purple, bell-shaped, ventricose, 4-cleft : its upper segment the largest. Stigma screw-shaped. Capsule ovate-conical, 2-grooved, 2-celled. Certainly not a species *of Digitalis.*

China Foxglove. PL 1 foot.

25 D. MILLE'RI ; leaves ovate-lanceolate, nerved; calyxes acute. 1/. H. Native of Tartary. D. orientalis, Mill. diet, no. 7, but not of Lam. Leaves smooth: cauline ones half stem-clasping. Corolla yellow, size of those of *D. ambigua.*

Miller's Foxglove. FL May, July. Clt. 1759. PL 1 foot.

Cult. Most of the species of Foxglove are showy, and well fitted for decorating flower borders. They all grow freely in common garden earth, and are readily increased by seed. Some of the more tender species require protection in winter.

II. ISOPLE'XIS (from tcoe, *isos,* equal; and TIXCKW, *pleco,* to plait; the upper segment of corolla is equal in length to the lip.) Lindl. dig. p. *25.* Digitalis species, Lin.

LIN. SYST. *Didynamia, Angiospermia.* Calyx unequal. Corolla tubular at the base, campanulate ; limb obliquely 4-lobed ; upper segment equal in length to the lip, and, like it, incumbent in aestivation. Stigma bilamellate. ? Capsule ovate, acuminated.—Stems shrubby. Racemes pedunculate.

1 I. CANARIE'NSIS (Lindl. dig. p. 25. t. 27.) segments of the corolla acute. ^ . G. Native of the Canary Islands. Digitalis Canariénsis, Lin. spec. p. 868. Mill. fig. 1.t. 120. Ker. bot. reg. t. 48. R. Br. hort. kew. ed. 2d. vol. 4. p. 30.—Plukn. mant. t. 325. f. *2.*—Comm. hort. 2. p. 105. t. *53.* Stem simple, downy. Leaves permanent, lanceolate, serrated, pilose on the edges. Calycine segments subulate : upper one the largest. Flowers dense, golden yellow: superior lip obovate, emarginate; ,!:-eral segments subulate.

Canary-Island Isoplexis. FL June, July. Clt. 1698. Shrub 4 to 6 feet.

2 I. SCE'PTRUM (Lindl. dig. p. 26. t. 28.) segments of corolla obtuse ; racemes comose. F? . G. Native of Madeira, in shady woods. Digitalis sceptrum, Lin. suppl. 282. Lher. angl. p. 21. *• 24. Smith, exot. bot. 2. p. 27. t. *73.* R. Br. in hort. kew. 4. P» 31. Trunk di-trichotomous, Young branches fleshy, pilose. -Leaves obovate-lanceolate, denticulated, pilose beneath, crowded at the tops of the branches. Racemes thyrsoid. Flowers dense, pendulous, of a yellowish brown colour. Calycine segments pilose, spatulate, the 3 upper the shortest. Corolla pilose, reticulated; segments oblong-roundish: superior one flat, bipartite : lateral ones spreading a little smaller : lower one concave.

Sceptre Isoplexis. Fl. July, Aug. Clt. 1777. Shrub 3 to 4 feet.

Cult. Both species of *Isoplexis* are very showy when in blossom. A light rich soil answers them well; and they may be either increased by cuttings under a hand-glass, or by seed, which ripen plentifully.

III. SCROPHULA'RIA (so named from its supposed use in the cure of scrofula.) Tourn. inst. p. 166. t. 74. Lin. gen. no. *756.* Schreb. gen. no. 1014. Juss. gen. p. 119. ed. Usteri. P- 133. Gaertn. fruct. 1. p. 249. t. *53.* Neck. elem. 1. p. 343. ^am. diet. 7. p. 27. ill. t. *533.* Scrofularia, Spreng. anleit. ed. 2d = 1. p. 394. Wydler. mon. scrof.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted, or usually 5-cleft, nearly equal. Corolla with a ventricose subglobose tube, and a short 5-lobed limb : segments short, roundish : the 2 upper ones combined with the upper lip. Stamens 4, fertile, didynamous, declinate, the rudiment of a fifth often present; anthers 1-celled. Style simple, thickened at the apex. ktigrna emarginate. Capsule almost globose, or ovoid, often acuminated ; valves entire, but often also shortly bifid at apex. The fifth filament, when present, is adnate, bearing a sessile, ^rnellifbrm, or emarginately spatulate anther or tip.—Herbs or under-shrubs with a fetid smell. Leaves opposite; or the superior ones are sometimes alternate, entire, or deeply pinnatifid, sometimes full of pellucid dots. Inflorescence thyrsoid; peduncles °Pposite, or alternate, cymosely many-flowered, rarely 1-flowered.

SECT. I. VENI'LIA (in myth, the wife of Neptune.) Rudiment °* a fifth stamen none.

§ 1. *Thyrse leafy.*

1 S. VERNA'LIS (Lin. spec. p. 864.) hairy ; leaves roundish-cordate, coarsely and multiplicately serrated; acute ; peduncles °Pposite ; lobes of calyx without a membrane, lanceolate ; lobes of corolla short, connivent; genitals exserted. ©. H. Native °* Europe, in shady, humid places ; particularly on the Caucasian Alps. It is to be found in woods and hedges in some parts °f England, but is hardly indigenous. Schkuhr, handb. 2. t. 173. Smith, engl. bot. t. *567.* Hook. fl. lond. t. 70. Oed. fl- dan. t. 411. S. cordata, Waldst. et Kit. hung. 1. p. *75.* t. 73.—Barrel, icon. t. 273.—Mor. hist. p. 482. sect. 5. t. 8. f. 2. —Riv. mon. irr. t. 107. f. 2. Upper leaves alternate and smaller. Size and form of bracteas variable. Lobes of calyx obtuse, or acute, full of pellucid dots. Corolla yellow. Ovarium clothed with stipitate glands. Capsule oblong, pear-formed.

Vernal Figwort. Fl. March, May. Britain. PI. 2 feet.

§ 2. *Thyrse leafless.*

2 S. PAUCIFLORA (Benth. scroph. ind. p. 17.) glabrous ; stem nardly angular ; leaves roundish-ovate, coarsely, acutely, and doubly serrated; thyrse elongated, *few-flowered, with short, remote cymes ; calycine segments lanceolate, acute, without membranes, shorter than the capsule; genitals inclosed. %. H. Native of Gosaingsthan, Wall. Corolla yellowish, with nearly equal segments. Capsule ovate, obtuse.

Few-flowered Figwort. PI. 2 to 3 feet ?

3 S. ORIENTALS (Lin. spec. 864.) glabrous ; lower leaves pinnatifidly cut: superior ones lanceolate, all regularly and sharply serrated ; peduncles subverticillate ; lobes of calyx membranous, ovate ; genitals exserted. 1/ . H. Native of the Levant, Siberia, and Caucasus. Schkuhr, handb. 2. p. 196. t. 175. Wydler. scrof. p. 26. S. ebulifolia, Bieb. fl. cauc. 2. p. *77.* and 3. p. 415.? but not of Link. S. orientalis foliis cannabinis, Tourn. cor. p. 9. Lower leaves 3-4 in a whorl, pinnatifid, or appendiculate at the base; segments petiolate, all acuminated. Corolla greenish yellow outside, striped lengthwise with purple inside : lobes of the upper lip shorter than the others. Stigma pilose. Capsule oblong-conical, acuminated.

Eastern Figwort. Fl. July, Aug. Clt. 1710. PI. 3 to 4 feet.

SECT. II. SCORODONIA (from *fficopoSov, scorodon,* the Greek name of garlic; in reference to the fetid smell of the species.) Sterile stamen present, adnate at the base, but free at the apex, dilated and spatulate, or emarginate and reniform. Calycine lobes roundish, or ovate, usually with membranous edges. Corollas purplish-green, greenish, purplish white, rarely yellowish. Genitals inclosed, or exserted. Fertile anthers yellow. Roots fibrous, rarely tubercular and woody. Stem usually herbaceous, but in a few species shrubby. Thyrse loose.

§ 1. *Thyrse leafy.*

4 S. GRANDIFLORA (D. C. cat. hort. monsp. p. 143. Wydler, scroph. p. 26.) leaves clothed with soft villi : lower ones interruptedly and lyrately pinnatifid: lobes alternate, ovate, acute, toothed: terminal one large, broad, lanceolate; upper leaves ovate-lanceolate; calyx membranous; genitals inclosed. %. H. Native of South America. ? Leaves sometimes doubly toothed ; teeth ciliated, mucronate ; petioles villous. Peduncles 5-flowered, much shorter than the leaves. Pedicels and calyxes villous. Corolla large, deep red. Anther or top of sterile filament reniform. Capsule almost globose.

Great-flowered Figwort. Fl. June, Aug. Clt. 1820. PL 2 to 3 feet.

5 S. SAMBUCIFOLIA (Alp. exot. 203. t. 202. Lin. spec. p. *865.)* glabrous ; lower leaves deeply pinnate : upper ones ternate, or undivided ; leaflets ovate, acute, deeply toothed: terminal one large; calyxes membranous; genitals inclosed. %. H. Native of Spain, Portugal, Corsica, North of Africa, Levant, &c. Hill. veg. syst. 19. t. 48. Mirb. elem. bot. (1815.) t. 30. f. 7. S. mellifera, Vahl, symb. 2. p. *68.* Desf. fl. atl. 2. p. *53.* t. 143. S. viridiflora, Poir. voy. barb. 2. p. 194. S. Hispanica sambuci folio, glabro, Tourn. inst. p. 166. —Mor. hist. 2. p. 483. sect. 5. t. 8. f. 6.—Munt. phyt. 45. f. 238. Mill. fig. 2. t. 231. Leaflets sometimes petiolate. Anther or top of sterile stamen reniform. Capsule acuminated. Corolla purple ; lower lip greenish.

Far. /3, *hirsilta* (Wydler, scroph. p. 27.) plant hairy in every part, canescent. *If.* H. Native of Portugal. S. sambucifolia, Willd. enum. 645. Link, fl. port. p. 272. S. grandiflora, Rchb. icon. cent. 1. t. 98. but not of D. C. S. maxima Lusitanica, sambucifolio lanuginoso, Tourn. inst. p. 166. S. Lusitanica, maximo flore, foliis dissectis, Ray, hist, suppl. *396.* This is very like the species, but differs in all its parts being hairy.

Far. y, *thyrso aphyllo* (Wydler, 1. c.) thyrse leafless.

Elder-leaved Figwort. Fl. May, July. Clt. 1640. PI. 2 to 3 feet.

6 S. PEREGRI'NA (Math. comm. in Diosc. Cam. hort. p. 157. t. 43. Lin. spec. p. 866.) glabrous ; leaves cordate, shining,

glabrous; peduncles alternate, 2-5-flowered; lobes of calyx not membranous, glabrous, acute; genitals inclosed. ©. H. Native of Greece, Italy, Crete, Balearic Islands, and Provence, along way-sides, in hedges, and shady places. D. C. fl. fr. 3. p. 580. in add. p. 729. S. geminifldra, Lam. fl. fr. 2. p. *336.* S. sexangulàris, Moench. meth. p. 445. S. minor, Sav. fl. pis. 2. p. 8lT S. argùta, Ait. hort. kew. ed. 1st. vol. 2. p. 342.—Mor. hist. *2.* p. 481. sect. 5. t. 8. f. 1. — Chabr. sciagr. 470. icone *Va\io\piQ,* Diosc. Stem acute-angled at the base, but obtuse angled at apex, dark purple. Leaves full of pellucid dots. Corollas small, purple, veiny ; lobes all denticulated. Anther or tip of sterile stamen reniform. Capsule almost globose.

Foreign Figwort. Fl. July, Aug. Clt. 1640. PI. 1 to *2* feet.

7 S. SCORODÒNIA (Lin. spec. p. 864.) pilose ; leaves cordately triangular, doubly toothed, acute, wrinkled, all opposite ; edges of the lobes of calyx white and membranous, clothed with glandular hairs outside; genitals inclosed. %. H. Native of the Island of Jersey, Siberia, Galicia, Portugal, Tunis, in humid places and hedges. Hill. veg. syst. 19. t. 45. Lam. ill. t. *533.* Smith, engl, bot. 2209. S. scordiifolia, Grisl. vir. lus. p. *75.* S. melisssefolia, Tourn. inst. p. 166. Petiv. brit. 2. p. *35.* f. 11. S. scorodoniaefblia, Mor. hist. 2. p. 482. sect. 5. t. *35.* f. 6. Plukn. phyt. t. *59.* f. 5. S. foliis cordatis, duplicato-serratis ; racemo composito, Gmel. sib. *3.* p. 195. Corolla small, brownish purple. Anther or tip of sterile stamen reniform. Capsule roundish. The plant of Desfontaines, under this name, differs from that of Linnaeus in the thyrse being leafless, and the size of the corolla.

Far. p. Leaves jagged at the base.

Balm-leaved Figwort. Fl. July, Aug. Britain. PL 2 to 3 feet.

8 S. CASTAGNEA'NA (Wydler, scroph. p. 29.) angles of stem rather downy ; leaves oblong-cordate, doubly and deeply toothed, acute, rather downy : lower ones opposite : upper ones alternate ; edges of the lobes of the calyx red, membranous, glabrous outside ; genitals inclosed. %. H. Native of Turkey, about Constantinople, Castagne. Stem simple, striated. Leaves full of pellucid dots ; teeth finely ciliated. Peduncles bifid ; pedicels equal. Lobes of calyx ovate. Corollas larger than those of *S. nodosa,* purple. Anther or tip of the fifth stamen roundish, emarginate.

Castagne's Figwort. PL \\ to 2 feet.

9 S. URTICIEFOLiA (Wall. cat. no. 3922. Benth. scroph. ind. p. 18.) downy, but at length nearly glabrous; leaves roundish-ovate, coarsely and doubly toothed, cordate at the base; peduncles opposite, 3-7-flowered ; segments of the calyx broad ovate, obtuse, with membranous edges ; genitals inclosed. %. H. Native of Nipaul and Gosaingsthan, Wall. Corolla greenish : upper lip longer than the lower segments. Anther or tip of sterile filament dilated, spatulate, and emarginate.

Nettle-leaved Figwort. PI. 1 to 2 feet ?

10 S. HIMALAYE'NSIS (Royle, mss. ex Benth. scroph. ind. p. 18.) downy, tall; stem obtuse-angled ; leaves ovate-lanceolate, somewhat doubly-toothed, subcordate at the base ; thyrse ample, panicled, leafy at the base; segments of the calyx ovate, roundish, hardly membranous ; genitals exserted. *If..* H. Native of the Himalaya, common. Corolla greenish. Anther or tip *of* sterile stamen dilated, spatulate, and emarginate.

Himalaya Figwort. PI. *3* to 4 feet ?

§ 2. *Thyrse leafless.*

11 S. POLYA'NTHA (Royle, mss. ex Benth. scroph. ind. p. 18.) downy, tall; stem rather angular; leaves ovate-lanceolate, somewhat doubly toothed, narrowed unequally at the base, or furnished with a few lanceolate segments; thyrse elongated, large, panicled ; segments of calyx ovate-roundish, with membranous edges; genitals exserted. %. H. Native of Mussooree, Royle. Corolla greenish.

Many-flowered Figwort. PI. 2 to 4 feet?

12 S. ELA'TIOR (Wall. cat. no. 3921. Benth. scroph. ind. p. 18.) glabrous, tall; stem angular, or winged; lower leaves ovate, cordate at the base : superior ones ovate-lanceolate, all doubly-toothed ; thyrse large, panicle-formed, almost leafless ; segments of calyx deep, lanceolate, acute, not membranous ; genitals exserted. %. H. Native of Gosaingsthan, Wall. Anther or tip of sterile stamen dilated, spatulate, and emarginate.

Tall Figwort. PL 3 to 4 feet?

13 S. LANCEOLÀTA (Pursh. fl. amer. sept. 2. p. 419. Nutt. gen. amer. 2. p. 44. ? Wydler, scroph. p. 29.) glabrous ; lower leaves ovate-lanceolate : superior ones lanceolate, all acute, serrated; peduncles bifid, 2-5-flowered; calycine segments with membranous edges ; capsule roundish. 1/. H. Native of Carolina, Pennsylvania, &c. S. Marylàndica, herb. D. C. et Desf. Stem very simple. Leaves not cordate at the base. Petioles shorter than the leaves. Corolla greenish yellow. Genitals inclosed.

Lanceolate-leaved Figwort. Fl. July, Aug. Clt. 1820. PI- *2* to 3 feet.

14 S. NODÒSA (Lin. spec. p. 863.) root tubercular ; stem acute-angled, glabrous ; leaves glabrous, cordately triangular, doubly serrated : teeth drawn out at the base ; segments of calyx not membranous; genitals inclosed. %. H. Native of shady, humid places, and edges of ditches, throughout Europe ; plentiful in some parts of Britain, particularly in the north. Schkuhr, handb. 2. p. 194. Smith, engl. bot. 1544. Oed. fl. dan. 1167. Gunn. fl. norv. 2. p. *87.* no. *732.* t. 4. f. 1—3. Hayne, arz. 5. t. 35.—Petiv. 193. f. 194.—Mor. hist. p. 482. sect. 5. t. 8. f. 3.—Riv. mon. irr. t. 107. f. 1.—Blackw. herb, t. 87.—Lob. icon. *533.* Roots knobbed. Leaves full of small pellucid dots, sometimes not cordate at the base. Corollas greenish ; lip purplish. Anther or tip of sterile stamen reniform. Capsule nearly globose. This species has the name Figwort and formerly Kernelwort from its knobbed roots, and Brownwort from the brown tinge of the leaves. In medicine the plant is hardly known in modern practice, but the rank smell, like elder, and bitter taste of the leaves, seem to indicate some active properties. Swine that have the scab are cured by washing them with a decoction of the leaves. Wasps resort greatly to the flowers. Goats eat the plant; but cows, horses, sheep, and swine refuse it.

Far. /3 ; leaves 3 in a whorl.

Far. y ; flowers green.

Knotty-rooted Figwort. Fl. May, July. Britain. PI. 2 to *3 feet.*

[5 S. MARYLA'NDICA (Lin. spec. p. *863.)* stem obtuse-angled ; leaves cordate, serrated, acute, rounded at the base. %• H. Native of North America and Siberia. S. nodòsa, /3, Americàna, Michx. fl. bor. amer. 2. p. 21. S. Marylàndica, longo profunde seri&to urticae folio, Ray, hist, suppl. p. *396.* This species hardly differs from *S. nodbsa,* unless in the stem being taller, in the teeth of the leaves being deeper ; but the calyx, corolla, and capsule are the same as those of *S. nodòsa.*

Maryland Figwort. Fl. May, July. Clt. 1759. PL S ^{t0} * feet.

16 S. SCOPÒLII (Hoppe. cent, exsic. D. C. fl. fr. suppl. 406. Wydler, scroph. p. 31.) downy ; leaves ovate-cordate, regularly and doubly crenated, or serrated, acute, wrinkled ; lobes *of* calyx broad, ovate, with whitish, membranous edges ; genitals inclosed. %. H. Native of the Alps of Hungary, Carniola, Pyrenees; in hedges, orchards, gardens, and waste places; north of Caucasus, in groves ; and south of Tauria. Bertol.

amoen. ital. p. 382. S. auriculàta, Scop. earn. ed. 2d. vol. 1. p. 446. t. 32. S. rugòsa, Willd. enum. suppl. p. 42. ? S. nepetefftlia, Smith, in Rees' cycl. 32. no. 7.—Barrel, icon. 274. S. màjor hirsùta, Tourn. inst. 166. Lower leaves very large, all full of pellucid dots, without any auricles. Anther or tip of sterile stamen reniform. Capsule nearly globose.

Var. ft ; pedicels elongated, filiform. Wydler, scroph. p. 31.

Scopoli's Figwort. Fl. May, Sept. Clt. 1816. PI. 2 feet.

17 S. GRANDIDENTA^NTA (Tenore, fl. nap. suppl. 2. p. 69. Guss. pi. rar. p. 255.) stems and petioles villous ; leaves cordate-oblong, downy beneath, deeply bidentate ; teeth diverging; thyrse panicled ; peduncles trichotomous. 1/. H. Native of Naples, Calabria, and Hungary, on the mountains. S. glandulòsa, Waldst. et Kit. hung. *3.* p. 238. t, 214. S. Scopòlii, /3, glandulòsa, Wydler, scroph. p. 31. Leaves 3-nerved, downy. Peduncles and bracteas clothed with glandular hairs.

Large-toothed-leaved Figwort. Fl. May, Sept. Clt. 1806. PI. 2 to 3 feet.

18 S. CALIFORNIA (Cham, et Schlecht, in Linnaea, 2. p. 585. Hook, et Arn. in Beech, voy. pt. bot. p. 153.) stem acute-angled, glabrous, the floriferous part clothed with glandular down; leaves oblong-triangular, acute, cordate at the base, doubly serrated, glabrous above, but sparingly beset with glandular down beneath ; thyrse leafless ; calycine segments ovate, acute, mucronate, the margins furnished with a narrow membrane ; capsule ovate, conical. %. H. Native of California. Said to **be nearly allied to *S. nodosa* and *S. Maryldndica.***

Callfornian Figwort. PL 2 feet.

19 S. BETONKLEFÒLIA (Tourn. inst. 166. Lin. mant. p. *87.* Wydler, scroph. p. 31.) rather pilose; leaves cordate-oblong, acute, unequally toothed, wrinkled ; lobes of calyx roundish, with rusty, membranous edges; genitals inclosed. %. H. Native of Portugal, Canary Islands ; in Madeira, at the altitude of from 2500 to 4000 feet. Hill. veg. syst. 19. tr. 46. Spreng. syst. 2. p. 785, exclusive of the syn. of Horn.—Barrel, icon. 274.? S. rugòsa, hort. lugd. ex herb. Balb. Stem purplish. Petioles ciliated. Leaves unequally and doubly toothed, or rarely crenated ; the teeth ciliated with glandular hairs. Thyrse usually leafless, but sometimes leafy. Corolla greenish purple, or of a rusty green, size of those of *S. nodòsa.* Anther or tip of sterile stamen green, marked with purple, reniform. Capsule globose. *S. betoniccefolia,* of Brotero and Link, a native of Portugal, is quite distinct from this.

Var. /3, glàbra (Wydler, scroph. p. 31.) plant glabrous,

Var. y, thyrsofolibso (Wydler, 1. c.) thyrse leafy.

Bctony-leaved Figwort. FL June, Aug. Clt. 1752. PL 2 to 3 feet,

20 S. HERMI^NNI (Link, et HofFm.fi. port. 1. p. 266.) stem hairy ; leaves cordate and subcordate, oval, and somewhat <Wbly crenate-toothed, not wrinkled, downy ; capsule conical, long. i£. H. Native of Portugal, on Serra Estrella. Leaves on long petioles. Lobes of calyx small, margined a little. Upper lip of corolla pale brown, lower one green. Stamens and Anthers yellow.

Hermiris Figwort. PL 2 to 3 feet.

21 S. ALTA^YICA (Murr. in comm. goett. 1781. p. *35.* t. 2.) P^nt clothed with glandular villi.; leaves cordate, doubly toothed, downy beneath, acute; lobes of calyx broad-lanceolate, acute, not membranous ; capsule roundish. %. H. Native of Altaia. Leaves sinuately toothed; teeth acute: lower teeth reverse. Thyrse beset with glandular villi. Lobes of calyx lanceolate, acuminated, ciliated. Anther or tip of sterile stamen reniform. Genitals sub-exserted. Corolla whitish yellow.

Altaian Figwort. FL May, June. Clt. 1786. PL 1 foot.

22 S. SMI'THII (Horn. hort. hafn. suppl. *68.* Link, enum. 2. P- 139. Wydler, scroph. p. 33.) hairy; leaves ovate-cordate, multiplicately and deeply crenated, acute ; lobes of calyx roundish, with red or yellowish membranous edges; capsule somewhat ovate. %. G. Native of the Canary Islands. Stem quadrangular, dark purple, branched. Corolla yellow. Genitals inclosed. Anther or tip of sterile stamen reniform.

Smith's Figwort. FL April, Aug. Clt. 1815. PL 2 to 3 feet.

23 S. GLABRA^XTA (Ait. hort. kew. 2. p. 341. and ed. 2d. vol. 4. p. 22.) glabrous; stem suffruticose ; leaves cordate-lanceolate, acute, doubly and triplicately toothed,- lobes of calyx with white membranous edges; genitals exserted ; capsule ovate-globose. <£. G. Native of TenerifTe, among rocks on the Pic de Teyde, at the altitude of 7000 or 8000 feet, where it is called *Yerba de Cumbre.* Jacq. hort. schcenbr. 2. p. 44. t. 209. Willd. spec. 3. p. 272. exclusive of the syn. of Vahl. Wydler, scroph. p. *33.* Leaves full of pellucid dots. Lobes of calyx roundish ovate. Corolla purple, veined, size of that of AS. *canna.* Anthers margined with red.

Far. /3, ? pubescens (Wydler, scroph. p. *33.)* stem and leaves downy. 2/. H. S. betonicaefòlia, D. C. in herb. Balb. This differs from *S. betoniccefolia,* Lin. in the lobes of the calyx not being margined with rust colour.

Smooth Figwort. Fl. April, May. Clt. 1779. PL 2 to *3* feet.

24 S. BISERRA'TA (Willd. enum. p. 6ii. Wydler, scroph. p. *33.)* leaves oblong-lanceolate, deeply cordate, sharply and doubly serrated, glabrous. %. H. Native country unknown. Very like the preceding, and probably only a variety of it.

Doubly-sawed-lesLved Figwort. FL June, Aug. Clt. 181(j. PL 2 to 3 feet.

25 S. FOSTIDA (Wydler, scroph. p. 31.) glabrous; leaves ovate-oblong, deeply and multiplicately crenated. %. H. Native country unknown. Plant fetid. Stem simple, or a little branched, striated. Leaves full of pellucid dots. Peduncles alternate, bifid. Lobes of calyx broad-ovate, sometimes glandular outside, with membranous, chestnut-coloured edges. Corolla size of those of *S. nodosa9* yellow, ex. D. C.

Fetid Figwort. PL 2 to 3 feet.

26 S. TRIFOLIA'TA (Lin. spec. p. 865.) glabrous; stem almost simple; leaves ovate, or roundish, cordate, deeply-toothed, or lobately crenated, often appendiculate at the base, according to several authors, or deeply cut; lobes of calyx roundish, with reddish white membranous margins; capsule ovate-conical. $. H. Native of Corsica, in mountainous places ; and of Portugal, and the north of Africa. D. C. fl. fr. 3. p. 581. Wydler, scroph. p. 34. S. laevigàta, VahJ,' symb. 2. p. *67.* S. appendiculàta, Jacq. schcenbr. 3. p. 19. t. 286.—Plukn. aim. 338. t. 313. f. 6. ? but the thyrse is leafy.—Bocc. mus. t. 60. ? Stem tetragonal. Corolla globose : lower lip whitish, the other reddish. Filaments white. There is probably two species confounded; the one having the leaves never appendiculate, or ternate, and downy beneath.

Trifoliate Figwort. FL May, Sept. Clt. 1731. P. 2 feet.

27 S. III'SPIDA (Desf. fl. atl. 2. p. *55.* Wydler, scroph. p. 35.) hispid ; leaves pinnate at the base, doubly crenated : terminal lobe large, cordate; cymes dense flowered ; lobes of calyx margined with white. %. H. Native of Mount Atlas, in the fissures of rocks near Tlemsen. Genitals inclosed.

Hispid Figwort. Fl. June, Aug. Clt. 1824. PL 2 feet.

28 S. AURICULA^YTA (Lin. spec. p. 864. exclusive *o£* the synonymes. Wydler, scroph. p. *35.)* leaves cordate-oblong, appendiculate at the base, tomentose beneath. %. H. Native of Nice and Algiers, on the sides of ditches. D. C. fl. fr. 3. p. 580. Desf. fl. atl. 2. p. *56.* exclusive of the syn. of Lob. Stem tetragonal, rather pilose ; angles membranous. Leaves rather pilose, crenated ; crense broad, mucronulate. Segments of calyx roundish, with red membranous edges, glandular outside.

Corolla, stamens, and sterile anther and capsule as in *S. aqudtica.* Smith considers this to be a variety of *S. Scorodbnia,* but Wydler considers it a variety of *S. aqudtica.*

Aurickd-leaved Figwort. Fl. June, Aug. Clt. 1772. Pl. 2 to 3 feet.

29 S. ASUA'TICA (Lin. spec. p. 864.) glabrous; angles of stem acute, membranous; leaves ovate, or elliptic, subcordate at the base, crenate-toothed: lower leaves usually appendiculate; lobes of calyx margined with red; genitals inclosed. •*U.* H. Native throughout Europe, and in Caucasus, in moist places by the sides of ditches, &c.; plentiful in BriST Blackw. herb. t. 86. Schkuhr, handb. 2. p. 195. t. 173*. smith, engl. bot. t. 854. Oed. fl. dan. 507. Havne arz. *It.* 367. Chaumet. fl. med., 321. S. Balbisii, HorZLrt. hafn. ill. J" [illegible] aUr> 1813> P- 69, ^elusive of the syn. I T 292? T [illegible] Balb herb. S. HricnUta, LS." *US* wL, V°- ^ V [illegible] Schkuhr> handl>- «• p. 195. t. 173. Leaves sometimes without auricles, but always fuHof pellucid dots. Cymes usually dense-flowered. Corolla blondU TT i- is called *Water Betony, B r o J ^ ^ S S ^ ^ ^* [illegible] e hoirn7e/eTmended raedicina% «» the same purposelas those *of S.nodosa;* in taste and smell they are similar, but weaker. M. Marchant has reported, in tbJ memo's of the Trench Academy, that this plant is identical with the Equetaia of the Brazilians, celebrated as a corrector of the ill flavour of senna: the Edinburgh college, in their common infusion of that drug directed two thirds of its weight of water Figwort leaves to bejo.ned; but as they have since discarded this hWet lent, we may presume that it was not found to be of much use. The disagreeable smell which attends this plant when brusSed makes it rejected by cattle in general. Bees collect much honey from the flowers.

Var. /3; stem simple; leaves lanceolate-elliptic; flowers less Uense. %. H. Native of ditches about Geneva. Wydler, scropb. p. 37.

Var. y; thyrse leafy, *if.*. H. Wydler, scroph. p. *37.*

P[illegible]*ater*^'8wort, or Water fietony. Fl. May, Sept. Britain. JrJ. *o* to 5 feet.

SO S. LYRA^TA (Willd. enum. p. 545. hort. berol. t. *55*.) Jeaves hairy on both surfaces: lower ones lyrately and interruptedly pinnate: superior ones ternate: upper ones simple auncled; terminal lobe large, oblong-ovate, subcordate, bluntly and doubly toothed. %. H. Native country unknown. Braeteas beset with glandular hairs. Corolla brownish purple. Genitals inclosed.

Lyrate-leaved Figwort. Fl. June, Aug. Clt. 1816. Pl. *2* to 4 feet.

31 S. EBULIFOLIA (Hoffm. et Link, fl. port. 1. p. *270.* Wydler, scroph. p. 37. but not of Bieb.) glabrous; lower leaves lyrate: segments somewhat duplicately, acutely, and deeply crenated: superior leaves deeply pinnatifld: segments dentately crenated. %.H. Native of Portugal, °on the seashore near Setuval. Nearly allied to *S. lyrala*

Var. ft- leaves shining, if. H. Native of Portugal, on Serra de Gerrez.

Danervort-leaved Figwort. Pl. *2* to 3 feet. ?

32 S. TANACETIFOLIA (Willd. hort. berol. *t. 56.* Link, enum. *2.* p. 140.) glabrous; leaves interruptedly pinnate; 'leaflets petiolate, oblong-ovate, deeply toothed, the terminal lobe the largest; genitals exserted. %. H. Native of North America. Anther or tip *of* sterile stamen nearly orbicular. Fertile anthers dark purple. Segments *of* calyx with white membranous edges, usually shining. Root and stem often woody. Leaves more or less fleshy, rarely undivided, but usually pinnatifid, or pinnate. Corolla brownish purple.

Tansy-leaved Figwort. Fl. July, Sept. Clt. 1804. Pl. *2* to 4 feet.

33 S. VERBEN^FOLIA (Desf. cat. hort. par. p. *77.* Poir. suppl. 5. p. 117. Wydler, scroph. p. 38.) stem simple, glabrous, herbaceous; leaves cordate-oblong, laciniately pinnatifid, unequally crenated and serrated, lower segments the deepest, often auricled; genitals exserted. %. H. Native of Croatia, on calcareous rocks. S. laciniata, Waldst. et Kit. hung. *2.* p. 185. t. 170. Segments of calyx margined with white. Corolla size of that of *S. nodosa,* greenish; upper lip purple.

Vervain-leaved Figwort. FJ. June, July. Clt. 1806. Pl. 1| to *2* feet.

34 S. PATRINIA'NA (Wydler, scroph. p. 39.) stem simple, glabrous, herbaceous; leaves ovate, acute, deeply and acutely toothed: lower ones pinnatifid at the base: lobes acute. %. H. Native of Dauria. Stem striated. Leaves glabrous, on short petioles. Peduncles 2-3-flowered. Lobes of calyx broad, ovate. Corolla as in *S. canina.* Sterile anther roundish, white.

Patrin's Figwort. Pl. *2 to 3* feet.

35 S. INCI'SA (Weinm. ind. pi. hort. dorp. 1810. p. 136. Ledeb. fl. ross. alt. ill. t. 156. fl. alt. *2.* p. 442.) leaves oblong, attenuated at both ends, petiolate, deeply serrated, thickish, glabrous; panicle elongated, clothed with glandular villi: lower branches 3-5-flowered: superior ones *2-3-* flowered. If. H. Native of Altaia, on rocks among the mountains of Arkaul and Tschingistau; and on the borders of the river Tschuja, &c. Said to be nearly allied to *S. laciniata,* but the leaves are never cordate at the base. Stem and branches bluntly quadrangular. Corolla and anthers dark purple. Genitals exserted. Margins of calyxes white, and membranous.

Cut-leaved Figwort. FJ. May, June. Pl. *2* feet.

36 S. DIVARICVTA (Led. ind. sem. hort. dorp. *1822.* p. 17. Led. fl. ross. alt. ill. t. 121. fl. alt. *2.* p. 440.) leaves cordate, acuminated, doubly serrated, downy on both surfaces; racemes axillary, dichotomous; calycine segments acutish, adpressed; genitals inclosed. 1£. H. Native of Iberia, near Tiflis. Stem and branches bluntly tetragonal, beset with glandular hairs, and longer simple ones. Margins of the segments of the calyx membranous. Corolla yellowish-green. Capsule nearly globose, acuminated. The thyrse of this species being leafy, it ought to have been placed in the preceding section: the leaves of the thyrse are deeply jagged.

Divaricate Figwort. FJ. May, Oct. Pl. 4 to 6 feet.

37 S. OLIVIERIA'NA (Wydler, scroph. p. *39.)* stem glabrous; leaves ovate, deeply and dentately crenated, more or less pinnate at the base; segments or leaflets petiolate, roundish. *If.*. H. Native of the Levant. Stem nearly simple, woody at the base, striated, dark purple. Upper leaves roundish, subcordate. Lobes of calyx roundish. Corolla form, size, and colour of *S. canina.* Sterile anther white. This is very nearly allied to *S. Urvilleana,* but differs in the lobes *of* the calyx being broader, and in the petioles being dilated.

Olivier's Figwort. Pl. 1 to *2* feet.

38 S. MICRA'NTHA (D'Urv. enum. arch. p. 75.) stem branched at the base, glabrous, ascending; branches weak; leaves petiolate, oblong, obtuse, auricled at the base, coarsely toothed; flowers small. %. H. Native of the Island of Ferasia, near Thera. Wydler, scroph. p. 39.

Small-flowered Figwort. Pl. 1 to *2* feet.

39 S. URVILLEA'NA (Wydler, scroph. p. 40. t. 11.) stem simple, glabrous; leaves roundish-cordate, lobed, rarely crenated. %. H. Native of the Island of Melos, and at Thera, on walls and on rocks, d'Urville. Stems numerous, dark purple. Lower bracteas like the leaves. Peduncles alternate; cymes *3-6-* flowered. Segments of calyx margined with white. Corolla small, purple. Capsule roundish. This species hardly differs from the preceding, and might with propriety be joined to it.

Var. /3, *lyrata*; lower leaves ovate: superior ones cordate-ovate, all lyrately pinnate; leaflets cuneate, ovate, sometimes petiolate: terminal one large, all deeply crenated. %. H. Native along with the species. Wydler, scroph. p. 40. t. 3.

D'Urville's Figwort. PL 1 to 1| foot.

40 S. VARIEGA'TA (Bieb. casp. 177. app. no. 48. fl. cauc. 3. p. 416.) stem suffFruticose; leaves ovate, lobately toothed: lower ones pinnatifid at the base, and rather downy. 7/. H. Native of Caucasus, in stony places. Rchb. icon. cent. 3. t. 257. Corolla purple; lower lip white, as well as one of the segments of the upper lip. Genitals exserted.

yariegaled-fiowered Figwort. Fl. June, Aug. Clt. 1816. •!• 2 feet.

41 S. RUPE'STRIS (Bieb. fl. cauc. 2. p. 79. and 3. p. 417.) stems nearly terete, clothed with hoary down; leaves oblong-ojate, attenuated at both ends, toothed, glabrous. 3/. H. Native of the South of Tauria, among rocks. Willd. spec. 3. P- 274. Rchb. icon. cent. 3. t. 258. S. orientals, Habl. jaur. p. 164. ex Bieb. There is a variety of this having the lower leaves cut at the base, and downy on the nerves beneath, which is probably a variety of *S. variegdta.* Genitals exserted.

Rock Figwort. Fl. July, Aug. Clt. 1818. PI. 2 feet.

42 S. U'VIDA (Smith, prod. fl. grsec. 1. p. 437. fl. graec. t. 01.) leaves pinnate: leaflets pinnatifid; thyrse twiggy; genius inclosed. ©. H. Native of Asia Minor, Sibthorp! Calyx edged with white. Corolla greenish yellow; upper lip purple.

Livid Figwort. PI. 1 to 2 feet.

43 S. BI'COLOR (Sibth. et Smith, fl. graec. t. 602.) leaves bi-Pinnate; racemes panicled; peduncles many-flowered; capsule globose, mutic; stamens exserted. 1/. H. Native of Sicily, Only x edged with white. Corolla blood-coloured, with a white base ; lateral segments short, white; the rest blood-coloured, ed ged with white.

***Tno-coloured-fiowered* Figwort. PI. 3 feet.**

44 S. MULTI'FIDA (Willd. enum. p. 646. hort. berol. t. 58.) stem simple ? glabrous, herbaceous; lower leaves bipinnate; Segments or leaflets lanceolate, deeply toothed, acute: superior on.es pinnate, or pinnatifidly cut: uppermost ones tripartite, the ^^dle segment long and toothed. 1/. H. Native of Sicily and Asia Minor. S. silaifolia, Clark, voy. ex Spreng. syst. Corolla brownish-purple.

Multifid Figwort. Fl. June, Aug. Clt. 1816. PL 2 to 3 feet, sh K " LU,CIDA (Lin. spec. p. *865,)* stem simple, glabrous, r rubby; leaves thickish, shining, pinnate; leaflets pinnatifid, oundish or acute, toothed; thyrse short, dense. *%.H.* Native ** Italy, Greece, Levant, Iberia, and the North of Africa. D. C. •• t*. S. p. 582. Willd. hort. berol. t. *57.* S. glauco folio in ttiplas lacinias diviso, Tourn. cor. 9. voy. 1. t. 85. (ed. 1717.) 1. t. 221.—Bocc. mus. t. 117.—Mor. hist. 2. p. 483. sect. 5. t; 9. f. 7. *Zicrjpirig rpirrt,* Diosc. This species is readily distinguished from the rest in the peduncles and pedicels being thick; the calyx larger, and the membranes broader. Stems always leafy at the base. Corolla pale, with a red upper lip; but acceding to Miller dark brown. Genitals inclosed.

Vatr C3; leaves narrower. %. H. Wydl. scroph. p. 42.

Shin?g Figwort. Fl. June, Sept. Clt. 1596. PI. 1 to 2 feet.

46 g FILICIFOLIA (Mill. diet. ed. 8th. no. 10. Sibth. et **Smith,** j: rod. fl. grsec. 1. p. 436. Rees' cycl. vol. 32. no. 26.) **radical** leaves interruptedly pinnate; leaflets pinnatifid, lanceo-late; lobes acutely toothed: teeth mucronate; flowers distant. Native of Greece. S. Crética, Riv. mon. irreg. t. 94. Trev- in Linnaea, 2. p. *53.* Radical leaves a foot long. Thyrse footlong, not short as in *S. lucida;* and the peduncles are Just thickened as in *S. lucida.* Segments of calyx margined Wltli whjite. Corollas small, purple, edged with white, ex **Mill.** Genitals exserted.

Fern-leaved Figwort. Fl. July, Aug. Clt. 1700. PI. 2 to 3 feet.

47 S. DECOMPOSITA (Royle, mss. ex Benth. scroph. ind. p. 18.) glabrous, shining; leaves opposite, thickish, pinnate; leaflets deeply pinnatifid, lanceolate: lower ones petiolate; thyrse strict; lower peduncles opposite: superior ones alternate, short, stiff, 3-5-flowered; segments of calyx with white margins, and rufous membranes; genitals exserted. %. H. Native of Kinnour, Royle. Perhaps only a variety of *S. lucida.* Sterile stamen with an orbicular tip.

Decompound-leaved Figwort. PI. 2 to 3 feet.

SECT. III. CANIXNA (SO called on account of the species agreeing in character and habit with *S. canina.)* The fifth or sterile stamen deficient of an anther; that is to say, the free part or tip is acute. The rest as in the last section.

§ 1. *Thyrse compound; cymes many-flowered.*

48 S. DESE'RTI (Delile. fl. d'egypt. p. 96. t. *33.* f. 1.) stem suffFruticose at the base, and branched; leaves cut, glabrous, with cartilaginous edges: lower ones sublyrate: superior ones pinnatifid; segments narrow-obovate, toothed. 1£.F. Native of the deserts of Egypt. Margins of calyx cartilaginous.

Desert Figwort. PI. 1 to 2 feet.

49 S. FRUTE'SCENS (Lin. spec. p. *866.)* stem shrubby; leaves usually alternate, cuneate-ovate, or lanceolate, running into the short petioles, toothed. T? . F. Native of Portugal, in the sand by the sea side; Greece, and the North of Africa. Hill, veg. syst. 19. t. 46. Herm. lugdb. 545. t. 547. S. Lusitanica verbenacae folio, Tourn. inst. 167. Stem quadrangular. Corollas small, dark purple, with the lateral segments white.

Far. /3; leaves cut or jagged. J? . F. Wydler, scroph. 43.

Shrubby Figwort. Fl. June, Aug. Clt. 1768. Shrub *2 feet.*

50 S. PINNATI'FIDA (Brot. fl. lus. 1. p. 202. HofTm. et Link, fl. port. 1. p. 269,) stem suffruticose; leaves sessile, lanceolate, deeply crenate-toothed, or cut and pinnatifid at the base. J? . F. Native of Portugal, in sandy places.—An intermediate plant between *S. frutescens* and *S. canlna,* and probably only a variety of the first. Stem erect, much branched, glabrous. Leaves usually alternate, sometimes opposite, narrowed at the base.

Pinnat'ifid-leaLved Figwort. Fl. July, Aug. CJt. 1819. Shrub 2 feet.

51 S. HETEROPHY'LLA (Willd. spec. 3. p. 274. d'Urv. enum. arch. 75.) stem shrubby; leaves on long petioles, rather fleshy: lower ones pinnate: superior ones 3-lobed and elliptic, all remotely and deeply toothed; thyrse very long. J? . F. Native of Candia, and the Island of Melos; and of Ferasia, near Thera. Sibth. et Smith, fl. graec. t. 603. S. frutescens, var. /3, Smith, prod. 1. p. 437. S. Sibthorpiana, Spreng. syst. 2. p. 786. S. crética frutescens folio vario et carnoso, Tourn. cor. p. 9. Very nearly allied to *S. frutescens;* but the leaves are all on long petioles. Branches bluntly tetragonal. Corolla scarlet. Genitals exserted.

Various-leaved Figwort. Shrub 2 to 3 feet.

52 S. CANI'NA (Lin. spec. 865.) root woody; stems herbaceous; lower leaves pinnate: superior ones pinnatifid or bipinnatifid; segments roundish or lanceolate, toothed. V. H. Native of the South of Europe, in dry, sandy, or gravelly places; Greece, and the Balearic Islands; North of Africa, on the Mediterranean sea. Hill. veg. syst. 19. t. 48. D. C. fl. fr. 3. p. 582. S. multifida, Lam. fl. fr. 2. p. *337.* S. chrysanthemifolia, Balb, herb.—Mor. hist. 483. sect. 5. t. 9. f. 8. Sicfyptne crepa, Diosc. Thyrse sometimes leafy, strict, long; branches of cyme kneed. Corollas purple, with a mixture of green. Genitals exserted.

*Var, 0, **chrysa^themifoUi*** (Wydler .scroph. p. 44.) flowers small, purple, margined with white. *%.U.* Native of lau- i s! chrysantbemifoli*, Bieb. fl. cauc. 2. p. 78. and 3. p. 4li>. "WillX *halt,* berol- t. 59. S. canina, 0, Willd. spec. 8, 277. exclusive of the syn. of Tourn. S. pinnata, Mill, diet, iio 155.? S- orientalis, chrysanthemifolia, flore minimo varic- u>, Tourn. COT. 9.

Var, y, nana (D. C, (1. fr. S. p. 589.) stem more humble ; leaves very narrow; racemes short; flowers dense. If. H. Native of Mount Jura, in many places. S. praUinsis, Schleich. cent, exsic. no. 67,

far. t), *pubescens;* stems downy. If. H. Native of the valley of Boden, near Win disch-B lei berg, Hoppe. S. canina, Hoppe, cent. 4. S. canina, var. y, D, C. fl. fr. 3. p. 582.

Var, e, albi flora (Wydler, scroph. p. 45.) flowers white ; leaves broader, with rounJed segments. % . H.

Dog's Figwort. Fl. June, Aug. Clt. 1683. PI. 2 to 3 feet.

* S3 S. rVRAMiBAYis {Wydler, scropli, p. 45.) stems very long; leaves alternate : lower ones lanceolate, denticulated : upper ones pinnatifid ; thyrse very long, *11.* H. Native about the Black Sea, near Donnums Bercy. Perhaps only a variety of *S.. canina ;* the peduncles are longer, and the capsule ovate-roundish, acuminated, small.

Pyramidal-flowered Figwort. PL 2 to 3 feet.

^•54 S. CALYCINA (Benth. scroph. ind. p, 18.) glabrous or do'.vny; stem angular; leaves broad-ovate, toothed; lower ones cordate at the base: rameal ones roundish ; thyrse short, Hense, almost leafless ; calyx 5-parted, with lanceolate, acuminated, downy segments, which are longer than the capsule ; genitals inclosed; anther or tip of sterile filament ovate-acute. 1/. H. Native of Kamaon. Veronica thyrsiflora, Wall. cat. no. 6393. Leaves wrinkled. Calyxes not membranous. Segments of the corolla short, nearly equal. Capsule large, acuminated.

Large-calyxcd Figwort. PL 1 foot.

§ 2. *Thyrse simple; cymes few-flowered from the abortion of the pedicels,*

55 S. RAMOSISSIMA (Lois. fl. gall. 2, p. 381. D, C. fl. fr. suppl. 406. exclusive of the synonymes) stems rather woody, much branched; leaves opposite, subpetiolate, ovate-oblong, deeply toothed or pinnatifid; peduncles 1-2-flowered. %, H. Native of Corsica, by the sea side ; also of Provence, by the sea side, &c. S. firut&scens, D. C. fl. fr. 3. p. 721). but not of Lin.

Muck-branched Figwort. Fl. June, Aug. Clt. 1821. PL 2 to *3* feet.

56 S. CE'SIA (Sibth. et Smith, fl.grsec.t. (504. prod. 1. p. 438.) stems humble, numerous, tufted ; leaves opposite, glaucescent, lyrately pinnatifid, cut; peduncles simply dichotomous, 2-3-floweretl. *%. H.* Native on rocks about Atliens, &c. S. orientalis minor melissse folio, Tourn. cor. p. 9.—Buxb. cent. 5. 10. t. 17. f. 2. ex Smith, Stems a span high, glabrous. Perhaps distinct from the preceding. Corolla greenish ; upper lip dark purple. Genitals exserted.

Grey Figwort, PI. *§* to 1 foot.

57 S. DEKTATA (Royle, mss. ex Benth. scroph. ind. p. 19.) humble, tufted, downy ; leaves alternate, thick, oblong, narrowed at the base, deeply toothed at the apex; thyrse simple, few-rlowered; peduncles 1-3-flowered; genitals exserted ; tip of sterile stamen oblong, acute, %• H. Native of Kinnour. Margins of the calyxes mpbranous. Very nearly allied to *S. cretacea,* but distinct.

Tootitd-Uand Figwort. PL | to 1 foot.

58 S. CRETA'CEA (**Fiseh.** in Spreng. syst. 2. p. 788. Wydler, scroph. p. 46. t. 4.) leaves alternate, on short petioles, lanceolate, serrated, attenuated at both ends ; peduncles I-2-flowered. %, H. Native of Siberia, on cretaceous mountains, at the river Don. Stem simple, clothed with white, glandular, powdery down. Leaves i inch long, generally running into the petioles, glabrous. CorollafsmalJ, dark purple. Capsule brown, size of a pea.

Cretaceous Figwort. Fl. July, Aug. Clt. 1827. PL 1 to 2 feet.

59 S. JIYPERICIFOLIA (Wydler. scroph. p. 46. t. 5.) stem woody; leaves opposite, ovate, quite entire, running into the short petiole; peduncles I-2-fiowered. %. H. Native of Arabia, in deserts. Branches with whitish bark, sometimes spinescent.? Leaves small, glabrous, full of pellucid dots. Abortive pedicels spinescent. Segments of calyx roundish, with white margins. Corolla small, purple. Genitals exserted. Capsule roundish, large in respect to the size of the flower.

St. Johris-wort-leaved Figwort. Shrub.

§ 3. *Flowers capitate,*

60 S. MI'NIMA (Ilieb. fl. cauc. 2. p. 79.) humble; stems quite simple; leaves petiolate, ovate, sublobate, toothed ; heads of flowers terminal, dense, nearly globose. %. H. Native of Iberia. S. orientals minima, folio subrotundo, Tourn. cor. p. 9, ex Bieb. Flowers size of those of *S. vernalis,* rose-coloured ; the Jip paler. Tip of sterile stamen unknown.

Least Figwort. PL i foot ?

f Species not sufficiently known.

61 S. MICRA'NTHA (Herb. Desv. ex Hamilt. prod. fl. ind, oce. p. 47. but not of d'Urv.) stem nearly simple; leaves ovate, acute, deeply toothed, quite glabrous ; flowers in loose almost terminal spikes. *If..* ? H. Native of HispanioSa.

Small-flowered Figwort. PL ?

62 S, SUBVERTICILLATA (Moris, stirp. sard. fasc. *3.* p.:S stem tetragonal, full of glandular dots; leaves oblong-lanl; late, doubly toothed : lower ones pinnate ; racemes termn. almost leafless; peduncles opposite, distant, short, dcnselyar mose. *"if..* H. Native of Sardinia, near Tivulets about Ohe and Bono, &e. Corolla deep purple. Leaves pilose benealy

Whorled Figwort, Ft. May, July. PI. 2 to 3 feet. it

63 S. BIVULA'RIS {Moris, 1. c. p. 7.) stem tetragonally vies ed ; lower Jeaves ovate : upper ones oblong-lanceolate, cr toothed, glabrous, running into the petioles ; racemes terr nearly naked; peduncles branched. %, H. Native of Ss ; nia, on mountains, nefir rivulets. Corolla obscure purple n- green, Habit of *S. aqtidtica,* but the stems and petioleif. more conspicuously winged ; the leaves are bluntish, and he bluntly toothed. c.

Rivulet Figwort. Fl. May, June. PL 8 to 4 feet, of *S.*\

64 S. OBLONG] yon A (Lois. not. in mem. soc. Lin. p^o *S,* 6.) glabrous; stem tetragonal; leaves oblong-lanceolatdeif rated, tapering into the petioles ; racemes terminal, naket duncles branched. If. H. Native of Corsica.

Oblong-leaved Figwort. PL 2 to 3 feet. nclied

65 S. NUflicAr'ns (Wydler. scroph. p. 48.) stem alnpet;o- ple, leafy at the base, but almost leafless above ; **leavtths** ; tifid, strigose ; racemes simple. If. H. Native of Asi, a Jfej on Mount Elivend. Root woody. Stem clothed with *sti* glands. Lower leaves deeply pinnatifid, beset with ad/r hairs, rather glaucous; segments alternate, acute, toothe*rss»* ciliated. Cauline leaves small, pectinately pinnatifid^ fin^y glandular; segments ov,ate-lanceolate, acuminated, n* branous. Corolla and capsule not seen. Perhaps beloj a distinct genus.

Naked-stewmed Figwort. PL ? *vU'"

66 S. SCKE'LLII (Spreng. syst. 2. p. 783.) stem lar, smooth ; leaves lanceolate, acute, glabrous, equa

on short dilated petioles ; panicle terminal, with trichotomous branches, *y.*. H. Native country unknown.

SckelVs Figwort. PI. 2 to 3 feet ?

67 S. NEPET^FOLIA (Presl. del. prag. 1. p. *73.)* stem shrubby; branches quadrangular; leave* cordate, obtuse, doubly toothed, glabrous on both surfaces; peduncles dichoto-»nous, 3-flowered. F? . F. Native of the South of Spain. S. glabrata, Spreng. syst. 2. p. 784. ? Leaves almost like those of *Nepeta cataria.* Flowers of a livid yellow, like those of *S. aquahca,* but not half the size. Capsule ovate.

Cat-mint-leaved Figwort. Fl. May, July. PI. 2 to 3 feet ?

68 S. MELISS^FOLIA (D'Urv. enum. pi. arch. p. *75.)* stem erect, quadrangular, quite glabrous ; cauline leaves petiolate, ovate-lanceolate, sharply serrated; bracteas lanceolate, erectish ; peduncles downy, many-flowered; panicle elongated. 1/. H. Native about Trebizond, on hills. Flowers small, purple. Peduncles 3-4 times forked. Nearly allied to *S. Scoroddnia.*

Balm-leaved Figwort. Fl. July, Aug. Clt. 1823. PI. *2* to 3 feet.

69 S. HASTA'TA (Rafin. fl. ludov. p. 44.) leaves opposite, on long petioles, oblong, hastate, serrated, canescent, hoary beneath ; flowers loose, panicled. %. H. Native of Louisiana.

Hastate-tewed Figwort. PI. 2 feet ?

70 S. ADSCE'NDENS (Willd. enum. p. 644.) leaves lanceolate, attenuated at both ends, deeply, unequally, and doubly toothed, glabrous ; racemes terminal. *U.* H. Native country unknown.

Ascending Figwort. Fl. June, July. Clt. 1816. PI. *2* feet.

71 S. CHINE'NSIS (Lin. mant. 250. Smith, in Rees' cycl. 32.) leaves ovate-oblong, serrated, downy. 2/. H. Native of China. Perhaps belonging to a distinct genus.

Vnna Figwort. PI. 2 feet.

72 S. HIRSU'TA (Schott, ex Steud. nom.) %. H. Nothing Ot ^e plant is known but the name.

{fairy Figwort. Fl. June, Aug. Clt. 1816. PI. 2 feet.

/8 S. INCI^SA (Weim. ex Steud. nom.) 1/. H. Nothing of this plant is known but the name.

^Meaved Figwort. PI. 2 to 3 feet?

iswt. The species of Figwort are plants of the most easy culture and propagation, will grow in any soil, but prefer a moist situation. All are readily increased by seeds. The shrubby species require protection in winter, by being kept in a frame. Some of the species are handsome border flowers, as

***nellifera, canina, grandiflbra, sambucifblia,* &c.**

IV. ALONSO^A (named by Ruiz, et Pavon, after Zanoni Alonso, formerly Spanish secretary for Santa Fe de Bogota.) Gt PaV* fl, per, *SySU* P, *l52,* Hemimeris **species of**

L'N . SYST. *Didynamia, Angiospermia.* Calyx 5-parted. Corolla subrotate, resupinate ; the superior segment the largest, stamens *4,* didynamous, glabrous, declinate ; anthers cordate; cells confluent at top. Stigma capitate. Capsule 2-celled, one of the cells more gibbous than the other. Seeds angular. Small shrubs and herbs, with opposite or verticillate leaves : floral ones alternate. Flowers racemose, scarlet or vermillion-coloured.

§ 1. *Shrubby, Stems and branches quadrangular.*

1 A. LINEA'RIS (Ruiz, et Pav. syst. fl. per. p. 154. fl. per. t. 503. * b') glabrous ; leaves opposite, or 3 in a whorl, linear, entire, or remotely denticulated. T?. G. Native of Peru. Swt} fl- gard. n. s. 240. Hemimeris coccinea, Willd. spec. 3. 210 -3.tr Clsia linearis, Jacq. icon. 3. t. 497. Curt. bot. mag.

• Hemitomus fruticosus, Lher. ? Hemimeris linariaefolia. H. B. et Kunth, nov. gen. 2. p. *377.* Young leaves fascicled in the axils of the old ones. Corolla scarlet, with a dark bottom, like most of the species. There is a variety of this with opposite leaves and peduncles. There is also a hybrid between this and *A, incisifolia* figured in Lodd. bot. cab. 1456, called *A. intermedia.*

Linear-tewed Alonsoa. Fl. May, Oct. Clt. 1790. Shrub 1 to 2 feet.

2 A. QUADRIFOLIA ; leaves 4 in a whorl, ovate ; flowers verticillate, racemose. T? . G. Native of Vera Cruz. Scrophularia coccinea, Lin. spec. 866. Smith, in Rees' cycl. 32. no. 10.

Four-leaved Alonsoa. Shrub 1 to 2 feet.

3 A. INCISIFOLIA (Ruiz, et Pav. syst. fl. per. p. 154.) glabrous ; leaves opposite, ovate, acute, deeply toothed, or serrated. T? . S. Native of Chili, about Conception. Hemimeris urticifolia, Willd. spec. 3. p. 282. Celsia urticifolia, Curt, bot. mag. 417. Peduncles long, alternate, disposed in terminal racemes like the others, (f. 46.)

FIG. 46.

Cut-leaved Alonsoa. Fl. May, Oct. Clt. 1795. Shrub 1 to 2 feet.

4 A. PROCU'MBENS (Ruiz, et Pav. I.e.) stems procumbent; leaves opposite, ovate, serrated. J?. G. Native of Peru, in waste places, where it is called Ricaco. Hemimeris procumbens. Pers. ench. 2. p. 162. Corollas scarlet.

Procumbent Alonsoa. Shrub procumbent.

5 A. ACUTIFOLIA (Ruiz, et Pav. 1. c. p. 153.) leaves opposite, ? ovate-lanceolate, deeply serrated, *fy* • S. Native of Peru, on hills. Hemimeris acutifolia, Pers. ench. 2. p. 162.

Acute-leaved Alonsoa. Fl. May, Oct. Clt. 1790. Shrub 1 to 2 feet.

§ 2. *Herbaceous. Stems and branches quadrangular; angles winged.*

6 A. CAULIALA'TA (Ruiz, et Pav. 1. c. p. 152.) leaves ovate, acute, serrated ; stems and branches winged. 1/. G. Native of Peru. Hemimeris caulialata, Pers. ench. 2. p. 162.

Wing-stemmed Alonsoa. Fl. year. Clt. 1823. PI. 1 foot?

7 A. PARVIFLORA (H. B. et Kuqth, nov. gen. amer. 3. p. *376.* under Hemimeris) stem herbaceous, 4-winged ; leaves opposite, ovate, acute, serrated ; flowers axillary, racemose. %. G. Native of Caraccas, in temperate places on Mount Bonavista, near Los Teques, at the altitude of 830 hexapods. Stem branched, panicled at top. Leaves glabrous, nearly an inch long. Middle segment of the lower lip of the corolla larger, and obcordate.

Small-flowered Alonsoa. PI. 2 to 4 feet.

8 A. MUTI'SII ; stem herbaceous, somewhat 4-winged; leaves opposite, oblong, acute at both ends, serrated ; flowers racemose. %. G. Native near Santa Fe de Bogota. Hemimeris Mutisii, H. B. et Kuntb. 1. c. p. 376. Schrophularia Meridionahs, Mutis and Lin. Stem panicled. Leaves glabrous, an inch long, and 5 lines broad. Corolla and stamens unknown.

Mutis's Alonsoa. PI. 1 to 2 feet ?

Cult. The species are all very showy when in blossom, and on that account are general favourites. They grow freely in any rich light soil, and are readily increased by cuttings and seeds.

V. RUSSE^LIA (so named by Jacquin, in honour of Alex.

ander Russel, M.D. F.R.S., author of a Natural History of Aleppo. London, 1756. He died in 1768. There is a second edition revised by his brother, Patrick Russel, M.D. F.R.S. 1794. Patrick Russel published a fine work upon serpents collected on the coast of Coromandel.) Jacq. amer. p. 178. t. 113. Schreb. gen. no. 1041. Juss. gen. p. 118. ed, Usteri, p. 132. H. B. et Kunth, nov. gen. amer. 2. p. 358.

LIN. SYST. *Didynamia, Angiospermia.* Calyx deeply 5-parted ; segments acuminately subulate. Corolla tubular, swollen, and widened at top; limb bilabiate ; upper lip emarginately 2-lobed : lower lip tripartite, segments nearly equal; palate convex, bearded. Stamens 4, didynamous, inclosed; cells *of* anthers spreading. Stigma undivided. Capsule inclosed in the calyx, nearly globose, attenuately beaked, 2-celled, 2-valved; valves bipartible ; placentas central, at length free. Seeds numerous, small.—Shrubs or herbs with angular branches, and opposite, or verticillate leaves. Corymbs and racemes axillary. Flowers scarlet.

§ 1. *Leaves opposite. Stems and branches quadrangular.*

1 R. SARMENTOSA (Jacq* amer. 178. t. 113. H. B. et Kunth, nov. gen. amer. 2. p. *358.)* stem and branches quadrangular, glabrous ; leaves opposite, ovate, rounded at the base, rather pilose above ; corymbs axillary, pedunculate, 3-5-flowered. ^ • S. Native of Cuba, near Guanavacoa, in shady places, and about the Havannah. Leaves nearly sessile, crenately serrated, 8 lines long, and 5 lines broad. Corolla flesh-coloured, or fine red, about half an inch long.

' *Sarmentose* Russelia. Shrub 4 to 6 feet.

2 R. MULTIFLORA (Sims, bot. mag. t. 1528.) stem quadrangular, glabrous ; leaves opposite, ovate, acuminated, serrately crenated; peduncles cymose, many-flowered, verticillate. *2 • S. Native of the mountainous tract between Vera Cruz and Mexico. Racemes terminal, verticillate. Leaves glabrous. Corollas scarlet.

Many-flowered Russelia. Fl. June, Aug. Clt. 1812. Shrub 4 to *G* feet.

3 R. KOTUNDIFOLIA (Cav. icon. 5. p. 9. t. 415. Pers. ench. 2. p. 164.) downy or tomentose ; stem and branches erect, tetragonal ; leaves opposite, sessile, cordate-roundish ; peduncles racemose, subsecund, many-flowered. J? . S. Native of Mexico, near Acapulco. Corollas scarlet. Leaves crenately serrated.

Hound-leaved Russelia. Shrub 4 to 6 feet.

4 R. SYRINGJEFOLIA (Cham, et Schlecht. in Linnaea, 6.p. 376.) scandent, glabrous ; branches tetragonal: angles acute ; leaves opposite, on short petioles, cordate-ovate, acuminated, acute, mucronulate ; cymes terminal and axillary, many-flowered. Tj. ب. S. Native of Mexico at Papantla. Leaves %\ to 3 inches long. Branches and pedicels of .cyme downy. . Calyx glabrous, with ovate, acuminated, acute, short segments. Corolla 8 lines long, scarlet; throat bearded. Capsule ovate, acute.

Syringa-leaved Russelia. Shrub climbing.

5 R. FLORIBU'NDA (H. B. et Kunth, nov. gen. 2. p. 359.) stem and branches quadrangular, glabrous; leaves opposite, ovate, cordate, smoothish ; corymbs axillary, sessile, many-flowered. T? . ? "V. ? S. Native of Mexico, between the river Papagallo and Venta de Tierra Colorado, at the altitude of 120 hexapods, Humb. et Bonpl. ; near Hacienda de la Laguna, Schiede and Deppe. Leaves on short petioles, serrately crenated, downy on the midrib beneath, 9-10 lines long, and 8-9 lines broad. Corymbs about the length of the leaves, downy, sessile, ex Kunth, 1. c.; pedunculate, ex Cham, et Schlecht, in Linnsea, 5. p. 106. Corolla scarlet. Seeds min,ute, oblong, angular, brown, a little wrinkled.

Bundle-flowered Russelia. Fl. ? Clt. 1824. Shrub 4 to 6 feet.

6 R. ALATA (Cham, et Schlecht, in Linnsea, 3. p. 3.) stem quadrangular, winged, pilose ; leaves opposite, acuminated, running into the short, winged, ciliated petioles; peduncles axillary, solitary. %. S. Native of tropical Brazil, Sello. Old stems decumbent, rooting at the joints, from which rise erect branches about 1 or 1^ foot high. Wings of stem ciliated. Leaves bluntly serrated, pilose beneath, 2| inches long, and If broad. Limb of corolla ciliated.

Winged-stemmed Russelia. PI. 1 to 2 feet.

§ 2. *Leaves verticillate. Stem and branches many-angled.*

7 R. TERNIFOLIA (H. B. et Kunth, nov. gen. amer. 2. p. 359.) stem and branches 6-angled, hairy, or downy ; leaves 3 in a whorl, obovate, or ovate, cuneated at the base, hairy above, and pubescent beneath ; corymbs pedunculate, many-flowered. Tj . ? %. ? S. Native of Mexico, on the declivities of the burning mount Jorulla, at the altitude of 450 hexapods. Leaves on short petioles, coarsely serrate-toothed, 2 or *2*\ inches long, and 16-24 lines broad. Corolla scarlet.

Tern-leaved Russelia. Fl. ? Clt. 1818. Shrub 4 to 6 feet.

8 R. VERTICILLATA (H. B. et Kunth, 1. c. p. 360.) branches somewhat 10-angled, glabrous ; leaves and corymbs verticillate. *2 . S. Native of New Spain, in temperate places near Puente de la Madre de Dios, at the altitude of 880 hexapods. Branches verticillate. Floral leaves roundish-ovate, obtuse, cuneated at the base, serrately crenated, hairy. Corollas scarlet.

Whorled-lestyed Russelia. Shrub 4 to 6 feet.

9 R. EQUISETIFORMIS (Cham, et Schlecht. in Linnaea, 6. p. 377.) suffruticose; branches twiggy, almost leafless, angular, verticillate, or opposite; flowers pedicellate at the tops of the branches ; leaves elliptic, acute, coarsely serrated. \ . S. Native of Mexico, at Papantla. Stem 12-8-angled. Leaves 4 lines long, and one broad. Calycine segments triangular, acute. Throat of corolla beardless. Corolla scarlet, 6 lines long. Genitals equal in length to the corolla. Capsule globose.

Horsetail-formed Russelia. Shrub 3 to 4 feet.

Cult. All the species are showy when in blossom. Any light rich soil answers them ; and they are readily propagated by cuttings, which strike root freely in heat under a hand-glass.

Tribe II.

ANTIRRHI'NE^E (this section agrees with the genus *Antirrhinum* in the characters given below.) Chav. antjrrh. D. Don, in edinb, phil. journ. 19. p. 110. Calyx deeply 5-parted, imbricate in aestivation. Corolla tubular ; limb 5-lobed, personate or ringent, bilabiate. Stamens 4, didynamous, sometimes with the rudiment of a fifth. Cells of anthers distinct at apex. Stigma 2-lobed. Capsule crustaceous; dissepiment undivided; P*a" centas spongy, adnate. Seeds with a thick, spongy, corrugated, or cellular testa. Albumen fleshy. Embryo almost the length of the seed.—Herbs or shrubs inhabiting the temperate regions of the globe. Leaves opposite, or alternate. Flowers disposed in terminal, spicate racemes, or axillary and solitary.

VI. ANTIRRHPNUM (av&ppii/ov, of Theophrastus and Dioscorides; from avn, *like;* and *piv,* rhin, a snout; in allusion to the form of the flowers; hence also it is called in English Snap-Dragon, and Calves' Snout.) Juss. gen. 120. ed. Usteri. p. 184. Vent. tab\. 2. p. 3G2. D. C. fl. fr. p. 592. t. 3. Gsertn. fruct. 1. p. 249. t. 53. Chav. mon. p. 79.__Antirrhinum species, Lin. gen. no. 750. Schreb. gen. no. 1007. Lam. ill. t. 531. f, 1—2. Antirrhinum and Asarina, Tourn. inst. p. 167. and 171. t. 75 et 76. Orontium, Pers. ench. 2. p. 1^8- Ten. fl. neap. 2. p. *53,* but not of Lin.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted, oblique. Corolla personate; tube ample, a little compressed, saccate at the base, and furnished with Z parallel and interrupted lines of hairs inside beneath the palate; lobes of the upper lip erect, and often adpressed to the back by turns: lower lip spreading, having the middle lobes smaller than the lateral ones, with an ample bearded palate, which closes the throat. Stamens compressed, rather hairy at the base, having the sterile or fifth one very short or wanting. Stigma 2-lobed. Capsule 2-celled, woody, ovate, or pear-formed, incurved at top, opening by 3 holes, or an irregular foramen, under the top. Seeds oblong, truncate, minute; testa black, more or less engraven, or wrinkled.—Perennial or annual, rarely suffruticose plants. Stems or branches erect or procumbent. Leaves feather-nerved and entire, rarely palmate-nerved and lobed, sessile or petiolate: lower leaves opposite, but sometimes 3 in a whorl: superior ones usually alternate. Flowers showy, in terminal racemes, or solitary and axillary.

SECT. I. ASARI'NA (meaning unknown to us.) Tourn. inst. 171« t. 76. Chav. anthill, p. 80. t. 3. f. 12. Leaves palmate-nerved, lobed, opposite. Capsule membranous, sub-globose; each cell opening by a broad, irregular foramen under the apex.

* A. ASARI'NA (Lin. spec. 860.) plant clammy and villous; branches procumbent; leaves opposite, on long petioles, 5-nerved, 5-lobed, cordate, and crenated; flowers axillary, solitary; calycine segments linear-lanceolate, acute, hairy. %. H. Native of the South of France, Eastern and Central Pyrenees; near Montpelier, Cevennes, &c. Sims, bot. mag. 902. Orontium Asarina, Pers. ench. 2. p. 159. Asarina cordifolia, Mcench, meth. suppl. p. 172. Antirrh. asarinum, Lam. fl. fr. 2. p. 348. Asarina procumbens, Mill. diet. edit. 8. no. 1. Asarina, Lob. jcon. t. 601. f. 2.—Mor. hist. 3. p. 432. sect. 11. t. 21. f. 1. Sabb. hort. rom. *3.* t. 3. Asarina Lobelii, Dalech. hist. p. 915. Xa Maiiao-<roc, Diosc. 4. p. 126. Plant canescent. Corolla 1^ inch long, white, sometimes tinged with red; palate yellow; tube glabrous, compressed on the back, marked by purple spots on the ventre, and bearded by yellow hairs inside.

Asarina or Heart-leaved Snap Dragon. Fl. June, July. Clt. 1699. PI. trailing.

SECT. II. ANTIRRHINA'STRUM (from Antirrhinum and astrum, an affixed signification, like.) Chav. antirrh. p. 81. Antirrhinum, Tourn. inst. p. 167. t. 75. Leaves pinnate-nerved, quite entire: lowef ones opposite, rarely 3 in a whorl: superior ones for the most part alternate. Capsule woody, or chartaceous, nearly pear-shaped, very oblique at the base, incurved at top, and opening by 3 holes.

§ 1. *Lobes of calyx much shorter than the corolla,*

2 A. MOLLE (Lin. spec. p. 860.) villous; branches procumbent, slender, clothed with woolly villi; leaves opposite, petiolate; flowers few, at the tops of the branchlets; calycine lobes lanceolate, erect. %. F. Native of the Pyrenees, on the confines of Spain; on rocks in the valley de La Segre, between Bellwor and La Seo d'Urgel; in the valley of Andorrea; and on the mountains of Granada. Lam. diet. 4. p. 366. exclusive of the syn. of Tourn. Chav. antirrh. p. 81. Leaves clothed with glandular and clammy hairs, *5-6* lines long, and 4-5 broad. Corolla an inch long, whitish, with a yellow palate; the upper lip striped with purple. Capsule ovate-globose, pilose.

^o/Meaved Snap Dragon. Fl. July, Oct. Clt. 1752. PI. Procumbent.

3 A. SEMPERVI'RENS (Lapeyr. fl. pyr. 1. p. 7. t. 4. abr. p. 354. Chav. antirrh. p. 82.) stem short, sufFruticose, ascending, branched; leaves petiolate, opposite, elliptic, or oblong-ovate, evergreen, rather downy; flowers few, in loose racemes; calycine lobes lanceolate, acute, reflexed at top. f?. F. Native of the South of France; of the Pyrenees, in calcareous places near Gerdres; in the valleys of Oo, and Venas, &c.; and in Portugal, near Oporto. A. molle, St. Am. bouq. pyr. no. 151. but not of Lin. A. meonanthum, Hoffm. et Link, fl. port. 1. p. 261. t. 51. Branches nodose. Leaves decussate: floral ones usually alternate, all obtuse, and rather fleshy. Corolla smaller than that of *A. molle,* white, having the upper lip and tube marked with purple, and the palate yellowish; tube beset with short hairs. The plant is usually rather downy in every part, but sometimes entirely glabrous.

Evergreen Snap Dragon. Fl. June, Sept. Clt. 1817. Shrub 1 to 3 feet.

4 A. HISPA'NICUM (Chav. antirrh. p. 83.) villous; branches erect, rather woody, and branched again; leaves oblong-lanceolate, contracted at the base, bluntish: lower ones opposite: superior ones alternate, narrower; bracteas linear-lanceolate, much longer than the pedicels; flowers in loose spikes; calycine segments oblong, acutish. 1/0 F. Native of Spain. Antirrhinum Hispanicum villosum origani folio, Tourn. inst. p. 168. Plant clothed with glandular hairs. Calycine segments reflexed a little at apex. Corolla hardly an inch long, purple, with a golden yellow palate; tube villous. Capsule small, ovate-oblong, elongated, downy.

Spanish Snap Dragon. PI. 1 to 1^ foot.

5 A. LATIFOLIUM (D. C. cat. hort. monsp. 7. fl. fr. 5. p. 411. Chav. antirrh. p. 84. t. 3. f. 28.) caudex thick, twisted; branches ascending, or erect, villous; leaves ovate, or ovate-lanceolate, petiolate, broadly mucronate at apex, downy; flowers racemose; rachis villous; lobes of calyx elliptic, pilose, ciliated. %. H. Native of the South of France; in the Eastern Pyrenees, near Villa Franca, and Saint Martin du Canigon; Nice; near Arti, in Piedmont. Nocc. and Balb. fl. ticin. 1. p. 28. t. 42. A. diffusum, Bernh. A majus, /3, latifolium, Duby, bot. gall. 1. p. 343. A. majus, var. a, Lin. spec. p. 858. Vill. dauph. 2. p. 441. Willd. spec. 3. p. 256. D. C. fl. fr. 3. p. 593. Bertol. amcen. p. 382. Poll. fl. ver. 2. p. 336.—Lob. icon. 405.—Bocc. mus. p. 49. t. 41.—Barrel, icon. t. *655.* A. luteo flore, Bauh. pin. 211. Branches fistular, beset with capitate pili. Leaves 1-2 inches long, and 6-10 lines broad, obsoletely spotted with purple. Bracteas and pedicels pilose. Corolla 1 to 1 \ inch long, usually yellow, with a. deeper coloured palate; tube villous, elongated, very gibbous at the base. Capsule pilose, elongated. Seeds ovate, truncate at apex; testa foveolate.

Var. /3, *hybridum* (Chav. antirrh. p. 84.) leaves longer; flowers purplish, or marked by purple lines; lobes of calyx ovate-elliptic. 2/. H. Native of the Pyrenees, betwixt Rousse and Rodome, &c.; and of Portugal, near Lisbon. A. hybridum, Benth. pi. pyr. p. 60. A. latifolium, /3, striatum, D. C. fl. fr. 5. p. 411. A. latifolium, Mill. diet. ed. 8. no. 4. *Hg.* 1. t. 28. Hoffm. et Link, fl. port. 1. p. 260. t. 50. exclusive of the syn. of Tourn. This appears to be a hybrid between *A, latifolium* and *A. majus.*

Broad-leaved Snap Dragon. Fl. July, Oct. Clt. PI. 1 to 3 feet.

6 A. MAJUS (Lin. spec. p. 859. var. /3. Gsertn. fruct. 1. p. 249. Chav. antirrh. p. 86. t. 3. f. 26.) caudex thick, twisted; branches erect, usually branched again; leaves oblong-lanceolate, attenuated at both ends, glabrous; flowers racemose, approximate; rachis pubescent; lobes of calyx broad-ovate, obtuse, clothed with glandular pili. %- H. Native of South and middle Europe, indigenous every where, generally upon old

walls ; also of Barbary, about Algiers, and near Mustapha-Pacha frequent ; and in Persia. In Britain on old walls, as about London, and other places, but probably an escape from gardens. Smith, engl. bot. t. 129. Schkuhr, handb. 2. p. 193. t. 172. A. grandiflorum, Stok. bot. mat. med. 3. p. 384. A. murale, Sal. prod. p. 100. Orontium majus, Pers. ench. 2. p. 158.—Bauh. hist. 3. p. 162. with a figure.—Riv. mon. irr. t. 82. f. 1. —Lob. icon. t. 404. f. 2.—Besl. hort. eyst. 1. t. 9,10. Branches glabrous, rarely downy. Leaves 1-3 inches long : upper ones narrower. Rachis leafless, beset with glandular hairs, as well as the calyxes. Corolla 1-2 inches long, purple, red, scarlet, or white, or variegated with these colours ; palate yellow at top, very prominent; tube downy outside. Capsule downy, oblique at the base, incurved at apex. Seeds oblong, ovate. This is a very polymorphous plant, varying considerably in habit, and much in the colour of the flowers. .There is also a variety with double flowers. The leaves in some varieties are variegated.

Far. /3, *angustifblium* (Chav. antirrh. p. *86.)* leaves very narrow, often revolute, sometimes approximate by threes; corolla large, purple. %. H. Native upon walls about Constantinople. A majus, Oliv. et Brug. herb. mus. par.

Far. y, Montevidense; leaves long, all opposite, dark green ; flowers usually white, or yellow, and not so much crowded. %. H. Native of Monte Video. A. montevidense, Hort. berol. This does not appear to be more than a slight variety of the species.

Greater, or Common Snap Dragon. Fl. June, Oct. Britain. PI. 1 to 2 feet.

7 A. TORTUOSUM (Bosc, mss. Lam. diet. 4. p. *365.* Chav. antirrh. p. *87*)* plant altogether glabrous ; branches erect or ascending, flexuous, twisted at the base; leaves linear, acute, opposite, or 3 in a whorl; flowers racemosely spicate, approximating by threes and fours, the raceme is therefore interrupted ; lobes of calyx oblong-ovate, obtuse. 1/. H. Native of Italy, on rocks, and in waste places by the sea side, as near Rome ; also in the South of France, near Frejus ; and of Sicily. Guss. fl. sic. 2. p. 1G9. exclusive of many synonymes. Ten. syll. p. 304. Orontium Siculum, /3. tortuosum, Pers. ench. 2. p. 158. A. capitatum, Presl. del. prag. p. 74.—Sabb. hort. rom. 3. t. 2. —Barrel, icon. 638. Leaves 1-nerved, 2 inches long, attenuated at both ends: upper ones very narrow. Corolla the largest of the genus, purple; tube short; upper lip large. Capsule smaller than that of the preceding, and glabrous. This species is often confounded with *A. Siculum,* but appears to be more nearly allied to *A. majus.*

Twisted-branched. Snap Dragon. Fl. June, Oct. Clt. ? PI. 1 to ljfoot.

8 A. SICULUM (Ucria pi. and Lin. op. addenda, no. 17. Chav. antirrh. p. *8S. t.* 3. f. 24.) branches erect, flexuous, downy at top, and branched; branchlets diffuse ; leaves linear-lanceolate or linear, opposite, alternate, or 3 in a whorl, narrowed into the petioles at the base; flowers in loose racemes ; lobes of calyx lanceolate, acute, downy. %. H. Native of Sicily, on walls, and in waste places about Palermo and Ragaza ; of Calabria, on walls about Reggio and Trucoli, &c. Mill. diet, no. 6. Pers. ench. 2. p. 158. exclusive of var. *j3.* Guss. pi. rar. p. *253.* fl. sic. 2. p. 170. Tenor, syll. p. 304. A. angustifolium, Poir. suppl. 4. p. 27. Branches woody. Leaves 1 to 1J inches long. Flowers solitary, twin, or 3 in a whorl. Corolla hardly an inch long, white or yellowish, rarely purple; tube rather pilose ; lobes of the upper lip, and the middle lobe of the lower lip emarginate. Capsule downy. Seeds oblong, subquadrangular.

Far. 0, *glandulbsum* (Chav. antirrh. p. *88.*\ leaves broader; branches and calyxes beset with glandular hairs ; corollas yellowish. 7/. H. Native of Sicily, Gussone. A. Siculum, var. *y.* Guss. fl. sic. t. 309. f. 2.

Far. y, eldtum (Chav. antirrh. p. 88.) plant taller and firmer; corolla purplish-yellow. %. H. Native of Spain and the Archipelago. A. angustifolium, D'Urv. enum. pi. arch. no. 549. exclusive of the syn. of Lam. et Bocc. A. satureiaefdlio, Vaill. herb. A. Hispanicum, altissimum, angustissimo folio, Tourn. inst. p. 168.

Sicilian Snap Dragon. Fl. July, Aug. Clt. 1804. PL 1 to 2 feet.

§ 2. *Segments of the calyx exceeding the corolla, or about equal in length to it.*

9 A. ORONTIUM (Lin. spec. 860. Chav. antirrh. p. 89. t. 3. f. 18. and 19.) stem glabrous, erect or ascending, branched; leaves oblong-lanceolate or linear, acutish, attenuated at both ends, glabrous ; flowers distant; calycine segments linear-lanceolate, large, and as if they were digitately pilose. ©. H. Native almost throughout Europe, along way sides and in waste fields and vineyards; of Barbary, abundant about Algiers ; islands of Madeira, and Scio ; Virginia, ex Pursh, but probably introduced from Europe ; in Britain it is to be found in corn-fields, on a light soil ; but hardly indigenous. Curt. fl. lond. fasc. 4. t. 45. Gaertn. fruct. 1. p. 249. t. *53.* Lam. ill. t. 531. f. 2. Smith, engl. bot. 17. t. 1155. Schkuhr, handb. 2. p. 193. t. 173. A. humile, Salisb. prod. p. 9S. A. elegans, Tenore, viag. in abbruz. 1830. p. *35.* syll. p. 304.—Barrel, icon. *656.* A. arvense majus, flore albo, Tourn, inst. p. 168.—Sabh. hort. rom, 3. t. 1.

Orontium Snap-Dragon, or Calves'-Snout. Fl. June, Sept. Britain; /3. 1810. PI. \ to 1 foot.

10 A. RYTIDOCARPUM (Fisch. et Meyer, in ind. sem. hort. petrop. 1836. p. 27.) annual, rather pilose; leaves oblong or linear ; flowers distant, nearly sessile ; calycine segments linear, longer than the corolla; seeds prismatic, wrinkled on all sides. ©. H. Native *of* Caucasus, on the Talusch Mountains, in corn-fields. Corollas small, bluish. Capsule nearly globose. Seeds black, subtetragonally prismatic. This comes nearer to *Ant. Orontium* than any other, but is very distinct.

Wrinkled-fruited Snap-Dragon. Clt. 1836. PI. \ to 1 foot.

f *Species doubtful, or not sufficiently known.*

11 A. CORDATUM (De Buch. besch. der. can. ins. ex Chav. antirrh. p. 181.) Native of-the Canary Islands. We know nothing of this plant but the name.

Cordate-leaved Snap-Dragon. PI.

12 A. ITA'LICUM (Mill. diet. ed. 7th. no. 5.) Of. H. Native of Italy. This is nothing but a variety of *A. majus.*

Italian Snap-Dragon. PI. 1 to 2 feet.

ISA. OSY'RIS (Raeusch. Fisch. ex Steud. nom. ex Chav. antirrh. p. 181.) ©. H. This is probably a variety of *A. Orontium.*

Osyris Snap-Dragon. PL 1 foot.

14 A. VARIA'BILE (Link, ex Steud. nom. ex Chav. antirrh. p. 18 L) A. multibracteatum, Brot. ex Steud. This is probably a variety of *A. Orontium.*

Variable Snap-Dragon. PL 1 foot.

N.B. A. porcinum, Lour. coch. 2. p. 467. A. aquaticum, Bar. 1. c, and A. papilionaceum, Burm. fl. ind. p. 131. t. 39. f. 2. certainly do not belong to this genus, and it is difficult to say what they really are.

Cult. All the species of Snap-Dragon are showy, and worth cultivating for ornamenting flower-borders and rock-work. The species are readily increased, either by cuttings of the young Ranches or by seeds. The 4 first species will require protection in winter, by placing them in a frame or greenhouse. *A. Orontium,* being an annual plant, the seeds only require to be sown in the open ground in spring.

VII. LINA'RIA (from \ivov, *linon,* flax ; similarity in the leaves.) Vent. tabl. 2. p. 360. Juss. gen. p. 120. edit. Usteri, p. 134. £>. C. fl. fr. 3. p. 582. Chav. antirrh. p. 91. Linaria and Elatine, Mcench. meth. p. *522.* and 524. Antirrhinum, Lin. gen., Lam. ill. t. 531. f. 3—4. and other authors. Ratine, Dill. nov. gen. p. 116. t. 6. but not of Lin. Linaria species, Tourn. inst. p. 168.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted. Corolla personate, almost like that of *Antirrhinum,* but furnished with a spur at the base; tube short, inflated ; palate more or less bearded, usually prominent at the throat, but sometimes depressed, and not closing the throat; lobes of upper lip plicate at the base, often reflexed ; lobes of the lower lip spreading, or a little deflexed: the middle lobe of the lower lip generally the smallest. The rudiment of the fifth stamen very small or wanting. Capsule ovate -or spherical, a little compressed, 2-celled ; each cell more or less drawn out into *3-5* valves, or dehiscing by a single operculum or one valve. Seeds egg-shaped, or somewhat prismatic, or compressed and discoid, girded by a membranous margin.—Annual or perennial plants, very rarely small shrubs. Roots of the perennial kinds rhizomatose. Leaves alternate, verticillate, or opposite, quite entire, or lobed. Flowers beautiful, racemose, or spicately racemose at the tops of the Ranches, or solitary and axillary.

SECT. I. CHJENORRHINUM (from *xaLyu), chaino,* to gape ; and *9iv i rhin,* a snout; the palate of the flower is depressed, therefore the throat appears wider than in those of other sections.) *\C. fl. fr. 5. p. 410. Duby. bot. gall. 1. p. *34,3.* Chav. antirrh. p. 92. Corolla having the palate more or less depressed ; the upper lip drawn out in front, not erect; spur shorter than the corolla. Seeds oblong-ovoid, truncate ; testa furrowed lengthwise, or foveolate or echinated.—Herbs usually clothed with pili. Leaves opposite and alternate, quite entire. Flowers axillary, or loosely racemose.

§ I. *Capsule chartaceous ; superior cell usually much larger than the other, dehiscing by one valve at apex; the lower cell dehiscing slowly by a transverse chink towards the base, or altogether indehiscent.* Chav. antirrh. t. 5. f. 8.

1 L. TENE'LLA (D. C. fl. fr. 5. p. 410. Chav. antirrh. p. 92.) viscous ; branches procumbent, slender; leaves cordate-ovate, opposite, acute : floral ones alternate ; calycine segments linear, acutish. ©. H. Native of Spain, in the province of Valentia, near the top of Mount Ayora, in shady humid places, where it is generally hidden by other plants. Leaves distant, 3-4 lines long. Flowers axillary ; pedicels capillary, much longer than the leaves. Corolla white, with a short, blunt, bent spur, and rounded, quite entire lobes. Seeds oblong; testa furrowed.

Slender Toad-Flax. PL procumbent.

2 L. VILLOSA (D. C. fl. fr. 5. p. 410. Chav. antirrh. p. 93.) villous; leaves ovate or orbicular, obtuse, on short petioles, all opposite ; flowers opposite, on long pedicels ; calycine segments linear-oblong, somewhat spatulate. %. F. Native of Spain, about Gibraltar ; and near Vejez de la Frontera, not far from Gibraltar. Ait. hort. kew. ed. 2. vol. 4. p. 15. L. muralis, Saltzm. in herb. D. C. Ant. oppositiflorum, Poir. suppl. 4. p. 23. Ant. serpyllifolium, Poujr. in herb. Desf. Ant. villosum, Lin. spec. p. 852. Linaria Hispanica nummulariae folio villoso, Tourn. inst. p. 169.—Barrel, icon. t. 597. Branches diffuse, clothed with simple, spreading hairs, woody at the base, 5-10 inches high. Leaves villous. Pedicels hairy, 2 or 3 times longer than the leaves. Corolla white or pale blue, marked by more intense lines; lobes emarginate at top; spur straight, widened above the base. Capsule downy, ovate. Seeds oblong, truncate at top ; testa furrowed lengthwise.

Villous Toad-Flax. Fl. July, Aug. Clt. 1786. PL diffuse.

3 L. ORIGANIFOLIA (D. C. fl. fr. 3. p. 591. exclusive of the syn. of Magn. Chav. antirrh. p. 94. t. 6.) pubescent or glabrous ; leaves oblong or obovate, on short petioles : lower ones opposite : upper ones alternate ; flowers alternate, distant; calycine segments linear, or linear-spatulate, villous. %. F. Native of the South of France, on walls and rocks ; in the Pyrenees ; about Narbonne; on old walls near Bagneres-de-Luchon ; in Sicily; in Portugal, on La Serra d'Arrabida, and on Monte Junto, among high rocks and in calcareous places. Ait. hort. kew. ed. 2d. vol. 4. p. 15. Benth. cat. pi. pyr. p. 96. exclusive of var. rubrifolia. Ant, origanifdlium, Lin. spec. 852. Linaria saxatilis serpyllifolia, Tourn. inst. p. 169. This is a very polymorphous plant. Branches branched, ascending or procumbent. Flowers in the axils of the superior leaves, distant, forming a loose raceme. Calyx beset with glandular hairs. Corolla like the preceding, but smaller, bluish-violet, rarely white; throat yellow; lobes emarginate, striped with red. Seeds oblong, ovate, truncate at top ; testa furrowed lengthwise.

Var, (3, grandijlora (Benth, cat. pi. pyr. p. 96. Chav. antirrh. p. 94.) plant more villous and larger; flowers larger. 2£.F. Native of the higher Pyrenees, at Font de Comps, Crabere, &c. Ant. villosum, Lapeyr. fl. pyr. p. *853.* but not of Lin.

Var. y, crassifolia (Chav. antirrh. p. 94.) leaves ovate, acutish, quite glabrous, thickish ; flowers large. %. F. Native of Spain, on the mountains. L. crassifolia, D. C. fl. fr. 5. p. 410. Anarrhinum crassifdlium, Willd. spec. 3. p. 261. Pers. ench. 2. p. 159. Ant. crassifolium, Cav. icon. 2. p. 11. t. 114.—Barrel, icon. t. 1313.

Marjoram-leaved Toad-Flax. Fl. June, Sept. Clt. 1785. PL ascending.

4 L. FLEXUOSA (Desf. fl. atl. 2. p. 47. t. 139. Chav. antirrh. p. 95.) quite glabrous; branches filiform, flexuous, interwoven, procumbent; leaves petiolate, spatulately-elliptic or oblong: lower ones usually opposite : upper ones alternate ; flowers distant ; pedicels twice or thrice as long as the leaves ; calycine segments linear, bluntish. ' %. F. Native of Barbary, in fissures of rocks on Mount Hamamelif, near Tunis. Ant. flexuosum, Willd. spec. 3. p. 250. Plant prostrate, diffuse. Corolla like that of *L. minor,* but longer, small, bluish ; tube a little elongated ; spur obtuse, recurved ; lobes entire. Cells of cap-

sule nearly equal. Seeds ovate, truncate, at botli ends; testa Hack, full of small pits,

Fiexuous Toad-flax. Pl. prostrate.

5 L. nuBRiruLi* (Boba, et Cast, diss, ined, ex D. C. fl, fr. *o.* p. 410. Chav. yntirrh. p. 9G.) stem erect, branched from tin; base, flexnous, downy : luwer leaves ovate, opposite, approximate, deep red beneath, glabrous ; upper leaves oblong, alternate; calycine segments linear-spandate, obtuse, villous. ©. H. Native of the South of France, near Dragui<-nan, Duby; Marseilles, KobiU ; about 1 elon ; Pyrenees; and Sardima. L. origamfdia, var. rubrifSIia, Bent!), cat. pi. ryr. p. <G. Ant. fill forme, Pojr. suppl. 4. p. 27. Ant. origan i folium, touan, hort. monsp. 301. but not of Lin.—Magn. bot. 25. icon, t. 24. Stems beset with capitate pili; branches villous. Flowers loose ; pedicels pilose, about equal in length to the flowers, but lengthening at last. Floral leaves ciliated. Corolla small, purplish blue, marked with 2 yellow spots at the mouth, downy ; lobes entire ; spur slender, acute, diverging.

Far, (i, h&milu (Chav. antirrli. p. 96.) leaves oblong, nearly sessile; calyx about equal in length to the corolla; corolla small, with a straight spur. 0. H. Native of Sicily, on arid rocks of Montallegro, Mineo, S:c.

Kild-Uaved Toad-flax. Fl, June, Aug. Clt, 1830. PL J to ↑ foot.

§ 2. *Capsule membranous; cells equal in size; each cell dehiscing by* 3 *teeth at apex.*

6 L. MI'NOR (Desf. fl. at]. 2. p. *46.* Chav. antirrh. p. 97.) stem erect, much branched, downy ; leaves oblong-linear, obtuse, downy : lower ones opposite ; pedicels twice or thrice as long as the calyx ; flowers small, distant; calycine segments linear-spatulute, clothed with glandular hairs. G- H. Native of Europe, in sandy corn-fields frequent; as of France, Switzerland, England, Germany, Barbary, and Caucasus, &c. D. C. fl. fr. 3. p. 591. L. Antirrhinum, Chevall, fi. gen. des env. de Par. t. 2. L. viscida, Moencb. meth. p. 524. Ant. minus, Lin, spec. n. §52, 0*4. tt. thn. t. SOS. Ga>rtn, fruct. 1. p. 249. t. 53. f. 1. Capsule globose, glabrous.

Liverwort-leaved Toad-Flax. Fl. June, Nov. Pi. **trailing'**

10 L. PA'LLIDA (Tenore, fl. nap. 1. p. 32. et add. fl. na 159. f. 2, syll. p. 302. Chav. antirrh. p. 101.) pabest4T leaves opposite, cordately reniform, 3-5-lobed : lobes rourow hardly mucronate ; floriferous pedicels shorter than the leavi-.

1

calycine segments linear-lanceolate, acutish. 1/ . H. Native of Abruzzo, in gravelly places, and among rocks on the mountains ; and on the mountains of Magella. Ant. pubéscens, Tenore, fl. neap. prod. p. *36.* Branches slender, diffuse. Leaves sometimes quite entire, rarely crenated, dark green. Corolla pale blue, sweet-scented ; spur straight. Capsule globose, smoothish.

Pafe-flowered Toad-Flax. Fl. July, Sept. Clt. 1820. PI. 4 to 6 inches.

11 L. PILÒSA (D. C. fl. fr. 3. p. 584. Tenor, syll. p. 302. Chav. antirrh. p. 101.) leaves opposite and alternate, cordately rounded or reniform, villous, 5-11-lobed: lobes rounded, mucronulate ; floriferous pedicels about equal in length to the leaves; calycine segments narrow-lanceolate, acute, shorter than the capsule. %. H. Native of Sicily, on the mountains, or in the fissures of shaded humid rocks, particularly near Palermo ; and about Naples, &c. L. pubéscens, Presl. del. prag. p. 74. Guss. prod. fl. sic. 2. p. 158. Ant. pilòsum, Lin. rnant. p. 749. Jacq. obs. 2. p. 29. t. 48.—Cup. pamph. sic. t. 214.—Mich. pi. ital. ed. germ. no. 108. Linaria hederaceo folio villoso seu Cymbalaria alpina, Tourn. inst. 1. p. 169. Branches prostrate, radicant, clothed with white hairs. Leaves soft, villous, purplish beneath. Calyx pilose. Corolla purplish blue, with a yellow palate, and rather incurved spur. Capsule downy, globosely ventricose.

Var. /3, pùmila (Chav. antirrh. p. 101.) leaves smaller, thick ; plant hardly 4 inches long.

Pilose Toad-Flax. Fl. June, Sept. Clt. 1800. PL creeping.

12 L. JEQUITRI'LOBA (Duby, bot. gall. 1. p. 304. Chav. antirrh. p. 102.) plant rather pilose, very slender; leaves opposite, small, cordately reniform, 3-lobed: lobes rounded, shortly mucronulate ; floriferous pedicels longer than the leaves ; segments of calyx linear-lanceolate, shorter than the capsule, if.. H. Native of Corsica, on Monte della Trinita, among rocks ; about Saint Antoine, in high, shady, rocky places; and near Speluncato. Ant. aequitrilobum, Viv. fl. cors. p. 10. fragm. fl. lyb. p. 68. Hook. bot. mag. t. 2941. Branches slender, creeping or pilose. Leaves very numerous, shining, green, often smoothish : lower ones on long villous petioles. Corolla purplish-blue, with a short straight spur. Capsule small, globose. This species is very nearly allied to the preceding, but is readily distinguished by the smaller membranous leaves; by the filiform branches ; and by the slender flexuous pedicels.

Equal4obed-\ea\ed Toad-Flax. Fl. June, Sept. Clt. 1829. PI. creeping.

SECT. III. ELATINOI'DES (this section contains species agreeing with *L. EMtine* in the characters indicated below.) Chav. antirrh. p. 103. Elatine species, Moench. and Gray. Cymbalaria species, Baumg. Leaves feather-nerved, usually on short petioles, alternate (the lower ones sometimes opposite, rarely wanting), toothed or lobed, sometimes entire. Flowers axillary, distant. Corolla with a prominent palate at the throat; and an acute spur, which is about equal in length to the corolla, but never longer. Capsule nearly spherical, dehiscing at the sides by 2 lids, or operculi; or ovate, and dehiscing by 2 valves at the apex. Seeds ovate, truncate or roundish ; testa full of irregular little pits, or granular from tubercles. (Chav. antirrh. t. 4. f. 19—21.) Annual or suffrutescent plants, commonly procumbent.

^§ 1. *Capsule nearly spherical, dehiscing by 2 circular lids or at operculi at the sides.* Chav. antirrh. t. 5. f. 9—10.

13 L. SCARIÒSA (Desf. fl. atL *2,* p. 38. t, 131. Chav. antirrh. p. 103.) villous; leaves oblong, or ovate-oblong, petiolate : lower ones opposite, angularly toothed above the base: superior leaves alternate, quite entire; pedicels much shorter than the corolla; calycine segments ovate-oblong, scarious. ©. H. Native of Tunis, on arid hills ; and in corn-fields near Kervan ; and probably of Spain. Ant. dentàtum, Vahl, symb. 2. p. *66.* t. *37.* Willd. spec. 3. p. 234. but not of Poir. Ant. scaridsum, Lam. diet. 4. p. 349. Pers. ench. 2. p. 156. Branches prostrate, densely clothed with simple spreading pili, like the rest of the plant. Leaves 1-3 inches long. Flowers numerous, approximate. Corolla large, yellow, downy; spur arched ; filaments rather hispid. Seed oblong-ovate; testa pitted.

Scarious Toad-flax. PI. prostrate.

14 L. ELATINOI'DES (Desf. fl. atl. 2. p. 39. t. 132. Chav. antirrh. p. 104.) downy; leaves alternate, ovate and elliptic, obtuse : lower ones dentately angular, on short petioles : superior ones sessile, quite entire ; pedicels shorter than the corolla; calycine segments oblong, acute, with membranous edges. ©. H. Native of Habra, in cultivated fields near Mascar. Ant. elatinoides, Willd. spec. 3. p. 235. Pers. ench. 2. p. 155. but not of Tenore. Branches 1-2 feet long, procumbent and prostrate ; branchlets spreading, slender. Leaves glabrous or downy: lower ones 1-2 inches long. Flowers in the axils of the superior leaves. Corollas size of those ofZ. *vulgàris,* yellow; spur a little arched, sometimes straight. Capsule glabrous. Seeds a little curved ; testa brown, foveolate.

Elatine-Uke Toad-Flax. Fl. July, Sept. Clt. 1821. PL prostrate.

15 L. DEALBA'TA (Hoffm. et Link, fl. port. p. 231. t. 34. Chav. antirrh. p. 104.) hairy ; leaves ovate, or ovate-lanceolate, sessile, acute : lower ones toothed: superior ones entire ; pedicels very short; calycine segments lanceolate, acute. ©. H. Native of Portugal, near Thomar ; and in the Algarves and Alentejo, Brot. Ant. lanigerum, Brot. fl. lus. 1. p. 189. but not of Willd. Branches slender, 2-3 feet long ; branchlets stiff, spreading. Lower leaves an inch long. Flowers small, in the axils of the superior leaves. Corolla small, referrible in shape to those of *L. spùrium;* upper lip violaceous: lower ones white; palate pale, and marked with blue dots. Seeds ovate; testa finely foveolate.

Whitened Toad-Flax. Fl. July, Sept. Clt. 1820. PL trailing.

16 L. LANI'GERA (Desf. fl. atl. 2. p. 38. t. 130. Chav. antirrh. p. 105.) clothed with woolly villi ; leaves alternate, cordate, or cordately rounded, mucronulate, woolly : lower leaves on short petioles, and sometimes vaguely toothed: superior ones nearly sessile, quite entire ; pedicels longer than the leaves; calycine segments linear-lanceolate, acute. ©. H. Native about ancient Carthage, in cultivated fields. Ant. lanigerum, Willd. spec. 3. p. 235. but not of Brot. Plant 1-3 feet long ; branches prostrate, slender. Lower leaves *5-6* lines long. Corolla villous, small, yellowish, a little incurved. Capsule glabrous. Seeds egg-shaped ; testa pitted.

Wool-bearing Toad-Flax. Fl. June, Sept. Clt. 1818. PL prostrate.

17 L. SPU'RIA (Mill. diet. ed. 8. no. 15. D. C. fl. *ft.* 3. p. 584. Chav. antirrh. p. 105.) plant pilose; leaves cordate-ovate or ovate, mucronate at apex: lower ones sometimes opposite, on short petioles, and obsoletely toothed: superior ones quite entire, nearly sessile ; pedicels longer than the leaves ; calycine segments ovate-lanceolate, cordate at the base, acute. ©. H. Native throughout Europe, in corn-fields. Ait. hort. *kew. ed. 2d. vol. 4. p. 11. L. lanigera, Hoffm. et Link, fl. port. 1. p. 231. t. 34. exclusive of the syn. of Desf. Elatine ovàta, Gray, brit. pi. 2. p. 321. Ant. spùrium, Lin. spec. p. 851. Brot. fl. lus. 1. p. 188. Smith, engl. bot. 10. t. 691.

Oed. fl. dan. t. 913. Labr. et Heg. icon. helv. 5. t. 1. Cymbalaria spuria, Baumg. trans. 2. p. 209.—Hall. helv. no. 341. Linaria segetum nummulariae folio villoso, Tourn. inst. 1. p. 169.—Bauh. hist. 3. p. 372. f. 1__fabern. 2. t. 413. f. 1.—Mor. hist. sect. 5. t. 14. f. 27. Plant a foot or more long, clothed with spreading articulated hairs. Branches usually procumbent. Leaves 1-3 inches long. Corolla yellow ; upper lip dark purple ; spur incurved. Capsule downy. Seeds ovoid, compressed ; testa foveolate.

Far. /3, *dentata* (Chav. antirrh. p. 106.) lower leaves, and sometimes also the upper ones toothed; flowers larger; plant firmer, erectish. ©. H. Native of France and Switzerland, rather frequent.

Far. y, *microphylla* (Chav. 1. c. t. 8.) leaves much smaller, roundish, woolly. ©. H. Native about Montpelier. Peldria comm. goett. 1. p. 351. t. 15. f. 4. Stoehel, in act. helv. 2. p. 25. t. 4.

Spurious Toad-Flax. Fl. June, Sept. England. PL pros.

18 L. ELA'TINE (Mill. diet. ed. 8. no. 16. Chav. antirrh. p. 107.) pilose ; leaves usually ovate-hastate, mucronulate at top, alternate : lower ones sometimes opposite, and often denticulated ; pedicels longer than the leaves ; calycine segments lanceolate, very acute. ©. H. Native of Europe, North of Africa, frequent in corn-fields; and *of* the Island *of* Madeira. It is also to be found in North America, but has, most probably, been introduced from Europe. D. C. fl. fr, 3. p. 584. Tenore, syll. p. 302. L. commutata, Bernh. in Reichb. pi. cnt. 19. t. 815. f. 1101. Ant. elatinoides, Tenore, fl. nap. 2. p. 48. Ant. auriculàtum, Lam. fl. fr. 2. p. 339. Smith, engl. bot. 10. t. *692.* Gaud. fl. helv. 3. p. 147. but not *of* Sibth, herb.__Hall. hist. no. 340. Linaria segetum nummulariae folio aurito et villoso, flore luteo, Tourn. inst. 1. p. 169.—Mor. hist. 2. sect. 5. t. 14. f. 28.—Lob. icon. 470.—Blackw. herb. t. 170. EXcmvrj, Diosc. 4. p. 40. This species comes very near the preceding, but it is readily distinguished by its slender habit, and the usually smaller hastate leaves, with acute auricles : and in the segments of the calyx being less cordate at the base. The flowers are the same, but sometimes bluish.

Var. ft, ccerulea (Chav. antirrh. p. 107.) flowers blue, larger ; leaves broader, usually toothed. ©. H. Native of Egypt and Mauritania. Linaria segetum nummulariae folio aurito et villoso, flore caeruleo, Tourn. inst. p. 169. Elatine folio acuminato, flore caeruleo, Bauh. pin. *253.* Magn. bot. p. *89.*

Far. y, *Siebèri* (Chav. 1. c.) very villous ; leaves smaller, usually cordate-ovate, not hastate : calycine segments narrower. ©. H. Native of Candia. ? L. Elatine, Sieb. in herb. Gay. L. Siebèri, Rchb. fl. germ. sect. 2. p. 374.

Far. Bf hamosa (Chav. 1. c. p. 108.) flowers pale blue, larger; spur hooked ; calycine segments almost linear. 0. Fl. Native of the Island Ischia, on rocks; and of Calabria and Camaria. Ant. hamòsum, Passy, in herb. D. C. et Merat.

Far. e, peloria (Chav. 1. c) flowers shape of those of *L. vulgaris,* var. *peloria.* ©. H. Hegets, in descript. *mL. spuria,* in icon. helv. 5. no. 1.

Elatine, or Halbert-leaved Toad-Flax. Fl. June, Nov. Britain. PL trailing.

19 L. GR^VCA (Chav. antirrh. p. 108.) villous ; lower leaves ovate-oblong, or ovate, opposite: superior ones ovate-lanceolate, hastate, alternate, on short petioles ; pedicels capillary, much longer than the leaves; segments of calyx linear, very* acute, hardly exceeding the capsule. ©. H. Native of the Grecian Islands, and the neighbouring continent; Corsica and Sardinia. Ant. Grae'cum, Bory, et Chaub. fl. pelop. no. 796. t. 21. L. Elatine, D. Urv. enum. p. 74. Sibth. et Smith, fl« graec. icone. but not of Mill. Branches slender at first, erectish, but at length prostrate, nearly simple. Pedicels stiff, bent, or twisted at apex, quite glabrous. Corolla downy, citron coloured ; spur arched, at length straight, rather longer than the corolla. Capsule glabrous. Testa of seeds brown, granularly tubercled.

Grecian Toad-Flax. FL July, Oct. PL prostrate.

20 L. CIRRHO^SA (Willd. enum. p. 689. D. C. fl. fr. 5. p. 407. Chav. antirrh. p. 109.) pilose, very slender ; leaves lanceolate, or linear-lanceolate, hastate, alternate, petiolate ; pedicels longer than the leaves, here and there twisted like tendrils; calycine segments linear-lanceolate, acute, shorter than the capsule. 0. H. Native of the South of France, in corn fields ; in Camaria; Stoechades; Corsica, near Ajaccio; and on the mountains about Bola; Island of Ischia, in hedges; Candia ; and Egypt. Ten. syll. p. 302. Elatine tènuis, Mcench, meth. suppl. 171. Ant. cirrhosum, Lin. mant. 249. Jacq. hort. vind. t. 82. Tenore, fl. neap. 2. p. 49. Linaria supina villosa, folio sagittato, Till. pis. t. 32. f. 2. Habit of plant slender, prostrate. Corolla small, bluish ; palate white, marked with purple dots; spur almost straight, shorter than the corolla. Capsule downy. Seeds ovate-truncate ; testa black, tubercular.

Tendrilled Toad-Flax. FL June, Sept. Clt. 1771. PL prostrate.

21 L. ALSIN;EFO'LIA (Spreng. syst. 2. p. 729. Chav. antirrh, p. 110.) leaves quite entire, downy: lower ones ovate, opposite, on long petioles : superior ones ovate-cordate, mucronate, petiolate ; pedicels shorter than the petioles; calycine segments linear-lanceolate, very acute, with membranous edges. Q. H. Native *of* the small Islands between Corsica and Sardinia ; and on the north-west shore of Sardinia; and in the desert near the Red Sea. Ant. alsinifolium, Viv. fl. cors. p. 10. The whole herb is clothed with short white glandular hairs. Branches erectish. Lower leaves 1 inch long. Calyx villous, ciliated. Corolla small, yellow, with a straight, short, acute spur. Capsule smoothish. Seeds roundish ; testa brown, granularly tubercled.

Chickweed-leaved Toad-flax. PL 1 foot.

22 L. *MGYVTIÀCA* (Dum. Cours. bot. cult. ed. 1st. t. 11. p. 92. Chav. antirrh. p. 110.) sufFruticose, downy ; leaves alternate, ovate, usually tricuspidate, petiolate ; pedicels bent at top, at length ending each in a spine ; calycine segments linear-lanceolate, acute. ^2. F. Native of Egypt, in arid places near Cairo ; and on the mountains of Cyrenaica. Ait. hort. kew. ed. 2d. vol. 4. p. 11. Del. fl. aegypt. p. 95. t. 92. Ant. spinescens, Viv. fl. libyc. p. *22. t.* 27. f. 2. L. spinescens, Spreng. syst. 2. p. 789. Ant. iEgyptiacum, Lin. syst. p. 464. Lam. diet. 4. p. *350.* Forsk. aegypt. p. 112. EXi-tj/r/, Diosc. ex Sibth. The branches rise from the neck of the plant the first year, but afterwards the neck becomes the form of a caudex, and twisted ; branches 1-3 feet long. Leaves glaucous, 2-3 lines long. Corolla small, yellowish ; spur blue, hooked. Capsule downy. Seeds small; testa granulately tubercled. The *L. spinescens of Viv.* is only the old state of *L. Mgyptiaca.*

Egyptian Toad-Flax. Fl. June, Aug. Clt. 1771. fchrub trailing.

23 L. rituTictfsA (Desf. fl. ad. 2. P- *»• *t. 133.* Char, antirrh. p. 111.) stem suffruticose, villous, branched ; leaves alternate, petiolate, ovate-oblong, acutish, downy, rarely furnished with one or two teeth at the base : superior ones entire ; pedicels shorter than the leaves, erect; calycine segments narrow, acute, *h* . F. Native of Barbary, on calcareous mountains near Cafsa. Ant. fruticòsum, Willd. spec. 3. p. 237. Pers. ench. 2, p. 155. Stem woody, thick, twisted; branches erect, villous. Leaves acutish, or obtuse, 3-4 lines long. Pedi-

eels glabrous. Calyx downy. Corolla yellow; spur straight, or arched ; upper lip emarginate, somewhat 2-lobed ; lobes reflexed. Capsule downy. Seeds small; testa tubercled.

Shrubby Toad-Flax. Shrub 1 foot.

§ 2. *Capsule ovate, dehiscing by two oblong, valve-formed lids at apex.*

24 L. RAMOSI'SSIMA {Vail, pi. asiat. rar. *2.* p. 43. t. 153.) smoothish; caudex thick; branches elongated, woody ; leaves alternate, petiolate, quite glabrous, all triangularly hastate, or the lower ones are somewhat palmate nerved, and 5-7-lobed ; pedicels stiff, longer than the petioles ; segments of the calyx linear-lanceolate, very acute, with membranous margins, *fy* • F. Native of India, in Hindostan and Burmah, in waste and stony places, Wall. ; in the province of Delhi, Royle; Coromandel, Heyne; and at Patna, Hamilton. L. hastâta, Royle, mss. L. Rôylei, Chav. antirrh. p. 112. Caudex twisted ; branches erect, or ascending, downy. Pedicels glabrous, bent at top, and like the petioles becoming at length stiff and spine-like. Calyx glabrous. Corolla downy, yellow; upper lip short; spur short, arched. Capsule glabrous. Seeds nearly orbicular; testa black, finely tubercled.

Much-branched Toad-Flax. Shrub 1 to 1| foot.

25 L. INCA'NA (Wall. cat. no. 3910. Benth. scroph. ind. p. *20.)* clothed with hoary villi; stems prostrate, woody at the base; leaves ovate, villous, rather cordate at the base, quite entire, or sub-hastate; pedicels longer than the petioles ; segments of calyx linear, acute. J?. F. Native of Nipaul, in fields, and among rubbish in the valleys. Corolla pale brown, spotted with purple inside.

Hoary Toad-Flax. Shrub prostrate.

26 L. HETEROPHY'LLA (Spreng. syst. 2. p. 790. Chav. antirrh. p. 112. but not of Desf.) suffruticose ; branches slender, glabrous; leaves petiolate : lower ones oblong-hastate : superior ones linear-lanceolate, and linear, sometimes hastate, or sagittate, sometimes quite entire ; pedicels longer than the leaves; calycine segments nearly lanceolate, acute. F? . F. Native near Mogodor ; and of the Canary Islands. Webb, et Bertholet, fl. can. icon. hied. Ant. heterophyllum, Willd. spec. 3. p. 234. Ant. sagittâtum, Poir. suppl. 4. p. 20. Caudex woody; branches 1-2 feet, striated. Lower leaves 8-14 lines long, glabrous above, but rather downy on the back. Corolla large, yellow, with a woolly palate, and straight spur. Testa of seed granularly tubercled.

Variable-leaved Toad-Flax. Shrub procumbent.

27 L. CIRCINA'TA (D. Don, in Sweet, fl. gard. n. s. t. 235.) suffruticose, glabrous ; leaves sagittate, circinately recurved, acute behind; calycine segments lanceolate, acuminated; spur subulate, straight, length of corolla; palate with 2 prominences, densely bearded. ty. G. Native of the Canary Islands. Corollas of a sulphur colour, larger than those of *L. vulgâris,* clothed with glandular pubescence; palate deeper coloured, clothed with dark red hairs. Leaves alternate. Peduncles filiform, axillary, solitary, thickened at top.

Circinate-leaved Toad-Flax. Fl. June, Aug. Clt. 1824. Pi- procumbent.

28 L. SPARTIOI'DES (Brouss. ex Buch. besch. der. can. p. 163. Webb, et Berth. 1. c. Chav. antirrh. p. 113.) suffruticose, glabrous; branches leafless at the base, twiggy; leaves linear-lanceolate, or linear, quite entire, alternate : lower ones petiolate ; superior ones nearly sessile ; pedicels longer than the segments nearly lanceolate, very acute. *J?* . F. Native of Teneriffe, and Grand Canary, on rocks by the sea-side; and of Cape Verd, upon a hill called in French Les Mamelles, and by the English the Paps. L. scopâria, Brouss. in herb. D. C. Spreng. syst. 2. p. 789. Root emitting many procumbent branches. Leaves 6-12 lines long. Pedicels bent at top. Corollas size of those of *L. Grceca,* downy, yellow ; spur ascending. Seeds ovoid ; testa brown, tubercled.

Broom-like Toad-Flax, Fl. June, July. Clt. 1816. Shrub procumbent.

SECT. III. LINARIA'STRUM (from *Linâria* and *astrum,* an affixed signification like; the name is given to the section of the genus from its containing the only legitimate species of the genus.) Chav. antirrh. p. 114. Linariastrum, the greater part Duby, bot. gall. 1. p. 344. Leaves sessile, alternate, or verticillate, rarely opposite, feather-nerved, quite entire, usually glaucous. Flowers terminal, racemose, spicately racemose, and sometimes somewhat capitate. Palate at the throat of the corolla, prominent. Capsule dehiscing by 4-10 small valves or teeth at the apex. Seeds angular; or discoid, girded by a membranous border or margin, emarginate at the hilum.

§ 1. *Leaves dilated, ovate, lanceolate, or oblong, verticillate or alternate. Flowers racemose, or spicately racemose. Corolla always beyond 3 lines long, with the spur.*

* *Leaves usually* 4 *in a whorl. Flowers usually verticillate.*

29 L. TRIORNITHÔPHORA (Willd. enum. p. 639. Chav. antirrh. p. 114.) branches erect, decumbent at top; leaves lanceolate, acute, quite glabrous ; flowers usually 3-4 in a whorl. 2£. G. Native of Portugal, especially in the province of Minho, in gravelly, mountainous, humid places. Hoffm. et Link, fl. port. p. 244. L. Lusitânica, Mill. diet. ed. 8. no. 3. but not of Brot. Ant. triornithophorum, Lin. spec. p. 852. Vent. malm. p. 11. t. II. Brot. fl. lus. 1. p. 198. Curt. bot. mag. 525. Linâria latissimo folio Lusitânica, Tourn. inst. 1. p. 169.—Riv. mon. irr. 1. t. 84.—Herm. lugdb. 376. t. *377.* Plant glaucous, glabrous. Leaves usually 4 in a whorl, rarely *3-5,* 2-3 inches long, glaucous beneath, with purplish edges. Calyxes exceeding the capsule. Corolla an inch long, pale violet, or purple; spur straight, equal to the corolla in length ; palate yellow ; tube inflated, and striated. Capsule dehiscing by 8 teeth at apex. Seeds discoid.

Three-birds-bearing Toad-Flax. Fl. June, Sept. Clt. 1710. PI. 2 to 4 feet.

* * *Leaves all 3 in a whorl, or only the lower ones, or opposite ; the rest alternate.*

30 L. LATIFÔLIA (Desf. fl. atl. 2. p. 40. t. 134. Chav. antirrh. p. 115.) glabrous ; branches erect, almost simple, twiggy; leaves broad-lanceolate : lower ones 3 in a whorl : superior ones alternate ; flowers disposed in long spicate racemes ; calycine segments linear-lanceolate, exceeding the capsule. ©. H. Native of Barbary, in corn fields near Mascar and Tlemsen. Ant. latifdlium, Willd. spec. *3.* p. 238. Pers. ench. *2.* p. 155. Leaves somewhat stem-clasping, U to 3 inches long, rather glaucous. Corollas size of those of *L. vulgâris,* yellow ; spur straight, or a little arched, length of corolla. Capsule dehiscing by 6 small valves at apex. Seeds discoid.

Broad-leaved Toad-Flax. FL June, July. Clt. 1800. PI. 1 to 2 feet.

31 L. HI'RTA (Mcench, meth. suppl. p. 170. Chav. antirrh. p. 116.) villous, erect; leaves ovate-elliptic, acutish: the lower ones 3 in a whorl, or opposite, the rest alternate; flowers crowded; segments of the calyx ovate-oblong, obtuse; upper one the largest. ©. H. Native of Spain, near Madrid ; and about Malaga; of Portugal, in cultivated fields between Serpa and La Guadiana. L. villôsa, Mill. diet. ed. 8. no. 10. but not of D. C. L. semiglâbra, Salzm. exsic. in herb. D. C. Ant,

viscdsum, Curt. bot. mag. t. 368. Ant. hirtum, Lin. syst. p. 446. spec. p. 857. Jacq. icon. rar. 1. p. 12. t. 117. Hoffm. et Link, fl. port. p. 246. Plant clothed with clammy, glandular hairs. Leaves half stem-clasping, 1-2 inches long. Corolla yellow, showy, marked by green stripes, 9-14 lines long, with the spur, which is straight, and equal in length to the corolla; palate fulvous. Capsule opening by 6 small valves at apex. Seeds compressed, sub-discoid, obscurely triquetrous; testa grey, scrobiculate.

Hairy Toad-Flax. Fl. June, Sept. Cit. 1759. PL \ to \\ foot.

32 L. CAVANILLE'SII (Chav. antirrh. p. 117.) villous, erect ; leaves ovate, subpetiolate, usually 3 in a whorl; flowers crowded ; calycine segments oblong, contracted at the base : superior one the longest. ©. H. Native of Spain, on the shady mountains of la Cova Alta, near Albayda and Palomera. Ant. triphyllum, Cav. icon. 2. p. 61. t. 179, exclusive of all the synonymes. Linaria Hispanica trifolia latifolia villosa, Tourn. inst. p. 169. Branches branched at top, clothed with capitate or glandular hairs, like the rest of the plant. Leaves \ inch long and more, 3-nerved, bluntish. Flowers crowded into a spike-formed raceme. Corolla almost like that of the preceding, pale yellow; spur a little incurved ; superior lip whitish, marked with brown lines. Capsule downy, opening by 6 teeth at apex. Seed almost similar to those of the last.

Cavanilles's Toad-Flax. Fl. April, July. PL 1 foot.

33 L. TRIPHY'LLA (Mill. diet. ed. 8. no". 2. Desf. fl. atl. 2. p. 40. Chav. ant. p. 118.) quite glabrous, glaucous, erect, or ascending ; leaves ovate and elliptic, usually 3 in a whorl; flowers disposed in dense, spicate racemes; calycine segments oblong, or ovate-lanceolate, obtuse, shorter than the capsule. Q. H. Native o€ Italy, Ca\abt\a, Spam, Portugal, Sicily, Corsica, France, &c. Tenore, syll. p. 303. L. glabrata, H. B. et Kunth, nov. gen. amer. 2. p. 362. Linaria triphylla minor lutea, Bauh. pin. 212. Tourn. inst. p. 169. Lower leaves an inch long, obtuse, or acutish : upper ones smaller, 3 in a whorl, opposite, or alternate, attenuated at both ends. Upper segment of calyx rather the largest. Corolla variegated with three colours, blue, white, and yellow; spur arched, almost the length of the corolla : upper lip pale purplish blue, lower one smaller and whitish ; the palate yellow ; the spur blue, or violaceous, acute. Capsule furrowed, opening by 6 valves at apex. Seeds prismatic, subtriquetrous, angular ; testa brown, reticulately excavated.

Var. fi, cceriilea (Chav. antirrh. p. 118.) corollas nearly all blue; leaves narrower; plant more slender. 0. H. Linaria triphyllos caemlea, Bauh. pin. p. 212. Tourn. inst. p. 169. Mor. hist. sect. 5. t. 12. f. 23. Linaria nedecta, var. /3, Guss. icon. fl. sic. t. 305. f. 2.

Far. y, *Peldria* (Rcem. arch. bot. 1. p. 125.) corollas shaped like those of Peloria, var. of *L. vulgaris.*

Three-leaved Toad-Flax. FL June, Sept. Clt. 1596. PI. 1 to 2 feet.

34 L. VIRG^TA (Desf. fl. atl. 2. p. 41. t. 135. Chav. antirrh. p. 119.) glabrous, glaucescent; branches erect, simple, twiggy; lower leaves ovate, 3 in a whorl: superior ones ovate-lanceolate, generally alternate ; flowers disposed in spicate racemes ; calycine segments linear, very acute, exceeding the capsule. ©. H. Native of Numidia, Poir.; in corn-fields of Algiers, Desf. ; in fields near Tripoli ; and in the Great Syrtus, Viv. Ant. virgatum, Poir. itin. 2. p. 192. Lam. ill. t. 531. f. 4. Viv. n. libyc. p. *33.* Branches erect, or decumbent. Leaves rnucr0" nulate, 5-9 lines long. Bracteas and calyxes hairy. Corona blue ; spur subulate, twice as long as the corolla : upper; nj? elongated. Capsule opening by 6 teeth at apex. Seeds suDtnquetrous, angular ; testa brown, scrobiculate.

Twiggy Toad-Flax. Fl. June, July. Clt. 1817. PL 1/5 to 1 %°5

L. REFLE'XA (Desf. fl. atl. 2. p. 42. D. C. fl. fr. 3. p. 585. Chav. antirrh. p. 119.) glabrous, procumbent; leaves ovate, acute, glaucous : lower ones *3* in a whorl: superior ones alternate; flowers in loose racemes; pedicels longer than the leaves, reflexed after flowering ; calycine segments sub-lanceolate acute ©. H. Native of Corsica, Sicily, Sardinia, Italy, Tunis "n corn-fields. Guss. prod. fl. sic p. 162. Tenore, syll p. 303. L. rhegina, Spreng. syst. 2. p. 792. Ant. prostratum, Cyr. in herb. Moricand. Ant. reflexum, Lin. syst. p. *557* spec p. *857.* All. misc. taur. 2. p. 205. t. 1. Sibth. et Smith, fl. grsec. t. 593. Corolla pale blue, rarely white ; palate yellow; spur straight, twice or thrice as long as the corolla, subulate, acute ; upper lip erect, elongated. Capsule dehiscing bv 6 valves at apex. Seeds subreniform ; testa brown, pitted.

lteflexed-vedice\\e& Toad-Flax. FL May, Aug. Clt. 1810. PL procumbent.

36 L. PEDUNCULA^TA (Spreng. syst. 2. p. 797. Chav. antirrh. p. 120.) quite glabrous, ascending; lower leaves ovate-lanceolate, obtuse, 3 in a whorl, and opposite: middle and upper ones oblong, alternate ; flowers on long pedicels; pedicels a' length firm, not reflexed ; calycine segments linear-oblong, obtuse, shorter than the capsule. ©. H. Native of Spain, as about La Torre Gorda, Malaga. Gibraltar, &c. L. transtagkna, Spreng. syst. 2. p. 792, exclusive of the syn. *o*\ Link. Ant. spartium, Saltzm. exsic. in herb. D. C, et Gay, but not of Lin. Ant. pedunculatum, Lin. spec. 2. p. 857. Lam. diet. 4. p. *363.* Branches woody at the base, and often without leaves ; young branches leafy, and decumbent. Leaves 3-4 lines long, like those of *Polygonum aviculare.* Corolla blue, marked with deeper veins, size of those of *L. origanifolia;* palate yellow ; spur straight, subulate, shorter than the corolla! Capsule opening by 6 small valves at apex. Seeds reniforrn; testa black, muricated. Flowers loose.

Pedunculate-flowered Toad-Flax. Fl. June, July. Clt. 1810. PL \ to 1 foot.

37 L. FLA^VA (Desf. fl. atl. 2. p. 42. t. 136. D. C. fl. fr. *s.* p. 729. Chav. antirrh. p. 121.) glabrous, erect; lower leaves ovate, or ovate-oblong, 3 in a whorl: superior ones oblong-linear, alternate : flowers terminal, few, on short pedicels • calycine segments broadly linear, obtuse, shorter than the capl sule. ©. H. Native of Barbary, in corn-fields near La Calle ; Numidia; Sardinia; Corsica, in sand by the sea near Ajaccio; and of Spain. Ant. flavum, Poir. itin. 2. p. 19\. Lam. diet. 4. p. 358. Lower leaves 4-6 lines long: superior ones smaller, all obtuse and glaucous. Corolla small, deep yellow ; spur acute, about equal in length to the corolla. Capsule opening by 6 small valves. Seeds subreniform ; testa black pitted.

Yellow-flowered Toad-Flax. FL July, Aug. Clt. 1820. PL i to 1 foot.

38 L. CRETVCEA (Fisch. exsic. in herb. D. C. Sprenosyst. 2. p. 791. Chav. antirrh. p. 122.) glabrous ; leaves ovate acutish, glaucescent: lower ones 3 in a whorl: superior on ' opposite and alternate ; flowers spicately racemose, f[illegible] cine segments linear-lanceolate, acute, very short. rk *£' Native in cretaceous places at the river Don. Branchp* K [illegible] at top. Leaves crowded, 4-6 lines long: u p p e r f ^

Racemes short. Flowers on short pedicels. Corolla yellow, with a short, sub-incurved spur ; palate deep yellow. Capsule unknown.

Cretaceous Toad-Flax. Fl. June, Sept. Clt. 1827. PI. *h* to f foot.

39 L. THYMIFO'LIA (D. C. fl. fr. 3. p. 587. Lois. fl. gall. ed. 2d. vol. 2. p. 792. t. 10. Chav. antirrh. p. 122.) glaucous, glabrous, procumbent, or ascending ; lower leaves ovate, obtuse, 3 in a whorl: superior ones oblong, usually opposite ; flowers few at the tops of the branches; calycine segments oblong-ovate, obtuse, shorter than the capsule. ©. H. Native of the south-west of France, on the sea-shore about Burdigala, and near Bayonne. Ant. thymifolium, Vahl, symb. 2. p. 67. VVilld. spec. 3. p. 243. Ant. glaucum, Thore, clor. land. 265. but not of Lin. nor Lapeyr. Branches usually decumbent. Leaves *3-5* lines long : upper ones smaller. Flowers on short pedicels. Corolla like those of Z. *supmum,* yellow ; spur a little arched, about the length of the corolla ; palate orange-coloured. Capsule dehiscing by 6 deep valves at apex. Seeds discoid.

Thyme-leaved Toad-Flax. Fl. June, July. Clt. 1818. PI. procumbent.

* * * *Leaves all alternate,*

40 L. LUSITA'NICA (Hoffm. et Link, fl. port. p. 247. t. 43. Chav. antirrh. p. 123. but not of Mill.) branches procumbent, glabrous ; leaves crowded, obovate, or oblong : upper ones the larger ; flowers disposed in dense racemes ; calycine segments oblong, obtuse, pubescent. %. H. Native of Portugal, in sand by the sea side near Comporto, and at the mouth of the river Mondego. Ant. Lusitanicum, Lam. diet. 4. p. 361. Brot. fl. lus. 1. p. 193. Linaria Lusitanica maritima polygalae folio, Tourn. inst'. p. 169. Root fibrous, yellowish. Leaves glabrous, glaucescent: lower ones *3-5* lines long. Corolla large, yellow; tube and spur marked with red lines ; spur about equal in length to the corolla, straightish, acute. Capsule opening by 6 small valves. Seeds discoid.

Portugal Toad-Flax. Fl. June, July. Clt. 1819. PI. proc.

41 L. MICHAU'XII (Chav. antirrh. p. 124. t. 7. f. B.) glaucous ; branches ascending, branched; leaves broad-obovate, rnucronate ; flowers disposed in spicate racemes ; calycine segments oblong, ovate, acutish. %. H. Native of Persia, near Ispahan. Plant quite glabrous. Branches furnished with a few sterile, filiform branchlets, which are sometimes reduced to spines. Leaves as if they were truncate at top, 5-7 lines long. Corolla large, purple ; the spur hardly longer than it, and incurved at top ; palate bearded. Capsule unknown.

Mkhaux's Toad-Flax. PL \ to \ foot.

42 L. FASTIGIA'TA (Chav. antirrh. p. 125. t. 7. f. A.) glaucous, glabrous, erect; branches fastigiate ; leaves ovate-lanceolate, or oblong, adpressed to the stem at the base, mucronulate at apex ; flowers disposed in dense spicate racemes, which taper to the top ; calycine segments oblong-lanceolate, acute. 1/ . H. Native of the Levant, Armenia, in cultivated fields near Bagdad and Kermancha, Oliv. Linaria orientalis latissimo folio, floribus linarise vulgaris, Tourn. cor. inst. p. 9.? Leaves lj to 2 inches long, 5-nerved, somewhat stem-clasping at the base. Corolla yellow ; spur shorter than the corolla, a little arched.

Fastigiate-hranched Toad-Flax. PL 1 to 2 feet.

43 L. PYRAMIDA[X]TA (Spreng. syst. 2. p. 796. Chav. antirrh. P- 125, exclusive of the syn. of Lin.) erect; leaves oblong-janceolate, attenuated at both ends, quite glabrous; flowers in spicate, pyramidal racemes ; calycine segments ovate-oblong, obtuse, downy, much shorter than the tube of the corolla. If.. H. Native of the Levant. Ant. pyramidale, Lam. diet. 4. p. 360. Linaria orientalis lilii persici foliis, florum spica densissima [et] pyramidata, Tourn. corol. inst. p. 9. Leaves *3-5* inches long, usually 5-nerved, a little stem-clasping at the base, mucronulate at apex. Corolla large, yellow ; spur straight, acute, about equal in length to the corolla ; palate densely bearded.

Pyramidal-spiked Toad-Flax. PI. 2 to 3 feet.

44 L. GRANDIFLORA (Desf. cor. inst. Tourn. p. 30. t. 21. Chav. antirrh. p. 126.) erect, glaucescent, glabrous; leaves ovate-lanceolate, acute, half stem-clasping; bracteas deflexed, longer than the pedicels; flowers approximate ; calycine segments oblong-lanceolate, acute, quite glabrous. ©. H. Native of Armenia, in uncultivated fields very frequent. L. Dalmatica, Rchb. pi. crit. 5. t. 438. f. 629. Ant. Dalmaticum, Lam. diet. 4. p. 360. exclusive of the syn. of Lin. and others.—Buxb. cent. 1. p. 15. t. 24. Linaria orientalis flore luteo maximo, Tourn. cor. inst. p. 9. Leaves approximate, 5-nerved, attenuated at both ends. Corolla large, yellow ; spur a little shorter than the corolla, straight; palate deep yellow, villous. Capsule not seen.

Great-flowered Toad-Flax. PL 2 to 3 feet.

45 L. DALMA'TICA (Mill. diet. ed. 8. no. 13. Chav. antirrh. p. 127.) glaucous, glabrous, branched; leaves oblong-lanceolate, acute, approximate ; flowers few, and loose at the summits of the branches ; segments of calyx oblong-lanceolate, or linear-lanceolate, acute, glabrous. 1£. H. Native of Candia, Armenia, and Dalmatia. Baumg. trans. 2. p. 205. Ant. Dalmaticum, Lin. spec. p. 857. exclusive of the syn. of J. Bauh. Pall.'itin. p. 590. Linaria latifolia, Dalmatica magno flore, C. Bauh. pin. p. 212. Tourn. inst. p. 169. Branches erect, or decumbent, densely clothed with leaves. Leaves 1-3 inches long, 3-5-nerved : upper ones 3-nerved. Flowers disposed in loose few-flowered racemes. Corolla yellow ; spur straight, much shorter than the corolla; palate large, villous.

Dalmatian Toad-Flax. PL 3 to 4 feet.

46 L. GENIST/EFO[Y]LIA (Mill. diet. ed. 8. no. 14. Chav. antirrh. p. 128.) glaucous, glabrous, erect; leaves lanceolate, acute, 3-5-nerved ; flowers paniculately racemose ; rachis flexuous, twiggy; segments of the calyx oblong-lanceolate, acute. "2/. H. Native of Austria, Hungary, Tauria, Caucasus, and Altaia ; and about Constantinople, in sandy, dry places. Rchb. pi. crit. 5. t. 435. Ledeb. fl. alt. 2. p. 443. Meyer, verz. p. 109. Riv. mon. ii Os^is, Pliny, na, h i s t ^ Osyris Linària, Trag. *357' O*vp«%* Diosc. 4. p. *138.* Rhizoma creeping tubercled Plant glaucous. Leaves about an inch long. Corolla pale yellow or citron-coloured; palate copper-coloured; spur curved, about equal in length to the corolla. Capsule dehiscing by 6-8 teeth. Seed with tubercled centre and winged margin.]n Worcestershire the plant is called Butter-and-Eggs. Gerard names it *Wild-Flax, Toad-Flax,* and *Flax-weed.* It abounds in an acrid oil, that is almost empyreumatic. Given inwardly it excites nausea. It is recommended in dropsical cases ; but Haller and others do not much approve of it. The juice, mixed with milk, is a poison to flies.

Far. /3, glandulbsa (Chav. antirrh. p. 132.) downy, usually procumbent; calyxes glandular. %. H. Native in woods about Malmedy. Ant. glanduldsum, Lejeune, fl. spa. p. *320.* Ant. Linària, var. glandulòsum, Lejeune, revue, p. 124. L. prostràta, Bcenn. in Rchb. 1. c. but not of Cyrill. under *Antirrhinum.*

Far. y, specibsa (Chav. 1. c.) leaves linear-lanceolate, rather coriaceous, obsoletely 3-nerved, glaucescent beneath ; flowers larger ; capsule elliptic-oblong. %. H. Native of Naples, in corn-fields on the mountains. L. speciòsa, Ten. fl. neap. 4. t. 159. f. 1. syll. p. 304.

Far. <), acutiloba (Chav. 1. c.) leaves narrow-oblong, or oblong-lanceolate, usually 3-nerved ; calycine segments often acuminated ; corolla pale yellow ; palate deep orange-coloured ; lobes sometimes acutish, sometimes obtuse; capsule subcylindrical. %. H. Native *of* Dahuria; and *in* shady dry places in the region of Altaia. L. acutiloba, Fisch. mss. Rchb. pi. crit. 5. p. 14. t. 424. f. 611.

Far. e, Pelòria (Lin. amoan. 1. p. *280.* Smith, engl. bot. 4. t. 260. nov. diet. sc. nat. veg. t. 31.) corolla almost regular, ending in 5 horns at the base.

Common Toad-Flax. FL June, Sept. Britain. PL 1 *to 2* feet.

50 L. BIEBERSTE'INII (Besser, enum. pi. pod. p. 25. Rchb. pi. crit. 5. t. 434. f. 624. and *625.)* branched ; leaves broad-linear, or linear-lanceolate, 3-nerved, mucronate ; flowers disposed in a short crowded raceme ; segments of the calyx oblong-linear, acutish, downy ; capsule globose. 1/. H. Native of the South of Podolia; on the shores of the Black Sea, about Odessa ; in Syria, about Damascus. Chav. antirrh. p. 134. Ant. Linària, Bieb. fl. cauc. 2. p. *75.* exclusive of many synonymes. Stem furnished with fastigiate branches. Leaves *1-2* inches long. Corollas form of those of //. *vulgdris,* but a little smaller, pale yellow, with a deeper coloured, bearded palate. Capsule nearly globose, dehiscing by 6-8 valves at apex. Seeds margined, black.

Bkberstein's Toad-Flax. Fl. June, Aug. Clt. 1820. PL 1 to 3 *feet.*

51 L. HEPA'TICA (Bunge, in Led. fl. alt. *2.* p. 445. fl. ross. alt. ill. t. 91. Chav. antirrh. p. 134.) branches spreading, elongated, strict; leaves oblong-linear, acute, glabrous, crowded ; flowers racemose; calycine segments glabrous, obtuse, about equal in length to the pedicels ; spur slender, straight, about equal in length to the corolla. %• H. Native of the Kirghisean steppe, on the mountains at the river Kurtschum, and on the mountains of Arkaul and Dolenkara. Plant glabrous, glaucous, rather procumbent at the base. Leaves somewhat 3-nerved. Flowers distant on the raceme. Calycine segments glabrous, rarely glandularly ciliated. Corollas rather large, liver-coloured, or dirty purple, almost like those of *Lotus Jacobceus;* palate villous. Seeds black, discoid.

Zi^r-coloured-flowered Toad-Flax. PL 1 to /\ foot.

52 L. PR^COX (Bunge, in Led. fl. alt. 2. p. 446. fl. ross. alt.

ill- t. 431. Chav. antirrh. p. 135. but not of Link, fl. port.) stem erect, strict, simple; leaves scattered: lower ones short, broader: superior ones linear, elongated, fleshy, glaucous; segments of the glandular calyx oblong, obtuse ; spur straight, exceeding the corolla, which is also glandular; racemes subspicate. V« H. Native of Altaia, at the river Irtysch, and between Tscheremschanskoi and Krasnojarski, on dry mountains. Plant glabrous, glaucous. Leaves 1-2 inches long. Racemes 12-15-flowered, at length elongated. Calycine segments somewhat 3-nerved. Corolla violaceous, marked with deeper stripes ; throat villous, white, furnished with 2 yellow confluent spots ; the spur deeper violet. Seeds discoid.

Early Toad-Flax. Fl. April. PI. 1 to 2 feet.

53 L. ODORA (Fisch. cat. hort. gorenski, 1812. p. 25. Chav. antirrh. p. 136.) branched, erect or ascending; leaves linear-subulate, semiterete, channelled; flowers in loose racemes ; calycine segments short, ovate or elliptic, obtuse; capsule globose. 2/. H. Native of Tauria, in the sand of the Ukraine ; in the colony of Sarepta, Rchb. ; Siberia, at the Oby, Demidow ; on sandy hills between Schulbinsk and Oserski, at the river Irtysch,' Ledeb. ; in Calabria and Sicily rather frequent, Schouw. ? Pink-leaved Toad-Flax. PI. ?

101 L. POLYGONIIFOLIA (Hoffm. et Link, fl. port. 1. p. 248. t. 44.) leaves subverticillate and opposite, sessile, ovate, glabrous as well as the prostrate stem; flowers subspicate; calyx hispid. 0. H. Native of Portugal.

Polygonum-leaved Toad- Flax. PI. prostrate.

102 L. RUPE'STRIS (Meyer, verz. pflanz. p. 110.) perennial, glabrous, glaucescent; stems slender, much branched, diffuse ; leaves scattered, nearly linear, acutish ; racemes few-flowered, loose ; calycine segments nearly linear, obtuse, smoothish, much shorter than the corolla; spur subulate, almost erect, rather shorter than the corolla ; seeds discoid, winged, very smooth. %. H. Native of Caucasus, on rocks at the falls of the Terek, near Darial, at the altitude of 600 to 650 hexapods. Gorolla yellow.

Rock Toad-Flax. PI. diffuse.

Cult. All the species of this genus are elegant, and therefore well fitted for decorating flower borders. They grow well in common garden earth, but prefer a dry sandy soil. The seeds of annual species require only to be sown in the open border, where they are intended to remain. The perennial kinds are readily propagated by division of the root, or by seeds. The *L. alpina, L. supina, L. tristis,* and some others, are well fitted for ornamenting rock-work, or to be grown on dry banks, or in pots, and placed among other alpine plants ; these in winter require to be sheltered from the frost, as well as all those marked frame or greenhouse. A great part of the species are readily increased by the surculi, which will strike root readily if planted in sand; and fill are to be increased by seed.

VIII. ANARRHTNUM (from *ava, ana,* without; and *fa$ rhin,* a snout; in reference to the corolla being without a spur, or furnished with a very short one.) Desf. fl. atl. 2. p. 51. D. LIN. SYST. *Didynamia, Angiospermia.* Calyx deeply 5-cleft, cup-shaped at the base, contracted above the middle, incomplete in aestivation ; lobes lying over each other at top. Corolla tubular, bilabiate ; tube curved ; spur very short or wanting ; throat open ; lobes of the upper lip erect, at length reflexed ; lobes of the lower lip spreading, all more or less emarginate, and nearly equal. Stamens 4, fertile, with a short rudiment of a fifth; filaments equal. Anthers reniform, 1-celled from the confluence of the cells, filled with white pollen. Ovarium globose. Style thickened, and capitate at apex ; stigma obtuse, conical, subemarginate, half immersed in the top of the style. Capsule chartaceous, compressedly spherical or globose ; cells equal; each cell dehiscing by an oblong univalvate pore under the apex; the upper cell usually indehiscent. Seeds oval, small; testa granularly tubercled or muricated.—Biennial or perennial plants, with a slender habit. Radical leaves usually rosulate, rarely wanting; cauline and rameal leaves palmate-parted, or toothed at the apex: superior ones quite entire. Flowers small, beautiful, drooping, disposed in long spike-formed, twiggy, and interrupted racemes.

§ 1. *Corolla spurred. Rameal leaves divided.*

1 A. BELLIDIFOLIUM (Desf. fl. atl. *2.* p. 51. Chav. antirrh. p. 176. t. 10.) glabrous ; radical leaves spatulate or obovate-lanceolate, deeply toothed, rosulate: rameal ones deeply 3-7-parted ; divisions linpur .' ro^mnc ,r— « I _ J - i

H. Native of France, among rubbish, and in humid places; Pyrenees; Piedmont; Portugal; Switzerland; Germany; Syria, near Damascus; and Arabia, on Mount Kurma. Wn> WrinkIed, Perha Ps only a downy variety of *Douro* Anarrhinum. Fl. June, Sept. Clt. 1818. PI. 1 to 1J foot.

3 A. PEDA^TUM (Desf. fl. atl. *2.* p. 51. t. 141. Chav. antirrh. p. 178.) glabrous at bottom, villous above; radical leaves oblong, deeply toothed, pilose, erectish; rameal leaves deeply and palmately 5-9-parted (pedate, Desf.) glabrous: divisions broad-linear, acute; racemes short, tapering upwards. *$.* ? H. Native of Algiers, on arid hills. Flowers on short pedicels, somewhat horizontal. Bracteas linear-lanceolate, villous, ciliated. Calyx hairy. Corolla hairy, white; spur short, slender, incurved. *Pedate-leaved* Anarrhinum. PI. I to lj foot.

§ *2. Corolla without a spur. Rameal leaves quite entire or toothed.*

4 A. FRUTICOSUM (Desf. fl. atl. p. *52.* t. 142. Chav. antirrh. p. 179.) glabrous; stem short, suffruticose, branched; branches elongated, twiggy; lower leaves cuneiform or spatulate, for the most part tridentate at apex: superior ones oblong or oblong-linear, quite entire; raceme elongated, interrupted. T? . F. Native of Mount Atlas, near Tlemsen, Mascar, and Cafsa. Stem sometimes reduced to a short caudex. Racemes twiggy. Flowers small. Bracteas linear, acute. Corolla white, glabrous. Seeds scabrous from elevated dots.

Shrubby Anarrhinum. Fl. July, Sept. Clt. 1826. Shrub *2* to *3* feet.

Cult. Plants of the most easy culture; except that, if the winter prove severe, they require protection from frost. They are all increased by seeds.

IX. GALVE'ZIA (named by Dombey, after D. Galvez, of Lima.) Domb. mss. Juss. gen. p. 119. but not of Ruiz, et Pav. —Dodartia species, Ruiz, et Pav. prod. fl. per. p. *56.* Agassizia, Chav. antirrh. p. 180. t. 11.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted; segments ovate-oblong, acute, with a quincuncial aestivation. Corolla tubular, bilabiate; tube elongated, subcylindrical, ventricose at the base; lobes of the upper lip erect, ovate; of the lower lip spreading, ovate-roundish, nearly equal. Stamens 4, fertile, didynamous, without any rudiment of a fifth; filaments terete; anthers 2-celled, replete with yellow pollen. Ovarium roundish; style terete, thickened at top; stigma emarginate, somewhat 2-lobed. Capsule globose, ventricose, a little depressed; each cell opening by an irregular hole towards the apex. Seed numerous, oblong, truncate, small, fixed to a round placenta; testa ribbed lengthwise, engraven by small pits. Plant suffruticose. Leaves feather-nerved, petiolate, alternate and opposite, quite entire. Flowers beautiful, axillary, on long pedicels.

1 G. LTME'NSIS (Domb. mss. ex Juss. gen. p. 119.) b. G. Native of Peru, near Lima. Agassizia Limensis, Chav. antirrh. p. 180. t. 11. Plant much branched. Branches V^ Unarmed clothed with glandular down. Leaves ovate-lanceolate, referrible in form to those of *Myrtus communis,* 1 to 1\ inch long, mucronate, downy: lower ones usually opposite: upper ones alternate, and more distant: those on the branches are nearly all opposite, more approximate, and much smaller. Pedicels bent above the middle. Corolla scarlet, *6-8* lines long, downy. Filaments furnished with glandular hairs, especially at base and apex. Anthers glabrous or downy.

Lima Galvezia. Shrub 1 to *3* feet.

Cult. This is a very curious and rather pretty shrub. It will grow well in light rich soil; and may be propagated by cuttings and seeds.

X. MAURA'NDYA (named in honour of Dr. Maurandy^ the botanical professor at Carthagena.) Ortega, nov. gen. hort. matr. dec. 11. p. 21. Jacq. schoenbr. *3.* p. 20. t. 288. H. B. et Kunth, nov. gen. amer. *2.* p. 291. Chav. antirrh. p. *77.*- Ustèria, Cav. icon. *2.* p. 15. but not of Willd.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted, with a quincuncial sestivation. Corolla personate; tube obscurely tetragonal, saccate at the base, ventricose downwards; lobes roundish or ovate, emarginate or entire; those of the upper lip erect, and those of the lower lip spreading; palate closing the throat, or rilled up by *2* plicse, which are drawn out nearly to the base of the tube. Stamens 4, fertile, didynamous, with the short rudiment of a -fifth. Filaments of fertile stamens villous at the base, and dilated; anthers 2-celled; cells oblong. Ovarium ovoid; style subulate; stigma obtuse, emarginate. Capsule ovate-globose, oblique at the base, rather compressed, membranous; each cell dehiscing at top by 5 reflexed valves. Seeds nearly ovate, truncate at apex; testa black, furnished with tubercles.—Climbing, evergreen, suffruticose herbs; branches slender, elongated. Leaves alternate, on long petioles; petioles twining; limb cordate, 5-7-nerved; nerves palmate. Flowers large, showy, solitary from the axils of the leaves, on long twining pedicels.

§ 1. *Throat of corolla pervious.*

1 M. BARCLAYA'NA (Lindl. bot. reg. t. 1108. Sweet, fl. gard. icone. Chav. antirrh. p. *77.)* leaves cordate, acuminated: young ones somewhat hastate; calycine segments linear-lanceolate, very acute, clothed with glandular hairs. F? . ^*j.* G. Native of Mexico. Branches and leaves glabrous. Lower and middle leaves obscurely 5-lobed; lobes acuminated. Corolla lj to *2* inches long; tube downy, greenish, curved; lobes ovate, roundish, emarginate, of a violet purple colour. Filaments subclavate at top, furnished with short glandular hairs. Capsule hidden by the calyx, (fig. 48.)

Toothed-leaved Nemesia. PL 1 to \\ foot.

Cult. For culture and propagation see *Dopatrium, p. 530.*

XIIP. LEUCOPHY'LLUM (from *XEVKOG, leukos,* white ; and *(j)v\\ov, phyllon,* a leaf; in reference to the whiteness of the leaves.) Humb. et Bonpl. pi. aequin. 2. p. *95.* t. 109. H. B. et Kunth, nov. gen. 2. p. 361.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted, equal. Corolla tubularly campanulate, exceeding the calyx; limb bilabiate ; upper lip 2 lobed : lower one trifid ; the middle segment the broadest; palate convex ? spotted. Stamens 4, didynamous, inclosed; cells of anthers divaricate. Stigma undivided. Capsule 2-celled ; cells many-seeded.—A much branched shrub, densely clothed with white tomentum. Leaves alternate, quite entire, or almost so. Flowers axillary, solitary, violaceous.

1 L. AMBI'GUUM (Humb. et. Bonpl. 1. c.) T? . G. Native of Mexico, near Actopan, at the altitude of 1050 hexapods. Branches scattered, retroflexed. Leaves elliptic, obtuse, acutish at the base, 6-11 lines long. Corolla violaceous ; palate spotted with orange colour.

Ambiguous Leucophyllum. Shrub 5 to 8 feet.

Cult. For culture and propagation see *Galvezia,* p. *532.*

Tribe III.

GRATIO'LEJE (this tribe contains plants agreeing with the genus *Gratiola* in the characters given below.) D. Don, in edinb. phil. journ. vol. 19. July, 1835. Calyx usually tubular, 5-cleft. Corolla tubular, ventricosdj sometimes personate ; limb 5-lobed, bilabiate, or nearly equal. Stamens 4, didynamous, inclosed, sometimes 2 of which are sterile ; cells of anthers diverging, distinct at apex. Stigma usually bilamellate. Capsule often membranous, rarely subunilocular. Dissepiment membranous, formed by the inflexed margins of the valves ; placentas spongy, at length free. Seeds with a somewhat crustaceous testa. Albumen fleshy. Embryo almost the length of the seed. Herbs, rarely under-shrubs, natives of the temperate parts of the globe ; or in marshy places within the tropics. Leaves opposite or verticillate. Flowers axillary or terminal^ usually yellow or purple.

§ 1. *Stamens* 4, 2 *of which are sterile.*

XIV. GRATIVOLA (from *gratia,* grace; on account of the supposed medicinal good qualities.) R. Br. prod. p. 435. Lam. ill. 116. f. 1. Gratiola species of Lin. and other authors.

LIN. SYST. *Didndria, Monogynia.* Calyx 5-parted. Corolla tubular, bilabiate ; upper lip 2-lobed : lower one trifid, equal. Stamens 4, 2 of which bear anthers, and 2 or 3 are sterile. Stigma bilamellate. Capsule 4-valved ; dissepiment contrary, separable but slowly from the inflexed edges of the valves.—Glabrous herbs, with opposite leaves, and axillary, usually bibracteate flowers.

Species natives of Europe.

1 G. OFFICINA'LIS (Lin. spec. 24.) glabrous ; leaves lanceolate, serrated, somewhat 3-nerved ; flowers pedunculate. %. H. Native of France, Switzerland, Denmark, &c, in humid places. Oed. fl. dan. t. *363.* Hayne, term. bot. t. 1. f. 47. Bull. t. 130.—Plenck. off. t. 15__Sabb. hort. rom. 2. t. 87.—Mor. hist. 2. p. 479. sect. 5. t. 8. f. 7.—Riv. mon. t. 157.—Blackw. t. 411. Root creeping, articulated. Stem tetragonal above. Leaves decussate, 3-5-nerved, sometimes entire. Corollas whitish or pale yellow, striated with purple. Fertile filaments bearded. Calyx often 7-cleft. Capsule ovate, acuminated. The whole plant has a strong, bitter, nauseous taste, and is much recommended by several eminent medical writers in cases of dropsy. It is a powerful cathartic, but is said generally to occasion vomiting. On account of its bitterness cattle reject it? insomuch that Haller assures us that there are meadows about Yverdun entirely useless from the abundance of it.

Officinal Hedge-Hyssop. FL May, Aug. Clt. 1568. PI- foot.

2 G. LINIFOLIA (Vahl, enum. 1. p. *89.)* glabrous; lea^ lanceolate-linear, quite entire; flowers pedunculate. %• Native of Portugal. G. officinalis, Brot. fl. lus. 1- P- Hoffm. et Link, fl. port. p. *225. t.* 31. Stems ascena^ branched a little. Leaves stem-clasping, acute, 3-nerved. rolla purplish-white.

Flax-leaved Hedge Hyssop. PL \ foot.

* * *Species natives of America.*

3 G. ALATA (Bush, fl. amer. sept. 11. p. 112.) glabrous; leaves broad-lanceolate, sessile, obscurely toothed, 3-nerved, dotted above; peduncles terete, the length of the leaves. %. H. Native of New York, and Carolina, in marshy places. Torr. bot. Mex. fl. amer. 1. p. 16. Stem bisulcate, terete at the base. Leaves half stem-clasping. Calycine segments linear, as long as the capsule, which is globose, glandular at top, equal. Corolla golden yellow, small.

4 G. PURPUREA (Walt. fl. car. p. 89.) glabrous; leaves ovate-oblong, somewhat 5-nerved, serrated; flowers sessile. %. H. Native of Peru, Chili, and Mexico. Pentstemodia glabra, Spreng. syst. 2. p. 811. Leaves ovate-lanceolate, 5-nerved, serrated, sessile. Flowers purple, smaller, and white. Capsule size of a Pepper corn. Hyssop. Pl. ½ to 1½ foot.

5 G. LAEVIGATA (Nutt. in Journ. acad. sc. Phil. 7. p. 103.) glabrous; leaves lanceolate, obsoletely denticulated, with the segments shorter than the leaves; flowers rather large, whitish. Native of Florida. Leaves smaller than those of *G. Virginica,* which it closely resembles, but the flowers are smaller and pale yellow. The whole plant is smaller. Hyssop. Pl. ½ to 1 foot.

6 G. OVATA (Walt. fl. car. p. 89.) glabrous; leaves ovate, acuminated, serrated; peduncles very short. %. H. Native of Carolina, in fields. Leaves 1 to 2 inches long. Flowers purple, with a yellowish tube, and white throat. Capsule 3 times shorter than the calyx. Hedge Hyssop. Fl. May, Aug. PL procumbent.

7 G. PUBESCENS (Willd. enum. p. 89.) pubescent; leaves lanceolate, remotely few-toothed; peduncles as long as the leaves. %. H. Native of Carolina, in fields. Vahl enum. p. 89. Habit of the preceding, but smaller. Stems terete. Flowers purple, with a yellowish tube, and white throat. Capsule 3 times shorter than the calyx. Hedge Hyssop. Fl. May, Aug. PL procumbent.

8 G. ELLIPTICA (Nutt. in Journ. acad. sc. Phil. 7. p. 103.) glabrous; leaves elliptic-lanceolate, sessile, obsoletely denticulated, with the peduncles shorter than the leaves; flowers rather large, white. Native of Florida. Leaves ovate, obtuse, obsoletely crenated, and quite entire; flowers sessile. 1/. G. Native of New South Wales, about Port Jackson; and of Van Diemen's Land. Corollas white. ?

9 G. PUBERULA (Vahl enum. p. 89.) pubescent; leaves lanceolate, sessile, obsoletely denticulated; peduncles shorter than the leaves; flowers rather large, white. %. H. Native of Carolina, in fields. Vahl enum. p. 89. Conobea borealis, Pursh. fl. amer. sept. 1. p. 12. G. acuminata, Vahl enum. p. 92. exclusive of the synonymes. Pursh. new em. fl. N. York, p. 89, Conobea borealis, Pers. syn. 2. p. 205, Steni terete, rooting at the joints. Flowers longer than the calyx, yellowish white. Capsule acuminated, FL Aug. Clt. 1759. PL creeping.

10 G. PEDUNCULATA (Ehx. fl. bor. Pl. Sh. fl. p. 12.) pubescent; leaves linear-lanceolate, remotely few-toothed; peduncles as long as the leaves. %. H. Native of Carolina, in fields. Leaves 1 to 2 inches long. Flowers purple. Vahl enum. p. 94. G. Peruvian. Stem terete. Leaves half stem-clasping. Corolla white, tinged with purple, villous in the throat. Hyssop. Pl. 1 to 2 feet.

11 G. SPHAEROCARPA (Elliot, car. p. 14.) glabrous; stem procumbent, terete; leaves obovate, attenuated at the base, serrated; capsule globose. %. H. Native of South Carolina. Perhaps a species of *Nelsonia.* Flowers nearly sessile. Sterile filaments wanting.

Round-fruited Hedge Hyssop. PL procumbent.

* * * *Species natives of New Holland.*

12 G. LATIFOLIA (R. Br. prod. p. *435.)* leaves ovate, obtuse, obsoletely crenated, and quite entire; flowers sessile. 1/. G. Native of New South Wales, about Port Jackson; and of Van Diemen's Land. Corollas white. ?

Broad-leaved Hedge Hyssop. Fl. July, Aug. Clt. 1822. PL 1 foot.

13 G. PUBESCENS (R. Br. prod. p. 435.) clothed with glandular pubescence; leaves lanceolate, toothed; flowers nearly sessile. %. G. Native of New South Wales; south coast of New Holland and Van Diemen's Land.

Downy Hedge Hyssop. PJ.

14 G. PEDUNCULATA (R. Br. I. c.) clothed with powdery down; leaves lanceolate, toothed above, the middle hardly longer than the peduncles. %. G. Native of New South Wales, about Port Jackson.

Peduncled Hedge Hyssop. PI. 1 foot.

Cult. The species of *Gratiola* are free growing plants, but require a moist soil; and they are readily increased by dividing at the root. Those species, natives of New Holland and North America, require protection in winter, by placing them in a frame or green-house.

XV. BEYRFCHIA (named after Charles Beyrich, who brought many living plants from Brazil to the Continent of Europe.) Cham, et Schlecht, in Linnaea. *3.* p. 21.

LIN. SYST. *Didynamia, Angiospermia.* Calyx deeply *5*-parted; segments unequal, the hind one small; the *2* lateral ones larger than the one in front. Corolla tubular, bilabiate. Stamens 4, the *2* posterior ones fertile, the *2* anterior sterile. Style thickened at apex; stigma cup-shaped, terminal. Capsule 2-celled, 2-valved, with a septicidal dehiscence; placenta central, at length free. Seeds numerous, scrobiculate.—Herbs beset with articulated hairs, with almost opposite leaves; tetragonal stems. Flowers solitary, axillary, opposite, spicate; calyx tribracteate.

1 B. OCYMOIDES (Cham, et Schlecht, in Linnaea, 3. p. 21.) downy; leaves ovate, serrated from the middle to the top; rameal ones elliptic, smaller; spike dense, leafy; both lips nearly equal, entire; fertile filaments exserted. %. S. Native of Brazil, in the province of Rio Janeiro, in humid places.

Bazil-like Beyrichia. PI. lj foot.

2 B. AJUGOIDES (Benth. scroph. ind. p. 9.) flowers spicate; upper lip of corolla retuse: lower one tricrenate; genitals inclosed. %. ? S. Native of Brazil, in the province *of* Bahia.

Jjuga-lifce Beyrichia*. PI. 1 foot. ?

3 B. SCUTELLARIOIDES (Benth, 1. c.) downy; leaves small, petiolate; flowers axillary; upper lip of corolla bifid: lower one trifid. %. ? S. Native along with the preceding.

Skull-cap-like Beyrichia. PI. 1 foot. ?

4 B. VILLOSA (Benth, 1. c.) villous all over; leaves nearly sessile; flowers axillary; upper lip of corolla emarginate, lower one shortly trifid. 1/. ? S. Native along with the preceding.

Villous Beyrichia. PL 1 foot.

Cult. For culture and propagation see *Montira* below.

XVI. ACHETA^RIA (meaning unknown to us.) Cham, et Schlecht, in Linnaea, 2. p. *5(56.*—Herpestis species, Spreng.

LIN. SYST. *Didynamia, Angiospermia.* Calyx bibracteate, 5-cleft, the fifth segment large ; the rest linear and equal. Corolla tubular, ringent; upper lip entire, erect; lower one longer, and 3-lobed. Stamens 2, fertile in front, and inclosed, without any rudiments of sterile ones. Style inclosed ; stigma drooping, emarginate. Capsule girded by the permanent calyx, 2-celled, with a septicidal dehiscence; valves bipartite; placenta occupying the whole dissepiment, permanent, at length free. Seeds irregularly angular, scrobiculate.—Herb erect, hairy, glandular, with the habit of *Melissa Calamintha,* with opposite leaves. Stems obsoletely tetragonal. Flowers axillary, opposite at the tops of the stems. Corolla pilose and glandular.

1 A. SPRENGE'LII (Cham, et Schlecht, 1. c.) *%.1S.* Native of tropical Brazil, Sello. Herpestis erecta, Spreng. syst. *2.* p. 801.

SprengeVs* Achetaria. PI. *3 to* 4 *feet.

Cult. For culture and propagation see *Montira* below.

XVII. MONTTRA (named by Aublet after M. de Monti, of Cayenne.) Aubl. guian. *2.* p. *637. t. 257.* Juss. *gen.* p. *122.* ed. Usteri. p. 137.

LIN. SYST. *Didndria, Monogynia.* Calyx 5-parted, spreading. Corolla funnel-shaped; limb spreading, 5-cleft, equal. Stamens 4, didynamous, all fertile ; anthers oblong. Ovarium didymous. Stigma furrowed. Japsule didymous, 2-celled, 4-valved, many-seeded. Seeds fixed to the inner angle of the cells.—Herbs with tetragonal stems, opposite leaves, and terminal 1-3-flowered peduncles.

1 M. GUIANE'NSIS (Aubl. 1. c.) ©. S. Native of Guiana. Stem quadrangular, marginate. Leaves oval-oblong, acute, glaucous, sessile. Flowers 3 in the bifurcation of the branches, and between the terminal leaves : lower one sessile : the other pedicellate, and the third on a longer pedicel, all white.

Guiana Montira. PI. \ foot.

Cult. A plant of easy culture; grows best in light rich earth kept moist, and is readily increased by division.

XVIII. DOPATRIUM (meaning unknown *to* us.) Hamilt. mss. ex Benth. scroph. ind. p. 31.

LIN. SYST. *Didndria, Monogynia,* Calyx short, membranous, semiquinquefid. Corolla funnel-shaped ; tube exserted ; limb obliquely widened, 5-cleft, somewhat bilabiate; lower lip larger. Stamens very short, the *2* upper fertile ; anthers cohering, 2-celled; cells parallel; the *2* lower stamens small and sterile. Stigma bilamellate, dilated. Capsule hardly furrowed, 4-valved ; margins of valves flattish ; dissepiment at length free, with adnate placentas.—Slender glabrous herbs, natives of bogs. Leaves opposite ; radical and lower leaves few, obovate, quite entire; cauline ones minute, distant. Pedicels filiform, opposite, or alternate from abortion, 1-flowered. Corollas blue.

1 D. NUDICAU'LE (Benth. in scroph. ind. p. 31.) humble, much branched ; cauline leaves small* very acute; capsule oblong. ©. S. Native of the coast of Coromandel, in wet places. Gratiola nudicaulis, Willd. act. berol. 4. p. 192. Gratiola aphylla, Roth, nov. spec. p. 7. Gratiola cuneifblia, Roxb. fl. ind. 1. p. *U2.*

Naked-stemmed Dopatrium. PL *2* to 3 inches.

2 D. LOBELIOIDES (Benth, in scroph. ind. p. 31.) stem elongated, a little branched ; cauline leaves small, obtuse; capsule globose ; corollas about 4-5 times longer than the calyx. 0* S. Native of Coromandel, growing in wet places during the rainy season. Gratiola lobelioides, Retz. obs. 4. p. 7. Roxb. fl. ind. 1. p. 143. Habit of *Lobelia Dortmdnna.* Flowers on longish pedicels, racemose at the tops of branches. Leaves sessile.

Lobelia-like Dopatrium. PI. \ to \ foot.

3 D. JU'NCEUM (Hamilt. ex Benth. scroph. ind. p. 31.) stem elongated, a little branched ; cauline leaves small, obtuse ; capsule globose; corollas hardly 3 times longer than the calyx. ©. S. Native of Coromandel, delighting in wet situations, where it flowers during the rains. Gratiola juncea, Roxb. cor. *2.* p. 16. t. 129. Very like *D. lobelioides;* but the flowers are much smaller, and the pedicels shorter, the lower pedicels generally very short. Leaves stem-clasping : floral ones minute, triangular. Corollas small, rose-coloured.

Rushy Dopatrium. PI. J to 1 foot.

Cult. The seeds of the species *of Dopatrium* require *to* be reared on a hot-bed in spring; and the plants may be planted out in the open ground in the month of May in a warm, sheltered situation, where they will flower and ripen their seeds.

XIX. MICROCARPiE'A *(fwcpoc, micros;* and καρπος *karpos,* a fruit; in reference to the smallness of the capsules.) R. Br. prod. p. 435. Benth. in Lin. trans, p. 435. Hook, bot. misc. 2. p. 101.

LIN. SYST. *Didndria, Monogynia.* Calyx short, campanulate, 3-5-toothed. Corolla small: tube equal in length to the calyx; limb sub-bilabiate, 5-cleft; segments all flat, and nearly equal. Stamens 2, fertile; filaments straight, entire ; anthers approximate, 2-celled; cells parallel ; vestiges of sterile *ot* lower stamens wanting. Stigma bilamellate, dilated. Capsule 2-valved ; valves entire, septiferous in the middle; dissepiment at length free; placentas adnate.—Small, mossy, glabrous herbs, with the habit of *Limosella.* Leaves opposite. Flowers pedicellate, axillary, small, bractless.

1 M. MUSCOSA (R. Br. prod. p. 436.) creeping; leaves oblong, entire; calyx 5-toothed ; teeth hairy inside. ©.?G. Native of India and New Holland, within the tropic. Paederdta minima, Koen, in *Retz.* obs. fasc. 5. p. 10. M. alternifolia, Blum, bijdr. p. 744. Nearly allied to *Hedybtis maritima,* but that plant has a valveless capsule, ex R. Br. 1. c.

Mossy Microcarpaea. PI. small.

2 M. SPATULA'TA (Hook. bot. misc. 2. p. 101. suppl. t. 4.) creeping; leaves linear-spatulate; calyx 3-toothed. %. G. Native of the Peninsula of India. Peplidium Capense, Spreng. syst. 1. p. 43. Limosella diandra, Lin. mant. p. *252.*

SpatulateAestwed Microcarpaea. PL creeping.

Cult. For culture and propagation see *Montira* and *Dopa' trium* above.

XX. PEPLI'DIUM (from 7r£7r\oc, *peplos,* purslane; and *idea, idea,* form ; plants with the habit *of Purslane.)* Delile, * segypt. p. 4. t. 4. f. 2. Benth. scroph. ind. p. *M^.Zd* carpsea, spec. Smith.—Pederdta, spec. Keen. Oldenlandia ai Hedyotis, species Lin. 5-

Speedwell-leaved Bonnaya. FL June, Sept. Clt. 1798. PL *1* foot.

4 B. VERBENJSFOLIA (Spreng. syst. 1. p. 42. Benth. scroph. ind. p. *33.)* stems erect or ascending ; leaves lanceolate, quite entire or serrated ; flowers racemose ; capsules erectly spreading, 2-3 times longer than the calyx. ©. S. Native of Hindostan, Silhet, Birmann Empire; and of China, Nelson. Tittmannia Colsmanni, Benth. in Wall. cat. no. 3952. Gratiola verbensefdlia, Colsm. grat. p. 9. Gratiola racemosa, Roxb. fl. ind. 1. p. 139. but not of Roth. Gratiola ciliata, Commers. in Colms. grat. p. 14. ? Gratiola Roxburghiana, Rcem. et Schultes, syst. 1. p. 123. Bonnaya Roxburghiana, Link, Schwsegr. et Dietr. spec. 1. p. *559.* This species hardly differs from *Vandellia,* unless in the stamens.

Vervain-leaved Bonnaya. PL i foot.

5 B. PUSI'LLA (Benth. in Wall. cat. no. 3861. scroph. ind. p. *33.)* stem diffuse, much branched ; leaves ovate-oblong, sessile, thickish, serrated; flowers small, racemose; capsules erectish, linear, scarcely exceeding the calyx. ©. ? S. Native of Singapore.

Small Bonnaya. PL diffuse.

* * *Capsules erectly spreading. Flowers axillary.*

6 B. GRANDIFLORA (Spreng. syst. I. p. 41. Benth. scroph. ind. p. *33.)* stem diffuse, subrepent; leaves ovate or ovate-lanceolate, sessile, serrated ; flowers axillary, opposite ; capsules linear, erectly spreading, hardly twice as long as the calyx. ©. ? S. Native of the Indian Peninsula, in wet places. Bonnaya Wightii, Benth, in Wall. cat. no. 3864. Gratiola grandiflora, Roxb. cor. 2. p. 42. t. 179. fl. ind. ed. Car. 1. p. 137. but hardly of Retz. Henckelia grandiflora, Link, Schwaegr. et Dietr. spec, pi. 1. p. *573.* Ruellia antipoda, Lin. spec. part.—Rumph. amb. 5. ^p. 460. t. 170. f. 2. Flowers light blue, very like those of *Vandellia pedunculata.* The specific name is not very apt, other species having equally large flowers.

Great-flowered Bonnaya. PL creeping, \ foot.

7 B. PEDUNCULA'RIS (Benth. in Wall. cat. no. *3865.)* stems elongated, slender ; leaves remote, oblong-lanceolate, nearly quite entire ; flowers axillary, solitary, on long peduncles ; capsules linear, spreading, hardly twice as long as the calyx. ©. S. Native of Silhet, Wall. Nearly allied to *Gratiola pulegiifdlia,* Vahl. enum. 1. p. *98.* but the flowers are very rarely opposite.

Peduncular-flowered Bonnaya. PL creeping, \ to 1 foot.

8 B. PULEGIIFOLIA ; leaves oblong, serrated ; peduncles axillary, opposite, length of leaves ; capsule subulate. ©. S. Native of the East Indies. Gratiola pulegiifolia, Vahl, enum. 1. p. *98.* Stems filiform. Leaves sessile.

Pennyroyal-leaved Bonnaya. PL creeping.

* * * *Capsules reflexed.*

9 B. OPPOSITIFOLIA (Spreng. syst. 1. p. 41.) erect; leases oblong or lanceolate, a little serrated ; peduncles opposite the leaves ; capsules linear, reflexed. ©. S. Native of Coromandel. Gratiola oppositifolia, Roxb. cor. 2. p. *30.* t. 155. fl. ind. ed. Car. 1. p. *139.* and probably of Retz. obs. 4. p. 8. Henckelia oppositifolia, Link, Schwaegr. et Dietr. spec. pi. 1. p. *573.* Flowers small, blue. Capsule linear, twice the length of the calyx. Sterile filaments white.

Opposite-leaved Bonnaya. PL 5 to i foot.

10 B. TENUIFOLIA (Spreng. syst. 1. p. 42.) erect ? leaves linear, quite entire; peduncles opposite the leaves ; capsule linear, reflexed. ©. S, Native of Coromandel; Birmann Empire, at Tavoy; Ceylon and China, in wet places. Gratiola ***tenuifolia, Colsm. grat. p. 8. Corollas blue ?***

Thin-leaved Bonnaya. PJ. \ to | foot.

§ *2.* BiiAcinrcA'ar^E (from *ftfxtx^c, brachys,* short; and *Kctp-7TOC, karpos,* a *fruit.) Capsules ovate,* exceeding the caJyx a very little. Plants with the habit *of Lindernia.*

11 B. HYSSOPIOI^DES (Benth. in Wall. cat. no. 3866. scroph. ind. p. 34.; stem elongated, loose; leaves oblong or lanceolate, remote ; peduncles axillary, elongated, filiform; corolla 3 or 4 times longer than the calyx. ©. S. Native of Hindostan, Silhet, China, Tranquebar. Gratiola hyssopioides, Lin. mant. p. 174. Koen. in Retz. obs. 4. p. 8. Roxb. cor. 2. p. 16. t. 128. fl. ind. ed. Car.1. p. 142. Morganuxhyssopioides, Spreng. syst. 2. p. 803. Corollas pale blue. Sterile stamens bearded. Habit of a species of *Dopatrium**

Hyssop-leaved Bonnaya. PI. J to 1 foot.

12 B. PARVIFLORA (Benth. in Wall. cat. no, 3867.^ scroph. ind. p. 34.) humble, branched ; leaves oblong or lanceolate ; flowers axillary or subracemose ; corolla twice the length of the calyx. ©. S. Native of Hindostan, Siljiet, and the Birmann Empire. Gratiola parviflora, Roxb. corom. 3. p. 3. t. 203. Flowers small, usually blue, but sometimes white. Sterile filaments capitate at apex.

Small-flowered Bonnaya. PI. \ foot.

§ 3. SPHTEROCA'RPA (from (7<f>aipa, *sphaira,* a sphere ; and •cap7Toc, *karpos,* a fruit; in reference to the capsules being roundish) Benth. scroph. ind. p. 34. Capsules roundish, shorter than the calyx. Similar to the species of *Vandellia,* with roundish capsules.

13 B. ROTUNDIFOLIA (Benth. scroph. ind. p. 34.) diffuse ; leaves sessile, broad-ovate, subcordate; peduncles axillary ; capsules roundish, shorter than the calyx. ©. S. Native of the Indian Peninsula and Ceylon, in moist places. Gratiola rotundifolia, Lin. mant. p. 174. Roxb. fl. ind. ed. Car^1. p. 138. Gratiola debilis, Hayne, in Wall. cat. no. 3946. Morgania rotundifolia, Spreng. syst. *2.* p. 803.—Rheed. mal. 9. p. 111. t. *57.* Flowers white.

Round-leaved Bonnaya. PI. | foot.

14 B. *BRACHYCA'RPA* (Cham, et Schlecht. in Linnsea, *2.* p. *568.)* stem decumbent; leaves oblong, bluntish, generally tridentate on both sides, narrowed at the base ; peduncles shorter than the leaves ; capsule about equal in length to the calyx. O. S. Native of the East Indies. Glabrous. Habit of *B.* ***grandiflora.***

Short-fruited Bonnaya. PI. decumbent.

15 B. MI'NIMA ; stem filiform, erect, simple; leaves oblong, sessile, remote, serrulated, and are, as well asilie calycine segments, ciliated ; capsule oblong, rather longer than the pedicels. ©. S. Native of the East Indies. Gratiola minima, Roth, nov. spec. p. 8.

Least Bonnaya. PI. \ foot.

f Species doubtful or hardly known.

16 B. PUNCTA'TA ; leaves lanceolate, serrated, nerveless, dotted beneath; flowers sessile. ©. S. Native of Java. Gratiola punctata, Colsm. grat. Vahl, enum. 1. p. 90. Stem erect, creeping at the base, quite simple. Leaves sessile, half an inch long. Flowers solitary, opposite. Capsule roundish, a little compressed, length of calyx.

Dotted Bonnaya. PI. | to \ foot.

17 B. VA'HLII; leaves oval, sessile, serrated, with cartilaginous edges, glabrous ; stem hispid ; peduncles axillary, opposite. 0. S. Native of the East Indies, in springs. Orat* pusilla, Willd. spec. 1. p. 105. Vahl, enum. 1. p. 105. *>™ simple or branched. Peduncles twice as long as the lea ***Segments of the calyx linear, acute. Flowers small, w*** *Capsule* globose.

VcihVs Bonnaya. PL creeping.

18 B. ***msFi'nvLA ; leaves oval, sesstie,*** **crenated, and are, a*** *well* as the *stem, pilose;* peduncles axillary, *opposite.* 0. • ^# Native of Java. Gratiola hispidula, Commers. in Vahl. enutn. 1. p. 94. Stem filiform, bifid at apex. Leaves a nail in length, acute, £-nerved beneath. Peduncles glabrous, longer than the leaves. Calycine segments linear-lanceolate. Capsule globose, almost the size of a coriander seed.

Hispid Bonnaya. PI. filiform.

19 B. ocYMiroLiA; leaves oblong, quite entire: lower ones petio\ate ; ftowers racemose. ©. S. Native of the East Indies. Gratiola ocymifolia, Vahl, enum. J. p. 96. Stem branched at bottom. Lower leaves petiolate : upper ones remote, sessile. Capsule globose.

Ocymum'leaved Bonnaya. PI. J to J foot.

Cult. The seeds of all the species should be reared on a hotbed ; and when the plants are of sufficient size, they should be planted in separate pots, which should be either kept in a hotbed, or placed in the stove, in deep pans filled with water.

XXII. HYDRO'TRICHE (from ^Swp ^pog, *hydor hydros,* water; and 6pi£ rpi)(OG> *tltrix* tricJios, a hair ; in reference to the hair-like, submersed leaves, and habitation of the plant.) Zucc. abhandl. acad. wiss. 1829, 1830. vol. I. p. 308.

LIN. SYST. *Didndria, Monogynia.* Calyx 5-parted, nearly equal. Corolla regular, funnel-shaped ; limb 5-cleft. Stamens 2 ; anthers connected by hairs. Ovarium 2-celled ; placentas one in each cell, adnate to the dissepiment, many-ovulate. Stigma bilabiate, or bilamellate. Capsule unknown.—An aquatic herb. Lower or submersed leaves verticillate, capillaceously multifid, setosely serrated : superior ones opposite, lanceolate* obtuse. Flowers disposed in few-flowered racemes. This genus is distinguished from *Limnophila* in the absence of the 2 sterile stamens, or even the rudiments of them.

1 H. HOTTONIIFLORA (Zucc. 1. c.) %. S. Native of Madagascar, in stagnant water.

Hottonia-flotpered Hydrotriche. PL aquatic, 1 to *2* feet.

Cult. See *Limnophila,* p. 543. for culture and propagation.

XXIII. HEMIA'NTHUS (from i/xi, *hemi,* half; and *CLVQOQ. anthos,* a flower ; in reference* to the upper lip of corolla being obsolete.) Nutt. gen. amer. *2.* p. *42.* journ. acad. nat. sc. pbil. 1.p. 119. t. 6. f. *2.*

LIN. SYST. *Didynamia> A?igiospermia.* Calyx tubular, 4-toothed, cleft on the under side. Upper lip of corolla obsolete: lower one 3-parted; middle segment ligulate and truncate, much longer, closely incurved. Stamens 2 ; filaments bifid; lateral clefts antheriferous. Style bifid. Capsule 2-valved, many-seeded. Seeds ovate, even, and shining.—A small creeping plant, growing in marshes. Leaves entire, opposite and verticillate. Flowers solitary, alternate, pedicellate, minute.

1 H. MICRANTHEMOI^DES (Nutt. 1. c.) %. H. Native on the borders of the Delaware.

Micranihemum-Uke Hemianthus. PI. creeping.

Cult. For culture and propagation see *Herpestis,* p. 544.

XXIV. PTEROSTFGMA (from *irrepov, pteron,* a wing ; and *anyfia, stigma;* in reference to the stigma being generally girded by a wing.) Benth. scroph. ind. p. *20.*

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted, or deeply 5-cleft : upper segment the largest. Corolla bilabiate;

opposite, toothed. Flowers sessile, sometimes axillary and opposite, sometimes disposed in terminal or axillary racemes or interrupted spikes.

1 L. SINA'ICA (Benth. scroph. ind. p. 22.) hard, divaricately branched, villous; leaves small, roundish-ovate, coarsely toothed: floral ones shorter than the calyx; racemes elongated, axillary and terminal; flowers opposite, secund; corolla twice the length of the calyx. %. ? H. Native *of* Sinaica, in deserts, Bove. Bovea Sinaica, Decassne in ann. sc. nat. par. 2. ser. 2. p. 253.

Sinai Lindenbergia. PI. 1 to 2 feet.

2 L. GRANDIFLORA (Benth. 1. c.) climbing, and villously downy; leaves large, unequally ovate, acuminated, toothed: floral ones shorjter than the corolla; racemes axillary, loose; flowers opposite, secund; corollas 4 times the length of the calyx. 1/.? S. Native of Nipaul. Stemodia grandiflora, Hamilt. in D. Don, prod. fl. nep. p. 89. Leaves *3-6* inches long. Corolla more than an inch long, purple.

Great-flowered Lindenbergia. PI. 2 to 3 feet.

3 L. MACROPHY'LLA (Benth. 1. c.) somewhat scandent, hard, smoothish; leaves oblong, very acutely-serrated: floral ones ovate-lanceolate, shorter than the calyx; racemes elongated, many-flowered, axillary and terminal; flowers subalternate; corollas twice the length of the calyx. ©. S. Native of Oude, Serpur; Martaban, at Prome,. Stemodia macrophylla, Benth. in Wall. cat. no. *3925.* 'Adenosma cuspidatum, Benth. in Wall, cat. no. 3852. Leaves hardly\\ inch. Herb always becoming black on drying.

Long-leaved Lindenbergia. PI. 2 to 3 feet.

4 L. URTICJEFOLIA (Lehm. jn Link et Otto, abbild. 95.) erect or ascending, annual, villous; leaves ovate: floral ones similar; flowers solitary, axillary; corolla 3 times the length of the calyx. ©. H. Native of the mountainous parts of India, as of Nipaul, Hurdwar, Oude, Silhet, Birman Empire, Sansedarra, and Mussooree. Stemodia ruderalis, Vahl, symb. 2. p. *69.* Benth. in Wall. cat. no. *3923.* Brachycoris parviflora, Schrad. Much branched, usually purplish. Leaves ovate, purplish beneath. Flowers nearly sessile, secund, yellow, purplish outside.

Far. /J, major (Benth. scroph. p. 22.)* stems elongated, and moje branched. ©. H. Native of Martaban, on the banks of the Irrawaddi.

Nettle-leaved Lindenbergia. PI. \ to 1| foot.

5 L. POLYA'NTHA (Royle, mss. ex Benth. scroph. ind. p. *22.)* erect or ascending, annual, villous; leaves ovate: lower floral ones similar: superior ones shorter than the calyx; racemes many-flowered; flowers opposite, secund; corollas *twice* the length of the calyx. ©. H. Native at Delhi, along the river Jumna, Royle. Allied to *L. ufticcefblia,* but the inflorescence is distinct.

Many-flowered Lindenbergia. PI. 1 to 2 feet.

Cult. For culture and propagation see *Bonnaya,* p. 538.

XXVI. STEMCTDIA (said to be from *aTt)^v, stemon,* a stamen; and *dig, dis,* double; in reference to each stamen bearing 2 anthers, or 2 distinct lobes.). Lin. gen. no. 777. Schreb. gen. no. 1043. Gaertn. fruct. t. 52. Juss. gen. p. 118. ed. Usteri, p. 133. Lam. ill. t. 534. f. 1. Benth. scroph. ind. p. *23.*—Stemodiacra, Browne, jam. t. 22. f. 2. Jacq. amer. p. 181.

LIN. SYST. *Didynamia, Angiospermia.* Calyx tubularly campanulate, 5-parted, nearly equal. Corolla ringent; upper lip emarginate: lower one 3-lobed. Stamens 4, didynamous, inclosed: lower ones the longest; anthers approximating by pairs, free; cells separate, stipitate, all fertile. Style simple; stigma entire, a little dilated. Capsule oblong, or nearly globose, bisulcate, 2-valved; valves bifid; dissepiment duplicate

from the inflexed margins of the valves, at length free; placentas adnate. Seeds small, naked.

SECT. I. MODE'STIA (from *modestia,* humility ; in reference to the humble growth of the plants.) Cham, et Schlecht, in Linnsea, 3. p. 5. Benth. scroph. ind. p. 23. Capsule with a luculicidal dehiscence ; valves bifid at the dissepiment.—Usually glabrous herbs, almost with the habit of *Gratiola* or *Limnophila,* becoming blackish on drying. Leaves opposite or verticillate, sessile or on short petioles. Flowers axillary, or the superior ones approximate into a head or raceme, usually blue.

Flowers nearly sessile,

1 S. MENTHA'STRUM (Benth. in Wall. cat. no. 3927. scroph. ind. p. 23.) erect, smoothish ; leaves nearly sessile, ovate-oblong, narrowed at both ends : floral ones similar, longer than the calyx ; flowers sessile: superior ones collected into a glabrous, nearly globose head ; calycine segments lanceolate-subulate. ©. ? H, Native of the Monghyr mountains, Hamilt.

Mint4ike Stemodia. PI. 1 foot.

2 S. HYPERICIFOLIA (Benth. in Wall. cat. no. 3934. scroph. ind. p. 23.) glabrous, rooting at the base, ascending,; leaves sessile, ovate-oblong, obtuse, cordately stem-clasping at the base : floral ones smaller ; racemes terminal or axillary; flowers sessile, remote; segments of the calyx lanceolate. %. G. Native of Nipaul, at Narainhetty. Cybbanthera connata, Hamilt. in D. Don, prod. fl. nep. p. 23. Corollas blue. Flowers tribracteate.

***St. Johri s-wort-leaved* Stemodia. PL 1 *to* 1^ foot.**

3 S. BALSA'MEA (Benth. in Wall. cat. no. *3928.* scroph. ind. p. 23.) stem procumbent; branches rather hairy ; leaves ovate, obtuse, narrowed into the petioles, glabrous : floral ones similar in shape ; flowers axillary, sessile, solitary, or 2-3 on both sides, glomerate; segments of calyx lanceolate-subulate. %. ? G. Native of the Birman Empire, at Tavoy, Wall.

Balsameous Stemodia. PL procumbent.

4 S. SE'SSILIS (Benth. in Wall. cat. no. 3939. scr&ph. ind. p. 23.) procumbent, glabrous ; leaves sessile, oblong, obtuse, crenated, narrowed at the base: floral ones similar in shape; flowers solitary, axillary, nearly sessile ; calyxes glabrous, with lanceolate-subulate, strict segments ; corolla hardly longer than the calyx. 1/. ? G. Native at Goalpara, Moolmyne, and of Ceylon.—A humble rooting herb, native of bogs. Flowers hardly 4 lines long.

Sessile-Covered Stemodia. PL creeping.

5 S. TENUIFLORA (Benth. in Wall. cat. no. 3940. scroph. ind. p. 23.) procumbent, glabrous ; leaves sessile, lanceolate, acute, serrated, rounded at the base : floral ones similar in shape ; flowers solitary, axillary, almost sessile ; calyx glabrous, with lanceolate-subulate, strict segments; corollas hardly longer than the calyx. %. S. Native of the Birman Empire, near Jerome. Very nearly allied to the preceding ; but the plant is [illegible] ^ WCU ^ the flowers Habit of *Lythrum hyssopifo*

Thin-flowered Stemodia. PL procumbent.

6 S. MICRA'NTHA (Benth. in Wall. cat. no. 3936. scroph. ind. p. 23.) small, diffuse, much branched, glabrous; leaves sessile, oblong-lanceolate, acute, narrowed at the base : floral ones similar in shape ; flowers sessile, solitary, axillary; calyx cxlabrous, with lanceolate-subulate, recurvedly spreading segments ; corolla twice the length of the calyx. 3/. S. Native of Silhet, Wall. Nearly allied to the preceding ; but differs from it in the calyxes being shorter, and nearly globose ; and in its segments being recurvedly spreading. Stems hardly 3-4 inches high. Habit of *Jnagallis tenella.*

Small-flowered Stemodia. PL diffuse, 3-4 inches high.

7 S. RE'PENS (Benth. in Wall. cat. no. 3935. scroph. ind. p. 24.) creeping, glabrous, rather clammy; leaves sessile, o[illegible] long-lanceolate, narrowed at the base, acute, serrated : nora^ ones hardly longer than the calyx; flowers nearly sessile, racemose or glomerate ; calyxes nearly glabrous, with lanceolate segments, which are subulate and recurvedly spreading at apex* corolla twice the length of the calyx. %. S. Native of the Indian Peninsula, about Madras. Stems elongated, generally more than a foot. Racemes rather loose, terminal and axillary.

Creeping Stemodia. PL creeping.

8 S. CAMPHORA^TA (Vahl, symb. 2. p. 69. ? Benth. scropn. ind. p. 24.) erect, clothed with clammy pubescence ; leaves petiolate, ovate-oblong : floral ones linear-lanceolate ; racemes axillary, rather shorter than the leaves ; flowers almost sessile , calyxes downy, with lanceolate-acute segments; corolla almost 3 times as long as the calyx. %. *1* S. Native of Hindostan, and of the Birman Empire, at Prome ; and of Ceyldn. S. ciminica, Benth. in Wall. cat. no. 3933. Stems floriferous at the base. Racemes numerous, short, loose, leafy. " Leaves 1| inch long, sharply and unequally serrated. Corolla of a greenish citron colour," ex Vahl.

Camphorated Stemodia. PL 1 to 1| foot.

**** Flowers pedicellate; pedicels longer than the calyx.***

9 S. VISCOSA (Roxb. cor. 2. p.* 23. t. 163.) erect, downy, clammy ; leaves sessile, ovate-oblong, acute, narrowed towards the base, and dilately cordate at the base, and stem-clasping: floral ones similar in shape; flowers axillary, solitary : upper ones racemose; calycine segments lanceolate, acute. ©. • »• Native of Coromandel and Bengal. S. maritima, Heyne, ex Benth. in Wall. cat. no. 3931. but not of Lin. Corolla blue.

21 S. PALUSTRIS (Aug. St. Hil. rem. bras. p. *216.* mem. mus. 12. p. 314.) root creeping; stems ascending; leaves opposite, and *3* in a whorl, sessile, oblong-linear, acute, obsoletely toothed : superior ones narrower, nearly linear : upper ones, and those of the branches, linear, very narrow; flowers subspicate, on short pedicels; calyx puberulous. 1/. S. Native of the South of Brazil, on the margins of marshes, and in humid places on the banks of the Rio Negro and la Uraguay. Corolla blue; palate convex on one side, and concave on the other, white. Capsule about equal in length to the calyx. Plant puberulous at top.

Marsh Stemodia. PL \ to f foot.

22 S. GRATIOLOIDES (Aug. St. Hil. pl. rem. bras. p. 217. mem. mus. 12. p. 315.) leaves opposite, sessile, linear, acute, obsoletely toothed, glabrous ; flowers panicled, nearly sessile, usually solitary in the axils of the bracteas ; calyx smoothish. *If.* F. Native of Brazil, in the province of Rio Grande do Sul, on the edges of woods on the banks of the Ploropasso. Corolla pale blue.

Gratiola-leaved Stemodia. PL \ to 1 \ foot.

* * *Calyx bibracteate.*

23 S. MARITIMA (Lin. spec. 881. Jacq. amer. p. 181. t. 174. f. *66.* pict. 261. f. 48.) procumbent, hairy ; leaves opposite, hastate at the base, and half stem-clasping; flowers axillary, solitary, sessile. *$.* ? S. Native of Jamaica, in inundated parts by the sea side ; Cuba, in humid places near Havannah ; also of New Andalusia, near Bordones.—Brown, jam. 261. t. 22. f. 2.—Sloane, hist. 1. p. 175. t. 110. f. *2.* Leaves viscid. Calyx bibracteate. Corolla blue. The plant has a bitterish taste, and a pleasant aromatic smell.

Sea-side Stemodia. Fl. July, Aug. Clt. 1817. PL 2 to 3 feet.

24 S. DURANTIFOLIA (Swartz, obs. p. 240.) erect; leaves *3* in a whorl, and connate, serrated ; flowers axillary, solitary, therefore usually 3 in a whorl, nearly sessile. *$.* S. Native of Jamaica, in marshy places by the sea side. Capraria durantifolia, Lin. spec. p. 876. amcen. acad. 5. p. 379.—Sloane, hist. 1, p. 196. t. 124. f. 2. Branches hairy, viscid. Leaves pubescent. Calyx bibracteate, with subulate segments, shorter than the corolla. Corolla small, blue.

Duranta-leaved Stemodia. FL July, Aug. Clt. 1823. PL 1 foot.

25 S. HYPTOIDES (Cham, et Schlecht, in Linnaea, 3. p. 8.) pubescently hairy ; leaves opposite, and 3 in a whorl, ovate-lanceolate, sharply toothed, narrowed below, and auriculately stem-clasping at the base ; spikes terminal, dense-flowered, panicled ; calyx bibracteate, with narrow-linear, acuminated segments. %. G. Native of the southern provinces of Brazil. Habit of *Hyptis* or *Mentha.* Branches axillary, erect, shorter than the stem, pyramidally panicled. Root throwing out stolons. Cauline leaves 2\ inches long. Flowers on short pedicels.

Hyptis-like Stemodia. PL 1 to 2 feet.

26 S. STRICTA (Cham, et Schlecht, 1. c. p. 10.) clothed with clammy pubescence ; leaves obovate, acute, toothed, narrowed at bottom, but sessile and subdilated at the base, and quite entire : lower ones opposite: superior ones 3 in a whorl; spikes terminal, verticillate; calyx bibracteate, like that *of* the preceding. 1/. S. Native of tropical Brazil, Sello. Flowers smaller than those of the preceding, disposed in leafy verticillate racemes, on short pedicels. Floral leaves similar to the rest in shape.

Strict Stemodia. PL *I toll* foot.

j" Species hardly known,

%7 S. MINU'TA ; annual, spreading, 4-sided; leaves* sessile, ovate, cordate, serrulated ; flowers axillary, on long peduncles ; calyx 5-cleft; corolla ringent ; capsule globular. ©. H. Native of various parts of India, appearing during the rainy or cold season. Colûmnea minûta, Roxb. fl. ind. 3. p. 98.

Minute Stemodia. PI. spreading.

£8 S. TOMENTÔSA ; annual, diffuse ; leaves generally opposite, wedge-shaped, with gashed margins; racemes terminal ; calyx ample, 5-cleft; corolla ringent. ©. H. Native of Bengal, appearing during the cold season. Colûmnea toment6sa, Roxb. fl. ind. 3. p. 98.

Tomentose Stemodia. PI. spreading.

Cult. The species grow well in a light rich soil; and are readily increased by cuttings and seeds. The annual kinds may be planted in the open border about the end of May, in a warm sheltered situation.

XXVII. DODA'RTIA (so named by Tournefort after M. Dodart, member of the Academy of Sciences at Paris, and physician to the princess dowager of Conti.) Tourn. inst. 478. itin. *3.* t. 208. Lin. gen. no. 780. Schreb. gen. 1047. Gsertn. fruct. 1. p. 245. t. *53.* Juss. gen. 119. ed. Usteri, p. 134. Lam. ill. t. 530. f. 1.

LIN. SYST. *Didynamia, Angiospermia.* Calyx campanulate, short, angular, 5-toothed. Corolla tubular; limb bilabiate; upper lip emarginate : lower lip broader and trifid, twice the length of the upper one. Stamens 4, didynamous, inclosed ? anthers small, roundish, twin. Stigma 2-lobed. Capsule globose, covered by the calyx, 2-celled; placentas convex, growing to the dissepiment.—An herbaceous glabrous plant, with creeping roots ; branched, of simple, solitary stems. Leaves distant: lower ones opposite : upper ones alternate, linear, entire. Branches axillary. Flowers axillary, nearly sessile, at the tops of the stem and branches, bracteate. Corollas deep purple or blue.

1 D. ORIENTA'LIS (Lin. spec. p. *883.) %.* H. Native of Tartary; and on Mount Ararat. Mill. fig. 127. Sweet, fl. gard. t. 147. Lower leaves serrated : upper ones entire.

Eastern Dodartia. Fl. July, Aug. Clt. 1739. PI. 1 to 1J foot.

Cult. The plant loves a light dry soil, and a warm sheltered situation. It propagates very fast by its creeping roots; so that when once established in a garden, it will multiply fast enough.

XXVIII. MA^VSUS (from *fiaoog, masos,* a teat ; tubercles closing mouth of corolla.) Lour. coch. p. *385.* R. Br. prod, p. 439. Benth. scroph. ind. p. 26.—Hornemânnia species, Link—Gratiola species, Horn.

LIN. SYST. *Didynamia, Angiospermia.* Calyx campanulate, f~ff [illegible] nearly equaL Coroll a bilabiate; upper lip bidentate or bind : lower one longer, trifid, furnished with 2 gibbosities at the base ; lobes entire. Stamens 4, didynamous, inclosed ; filaments entire ; anthers cohering, or approximating by pairs; cells diverging or divaricate, but at length confluent. Stigma bilamellate. Capsule 2-valved, with a loculicidal dehiscence ; valves entire, bearing the dissepiment in the middle ; dissepiments at length free ; placentas adnate to the dissepiment.—Humble herbs, generally creeping or procumbent. Radical leaves numerous, petiolate, coarsely toothed or lobed : those of the sterile branches opposite; but those of the floral ones are *few* and alternate. Racemes of the floral branches, or of the scapes, naked, terminal, unilateral. Flowers alternate, pedicellate. Bracteas none, or 1-2 on a pedicel.

1 M. SURCULÔSUS (D. Don, prod. fl. nep. p. *86.)* stolons creeping; leaves deeply crenated, wrinkled, hispid, and a little curled ; those of the sterile branches roundish ; segments of calyx shorter than its tube, ovate, obtuse; corolla hardly twice the length of the calyx. %. F. Native of Nipaul, Kamaon, and Mussooree. Herb hairy. Racemes radical, pilose, *ox* scapes racemose. Corollas size of those of *Masus rugbsus,* but the plant is more branched.

Surculose Masus. PL creeping.

2 M. RUGÔSUS (Lour. coch. 385.) hardly stoloniferous; leaves all oblong, cuneated, coarsely toothed ; segments *of* the calyx ovate-lanceolate or lanceolate, acute, equal in length to the tube; corollas hardly twice the length of the calyx. 0. H. Native of Nipaul, Kamaon, Silhet, Wall.; Saharanpur and Mussooree, Royle ; Cochinchina, Lour.; Japan, Thunb. Sweet, fl. gard. t. *36.* M. bicolor, Benth. in Wall. cat. no. 3913. Hornemânnia bicolor, Willd. enum. 634. Rchb. icon. bot. exot. *25.* t. 37. Gratiola goodenisefdlia, Horn. hort. hafn. p. 19. Lindernia Japônica, Thunb. fl. jap. p. *253.1* Corolla blue, with a yellow or white palate.

Wrinkled-leaved Masus. Fl. May, Sept. Clt. 1780. PL procumbent.

3 M. DENTA^TUS (Wall. cat. no. 3914. Benth. scroph* ind. p. *27.)* stolons none ; leaves ovate, sinuated ; corolla 3 times the length of the calyx. ©. ? H. Native of Nipaul. Leaves larger, broader, smoother, and less lobed than the preceding; and the corolla is double the size.

***Toothed-leaved* Masus. PI. \ foot.**

4 M. PUMI'LIO (R. Br. prod. p. 439.) superior lip *of* corolla deeply bifid; scapes 1-4-flowered, and are, as well as the calyxes, glabrous. ©. ? H. Native of Van Diemen's Land. Flowers purple ?

Far. a; racemes 3-4-flowered ; pedicels furnished with a setaceous bracteole near the apex.

Far.fi; scapes 1-flowered.

Dwarf Masus. Fl. June, July. Clt. 1823. PI. small.

5 M. L^VIFÔLIA (Blum, bijdr. p. *753.)* leaves spatulate, repand, smooth on both surfaces ; racemes terminal, loose, glanduliferous. ©. H. Native of Java, in humid places about Buitenzorg.

Smooth-leaved Masus. PI. trailing.

Cult. The seeds of annual species require to be reared on a gentle hot-bed ; and when the plants are of sufficient size, but not before the end of May, they should be planted out in a warm sheltered situation in the open ground. *M. surculosus,* being perennial, will require to be kept in the greenhouse during winter.

XXIX. LIMNO'PHILA (from *Xtfivri, limne,* a lake ; and *(biXewy phileo,* to love ; in reference to the plants loving water.) R. Br. prod. 442. Benth. scroph. ind. p. 25.—Columnea species, Roxb.—Gratiola species, Willd.

LIN. SYST. ***Didynamia, Angiospermia.*** **Calyx tubular, *o**** cleft, equal. Corolla funnel-shaped ; limb somewhat bilabiate , upper lip 2-lobed: lower lip trifid; lobes all flat. Stamen* 4, didynamous ; filaments entire, usually abruptly mcurvea apex, sometimes dilated; anthers cohering by pairs, parallel, distinct. Stigma oblique, dilated, bilamellate, ^aps bisulcate, 2-valved; valves with a loculicidal dehi^?ce, tnev dehiscing slowly; dissepiment from the margins of or d^ at length free ; placentas adnate.—Erect marsh herbs. Leaves opposite : lower ones submersed, deep parted, as in *Ranunculus aqudtilis,* with capillaceously segments ; emersed leaves entire, toothed or cut, often and hence they appear as if they were verticillate.

opposite, sometimes sessile, sometimes pedicellate, axracemose ; pedicels usually bibracteate at apex.

§ 1. AXILLARIFLOR^E. *Flowers axillary. Emersed leaves hardly half an inch long.*

1 L. (Benth. in Wall. cat. no. 3904. scroph. ind. p. 25.) stem slender, glabrous; emersed leaves usually opposite, quite entire; flowers sessile, axillary ; teeth of calyx short, mutic ; capsule at length reflexed. ©.? %. S. Native of the Birman Empire, at Tavoy.

Reflexed-capsuled Limnophila. PL aquatic.

2 L. (Benth. in Wall. cat. no. 3905. scroph. ind. P- 25.) stem whorled, glabrous ; emersed leaves usually 3 in a whorl, lanceolate, subulately acuminated ; flowers sessile axillary, subverticillate ; teeth of calyx subulately acuminated. %. S. Native of Nipaul at 4,000 feet, Wall. ; Peninsula, Hamilt. ; Peninsula, Coromandel, Roxb. fl. ind. 3. p. *97.*

Subule-leaved Limnophila. PL aquatic.

3 L. (Blum, bijdr. p. 749.) stem villous ; leaves opposite, petiolate, lanceolate, obtuse, entire; spikes axillary and terminal, shorter than the leaves. T?. S. Native of India. Capraria diffusa, Roxb. fl. ind. *3.* p. *92.* Plant spreading, young parts puberulous. Leaves 1-3 inches long, and under one in breadth. Flowers small, purple. Racemes villous, clammy.

Diffuse Limnophila. PI. diffuse.

11 L. RACEMOSA (Benth. in Wall. cat. no. *3907.)* emersed leaves opposite, or subverticillate, 3-nerved, serrated, or the lower ones are parted ; racemes dense, many-flowered ; calyxes membranous, smooth, pedicellate. %. S. Native of the Indian Peninsula and Bengal, Wall. Bejar Royle. Cyrilla aquatica, Roxb. cor. *2.* p. 47. t. 189. L. hyssopifolia, Roth, nov. spec. 297. ? Corollas purple.

Racemose-flowered Limnophila. PI. aquatic.

12 L. GRATISSIMA (Blum, bijdr. p. 749.? Benth. in Wall, cat. no. 3906. scroph. ind. p. *26.)* emersed leaves 3 in a whorl, lanceolate-linear, serrated, feather-nerved ; raceme loose ; calyx with elevated stripes, on long pedicels. 1/. S. Native at Goalpara, Hamilt. ; Peninsula, Wight ; Ceylon, Macrae; Java, Blume.—Rheed. mal. 10. t. G, ex Blume. Leaves all ternate, sessile. Peduncles and calyxes clothed with glandular hairs, ex Blume.

Very grateful Limnophila. PI. aquatic.

13 L. POLYSTA'CHYA (Benth. in Wall. cat. no. 3909.) emersed leaves *3* in a whorl, 3-nerved ; racemes branched, slender, many-flowered ; flowers small, sessile. 1/. S. Native of the Indian Peninsula and Bengal.

Many-spiked Limnophila. PL aquatic.

N.B. L. campanuloides, Benth. in Wall. cat. no. 3908, probably belongs *to* Gentianese.

Cult. All the species of Limnophila being aquatic, they should be grown in a cistern placed in a stove, or warm part of a greenhouse, and treated like other tender aquatics.

XXX. MORGA^NIA (named in memory of Hugh Morgan, an apothecary of London, whose botanic garden is spoken of highly by Lobel and Gerarde in several parts of their works.) R. Br. prod. p. 441.

LIN. SYST. *Didynamia, Jngiospermia.* Calyx 5-parted, equal. Corolla ringent; upper lip 2-lobed : lower lip trifid ; lobes nearly equal, obcordate. Stamens 4, didynamous, inclosed ; lobes of anthers divaricate, mutic. Stigma bilamellate. Capsule 2-celled, 2-valved; valves bipartite; dissepiment from the inflexed margins of the valves.—Herbs with opposite leaves. Stems erect, tetragonal. Leaves linear. Peduncles axillary, 1-flowered, bibracteate at apex. Flowers blue. This

genus is nearly allied to *Herpéstis,* but is readily distinguished by the equal calyx, and more unequal corolla.

1 M. GLA'BRA (R. Br. prod. p. 441.) glabrous ; leaves linear, entire, or few-toothed; flowering peduncles about equal in length to the calyx. If. ? S. Native of New Holland, within the tropic.

Glabrous Morgania. PI. J foot. ?

2 M. PUBE'SCENS (R. Br. prod. 441.) downy ; leaves lanceolate-linear, toothed ; flowering peduncles shorter than the calyx. !£.? S. Native of New Holland, within the tropic. Very nearly allied to the preceding, and is, perhaps, only a variety of it.

Dowvy Morgania. PI. \ foot.

Cult. For culture and propagation see *Slemódia,* p. 542.

XXXI. HERPE'STIS (from *Ipirtierrie, herpestes,* any thing that creeps, in allusion to the creeping habit of the plants.) Gaertn. fruct. 3. p. 187. t. 214. R. Br. prod. p. 441. Benth. scroph. ind. p. 29.—Monniéra, Browne, Michx. &c. Gratiola species, Lin. and others. Calýtriplex, Ruiz, et Pav. Brâmia, Lam. Mart. pi. bras. 3. p. 16.

LIN. SYST. *Didyñamia, Jngiospermia.* Calyx 5-parted ; upper segment large, ovate, covering the rest: 2 lower ones narrower : 2 lateral ones linear. Corolla tubular, somewhat bilabiate : upper lip bifid : lower one trifid ; segments all flat, and nearly equal. Stamens 4, didynamous, inclosed ; anthers approximating by pairs ; cells diverging, or divaricate, at length nearly confluent. Style simple ; stigma emarginate, or 'bilamellate. Capsule hardly furrowed, 4-valved ; margins of the valves flat; dissepiment at length free ; placentas adnate.—Usually creeping, glabrous, or villous herbs. Leaves opposite, quite entire, or toothed. Flowers axillary, sessile, or pedicellate, solitary, or 2-3 together. Bracteas wanting, or furnished with 1-2 on each peduncle. Corollas generally blue.

§ 1. *Calyx bractless.*

1 H. ? AMÁRA (Benth. scroph. ind. p. 30.) plant almost glabrous ; leaves petiolate, ovate, crenated, cuneated at the base ; peduncles axillary, shorter than the leaves, 2-4-flowered, somewhat racemose; flowers pedicellate. %. S. Native of the Moluccas, Java. Gratiola amára, Roxb. fl. ind. ed. Car. 1. p. 136. ? Caranga amára, Vahl, enum. 1. p. 100. Curania amara, Juss. 1. c. Blum, bijdr. 746. Serrátula amara, Rumph. amb. *5.* p. 459. t. 170. fv 1. According to Roxburgh only 2 of the filaments are fertile. Rumphius says, the leaves are exceedingly bitter, and might, no doubt, answer valuable purposes in medicine.

Bitter Herpestis. PI. creeping.

2*TL OVATA (Wall. cat. no. 3896. Benth. scroph. ind. p. 30.) glabrous, procumbent; leaves short, petiolate, ovate, crenated; flowers solitary, opposite, nearly sessile. %. S. Native °\'. f® .Airman Empire at Tavoy. Habit of//, *chrysdntha,* from which it hardly differs unless in the sessile flowers.'

Ouafe-leaved Herpestis. PI. procumbent.

3 H. LiNEARis (Spreng. syst. 2. p. 802.) stem humble, branched ; leaves linear, quite entire, glabrous ; peduncles axillary, twin, 1-flowered. }/. S. Native of Coromandel. Lindérnia sesamoides, Spreng. new. entd. p. 14.

Li?iear-le2Lved Herpestis. PI. humble.

4 H. CHRYSA'NTHA (Cham, et Schlecht, in Linnsea, 2, p. 577.) herbaceous, glabrous ; stems at first erect, but at length decumbent ; leaves petiolate, ovate, serrated; peduncles opposite, a little shorter than the leaves ; outer sepals ovate, nearly entire. ©. H. Native of Mexico. Corolla yellow.

Yellow-flowered Herpestis. PI. decumbent.

5 H. LANCEOLA^TA (Wight, in Wall. cat. no. 3899. Benth. scroph. ind. p. 30.) glabrous, erect; leaves lan^olate* linear, quite entire, narrowed at the base; flowers pedicellate, together. 1/. S. Native of the Peninsula of India.

Lanceolate-leaved Herpestis. PL % foot.

6 H. SERPYLLOI^DES (Cham, et Schlecht, in Linnsea, 2, p. 574.) suffruticose ; stems radicant, tufted ; leaves nearly late, remotely and obsoletely serrated ; flowers sessile, alternate and opposite ; outer sepals lanceolate, acute. Native of Brazil, within the tropic, Sello. Habit of *serpyllum.* Flowers small.

Wild-Thyme-like Herpestis. Shrub creeping.

7 H. FLAGELLA^RIS (Cham, et Schlecht, in Linnaea, 2, p. 576.) sessile, suffruticose, glabrous ; stems whip-like, filiform ; leaves long, lanceolate, nearly entire, or serrated; peduncles alternate; outer sepals lanceolate, acute. In the South of Brazil, in the province of Monte Video. Herpestis tevidénsis, Spreng. syst. 2. p. 802. Flowers deep coloured.

Var. 0, *veroniccefólia* (Cham, et Schlecht. p. 576.) herbaceous, slender; leaves narrower, usually serrated ; serratures few, deep, rarely obsolete; flowers smaller. %. G. Monte Video.

Whip Herpestis. PL creeping.

8 H. TENE'LLA (Cham, et Schlecht. L c. p. 576.) herbaceous, glabrous; stems prostrate; leaves on short petioles ovate, acutely serrated ; peduncles very long, alternate ; sepals ovate, cordate. %. S. Native of the South of Brazil, at Rio Pardo, Sello.

Tender Herpestis. PL prostrate.

9 H. cALLiTRicHoi^ES (H. B. et Kunth nov. gen. et spec. p. 367.) quite glabrous, prostrate ; leaves alternate, cuneated at the base, remotely toothed ; peduncles longer than the leaves. ⊙. S. Native of Mexico.

Outer segments of calyx ovate-oblong, acute, entire. Corollas small, pale blue. The natives of India use the expressed juice of this species mixed with *Petrblium* to rub on parts affected with rheumatic pains.

Monnier's Herpestis. Fl. July, Sept. Clt. 1772. PI. creeping.

27 H. STELLARIOIDES (Cham, et Schlecht, in Linna?a, 8. p. *32.)* glabrous; stem erect, nearly simple, loose; leaves subsessile, linear-lanceolate, obsoletely serrated at apex; peduncles axillary, equal in length to the leaves; calyx bibracte^ ate: the larger segments ovate, obtuse, reticulated. *U.* S. Native of Brazil, Sello. Leaves longer than the internodes, about an inch long, rarely opposite, but usually *3* in a whorl, half stem-clasping. **Bracteas and calyx** as in *H. Monniera,* but the corolla is smaller, and more deeply cleft, and the segments are narrower and longer, oblong, obtuse.

Stichwort-like Herpestis. PI. 1 to 1| foot.

28 H. MORANE'NSIS (H. B. et Kuntb, nov. gen. amer. 2. p. 367.) creeping, glabrous; leaves cuneate-oblong, obtuse, obsoletely and remotely denticulated at apex, rather fleshy ; peduncles longer than the leaves, bibracteate under the calyx ; outer segments of calyx ovate-oblong, bluntish, quite entire. *1J..* S. Native of New Spain, between Mount Ventoso and the mines of Moran, at the altitude of 1340 hexapods.

Moran Herpestis. PL creeping.

29 H. TOMENTÒSA (Schlecht, et Cham, in Linnaea, 5. p. 106.) plant clothed with white wool, creeping, branched ; leaves spatulate, elliptic, acutish, sessile, somewhat crenately serrated towards the apex ; flowers axillary, sessile ; calyx bibracteate ; bracteas and calycine segments linear-acuminated and acute. %. S. Native of Vera Cruz, in sandy places.

Tomentose Herpestis. PL creeping.

30 H. LANUGINO'SA (Blum, bijdr. p. 747.) woolly; leaves ovate, doubly crenated; peduncles shorter than the petioles; calyx bibracteate. %. S. Native of humid places near Sadjram.

Woolly Herpestis. PI. erect. ?

31 H. JAVA'NICA (Blum, bijdr. p. 743.) stems procumbent, rather villous; leaves ovate, unequally crenated, smoothish, lull of depressed dots beneath ; flowers nearly sessile ; calyxes bibracteate. 1/. S. Native of Java, in rice fields.

Java Herpestis. PL procumbent.

32 H. SPATULA^TA (Blum, bijdr. p. 743.) quite glabrous ; leaves spatulate, obsoletely serrulated above ; peduncles longer than the leaves ; calyx bibracteate. %. S. Native of Java, in bogs about Batavia and Buitenzorg.

SpatulateAeaved Herpestis. PL procumbent. ?

N.B. Herpestis floribiinda, Roth, nov. spec. *289,* but not of R. Br., and H. rugosa, Roth, 1. c. p. 290, do not belong to this genus, or even probably to the order. They are, perhaps, Acanthaceous plants.

Cull. Most of the species require to be grown in moist soil, or in shallow water. They are readily increased by separating the rooted stems.

XXXII. MECARDO^NIA(named^after Antonio Meca y Cardona, a Spanish botanist, and one of the founders of the botanic garden of Barcelona.) Ruiz, et Pav. fl. per. syst. p. 164. Mart. nov. gen. 1. p. 16. t. 208.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted, unequal ; the 3 outer segments the largest, propped by adnate twin bracteas. Corolla tubular ; limb short, sub-bilabiate, 5-lobed. Stamens 4, didynamous, inclosed; anthers discrete. Stigma oblique, subcapitate, on an incurved style. Capsule 2-celled, completely 2-valved ; dissepiment placentiferous, at length free; valves parallel.—Small, herbaceous, decumbent plants, with tetragonal stems, and opposite leaves on short petioles; and axillary and terminal flowers. This genus is nearly allied to *Herphtis* and *Morgania.*

1 M. PUSILLA (Mart. pi. bras. 1. p. 16. t. 208.) leaves lanceolate, or broad-lanceolate, obsoletely serrated. %. S. Native of Brazil, in the provinces of St. Paul and Bahia, in sandy desert fields.

Least Mecardonia. PL decumbent.

2 M. OVATA (Ruiz, et Pav. syst. veg. per. p. 164.) leaves ovate, serrated. %. S. Native of Peru.

Ovate-leaved Mecardonia. PL decumbent.

Cult. For culture and propagation see *Herpestis* above.

XXXIII. BRA'MIA *(Brami* is the Malabar name of *Herpestis Monniera,* according to Rheed. mal. 10. p. *27.* t. 14.) but not of Lam. nor Mart. Herpestis, Mart. pi. bras. 3. p. 13, but not of Gaertn. and R. Br. Mĕlia, Vand.

LIN. SYST. *Didynamia, Angiospermia.* ' Calyx unequal; the 3 outer segments the broadest, and subcordate : the 2 inner ones keeled. Corolla ringent, bilabiate ; upper lip 2-lobed: lower lip 3-lobed. Stamens 4, didynamous ; anthers discrete. Ovarium girded by a long, toothed disk. Stigma bifid. Capsule 2-celled; dissepiment placentiferous ; valves bipartite.—Herbs with opposite leaves. Peduncles axillary, bibracteate.

1 B. LANIGERA; %. S. Native of tropical Brazil, Sello. Herpestis lanigera, Cham, et Schlecht, in Linnaea, 2. p. *572-* Veronica rotundifdlia Brasiliensis, Spreng. syst. 1. p. *67.* Stem creeping, woolly. Leaves sessile, ovate, orbicular, entire, feather-nerved ; peduncles equal in length to the leaves and longer, bibracteate under the calyx.

Wool-bearing Bramia. PL creeping.

Cult. For culture and propagation see *Herpestis,* above.

XXXIV. SPH^ROTHFCA (from *tnraipa^spaira,* a sphere; and *OrjKrj, theke,* a case, or sheath, in reference to the globular capsule.) Cham, et Schlecht, in Linnaea, 2. p. *608.*

LIN. SYST. *Didynamia, Angiospermia.* Calyx deeply 5-parted, equal, permanent. Corolla tubular; limb unequal, 5-lobed, bilabiate; upper lip 2-lobed: lower one stretched out, and 3-lobed; lobes entire, obtuse. Stamens 4, didynamous, inclosed; filaments filiform, glabrous, short, inserted a little beneath the throat: lower ones the longest; anthers 2-celled, roundish, mutic, naked, approximating by pairs. Style inclosed ; stigma bilamellate. Capsule globose, 2-celled, dehiscing slowly at the dissepiment, as also in the middle *of* the cells, and, therefore, the capsule appears 4-valved ; dissepiment wholly placentiferous Seeds numerous, minute, oblong, angular, striated, and as if they were foveolate.—Glabrous herbs with opposite dotted leaves ; axillary, 1-flowered peduncles, and bibracteate calyxes.

1 S. SCOPARIOIDES (Cham, et Schlecht, 1. c. p. *606.)* %. H. Native of equinoctial Brazil. Root creeping. ? Stem tetragonal, erect, ornamented with flowers and leaves from the base to the apex, as well as the branches. Leaves lanceolate, acute, obsoletely, unequally, and sharply serrated, feather-nerved, 2 inches long; margins and teeth cartilaginous; petioles short. Flowers small. Segments of calyx linear-lanceolate, 3-nerved. Corollas small, downy outside, bluish in the dried state.

Scoparia-like Sphaerotheca. PL 2 to 3 *feet.* ^

Cult. For culture and propagation see *Herpestis* above.

XXXV. DI'CEROS (from *dig, dis,* twice ; and *xepoc, keros,* a horn ; in reference to the bicornute anthers.) Lour. coch. p. 381. Blum, bijdr. p. 751.

LIN. SYST. *Didynamia, Angiospermia.* Calyx bractless, *o*-parted, equal. Corolla funnel-shaped ; limb bilabiate, sometimes nearly equal. Stamens 4, didynamous ; filaments ascending : longer ones callous at the base; cells *of* anthers diverging, conniving in a cruciate manner. Stigma bilamellate. ^apsu nearly globose, 2-celled, 2-valved; valves undivided; dissep ment parallel; placentas adnate to the dissepiment.—wer^ with opposite leaves, and with generally terminal racemes flowers.

SECT 1. *Corolla subcampanulate; limb Globed, nearly equa •*

1 D. COCHINCHINE'NSIS (Lour. coch. p. 381.) leaves fl! in ^ whorl, ovate-lanceolate, serrated, fleshy, glabrous; F solitary, axillary, 1-flowered, villous. 1/. G. Native *ot* ^ . ^ china, in marshy places. Root creeping. Flowers pale

1 M. ... (Benth. scroph. ind. p. 16.) glabrous; stem erect, branched ; leaves lanceolate, bluntish, toothed towards the apex. 2/. H. Native from Pennsylvania to Carolina, in ditches and wet places. Gratiola acuminata, Walt. fl. carol, p. 61. Ell. fl. carol, p. 15. Gerardia cuneifolia, Pursh, fl. amer. 2. p. 422. Flowers large, pale yellow. ? Calyx 5-parted.

Blackish Matourea. PL 1 to \\ foot.

2 M. PRATE'NSIS (Aubl. guian. 2. p. 642. t. 259. under M. Guianensis.) leaves petiolate, ovate-oblong, acute, crenated. ©. S. Native of the Island of Trinidad, and of Brazil, on road-sides. Vandellia pratensis, Vahl, eclog. 2. p. 48. Willd. spec. 3. p. 343. Tupeicavi, Pis. bras. 249. Corollas blue.

Meadow Matourea. PL 2 feet.

3 M. ? DUNBIA ; leaves lanceolate, acutely serrated, attenuated at the base, and somewhat auricled; flowers nearly sessile, subspicate. %. G. Native of Buenos Ayres. Gratiola tetragona, Hook. bot. mag. t. 3134. Flowers blue.

Doubtful Matourea. FL Aug. Clt. 1830. PL 1 foot.

Cult. For culture and propagation see *Herpestis,* p. 546.

XXXVIII. CACONAVPEA (meaning unknown to us.) Cham, et Schlecht, in Linnsea, 8. p. 28.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted, unequal ; upper segment the largest. Corolla tubular: limb 4-cleft, bilabiate : upper lip shorter, emarginate: lower one trifid, equal. Stamens 4, didynamous, inclosed ; anthers roundish, 2-celled, emarginate at the base. Stigma compressedly bilamellate, bent a little forward. Capsule cylindrical, inclosed, 2-celled, 4-valved; dissepiment separating slowly from the inflexed valves.—An herb with the habit of *Gratiola amara.* Leaves opposite, decussate, quite entire, full of pellucid or glandular dots. Flowers small, in axillary contracted cymes, falsely verticillate. Calyx bibracteate.

1 C. GRATIOLOIDES (Cham, et Schlecht, 1. c. p. 29.) %. ? S. Native of Brazil, Sello ; Bahia, Lhotski, in marshes. Plant glabrous, or rather pilose on the midrib and margins of the leaves. Stem purplish. Leaves complicate, linear, or linear-lanceolate, acute, longer than the internodes. Bracteas setaceous.

Gratiola-like Caconapea. PL \\ to 3 feet.

Cult. For culture and propagation see *Herpestis*^ p. 546.

XXXIX. RANA'RIA (from *rana,* a frog, in allusion to the habitation of the plant, in inundated places.) Cham, et Schlecht, in Linnaea, 8. p. 30.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted; segments of equal length ; outer 3 the broadest. Corolla venb'icosely tubular ; limb 4-cleft, nearly equal. Stamens 4, didynamous, almost erect ; anthers sagittate, obtuse within the throat; cells elliptic. Stigma capitellately emarginate. Capsule inclosed, 4-valved; dissepiment membranous, thin, free, seminiferous at the axis.—A small, marsh, creeping herb. Leaves opposite, decussate, quite entire, full of pellucid dots. Flowers small, axillary, fascicled, on short pedicels. Calyx bibracteate ; bracteas minute.

1 R. MONNIERIOIDES (Cham, et Schlecht, in Linnsea, 8. p. 31.) %. S. Native of Brazil, in inundated places, Sello. Leaves half stem-clasping, from ovate, scarcely subcordate, narrowed at the base, bluntish, rather fleshy, shorter than the internodes.

Monniera-like Ranaria. PL creeping.

Cult. For culture and propagation see *Herpestis,* p. 546.

XL. VANDEXLIA (so named by P. Browne, in honour of Dominico Vandelli, professor of natural history at Lisbon.) Lin. mant. p. 89. Schreb. gen. no. 1040. Juss. gen. p. 122.

ed. Usteri. p. 136. Lam. ill. t. 522. f. 4. Benth. scroph. ind. **p. *35.***

LIN. SYST. *Didynamia, Angiospermia.* Calyx tubular, or campanulate, nearly equal, 5-toothed, or 5-parted. Corolla with an exserted tube, and a 5-cleft, bilabiate limb; upper lip the shortest. Stamens 4, didynamous : the *2* superior ones short; filaments entire : the *2* lower ones inserted at the base of the lower lip ; filaments elongated, arched, furnished with a tooth-formed or filiform appendage each at the base ; anthers cohering by pairs, 2-celled ; cells diverging or divaricate, confluent at apex. Style simple ; stigma flattened, bilamellate, or simple. ? Capsule globose, oblong, or linear, 2-valved ; valves entire, membranous, with flat margins ; dissepiment parallel, placentiferous, at length free.—Glabrous or hairy herbs, sometimes with the habit of species of *Torenia,* and sometimes with the habit of species of *Bonnaya.* Stems tetragonal. Leaves opposite, usually toothed. Flowers axillary, opposite, or fascicled : the upper ones generally racemose.

§ 1. BRACHYCA'RPJE *(from/3paxvg, brachys,* short; and rapTTOC, *karpos,* a fruit.) Benth. scroph. ind. p. *35.* CapsuJe nearly globose, or ovate-oblong, shorter than the calyx, or hardly longer.

**** Calyx 5-toothed before florescence. Capsule shorter than the calyx.***

1 V. OBLONGA (Benth. scroph. ind. p. *35.)* glabrous, erectish ; leaves oblong, or lanceolate, narrowed at the base, quite entire, thickish ; peduncles few, elongated, subracemose ; calyx tubular, almost equally 5-toothed, or semiquinquefid ; capsule* globose, shorter than the calyx. ©. H. Native of China, near Macao, Vachell.

Oblong-leaved Vandellia. PI. | to I foot.

2 V. MOLLUGINOIDES (Benth. 1. c.) glabrous ; leaves nearly sessile, ovate-oblong, cuneated at the base, with scabrous margins ; peduncles stiff, fascicled, hardly longer than the calyx; calyx narrowed at the base, 5-toothed at apex, at length cleft irregularly ; capsule ovate-oblong, shorter than the calyx. ©. ? S. Native of the Birman Empire. Torenia molluginoides, Benth. in Wall. cat. no. 3960. Calyxes stiff, *2* lines long. Corolla a little longer.

Mollugo-like Vandellia. PI. \ to 1 foot.

3 V. A'LBA (Benth. 1. c) diffuse, nearly glabrous; leaves on short petioles, ovate, rounded at the base, or cuneated ; peduncles slender, fascicled, much longer than the calyx ; calyx slender, somewhat 5-loothed at apex, at length hardly cleft ; capsule oblong, shorter than the calyx. 0. ? S. Native of the East Indies, at Nathpur. Torenia alba, Hamilt. in Wall. cat. no. 3961.

White-dowered Vandellia. PI. creeping.

4 V. CRUSTA^NCEA (Benth. 1. c.) diffuse, glabrous; leaves ovate ; peduncles axillary, or subracemose, *2-3* times as long as the calyx; calyx 5-toothed before florescence, but at length becoming 5-parted, exceeding the ovate capsule. ©. S. Native throughout India ; in the Peninsula ; at Macao in China ; and at Saharumpur. Capraria Crustacea, Lin. mant. p. 87. Torenia Crustacea, Cham, et Schlecht, in Linnsea, 2. p. 570. Gratiola lucida, Roxb. cor. 3. p. *2.* t. 202. fl. ind. ed. Car. 1. p. 138. Morgania lucida, Spreng. syst. 2. p. 802. Torenia lucida, Hamilt. in Wall. cat. no. 3962. Antirrhinum hexandrum, Forster, prod. p. 43. no. 235.—Rheed. mal. 9. p. 113. t. *58.* Morgania aspera, Spreng. syst. *2.* p. 803. Calyx 2 to *2* lines long. Corolla deep blue.

Crusiaceous Vandellia. Fl. June, July. Clt. 1816. Pi-trailing.

**** * Calyx 5-parted before florescence. Capsule shorter than the calyx.***

5 V. ERE'CTA (Benth. 1. c. p. *36.)* erectish, glabrous ; leaves nearly sessile, ovate or oblong, narrowed at the base; peduncles axillary or racemose, *2-5* times as long as the calyx ; calyx 5-parted, or deeply 5-cleft before florescence ; segments of the calyx lanceolate, membranous, exceeding the capsule, which is ovate. ©. S. Native of India; as of the Peninsula, Deyra Doon, Munghyr, Nipaul, Silhet, Birman Empire, &c. Tittmannia trichotoma, Benth. in Wall. cat. no. 3943. Very nearly allied to *V. Crustacea,* but distinct.

Erect Vandellia. PI. \ foot.

6 V. ELA'TA (Benth. 1. c.) glabrous, or sparingly pilose ; leaves petiolate, ovate, subcordate at the base ; pedicels racemose, at length hardly twice the length of calyxes; calyx 5-parted before florescence ; segments lanceolate-subulate, exceeding the ovate capsule. ©. S. Native of the Birman Empire, at Tavoy, Wall. Tittmannia elata, Benth. in Wall. cat. no. 3942.

Tall Vandellia. PI. \ foot.

7 V. HIRSU'TA (Hamilt. mss. ex Benth. scroph. ind. p. *36.)* hairy; leaves ovate: lower ones petiolate, narrowed at the base : superior ones nearly sessile, cordate at the base ; pedicels racemose, at length 2-3 times as long as the calyx ; calyx 2-parted before florescence ; segments lanceolate, subulate, exceeding the nearly globose capsule. ©. H. Native of India, at Goalpara, Silhet, Peninsula, and Ava. Tittmannia ovata, Benth. in. Wall. cat. no. 3942. but not of Rchb. Gratiola viscasa, Horn. hort. hafn. p. 19. Hornemmannia viscosa, WilW* enum. p. 654. Tittmannia viscosa, Rchb. icon. bot. exot. 1. P' 26. t. *38.* Corolla blue.

Hairy Vandellia. Fl. June, July. Clt. 1823. PI. *i hot.*

8 V. SCABRA (Benth. I.e.) diffuse, hairy, or almost glabrous; leaves nearly sessile, broad-ovate, subcordate at the base^ ^ rounded; peduncles axillary or racemose, 2-5 times as long as the calyx ; calyx 5-parted before florescence : segments lanceolate, exceeding the nearly globose capsule. ©. S. ^ the Indian Peninsula, and at Tavoy ; and of the Island Torenia hirta, Cham, et Schlecht, in Linnaea, 2. p. 36. Tittmannia pusilla, Benth, in Wall. cat. no. 3945. exclusive 0 C. Tittmannia sulcata, Benth. in Wall. cat. no. 3946. of *V. Crustacea;* but the plant, and especially the calyx* black on drying. It is also like *Bonnaya rotundifdlia** fers in the inflorescence and stamens.

Scabrous Vandellia. PI. diffuse, \ to 1 foot.

9 V. LA'XA (Benth. 1. c.) diffuse, hairy; leaves nearly s rounded at the base, or subcordate ; pedicels axillary mose, *2-3* times as long as the calyx; calyx 5-parted florescence ; segments subulate, very hairy, exceeding t sule, which is nearly globose. ©. S. Native of the fen of India, Wight. Perhaps only a variety of *V. scabra,* DU habit and calyx are distinct.

Loose Vandellia. PI. diffuse, \ foot.

10 V. MOLLIS (Benth. 1. c.) hairy; leaves nearly ; e oblong-ovate or ovate-lanceolate, clothed with soft vim eels axillary or racemose, 2-4 times as long as the calyx 5-parted before florescence, very hairy, With subulate s exceeding the capsule, which is oblong. 0. far. [i, Limosella ***di&ndra,*** Krock. fl, sil, *2.* no. 1006. t. 27. f. *ft,* flowers diandrous.

Aquatic Mudwort. Fl. July, Sept. Britain. PI. creeping.

2 L. AUSTRA'HS (R. Br, prod. p. 443.) leaves spatuJate-linear, longer than the scapes; flowers didynamous, rarely diandroits. ©. W. G. Native of Van Dicmen's Land, and the south coast of New Holland, in marshes.

Southern Mudwort. PI. creeping.

3 L. TENUIEOLIA (Nutt. journ. acad, sc. phiJ. 1. p. 115. gen. amer. 2. p, 43.) leaves linear and very narrow, scarcely dilated at the points; scapes **1-flowered,** about equal in length with the leaves; flowers tetraudrous. 0.W, H. Nativeof Germany, and North America, on the banks of **the** Delaware. Corolla white, externally blue, 4-5-lobed.

'Fine-leaved Limosella. PI. creeping.

Cult. The species being hardy, aquatic annuals, the seeds may be sown by the edge of a pond, Or cistern,

XLVII. HYDRANTHEXIUM (from **SSwp,** *hjdor,* water ; iind *av6i/\wv, anthelion,* a little flower.) H. B. et Kunth, HQV. gen. 7. p. 202. Wiliichia, Mum.

LIN, SYST. *Triandria, Monogtjnia.* Calyx deeply 4-parted, bractless, permanent; segments opposite, by pairs, 2 of which are oblong, obtuse, 3-nerved; and the other *2* are lanceolate, acutish, 1-nerved. Corolla funnel-shaped ; limb trifid; the third lobe twice the breadth of the others, and emarginste. Stamens 3, inserted in the throat of the corolla, and alternating with its lobes, and shorter than them; anthers oblong, 2-celled. Stigma 2-lobed. Capsule ovate-roundish, mucronate, membranous, 2-celled *1* 2-valved *1* dissepiment placentiferous on both sides, at length free. Seeds many, subcylindrical, a **little** arched, exalbuminous, striated, pendulous. Embryo cylindrical, 2-lobed. Radicle superior looking to the hilum.—A small, floating, glabrous, radicant herb. Leaves opposite, quite entire, 7-nerved. Flowers axillary, solitary, alternate, pedicellate, minute, white. This genus comes very near to *Lindernia* and *Limosella* ; but is distinguished from them in the structure of calyx, corolla, and number of stamens.

25 M. NEPALE'NSIS (Benth. in Wall. cat. no. 3917.) glabrous, diffuse ; leaves petiolate, ovate, serrated, cuneated at the base, or rounded ; calyx ovate-tubular, with short, acute teeth : tn upper tooth a little larger than the rest.—Native of Nipaul.

Nipaul Monkey-flower. PL diffuse.

§ 4. *Stems creeping. Leaves thickish, quite entire, and quite glabrous.*

26 M. ORBICULA^RIS (Wall. cat. no. 3919.) Benth. scroph. ind. p. *29.)* glabrous, creeping ; leaves petiolate, orbicular, quite entire, thickish; calyx ovate-tubular, truncate, with very short teeth.—Native of the Birmann Empire, at Rangoon and Tavoy, Wall.

Orbicular-\eave& Monkey-flower. PL creeping.

27 M. RIPENS (R. Br. prod. p. 439.) glabrous, creeping; leaves ovate, obtuse, quite entire, half stem-clasping, thickish; calyx ovate-tubular, truncate, with very short teeth. %. F. Native of Van Diemen's Land, Gunn. ; and New South Wales. **Habit of *Herphtis Monniera.***

Creeping Monkey-flower. PL creeping.

28 M. GRA'CILIS (R. Br. 1. c.) quite glabrous, erect; leaves linear-oblong, or oblong, obtuse, entire ; peduncles elongated. %. G. Native of New South Wales, about Port Jackson.

Slender Monkey-flower. PL erect.

Cult. Most of the species are showy, and worth cultivating for ornament. The shrubby kinds grow well in a light rich soil; and cuttings of them strike root readily under a hand-glass in the same kind of soil. The perennial herbaceous kinds are well adapted for decorating flower-borders, thrive in any common garden soil, and all prefer a moist shady situation. AH of them require some protection in severe weather: they are readily increased by division and seeds. The seeds of annual species may either be sown where the plants are intended to remain, or they may be reared on a hot-bed, and afterwards planted out into the open ground.

L. LEUCOCA'RPUS (from *Xevicog, leucos,* white ; and fcap7roc, *karpos,* a fruit; in reference to the white baccate fruit.) D. Don, in Sweet, fl. gard. n. s. t. 124. Conobea species, Graham. Mimulus species, Kunth.

Corolla bright violet, like that of many species of *Phlòx;* upper lip paler. Allied to *C. grandiflòra.* Seeds smaller than those of *C. vèrna.*

Fiolaceous-fiowered Collinsia. PL \ to 1 foot.

5 C. MI'NIMA (Nutt. in journ. acad. nat. sc. phil. 7. p. 47.) leaves opposite, cuneate-oblong, obtuse, somewhat denticulated; segments of the calyx hardly half so long as the corolla. 0. H. Native of North America, at Flat Head river, flowering early in spring. Peduncles axillary, longer than the leaves. Flowers smaller than in *C. vèrna,* but larger than in C. *parviflòra.* The upper lip of corolla is white, the lower blue. Very closely allied to *C. violàcea,* Nutt.

Least Collinsia. FL Spring. PL 1 to 2 inches.

6 C. PARVIFLÓRA (Lindl. bot. reg. 1082.) stem prostrate,

downy; leaves ovate-oblong, nearly entire, downy; pedicels axillary, solitary, much longer than the flowers; segments of corolla acutish, entire; calyx downy, about equal in length to the corolla. ©. H. Native of America, in the vicinity of the river Columbia. Corollas small, purple and blue.

Small-flowered Collinsia. Fl. June, July. Clt. 1826. PI. procumbent.

7 C. SPARSIFLORA (Fisch. et Meyer, cat. sem. hort. petrop. 2d. 1836.) diffuse ; leaves all opposite ; flowers solitary ; pedicels a little longer than the calyx; capsule globose. ©. H. Native of California, about the Russian colony, Ross. Smoothish, much branched. Stems and branches filiform. Leaves all, or only the upper ones opposite, on which account it is distinguished from the other species. The flowers are solitary, rarely opposite, of a size intermediate between those of C *grandiflbra* and C *parviflora.* Corolla pale violet: lateral segments of the lower lip deep purple.

Scattered-flowered Collinsia. Fl. June, July. Clt. 1836. PI. diffuse.

Cult. All the species being showy, they are well fitted for decorating flower borders, or to be grown in beds or large patches. The seeds only require to be sown where the plants are intended to remain in March or April.

TRIBE IV. GERARDIE'^E (this tribe contains plants agreeing with *Gerardia* in the characters indicated below.) D. Don, in edinb. phil. journ. vol. 19. p. 111. July, 1835. Benth, in bot. reg. under no. 1770^ Calyx tubular, 5-toothed. Corolla campanulate, funnel-shaped, or tubular ; limb 5-lobed, bilabiate. Stamens 4, didynamous ; anthers approximate, 2-celled, often bearded ; cells diverging, distinct at apex, for the most part spurred at the base. Stigma clavate, undivided. Capsule bipartible ; dissepiment composed of *2* connate lamina; valves entire, or bifid ; placentas narrow, spongy. Seeds angular, with a thick favosely cellular, loose testa. Albumen fleshy. Embryo sub-foliaceous, almost the length of the seeds. Radicle short, obtuse.—Herbs or under shrubf, for the most part natives of America. Leaves opposite, scabrous. Flowers axillary, solitary, or disposed in terminal, spicate racemes, yellow or purple.

LIV. GERA'RDIA (a name originally given by Plumier to a plant now hardly known, and intended by him to commemorate our old English botanist, John Gerarde, author of the Herbal, 1597, folio, and a great cultivator of exotic plants, of which he published a catalogue in 1596.) Lin. gen. no. 747. Schreb. gen. no. 1004. Juss. gen. p. 119. ed. Usteri. p. 134. Benth, in Hook. comp. 1. p. 204. Virgularia, Ruiz, et Pav.

LIN. SYST. *Didynamia, Angiospermia.* Calyx campanulate, 5-toothed, or 5-cleft. Corolla campanulate, or ventricosely and tubularly-campanulate : limb 5-cleft, with roundish, half-spreading segments. Stamens didynamous, or rarely nearly equal, shorter than the corolla, sometimes all antheriferous, and sometimes the *2* smaller or shorter ones sterile. Capsule acute, or obtuse, without a beak.-Herbs or under shrubs natives of America. Flowers solitary, axillary, sessile, or pedicellate; ped.cels generally bractless. Corollas yellow, or of a ros^ purple colour.

SECT. I. CYRTOCODON (from *KVPTO£, kyrtos,* a curve; and «*«„, *kodan,* a little bell.) Benth. in Hook. comp. 1. p. 204. Calyx deeply 5-cleft. Corolla yellow; tube usually short and incurved. Anthers mutic. Species natives of North America.

1 G. SERPYLLIFOLIA (H. B. et Kunth, nov. gen. *2.* p. 343) procumbent; leaves ovate, obtuse, quite entire ; flowers axillary, solitary, sessile ; calycine segments entire. ^. G. Native of New Spain, near Carpio, and on the borders of Lake St. Christopher, at the altitude of 1180 hexapods. Plant glabrous in every part. Leaves about *2* lines long. Corolla pale yellow, almost funnel-shaped; tube 3 times as long as the calyx. Stamens and ovarium glabrous.

Wild-Thyme-leaved Gerardia. Shrub procumbent.

2 G. PROSTRATA (H. B. et Kunth, 1. c.) prostrate ; leaves pinnatifid: segments linear, acutely mucronate: lower ones cut; flowers axillary, solitary, sessile; calycine segments pinnatifidly cut. ^ . G. Native of New Spain, between Pachuca and Mount Ventosa, at the altitude of 1320 hexapods. Plant glabrous, tufted, 2-3 inches long. Leaves 3-4 lines long. Corolla an inch and a half long.

Prostrate Gerardia. Shrub prostrate.

3 G. VIRGVTA (H. B. et Kunth, 1. c. p. 344.) erect, pubescent ; leaves pinnatifid : segments linear, obtuse, entire, or cut; calycine segments oblong, entire, and toothed ; tube of corolla incurved ; stamens nearly equal; anthers erect, glabrous ; capsule ovate, acute, T? . G. Native of Mexico, between Guanaxuato and Santa Rosa, at the altitude of 1330 hexapods. Leaves *5-6* lines long, and 2-3 lines broad. Flowers pedicellate. Corolla campanulate, yellow, glabrous. Filaments woolly. Tube of corolla longer than in *G. macrophylla.*

Twiggy Gerardia. PI. erect.

4 G. MACROPHYLLA (Benth. ger. in Hook. comp. 1. p. *205.)* pubescent; leaves deeply toothed, pinnatifid, or the lower ones are bipinnatifid : segments ovate, or oblong-lanceolate : upper leaves almost quite entire; flowers nearly sessile ; calyx hairy, with ovate, subdentate segments; tube of corolla short, incurved, villous inside ; stamens didynamous; anthers rather pilose. 2£. H. Native of the United States; Ohio; Kentucky ; Arkansas. Seymèria macrophylla, Nutt. gen. amer. — p. 49. The form and colour of the corolla connect this *species* with the following. The shorter stamens have smaller anther than the longer ones__Habit nearly that of *G. grand/flora^* Capsule small, ventricose, with a compressed point, somevvna 4-valved.

Large-leaved Gerardia. ' PI. 4 to 5 feet.

SECT. II. OTOPHYLLA (from *OVQ* wroc, *ous otos,* an ear ; a *(j>v\\or, phyllon,* a leaf; in reference to the auriculately 1° leaves.) Benth. ger. in Hook. comp. 1. p. *205.* ,Calyx deep'J 5-cleft. Corollas purple, campanulate. Stamens didynamous' anthers of the longer ones fertile, of the shorter ones small* , and bearded.

5 G. AURICULATA (Michx. fl. bor. amer. 2. p. 48.) If. Native of the United States, chiefly in the Western ones, Seymèria auriculàta, Spreng. syst. 2. p. 810. An erect Leaves oblong-lanceolate, generally auriculately lobecl base. Flowers almost sessile.

Auricled Gerardia. PL \ to 1 foot.

SECT. **III.** PEDICULARIOIDES (SO called by reason of the plants having the habit of the species of *Pediculdris.)* Benth, g Hook. comp. 1. p. 205. Calyx semi-5-cleft. Corolla *yeu^* tubularly campanulate. Stamens didynamous; ant hers equal; cells twin, fertile, spurred at the base.—Herbs of North America. Leaves broadish, usually cut. *l*ooc* corolla often ciliated.

6 G. FLVVA (Pursh, fl. amer. sept. *2.* p. 423. Benth. ^ but not of Lin.) downy; leaves ovate-lanceolate, or ^ obtuse, quite entire, or sinuately lobed; calyx the oblong, obtuse segments, which are rather shorter tube. %. H. Native of the United States, common.

almalth. t. 389. f. 1. Corolla about an inch and a half long, glabrous, yellow.

Narrow-flowered Gerardia. Fl. July, Aug. Clt. 1796. PL erect.

7 G. QUERCIFOLIA (Pursh, l. c.) quite glabrous; lower leaves large, bipinnatifid: superior ones oblong-lanceolate, pinnatifid, acute or obtuse; calyx a little inflated, with lanceolate, acute segments, which are shorter than the tube. V. H. Native of the United States, common. G. flava, Lin. spec. 848, but not P. 841. Rhinanthus Virginicus, Gron. virg. 192. Lin. spec. 1. Calyx rather larger than that of the preceding, divided nearly to the middle, the segments varying much, but are always more deeply cleft than in *G. flava,* ex Benth.

Yellow Gerardia. Fl. July, Aug. Clt. 1812. Pl. 3 to 4 feet.

8 G. QUERCIFOLIA (First ger. in Hook. comp. p. 206.) downy; leaves ovate-lanceolate, acute, serrated at top, pinnatifid at the base; calyxes longer than the pedicels; calycine segments entire or toothed; corolla 4 times as long as the calyx. Native of Mexico, in the province of Texas. Pointed segments. Capsule coriaceous, large, 2 inches long.

Oak-leaved Gerardia. PL 2 to 3 feet. ?

9 G. PEDICULARIA (Lin. spec. p. 849.) smoothish, or pubescent; leaves ovate-lanceolate, obtuse, pinnatifid, with toothed segments; calyxes shorter than the pedicels, with toothed segments; corolla 3 times as long as the calyx. %. H. Native of the United States, common. Corolla 15 lines long. Capsule coriaceous, pointed. Plant drying black like *Pedicularis.*

Pedicularis-like Gerardia. PL 1 to 2 feet. ?

10 G. PECTINATA (Torrey, mss. ex Benth. ger. in Hook, comp. p. 206.) hairy; leaves pectinately pinnacifid; lobes a little cleft; peduncles very short; calyx very hairy, deeply 5-cleft; segments toothed; corolla 3 times as long as the calyx. %. H. Native of Carolina and Georgia, in sandy Pine barrens, Uttall, Rocky Mountains, Torrey. G. pediculária, *ft, torr.* & Gray, Nutt. gen. amer. 2, p. 48. Corolla as in *G. pedicularia,* which it differs in being more hairy, the leaves usually smaller and more divided, and in the pedicels being much shorter.

Pectinate-leaved Gerardia. PL 1 to 2 feet. ?

11 G. DEFLORA (Benth. ger. in Hook. comp. p. 206.) scabrous and glandular; leaves pinnatifid, with narrow-linear, stiff, spreading segments; flowers secund, spicate; calycine segments lanceolate, very acute; tube of corolla attenuated at the base, and dilated at top; capsule obtuse. T. H. Native of Mexico, and in the province of Texas. Corolla an inch long. Anthers like those of the next section *Eugerardia,* more pointed, and slightly pilose at the base.

Deflowered Gerardia. PL ?

Sect. IV. EUGERARDIA (from *eu,* well or good, and *Gerdrdia*; the species contained in which are considered the genuine species of Gerardia, Benth. l. c. Calyx 5-toothed, rarely half 5-cleft. Corolla campanulate, rarely tubular or funnel-shaped, rarely campanulate. Anthers nearly equal; cells twin, fertile, parallel or unequal. Herbs or under shrubs natives of America. Leaves little cut, very rarely lanceolate, quite entire, or the lower ones are a few pairs of lobes.

12 G. SMOOTHII (Benth. l. c.) glabrous; leaves linear, fleshy; flowers nearly sessile; teeth of calyx short, truncate, with very villous edges; corolla amply campanulate, 4-5 times longer than the calyx. V. G. Native of South America, at Maldonado. Flowers disposed in terminal interrupted spikes; the floral leaves being very small. Calyx of *Sopubia.* Corolla above an inch long, very open.

Fingered Gerardia. PL ?

13 G. RIGIDA (Gill. mss. ex Benth. l. c.) glabrous and scabrous; leaves linear, very acute; flowers racemosely spicate; calyx longer than the pedicels, truncate: teeth short, acute; corolla amply and tubularly campanulate, villous, 4-5 times longer than the calyx. 1£. G. Native of South America, in the province of San Louis, Gillies. Flowers the same size, but more hairy than in *G. linarioides.*

Stiff Gerardia. PL ?

14 G. BRACHYPHYLLA (Cham. et Schlecht, in Linnsea, 3. p. 15.) shrubby, glabrous, smooth; leaves small, narrow-lanceolate, mucronulate; flowers pedicellate; teeth of calyx short, acute, shorter than the ovoid calyx. J?. S. Native of Tropical Brazil. Esterhazya alpestris, Spix. et Mart, reise in bras. 1. p. 397. Virgulária alpestris, Mart. nov. gen. 3. p. 10. t. 205. Leaves rather fleshy, 4 lines long. Pedicels shorter than the leaves. Corollas like those of *G. linarioldcs,* but rather smaller. Filaments with a few hairs at the base. Valves of capsule at length split, (fig. 52.)

FIG. 52.

Short-leaved Gerardia. PL 1 foot.

35 G. LANCEOLATA (Benth. 1. c. p. 207.) glabrous, smooth; leaves oblong-linear, mucronate, narrowed at the base; flowers on short pedicels; calycine teeth short, acute; corolla amply and tubularly campanulate, villous, 4 times as long as the calyx. %. G. Native of Peru, between Huariaco and Huanuco, Mathews. Virgulária lanceolata, Ruiz, et Pav. syst. fl. per. p. 161. Virg. revoluta, Ruiz, et Pav. 1. c. Closely allied to the preceding, of which it may be a variety. It differs chiefly in the leaves being rather broader, especially near the apex, and longer. The anthers and filaments are perfectly glabrous.

LanceolateAeaved Gerardia. PL 1 to 2 feet.

16 G. LINARIOIDES (Cham, et Schlecht. in Linnsea, 3. p. 13. Benth. 1. c.) glabrous, rather scabrous; leaves linear, acute, 1-nerved; flowers racemose; calyx shorter than the peduncles: teeth ovate, truncate, or lanceolate acuminated, much shorter than the tube; corolla amply and tubularly campanulate, downy, 4-5 times as long as the calyx. %. G. Native of South America; at Banda Oriental, Tweedie; southern provinces of Brazil, Sello. Differs chiefly from the preceding by its narrower leaves.

Toad-jlax-like Gerardia. PL 1| to % feet.

17 G. GENISTIFOLIA (Cham, et Schlecht. 1. c. p. 15. Benth. 1. c.) glabrous and rather scabrous; leaves lanceolate, acute, sub-trinerved; flowers racemose; calyxes shorter than the peduncles: teeth ovate, truncate, or lanceolate, acute, much shorter than the tube; corolla ample, tubularly campanulate, downy, 4-5 times as long as the calyx. 1/. F. Native along with the preceding, Tweedie and Sello. Plant woody at the base. Corolla almost \\ inch long. Leaves and branches 3 in a whorl. Largest cauline leaves 2\ inches long.

Genisla-likc Gerardia. PL 1 to~2 feet.

18 G. ANGUSTIFOLIA (Mart. bras. 3. p. 12. t. 206. Benth. L c.) quite glabrous; stem erect, virgately branched; leaves

more than an inch long, narrow linear, acute, erectly spreading ; peduncles bractless, about equal in length to the leaves ; teeth of calyx equal, mucronulate; corolla *5* times as long as the calyx. %. G. Native of Brazil, in the province of Minas Geraes. Habit of *G.pedunculàris,* but with a tubular corolla a little dilated at the top, and about an inch long *(fig. 53.)*

FIG. *53.*

Narrow-leaved Gerardia. PI. 1 to 2 feet.

19 G. HISPÍDULA (Mart. bras. 3. p. *13.* t. 207.) plant beset with spreading hairs ; stem fastigiately branched; leaves beyond an inch long, linear, acute, spreading, papillose, especially along the margins ; peduncles bibracteate, exceeding the leaves ; calyx equal, with acute teeth ; corollas *3* times as long as the calyx. 0. G. Native of Brazil, in the provinces of Pianhia and Para. No other species of this genus has bracteate peduncles. Corolla form of the preceding, but about half the size.

Hispid Gerardia. PI. 1 to *2* feet.

20 G. COMMUVIS (Cham, et Schlecht, in Linnaea, 3. p. 12.) glabrous, smooth ; leaves linear, cartilaginously marginate ; flowers nearly sessile; teeth of calyx longer than its tube ; corolla tubularly campanulate, exceeding the calycine teeth a little. 0. G. Native of the South of Brazil, from Rio Janeiro to the Banda Oriental. Corolla downy, ^ an inch long. Filaments and anthers slightly hairy. Capsule truncate, or emarginate.

Common Gerardia. PI. 1 to 2 feet.

21 G. DASYA'NTHA (Schiede, et Deppe, ex Cham, et Schlecht, in Linnaea, 5. p. 104.) stem bifariously pubescent; leaves linear, glabrous; teeth of calyx a little longer than its tube ; corolla downy outside, about twice as long as the calyx. 1/. G. Native of Mexico, in the Terra Fria, Schiede et Deppe. Said to resemble *G. purpùrea* in its appearance.

Thick-flowered Gerardia. PL 1 to *2* feet.

22 G. HETEROPHY'LLA (Nutt. in amer. phil. trans, n. s. *5.* p. 180.) glabrous; radical leaves broad, cut: cauline ones linear, or linear-lanceolate, acute, stiff, with scabrous margins ; flowers almost sessile ; calyx angular, with lanceolate-linear, very acu^e teeth, which are a little shorter than the tube; corolla amply campanulate, clothed with pubescent tomentum outside, 3-4 times as long as the calyx. 1(,. H. Native of the Arkansas territory, in prairies near the great salt river, Nuttall. Texas, Drummond. Corollas very open, from 8 lines to 1 inch long, purple, crowded towards the summits of the branches. The lower leaves are described as trifid, or laciniated, by Nuttall and Drummond.

Far. ft, grandiflòra (Nutt. 1. c.) flowers larger.

Variable-leaved Gerardia. PI. *2* feet.

23 G. FASCICULA'TA (Elliott, bot. car. *2.* p. 115.) very scabrous; stem stiff, branched at top ; leaves narrow-linear, acute; peduncles very short; calyx truncate, with short acute teeth; corolla ample, campanulate, downy, 5 times as Jong as the calyx. %. H. Native of Jacksonville, Drummond ; South Carolina and Georgia, Elliott. Corolla 10-11 lines long. Young leaves sometimes fascicled in the axils of the stem leaves. Perhaps only a variety of *G. purpùrea.*

Fascicled-leaved Gerardia. PI. 1 to *2* feet.

24 G. DOMINGE'NSIS (Spreng. syst. *2.* p. 817.) finely hispid; stem strict, erect, somewhat fastigiately branched; leaves about an inch long, narrow-linear, acute, erectish, *3* times as long as the short peduncles / calyx equal, with acute teeth; corolla 3 times as long as the calyx. 1/. S. Native of St. Domingo. Appears to be allied to *G. purpùrea* and *G. fasciculàta,* but the flowers are described as but 4 lines long, ex Benth.

St. Domingo Gerardia. PL 1 to 2 feet.

25 G. MARÍTIMA (Rafin. new york med. rep. *2.* p. 3°h) humble, glabrous, fleshy ; leaves linear, obtuse ; racemes terminal ; peduncles short; calyx truncate, with short, obtuse, mutic teeth ; corollas glabrous, campanulate, 8-4 times as long as the calyx. 4. H. Native of New Jersey and New York, in salt marshes. G. crinita, Eddy. G. purpùrea, β, crassifòlia, Pursh, fl. amer. sept. 2. p. 422. Plant usually 2-8 inches high. Corolla scarcely 8 lines long.

Far. /3, grand'flbra (Benth. 1. c. p. 208.) plant 4-6 inches high, with few leaves on the upper part; corolla about 8 lines long. % . H. Native of Texas.

Sea-side Gerardia. PI. 2 to 6 inches.

26 G. PLUKENE^TII (Ell. bot. car. *2.* p. 114.) quite smooth ; leaves small, remote, filiform, sub-fascicled ; peduncles shorter than the leaves and calyxes ; calyx truncate, with short, acute teeth; corolla finely pubescent, 3 times as long as the calyx. 1/. H. Native of Carolina and Georgia, Elliott; of the Cherokee country, Banks herb. Said by Mr. Bentham to come near to var. y, of *G. tenuifòlia,* but the leaves are still more slender, and the peduncles constantly very short.

PlukeneCs Gerardia. PL 1 foot.

27 G. PURPU'REA (Lin. spec. 848.) leaves linear, acutish, flat, with scabrous edges ; flowers on short peduncles; calyx almost nerveless, with acute teeth, which are one half shorter than the tube ; corolla glabrous, amply campanulate, with a short, tubular base. $. H. Native of the United States, common in ir[illegible] and of Mexico, in the Hacienda de La Laguna. Si[illegible] mag. 2048.—Plukri. phyt. t. 12. f. 2. mant. t. *388.* f. 1.

Far. a, parviflbra (Benth. 1. c. p. 208.) corolla har[illegible] lines long. %. H.

Far. p, grandiflora (Benth. 1. c.) corolla an inch long. H. Native of New Jersey. The two varieties at firsj; appear different, Benth.

Purpfe-flowered Gerardia. Fl. July, Aug. Clt. 177^2. ljfoot.

28 G. LONGIF6LIA (Nutt. in amer. phil. soc. trans, n. js. 180.) leaves narrow-linear, with scabrous edges : the floral exceeding the flowers; peduncles much longer than the calyxes almost nerveless ; teeth lanceolate, acute, hardly than the tube; corollas glabrous, ample, campanulate, tubular at the base. ©. H. Native on the banks of Arkansas, Nutt.; Red River, on the north-west coast, Dougl[illegible] Leaves I\ to 2 inches long. Corolla of *G. purpitrea,* var. r» which it resembles in many respects, (Benth.)

Long-leaved Gerardia. PI. 1 to If foot.

29 G. LINIFOLIA (Nutt. gen. amer. 2. p. 47.) stem smooth, much branched; branches floriferous at apex; linear, acute, smooth or roughish, longer than the pedu calyx truncate, campanulate, minutely toothed; corolla a campanulate, with a downy throat, and ciliated segments. H. Native of North Carolina to Florida, Nuttall; Dr. Gates. Root creeping. Leaves smooth [illegible] the Nuttall; but according to Bentham they are rougn margins.

Flax-leaved Gerardia. PI. 2 to 3 feet.

30 G. PEDUNCULA'RIS (Benth. 1. c. p. 209.) leaves edges, and are, as well as the stem, very revolute racemes panicled ; peduncles long; calyx angular, tr[illegible]

short acute teeth; corolla amply campanulate, downy, furnished with long cilia on the edges, 4 times as long as the calyx. $. ? Native of Mexico, Tate. This species chiefly differs from *G. purpurea,* by the narrow leaves and long peduncles. Capsule globose, longer than the calyx. (Benth.)

Long-peduncled Gerardia. PL 1 to 2 feet,

for the most part alternate, subfasciculate, and are, as well as the stem, scabrous, ex Benth, smooth, ex Nutt.; racemes paniculate, corymbose. Peduncles much longer than the leaves; calyx truncate, with short acute teeth; corolla ample, ventricosely campanulate. Native of West Florida, Nuttall; Jacksonville, Louisiana, and Texas, Drummond, Lat. from *G. Pedlmc«tiris* and *G. tenuifohay*; and » distinguished from the former in the slender stem and in having fascicled leaves and from the last ft™ fl™'' !? i ^ Peduncles. (Benth.)

Thread-leaved **Gerardia.** PI. 1 to 2 feet.

Very acute teeth, and are as well as the stem, much branched, and subpanicled; peduncles longer than the calyx. truncate, with setaceous teeth; corolla campanulate, nearly 4 times longer than the calyx. ? F. Native of the United States, common in dry forests. G. erecta, Walt. fl. carol. 170.—Plukn. t. 12. f. 4. The following varieties may perhaps be species, especially the last; but the characters are very slight. They all differ from *G. pedunculdris,* by the glabrous, hardly ciliated corolla; from *G. scihcea* by the slender capsule, and habit; and from *G. longiflora* by the truncate calyx with minute teeth. They have all the same slender stems, and always marked with decurrent lines from the base of the leaves; the anthers with long, white, woolly hairs. (Benth.)

Var. a (Nutt. in amer. phil, trans, n. s. *5.* p. 179.) flowers smaller, tube of calyx equal in length to the corolla; teeth acuminated, 5 fruit larger, of the Arkansa. Native in the prairies between the Verdigris river and the Canadian. Apparently a distinct species than the *G. pedunculdris,* branched, and inclined to grow taller than the *G. longiflora,* whose flowers are larger, with a much smaller calyx.

Broad-leaved Gerardia. Fl. July, Aug. Clt. 1812. PI. 1 to 2 feet,

are, as well as the setaceous leaves, rather scabrous; flowers few, on long peduncles; teeth of calyx short, setaceous; capsule ovate, longer than the calyx. ©.? F. Native from Pennsylvania, in sandy forests. Allied to *G. tenuifblia.*

Var. /3 arvidlia (Benth. in DC. prod. 10. p. 520.) leaves distant, flowers racemose. £. ? F. Native of Jacksonville, Louisiana, and Texas. Some resemblance to *G. aphylla,* but the leaves are never reduced to scales. It does not dry so black as other species of the genus.

Setaceous-leaved Gerardia. PI. 1 foot,

gated, filiform, nearly naked, scabrous; leaves short, remote, linear, or all minute and scale-formed; flowers pedunculate; calyx truncate, with very short acute teeth; capsule globose, exceeding the calyx. ©. F. Native from North Carolina to Florida, Nuttall; Jacksonville, Drummond.

Far. filicaulis (Benth. 1. c. p. 210.) branches very slender, few-flowered; flowers small.

Far. y, grandifibra (Benth. 1. c.) branches stiff; flowers racemose, rather large.

Leafless Gerardia. PI. 3 to 4 feet.

SECT. V. DARCEIDIA (an anagram of *Gerardia.*) Benth. ger. in Hook. comp. 1. p. 210. Calyx 5-toothed. Corolla purple; segments emarginately bifid. Stamens didynamous; anthers all equally 2-celled, fertile. An Indian herb, with pinnate leaves, and linear segments. Perhaps a proper genus.

36 G. PARVIFLORA (Benth. in Wall. cat. no. 3888. scroph. ind. p. 48.) stems tall, acutely tetragonal; racemes numerous, disposed in an ample panicle; flowers on short pedicels; corolla hardly 2 lines long; capsule ovate-globose, retuse, a little compressed; valves recurved at maturity, entire.—Native of the Himalaya Mountains. Leaves subpinnatifid. Teeth of calyx short, acute.

Small-flowered Gerardia. PL tall.

Cult. All the species of *Gerardia* are elegant when in blossom, but are difficult to cultivate. The hardy species require to be planted in a bed of peat soil, as they will not grow in pots; and they are only to be increased by seeds, and then with much difficulty. The tender species may be grown in pots, in peat earth, should any of them hereafter be introduced to our gardens.

LV. SOPIPBIA *(Sopubi swa* is the Nawarice name of the first species.) Hamilt. mss. ex D. Don, prod. fl. nep. p. *88.* Gerardia, sect. VI. Sopubia, Benth. ger. in Hook. comp. 1. p. 210.

LIN. SYST. *Didyncimia, Angiospermia.* Calyx campanulate, 5-toothed. Corolla campanulate, tubular at the base; limb spreading, 5-lobed, nearly equal; lobes rounded, entire. Stamens 4, exserted, nearly equal in length, somewhat didynamous, glabrous. Cells of anthers free, spurred at the base; the one fertile, erect; and the other sterile, small, and diverging, tubular. Stigma undivided. Capsule 2-celled, 2-valved; valves usually bifid. Dissepiment complete, continuous, parallel, placentiferous on both sides. Seeds numerous.—African and Indian perennial herbs. Leaves narrow, generally cut. Peduncles 1-flowered, solitary, in the axils of the upper leaves, opposite or alternate, therefore racemose, bibracteate. Corollas purple or yellow.

1 S. TRIFIDA (Hamilt. mss. ex D. Don, prod. p. 88.) stiffs branched; leaves pinnate, with linear scabrous segments; teeth of calyx ovate, with ciliately membranous edges, much shorter than the tube. %. F. Native of the Himalaya range of mountains, Common; Upper Nipaul, at Suembu; Ceylon, Macrae; Madagascar, Lyall. Gerardia scabra, Wall. cat. no. *3889.* Benth. scroph. ind. p. 49. but not of Lin. Gerardia Sopubia, Benth. ger. in Hook. comp. p. 210. Manulea Sopubia, Hamilt. mss. Leaves pinnate, simple or trifid. FJovvers purple, ex D. Don, 1. c.; yellow ? Benth. 1. c.

Trijid-lesLved Sopubia. PI. \ to 1 foot.

2 S. STRICTA; rough, stiff, a little branched; leaves lanceolate-linear, toothed or cut; teeth of calyx lanceolate, acute, naked, much shorter than the tube. %. S. Native of Martaban and Prome, Wall. Gerardia stricta, Benth. in

Wall. cat. no. 3889. scroph. ind. p. 49. ger. 1. c. Corollas pale purple, like those of *S. delphinifòlia.* Capsule globose at the base, but compressed at top.

Strict Sopubia. PI. 2 to 3 feet.

3 S. DELPHINIFÒLIA ; much branched, smooth; leaves pinnatifid, with narrow-linear segments ; calycine teeth linear-subulate, longer than the tube. 1/. S. Native of India, chiefly in the Peninsula, and as far North as Lohargan, Royle, always in wet soil, and sometimes even in water. Gerârdia delphinifòlia, Lin. spec. p. 848. Roxb. cor. 1. t. 90. Benth. scroph. ind. p. 49. ger. in Hook. comp. 1. p. 211. t. 11. Euphrâsia Coromandeliâna, Rottl. in Spreng. syst. 2. p. 775.—Plukn. aim. 17. t. *358.* f. 3. Leaves simple, trifid or tripinnatifid. Corolla 7-8 lines long, reddish, with a deep coloured spot on the under lip. Lower pair of anthers united.

Far. fi, parvijlbra (Benth. in scroph. ind. p. 49. ger. 1. c. p. 211.) 1£.S. Geiârdia Heyneâna, Benth. in Wall. cat. no. 3891. Corolla *5-6* lines long.

Larkspur-leaved Sopubia. Fl. June, July. Clt. 1800. PL 3 to 4 feet.

4 S. SCA'BRA ; glabrous ; leaves oblong-lanceolate, entire, cuneately 3-5-cleft, with rather scabrous edges ; teeth of calyx lanceolate, scarcely shorter than the* tube; corolla tubularly campanulate, more than 3 times longer than the calyx. %. F. Native of the Cape of Good Hope. Gerârdia scàbra, Lin. suppl. 279. Benth. ger. in Hook. comp. p. 211. Stems usually simple. Flowers almost sessile, near together. Corolla an inch long, apparently purple. Filaments hairy.

Scabrous Sopubia. PL J to 1 foot.

5 S. OBTUSIFÒLIA ; stem hairy at top ; leaves oblong-lanceolate, entire, or a little toothed, obtuse, scabrous, glabrous; calycine teeth broad-lanceolate, obtuse, scarcely shorter than the tube, which is a little inflated ; corollas tubularly campanulate, twice as long as the calyx. *If.*. S. Native of Madagascar. Gerârdia obtusifòlia, Benth. ger. 1. c. p. 211. Flowers similar to those of *S. scàbra,* but the calyx is larger. Filaments almost glabrous. Empty cells of anthers terminated by a long point.

Obtuse-leaved Sopubia. PL 1 to *2* feet.

6 S. FILIFÒRMIS ; leaves filiform, scabrous; peduncles opposite, short, 1-flowered, subsolitary. 1/. S. Native of Guinea, near Pramprom and Ningo, Thonning. Gerârdia filifòrmis, Schum. pi. guin. p. 272. Root horizontal. Stem simple at bottom, and fastigiately branched at top. Corolla pale purple ; throat large, campanulate. Anthers bipartite ; the lobes oblong, unequal, diverging.

Filiform Sopubia. PL \ foot ?

Cult. The species of *Sopùbia* might be grown in pots placed in pans of water. A peat soil is that best suited to them ; and they may either be increased by cuttings or seeds. They are, however, extremely difficult to cultivate.

LVI. SEYME^RIA (named by Pursh after Henry Seymer, an English naturalist.) Pursh, fl. amer. sept. 2. p. *737.* Benth. ger. in Hook. comp. p. 203.—Afzèlia, GmeL, but not of Smith. Gerârdia species, Michx. and Pers.

LIN. SYST. *Didyncimia, Angiospermia.* Calyx campanulate ; segments 5, linear, longer than the tube. Corolla with a short tube, and *5* oblong segments, which are at length subrotately spreading. Stamens 4, almost equal in length, rather longer than the corolla; anthers erect, all 2-celled and fertile. Stigma slender. Capsule globose at the base, and compressed at apex. —Herbs natives of North America. Leaves pinnate, with linear or filiform segments. Flowers small, somewhat paniculately racemose. Corollas yellow.

1 S. TENUIFÒLIA (Pursh, fl. amer. sept. 2. p. 737.) clothed with fine clammy down; leaves setaceously pinnatifid; segmen cut; capsule glabrous, beaked. ©. H. Native of Carolina* Georgia, Florida, and Louisiana, &c. Gerârdia Afzèlia, Mien** fl. bor. amer. 2. p. 20. Afzèlia cassioides, GmeL syst. nat. 927. Gerârdia cassioides, Pers. ench. 2. p. 154. Branches slender. Leaves small, distant. Flowers \ an inch in diameter. Capsule size of a grain of pepper.

Thin-leaved Seymèria. Fl. July, Aug. Clt. 1730. foot.

2 S. PECTINA'TA (Pursh. 1. c.) downy; leaves pinnatifid, wit linear, obtuse, rather cut segments"; capsule downy, obtuse. ©. H. Native of South Carolina, Pursh ; Louisiana, Drummond ; from North Carolina to Florida, Pursh. Leaves large* and their lobes much broader than in the preceding. Capsu le larger, compressed, obtuse, and almost emarginate at apex.

Pectinate-leaved Seymeria. Fl. July, Aug. Clt. 1820. P 1 foot.

Cult. For culture and propagation see *Gerdrdia,* p. 559.

LVII. MACRANTHFRA (from *fiaKpog, makros,* long; and *avdtipa, anthera,* an anther; in reference to the long anthers.) Torrey, mss. ex Benth. ger. in Hook. comp. 1. p. 203. —Conràdia, Nutt. and Pickering, in journ. acad. nat. sc. **phil-** 7. p. 88. t. 12. but not of Mart.

LIN. SYST. *Didynamia, Angiospermia.* Calyx campanulate, with 5 linear foliaceous segments, which are longer than the tube. Corolla tubular ; limb of 5 short, nearly equal, spreading segments. Stamens 4, nearly equal, exserted; anthers erect, all 2-celled, fertile. Stigma slender. Capsule nearly globose, acute.—An erect American herb. Leaves opposite, o sected. Flowers racemose, yellow.

1 M. FUCHSKHDES (Benth. 1. c.) %. H. Native of t^ southern states of North America ; Louisiana, Drummon • Cornelia fuchsioides, Nutt. 1. c. Plant slightly downy. ments of the leaves lanceolate : those of the lower ones divi Racemes long, unilateral. Peduncles opposite, spreading slightly reflexed. Flowers erect. Corolla an inch long, incurved at the top; mouth oblique. Stamens downy. Leaves like those of *Gerdrdia quercifòlia,* ex Nutt.

Fuchsia-like Macranthera. PL 2 to 3 feet.

Cult. For culture and propagation see *Gerdrdia,* p. 559.

LVIII. ESTERHA^ZIA (probably named after some ber of the family of Prince Esterhazy.) Mikan, del. pl. et bras. t. 5. Benth. ger. in Hook. comp. 1. p. 203. —Virg species, Mart.—Gerârdia species, Cham, et Schlecht, in vol. 8.

LIN. SYST. *Didyndmia, Angiospermia.* Calyx cam P? 5-toothed. Corolla tubularly funnel-shaped ; lobes ot ovate-roundish, nearly equal. Stamens didynamous, e villous : anthers all fertile ; cells very villous, acute at —Much branched shrubs, natives of Brazil, naked at Leaves usually opposite, quite entire, rather disposed in short racemes, pedicellate towards the branches ; pedicels bracteate.

1 E. CAMPE'STRIS (Spix et Mart, reise in bras. leaves lanceolate or oblong-lanceolate, mucronuiate, at the base, 1-nerved: floral ones exceeding racemes almost simple. *h* - G. Native of brazn, vince of Minas Geraes, in the Diamond district, campéstris, Mart. gen. bras. *3.* p. 7. t. 203.

Cult. For culture and propagation see *Sopūbia,* p. *560.*

LX. PHTHEIROSPE'RMUM (from ^pu, *phtheiro,* to corrupt; and *(nrepfxa, sperma,* a seed ; in reference to the seeds being wrapped in a spongy reticulated membrane.) Bunge. Fisch. et Meyer, ind. sem. hort. petrop. 1835. Benth. ger. in Hook. comp. 1. p. 212.

LIN. SYST. *Didynamia, Angiospermia.* Calyx campanulate, 5-cleft. Corolla campanulately ringent; upper lip flat, bifid ; lobes replicate: lower lip a little longer and trifid; throat gaping. Stamens didynamous, almost straight ; anthers free; with mucronate parallel cells. Stigma 2-lobed. Capsule beaked, compressed, 2-valved, 2-celled, many-seeded. Seeds oblong, angular, wrapped in a spongy reticulated membrane.

1 P. CHINE'NSIS (Bunge, 1. c.) 0. H. Native of the North of China.—An annual or biennial herb, with the habit, leaves, calyx, and capsule of *Pedicularis palustris ;* but the corolla is almost that of *Mimulus,* of a dirty red colour ; throat marked by *2* yellow lines.

China Phtheirospermum. PL 1 to 2 feet ?

Cult. For culture and propagation see *Sopūbia,* p. 560.

LXI. ESCOBEDIA (named after George Escobedo, a Spanish naturalist.) Ruiz, et Pav. syst. fl. per. et chil. p. 158. H. B. et Kunth, nov. gen. amer. 2. p. 371. Benth. in Hook, comp. 1. p. *202.*

LIN. SYST. *Didynamia, Angiospermia.* Calyx long, tubular, pentagonal, 5-cleft at apex ; segments acute, spreading a little. Corolla funnel-shaped; with a long slender tube; and an ample, 5-lobed, oblique, spreading limb. Stamens didynamous, inclosed ; anthers all fertile, linear-sagittate ; cells awned at the base. Capsule covered by the calyx, 2-celled, 2-valved.—American herbs, with generally opposite leaves. Peduncles axillary, solitary, 1-flowered, bibracteate. Flowers large, showy, white.

1 E. SCABRIFOLIA (Ruiz, et Pav. 1. c. p. 159. H. B. et Kunth. nov. gen. amer. 2. p. 571. t. 174.) leaves ovate and oblong, cordate at the base, toothed, scabrous on both surfaces. %. G. Native of New Granada, among stones between the town of Mariquita and the mine of Santa Anna, at the altitude of 530 hexapods, Humb. et Bonpl.; Eastern declivities of the Cordillera of Peru, Mathews ; Brazil, in the province of Minas Geraes, Langsdorff. Branches furrowed, hairy. Leaves sessile, 4 inches long. Both species are called *Asa/ran* by the natives of New Granada.

Rough-leaved Escobedia. PI. 2 to 4 feet.

2 E. LINEA'RIS (Schlecht, in Linnaea, 8. p. 246.) leaves long-linear, denticulated. %> G. Native of Mexico, in grassy places at the Hacienda de la Laguna. C. lsevis, Cham, et Schlecht, in Linnsea, 5. p. 108. Leaves 4-5 inches long, scabrous. Tube of corolla 4 inches long, and the limb 2 inches in diameter.

Linear-leaved Escobedia. PI. 2 feet.

Cult. For culture and propagation see *Gerardia,* p. *559.*

LXII. PHYSOCAXYX (from *yvoa, physa,* a bladder; and [illegible]t\i/£, a *calyx;* in reference to the inflated calyx.) Pohl, pl. bras. 1. p. *65.* t. 53. Mart. bras. *3.* p. 2, 3. t. 201, *202.*

LIN. SYST. *Didynamia, Angiospermia.* Calyx inflated, 5-toothed, coloured. Corolla tubularly salver-shaped ; limb spreading, somewhat equally 5-lobed. Stamens didynamous, inclosed. Anthers all fertile; cells shortly awned at the base.

—Shrubs natives of Brazil, densely covered with erect, thickish, quite entire, opposite or alternate leaves. Peduncles axillary, 1-flowered, bibracteate, racemose at the tops of the branches. Corollas red or blood-coloured. The three species are very nearly allied, and are scarcely distinct.

1 P. MA'JOR (Mart. bras. 3. p. *2.* t. 201.) leaves ovate or ovate-oblong, obtuse, mucronulate; bracteoles subulately linear, beneath the flowers; filaments glabrous; anthers bearded on the back. Tj. G. Native of Brazil, in the province of Minas Geraes, in the Diamond district, Martius; on Sierra da Muela, Sello.

Larger Physocalyx. Shrub.

2 P. MI^NOR (Mart. 1. c. p. *3.* t. 202.) leaves obovate, acutish ; bracteas subulately linear under the flowers ; filaments glabrous; anthers bearded on the back. J? . G. Native along with the preceding, in the Diamond district, Martius (fig. 54.)

FIG. 54.

Smaller Physocalyx. Shrub 1 foot.

3 P. AURANTIACUS (Pohl, pi. bras. 1. p. *65.* t. 53.) leaves obovate-elliptic ; bracteas oblong-lanceolate under the flowers ; filaments villous above, and the anthers on the back. J? . G. Native of Brazil, in the province of Minas Geraes ; on Serro Frio ; and on the tops of mountains, in arid, gravelly, rocky places, between Rio Jetiquinhonha, on the road between Bonfm and Villa de Fanado. Leaves oval-elliptic, obtuse, sessile, ex Pohl.

***Orange-colotired-calyxed* Physocalyx. Shrub 1 foot.**

Cult, For culture and propagation see *Gerdrdia,* p. 559.

LXIII. MELA'SMA (from yueXac, *melas,* black ; application not evident in any way, unless from the plants turning black on drying—a circumstance common to this order.) Berg. cap. t. *3.* Gsertn. fruct. t. *55.* Benth. ger. in Hook. comp. p. 202.. Nigrina, Lin. mant. p. 42.—Gerardia species, Lin. fil. suppl. 278, Physocalyx and Lyncea species, Cham, et Schlecht, in Linnaea.

LIN. SYST. *Didynamia, Angiospermia.* Calyx loose, folfaceous, at length inflated, 5-cleft at apex. Corolla campanulately funnel-shaped ; lobes of limb short, broad. Stamens subdidynamous, shorter than the corolla; anthers all fertile ; cells apiculate at the base.—American or Cape herbs ; with usually opposite leaves ; and axillary, 1-flowered, bracteate pedicels, which are disposed in a subracemose manner.

1 M. ? HI'SPIDUM (Benth. 1. c.) plant hispid from white pili; leaves lanceolate, a little toothed, narrowed at the base; peduncles bracteate at apex. %. G. Native of Mexico, near Hacienda de La Laguna, Schiede and Deppe. Lyncea hispida, Cham, et Schlecht, in Linnaea, 5. p. 108, and 8. p. 24. Leaves alternate or falsely opposite, on short petioles, quite entire or sinuately denticulated. Calycine segments 3-nerved. Lobes of corolla obtuse.

Hispid Melasma. PL *S to* 4 feet.

2 M RHINANTHOI'DES (Benth. 1. c.) plant very scabrous ; leaves oblong, a little toothed, hardly narrowed at the base; SS shorter than the calyx, bracteate m the middle. *v* - G. Na Jvp of Brazil, at Rio Grande, in many places, Sello and b! PhysoSyx rhinanthoides, Cham, et Schlecht, in Linnaea, 8. p. *23.* Floriferous calyx about half an inch long. Corolla nearly an inch long. Fructiferous calyx resembling that of *Physalis.* Capsule obtuse ; valves apparently entire, ex Benth. Leaves linear-lanceolate, obtuse, toothed, ex Cham* 1. c.

Yellow-rattle-like* Melasma. PI. a span to *2 feet.

3 M. SCA^BRUM (Berg. fl. cap. 162. t. *3.* f. 4.) leaves lanceolate, broadest at the base, toothed, scabrous ; peduncles longer than the calyx, bracteate in the middle. %. G. Native of the Cape of Good Hope. Nigrina viscosa, Lin. mant. p. 42. Gerardia Nigrina, Lin. suppl. 278. Flowers closely resembling those of the preceding, and of the same size. Teeth of calyx rather shorter ; and corolla rather fuller, ex Benth.

Scabrous Melasma. PI.

Cult. For culture and propagation see *Gerardia,* p. *559.*

LXIV. GASTROMFRIA (from *yatrrrjp, gaster,* a belly ; and *fxepig, meris,* a part; in reference to the inflated calyx.) D# Don, in Sweet, fl. gard. n. s. vol. 1. in a note under no. *75.*—• Lophospermum species, D, Don, in Lin. trans, vol. 15. p. *353-*

LIN. SYST. *Didynamia, Angiospermia.* Calyx almost globose, membranous, inflated, 5-toothed. Corolla eampanulate, nearly equal at the base ; limb 5-lobed, bilabiate. Stamens 4, didynamous; filaments glabrous; anthers oblong; cells confluent **at apex, loose at the base,** ***diverging, mutic. Ovarium 2**** celled ; dissepiment placentiferous on both sides ; ovula minute, angular, very numerous. Fruit unknown.—A Mexican shrub, scabrous from callous bristles. Leaves opposite, on short petioles, oblong, acute, toothed, pinnately nerved. Flowers axillary* solitary, pedunculate. Peduncles bibracteate. Calyx green. Corolla large, purple ? an inch and a half long.

Valves of capsule septiferous in the shrubs< \bl Parti ble. Seeds naked.—Herbs, under-shrubs, or Inscence aves opposite, alternate, or verticillate. Inflo- or re<Jt axi^ary, racemose, or spicate. Flowers blue, white,

Benth. § 1. VERONICA (see genus for derivation.) Reichb. seeds * Cro Ph. ind. p. 44. Capsule swollen, emarginate at top, Olon g, compressed a little.

§ 1. *Racemes terminal.*

Leaves verticillate, and opposite, serrated. Racemes numerous.

little VERONICA (Waldst. et Kit. hung. *2.* p. 106. t. 102.) leaves 3-4 in a whorl, ovate, or ovate-lanceolate, deeply and unequally serrated. *y..H.* Native of Hungary; Galicia ; about Halle, in Saxony, in humid meadows. Schrad. spic. f>. *35.* Willd. enum. p. 18. Spreng. fl. hal. p. 6. no. 9. t. 1. f. *2.* V. brevifolia, Bieb. cauc. 1. p. 6. ? V. triquefra, Kit. Root creeping, scaly. Leaves cuneated at the base, glabrous, shining. Racemes long, and loose. Flowers blue, or purple. Bracteas one half shorter than the pedicels. Calycine segments obtuse, shorter than the capsule.

Far. /3, nitida ; taller and more glabrous. %. H. V. nitida, Ehrh. pi. exsicc. no. *21.* V. maritima, *(3,* Willd. spec. 1. **p. *55.***

Far. y, *spilria.* 1/. H. V. spiiria, Spreng. fl. hal. t. 1. f. 1.

Leafy Speedwell. Fl. July, Sept. Clt. 1805. PI. *2* to 4 feet.

2 V. CRENULA'TA (Vahl, enum. 1. p. *57.* HofFm. phyt. blat. p. 95. t. E. f. *3.)* leaves *3* in a whorl, and opposite, oblong-lanceolate, subcordate ; calycine segments acute; segments of corolla undulated and crenulated. %. H. Native country unknown. V. villosa, Schrad. Stem downy at top. Racemes downy. Leaves villous, or downy. Capsule glabrous.

Crenulaled-fiowered Speedwell. Fl. July, Sept. Clt. 1814. PL lj foot.

3 V. MARITIMA (Lin. spec. p. 13. fl. suec. no. 8. fl. lapp. p. 4.) leaves 3-4 in a whorl, ovate-lanceolate, cordate at the base, deeply and doubly serrated, and are, as well as the stems glabrous ; calycine segments shorter than the capsule. 2/. H. Native of the North of Europe. Retz, obs. 1. p. 9. HofFm. phyt. blat. t. E. f. *2.* Schrad. coram. ver. p. *29.* t. i. f. 1. Vahl, enum. 1. p. *51A* Vahl, fl. dan. t. 374. Racemes dense, Flowers blue, purple, or white. Leaves in some varieties opposite, and in others the flowers are white, This is a very variable plant.

Sea-side Speedwell. Fl. July, Sept. Clt. 1570. PL 1 to 3 feet.

4 V. TICINE'NSIS (Poll. fl. veron. 3. append, p. *768.)* leaves 3-4 in a whorl, and opposite, linear-lanceolate, acuminated, serrated, and are, as well as the calyxes and capsules, glabrous. %. H. Native about Ticin, in humid meadows. V. maritima, Noc. et Balb. fl. tic. 1. p. 6, but not of Lin. V. Hostii, Moretti, in bibl. ital. 12. p. 369.—Tab. kreut. *2.* p. 99. f. 4. Racemes terminal, numerous. Flowers azure blue.

Ticin Speedwell. Fl. July, Sept. Clt. 1819. PI. *2* to 3 feet.

f5 V. SPU^RIA (Lin. spec. p. 13.) leaves 3-4 in a whorl, or opposite, lanceolate,' cuneated at the base, simply serrated, downy; serratures equal. %. H. Native of the South of Europe, Siberia, &c. Vahl, enum. 1. p. 57, exclusive of the syn. of Pollich. Schrad. ver. no. 19. t. *2,* f. 4. V. amethystina, Willd. enum. 1. p. 17. V. rubella, Pall.—Barrel, icon. t. 891. —Gmel. itin. 1. p, 169. t. 39. This differs from *F.foliosa* in the more slender habit, in the lanceolate, more acute, simply and equally serrated leaves, in the bracteas being about equal in length to the pedicels, not much shorter.

Spurious Speedwell. Fl. July, Sept. Clt. 1731. PI. *2* to 3 feet.

6 V. SERRULA'TA (Pall, in herb. Willd. Link, jahrb. 1-3. p. *38.)* stem slender, tomentose ; leaves opposite, or 3 in a whorl, petiolate : lower ones oblong: superior ones alternate, lanceolate, attenuated at the "base, serrulated ; lower bracteas longer than the pedicels; calyx downy. %. H. Native of Siberia. Flowers blue, or purple.

Serrulated-leaved* Speedwell. PL *2 to 3 feet.

7 V. STEPHANIANA (Rcem. et Schultes, syst. p. 96.) stem slender, tomentose; leaves opposite, and 3 in a whorl, lanceolate, attenuated at the base, acute, serrated, white from fine

tonientum ; bracteas shorter than the pedicels. 3/. H. Native of Persia. V. m611is, Link, jahrb. 1-3. p. 39, but not of Zea. Very nearly allied to *V. spùria,* but differs in the whole plant being white from tomentum.

Stephan's Speedwell. Fl. July, Aug. Clt. 1821. PI. 1 to 2 feet.

8 V. PANICULA'TA (Pall. itin. 1. p. 196.) downy; leaves opposite, and 3 in a whorl, lanceolate, attenuated and entire at the base, sharply and distantly serrated, stems ascending. %. H. Native of Tartary, Siberia, and Caucasus. Lepechin, itin. 1. p. 206. V. capitulàta, Poir. suppl. 5. p. 466. V. virgàta, Willd. herb. Link, jahrh. \-*3.* p. 39. V. spùria, Gmel. itin. 1. p. 169. t. 39. Bieb. fl. cauc. 1. p. 6. V. brevifòlia, Bieb. fl. cauc. 1. p. 6. ex Stev. in mem. soc. mosc. 5. p. 338. V. angustifolia, floribus paniculatis, Amm. ruth. p. *32.* Racemes very long and loose. Flowers blue, or purple. Calyx 4-5-cleft, hairy, ciliated, ex Poir.

Var. /3, leucdntha ; flowers white. %. H. Native of Altaia. V. leucantha, Helm. mem. soc. mosc. 2. p. 104. t. 8. V. Altaica, Fisch. cat. hort. gorenki, 1812.

Panicled-fiowered Speedwell. Fl. June, July. Clt. 1797. PI. 1 to 1J foot.

9 V. COMPLICA'TA (Hoffm. phyt. blatt. p. 98. t. E. f. 4.) leaves opposite, rarely 3 in a whorl, complicate, lanceolate, toothed; teeth thickened. 3/. H. Native of Europe. Vahl, enum. 1. p. *58.* Willd. enum. 1. p. 18. Radical leaves hoary, and more elliptic. Plant downy. Leaves coarsely crenate-toothed. Flowers blue, or purple. Leaves very long and narrow. Very nearly allied to *V. longifolia.*

Complicate-lewed Speedwell. Fl. Aug. Sept. Clt 1812. PI. 2 feet.

10 V. AZU'REA (Schott, ex Link, enum. 1. p. 22.) leaves opposite, or 3 in a whorl, very long, gradually attenuated, sharply serrated even to the apex: the lower serratures deep; bracteas longer than the pedicels. . %. H. Native country unknown. Plant downy. Leaves 3 inches long, and 4 lines broad, form of those of *V. complicdta;* the serratures are also similar, but much longer, fewer, and larger. Flowers blue, or purple.

Azure-h\ue Speedwell. Fl. July, Sept. Clt. 1821. PL *2 to 3* feet.

11 V. GLA'BRA (Ehrh. pi. exsic. no. 11. Vahl. enum. 1. p. *358.* Link, enum. 1. p. 21.) leaves opposite, or 3 in a whorl, ovate-lanceolate, acute, attenuated at the base, quite entire at the apex, simply serrated, and are, as well as the stems, glabrous: serratures remote, nearly equal. *If..* H. Native of the Somh of Europe. Schrad. comm. ver. t. 1. f. 4. Willd. enum. 1. p. 17. This species is readily distinguished by its smoothness. It differs from *V. argùta* in its greater stature, in the leaves being longer, broader, and more equally serrated. Petioles ciliated. Lower leaves subcordate at the base. Flowers blue, or purple. There is also a variety with white flowers. This is, probably, nothing but a glabrous variety of *V. maritima.*

Glabrous Speedwell. Fl. July, Sept. Clt. 1804. PI. 2 to 4 feet.

12 V. PERSICIFO'LIA (Schott. hort. vind. Link enum. 1. p. 21.) leaves opposite, of 3 in a whorl, ovate-lanceolate, or lanceolate, long-acuminated, serrated even to the apex ; bracteas longer than the pedicels. %- H. Native country unknown. Stem glabrous at bottom. Leaves 3 inches long, and 7-8 lines broad, glabrous. Lower bracteas long. Calyx rather downy. Corollas blue This seems to be intermediate between *V. longifdlia,* and *V. maritima,* but differs from both in the leaves being attenuated at the base.

Peach-leaved Speedwell. Fl. July, Sept. Clt. 18*. PI., to 3 feet.

13 V. ELA'TIOR (Ehrh. pi. exsic. no. 31. Willd. enum. 1« p. 17. Bieb. suppl. p. 8.) glabrous; leaves 3 in a whorl, lanceolate, acuminated, somewhat cordate at the base, doubly and deeply serrated : the serratures at the base deeper. %f\ Native of the South of Europe, and Caucasus. V. maritima, Bieb. taur. no. 15, exclusive of the syn. Gorter ingr. p. 2. spicàta urticae folio, Amm. ruth. no. *35.*—Riv. mon. t. 9. Bases of the superior leaves cuneated, of the lower ones subcordate. Corollas blue or purple.

Tall Speedwell. Fl. Aug. Sept. Clt. 1808. PL 4 to 7 feet.

14 V. LONGIBRACTEATA (Link, enum. 1. p. 20.) stem *svnoowish* ; leaves opposite, and 3 in a whorl, oblong, or lanceolate acute, serrated, gradually attenuated at the base; lower bracteas foliaceous, quite entire. %. H. Native country unknown. V. mèdia, Willd. enum. 1. p. 16. Leaves 3 inches long, and 5 lines broad, serrated, downy, ciliated. Lower bracteas much longer than the flowers. Corollas blue.

Var. j3 ; stem smoothish ; leaves from oblong, gradually attenuated at the base. %. H. V. hybrida, Willd. diar. Schrad. 1799. p. 388. Leaves 5 inches long, and 1| inch broad, long" acuminated.

Long-bracted Speedwell. Fl. Aug. Sept. Clt. 1817. *?)' 2 to 3* feet.

15 V. NI'TENS (Link, enum. 1. p. 20, under V. nitida.) leaves opposite, or 3 in a whorl, ovate, acute, attenuated at the base, serrated in the middle, and sub-serrated at apex, glabrous. %* H. Native of Europe. V. arguta, Willd. enum. 1. p. 16. Link. Plant glabrous. Leaves 2| inches long, and 1 broad. Bracteas longer than the pedicels. Corollas blue. This species differs from *V. argùta* in the leaves being shorter and broader, and racemes long.

Var. (3,falcata; serratures of leaves approximate, curved. %. H. V. falcata. Mart. enum. hort. erl. p. 10. Corollas blue.

Shining Speedwell. Fl. July, Aug. Clt. 1817. PL 2 to 3 feet.

16 V. ARGUTA (Schrad. comm. ver. no. 7. t. 2. f. 2.) downy, leaves lanceolate, acute, simply serrated, quite entire at base and apex, opposite, clothed with hoary down : serratures remote, equal, simple. *%.H.* Native in the groves *of l*Vahl, enum. 1. p. 3G0. Moretti, giorn. de fis. dec. 2. vol. 5. p. 41. V. mèdia, Moretti, bibl. ital. dec. 1816. t. 4. vol. 4. p. 494. Leaves cuneated at the base, deflexed, hoary, but rather naked above. Racemes numerous. Bracteas longer than the pedicels. There is a variety of this with more slender stems and narrower leaves.

Var. /3; raceme spicate, solitary ; leaves not half so broad as those of the species.

Sharp-toothed Speedwell. Fl. July, Sept. Clt. 1812. 2 feet.

17 V. MENDIA (Schrad. comm. ver. no. 8. t. 1. f. 20 opposite, or 3 in a whorl, lanceolate, acute, serrated, and as well as the stems, clothed with tomentose down: serratures approximate, unequal. %. H. Native of Carniola, Hungary, Bohemia, &c. in hedges and humid meadows. *Schreber, wetter,* p. *359.* Link, enum. 1. p. 21. N. longifolia, *i. e. no. 13. Roth, fl. germ. 2. p. 7. Mcench. meth. p. spùria and V. incàna, Schmidt. Leaves cuneated at Calycine segments shorter than the capsule.

Middle Speedwell. Fl. July, Sept. Clt. 1804. Pl. 2 to 4 feet.

18 V. AUSTRA^LIS (Schrad. 1. c. no. 9. t. *. ^'H ated, opposite, or *3.* in a whorl, ovate-lanceolate, simply serrated, quite entire at top, and are; as well as the stems, downy

Radical leaves a foot long, ovate-oblong, very blunt. Raceme spicate, terminal, solitary. Flowers blue, or purple. There is a variety of this having all the cauline leaves, or only the upper ones, quite entire.

Hoary Speedwell. Fl. July, Sept. Clt. 1759. Pl. \ to 1 foot.

23 V. CARTILAGI'NEA (Ledeb. fl. ross. alt. ill. t. 210. fl. alt. 1. p. 28.) stem downy: leaves glabrous: lower ones opposite, spatulate, serrated towards the apex : superior ones alternate, linear, serrulated ; lower bracteas exceeding the calyxes ; calyx 4-parted, with ovate, 3-nerved, glabrous, ciliated segments, i/. H. Native of Dauria, near Nertschinsk. Surculose at the base. Raceme usually solitary. Corolla blue.

Cartilaginous Speedwell. Pl. 1 to 2 feet.

24 V. RUBICU'NDA (Ledeb. fl. ross. alt. ill. t. 208. fl. alt. l.p. 28.) villously downy ; leaves tapering into the petioles, oblong, or lanceolate, serrated; bracteas all longer than the pedicels, and are, as well as the calyxes, clothed with glandular hairs. %. H. Native of Dauria. Superior leaves sub-alternate, coarsely serrated. Racemes several. Calyx 4-parted, unequal, obtuse. Corollas showy, rose-coloured. Perhaps the same as *V. rubella,* Pall. Said to be nearly allied to *V. serrulata,* Pall, and *V. élegans,* D. C, but differs from the first in the leaves being opposite, and from both in the leaves not being petiolate, but tapering to their insertion.

Reddish-flowered Speedwell. Pl. 1 to 2 feet.

25 V. E'LEGANS (D. C. cat. hort. monsp. 1813. p. 154. Link, enum. 1. p. 21.) leaves serrated, quite entire at top, petiolate, ovate-oblong, or oblong, attenuated, acute, and are, as well as the stems downy; racemes numerous ; lower bracteas longer than the pedicels: upper ones shorter. 2£. H. Native about Verviers, in humid meadows. FJowers rose-coloured. V. incarnata, G. Don, in Loud. hort. brit. p. 6. ?

Elegant Speedwell. FL May, June. Clt. 1822. Pl. 1 to 2 feet.

26 V. SPICA^VTA (Lin. spec. p. 14.) downy, canescent, rather clammy; leaves crenated: radical ones oblong, or obovate, running into the petioles : cauline leaves lanceolate, or oblong-lanceolate, or linear-lanceolate, sessile, toothed, entire at top; bracteas and calyxes pilose. %. H. Native of Switzerland, Germany, France, Siberia ; in England in high dry chalky pastures, especially on Newmarket Heath, and about Bury St. Edmund's. Smith, fl. brit. l.p. 15. engl. bot. t. 2. Schmidt, fl. boh. no. 7. Oed. fl. dan. 52. Poit. et Turp. fl. par. 1. p. 19. t. 19. Schrad. fl. germ, exclusive of the synonymes of Poll. Crantz, Vaillant and FL dan. WahL fl. ups. p. 3. Stems usually simple. Leaves sessile, firm, entire at top. Racemes spicate, dense, usually solitary. Flowers blue, or purple, or white ; tube of corolla thicker than in its congeners, longer and white, and the segments *of* the limb narrower. Capsules downy.

Far. (3, spicata alpina (Rcem. et Schultes, syst. 1. p. *93.)* %. H. Native of the Pyrenees. V. Sterbergiana, Bernh. Lapeyr, pi. des. pyr. p. 5. Leaves glabrous.

Spicate-ftowered Speedwell. FJ. July, Sept. England. Pl. \ to 1 foot.

27 V. CLU^SII (Schott. ex Rcem. et Schultes, syst. 1. p. 94.) tomentose from pedicellate glands; leases toothed : radical ones

ovate, running into the petioles : cauline ones lanceolate, petiolate; bracteas and calyxes ciliated. %. H. Native of Hungary, Bohemia, Austria, and Denmark. V. spicata, var. a, *2.* Scop. earn. ed. 2d. p. 17. Poll. pal. no. 7. Schultes, fl. austr. ed. 2d. p. 7. V. hybrida, Schmidt, ft. boh. no. 8. V. spicata, Vahl, fl. dan. t. 52. ? Raceme usually solitary, spicate, dense. Flowers blue, or purple. This is probably only a variety of *V. spicata,* clothed with viscid glandular pubescence.

Clusius's Speedwell. Fl. July, Sept. Clt. 1822. PL | to 1 foot.

28 V. HY'BRIDA (Lin. spec. p. 14.) leaves unequally and bluntly crenated, and are, as well as the stem, villous and canescent ; radical ones petiolate, ovate : cauline ones nearly sessile, elliptic-oblong ; bracteas linear, longer than the calyxes. 1/. H. Native of Europe, on the mountains ; in England, at the sides of mountains, rare ; on Craig Wreidhin, Montgomeryshire ; on Humphrey Head, a steep rock near Cartmell Wells, Lancashire. Vahl, enum. 1. p. 60. Willd. spec. 1. p. 50. enum. 1. p. 16, and in Schrad. diar. bot. 1799. t. 3. Baumg. fl. trans. 1. p. 19. Ray. syn. p. 278. t. 11. f. 1. Smith, engl. bot. t. 673. good. Schrad. ver. p. 22. fl. germ. 1. p. 17. V. Barrelieri, Schott, ex Rcem. et Schultes, syst. 1. p. 94. V. spicata minor, Vaill. par. t. S3. f. 7. V. spicata, D. C. fl. fr. no. 2408.—Barrel, icon. t. 682. Leaves all obtuse. Raceme spicate, solitary, or few together. Bracteas and calyxes ciliated. Flowers, blue, or purple. There is a variety of this with numerous spicate racemes.

Hybrid Speedwell. Fl. July, Sept. England. PI. \ to 1 foot.

29 V. CONFU'SA (Rcem. et Schultes, syst. 1. p. 95.) leaves opposite : lower ones cordate : superior ones ovate-lanceolate, acuminated, doubly and unequally serrated, and are, as well as the stem, clothed with soft canescent pubescence; segments of corolla divaricate, acuminated; capsules pilose. %. H. Native country unknown. Said to be nearly allied to *V. complicata.* Young leaves soft: adult ones more rough : lower ones petiolate : superior ones almost sessile. Calycine segments pilose, ciliated. Racemes spicate, usually solitary.

Confused Speedwell. Fl. June, July. Clt. 1819. PL 1 foot.

SO V. LONGIFLO'RA (Roem. et Schultes, syst. 1. p. 95.) leaves cordate-lanceolate, sharply and unequally serrated, almost glabrous ; tube of corolla twice as long as the calyx, which is small and unequal. %. H. Native country unknown. Plant downy at top ; petioles ciliated. Leaves cuneiform : superior ones having the teeth tipped with red. Pedicels and calyxes downy. Corolla lilac; tube lj line long. Capsule obcorda:e, pilose.

Long-flowered Speedwell. Fl. July, Aug. Clt. 1824. PL Ijfoot.

31 V. POLYSTA'CIIYA (Link, enum. 1. p. 23.) leaves nearly sessile, ovate, acute, serrated, downy ; spiciferous branches crowded ; flowers nearly sessile. 1/. H. Native country unknown. V. corymbosa, Hort. Plant downy. Leaves serrated even to the top, with a reflexed acumen. Lower bracteas longer than the flowers. Flowers small, pale blue. Racemes crowded in a corymbose manner at the tops of the branches, comose.

Many-spiked Speedwell. FL June, July. Clt. 1817. PL li to *2* feet.

32 V. RUTHE'NICA (Hort. vind. ex Roem. et Schultes, syst. 1. p. *96.)* leaves ovate-lanceolate, unequally serrated ; bracteas length of calyxes ; calyx unequal; capsule a little longer than the calyx. %> H. Native country unknown, being gathered in the botanic garden of Vienna. Very like *V. arguta,* but the leaves are serrated to the apex. Flowers blue, or purple.

Russian Speedwell. FL July, Aug. Clt. 1821. PL 1 foot.

33 V. VILLO'SA (Schrad. ver. p. 13. t. 1. f. 3.) leaves oblong-ovate, serrated, and are, as well as the stems, villous and canescent. %, H. Native country unknown. Willd. enum. 1. p. 361. Poir. encycl. 8. p. 513. Stems ascending. Leaves reflexed at top, thickish, wrinkled, and shining above: lower ones ovate, obtuse : the rest ovate-oblong, acutish, tapering into the petioles. Racemes spicate, long for the size of the plant, erectish, often flexuous. Flowers blue, or purple, and white. Capsule a little higher than the calyx. This specie has been joined by Willd. and Mart, with *V. crenulata.*

Villous Speedwell. FL July, Aug. Clt. 1804. PL 1 to 1? foot.

34 V. LUXITRIANS (Ledeb. fl. ross. alt. ill. t. 211. fl. alt. P. *27.)* stem pilose; leaves smoothish, petiolate, oblong, acuminated, rounded at the base, acutely and simply serrated : serratures nearly equal; bracteas about equal in length to the P^J" eels ; calyx 4-cleft, spreadingly reflexed, unequal. % • *^' Native of Siberia, near Irkutch. Leaves 4 inches long, or longer. Racemes 3 or more. Corolla blue.

Luxuriant Speedwell. PL *2* to 3 feet.

35 V. LINARLEFOLIA (Pall, in herb. Willd. Link, jahrb. 1-S- p. *35,)* leaves opposite, linear, gradually attenuated, long-acU" minated, remotely serrated ; bracteas longer than the pedicels- %. H. Native of Siberia. V. angustifolia, Fisch. hort. gorenk* Link, enum. 1. p. 19. Stem angular, with a few scattered hairs. Leaves entire at base and apex, serrated only in the middle. Raceme elongated ; rachis downy. Calyx glabrous* with ciliated segments. Corollas large blue.

Toadflax-leaved Speedwell. FL July, Sept. Clt. *1822.* P- 1 to 2 feet.

36 V. BRACHYPHY'LLA (Rcem. et Schultes, syst. 1. p. #^ stem downy, simple ; leaves opposite, lanceolate to oblong, *gl^* dually attenuated at the base, acuminated, serrated, quite ^ at the apex: upper ones sub-serrated ; lower bracteas foliaceous, longer than the pedicels. 1/. H. Native country unknown. V. brevifolia, Link, enum. 1. p. 21. Leaves 2 mcftes long, and 4-5 lines broad. Calyx downy. Corolla blue.

Short-leaved Speedwell. FL June, July. Clt. 1822. 1 foot.

37 V. MENTILEFOLIA (Schott. 1. c.) villous ; leaves unequal^ crenated : radical ones ovate : cauline ones oblong, acute, p^ olate, quite entire at base and apex ; bracteas linear. %. Native of Austria, and on the shores of the Volga.—J» hist. 3. p. 282.—Clus. hist. 347. Flowers racemose, blue, purple. Schultes had specimens of this plant from the £ at Gorenki, under the name of *V. spicata affinis,* R usually solitary. The segments of the corolla are twisted, as *V, orchidea,* but shorter.

Mint-leaved Speedwell. FL July, Sept. Clt. 1823. ?* to 1 foot.

38 V. CRASSIFO'LIA (Kit. ex Rcem. et Schultes, syst. 96.) leaves ovate-lanceolate, running into the petioles, *re* lower ones crenated : superior ones quite entire; corolla deous. *%.H,* Native country unknown. Stem red. rather downy beneath, fleshy. Racemes spicate, tern, a foot and more long. Calyx downy, unequal. all longer than the calyxes. Corolla violaceous, with segments. Capsule downy. Allied to *V. orclndea.*

Thick-leaved Speedwell. Fl. July, Aug. Clt. 18^. to3feet_

39 V. ORCHI'DEA (Crantz, austr. fasc. 4. p. *** > accpty the synonymes of Vaill. and Fl. dan.) downy ; serrated : radical ones oblong-ovate, running into cauline ones lanceolate, acutish, almost sessile; %. corolla lanceolate, twisted a little, exceeding H. Native of Austria, Pannonia, and Cape Cauca as,

Pinnate-leaved **Speedwell. Fl. June, Aug. Clt. 1776. Pl** 1 foot.

44 V. SESSILIFLORA (Bunge, in Ledeb. fl. ross. alt. ill. t. 126. fl. alt. 1. p. *32.)* leaves oblong, cuneated at the base, tapering into the petioles, pectinately pinnatifid, with entire bluntish segments; superior leaves linear, quite entire, and are, as well as the stem, downy; spike usually solitary, dense ; flowers exactly sessile. *If.* H. * Native of Altaia, in sterile places at the rivers Kurai and Tschuja. The whole plant villously pubescent. Bracteas exceeding the calyxes. Calyx 4-parted, rather unequal. Corollas blue.

Sessile-flowered **Speedwell. Pl. | foot.**

45 V. INCISA (Ait. 1. c.) leaves somewhat fascicled, petiolate, lanceolate, pinnatifid : segments almost entire; calycine segments lanceolate. 1£. H. Native of Siberia. Vahl, enum. 1. p. 61. Schrad. comm. ver. p. *33.* Lodd. bot. cab. 1397. Stem downy. Racemes numerous, never solitary. Leaves cuneated at the base. Calyx 5-cleft, unequal. Corollas blue or white.

CW-leaved Speedwell. Fl. July, Aug. Clt. 1397. Pl. 1 to 2 feet.

46 V. LACINIA'TA (Ait. 1. c.) leaves somewhat fascicled, on short petioles, lanceolate, pinnatifid : segments quite entire, unequal, linear, or lanceolate ; calycine segments oblong-ovate. 1/. H. Native of Siberia. Vahl, enum. 1. p. 60. Willd. enum. 1. p. 19. V. spuria, Junghans, icon. rar. C. L. f. 2. Veronicastrum laciniatum, Moench. Stem downy. Leaves spreadingly deflexed. Racemes usually solitary, about a foot long, loose. Bracteas equal in length, or exceeding the calyxes. Calyx 5-cleft, unequal. Flowers blue, or purple. Capsule equalling the calyx in length.

***Jagged-leaved* Speedwell. Fl. June, Aug. Clt. 1780. Pl. 2 feet.**

47 V. SUBLACINIA'TA ; rather downy; leaves opposite or 3-4 in a whorl, subfascicled, ovate-lanceolate, shining above, so deeply and doubly toothed as to be almost pinnatifid; calyx 4-cleft, unequal. 1/. H. Native country unknown. Corolla purplish-blue. V. maritima, Lin. herb.

***Somewhat-jagged-leaved* Speedwell. Fl. Aug. Sept. Clt. ? Pl. 1 to ljfoot.**

SECT. II. GENTIANOIDES (from *gentiana,* gentian ; and *idea,* form ; in reference to the appearance of the plants.) Capsule swollen, emarginate. Seeds large, flat, oblique, somewhat saucer-shaped. Leaves opposite, connate, or sheathing at the base, smooth and glossy. Racemes usually solitary, terminal, elongated, loose.

48 V. GENTIANOIDES (Vahl, symb. 1. p. 1. enum. 1. p. 62.) radical leaves oblong, crenated : cauline leaves ovate-lanceolate, with cartilaginous edges, crenated at top, and narrowed at the base : uppermost leaves acute, quite entire ; stems simple, ascending ; upper segment of corolla smaller than the lateral ones. *11.* H. Native of Tauria, Cappadocia, and Armenia. Vent. malm. t. 86. Sims, bot. mag. t. 1002. Sibth. et Smith, fl. graec. 1. p. 5. t. 5. V. Buxbaumiana, Pall. ind. taur. ex Bieb. fl. cauc. 1. p. 9.—Buxb. cent. 1.1. *35.* Stem glabrous at bottom. Leaves rather downy, obscurely 3-nerved. Bracteas villous. Calycine segments unequal. Flowers pale blue.

***Gentian-like* Speedwell. Fl. May, June. Clt. 1748. Pl. 1 to 3 feet.**

49 V. PA'LLIDA (Horn. hort. hafn. 1. p. 17.) leaves lanceolate, obtuse, subserrated ; superior segment of corolla larger than the lateral ones ; stem ascending. %. H. Native country unknown, V. olympicum, Pall.? Very like the preceding; but the leaves are much thinner and narrower, length of internodes, not twice their length, as in that species. Flowers distant, pale blue.

Pale Speedwell. FL May, June. Clt. 1821. PL 1 to 1* foot.

SECT. III. SERPYLLIFOLIA (from *Serpyllium,* Wild Thyme ; and *folium,* a leaf; in reference to the small leaves of the species.) Capsules ovate or obovate, usually emarginate, compressed. Seeds compressed. Leaves small, opposite. Racemes terminal, elongated, or corymbose, few-flowered. Small, alpine, erect, creeping, or trailing plants.

50 V. BELLIDIOIDES (Lin. spec. p. 15.) leaves obovate, crenated, and are, as well as the stems, which are simple and ascending, hairy ; cauline leaves remote, few; racemes corymbose, hairy, few-flowered; capsules obovate, hairy. %. H. Native of Switzerland and the Pyrenees, on the alps. Vahl, enum. 1. p. 61. Lapeyr. pi. pyr. p. 6. D. C. fl. fr. 3. p. 2414. —Hall. helv. no. 543. t. 15. f. 1. The whole plant is clothed with articulated hairs. Leaves crenated from the middle to the apex, half stem-clasping at the base. Calyxes nearly equal. Corollas blue, with a white throat. Radical leaves rosulate.

Daisy-leaved Speedwell. Fl. June, July. Clt. 1775. PI. | to \ foot.

51 V. BAUMGARTE'NII (Roem. et Schultes, syst. 1. p. 100.) erect, glabrous ; lower leaves opposite, sessile, oval, or ovate-lanceolate, serrated : upper ones alternate, half stem-clasping, linear-lanceolate ; corymbs dichotomous ; pedicels filiform, erectly spreading, 1-flowered ; segments of the calyx equal; corolla twice as long as the calyx, pale blue. 1/. H. Native of Transylvania, in the fissures of rocks on the alps. V. petraeNa, Baumg. trans. 1. p. 21. no. 27.

Baumg art en's Speedwell. PL \ foot.

52 V. NUMMULA'RIA (Gouan, ill. 1. t. 1. f. 2. exclusive of the synonymes) stem downy or smoothish ; leaves obovate-orbicular, tapering into the petioles, crowded, entire, or obsoletely crenated ; racemes short, few-flowered, crowded; calycine segments obtuse, ciliated ; stem prostrate, fruticulose. ^ . H. Native of the Pyrenees. D. C. fl. fr. no. 2413. V. saxatilis, /3, Vahl, enum. 1. p. 63. Willd. spec. 1. p. 62. V. strictiflora, Lapeyr. abr. p. 6. no. 8. fl. pyr. t. 51. exclusive of the synonymes and figure, but not the diagnosis. Flowers nearly sessile, pale blue. Lower segments of corolla cuneiform, obtuse, the other 3 linear. Leaves decussate, imbricated.

Money-wort-\e&ved Speedwell. Fl. June, Aug. Clt. 5 820. PL prostrate.

^53 V. JAVA'NICA (Blum, bijdr. p. 742.) procumbent; leaves almost sessile, opposite, ovate, bluntly serrated, downy ; spikes axillary and terminal ; calycine segments obtuse.—Native *of Java, on Mount Gede, and elsewhere.

Java Speedwell. PL procumbent.

54 V. NU'TANS (Bongard. mem. acad. imp. st. petersb. 2. p. 157.) stems simple, nutant at apex ; leaves sessile, ovate, serrated, acutish ; capsule nearly glabrous, about equal in length to the calyx ; corymbs terminal. !£. H. Native of the Island of Sitcha. Stem downy. Leaves opposite, half stem-clasping, downy, about 4 on a stem. Bracteas and calyxes pilose; segments of calyx nearly equal. Corolla small, blue, unequal. Capsule ovate, emarginate. Nearly allied to *F. Stelleri;* but differs in the flowers being smaller ; in the stems being nutant; and in the capsule being nearly glabrous, not pilose; and in the corolla being glabrous inside.

Noddwg'Stewmed Speedwell. PL J to J foot.

65 V. leaves ovate, obtuse, entire, or nearly so: stems erect, fruticulose> rather (Linn. Spec. P. 15.) nearly glabrous; Supervery downy ; racemes many-flowered, downy; capsule roundish, calyx ; stem, ovate, equal in length or shorter than the and the Shire, on the alps in Scotland, on Ben Cruachan, Arrochar, Rev. Dr. Walker ; Ben Lawers, R. Brown. Vahl, Enum. 5. exclusive of the syn. Wulf. in Jacq. coll. 4. P- 229, not. P. 6. Clus. syn. Smith, engl. bot. 1028. Lapeyr. n :0. exclusive of the syn. of Mor.—Hall. hist. 1. p. 235. t. 10. f. j^ Lower leaves obovate, tapering into the petioles. Corolla Pal at first red with deeper veins. Capsule hairy. Bracteas Seeds comfer and the pedicels. Segments of calyx obtuse. *friiiscose.* Pubescent. foot. Vedwell. Fl. June, Aug. Scotland. PI. J to

6 V. Lanosa (Hoyle, mss. ex Benth. scroph. ind. p. 45.) stem woolly, leaves sessile oblong, base ; branches erect, and hairy beneath, racemes rather loose ; calyx unequally 4-5-parted ; capsule ovate, acute in the immature state. T? . H. Native of Kanaour, Royle.

JFoo%-branched Speedwell. PL shrubby.

**/Q7* V. MACROSTEMON (Bunge, in Ledeb. fl. ross. alt. ill. t. 127. fl. alt. 1. p. *35.)* stems fruticulose, branched ; lower leaves roundish-ovate, quite entire : superior ones oblong, serrulated, villously pubescent; racemes villous, many-flowered, at length elongated ; capsule downy, twice as long as the calyx, which is 5-parted and unequal. F?. H. Native of Altaia, on alps at the river Tschuja, among stones. Corollas large, violaceous. Capsule obovate, emarginate. Stamens much exserted.

Long-stamened Speedwell. PL \ to \ foot.

sJ)8 V. SERPYLLIFOLIA (Lin. spec. 15.) glabrous ; leaves nearly sessile, oblong or ovate, 3-nerved, entire and crenated ; racemes elongated; flowers distant; stems creeping. %. H. Native of Europe, Siberia, and North America, in pastures and meadows ; plentiful in all parts of Britain; in the Himalaya, Royle. Vahl, enum. 1. p. 21. Smith, engl. bot. t. 1075. FL dan. t. 492. Bieb. fl. cauc. 1. p. 9. Curt. fl. lond. fasc 15. t. 3. Bertol. pi. rar. ital. dec. 3. p. 5. Lapeyr. abr. p. 7.—Lob. icon. 1. t. 472. f.—Riv. mon. t. 99. f. 1. Stem creeping at base, ascending at top, downy. Leaves fleshy, shining, glabrous. Bracteas shorter than the pedicels. Corolla blue, pale red and white. Capsule obcordate, didymous, compressed.

Var. (3, tenella ; leaves ovate-roundish. 7/ . H. V. tenella, Flor. wett. and Schmidt, fl. bohem.

Far. y, neglecta ; leaves 4 in a whorl. %. H. V. neglecta, Schmidt.

Far. $, nummularicefblia (Thuil.) %. H. Native of France.

Var. f, *humifusa ;* prostrate ; leaves cordate-roundish ; stems creeping. %. H. Native of the Highlands of Scotland, on wet shady rocks; and on the Cheviot Hills, Northumberland. V. humifusa, Dicks, in Lin. trans. *2.* p. 288. Plant downy.

Far. £, *hirsilta;* hairy ; hairs short, crowded. %. H. Native of the Pyrenees.

Wild-Thyme-leaved Speedwell. FL April, July. Britain. PL creeping.

69 V. HERNIARIOI'DES (Pourr. chl. hisp. no. 60. Lapeyr. suppl. abr. p. 4.) leaves obovate, glabrous, quite entire, small: lower ones reflexed ; stems prostrate, scattered, rooting ; raceme terminal, dense, ovate. 1/. H. Native of the Pyrenees, at Port de Jacca. Flowers blue, with pale claws.

Herniaria-like Speedwell. PL creeping.

70 V. FONTANA (Pall, ex Link, enum. 1. p. 102.) stem creeping, downy ; leaves sessile, ovate, obtuse, crenated, glabrous ; bracteas foliaceous ; pedicels much shorter than the bracteas. %. H. Native of the Island of Unalaschka and Kamtschatka, Pall.

Fountain Speedwell. PL creeping.

71 V. GEBHARDIANA (Vest, ex Rcem. et Schultes, syst. 1. mant. 1. p. 104.) branches prostrate, rooting; leaves elliptic, roundish, quite entire, glabrous : lower ones petiolate ; raceme terminal; flowers and capsules erect. %. H. Native on alp Schwarzenstein, in Zillerthal, beside rivulets formed by the melting of ice. Pedicels length of bracteas. Capsule broadly obcordate.

Gehhard's Speedwell. PL creeping.

72 V. TENELLA (AIL pedem. no. *272. t. 22.* f. 1.) leaves roundish, a little wrinkled, subcrenated, all petiolate: stems creeping, and are, as well as the calyxes, villous. 3/ • H. Native of Piedmont, Pyrenees, &c. Vahl, enum. 1. p. *65.* Lapeyr. abr. p. 8. Willd. spec. 1. p. 64. exclusive *of* the syn. of Dill__Pluck, t. 233. f. 4. This is very like *V. serpyllifolia*, and probably only a variety of it. Leaves on longer petioles. Flowers blue or purple, on long pedicels.

Far. (3; stems erectish ; leaves distant ; flowers rose-

coloured. 1/. H. Native of the Pyrenees. Lapeyr. abr. suppl. p. 4.

Slender Speedwell. Fl. May, Aug. Clt. 1820. PL creeping.

73 V. MICROPHY'LLA (Kit. in Schultes, fl. austr. ed. 2d. vol. 1. p. 20.) leaves ovate, inordinately crenated; bracteas hardly the length of the pedicels; stems ascending. %• H. Native of Hungary, in sandy places. Stems creeping at the base. Perhaps only a variety of *V. serpyllifdlia,* occasioned by the dry sandy soil in which it grows.

Small-leaved Speedwell. Fl. April, July. Clt. 1822. PL £ to | foot.

74 V. TELEPHIIFOLIA (Tourn. cor. p. 7.) glabrous; leaves obovate, almost quite entire; stems creeping. %. H. Native of Armenia. Vahl, enum. 1. p. 64. Stems filiform. Leaves petiolate, hardly half a nail in length, obsoletely crenulated outside. Perhaps a variety of *V. serpyllifblia.*

Telephium-leaved Speedwell. PL creeping.

75 V. RUDERAXLIS (Vahl, enum. 1. p. *66.* H. B. et Kunth, nov. gen. amer. 2. p. 312.) leaves ovate-oblong, obtuse, crenated, somewhat 5-nerved: superior ones subciliated, quite entire; stems creeping. %. H. Native of Peru, in waste humid places; and near Santa Fe de Bogota, and on Mount Quindiu. Vahl, enum. 1. p. *66.* V. serpyllifdlia, Ruiz, et Pav. fl. per. 1. p. 6. Stems filiform, diffuse, red. Bracteas longer than pedicels. Corolla violaceous; the smaller segment white. Probably a mere var. of *V. serpyllifdlia.*

Rubbish Speedwell. PL creeping.

SECT. IV. PIRI'TIA (the vernacular name of one of the species.) Capsule elliptic or roundish, acuminated. Leaves opposite, quite entire. Racemes terminal. Shrubs natives of New Zealand.

76 V. SPECIOSA (R. Cunningh. ex bot. mag. no. 3461.) quite glabrous; stem shrubby, erectish or diffuse; leaves opposite, flat, obovate, coriaceous, decurrent, with a callous obtuse point, and quite entire, thickened, coloured margins; racemes terminal, short, erect, crowded with flowers; bracteas ovate-lanceolate, one half shorter than the pedicels; calycine segments ovate, acutish, finely ciliated, about equal in length to the middle of the tube of the corolla. J?. F. Native of New Zealand, on the north side of the island; and on sandy hills near the estuary of the Hokianga, on the west coast. Leaves 3-4 inches long. Flowers showy, bluish-violet, almost like those *of Lysimachia atropurpurea.* Stamens exserted. Capsule elliptic, acuminated, glabrous, twice as long as the calyx.

Showy Speedwell. Shrub 3 to 6 feet.

77 V. LIGUSTRIFOLIA (Cunningh. 1. c.) quite glabrous; stem shrubby; leaves opposite, ovate-oblong or narrow-lanceolate, bluntish, quite entire; racemes peduncled, terminal, pubigerous, about equal in length to the leaves; bracteas oblong-lanceolate, about half the length of the pedicels; calycine segments ovate-lanceolate, acutish, length of the tube of the corolla. T?. F. Native of New Zealand, on the north coast, on shady hills on the banks of the Kana-Kana river; and Bay of Islands. A slender shrub, 2 feet high. Leaves sessile. Flowers white, spicately racemose. Calyx equal. Segments of corolla acutish. Said to be very like *V. angustifUia,* Richard.; but the racemes in that plant are slender, pedunculate, and axillary, and more than twice as long as the leaves; the segments of the calyx are obtuse, and not half so long as the tube of the corolla; and the leaves are linear-lanceolate, acute, and glaucescent beneath.

Privet-leaved Speedwell. Shrub 2 feet.

78 V. DiosMiEFOLiA (R. Cunningh. in bot. mag. under no. 3461.) shrubby, erect; leaves decussate, lanceolate, acute, quite entire or serrulated, petiolate, concave and smooth above, and of a different colour beneath: serratures simply cut, remote; corymbs axillary or terminal, many-flowered; bracteas ova about half the length of the pedicels; calycine segments ovai, obtuse, equal in length to the middle of the tube *of* the corol T?. F. Native of New Zealand, in dense woods near th source of the river Wycaddi; at the Bay of Islands, and elsewhere on the south coast, where it is called *Piriti* by the nativ A slender twiggy shrub, about 3-12 feet, with the *Trachymene.* Leaves 9 lines long, keeled beneath. rl white. Capsule elliptic, acute, compressed, 3 times as long the calyx, which is ciliated.

Diosma-leaved Speedwell. Shrub 3 to 12 feet.

SECT. V. HEBE (a mythological name, the daughter *of* Juno Capsule ovate, or oval, or oblong, acute, or obtuse, compresse Racemes lateral and axillary. Leaves quite entire. Plants n tives of New Holland, Van Diemen's Land, and New Zealand.

79 V. PARVIFLORA (Vahl, symb. 3. p. 4. enum. 1. P« leaves linear-lanceolate, quite entire, glabrous, mucronate; ste shrubby. J?. F. Native of New Zealand. V. floribunda, Br. in herb. Smith. Plant glabrous. Leaves approximate, sessile, stiff, 2 inches long. Racemes erect, \\ inch long, many-flowered; bracteas minute. Segments of corolla obtuse. Capsule oval, twice as long as the calyx.

Small-flowered Speedwell. Fl. June, July. Clt. 1822. Shrub 1 foot.

80 V. MACROCA'RPA (Vahl, symb. 3. p. 4. enum. 1. p. *obJ* leaves lanceolate, quite entire, glabrous, flat; racemes stem shrubby. F? . F. Native of New Zealand. B articulated. Leaves 4 inches long, nerveless. Racemes of leaves. Bracteas minute. Tube of corolla twice as long the calyx; segments obtuse. Capsule ovate, acute, 3 times long as the calyx.

Large-fruited Speedwell. Shrub.

81 V. SALICIFOLIA (Forst. prod. no. 11. Vahl, symb. 4.) leaves lanceolate, attenuated at both ends, quite racemes drooping; stem shrubby. J?. F. Native ot Zealand. Glabrous. Leaves 2-3 inches long, subundu Racemes longer than the leaves; pedicels capillary equal. Tube of corolla twice as long as the calyx; seg acute. Capsule oblong, acute, twice as long as the calyx.

Willow-leaved Speedwell. Shrub 2 to 3 feet.

82 V. ELLIPTICA (Forst. prod. no. 10.) leaves elliptic, olate, quite entire, glabrous; racemes short, few-flowe rymbose. T?. F. Native of New Zealand. Very near to *V. decussata.*

Elliptic-leaved Speedwell. Shrub 1 to 2 feet.

83 V. DECUSSAXTA (Ait. hort. kew. ed. 1. vol. 1. P; 2d. vol. 1. p. *68.)* glabrous; leaves permanent, elliptic, entire, decussate; racemes few-flowered; stem F. Native of the Falkland Islands, and the Straits of Ian. Curt. bot. mag. t. 242. Hebe Magellanica, J Gmel. syst. p. 27. Leaves mucronate, stiff, with cartil margins. Racemes shorter than the leaves. Bracteas ciliated. Corolla funnel-shaped, blue.

Decussate-leaved Speedwell. FL June, Aug. Shrub 1 to 2 feet.

84 V. PERFOLIATA (R. Br. prod. 434.) quite entire, ovate, acuminated, connate at lateral, pedunculate, many-flowered. %. G. South Wales, about Port Jackson. Sims. bot. mag. Plant glaucous. Leaves sometimes furnished with a Racemes long, secund; pedicels hardly the engt lyxes, which are 4-parted and unequal. Corolla purp Capsule oblong, oval. Flowers blue.

Perfoliate-leaved Speedwell. FL July, Aug. PL 1 to 2 feet.

cussatP " FORM oSA (R-Br. prod. p. 434.) leaves evergreen, deba«l -- ianceolate, quite entire, quite glabrous, acute at the Udse; racemes KAa»:^ «L ^i UP ed; racemes bifariously pilose; corymbs axillary, few-flowered; stem shrubby. *Jq* . F. Native of Van Diemen's Land.

Shrubby Speedwell. Shrub 1 to 2 feet.

linear-lanceolate, entire; stems nearly simple; corymbs lateral, few-flowered. P>rt T *i* ^' Gi Native of New South Wales, about Port Jackson. Flowers blue.

nder Speedwell. Fl. May, July. Clt. 1820. PI. \ to \ foot.

Sect. VI# CHAMiEDRYS (name of Germander.) Capsule compressed, flat on one side, and convex on the other. Racemes lateral and axillary.

§ 1. *Leaves quite entire.*

Plebeian Speedwell. Fl. June, July. Clt. 1820. PI. 1 foot ?

92 V. DI'STANS (R. Br. prod. p. 435.) leaves ovate, broadly serrated, glabrous; petioles ciliated; stem decumbent, bifariously pilose; corymbs lateral, pedunculate, few-flowered. 7/. G. Native of New Holland. Flowers blue.

Zh'stawJ-flowered Speedwell. Fl. May, June. Clt. 1825. PI. decumbent.

93 V. BROWNEI (Roam, et Schultes, syst. 1. p. 118.) leaves ovate-lanceolate, glabrous, unequally serrated; stem bifariously pubescent; lower petioles 3 times shorter than the leaves; racemes lateral, loose. %. H. Native of New South Wales, about Port Jackson. V. arguta, R. Br. prod. p. 435. Nearly allied to *V. plebeia.* There is a plant in Smith, herb, under this name, which has cordately-reniform, sharply-toothed leaves, which he there proposes to call *V. vitifblia.*

Brown's Speedwell. PI. 1 foot ?

94 V. NOVJE-HOLLA'NDLE (Poir. encycl. 8. p. *526.)* leaves ovate, deeply crenated, petiolate; racemes lateral; flowers on long pedicels; stems downy. %. G. Native of New Holland. Very like *V. Chamcedrys.* Calyx glabrous. Bracteas ovate. Capsule obcordate, compressed, shorter than the calyx.

New Holland Speedwell. PL diffuse.

* * *Species natives of Europe.*

95 V. OFFICINALIS (Lin. spec. p. 14.) creeping, hairy; leaves oval or oblong, serrated; petioles sheathing at the base; racemes spicate, alternate or opposite; calyx 4-parted, nearly equal; bracteas longer than the pedicels. %. H. Native of Europe and North America, in woods and dry sandy banks; plentiful in Britain. Vahl, enum. 1. p. 74. Gaertn. fruct. 1. p. 257. t. *56.* f. *7.* Fl. dan. t. 248. Curt. fl. lond. fasc. 3. t. 1. Woodv. t.219. Smith, engl. bot. 765. Bull. herb. t.293. Plenck. off. t. 12. Lam. ill. t. 13. f. 2. Poit. et Turp. fl. par. 1. p. 12. t. 8. Svensk, bot. t. 59.—Riv. mon. irr. t. 93. Stem procumbent, rooting at the base. Corollas small, pale blue, with deeper veins. Capsule obcordate, compressed, downy, larger than the calyx. This species is recommended as a sort of medicinal tea; and Simon Paullix, an old Danish botanist, contended it was the identical tea of China. The flavour is astringent and bitter, and by no means agreeable.

Far. /J; leaves obovate-roundish, pubescent. %. H. V. Tournefortii, Schmidt, boh. no. 12.

Far. y; leaves obovate or obovate-roundish, almost glabrous. *%K* H. V. Allidni, Schmidt, 1. c. Hook. scot. 7. excluding ttfe synonyme. Found on the mountains of Scotland and Ireland.

***Far. S, albifibra;* flowers white.**

Far. e, plena; flowers double.

Far. I, variegata; leaves variegated with white or yellow.

Officinal Speedwell. Fl. April, July. Britain. PI. creeping.

96 V. TOURNEFORTII (Vill. dauph. 2. p. 9.) creeping, hairy; leaves ovate, entire at the base, and serrated at apex, narrowed into the short petioles at the base; racemes spicate, opposite; calyx 4-parted. %. H. Native of the South of France. Stem procumbent. Corolla blue. Hardly distinct from *F. officindlis.*

Far. /3, *dubia* (D. C. fl. fr. 3. no. 2395.) leaves glabrous, ovate, toothed; stem rooting at the base, ascending; hairs spreading, or disposed in 2 rows. %. H. This variety differs from *F. chamce'drys,* in the stems being procumbent: from *F. qfficinalis,* in the leaves being glabrous; and in the calyxes being longer; and from *F. Allidni,* in the stem and peduncles being villous; and from *F. pildsa,* in the leaves being entire at the base, and in the calyxes being equal.

Tournefort's Speedwell. Fl. May, June. Clt. 1821. PI. creeping.

97 V. ALLIÒNI (Vill. daupb. 2. p. 8.) glabrous, creeping, procumbent; leaves oblong, stiff, shining, slightly crenated; racemes spicate, crowded; calyx 4-parted. %. H. Native of Switzerland, South of France, Italy, on the Alps. Vahl, enum. 1. p. 74. Smith, in Lin. trans. 1. p. 190. D. C. fl. fr. 8. p. 463. V. pyrenàica, All. ped. 1. p. *73.* no. 265. V. rèpens, All. spec. 1. t. 4. f. 3. V. officinàlis, j3, Lin. This species differs from *V. officinalis* in the rigidity and smoothness of the parts. Flowers blue, crowded into a short ovate spike.

AllionCs Speedwell. Fl. June, Aug. Clt. 1748. PI. creeping.

98 V. SETI'GERA (D. Don, rar. pi. scot. p. 4.) very hairy; hairs stiff, glandular; stems ascending; leaves elliptic-lanceolate, serrated, subcrenated; racemes elongated; calyx 4-parted; capsule abrupt, undivided. %.. H. Native of Scotland, in Ayrshire, in heathy parts of Garick. V. hirsùta, Hopk. fl. glott. p. 9. Link, enum. 1. p. 24. Leaves small. Bracteas longer than the flowers. Corolla very pale blue. Capsule ovate, compressed, glabrous. Perhaps only a small hispid variety *of V. officinàlis.*

Seiigerous Speedwell. Fl. April, July. Scotland. PI. \ foot.

99 V. MULLERTA'NA (Vest, in litt. ex Rcem. et Schultes, syst. 1. mant. 1. p. 108.) leaves elliptic, quite entire, obtuse, hairy, ciliated, on short petioles; stems short, prostrate, rooting; racemes lateral; flowers and capsules erect. If. H. Native of Upper Styria. Pedicels length *of* bracteas. Calyx 4-cleft. Nearly allied to *V. officinàMs, F. Allibni,* and *F. Tournefortii,* but the flowers are larger.

Mutter's Speedwell. Fl. June, July. Clt. 1825. PI. prostrate.

100 V. APHY'LLA (Lin. spec. 14.) villous; stems creeping; leaves radical, roundish or oblong, slightly crenated; peduncles scape-formed, usually 3-flowered. 2£. H. Native *of* the southern alps of Europe. Vahl, enum. 1. p. 68. V. subacaùlis, Lam. ill. no. 171.—Seguier, pi. veron. 1. p. 241. t. 3. f. 2.—Bocc. mus. t. 10. t. 9.—Pluck, aim. t. 114. f. 3. Plant hairy. Scapes 1-2 inches long, bearing each 2-4 large blue flowers. Capsule large, violaceous, thrice as long as the calyx, obovate, compressed, more or less emarginate, downy.

Far. /3, Kamtchdtica (Lin. suppl. p. 83.) leaves ovate or oblong, serrated, hairy; scapes hairy, 3-5-flowered. %. H. Native of Kamtschatka. V. grandiflora, Gaertn. nov. comm. petrop. 14. t. 18. f. 1. Racemes lateral, loose. Stem ascending, stoloniferous.

Var. y, nudicaulis (Lam. ill. no. 181.) capsule obtuse, not emarginate. %. H. V. nudicaùlis, Pers. ench. 1. p. 11.

Leafless-stemmed Speedwell. Fl. May, July. Clt. 1775. PI. \ foot.

101 V. MONTA^NA (Lin. spec. p. 17.) leaves cordate-ovate, petiolate, obtuse, coarsely serrated; stem and petioles hairy; racemes elongated, filiform, loose, axillary. 1/. H. Native of Europe, in groves; in Britain, in woods, chiefly in moist calcareous soil, but not very common. Vahl, enum. 1. p. 68. Jacq. fl. austr. 2. p. 6. t. 109. Fl. dan. t. 1201. Curt. fl. lond. 4. t. 2. HoffFm. fl. germ. t. I. Poit. et Turpin, fl. par. 1. p. H.# t. 10. Smith, engl. bot. t. 766. V. procùmbens, Riv. mon! irr. t. 93. Stems weak, procumbent, rooting at the joints, villous. Leaves usually villous, with generally purplish margins. Corolla pale blue or white, variegated with purplish veins. Calyx 4-parted, unequal. Capsule orbicular, compressed, emarginate at both ends, ciliated, didymous; cells 4-seeded.

Mountain Speedwell, or Mountain Madwort. Fl. June, July. Britain. PI. prostrate.

102 V. CHAM^DRYS (Lin. spec. 17.) downy or hairy; leaves deeply and unequally serrated: lower ones petiolate, ovate: upper ones cordate-ovate, sessile; stems bifariously pilose, creeping at the base; racemes axillary, exceeding the stems. %. H. Native of Europe, common on dry banks, and in groves, meadows, pastures, and hedges. Vahl, enum. 1. p« Lam. ill. t. 13. f. 1. Curt. fl. lond. 1. t. 2. Martyn, fl. rust. t. *66.* St. Hil. pi. fr. t. 8. Smith, engl. bot. *623.* FL dan. t. 448. Poit. et Turp. fl. par. 1. p. 13. t. 9. Svensk, bot. t. 239. Teucrium V. Clus. hist. p. 350.—Riv. mon. irr. t. <**• Chamsevdrys, Brunsf. herb. 1. p. 125. f. 1. Herb pale green. Stems more or less ascending, 1-2 feet long. Flowers large, blue, rarely flesh-coloured or white. Calyx 4-cleft, lanceolate. Capsule compressed, obcordate, shorter than the calyx. There are many varieties of this plant. Some take this for the true German *Forget-me-not.*

Far. /3, lamiifòlia; leaves cordate, cuneated at the base, o'' tuse: lower ones sessile, the rest petiolate. 1/. H. Native country unknown. V. lamiifòlia, Hayne, in mag. amic. hist. natt berol. 7. (1805.) p. 132. V. Rudolphiana, Hayne, 1. c. p. 1S$*

Germander Speedwell. Fl. July, Aug. Britain. PI. \ to I *foot.*

103 V. MICRA'NTHA (Hoffm. et Link, fl. port. p. 286. t. *57-)* downy and canescent, soft; leaves nearly sessile, ovate, obtuse, coarsely crenated, hairy; racemes axillary; flowers rather crowded. If. H. Native of Portugal. V. Teucrium, Brot. fl. lus. 1. p. 13. V. mollis, Zea. ex Roem. et Schultes, syst. 1. p. 112. V. mollfssima, Hort. Hairs of plant curled. Bracteas linear, longer than the pedicels. Calycine segments 4, lanceolate, acute, nearly equal. Corolla small, white, with a purplish ring in the throat. Capsule compressed, emarginate, shorter than the calyx, with ciliated edges. Very like *V. c»a' mc&drys;* but the flowers are smaller, and the whole plant hoary.

Small-flowered Speedwell. Fl. May, July. Clt. 1819. ?*• \ foot.

104 V. PLICA^TA (Pohl, tent. fl. boh. p. 15. f. 1.) leaves cordate-ovate, plicate, deeply toothed, clothed with white hairs as well as the stems; racemes axillary, alternate; flowers imcate, nearly sessile. %. H. Native of Bohemia, on hills, pilosa, Schmidt, 1. p. 17. Willd. spec. 1. p. *66.* Root creeping. Stem bifariously pilose. Lower leaves petiolate supf ones sessile. Calyx unequal. Bracteas linear, length of peeels. Flowers blue.

Plicate Speedwell. Fl. May, Aug. Clt. 1817. PL *i* foot.

105 V. UMBROSA (Bieb. fl. cauc. 1. p. 11. fl. ross. 1. lower leaves ovate, coarsely serrated: superior ones obio subserrated; racemes lateral, few-flowered; stems calyx nearly equal in length to the corolla. %> H. Tauria, in woods about Karassubasar. Plant loosely Pedicels elongated. Corolla showy. The leaves of ste branches are sometimes nearly entire.

Shaded Speedwell. PI. creeping.

106 V. PEDUNCULA'RIS (Bieb. casp. 126. append, no. cauc. 1. p. 11.) downy; leaves ovate, deeply and rated; racemes loose; stem hairy, with 2 more dense hairs; pedicels capillary, twice as long as the bracteas Native of Caucasus, in shady groves. V. pedunculate, enum. 1. p. 77. Pers. ench. 1. p. 12.—Buxb. cent. t. 41. f. 1. Flowers blue. This plant differs from *Vy yines drys* in the stems being villous all over, and also having both of more dense hairs; in the leaves being more villous surfaces, and more deeply cut, in the pedicels being si elongated, and in the calycine segments being blunter.

Far. /?; stems flaccid; leaves more deeply cur. Native of Caucasus, in groves.

Pedicels longer than the branches. Calyx 4-parted, equal. Corollas small, red, or pink. This species has much the habit of a species of *Circafa.*

Nettle-leaved Speedwell. Fl. May, June. Clt. 1776. Pl. 1 to 1 foot.

122 V. MELISS^FOLIA (Poir. encycl. 8. p. 526.) leaves sessile, subcordate-ovate, crenately cut, downy beneath ; racemes spicate, lateral, opposite. %. H. Native country unknown. Stem erect, downy, slender. Leaves obtuse, an inch long, and 10 lines broad. Bracteas ovate, hardly the length of the calyx. Calyx equal. Corollas small, pale blue, or white. Capsule glabrous, obcordate. Seeds red.

Balm-leaved Speedwell. Fl. May, June. Clt. 1826. Pl. 1 foot.

123 V. VESTIA'NA (Roem. et Schultes, syst. 1. mant. 1. p. 111.) stems hoary, villous; leaves coarsely serrated, petiolate : cauline ones ovate : rameal ones oblong ; style thicker than the filaments; racemes spicate, elongated; bracteas filiform, exceeding the calyxes a little. %. H. Native country unknown. V. melissaefolia, Vest, in litt. Leaves entire at the base, usually subcordate. Calyx rather unequal.

Vest's Speedwell. Pl. 1 foot.

124 V. PROSTRA'TA (Lin. spec. p. 17.) canescent and pubescent ; leaves sessile, oblong, obtuse, serrated: superior ones lanceolate, flat; racemes axillary, opposite, elongated; floriferous stems ascending: barren ones prostrate. %. H. Native of Germany, Italy, and Switzerland, on hills. Vahl, enum. 1. p. 75. Moench. hass. t. 1. V. Teucrium, /3, Savi, bot. etrusc. 1. p. 12. V. canescens, Bastard, suppl. fl. Main et Loire, p. 21.—Bauh. hist. 3. p. 287, with a good figure. Flowers blue. Capsule compressed, glabrous. Calyx unequal, nearly glabrous.

Var. /3, *minor* (Riv. mon. t. 95.) plant smaller.

Far. y, *satureijolia* (Poit. et Turp. fl. par. p. 22.) racemes exceeding the prostrate stems : lower leaves oblong, serrated at top : middle ones subdenticulated : the rest linear, and quite entire.

Var. B9 dlba; flowers white, wrinkled.

Prostrate Speedwell. Fl. May, June. Clt. 1774. Pl. pros.

125 V. TEU'CRIUM (Lin. spec. p. 16.) downy; lower leaves ovate-oblong, half stem-clasping, obtuse, coarsely serrated : superior leaves sessile, narrower, serrated; racemes axillary, opposite, on long peduncles; stems ascending, or prostrate. %. H. Native of Italy, Switzerland, Germany, in argillaceous soil. Vahl enum. 1. p. *76.* Schmidt, fl. bohem. p. 16. D. C. fl. fr. 2. p. 390. Lodd. bot. cab. 425.—Lob. icon. 473. Verbnica mondna, Riv. mon. t. *95.* Pall. itin. 2. p. *522.* V. Teucrium, var. intermedia, Led. fl. alt. 1. p. 40. V. latifolia, ft minor Schrad. fl. germ. 1. p. 86. Racemes rather dense. Calyx 4-5-parted, unequal. Corollas blue, larger than those of *V. latifolm.* Capsule compressed, emarginate, nearly glabrous, slightly ciliated, shorter than the unequal calyx. There is in gardens a stiffer variety, with rather broader leaves, and having capsules longer than the calyx. V. florida, of Schmidt, fl. boh. cent. J. p. 23, is probably also a variety of this, but the stems are said to be bifariously pilose, and the leaves equally serrated.

Germander-leaved Speedwell. Fl. May, June. Clt. 1[illegible]. Pl. 1 to \\ foot.

126 V. CHAI'XI (Lapeyr. pyr. abr. suppl. 1. p. *6.)* leaves sessile, wrinkled, elongated, deeply toothed; racemes lateral, calyx 4-parted, unequal. %. H. Native of the Pyrenees, on the Pic de Gerard. V. latifolia, y, dubia, Lapeyr. abr. p. *9.* dubia, Chaix, herb, et fl. fr. no. 2395. Plant smaller than *latifolia.* Leaves narrower, more acute ; calyxes and bractes more elongated. The whole plant pilose. Flowers large, pale blue.

Var. /3, *minor* (Lapeyr. 1. c.) leaves obtuse, somewhat pinnatifid at the base. %. H. Native of the Pyrenees.

Chaix's Speedwell. Fl. June, July. Clt. 1825. Pl. 1 foot.

127 V. LUTETIVNA (Rcem. et Schultes, syst. 1. mant. 1. p. 109,) leaves lanceolate, quite glabrous, a little toothed, obtuse, racemes lateral, very long. *U.* H. Native country unknown. V. nitida, Hort. par. ex Poir. suppl. 5. p. 467, but not of Ehrh. Perhaps only a variety of *V. Teucrium,* having the stem hardly downy, and the leaves deep green and shining? and almost entire. Corollas pale blue. Capsule glabrous, compressed.

Lutetian Speedwell. Pl. 1 foot.

128 V. LATIFOLIA (Lin. spec. p. 18. Ait. hort. kew. eq. 1. p. 24. ed. 2d. vol. 1. p. *33.)* downy; stems erect; leaves subcordate-ovate, sessile, half stem-clasping, bluntly serrated ; racemes axillary, opposite, dense ; calyx 5-parted. %. H. Native of Sweden, Switzerland, and Germany, and of Siberia, #Jj' Vahl, enum.]. p. 76. Schrad. fl. germ. 1. p. *35.* Sweet, *V-* gard. t. 23. Link, enum. 1. p. *25.* V. Teucrium, Poll. pal. no. 13. Hoppe, cent. sic. 1. no. *76,* and of many other authors. V. Teucrium, a, latifolia, Led. fl. atl. 1. p. 40. V. chamaedrys, Patrin, mss. V. pseudo-chamaedrys, Jacq. il. austr. 1* P* 37. t. 60.—Weinm, phyt. t. 1005. a. Flowers dense. Bracteas a little longer than the pedicels. Capsule compressed, emarginate, downy. Corollas blue, with deeper veins. There is » dwarf variety of this, having leaves so deeply serrated, & to be almost jagged. The variations of the five preceding species run so gradually into each other, as hardly to be distinguished ; in *V. latifolia,* however, the leaves are perfectly ovate, and broad in the middle ; in *V. Teucrium* they are ovate-oblong, broad at the base ; and in *V. prostrdta* the leaves are elliptic to nearly linear.

Broad-leaved Speedwell. Fl. May, June. Clt. 1748. F[illegible] 2 feet.

/129 V. HIMALE'NSIS (D. Don, prod. fl. nep. p. 92. Benth. scroph. ind. p. 44.) pubescently hairy, but at length glabrous, leaves sessile, ovate, or ovate-oblong, deeply crenated, hairy while young; racemes opposite, on long peduncles ; calyx unequally 5-parted; capsule ovate, acute, exceeding the calyx. %. H. Native of Nipaul, at Gosainsthan, Wall. V. *f^he* flora, Wall. cat. no. 403. Bracteas lanceolate, longer than the blue. pedicels. Calycine segments ciliated. Flowers azure D Said to be very nearly allied to *V. Teucrium.*

Himalaya Speedwell. Pl. \ to f foot.

130 V. CRINITA (Kit. in Schultes, fl. austr. ed. 2d. *vol.* ^ 26.) erect, downy; leaves nearly sessile, ovate-lanceolate, equally serrated ; racemes axillary, twice as long as the calyx 5-parted, unequal. %. H. Native of *fJ'onesian* hills. Stem tomentose. Lower leaves obtuse: upper variety acute, quite entire at base and apex. Bracteas longer than pedicels. Capsule emarginate, compressed. Fernap of *V. Teucrium,* or *V. latifolia.*

Hairy-fruited Speedwell. Fl. May, July. Clt. 1820. PL \ foot.

141 V. AUSTRI X ACA (Lin. spec. p. 17.) plant weak, trailing, or ascending ; leaves sessile, lanceolate, deeply serrated, and pinnatifid : racemes lateral, elongated ; calyx 4-parted ; bracteas entire, shorter than the pedicels. *If.* H. Native near Vienna, and of Bohemia, also of Spain. Jacq. enum. vind. p. 3. Schultes, fl. austr. ed. 2d. vol. 1. p. 27, exclusive of the syn. of Jacq. Krok. fl. siles. p. 23, exclusive of the syn. of Riv. Schwenkf. and Jacq. Mill. diet. no. 9. Host, syn. p. 9, exclusive of all syn. Link, enum. 1. p. 25. V. polymorpha, Willd. enum. suppl. p. 2. Schweig. enum. hort. regiom. p. *78.* V. laciniata, Mcench.—Bauh. hist. 3. p. 287.—Mor. hist. 2. sect. 3. t. 23. f. 12. V. Austriaca, foliis tenuissime laciniatis, Tourn. inst. p. 144. V. pratensis, var. a. Crantz, austr. p. 344, exclusive of the syn. of Tourn. V. multifida, Schmidt, fl. boh. p. 21, exclusive of the syn. of Lin. and Jacq. Plant downy. Flowers blue.

Austrian Speedwell. Fl. May, June. Clt. 1748. PL 1 foot.

142 V. ORSINIA X NA (Tenore, prod, append. 5. ex Linnaea, 3. p. 97.) stems erectish, villous, with 2 lines of more dense villi; leaves oblong, obtuse, pectinately sub-pinnatifid ; calyx 5-parted, with linear segments ; pedicels capillary, about equal in

length to the bracteas. %. H. Native of Abruzzo, on the mountains. Plant canescent from pubescence. It differs from *V. Austriaca* in the calyx being 5-parted, in the leaves being less cut, and in the whole habit; and from *V. peduncularis* in tlie calyx being 5-parted, in the segments being narrower, in the leaves being oblong, and in the pedicels being shorter.

Orsin's Speedwell. PI. 1 foot.

143 V. CAUCA'SICA -(Bieb. fl. cauc. 1. p. 13. suppl. p. 14.) erectish, nearly glabrous; leaves bipinnatifid ; segments lanceolate and linear; racemes axillary, few-flowered; pedicels capillary ; calyx large, 4-parted, nearly equal. %. H. Native of Caucasus and Iberia. Lodd. bot. cab. 1369. Calyx 4-cleft. Pedicels much longer than the bracteas, pendulous in the fructiferous state. Flowers pale red, or white, variegated by deeper veins. There are varieties of this, having the segments of the leaves narrower and broader. In mem. soc. nat. mosc. 2. p. 180. no. 8. Steven defines a variety of this, or a new species nearly allied, under the name of " *V. ossetica ;* leaves bipinnatifid; bracteas shorter than the pedicels, and are, as well as linear calycine segments, downy."

Caucasian Speedwell. Fl. June, July. Clt. 1816. PI. \ foot.

144 V. TENUIFOLIA (Stev. ex Bieb. cauc. 1. p. 13.) ascending; leaves pinnatifid, with linear, filiform segments; racemes axillary ; calyx unequal. 1/. H. Native of Iberia. Very nearly allied to F. *multifida,* but the stems are more elongated, the leaves less compound ; the pedicels are equal in length to the bracteas, or longer. The 3 superior segments of calyx are small. Perhaps the same as V. parvifldra, Vahl. ? but the flowers are never smaller than those of *V. orientalis, V. mullifda,* &c.

Fine-leaved Speedwell. Fl. May, July. Clt. 1821. PL | foot.

145 V. MULTI'FIDA (Lin. spec. 17.) procumbent, rather *wQody* at the base, canescent ; leaves bipinnatifid, with lanceolate, or linear segments ; racemes axillary. 1/. H. Native of Siberia, on hills ; also of Tauria and Caucasus ; an^J between Smyrna and Bursa. Bieb. fl. cauc. 1. p. 12. Will/J. spec. 1. p. 69. Smith, in Lin. trans. 1. p. 191. Sims, bot. mag. 1679. Calycine segments unequal, subulate. Coro]Jas pale blue. Pedicels equal in length to the bracteas, or sh^ter.

Var. /3, hirsuta; plant more majory, corollas rose-coloured. %. H. Amm. ruth. p. 25>; no> 33.

Mult$d-\eaYed Speed^H. pi. May, June. Clt. 1748. PL procumbent.

SECT. VII. SCUTELLA*TA (from *scutella,* a little saucer ; shape of valves of capsule.) Capsule orbicular, deeply 2-lobed, compressed. Seeds compressed on one side, and convex on the other. Aquatic plants with opposite leaves, and loose, axillary racemes of flowers.

146 V. SCUTELLA'TA (Lin. spec. p. 16.) erectish, creeping, and rooting at the base ; leaves linear-lanceolate, nearly entire ; racemes axillary, alternate, loose ; pedicels pendulous, or spreading ; calyx 4-parted, equal. %. H. Native of Europe, Siberia, and North America, in inundated places, particularly in watery spongy bogs, chiefly on a sandy soil. Vahl, enum. 1. p. 70. Fl. dan. t. 209. and t. 1561. Curt. lond. t. *56.* Smith, engl. bot. t. 782. Poit. et Turp. fl. par. 1. p. 15. f. 13. Riv. mon. irr. *96.* f. 1. Root creeping. Leaves sessile, nearly connate, rarely furnished with a few teeth. Racemes alternate, longer than the leaves ; pedicels longer than the bracteas. Corolla of a pale flesh colour, the smaller segment palest. In the American plant the peduncles are opposite, and shorter than the leaves, and the flowers are nearly sessile.

Var a, glabra; leaves subovate-lanceolate, denticulated, and are, as well as the stem, glabrous. 1/. W. H. Gesn. icon, aen. t. 10. f. *87**

Var.frpilosa (Vahl, 1. c.) plant pilose, or villous ; leavcs linear-lanceolate, sub-denticulated. %. H. V. villdsa, Scnum-fl. saell. 1. p. 7. Serrature glandular.

Var. a, *latifolia* (Rosen, et Weber, hols. no. 13.) leaves ovate-lanceolate. %. H. Lapeyr. pi. pyr. suppl. ined. *(?}* pilose.) V. parmularia, Poit. et Turp. fl. par. t. 14, ex Lois.

Saucer-capsuled Speedwell. Fl. June, Aug. Britain. *u to 2 feet.

147 V. PARMULARIA (Tratt. fl. austr. t. 20.) stem erectish* hairy ; leaves narrow-lanceolate, denticulated, ciliated. ^/. '. H. Native of Austria. Very nearly allied to *V. scutellata^* and differs from it only in the leaves being acute, not acuminated, hardly length of the intemodes, not longer. Bract bluntish. Probably only a slight variety of *V. scutellata.*

Small-shielded Speedwell. Fl. June, Aug. Clt. 1824. 1 to 2 *feet.*

148 V. CAROLINIA^NA (Poir. encycl. 8. p. 520.) g/*h*oU*\ stem erect, dichotomous at top; leaves ovate-oblong, °y nearly entire: lower ones petiolate. %. W. H. Native Carolina, in water. Leaves rather fleshy, 6 lines long a broad. Racemes loose, leafy ; bracteas petiolate, longer t the pedicels. Calycine segments ovate. Capsule obcorda Perhaps this is *V. scutellata* of American authors.

Carolina Speedwell. Fl. June, July. Clt. 1821. PL 2 1 foot.

SECT. VIII. BECABU'NGA (the name *Becabunga* comes the German Bach-pungen ; bach meaning a rivulet; in >o• shire and Norfolk a beck.) Capsule inflated', entire, or emarginate, subdidymous.. Seeds oblong, or globose. Aquatic F

*H0-V. •DJGCJISTJNGA (Lin. spec." p.-if\> glabrous, stems procumbent, rooting at the base ; leaves elliptic, oval oblong, obtuse, on short petioles, crenately serrulated or entire racemes loose, axillary. %. W. H. Native throughout Europe, Siberia, and North America, in ditches and rivulets clear water, and in running streams ; plentiful in Britain. Nipaul, Hamilt., and Kanaour, Royle. Vahl, enum. 1. P» ?. Fl. dan. t. 511. Curt. fl. lond. 2. t. 3. Woodv. t. 7. Sm engl. bot. t. *655.* Svensk, bot. t. 127. V. punctata, D. prod. fl. nep. p. 93.—Bocc. mus. p. 22. t. 6.—Riv. mon. ir 100. f. 1. Stems terete. Leaves running into the short petioles. Bracteas narrow, lanceolate, shorter than the pedice Calyx 4-parted. Corolla blue, veined with red. Capsule tire, or hardly emarginate. The Nipaul plant differs from European, in the bracteas and calyxes being obtuse ; a the capsule being entire. This plant is considered median being included in *Pharmacopoeias.*

Brook-lime Speedwell. Fl. May, July. Britain. PL \ *° 7

150 V. TENUIS (Ledeb. fl. ross. alt. ill. t. 217. fl. alt# 39.) stem erect, strict, and are, as well as the leaves, g leaves oblong-lanceolate, acutish, serrulated ; racemes ax intermediate ones opposite; calyx 4-parted; cap obovate, obtuse, entire. ©. H. Native of the *No* Persia. Leaves opposite, nearly connate. Racemes opposite. Pedicels twice as long as the bracteas minute, globose, not flat on one side, and convex on t as in F. *scutellata.*

Slender Speedwell. PL \ to 1 foot.

151 V. ANAGALLOIDES (Guss. pi. rar. p. *5. t. 3.)* « jebrous; leaves linear-lanceolate, stem-clasping, entire lateral; calyx 4-parted, about equal in length *to* capsules elliptic, obtuse. 0. H. Native of the Calabria, in low marshy places near Catanzarc at bottom. Pedicels longer than the bracteas^ a blue or white. Capsule rather emarginate. feet Very like *V. anagdllis.*

*J*r.* /J; stem downy ; hairs glandular at top.

J?52 V*** Speedwell. PI. \ to i foot.

ANAGA'LLIS (Lin. spec. p. 16.) glabrous, erect, root-acute at the base; leaves oblong-lanceolate or lanceolate, serrated, flat-stemclasping or subconnate ; racemes opposite, (1> 10nger than those of *V. Becabunga.* ©. W. H. and Native of Europe, Siberia, Levant, Virginia, Japan, in rivulets and muddy water also of Nipaul, Silhet, Hindostan Kamaour. Vahl, enum. 1. p. 69. Fl. dan. t. 903. Hil. Smith, engl. bot. t. 721.? 781. St. Roxb fl. 37, t# 6, Svensk> bot. 127. V. undulata, Wall, in sessil' P# *4^' Stem subtetragonal; superior leaves lower s pale blue, or white lined with blue. Calycine lobes roundish, emarginate.

Var. *minor* (Vahl. I.e.) stem and leaves much shorter.

Var. *P,* pusflla, Poir.— Tabern. icon. 1718.

rima (Schmidt, boh. cent. 1. no. 23.) leaves entire; stem erect; racemes terminal and axillary ; raceme solitary ; leaves lanceolate, crenated.

^mpernell-\\ke Speedwell. Fl. July. Britain. PI. 1 to 2

COCHLIDIOSPE'RMA (from *KOX^OQ, kochlos,* a shell; reference to the shape of the Capsule compressed, obcordate. Seeds naviular JLA. leaves alternate, with axillary 1-flowered pedicels. Floral leaves ovate, sessile, oblong or lanceolate, quite entire or serrated. ?*) Parted, exceeding the corolla; capsule 2-ob* longer than the style, and shorter than the calyx. Native of the Himalaya, on Mount Choor, Royle ; in corn fields ; Caucasus, on Mount Schahdagh, Vahl, symb. 1.p. 1. Rchb. icon. 645.—Buxb. cent. 1. t.36. 'p,

Two leaves longer than the peduncles. Corolla blue.

Pi. I *I^"-capsuled Speedwell. Fl. April, May. Clt. 1819.

RESTIS (Lin. spec. p. 18.) stem procumbent, ^mes leaves petiolate> ovate, crenately-serrated ; pedicels on an the capsule, reflexed in the fructiferous state; obcordate: lobes turgid, approximate, obsolete. keefd of Asia Europe, in cultivated fields ; fond. Saharampore. Vahl, enum. 1. p. 80. Curt. fl. cent. 3. Borrer, engl. bot. suppl. 2603. Rchb. icon. P^hella, P *U 227, f_ 44 - St_ HiJ_ Pi- fr_ P- 39- <• 3- V_ and Wright ex D_ c_ fl* fr_ SUPPL 308_ Corollas Pale blue, shorter than the calyx. Seeds about 6 in each cell. Speedwell. FL March, July. Britain. PL procumbent.

POLI'TA (Fries, ex Borrer, in engL bot. supp. under Veronica, segments proximate, « t. 19.) procumbent, hairy; leaves cordate-ovate, deeply serrated, shorter than the peduncles; calycine five ovate, acute; capsule obcordate : lobes turgid, approximate, keeled ; seeds many in each cell. ©. H. Native of Caucasus, Constantinople, and Kaki Tartary. Particularly in the North, in gardens. Rchb. icon. 247, sub *V. agrestis,* Smith, engl. bot. 783. Corolla bright blue, shorter than the calyx.

*** Speedwell. FL March, July. Britain. PL procumbent.

^LIFORMIS (Vahl, enum. 1. p. 82.) stem procumbent, filiform, Uncles, terminal, villous ; leaves roundish-cordate, crenated: petioles cordate, long, reflexed in the fruit-bearing state ; capsule Vot,,^ir^her turgid; calyx 4-cleft, unequal. ©. H. Native of the south of Europe and Caucasus. Bieb. fl. cauc. 1. p. 39. Rchb. icon. t. 644. Ver. orientalis foliis hederae terrestris, flore magno, Tourn. cor. 7.—Buxb. cent. 1. p. 25. t. 40. f. 1. Leaves furnished with scattered pili. Calycine segments lanceolate. Corolla large, pale blue. Stems long, procumbent. Perhaps the same as *V. Buxbaumii*

Filiform-stemmed Speedwell. Fl. May, July. Britain. PI. trailing.

157 V. BUXBAU'MII (Tenore, fl. neap. p. 7. no. 7. t. 1.) procumbent, hairy; leaves ovate-cordate, deeply crenated, petiolate ; peduncles drooping in the fructiferous state, rather longer than the leaves ; corollas larger than the calyx, which is 4-parted ; capsule compressed, 2-lobed : lobes divaricate, keeled. ©. H. Native of Europe, in fields; in England, in Kent. Rchb. icon. t. *268.* V. Tournefortii, Gmel. fl. bad. 1. p. 39. V. hispida, Hort. V. cymbalariaefolia, Schmidt. V. agrestis, var. Byzantina, Smith, fl. grsec. t. 8. V. Persica, Poir. encycl. 8. p. 542.—Buxb. cent. 1. p. 22. t. 40. f. 6. Much larger than *V. agrestis.* Stems much branched, bifariously pilose. Corollas blue.

Buxbaum's Speedwell. Fl. April, June. Clt. 1800. PI. procumbent.

158 V. GLAU'CA (Sibth. et Smith, fl. graec. 1. p. 5. t. 7. prod. 1. p. 9.) procumbent, hairy; leaves cordate, deeply serrated, petiolate : peduncles capillary ; calyx 4-cleft, with toothed segments. ©. H. Native near Athens, on Mount Hamettos. Much branched. Stem bifariously pilose. Leaves glaucous. Corolla blue, bordered with white, larger than the calyx.

(7/tfwc0MS-leaved Speedwell. PI. prostrate.

y(59 V. ARVE'NSIS (Lin. spec. p. 18.) erect, hairy; lower leaves petiolate, cordate-ovate, serrated ; cauline ones crenated ; floral ones lanceolate, sessile, entire, longer than the peduncles ; flowers nearly sessile ; calyx 4-cleft, unequal; capsule obcordate, compressed. 0. H. Native of Europe and North America, in cultivated fields. Vahl, enum. 1. p. 81. Fl. dan. t. 515. Curt. fl. lond. 2. t. 2. Smith, engl. bot. t. 734. Drev. et Heyne, 2. t. 11. V. acinacifolia, Willd. enum. no. 41. V. Romana, Schmidt, fl. boh. no. 45. V. polyanthos, Thuill. par. ed. 2. p. 9. Alyssum, Column, phyt. p. 28. with a good figure. Corolla smaller than the calyx, pale blue.

Corn-field Speedwell. Fl. April, July. Britain. PI. \ to J foot.

160 V. PULCHE'LLA (Bernh. ex Rcem. et Schultes, syst. 1. p. 126.) procumbent, pilose; leaves petiolate, broad-cordate, deeply crenated; peduncles filiform, hardly shorter than the leaves ; calyx 4-cleft, unequal. ©. H. Native country unknown. Habit *of V. Persica,* but smaller and less pilose ; the leaves more oblong and firmer. Corolla shorter than the calyx, white, except the upper segment, which is rose-coloured.

Pretty Speedwell. Fl. April, May. Clt. 1819. PL procumbent.

161 V. CERATOCA'RPA (Meyer, verz. pflanz. p. 106.) puberulous ; stems branched, diffuse; leaves ovate, acutish, serrated; peduncles longer than the leaves; calyx 4-parted, with lanceolate, acute, nearly equal segments ; capsule compressed, broadly obcordate: lobes lanceolate. ©. H. Native of Caucasus, in meadows, between Sallian and Leukoran. Allied to *V. fillformis.*

Horned-capsuled Speedwell. PL diffuse.

•462 V. DI'DYMA (Tenore, prod. fl. neap. p. 6.) procumbent? downy; leaves deeply crenated ; peduncles reflexed in the fructiferous state; capsule didymous, roundish. ©. H. Native of Naples.

Didymous-fruited Speedwell. PL procumbent.

163 V. AMŒNA (Stev. in Bieb. fl. cauc. 1. p. 12.) spreading,

hairy ? leaves ovate, crenated ; floral leaves oblong, quite entire, shorter than the peduncles; calyx 4-cleft, with linear segments. ©. H. Native of Iberia, in fields. Size of *V. arvensis;* but the floral leaves are dissimilar to the cauline ones, minute and quite entire. Corollas large, blue, with a white bottom. This is said to be the prettiest species of the genus.

Pleasant Speedwell. Fl. April, May. Clt. 1824. PI. procumbent.

164 V. ACINACIFOLIA (Lin. spec. p. 19.) erectish, glabrous; lower leaves petiolate, ovate, serrated or crenated: floral ones nearly sessile, about equal in length to the peduncles ; calyx 4-cleft, unequal. ©. H. Native of Germany, France, and Italy, in muddy fields ; and of Chili, about Conception. Vahl, enum. 1. p. 85. Willd. spec. 1. p. *75.* exclusive of *V, prcecox,* V. Romana, All. pedem. t. 85. Poit. et Turp. fl. par. 1. p. 22. t. *33.* f. 3. V. Burdigalensis, Laterr. fl. bord. ed. p. 87.—Bocc. mus. p. 19. t. 102.—Vaill. par. t. *33,* f. 3. Stem drooping at top, usually branched. Leaves sessile, connate, usually glabrous : floral ones smaller and narrower. Corolla pale blue, marked by more obscure veins. Capsule obcordate, rather turgid, compressed.

Acinus-leaved Speedwell. Fl. April, May. Clt. 1788. PI. \ to 1 foot.

165 V. PR/E'COX (Allioni, auct. p. 5. t. 1. f. 1.) the whole plant clothed with glandular and simple hairs; stem erectish ; lower leaves petiolate, cordate-ovate, serrated : floral ones nearly sessile, shorter than the peduncles, which are incurved in the fructiferous state; calyx 4-cleft; capsule obovate, emarginate, turgid. ©. H. Native of France, Germany, and Italy, in fields. Vahl, enum. 1. p. 40. D. C. fl. fr. 2402. Willd. spec. 1- p. 76. under *V, acinacifolia.* V. ocymifdlia, Thuil. fl. par. p. 10. no. 18. V. segetalis, Pers. in Ust. ann. 14. p. *37,* V. acinacifolia, Schleich. cat. p. *53,* V. viscida, Waldst. mss. Stem branched at the base. Leaves purplish beneath. Flowers small, blue. Capsule downy. There is a variety of this species almost glabrous ; and another with more or less deeply cut leaves. Habit of *V. triphylla.*

Early Speedwell. Fl. March, May. Clt. 1775. PI. A foot.

166 V. CYMBALA'RIA (Bertol. soc. med. d em. di gen. 1. p. 74. pi. gen. p. 3. giorn. de litt. 2. p. 2. 1805.) procumbent, glabrous; leaves petiolate, reniformly subcordate, with 5-9, but usually 7 obtuse crenae or teeth, rather fleshy ; peduncles longer than the leaves ; calyx 4-cleft, equal, with ovate obtuse segments, spreading in the fructiferous state; capsule hairy, depressed, obcordate. ©. H. Native about Genoa, on garden walls; Island of Chio; Constantinople; Tunis, in fields. Sibjh. et Smith, fl. grace, t. 9. Viv. fragm. 1. t. 16. f. 1. V. cymbalariaefdlia, Vahl, enum. 1. p. 81. Gmel. tubing, p. 6. V. hedersefolia, /3, Lin. spec. p. 19.—Buxb. cent. 1. p. 25. t. 39. f. 2. bad. Corolla larger than the calyx, with a white limb and greenish-yellow throat. Cells of capsule 2-seeded.

C^&a/arm-leaved Speedwell. Fl. April, May. Clt. 1821. PI. procumbent.

167 V. HEDER^FOUA (Lin. spec. p. 19.) procumbent, downy; leaves petiolate, roundish-cordate, 5-lobed : upper ones 3-lobed; peduncles shorter than the leaves; calyx 4-lobed, tetraquetrous, and conniving in the fructiferous state; calycine segments cordate, acute; capsule obcordate, turgid, few-seeded. ©. H. Native throughout Europe, among rubbish, in gardens and fields; plentiful in Britain. Vahl, enum. 1. p. 82. Smith, engl. bot. t. 784. Curt. fl. lond. 2. t. 1. Poit. et Turp. fl. par. 1. p. *23.* t. 26. Fl. dan. 428. Leaves reniformly cordate, rather fleshy. Corolla pale blue, sometimes white.

Far. /J, *Lappago* (Schmidt, fl. boh. no. 39.) leaves alternate, cordate, acutish, 3-4-lobed, petiolate ; stem erectish, much branched; peduncles axillary, shorter than the petioles. 0, H. Native of Bohemia. Calycine segments hastate. Flowers small, red. This variety remains constant in cultivation.

Ivy-leaved Speedwell. Fl. March, June. Britain, rl. Procumbent.

168 V. 4 P. CHAIVLEDRIFO'LIA (Brign. fasc. pi. forog. p. 9.) stem leafy; leaves nearly sessile, roundish, obtuse, serrated; calyx tomentose, two of the segments shorter than the rest. *U 'f',* Native of Carnia. P. Bonarota, Vittm. suinm. 1. p« 36. &*0,* narota, no. 2. Michel, gen. p. 19. t. 15. f. 2. Leaves downy. Bracteas length of pedicels. Corolla violaceous ; upper lip undivided, and sometimes emarginate.

Germander-leaved Paederota. PI. 2 to 3 inches.

Cult. The species of *Pcederota* are pretty little alpine o rock plants. They should be grown in pots, and placed among other alpine plants. They are increased by division and seeds.

LXX. CALORHA'BDOS (from fcaXoe, *kalos,* beautiful; and *pafiSog, rhabdos,* a twig, in reference to the beauty of the plan.; Benth. scroph. ind. p. 44.

LIN. SYST. *Didndria, Monogynia.* Calyx 5-parted. Corolla (r-tubular, incurved ; limb erect, obliquely 2-3-cleft: lower segment the smallest. Stamens 2, inserted at the sides of upper corolline segment, without any vestiges *of* lower ones anthers 2-celled ; cells parallel, confluent at top. Stigma hardly thickened. Valves of capsule bipartite. Seeds numerous, girded by a curled membrane.

1 C. BRUNONIA'NA (Benth. 1. c.)—Native of Nipaul. Verónica ? Brunoniana, Wall. cat. no. 405. An erect, glabro«s» nearly simple herb, 1 to *2* feet high. Leaves oblong-lanceolate, deeply and acutely serrated, narrowed into the short petioles the base. Spikes half a foot long. Flowers sessile, glomera

Brown's Calorhabdos. P. 1| to 2 feet.

Cult. For culture and propagation see *Leptandra.*

LXXI. WULFE'NIA (so named in honour of the Rev. Francis Xavier Wulfen, author of " Plantaa Rariores Carinthiac in Jacquin's Miscellanea.) Jacq. misc. 2. p. 62. t. 8. & gen. no 34. Smith, in Lin. trans. 6. p. 96. Benth. in scrop • ind. p. 46, but not of Wall. *Q0**

LIN. SYST. *Didndria, Monogynia.* Calyx 4-5-parted. rolla tubular, declinate ; limb 4-5-cleft; segments straign hardly spreading : upper one emarginate, or bifid: lateral entire : lower one entire, or broadly crenated. Stamens placed at the sides of the upper corolline segment, destitu e any vestiges of lower ones. Anthers 2-celled; cells at d confluent at apex. Style simple ; stigma truncate, or thj f and 2-lobed. Valves of capsule septiferous in the middle, at apex.—Almost stemless herbs. Radical leaves p Scapes naked, many-flowered, erect. Flowers unilateral, p dulous, on short pedicels, solitary in the axils of the bracteas.

1 W. AMHERSTIA'NA (Benth. scroph. ind. p. 46.) leaves long, narrowed at the base, doubly and deeply crenated; of corolla straight; segments of the limb all acute. Native of Kamaon, Wall.; Kanaour, Royle. Psederota herstiana, Wall. cat. no. 410. Habit of *W. Carinthiaca.* ers blue.

Lady AmhersVs Wulfenia. PI. lj foot.

2 W. CARINTHI^ACA (Jacq. misc. 2. p. 62. t. 8. f. 1- 1. t. 2.) leaves oblong, narrowed at the base, doubly cren tube of corolla gibbous above the base; segments roundish: lower one crenated. 1^. H. Native of on the alps. Lin. syst. p. 865. Reiner, et Wolffe 1. p. *73. t.* 1. Sweet, fl. gard. vol. 3. icone. Paederota Lam. ill. t. 13. f. 2. Flowers blue.

Carinthian Wulfenia. Fl. July, Aug. Clt. 1817. foot.

3 W. RENIFORMIS (Dougl. mss. ex Benth. scroph. leaves reniform, doubly crenated: tube of corolla segments of the limb roundish: lower one crenatea. Native of North-west America, on mountains near Columbia. Flowers blue. ?

Reniform-leaved Wulfenia. PL 1 foot.

Cult. The species of *Wulfenia* are very showy while in flower, and are well fitted for decorating borders. They grow in many light rich soil, and are readily increased by seeds. A duplicate plant, or two of each kind should be sown in pots, so that they may be placed under shelter with more ease in winter, as they are liable to rot at that season, if they are allowed to remain in the open air.

LXXII. GYMNA'NDRA (from *yvfxvos, gymnos,* naked; and *aner andros*, a male.) Pall. itin. 3. p. 712. t. A. f. 1. Appendix no. 60. Willd. in mag. gess. naturf. freund. berol. 3. p. 396. t. 9. f. 1. Willd. herb. no. 258. Benth. scroph. ind. p. 46.—Lagotis, Gaertn. nov. comm. petrop. 14. p. 533. t. 18. f. 2. Veronica species, Gmel. Bar. Asia species, Lin. fil.

SYST. *Diandria Monogynia.* Calyx spathaceous, cleft or bipartite; segments entire, or toothed. Corolla bilabiate; upper lip entire, emarginate, or bifid; under one sub 2-4-cleft; segments all flat. Stamens 2, placed at the sides of the upper lip, without any vestiges of lower ones. Anthers 2-celled. Ovarium 2-celled. Stigma thickened and capitate. Capsule 2-celled; cells 1-seeded or sub-confluent at apex. Seeds attached to the dissepiment by a little curved, excavated, dry, membranaceous wing.—Erect, glabrous herbs, becoming black on drying. Stems many, simple, rising from the neck. Radical leaves petiolate: cauline ones smaller: the uppermost ones usually scale-formed. Flowers sessile in the axils of the bracteas, crowded into terminal spikes.

1. G. UNAWURE'NSIS (Royle, mss. ex Benth, scroph. ind. p. 47.) radical leaves ovate, rather deeply toothed, rounded, or narrowed at the base; stamens very short at the base of the upper lip of corolla; style equal in length to the stamens; lower one of the corolla is probably always 4-cleft. Said to be an: f... of the coro^a. Native of Kanaour (Kunawur), Royle. more of G. *Gmetini,* Cham, et Schlecht, but the spike is *Kal...* Corollas blue.

£a£«our Gymnandra. PI. 1 foot.

2. G. KASHMERIANA (Royle fill. bot. himal. t. *73.* f. 3.) radical leaves long wavy, coarsely crenated, and quite entire, narrowed at the base; spike short, ovate; corolla incurved at the top, rather exceeding the superior lip; style shorter than the stamens. V. H. Native of Cashmere, Royle. Corolla blue. Cashmere, of corolla usually bifid.

3. G. Gmelini (Gymnandra, Cham, et Schlecht, in Linnsea, 2. p. 561.) radical leaves oblong, obtuse at the base, roundish, or elongately-ovate, rather attenuated at the base, coarsely and unequally crenated; stamens not above half the length of the superior lip; style shorter than the stamens, if. H. Native of Kamtschatka, Bhering's Island, and most of the Aleutian Islands. G. renifolia, Willd. herb. no. 258. G. dentata, Willd. 1. c. p. 394. t. 9. f. 4. herb. no. 260. G. gracilis, Willd. 1. c. p. 394. t. 9. f. 5. G. elong&ta, Willd. 1. c. Gymnandra borealis var. inter Lenam et Oceanum lecta, Pall. itin. 3. p. 712. Plant slender, quite glabrous. Spikes slender. Corolla blue; lower lip 2-3-parted.

Steller's Gymnandra. PL J to 1 foot.

5 G. PALLA'SII (Cham, et Schlecht, 1. c. p. 564.) radical leaves roundish, or elongately ovate, acutish, attenuated at the base, quite entire, or obsoletely crenated; stamens not above half the length of the superior lip; style longer than the stamens, if. H. Native of Davuria, on the tops of the alps; and of arctic Siberia. C. integrifblia, Willd. 1. c. p. 392. t. 9. f. 1. herb. no. *255.* G. Altaica, Willd. 1. c. p. 395. t. 10. f. 7. herb, no. *257.* Gymnandra borealis ex arcto et alpibus Davuriae, Pall. itin. 3. p. 712. t. A. f. 1. Bartsia Gymnandra, Lin. fil. Flowers blue. Lower lip of corolla constantly 2-lobed. All the segments of the corolla are narrow.

Pallas's Gymnandra. PI. \ to 1 foot.

Cult. For culture and propagation see *Wulfenia,* p. 580. Pretty alpine plants.

§ *2. Stamens* 4, *didynamous.*

LXXIII. PICRORHi^ZA (from *irucpog, picros,* bitter; and /oi£a, *rhiza,* a root; in reference to the bitterness of the root.) Royle, ill. bot. himal. t. 71. Benth. scroph. ind. p. 47.

LIN. SYST. *Didynamia, Angiospermia.* Calyx campanulate, about equally 5-cleft. Corolla campanulate, shorter than the calyx, about equally 4-cleft; segments quite entire. Stamens 4, inserted at the throat of the corolla, nearly equal, diverging, much exserted; anthers 2-celled: cells confluent at top. Stigma hardly thickened. Valves of capsule septiferous in the middle, bipartite; dissepiment duplicate. Seeds nearly inclosed in an aril-formed vesiculose membrane.

1 P. KURRO'A (Royle, ill. bot. himal. t. 71.)—Native of Gosainsthan and Kamaon, Wall.; Kidarconta, Royle. Veronica Lindleyana, Wall. cat. no. 404. Herb almost stemless. Radical leaves oblong, narrowed into the petioles at the base, serrately crenated at top, or beset with a few short scattered hairs. Scapes naked, erect. Flowers sessile, densely spicate.

Kurroa Picrorhiza. PL \ foot.

Cult. For culture and propagation see *Wxdfenia^* p. 580.

LXXIV. GEOCHO'RDA (from y*, *ge,* the earth; and *XopSrj, chorde,* a cord; in reference to the whip-like, creeping stems.) Cham, et Schlecht, in Linnaea, 3. p. 11. Herpestis species, Spreng.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted, equal. Corolla funnel-shaped; limb nearly equal, 4-parted. Stamens 4, nearly equal, a little exserted; anthers oblong, 2-celled; cells opposite, fixed by the middle. Capsule oblong, inclosed in the calyx, which is permanent, 2-celled, with a loculicidal dehiscence; dissepiment from the involute margin of the valves; placenta central, stipitate.—Root rather woody. Stems articulated, terete, prostrate, rooting at the joints. Leaves opposite or 3-4 in a whorl, furnished with young branches in the axils, hence the leaves appear fascicled; from obovate to roundish, cuneated, and tapering into the petioles, lobed; lobes crenated, or irregularly and sometimes doubly crenated, quite entire in the cuneated part. Young stems, nodi, petioles, peduncles, and calyxes covered with long, curled, articulated hairs. Pedicels axillary, twin from the 4-leaved nodi, and shorter than the leaves; the rest very variable in length, usually very short, filiform, terete, 1-flowered. Calyx bractless.

Tribe VI.

BUCHNE'RE^E (this tribe contains plants agreeing with Buchnera in the characters given below.) D. Don, in edinb. phil. journ. vol. 19. July 1835. Benth. in Hook, comp. 1. p. 356. Calyx tubular, striated, 5-cleft, or 5-toothed. Corolla salver-shaped ; limb 5-cleft, or unequally 4-cleft, sometimes bilabiate ; segments all flat. Stamens 4, didynamous, ascending, rarely only 2, approximate ; anthers usually 1-lobed from the cells being continuous, with a thick, elevated connective. Stigma undivided. Capsule 2-valved; valves entire, or bifid, rarely fleshy and indehiscent; dissepiment simple. Placenta narrow, columnar, adnate, longitudinally, or at length free. Seeds minute, smooth, or scrobiculate ; testa membranous. Albumen fleshy. Embryo much shorter than the seeds. —Herbs or sub-shrubs mostly native of the Cape. Leaves opposite, or alternate. Flowers terminal, spicately racemose, white or red.

LXXV. STRFGA (so named from the strigose habit of some species.) Lour. coch. p. 22. Benth. in Hook, comp. 1. p. 361. Buchnera species, Lin. and other authors.—Campanulèia, Pet. nov. gen. mad. p. 23.

LIN. SYST. *Didynamia, Angiospermia.* Calyx short, tubular, with 5-15 elevated ribs, and membranous between the ribs, 5-toothed, or semiquinquefid at apex, rarely 4-toothed by abortion ; teeth generally subulately acuminated. Corolla salver-shaped, with a slender tube, which is abruptly incurved in the middle, or above the middle ; limb bilabiate, the upper lip usually shorter, entire, emarginate or bifid : lower lip trifid. Stamens didynamous, inclosed. Capsule straight; valves somewhat coriaceous, entire, dehiscing elastically at maturity, septiferous in the middle.—Scabrous, Asiatic, and African herbs, becoming blackish on drying, sometimes parasitical in the manner of *Orobdnche.* Lower leaves opposite: superior ones alternate, sometimes scale-formed, usually linear, quite entire, rarely few-toothed : floral ones conform to the others, but becoming gradually smaller as they ascend. Flowers axillary, solitary, sessile, disposed in terminal spikes, generally minutely bibracteate. Corolla white, purplish, or red.

* *Leaves scale-formal.*

1 S. OROBANCHIOIDES (Benth, 1. c. p. 361. t. 19.) glabrous, branched ; leaves minute, scale-formed: floral ones lanceolate, shorter than the calyx. %. S. Native of Senegambia, Endlicher; Abyssinia, Brown ; south-east Africa, in the district of Uitenhage, Ecklon; to Delagoa Bay, Forbes ; East Indian Peninsula, Wight, and plains as far as Saharumpur, Royle. Buchnera orobanchioides, R. Br. Endl. in bot. zeit. 1832. 2. p. 388. t. 2. Benth. scroph. ind. p. 40. Buchnera Hydrabadensis, Roth, nov. pi. 292, Buchnera gesnerioides, Willd. spec. 3. p. 338. Orobanche I'ndica, Spreng. syst. 2. p. 816, but not of Roxb. Plant parasitic. Root tuberous. Scales and bracteas lanceolate. Calyx 4-5-cleft. Corollas white, or pale yellow. Stem none, unless the unbranched portion of the scape may be considered as such ; it is covered by scales. The whole plant is covered with short stiff hairs. Flowers sessile, surrounded by *3* bracteas.

Orobanche-like Striga. PI. f foot.

* * *Leaves elongated. Calyx with 5 elevated stripes. Corolla incurved towards the apex.*

2 S. HUMIFUSA (Benth. 1. c. p. 362.) prostrate, scabrous; leaves obovate-oblong, obtuse; spikes short, few-towered. calyx 5-striped ; ? tube of corolla glabrous. %. G. Native of Ara- bia, on the mountains of Hadge, Forsk. Browallia humifusa, Vam, Forsk. pi. a>gypt. arab. p. 12. Buchnera humifusa, Ben- 3. p. 81. The form of the leaves and procumben t stem, Wrich- tham says, will distinguish this from all other spec es, n standing he has not been able to ascertain whether the ca- 5-ribbed or not, from the specimens he has examined 8 imperfect.

Trailing Striga. PI. trailing.

3 S. PARVIFWRA (Benth. 1. c.) small, very * with b linear, quite entire, strict; calyx 5-striped ; coro a do an entire upper lip, which is hardly half the length ot U lip. 1/. G Native of New Holland, on the east c Keppel Bay. Buchnera parvifldra, R. Br. prod. p. £ other but little branched. Flowers smaller than those species.

Small-flowered Striga. PL small.

4 S. A'SPERA (Benth. 1. c.) leaves linear; quite e and are, as well as the branches, covered with cani and ciliated with rigid spreading hairs ; calyx 5-strip glabrous, with an elongated, slender tube, and an upper lip, which is about half the length of the S. Native of Guinea. Euphrasia aspera, 197. Buchnera aspera, Schum. pi. guin. p. 2» from *S. pusilla* in the flowers being twice the size, more regular and greater hispidity of the plant.

Bough Striga. Pf. \ foot.

5 sfcuRViFLO^A (Benth. 1. c.) very scabrous ; linear, quite entire, spreading a little ; calyx corolla pubescent; upper lip retuse, thrice as sno lip, which is tripartite. V. S. Native of New Holla north coast, within the tropic, and of Java, *exBlum.* Buchnera curviflora, R. Br. prod. P-«?*• . first by the S. *euphrasioides* and S. cocanea, and differs from calyx, and from the last by both calyx and corolla.

Curved-flowered Striga. PI. *I* to 1 foot.

6 S. MULTIFLORA (Benth. 1. c.) much branched; leaves long-linear, spreading, a little calyx 5-ribbed; corolla glabrous ; upper lip shorter than the lower one, which is tripartite, of New Holland, of the Islands west of G decumbent the north coast, Cunningham. Distinct in the habit, and in the form of the flowers, which are tne **of *S. coccinea.***

Many-flowered Striga. PI. decumbent.

7 S. DENSIFLO^RA (Benth. 1. c.) humble, rather gia scabrous ; leaves lanceolate-linear, somewhat squam dense, approximate ; calyx ovate, 5-striped ; coro upper lip emarginate, 2 or 3 times shorter than %. S. Native of the Indian Peninsula, Heyne; an of India as far as Saharampur, Royle. Buchnera dens'- Vahl, symb. 3. p. 81. ? Lin. spec. 879. part. Hort flora, Benth. scroph. ind. p. 41. Plant small, rigid, branched, in some respects resembling *S. Thunberg*- smaller; the lobes of the limb shorter and differs from that species in the remarkably spre recurved leaves.

Dense-florvered Striga. PI. \ to \ foot.

8 S. THUNBE'EGII (Benth. 1. c.) hispid, scabrous; simple; leaves lanceolate-linear, erect: floral adpressed, the middle nerve beneath, and margins pid; spike dense; calyx 5-striped; tube recurved and inflated at top ; lips of limb oblong. 1/. G. Native of the Cape of Good district of Uitenhage, and in Caffreland, and Tambf

lon, and Drege, &c. Guinea, in the valley of Friderikoberg, Thunberg. Buchnera Asiatica > ^in. spec. p. 879. partly, Buchnoro ui i.-* folia si bllabiata > Thunb. fl. cap. p. 465. leaves lon ^ -li ^r 5 (A'TA (Benth. 1. c.) nearly glabrous, scabrous; ?rolla gl at DOus. lobes of limb oblong : upper lip emargin^, boi ib P ^e length of the lower one. 'U. S. Native of the Penin iUll es^ T !P a^» and mountains of Ava, Wall.; also in the Lin. spec. Buchnera Asiatica, Benth. scroph. ind. 40. partly. This species evidently comes near the following, but is distinguished by the glabrous corolla. The flowers are said to be bluish.

Glabrous Striga. PL \ to 1 foot.

14 S. EUPHRASIOIDES (Benth. 1. c.) smoothish, scabrous; leaves long-linear, quite entire, and few-toothed; calyx oblong, somewhat 15-striped ; tube of corolla downy. %. G. Native of the East Indies, from the Peninsula to the mountains of the north; and of Java, ex Blum, bijdr. p. 740. Buchnera euphrasioides, Vahl, symb. 3. p. 81. Buchnera angustifolia, D. Don, prod. fl. nep. p. 91. Buchnera Asiatica, Lin. spec. 879, partly. Distinguished from all other species of the present section by the pubescent corolla, and long striated calyx.

Euphrasia-like Striga. PL \ to 1 foot.

15 S. MASURIA (Benth. 1. c.) tall, very scabrous ; leaves quite entire, linear, adpressed, strict; calyx somewhat 15-striped, elongated ; tube of corolla elongated, finely downy; limb ample, *if.*. S. Native of the East Indies, on the mountains of Morang, Hamilt. Prome, Wall. Buchnera Masuria, Hamilt. ex Benth. scroph. ind. p. 41. Flowers twice the size of those of AS. *euphrasioides.*

Masuria Striga. PL 1 to *2* feet.

16 S. FORBESII (Benth. 1. c.) tall, very scabrous, downy ; leaves linear-lanceolate, toothed; calyx deeply cleft, 10-striped, with linear, foliaceous segments; tube of corolla elongated, clothed with fine down, incurved towards the apex. 2/. S. Native of Madagascar and Mosambique, Forbes. Nearly allied to the preceding, but less rigid, and leaves broader ; calyx *7-8* lines long; but the corolla is about the same size ; and in the **var.** *(3.* **nearly as large as in** *Rkamphicdrpa tubijlbra.*

Far. [3, grandijldra (Benth. 1. c.) flowers larger.

Forbes's Striga. PL 1 to *2* feet.

* * * * ***Corolla abruptly incurved at the middle.***

17 S. HERMONTHICA (Benth. 1. c. p. *365.)* rather pilose, scabrous : leaves linear : floral ones lanceolate, ciliated ; calyx 5-striped; tube of corolla smoothish, incurved at the middle: limb ample. %. G. Native of Western Africa ; Upper Egypt, near Silsileh, Jordan; Mosambique, Forbes. Buchnera hermonthica, Delile, fl. aegypt. t. *25.* f. 1. A handsome species, a foot high, with a long spike of large red flowers.

Hermonthic Striga. PL I foot.

Cult. For culture and propagation see *Buchnera,* p. 585.

LXXVI. BUCHNERA (in honour of Jean Godefroy Buchner, who in 1743 gave observations of many plants of Voigtland, in Saxony.) Lin. gen. no. *772.* Schreb. gen. no. 1035. Juss. gen. p. 100. ed. Usteri, p. 112. Gsertn. fruct. t. *55.* Benth. in Hook. comp. 1. p. 364. Peripea, Aubl. **guian.** *2.* **p.** *628. t. 253.*

LIN. SYST. *Didynamia, Angiospermia..* Calyx short, tubular, obscurely 10-nerved, with 5 short teeth at apex. Corolla salver-shaped; with a slender exserted tube, which is straight or a little incurved; limb spreading, nearly equal, 5-cleft; segments oblong or obovate. Stamens didynamous, inclosed. Capsule straight, with rather coriaceous, entire valves, which dehisce elastically at maturity, septiferous in the middle.—African, Asiatic, or American herbs, usually scabrous, becoming black on drying. Lower leaves opposite : upper ones alternate : lower ones the broadest: upper ones narrower, remote, and, for the most part, quite entire: floral ones bractea-formed, usually shorter than the calyx. Flowers solitary, sessile, bibracteate, disposed in a terminal spike.

Spikes loose or dense, but not imbricated. **With the exception** of *the B.juncea,* distinguished by its peculiar habit; *B.hispida* by its long hairs ; and *B. macrdntha* by its flowers ; the other

species contained in this section are aH so much alike, and run into each other by such minute or vague characters, that Mr. Bentham would have been disposed to consider them as only varieties of each other, had he been better acquainted with the American species, or had he been possessed of more numerous specimens.

1 B. JU'NCEA (Cham, et Schlecht, in Linnaea, 2. p. 590.) stem simple, rushy, clothed with 4 rows of adpressed leaves; panicle short, contracted, terminal. *11.* S. Native of tropical Brazil. Leaves inflexed at apex, with scabrous margins.

Rushy Buchnera. PL *2* to *3* feet.

2 B. PALU'STRIS (Spreng. syst. *2.* p. 805.) scabrous, nearly glabrous ; stem slender, a little branched ; leaves narrow-linear, quite entire, or the lower ones are small and obovate; spike loose, few-flowered, with lanceolate-linear bracteas ; tube of corolla about twice as long as the calyx ; fructiferous calyx erect. *V-.* S. Native of Guiana. Peripea palustris, Aubl. guian. 2. p. 628. t. 258. Flowers purplish.

Marsh Buchnera PI. 1 foot.

3 B. ELONGATA (Swartz, fl. ind. occ. 2. p. 1061.) scabrous from strigse; stem nearly simple, leafy at base ; leaves oblong, quite entire: superior ones linear ; spike loose, few-flowered ; tube of corolla about twice the length of the calyx ; fructiferous calyx erect. *%.* S. Native of America, from Carolina on the north, to Rio Grande do Sul on the south ; and the West India Islands.—Plum. icon. 19. t. 17. Erinus Americ&nus, Mill, diet. ? Corolla violaceous, or purplish blue.

Elongated Buchnera. PI. 1 to 2 feet.

4 B. TENE'LLA (R. Br. prod. 437.) scabrous, rather glabrous; stem slender, a little branched; leaves narrow-linear, quite entire ; spikes rather loose ; bracteas ovate-lanceolate, ciliated; corolla small, with a slender tube, which is about twice as long as the calyx; fructiferous calyx hardly incurved. *%.* S. Native of New Holland, on the north coast. Calyx glabrous or downy.

Slender Buchnera. PI.

5 B. LINEA'RIS (R. Br. prod. 437.) scabrous ; leaves oblong : superior ones linear, obtuse, quite entire ; spike loose; lower bracteas linear: superior ones ovate-lanceolate ; calyx downy, hardly incurved ; tube of corolla a little exserted. 1/. S. Native of New Holland, within the tropic, Carpentaria.

Linear-leaved Buchnera. PI.

6 B. PUBE'SCENS (Benth. in Hook. comp. 1. p. *365.)* scabrous ; lower leaves oblong : superior ones linear, all quite entire, obtuse ; spikes many-flowered; bracteas ovate-lanceo>,ate, subciliated ; calyxes downy, a little incurved: fructiferous ones with an oblique mouth ; tube of corolla a little exserted. *%.* G. Native of New Holland, in marshy lands on the Endeavour River, north coast, Cunningham.

Downy Buchnera. PL

7 B. RAMOSI'SSIMA (R. Br. prod. 438.) scabrous, much branched ; rameal leaves quite entire, linear-lanceolate ; spikes elongated, many-flowered ; bracteas ovate-lanceolate, subciliated ; tube of corolla more than one half longer than the calyx, which is incurved in the floriferous state, pilosely hispid at top, straightish in the fructiferous state. l£. S. Native of New Holland, on the east and north coast, within the tropic.

***Much-branched* Buchnera. PL**

8 B. DURA (Benth. L c. p. *366.)* glabrous, or a little hispid at the base ; stem a little branched ; lower leaves obovate : superior ones oblong, quite entire: upper ones linear; spike dense at apex, many-flowered ; bracteas ovate-lanceolate, subciliated • tube of corolla exserted ; capsule equal in height to the calyx/which is straight in the fructiferous state. •. *%* *G* Native of the Cape *of* Good Hope, as in Uitenhage and CafTreland, Ecklon and Drege.

Hard Buchnera. PL

9 B. GLABRVTA (Benth. 1. c.) glabrous, or hardly n the base; stems erect, nearly simple ; lower bracteas superior ones linear or oblong; spikes dense, short, ovate-lanceolate ; tube of corolla exserted ; capsule longer than the straight calyx. %. G. Native ot the Good Hope, near Rondebosch, Ecklon ; Katberg l

Glabrous Buchnera. PL | to 1 foot.

10 B. GRA^CILIS **(R. Br. prod. 437.) stem simple** g lower leaves obovate : superior ones oblong, all entire ; spike loose ; bracteas ciliated, one half short calyx; top of capsule exserted. %. G. Native o Wales, near Port Jackson.

Slender Buchnera. PL

11 B. ASPERATA (R. Br. prod. p. 438.) very leaves lanceolate-oblong, few-toothed : superior ones lanceolate, quite entire ; bracteas lanceolate-ovate, one than the calyx ; fructiferous calyx oblique at top; closed. 1/. S. Native of New Holland, on the norm within the tropic.

Far. /3, angustifblia (Benth. 1. c.) leaves narrower. Native of Goulburn Island, Cunningham.

Var. y, *tomentosa;* plant rather tomentose ; lower leaves obtuse, coarsely toothed : superior ones linear, quite entire ; stem much branched.—Native *of* Java, inundated places. Buchnera tomentosa, Blum, bijdr. *y>*

Rough Buchnera. PL I to *2* feet.

12 B. URTICEFOLIA (R. Br. prod. 437.) scabrous or pubescent; lower leaves approximate, oblong, obtuse, coarsely toothed, as well as the middle ones, which are lanceolate and distant; spike loose ; bracteas lanceolate, ciliated, one half shorter than the calyx; tube of corolla about twice as long as the calyx; top of capsule exserted. 1f. S. Native of New Holland, east coast, about Port Curtis, within the tropic.

Nettle-leaved Buchnera. FL July, Aug. Wt. to *2* feet.

13 B. HI'SPIDA (Hamilt. ex D. Don, prod. fl. *Nepalensis*, p. 91-) hispid from long hairs, nearly simple, leafy at the base; leaves oblong, toothed a little : superior ones linear ; spikes few-flowered ; tube of corolla hardly exserted. Hamilt., Gambia, ex herb. Hook.; mountains of the East inu Royle, &c. PI. 1 foot.

Hispid Buchnera. FL July, Oct. Clt. 1818. ri.

14 B. AMERICANA (Lin. spec. 879.) pilosely scabrous, or at length glabrous ; stem nearly simple, base; leaves oblong or lanceolate, a little ones linear ; spike rather loose ; tube of corolla about length of the calyx ; fructiferous calyx straight. U-i tive of North America ; Southern States, to St. Domingo; Mexico and Panama. Plant very variable.

American Buchnera. FL June, Aug. Clt

15 B. MACRANTHA (Benth. 1. c. p. *S66.)* K brous ; leaves lanceolate, subdentate, remote; the calyx, loose; tube of corolla hairy, *5* times longer than *Jmericana.* 0. S. Native of Sierra Leone. inch long; Calyx covered with clammy hairs. Corolla about an lobes of the limb large and broad.

Long^flowered Buchnera. PL 1 to 1 i foot.

16 &WLLA (H. B. et Kunth nov. gc«u ame leaves hispidly scabrous ; stem nearly simple, and nearly opposite: lower ones obovatcob ong. *Jlx* shorter linear, JJL entire, than the tube of the corolla, H. "Native of New Granada. Flowers

Least Buchnera. PL 1 to 4 inches.

17 B. ADGU'TA (Juss. in nov. ann. du. mus. 3. p. 374.) hispidly scabrous; stem branched, terete; radical leaves lanceolate-oblong, obtuse, subserrate; cauline ones subdecurrent: rameal ones linear, entire, sessile, alternate and nearly opposite; spikes solitary, terminal, bracteate; calyx equalling the tube of the corolla, cut into 5 acute, one half shorter than the cylindrical, Commu ? calyx. O. H. Native of the island of Timor. Corolla glabrous, bluish-purple. Said to be nearly allied to *B. tomentosa*, Blume.

Sharp Buchnera. PI. 2 to 3 feet.?

18 B. ASPERA (Hamilt. ex D. Don, prod. fl. nep. p. 91. B. et Kunth, l. c.) hispidly scabrous, stem branched, subtetragonal; leaves nearly opposite, linear, entire, subserrate; spikes solitary, distich; calyx equalling the tube of the corolla. O. S. Native near Santa Fe de Bogota. Corolla blue.

Rough-stemmed Buchnera. PI. 2 to 3 feet.

19 B. TENUIFOLIA (H. B. et Kunth, l. c. p. 340.) smoothish; stem branched, terete, rather scabrous; lower leaves opposite, linear, elongated, quite entire, 3-nerved, rough from callosities; cauline ones alternate; calyx shorter than the tube of the corolla. Leaves 4 lines long, narrowly linear along with the preceding. Corolla blue. *Inner* lobes 3 inches long.

Thin-leaved Buchnera. PI. 2 to 3 feet.

20 B. HISPIDULA (H. B. et Kunth, l. c. p. 340.) hispidly scabrous; stem simple, terete, rather scabrous; lower leaves opposite, linear, 3-nerved; upper ones alternate, nearly opposite, linear, almost quite entire, rolled back and downy; spikes solitary; calyx 3 times shorter than the corolla, equal in length to the capsule. ©. S. Native on the dry plains of the river Magdalena, near Melgar and Picala; also on the plains of Santa Fe de Bogota. Corolla blue or violaceous.

Hispid Buchnera. PL 1J foot.

21 *mum-leaved* Buchnera. PL 1J foot.

21 B. PULCHELLA (H. B. et Kunth, l. c. p. 341.) hispidly scabrous; stem simple, lanceolate, terete, trigonal; lower leaves 3 in a whorl, linear, remotely serrated towards the apex, 3-nerved; spike solitary, terminal. Native of Mexico. Tube of corolla exceeding the calyx a little. ©. S. With the Preceding. Corolla violaceous.

22 B. STERNA'TA (H. B. et Kunth, l. c. p. 342.) hispidly scabrous; stem tetragonal; branched at the base; branches twiggy, somewhat nerved; leaves opposite, lanceolate-linear, quite entire, 3-nerved; spikes solitary, terminal; calyx one half shorter than the tube of the corolla. Native of Mexico, about Panicled; calyx one half as long as the capsule. *%.* Near Real del Monte and Tasco, at the altitude of 6 hexapods. New Andalusia, on the mountains of Cocuy. Meriquiri, at the altitude of 540 hexapods. Corolla violet.

23 B. HISPIDA (H. B. et Kunth, l. c.) hispidly scabrous; stems somewhat diffuse, simple, nearly terete; lower leaves opposite, lanceolate, hirsute; upper ones alternate, linear, simple, numerous; spikes crowded, terminal, at length elongated. Native of Caracas, at the altitude of 430 hexapods. Corolla rose-coloured.

Rose.

24 B. CHAMISSONIS (H. B. et Kunth, l. c. p. 340.) hispidly scabrous; stem simple, terete; radical leaves lanceolate, narrowed at the base, remotely toothed towards the apex; cauline ones solitary, linear, entire; calyx shorter than the tube of the corolla and blue. Native of New Andalusia. Leaves 3-nerved.

Long-fruited Buchnera. PL 2 feet.

25 B. AMETHYSTINA (Cham, et Schlecht, in Linnaea, 2. p. 588.) hispidly scabrous; stem simple, leafy at bottom: spike loose, many-flowered; outer bractea ovate, acute; teeth of calyx short, nearly equal. Native of tropical Brazil, Sello. Bracteas lanceolate, acute: lateral ones lanceolate. Stem nearly naked at top, leafy at bottom. Corollas blue.

Amethyst-flowered Buchnera. PL J to Hfoot.

26 B. LOBELIOIDES (Cham, et Schlecht, 1. c. p. 589.) hispidly scabrous; stem simple, leafy at bottom; spike loose, many-flowered; outer bractea lanceolate, very acute; teeth of calyx unequal: the two front ones the largest. %. H. Native of tropical Brazil, Sello. Upper part of stem naked. Leaves in some specimens toothed, and in others quite entire.

Lobelia-like Buchnera. PI. f to»l| foot.

27 B. LAVANDULA'CEA (Cham, et Schlecht, 1. c.) stem simple, leafy at bottom; leaves quite entire, somewhat plicately nerved; spike dense-flowered. %. H. Native of tropical Brazil, Sello.

Lavender-\ea.Ye& Buchnera. PI. 1 to 3 feet.

* * *Spike dense, imbricate, tetragonal.*

28 B. STRI'CTA (Benth. in Hook. comp. p. *367.)* smoothish; leaves linear, erect, strict; spike tetragonal, imbricated, nearly glabrous; bracteas ovate-lanceolate, acute, naked, about equal in length to the calyx. 1/. G. Native of China, Lord Mulgrave, in herb. Banks. This species has not the large lower leaves of the 3 following; the stem is simple, ex Benth.

Strict Buchnera. PI. f foot.

29 B. CRUCIATA (Hamilt. ex D. Don, prod. fl. nep. p. 91.) downy; radical leaves obovate: lower cauline ones oblong: superior cauline ones linear; spike tetragonal, imbricated, downy; bracteas ovate, ciliated, shorter than the calyx. %, G. Native of the mountains of Nipaul and Prome, Wall. Stem and leaves of *B. hispida.* Calyx nearly cylindrical. Spike about an inch long. Radical leaves toothed: cauline ones entire.

Cruciate Buchnera. PL \ to f foot.

30 B. TETRA'STICHA (Wall, ex Benth. scroph. ind. p. 41.) pubescent or smoothish, tall; leaves oblong or lanceolate, obtuse, quite entire; spike tetragonal, imbricated; bracteas broad-ovate, about equal in length to the calyx. %. S. Native of Burma, at Moalmyne, on the banks of the Salian, Wall. Calyx much depressed. Leaves numerous. Spikes *2* inches long.

Four-rowed-spiked Buchnera. PL 2 feet.

31 B. TETRAGONA (R. Br. prod. p. 437.) glabrous, tall; leaves oblong or lanceolate, few-toothed; spike tetragonal, imbricate, glabrous; bracteas broad-ovate, exceeding the calyx. %. G. Native of New Holland, on the north coast, within the tropic, R. Br.; Goulburn Island, Cunningh. This differs from *B. tetrdsticha* besides its smoothness, in the spike being much less densely imbricate, and the leaves more distant on the stem, ex Benth.

"Tetragonal-spiked Buchnera. PL 1 to *2 feet.*

Cult. All the species grow freely in any light rich soil, and are readily increased by cuttings and seeds.

LXXVII. RHAMPHICA'RPA (from *pafi<f>og, rhamphos,* a beak; and *Kaprrog, carpos,* a fruit; in reference to the mucronate or beaked capsule.) Benth. in Hook. comp. 1. p. *368.* Buchnera species, Wall.—Gerardia species, Lin. suppl. 279.

LIN. SYST. *Didynamia, Angiospermia.* Calyx campanulate, 5-cleft. Corolla with a long, exserted, slender tube; limb spreading, 5-parted; segments obovate, nearly equal. Stamens didynamous, inclosed. Capsule obliquely mucronate or beaked; valves coriaceous, entire.—Erect, branched, glabrous herbs, becoming black on drying. Lower leaves opposite: superior ones alternate, narrow, entire, or pinnate. Flowers on short pedicels, racemose, usually bractless.

1 R. LONGIFLORA (Benth. 1. c.) leaves pinnate, narrow, linear; tube of corolla straight, much longer than the limb; beak of capsule a little recurved. 0. S. Native of Senegal, in the Isle of St. Louis; Indian Peninsula, Jacquemont. Buchnera longiflora, Wight, mss. A small, erect, branching annual.

Segments of leaves few and distant. Peduncles usually shorter than the calyx, and naked, sometimes longer, with a pair of bracteas. Corolla white, drying bluish ; tube 1 \ inch long ; lobes of limb short, broad, truncate or emarginate.

Long-flowered Rhamphicarpa. PI. \ foot ?

2 R. TUBULOSA (Benth. 1. c.) leaves lanceolate-linear, entire; limb of corolla a little shorter than the tube, which is a little incurved ; capsule truncate, with a short beak. ©.? G. Native of the Cape of Good Hope, in the eastern portion of the Uitenhage district, Ecklon, Drege, &c. Plant glabrous, erect, a little branched. Peduncles rather longer than the calyx. Corolla white, drying bluish ; tube an inch long, slightly curved about the middle ; lobes of limb obovate, entire, ex Benth.

Tubular-flowered Rhamphicarpa. PI. 1 foot.

3 R. CURVIFLORA (Benth. 1. c.) leaves lanceolate-linear, entire ; limb of corolla rather shorter than the tube, which is incurved ; capsule acinaciform. ©. ? S. Native of Madagascar and Mosambique, Forbes. Habit of *R. tubulosa.* Leaves narrower. Divisions of the calyx longer; tube of corolla more curved, with a larger limb. Capsule very oblique.

Curved-flowered Rhamphicarpa. PI. 1 foot. ?

Cult. For culture and propagation see *Polycarena,* p. 588.

LXXVIII. CY'CNIUM (probably from *KVKVOQ, cycnos,* a swan ; but the application is not evident.) E. Meyer, mss. ex Benth. in Hook. comp. I. p. *368.*

LIN. SYST. *Didyndmia, Angiospermia.* Calyx bibracteate at the base, long-tubular, 5-cleft at apex. Corolla with a cylindrical, straight tube, and a deeply 5-cleft spreading limb ; segments ovate, entire. Stamens didynamous, inclosed. Capsule fleshy, indehiscent. ?—Rigid scabrous herbs, natives of South Africa, becoming blackish on drying. Leaves opposite, or the superior ones are alternate, coarsely toothed. Flowers axillary, or racemose.

1 C. ADDONE'NSE (E. Meyer, mss. ex Benth. 1. c.) stem procumbent ; leaves ovate, or oblong ; flowers sessile, axillary; tube of corolla more than twice as long as the calyx. ©. ? G. Native of the Cape of Good Hope, in the Addo country, in the Uitenhage district, Drege and Ecklon. The whole plant covered with stiff short hairs. Leaves sessile, cuneated at the base. Calyx more than an inch long, opening at the base as the capsule swells ; divisions foliaceous. Corolla white, tube %\ inches long ; limb flat, 1 \ inch in diameter. Capsule oval, half an inch long, ex Bentham.

Addo Cycnium. PI. 1 foot. *?*

2 C. RACEMOSUM (Benth. 1. c.) stem erect; leaves lanceolate; flowers pedicellate, racemose; tube of corolla hardly equal in length to the calyx. ©. ? G. Native of the Cape of Good Ho\\e> ueax Siloh, on the Kl\p\>l&at i'vra, on tht easton s\de o? the Witsenberg, in Tambukiland. Habit resembling *Meldsma scabra,* or *Rhamphicarpa tubulosa.* Stem nearly simple, scabrous. Leaves lj to *2* inches long, with a few teeth, contracted at the base, nearly all alternate. Pedicels short. Bracteas linear. Tube of calyx 9-10 inches long, striated ; lobes lanceolate-subulate. Limb of corolla 1| inch in diameter, ex Benth.

Racemose-flowered Cycnium. PI. 1 foot.

Cult. For culture and propagation see *Polycarena,* p. *588.*

LXXIX. NYCTERI'NIA (from *vvKTepivog, nycterinos,* of, or belonging to the night; the flowers expand, and are very fragrant in the evening.) D. Don, in Sweet, fl. gard. n. s. vol. *3, u 239** Benth. in Hook, comp. 1. p. 369.—Erinus species of Lin. and other authors.

LIN SYST. *Didyndmia, Angiospermia.* Calyx ovate-tubular, shortly 5-toothed, bilabiate, or bipartite. Corolla permanent; tube Lngated, at length cleft at the base; throat equal, often hispid; limb spreading, almost equally 5-parted ; segments bifid, or entire. Stamens didynamous : superior ones inserted in the tube, with oblong, erect anthers : lower ones inserted on the throat, with smaller, transverse, usually sterile anthers : are sometimes altogether abortive. Capsule coriaceous, or membranous ; valves bifid at apex.—Herbs or under shrubs natives of South Africa, more or less clammy, and often becoming blackish on drying. Lower leaves opposite : upper ones alternate, usually few-toothed : floral ones often smaller : flowers adpressed to the calyx, or sometimes adnate to it. sessile, interruptedly or densely spicate.

§ 1. *Segments of corolla bifid; tube clothed with fine dotvn. Leaves oblong, linear, or lanceolate.*

1 N. CORIACEA (Benth. 1. c.) suffruticose; floral leaves broad-lanceolate, obtuse, toothed, thick, coriaceous, about twice as long as the calyx, which is coriaceous and villous; spike elongated. \?. G. Native on mountains about Cape Town. In habit it comes near to *N. divaricata,* but much larger and more rigid, and has the flowers of *N. spathacea.* Capsule larger than in any other species, and almost woody.

Coriaceous~ca\yxed Nycterinia. Shrub \ to 1 foot.

2 N. SPATHACEA (Benth. 1. c.) suffruticose, erect; leaves obovate, or oblong-spatulate : lower ones 3-nerved : floral ones clasping, broad-lanceolate, or oblong, obtuse, almost quite entire, 1-nerved, all coriaceous, pubescent on the margins and nerves, the rest glabrous ; spike elongated ; calyx elongated, a little shorter than the floral leaves. J? . G. Native of the Cape of Hope, in Tambukiland, near Siloh, east of the Winterberg, on the Katriviersberg, Ecklon. At the top *of* the Drege. Floral leaves spathe-formed, near an inch long, apparently coloured. Spike much lengthened after flowering. Tube of corolla \\ inch long.

Spathaceous-leawed Nycterinia. Shrub 1 foot.

3 N. MARITIMA (Benth. 1. c.) suffruticose, erect, near glabrous ; leaves lanceolate, or oblong, obtuse, almost quite entire, *floral* ones broad-lanceolate, exceeding the calyxes and rather coriaceous, glabrous ; spike elongated, dense, many flowered. T? . G. Native of the Cape of Good Hope, in the Uitenhage district; and on the sea-coast near the Zeeko and Thunberg ; near Kachu, Drege. Erinus maritimus, Lm. *281.* syst. 571. Thunb. fl. cap. 474. Flowers colour of *N. lychnidea.* This species comes near *N. spathacea,* but taller. Perhaps a variety of *N. lychnidea.*

Sea-side Nycterinia. Shrub J to 1 foot.

4 N. LYCHNI'DEA (D. Don, in Sweet, fl. gard. n. ?'vo. leaves *239.)* suffruticose : branches clothed with adpressed, smooth, oblong-linear, few-toothed, and quite entire, 1-nerved; owes ... -pg, ... tuse, few-toothed, and quite entire, having the nerves ciliated ; spike elongated ; calyxes shorter than the floral leaves. \. G. Native of the Cape of Good Hope, eetl the along the sea-coast; in the Amaponda country? f chnW river Uintenda and Umzimcoolu, Drege. Erinus V_ ^O^ Lin. suppl. 287. Ker. bot. reg. 748. Sims, A>ot. «» oothed« Leaves more or less fleshy, the larger ones j a1^^ Corolla yellowish, white inside, but purplish outside. S^rU^ ^

Lychnidea Nycterinia. Fl. May, July. Clt\ \7^b, to 1 foot. (,ard; stffljj

5 N. CAPE'NSIS (Benth. I.e. p. 370.) herbaceous, sUperi erect, adpressedly villous; lower leaves lanccolate ones or all linear, few-toothed, or quite entire,), gins and nerves usually ciliated : floral leaves quite entire, hardly exceeding the calyxes; spikes G. Native of the Cape of Good Hope, on hills to Fort Beaufort, in the neutral territory, Eckloi

&c.; also northward, in Namaqualand and New Hantam, Drège.

Erinus Capensis, Lin. mant. *252.* Erinus ^Ethiopicus, Thunb. fl. cap. 478. This apparently very common species, distinct from *N. lychnidea* by its herbaceous, probably annual and few-flowered stem and smaller leaves. Spikes usually short, durable, occasionally the central one acquires a considerable length. Corolla slender, hardly an inch and a quarter long, ex Benth.

Var. a, hirsuta (Benth. 1. c.) branches more villous; leaves hairy on both surfaces. O. ? G.

Var. β, [illegible] (Benth. 1. c.) leaves smoothish. ©. ? H.

Var. γ, [illegible] (Benth. 1. c.) leaves smaller, more numerous; spike few-flowered.

Var. δ, [illegible] (Benth. 1. c.) leaves narrow-linear, and more glabrous.

Cape Nycterinia. PL \ to 1 foot.

N. [illegible] (Benth. l. c.) herbaceous; stem adpressedly pilose; leaves [illegible] toothed: floral ones lanceolate, near, pinnatifidly toothed: floral ones lanceolate, clothed with rather clammy down; spike short, in the mountains of the Cape of Good Hope, in the Kamiesbergen, Cape Pensis, Cranwilliam district, Drège. This differs from *N.* [illegible] their narrow, deeply toothed leaves, and from *N. dentata* by long[illegible]ness, from both by the corolla being 18-20 lines long.

[illegible]flowered Nycterinia. PL \ to 1 foot.

[illegible] (Benth. l. c.) herbaceous, erect; stem adpressedly pilose; leaves [illegible] oblong-lanceolate, or elliptic, narrowed [illegible] coarsely toothed, or half pinnatifid, clothed with clammy [illegible] lanceolate, [illegible] as well as the floral ones, which are broader, short, dense, ? ? G. Native on the mountains near Paarl, Ecklon and Drège. Habit of *N. Capensis*, but is distinguished from it by its broad, deeply toothed [illegible] often narrowed into the petioles at the base.

[illegible] (Benth. l. c.) Plant more humble. V. ? G. Native on [illegible] warteberg, Ecklon; and Nieuweveld mountains, Drège.

Red-leaved Nycterinia. PI. | to 1 foot. ?

[illegible] (Benth. 1. c.) suffruticose, ? divaricate, or procumbent, villous with clammy villi; leaves ovate, coarsely toothed, Which are oblong, on both surfaces, as well as the floral ones; spike short. ^ • G. Native of Caffreland, at Witbergen. Leaves very blunt, narrowed at the base. Spike apparently interrupted. Corolla \\ inch long.

Scale-leaved Nycterinia. Shrub procumbent.

[illegible] (Benth. l. c.) humble, much branched; leaves linear, 8-linear, ? (Benth. l. c.) humble, much branched; leaves linear or thrice deeply and remotely toothed: floral ones similar, but smaller; flowers axillary, hardly spicate; tube of corolla hardly longer than the corolla, somewhat dilated at the throat; lobes ovate, coriaceous.—Native of the Cape of Good Hope, in the Nieuweveld or Kowp, Drège. A remarkable species, somewhat the appearance of *Castilleja fissifolia*, scarcely [illegible] inches high, ex Benth.

Dwarf Nycterinia. Shrub i foot.

§ 2. *Segments of corolla bifid; tube glabrous. Leaves spatulate.*

10 N. [illegible] (Benth. l. c.) humble, branched at the base of leaves spatulate: floral ones dilated at the base; throat of corolla crowned by rigid hairs; lower stamens abortive. ©. Native of the Cape of Good Hope, on the sandy plains on the west coast [illegible] Cape flats northward, Ecklon. Erinus [illegible] Thunb. fl. cap. p. 475. Erinus Africanus, Herb, [illegible] not of Lin. A low annual, generally *3-5* inches high, usually covered with spreading, clammy hairs, and leaves obovate: upper ones oblong, or linear-spatulate, entire, or with a very few teeth: floral ones adhering at the base to the calyx, spreading at top. Flowers rather distinct, especially at the base of the spike. Calyx and capsules membranous. Corolla 9-11 lines long, ex Benth.

Var. a, *villbsa* (Benth. 1. c.) villous.

Var. ft, glabra (Benth. 1. c.) glabrous. ©. G. On the Olifants and Zwartdoorn rivers, Drège.

Var. B, parviflora (Benth. 1. c.) corolla scarcely 5 lines long, concealed under the floral leaves. ©. G. Native of the Cape of Good Hope, but the locality is not mentioned.

Selago-like Nycterinia. PI. \ to 1 foot.

U N. AFRICA'NA (D. Don, in Sweet, fl. gard. n. s. vol. *3.* p. *239.)* humble, branched at the base; leaves opposite: floral ones oblong-spatulate; throat of corolla scarcely pilose; stamens 4, all antheriferous. ©.? G. Native of the Cape of Good Hope, in the Carro and Carroid districts; Hexriver; Winterbergen and Sneeuwebergen, Ecklon, Drège; Hermanns Kraal, in Albany, Ecklon. Erinus Africanus, Lin. spec. *S78.* Thunb. fl. cap. 474.—Burm. afr. p. 139. t. 50. f. 1. Habit of *N. selaginoides.* Leaves rather more collected at the base of the stem. Spike more dense, with the floral leaves more prominent, and readily distinguished by the % lower anthers slightly projecting from the mouth of the tube.

African Nycterinia. PI. \ to 1 foot.

§ *3. Segments of the limb of the corolla entire; tube glabrous.*

12 N. DIVARICA'TA (Benth. 1. c.) humble, stiff, branched at the base, pubescently hairy; lower leaves on long petioles, obovate: upper floral leaves lanceolate, toothed; spikes elongated. I? . ? G. Native of the Cape of Good Hope, on sandy hills and plains near Cape Town. Manulea divaricata, Thunb. fl. cap. 468. A common plant in collections, drying black. Corolla slender, about 10 lines long. Capsule rather coriaceous.

Divaricate Nycterinia. PI. dwarf.

13 N. PEDUNCULA'RIS (Benth. 1. c.) humble, leafy at the base, branched; lower leaves petiolate, ovate: cauline leaves few, lanceolate, a little toothed; spikes on long peduncles, head formed, few-flowered.—Native of the Cape of Good Hope; Theopolis, in Albany, Ecklon. Leaves almost all collected at the base *of* the stem, which is scape-formed. Branches 4-6 inches long. Flowers like those of *N. divaricata.* Capsule somewhat coriaceous.

Var. a, *hirsuta* (Benth. 1. c.) plant hairy.

Var. /3, glabriuscula (Benth. 1. c.) plant nearly glabrous. Native at Haazenkraalsrivier, Drège.

Peduncled Nycterinia. PI. dwarf.

14 N. PUSI'LLA (Benth. 1. c.) erect, nearly simple; leaves almost all radical, petiolate, broadly ovate: floral ones oblong-linear, or spatulate; flowers few, distant, or rather approximate. —Native of the Cape of Good Hope, between Hoi river and Micrencasteel, in the North Cianwilliam district. More slender than *N. peduncular is,* and the branches are not scape-formed. Buchnera divaricata, Lin. soc. herb. ?

Small Nycterinia. PI. \\ to \\ foot. ?

15 N. [illegible] (Benth. l. c.) stem erect, branched, leafy; leaves oblong-linear, obtuse, almost quite entire; spikes interrupted at the base, dense at apex.—Native of the Cape *of Good* Hope; Haazenkraalsrivier, Drège. Erinus villosus," Thunb. fl. cap. 474. ? Taller than the three last, and scarcely blackens on drying. Capsule almost membranous. Stamens all antheriferous and inclosed, as in the three last species, ex Benth.

Villous Nycterinia. PI. \ to \ *foot.* ?

Cult. All the species of *Nycterinia* are worth cultivating for the sake of the beauty and sweet scent *of* their flowers. They grow well in a mixture of peat and sand, or vegetable mould;

and cuttings will strike root readily in the same kind of earth under a hand glass ; or they may be increased by seeds.

LXXX. POLYCARE'NA (from *ttoxvq, polys,* many ; and *Kaprjvoy, karenon,* a head, in reference to the heads of flowers.) Benth. in Hook. comp. 1. p. 371. Buchnera and Manulea species, Lin. and Thunb.

LIN. SYST. *Didynamia, Angiospermia.* Calyx membranous, bilabiate, bipartite in the fructiferous state. Corolla permanent; tube at length cleft; throat broader; limb spreading, nearly equally 5-cleft. Stamens didynamous, inserted towards the top of the tube ; anthers all similar, exserted. Capsule membranous.—Small annual herbs, natives of South Africa, usually much branched, more or less clammy, hardly becoming blackish on drying. Spikes terminal, usually capitate in the floriferous state, but generally elongated in the fructiferous state. Flowers almost sessile. Floral leaves adnate to the very short pedicels.

* *Tube of corolla 2 or 3 times longer than the calyx.*

1 P. CAPE'NSIS (Benth. 1. c.) clothed with clammy down; leaves linear, or oblong, entire, and few-toothed ; spikes rather loose, numerous, corymbosely panicled ; tube of corolla *3* times as long as the calyx. O. G. Native of Cape District, Ecklon, Drege, &c. Buchnera Capensis, Lin. mant. 88. Manulea Capensis, Thunb. fl. cap. 467. Flowers yellow. Tube of corolla J an inch long ; limb larger than in any of the other species. Generally all 4 anthers are exserted.

Cape Polycarena. PI. \ foot.

2 P. GILIOIDES (Benth. 1. c. p. *372.)* clothed with clammy pubescence ; leaves linear, a little toothed : floral ones about equal in length to the calyxes ; spikes downy, few-flowered ; tube of corolla twice as long as the calyx. ©. G. Native of the Cape of Good Hope, in sands near Paarl, Drege. Habit of *Gilia laciniata,* more slender than *P. Capensis,* with the flowers hardly half the size, Benth.

Gilia-like Polycarena. PI. \ to \ foot.

* * *Tube of corolla rather shorter than the calyx.*

3 P. AU'REA (Benth. 1. c.) clothed with clammy pubescence; leaves linear, quite entire, or a little toothed: floral ones linear-lanceolate, about equal in length to the calyxes ; spikes short, dense, pubescent; limb of corolla longer than its tube. ©. G. Native of the Cape of Good Hope. Buchnera aurea, Herb. Banks, mss. Manulea iEthidpica, Thunb. fl. cap. 467,? exclusive of the syn. of Lin. Flowers golden yellow, above twice the size of those of P. *pubescens,* by which it differs from that species, as well as in its narrow, erect leaves.

Golden-howered Polycarena. PI. \ foot.

4 P. PUBE'SCENS (Benth. 1. c.) erect, small, clothed with clammy pubescence ; lower leaves subovate : superior ones oblong, or linear, quite entire, and toothed : floral ones ovate, or lanceolate, about equal in length to the flowers ; bracteas and capsules downy ; limb of corolla about equal in length to its tube. ©. G. Native of the Cape of Good Hope, at Rodesand, Haazenkraalsrivier, and Zilverfontein, in Namaqualand. Varies m the leaves being entire and toothed. Spikes short, and dense.

Downy Polycarena. PL \ foot. ?

5 P. CAPILLA'RIS (Benth. 1. c.) smoothish ; lower leaves obovate, or oblong : rameal ones linear : floral ones linear, obtuse, equalling the calyxes in length, and capsules, glabrous ; fructiferous spikes loose. ©. G. Native *of* the Cape Flats and Zwarteland. Manulea capillaris, Lin. syst. *569.* suppl. *285.* Thunb. fl. cap. p. 468. Branches slightly pubescent. Calyx about a line long. Flowers small, yellow.

Capillary Polycarena. PI. \ foot.

6 P. RARIFLORA (Benth. 1. c.) clothed with fine pubescence; leaves narrow-linear, almost quite entire, or the lower ones are oblong : floral ones exceeding the flowers ; spikes few, flowered, nearly glabrous ; limb of corolla shorter than its tube. ©. G. Native of the Cape of Good Hope. Habit of the preceding, but the leaves are narrower, and the flowers smaller.

Few-flowered Polycarena. PI. \ to \ foot.

7 P. PLANTAGI'NEA (Benth. 1. c.) erect, small, clothed with clammy pubescence ; lower leaves obovate : superior ones long, quite entire, and few toothed: floral ones lance obtuse, exceeding the calyxes ; corolla small, having the limb shorter than its tube. ©. G. Native of the Cape of Good Hope, on rocks at Modderfontein and Zilverfontein, in Namaqualand, Drege. Spikes forming small leafy heads, with the lowermost detached, axillary flowers, lower down in the series smaller than in any other plant belonging to tribe *Bucnn*

Plaintain-like Polycarena. PI. \ foot.

8 P. INTERTE'XTA (Benth. 1. c.) procumbent, clothed with clammy pubescence ; leaves petiolate, small, ovate-lanceolate, downy : floral ones ovate-oblong, obtuse, scarcely exceeding the calyx ; spikes globosely capitate, somewhat fastigiate. Native of the Cape of Good Hope. Manulea *intertexta* Banks, herb. Flowers very small. Leaves more deeply toothed than any other species.

Interwoven Polycarena. PI. procumbent.

Cult. The species are all beautiful tender annuals. The seeds of them should be reared on a hot-bed in early spring, and about the middle or end of May some of the young plants may be set out in the open border, in a warm, sheltered situation, others may be grown in pots, and placed in the green

LXXXI. PHYLLOPODIUM (from *<f>v\\ov, phyllon,* a leaf; and *rrovQ KoSog, pous podos,* a foot; in reference to the floral leaves being adnate to the pedicels or flower stalks, either. Thunb. in Hook. comp. 1. p. *372.*—Manulea species, Lin. and Thunb.

LIN. SYST. *Didynamia, Angiospermia.* Calyx membranous 5-parted ; segments sub-connate at the base, with membranous margins. Corolla funnel-shaped; tube shorter than the limb 5-parted ; segments entire, nearly equal. Stamens didynamous, exserted ; anthers all similar. Capsule membranous.—Harsh annual herbs, natives of South Africa, generally branching on the ground at the base, rarely erect, usually becoming procumbent, very drying. Floral leaves adnate to the pedicels, usually short. Flowers small, sessile, orange-coloured, or reddish or purplish.? Spikes terminal, usually capitate, rarely elongated in the fructiferous state.

1 P. CUNEIFOLIUM (Benth. 1. c. p. *373.)* stem procumbent, hairy ; lower leaves petiolate, ovate, or obovate, deeply cuneated : superior ones oblong, cuneated : floral ones hardly exceeding the calyxes ; fructiferous spikes capitate: **long-cylindrical, dense, many-flowered.** ©. G. Native of the Uitenhage district, about Algoa Bay. Stem annual. Leaves thickish, glabrous. Divisions of the calyx to the middle by a membrane. Habit of *Selago,* Benth.

Wedge-leaved Phyllopodium. PL *i toot.*

2 P. CAPITAW (Benth. 1. c.) stem hairy; floral leaves ovate-lanceolate, linear, hairy : outer ones exceeding the calyxes; ones ovate-lanceolate, hairy : outer ones exceeding the calyxes; spikes capitate, nearly globose, or at length oblong, dense, many-flowered. ©. G. Native of the Cape of *GoodJ* Hope, in the western districts, from Cape Town to Ohfan ts n The preceding-liam. Manulea capitata, Lin. syst. *56J.* &u]F- fl. cap. 469. More hairy and less dense, and Leaves narrower, and less toothed.

LXXXIII. CHiENO'STOMA (from *x <"™, chaino,* to gape ; and *OTOJACL, stoma,* a mouth ; in reference to the wide throat of the corolla.) Benth. in Hook. comp. 1. p. 374.—Manulea species of Thunb. and Vent.—Buchnera species, Andr. aivl Pers.

LIN. SYST. *Didynamia, Angiospermia.* Calyx 5-parted. Corolla deciduous, funnel-shaped or salver-shaped, rarely with a short subcampanulate tube ; throat dilated ; limb almost equally 5-cleft; segments obovate or roundish. Stamens didynamous ; anthers all similar, equal in height to the throat, or exserted.—Herbs or under-shrubs, natives of South Africa, not becoming blackish on drying. Leaves nearly all opposite, toothed, rarely quite entire : floral ones similar, or bractea-formed, free from the pedicels. Flowers axillary or racemose, on longish pedicels. Capsule glabrous.

* *Tube of corolla hardly exserted, or shorter than the calyx.*

1 C. ROTUNDIFOLIUM (Benth. 1. c.) suffruticose, smoothish ; leaves small, petiolate, roundish-obovate, deeply toothed, thickish, green on both surfaces; pedicels axillary, a little longer than the glabrous calyx ; corolla funnel-shaped; tube shorter than the calyx. 1?. G. Native of the Cape of Good Hope. Branches apparently procumbent. Flowers few, small, towards the summits of the branches.

Round-leaved Chaenostoma. Shrub procumbent.

2 C. PAUCIPLORUM (Benth. 1. c.) suffruticose, pubescent ; leaves petiolate, obovate-roundish, toothed, downy on both surfaces ; pedicels axillary, rather longer than the calyx, which is hispid ; corolla funnel-shaped : tube shorter than the calyx. *2 . G. Native of South Africa, at Nieuweveldsbergen, in Beaufort, Drege ; Krakakamma, in Uitenhage, Ecklon.—Nearly allied to *C. rotundifolia,* but the flowers are nearly twice the size. Drege's specimens are more hairy than Ecklon's, Benth.

Few-flowered Chaenostoma. Shrub procumbent ?

3 C. CAMPANULA'TUM (Benth. 1. c.) suffruticose, villous ; leaves ovate, toothed ; racemes loose, many-flowered ; calyx hispid, with linear-lanceolate segments ; corolla subcampanulate, with a very short tube, about twice as long as the calyx. *h c* . G. Native of South Africa, at Zuurebergen and Zwartehoogden, in Uitenhage and Albany, Ecklon and Drege ; on the Key river, in Tambukiland, Ecklon. Leaves about half an inch long, generally irregularly toothed, and contracted at the base. Stamens very unequal in length; the longer pair rather shorter than the corolla, which appears to be blue.

Campanulate-ftowered Chaenostoma. Shrub.

4 C. CALYCI'NUM (Benth. 1. c.) suffruticose, smoothish ; leaves oblong-lanceolate, toothed, glabrous or canescent beneath ; calyx smoothish, with subulate segments, hardly one half shorter than the subcampanulate corolla. ^ • G. Native of South Africa, in the Amakosa country, between the rivers Gehau and Bashe, Drege.—Habit almost of *Sphenandra viscbsa,* but more slender, and flowers more numerous. Corolla like that of *C. campanulàtum,* but smaller.

Far. /3, laxiflorum (Benth. 1. c.) flowers more loose ; calyx much smaller. *h c* . G. Native on the rivers Bashe and Windvogelberg. Perhaps a distinct species.

Large-calyxed Chaenostoma. Shrub.

5 C. PROCU'MBENS (Benth. 1. c.) suffruticose, humble, much branched ; leaves oval-oblong, a little toothed, obtuse, green on both surfaces, thickish; racemes few-flowered ; pedicels longer than the calyxes ; corolla funnel-shaped : tube equal in length to the calyx, or hardly exceeding it. *? . G. Native of the Cape of Good Hope, on the Fish river, Drege. Branches

apparently prostrate, slightly pubescent towards the extremity ; the calyx has also a few hairs, but the rest of the plant is quite glabrous.

Procumbent Chaenostoma. Shrub prostrate.

6 C. LAXIFLORUM (Benth. 1. c.) suffruticose, procumbent, subcanescent; branches ascending, fastigiate; leaves oblong-ovate, a little toothed, narrowed a long way at the base, flat; racemes loose; flowers on long pedicels; calyxes glabrous or canescent; corolla funnel-shaped : tube equalling the calyx, or hardly exceeding it. I? . G. Native of the Cape of Good Hope, near the Keiskamma, Drège. Probably a mere variety of the preceding ; but the flowers are larger.

Loose-flowered Chaenostoma. Shrub procumbent.

7 C. HALIMIFOLIUM (Benth. 1. c. p. *375.)* suffruticose, humble ; branches numerous, erect, white; leaves oval-oblong or lanceolate, a little toothed, hoary on both surfaces, flat; racemes loose; flowers on long pedicels ; corolla funnel-shaped: tube equalling the calyx in length, or hardly exceeding it. ^ • G. Native of the Cape of Good Hope, in the Karroo desert, near Graafreynet, Ecklon ; Steelkloof, Hamerkuil, and plains near Aasvogelberg, Drège. Habit of *Manulea incana.* Branches densely leafy at the base. Racemes almost leafless ; the floral leaves being very small and entire.

Halimum-leaved Chaenostoma. Shrub.

8 C. POLYANTHUM (Benth. 1. c.) herbaceous or suffruticose, much branched at the base ; branches downy at top, panicled ; leaves ovate, toothed, cuneated at the base : upper ones oblong, glabrous or canescent beneath; racemes loose ; calyx hispid ; corolla funnel-shaped : tube hardly exceeding the calyx. T? . G. Native of South Africa, on the Zwartkops river, in Uitenhage, Ecklon ; Algoa Bay, Hook. herb. Habit and corolla of ***C. laxiflorum.*** **Leaves and calyx of *C. campanulalum.***

Many flowered Chaenostoma. Shrub.

9 C. PI/MILUM (Benth. 1. c.) plant suffruticose, of many stems, glabrous ; leaves oblong : superior ones linear, quite entire, or few-toothed ; flowers racemose ; corolla funnel-shaped : tube hardly longer than the calyx. T? • ^« Native of South Africa, in Uitenhage district, Ecklon ; and probably from Algoa Bay. Branches many, erect. Leaves slightly revolute on the margins. Pedicels longer than the calyxes, which are nearly glabrous. Corolla very open, as in all the species of this section.

Dwarf Chaenostoma. Shrub \ to \ foot.

10 C. DENUDATUM (Benth. 1. c.) suffruticose; branches glabrous, ascending; leaves distant, linear, quite entire, with revolute edges, glabrous ; racemes few-flowered ; calyx hispid, hardly shorter than the tube of the corolla, which is funnel-shaped. *2 • G. Native of South Africa, at Langekloof, in George district, Ecklon and Drège. Habit almost of *Asperula cyndnchica.* **Calyx of *C. campanuldtum.* Corolla of *C. pumiturn.*** Capsule oblong, longer than the calyx.

Naked Chaenostoma. Shrub ascending.

* * *Tube of corolla twice or thrice the length of the calyx,*

11 C. REVOLUTUM (Benth. 1. c.) suffruticose, greyish or pubescent; leaves linear, quite entire, with revolute edges; flowers racemose ; pedicels hardly longer than the calyx; segments of calyx linear or subulate, about equal in length to the capsule, which is ovate, but *2* or *3* times shorter than the tube of the corolla. *? . G. Native of South Africa, under the Zwartebergen, from the river Zondereinde to Gaurite river, Ecklon and Drège ; and on the Fish river, Dr. Gill. Manulea revoluta, Thunb. fl. cap. 467. Much branched.

Far. a, *glabriusculum* (Benth. 1. c.) plant smoothish.

Var. j3, *pubescens* (Benth. 1. c.) plant pubescent. Native on the Cedarbergen, and near Boschkloof, Drege.

Revolute-leaved Chafnostoma. Shrub 1 foot.

12 C. GLABRA^TUM (Benth. 1. c.) suffruticose, glabrous; leaves linear, quite entire, with revolute margins; flowers ra pedicels more than twice as long as the calyx ; seg calyx lanceolate-subulate, rather downy, shorter than t capsule ; tube of corolla twice or thrice as long as tn *h.* G. Native of South Africa, at Kerg river, in land; and Kannaland, in Zwellendam, Ecklon; and else Drège. This differs from *C. linifolium* in its narrower longer capsules, and is almost always perfectly glabrous.

Glabrous Choenostoma. Shrub.

13 C. LINIFOLIUM (Benth. 1. c.) suffruticose; at top ; leaves oblong-lanceolate, or linear, quite en few-toothed, with subrevolute edges, hairy or ers racemose; pedicels more than twice as long as calycine segments glabrous, or scarcely hairy, linear, e the capsule a little, but *3* times shorter than the tube o rolla. t. G. Native of the Cape of Good Hope, tains in the Cape district, near Worcester, and near tein, in Clanwilliam, Ecklon and Drege. Manulea nu Thunb. fl. cap. 466. ? An intermediate species between *bratum* and *C. Mthiopicum;* and probably only a variety latter.

Flax-leaved Chaenostoma. Fl. July, Aug. Clt. 1^u, J to 1 foot.

14 C. MTHIOPICUM (Benth. 1. c.) suffruticose; merous, floriferous, fastigiate; leaves oblong or toothed, smoothish ; racemes short, loose, subcorymbos hispid, *2-3* times shorter than the tube of the corolla. Native of South Africa, in the Cape district. Buchne pica, Lin. mant. 251. but not of Thunb. Intermediate ***C. linifolium* and *C.fastigidtum.***

^*Ethiopian* Chaenostoma. Shrub.

15 C. FASTIGIVTUM (Benth. 1. c. p. 376.) branches numerous, erectish ; leaves linear, or deeply few-toothed at apex ; flowers capitately racemos tops of the branches ; pedicels usually shorter than tn calyx hispid, *2* or *3* times shorter than the tube of tn *hc* . G. Native of the Cape of Good Hope, in Caleaon nulea cephalotis, Thunb. fl. cap. 470. ? A low for leaves very much like tfcose of *Sdlvia dentata,* reniariy the compact racemes, consisting of from *3* to 7 no very hispid calyxes.

Var. a, *hirsutum;* branches and leaves hairy.

Var. /5, *glabratum* (Benth. 1. c.) plant glabrous.

Fastigiate-branched Chaenostoma. Shrub.

16 C. SUBSPICVTUM (Benth. 1. c.) suffruticose, q branches numerous, erectish ; leaves half stenfl-claspin deeply few-toothed ; flowers spicately racemose; brous, or very shortly ciliated, *2-3* times shorter t of the corolla. T?. G. Native of the Cape of Good Hope, but the precise locality is unknown. Spikes *ot* about an inch long. All the pedicels very much the calyx.

Subspicate-flowered Chaenostoma. Shrub.

17 C. MARIFOLIUM (Benth. 1. c.) suffruticose, branches clothed with hoary pubescence ; leaves ova with subrevolute edges, clothed with hoary tomen or on both surfaces ; flowers on very short pedicels, subracemose ; tube of corolla twice as long as the G. Native of South Africa, in the Uitenhage a lea virgata, Thunb. fl. cap. 470.? Branches Leaves almost sessile, and very white, which does n Thunberg's description, Benth.

Cat-Thyme-leaved Chaenostoma. Shrub procumbent.

18 C. THYMIFOLIUM (Benth. l. c.) suffruticose, loosely much branched, quite entire, glabrous; leaves ovate, with subrevolute, Pedicellate^ or toothed margins, glabrous; flowers axillary, lender Superior ones loosely racemose; tube of corolla South Ar es longer than the cal y x. *? • G. Native of syst. p. ff y. a m the Ca P e dist ct. Manulea integrifolia, Lin. most of C his SUppL 285 *? Thunb. fl. cap. 467. ? Habit al- and the w i i P ; but the leaves are smaller, less toothed, *Vat. a* P s ls nearl y or q^'te glabrous.

Native of ^ar *I:folium* (Benth. 1. c.) leaves smaller. *hc*. G. *E*tire-leaf& of Good Hope, On the Tygerberg Drae,

Racemose-flowered Chaenostoma. PL J to 1 foot. ?

24 C. FCETIDUM (Benth. 1. c.) annual? erect, branched, nearly glabrous; leaves on long petioles, ovate, deeply toothed; peduncles axillary, 1-3-flowered: superior ones subracemose; tube of corolla slender, *2-3* times longer than the calyx. ©. G. Native of the Cape of Good Hope, in the eastern portion of Worcester and Clanwilliam districts, &c. Buchnèra fce'tida, Andr. bot. rep. t. 80. Manulea foe'tida, Pers. ench. *2.* p. 148. Manulea alternifolia, Hort. par. Pers. ench. *2.* p. 148. Leaves \ to 1 inch long. Lower pedicels almost always bearing a small corymb of about 3 nearly sessile flowers: the upper ones usually simple, forming an irregular leafy raceme. Corollas white.

Stinking Chaenostoma. FL June, Sept. Clt. 1794. PL 1 to lj foot.

25 C. PEDUNCULOSUM (Benth. 1. c.) herbaceous, much branched, procumbent, clothed with clammy pubescence; leaves petiolate, ovate, deeply toothed or pinnatifid: superior ones small; peduncles axillary, very long, filiform; tube of corolla slender, one half longer or almost twice as long as the calyx; limb ample. 1/. G. Native of South Africa, at Zilverfontein, in Namaqualand. This species is remarkable for its intricate leafy stems; its numerous peduncles, often *2* inches long; and for the form of the flowers, which appear like those of *Lyperia.* The corolla dries yellowish; with a dark-coloured throat.

Peduncled Chsenostoma. PL procumbent.

Cult. For culture and propagation see *Nycterinia,* p. .587.

LXXXIV. LYPEXRIA *(XvirripoQ, hjperos,* sad or sorrowful; from the dull heavy colour of the flowers; and also from their expanding and becoming sweet-scented at night; but are closed and scentless throughout the day-time.) Benth. in Hook, comp, 1. p. *377.*—Erinus species, Lin., Ait., and Thunb. Manulea species, Lin., Pers., and Link. Buchnèra species, Andr. Lychnidea species, Burm.

LIN. SYST. ***Didyna??iia, Angiospermia.*** **Calyx 5-parted;** segments linear, subfoliaceous. Corolla deciduous, with an elongated tube, which is clammy outside, and gibbous or incurved on the upper side at the apex; limb spreading, 5-cleft; segments approximating into *2* lips. Stamens didynamous, inclosed.—Herbs, subshrubs, or shrubs, natives of South Africa. Lower leaves opposite: superior ones alternate, entire, toothed, or deeply pinnatifid, or multifid, usually with the young leases in fascicles, in the axils of the old ones. Flowers sessile, or generally pedicellate, axillary, racemose, or spicate. The corollas, and sometimes the whole plant, becomes black on drying. ***id Me w kte*** dammy. *

**** Flowers nearly sessile, spicate.***

1 L, FRUTICOSUM (Benth. 1. c.) clothed with clammy pubescence; leaves ovate, oblong, or subcordate, quite entire, and few-toothed: floral ones similar, exceeding the calyxes; capsule oblong, about equal in height to the calyx. T? • 6. Native of the Cape of Good Hope, on the Zwartdoorn river, in Clanwilliam and Modderfontein, and the Gariep plains, in Namaqualand, &c. More of a shrub than any of the other species. Leaves sessile, from 4 lines to an inch in length, always drying black, as well as the flower spikes.

Shrubby Lyperia. Shrub.

2 L. AMPLEXICAI/LIS (Benth. 1. c.) herbaceous? erect, clothed with clammy pubescence, or villous; leaves broad-ovate, toothed, cordately stem-clasping at the base: floral ones similar, exceeding the calyxes; spikes elongated, many-flowered; tube of corolla hardly exceeding the calyx: limb small. *%A* G. Native of South Africa, in Namaqualand, Ecklon; Given river, in Clanwillian, Drège. Flowering branches about a foot long,

of which the greater part is occupied by the leafy spike. Capsule nearly glabrous, hardly as long as the calyx.

S(em-clasping-\eaved Lyperia. PI. 1 foot.

S L. TRI'STIS (Benth. 1. c. p. 378.) herbaceous, erect, very clammy ; lower leaves petiolate, ovate or oblong, toothed and cut: superior ones oblong-lanceolate: floral ones lanceolate, quite entire : upper ones shorter than the capsules ; floriferous spikes dense: fructiferous ones elongated; capsule twice as long as the calyx. %. G. Native of the Cape of Good Hope. Erinus tristis, Lin. syst. 571. suppl. 287. Thunb. fl. cap. 476. Stems thick, rigid, branched. Tube of corolla about an inch long ; segments of the limb emarginate. Capsule 4-5 lines long. The flowers of a dull dirty purple colour.

A$M-flowered Lyperia. Fl. May, June. Clt. 1825. PI. 1 to 1| foot.

4 L. FRA'GRANS (Benth. 1. c.) suffruticose, erectish, clammy ^ leaves oblong-lanceolate, toothed at top, narrowed at the base, quite entire : superior ones narrower, and nearly entire : floral ones rather shorter than the calyx; floriferous spike dense: fructiferous one elongated ; capsule hardly twice as long as the calyx. T? . G. Native of the Cape of Good Hope ; plentiful. Erinus frâgrans, Ait. hort. kew. ed. 1. vol. 2. p. *357.* Erinus lychnideus, Thunb. fl. cap. 474.? exclusive of many synonymes. Ker. bot. reg. 748. Sel&go lycnidea, Lin. spec. 877. amcen. 6. p. 89. Lychnidea villdsa, &c, Burm. pi. afr. 13. t. 49. f. 4. Leaves very numerous at the base of the stem ; and the whole plant is slightly pubescent, and dries very black. Capsule 4-5 lines long.

Far. a ; limb of corolla dirty lurid purple.

Far. /3 ; limb of corolla dirty yellow.

Fragrant Lyperia. Fl. May, June. Clt. 1776. Shrub \ to 1 foot.

5 L. MACROCA'RPA (Benth. 1. c.) suffruticose ? stem smoothish ; leaves oblong, linear, obtuse, quite entire, narrowed at the base, finely pubescent: floral ones equal in length to the calyxes ; spikes elongated ; capsule about 3 times longer than the calyx. \. G. Native of South Africa, probably of the Cape district. Habit of *L. frâgrans;* but the leaves are entire, and the capsules about an inch long.

Long -fruited Lyperia. Shrub.

6 L, SI'MPLEX (Benth. 1. c.) herbaceous, erect, nearly simple; lower leaves petiolate, ovate, a little toothed: superior and floral ones oblong or lanceolate, quite entire ; spikes elongated ; capsule clothed with clammy pubescence, hardly exceeding the calyx. %. G. Native of South Africa, in the Cape district; Karroo desert, and False Bay, &c. Erinus simplex, Thunb. fl. cap. 474. ? Differing from the three preceding species by the short thick capsule; and in the flowers, and especially the capsules, being more distant from each other. Mr. Bentham is doubtful whether this be the same as Thunberg's plant.

Simple-stemmed. Lyperia. PI. \ foot ?

* * *Herbs. Leaves not fascicled. Flowers pedicellate, racemose,*

7 L. TENUIFLÒRA (Benth. 1. c.) small, erect, clothed with fine clammy pubescence; leaves oblong or lanceolate, quite entire, and few-toothed ; pedicels a little longer than the calyxes. *If..* ? G. Native of the Cape of Good Hope; but the particular station is unknown. Flowers 8-10 lines long.

Thin-flowered Lyperia. PI. \ to \ foot.

8 L. RACEMÒSA (Benth. 1. c.) erect, very clammy; leaves petiolate, ovate, sharply toothed, narrowed a long way at the base; flowers pedunculate, racemose; limb of corolla ample, longer than the half of the tube. 1/. G. Native of South Africa, in the north of Clanwilliam district; and at the mouth of the Gariep, in Namaqualand, Ecklon and Drège. Tube of corolla about 9 lines long; lobes of the limb broad, shortly bifid.

Racemose-fiowered Lyperia. PI. 1 foot.

9 L.GLUTINÒSA (Benth. I.e.) herbaceous, erect, very clam ^ leaves petiolate, ovate, sharply toothed, roundly trunca ^^ base ; flowers pedicellate, racemose ; limb ot coro of than the half of the tube. %. G. Native of the t> Good Hope, near the Gariep. Not so tall, and than the preceding. Leaves shorter. Corolla with a much smaller limb. Calyx very clammy, ratner than the capsule.

Clammy Lyperia. PI. \ to 1 foot.

10 L. VIOLAW (Benth? 1. c. p. 379.) decumbent; smoothish ; leaves petiolate, oblong, toothed; racemose; limb of corolla much shorter than the tube; capsule ovate, villous, twice as long as the c G. Native of the Cape of Good Hope. Manulea Link, enum. *2.* p. 142. Manulea crystallina, Weinm. soc. rat. 1. p. 221.? Erinus patens, Thunb. Branches smooth. Leaves \ inch long. Corolla of a purplish-violet colour ; segments of the limb cording to Link, the plant is beset with short curled

G. Native of South Africa, on the Gauritz river, Drege. Leaves intermediate between those of *L. foliolòsa* and *L. atropurpùrea.* Differs from *L. pedunculàta* by the smaller leaves, and in the '"'»' *-" jjt«ttm,'(i«tit *uy* Lüe minute sessile le peduncles, which are seldom half an inch long,

CW«Je-ieaved Lyperia. Slirub

23 L. ATROPURPU'REA (Benth. 1. c.) shrubby, much **branched**; leaves minute, fascicled, linear, quite entire, or rarely unidentate ; flowers subracemose; tube of corolla 6-T times longer than the calyx. fj . G. Native of the Cape of Good Hope, in the Karroo and Karroid districts, Ecklon and Drege. Man^lea atropurpurea, Banks, herb. Leaves glabrous or downy, *1-2* lines long. Coroila near an inch long. Capsule larger than in the neighbouring species. Leaves longer in the cultivated plant.

Z)«r£-pw)-p/e-flowered Lyperia. Shrub.

24 L. ASPALATHOI'DES (Benth. 1. c. p. 381.) shrubby, much branched ; leaves minute, fascicled, obiong or linear, quite entire ; flowers racemose ; tube of corolla 2-3 times longer than the calyx, b - Gr. Native of South Africa, at Grassrugg and Krakakamma, in the Uitenhage district, Ecklon. Leaves smaller than in the preceding, and narrower than those of the following, and not imbricated. Corolla i an inch long. Branches downy. Leaves glabrous.

Aspalathus-likc Lyperia. Shrub.

25 L. MICROPHY'LLA (Benth. 1. c.) shrubby, much branched; leaves minute, ovate, quite entire, fascicled in the axils: those of the younger branches imbricating in 4 rows ; flowers few, towards the tops of the branches. f;. *G.* Native of South Africa, in Karroid districts ; Zwartkops river, Ecklon ; near Garip, and between Addo and Zoudag river, Drege. Manulf* microphylla, Lin. syst. 569. suppl. 285. Thunb. fl. cap. *A* Leaves scarcely *h* a line long. Flowers about half an inch Segments of the limb broad, obovate. •) stem

Small-leaved Lyperia. Shrub. *i broad-

1 M.? NERVOSA (E. Meyer, mss. Benth. 1. c. p. 381.) leaves petiolate, obovate-oblong or ovate, quite entire, glabrous; calycine segments broad-lanceolate; segments of corolla broad, emarginate : the *2* upper ones combined beyond the middle, quite entire. \/ . ? G. Native of South Africa, at Zilverfontein, in Namaqualand, Drège. The calycine segments are broader and thicker ; tube of corolla shorter; limb larger, and less deeply cleft than in any other species. Perhaps a separate genus, ex Benth.

Nerved Manulea. PI. \ to | foot.

2 M. SILENOI'DES (E. Meyer, mss. ex Benth. 1. c.) annual; leaves petiolate, ovate, quite entire, or obscurely toothed ; calycine segments linear, while young connected by a membrane, and exceeding the capsule in the fructiferous state ; segments of corolla emarginately bifid. 0. G. Native of South Africa, at Karakuis. More slender than *M. nervosa.* Tube of corolla longer; limb smaller, with narrow segments.

Var. j3, minor (E. Meyer, 1. c.) ©. G. Native of South Africa, between Micrenkasteel and Zwartdoorn river, in Clanwilliam ; and Modderfontein, in Namaqualand.

CatcJifly-like Manulea. PI. *S* to 4 inches.

3 M. ANDROSA'CEA (E. Meyer, mss. ex Benth. 1. c.) leaves obovate-oblong, glabrous, quite entire, or subcrenated; peduncles glabrous ; racemes subcapitate ; calycine segments oblong-linear, glabrous, equalling the capsule in length ; tube of corolla 3 or 4 times longer than the calyx; segments of the limb obovate, retuse. ©. ? G. Native of South Africa, in sands near Noagas, Drège. Rather taller than *M. silenoides.* Leaves rather longer and narrower. Flowers nearly sessile, mostly forming a compact head, which is sometimes elongated in the manner termed proliferous, Benth.

Androsace-like Manulea. PL \ to J foot.

4 M. CORYMB6SA (Thunb. fl. cap. 472. Benth. 1. c.) leaves ovate-oblong, obovate, quite entire and toothed, glabrous, or finely downy ; peduncles scape-formed, sometimes furnished with 1-2 leaves ; fructiferous racemes elongated ; calycine segments linear, longer than the capsule, membranously ciliated at the base ; segments of corolla broad, obovate.—Native of South .Africa, in the Cape district. Flowers often reflexed. Tube of corolla 3 lines long ; orifice hairy.

farymbose-flowered Manulea. PI. \ *to* 1 foot.

5 $. ALTI'SSIMA (Lin. syst. *569.* suppl. 286. Thunb. fl. cap. 472.) Ie2^ves oblong-elliptic, lanceolate, or toothed, finely pubescent; pedu1?^8 very l°ng, sometimes furnished with 1-2 leaves; fructiferous i^cemes oblong, dense ; calycine segments longer than the capsule, clothed with scabrous pubescence.—Native of South Africa, in the Cape district. Peduncles or flowering stems often a foot a?^ a na tf ni gn> sometimes with one or two branches.

Very-tall Manulea. *V.:*feet.

Obtuse-leaved Manulea. Pl. decumbent.

M. TOMENTOSA (Lin. syst. p. 569. mant. 420. Thunb. fl. cap. 470.) stem decumbent, humble, branched, tomentosely villous; leaves obovate or oblong, toothed, thick, densely tomentose on both surfaces; racemes short, dense; segments of calyx lanceolate-linear, villously tomentose, about equal in length to the capsule. %. G. Native of the Cape of Good Hope. Curt. bot. mag. t. 822. Link et Otto, in sel. hort. berol. 45. t. 10. good. Selago tomentosa, Lin. spec. 877.—Plukn. phyt. t. 319. f. 2. Branches short and stiff. Racemes 2-3 inches long. Flowers at first greenish-yellow; but at length becoming orange-coloured (fig. *56).*

Tomentose Manulea. FL May, Nov. Clt. 1744. PL 1 foot.

FIG. *56,*

18 M. THYRSIFLORA (Lin. syst. p. 569. suppl. 285. Thunb. fl. cap. 471.) stem erect, flexuous, branched, finely pubescent; leaves obovate, coarsely toothed, smoothish; raceme panicle-formed, many-flowered; peduncles loosely cymose; calycine segments linear; tube of corolla slender, 3-4 times longer than the calyx; segments of the limb oblong-linear, obtuse. %. ? G. Native of South Africa, in the Cape district. Raceme or panicle above half a foot long. Lower cymes opposite: upper ones alternate, all loosely dichotomous. Corolla slender; tube about 3 lines long.

Thyrse-flowered Manulea. PL 1 foot.

19 M. PANICULATA (Benth. l. c.) erect, tall, branched, clothed with hoary pubescence; leaves ovate or obovate, coarsely crenated; panicle large; racemes numerous, leafy at base, many-flowered; peduncles cymose; calycine segments oblong-linear, obtuse; tube of corolla 3 times longer than the calyx; segments of the limb ovate. %. ? G. Native of South Africa, at Stormbergen, and near the Krai river. Stem thick and hard. Panicle a foot long; branches erect; cymes much denser than in *M. thyrsiflora,* ex Benth.

/W'c/ed-flowered Manulea. PL tall.

20 M. TURRITIS (Banks, herb. mss. ex Benth. l. c.) stem and branches erect, hairy; leaves petiolate, ovate or oblong, deeply toothed, narrowed at the base, hairy on both surfaces; racemes elongated, slender; flowers fascicled; segments of calyx linear, obtuse; tube of corolla slender, 5-6 times longer than the calyx; segments linear-oblong, obtuse. %. ? G. Native of South Africa, on rocks, of Nieuwekloof, Drège; and in the Cape district. This species is remarkable for the white hairs of the stem. Racemes and flowers almost like those of *M. leiostachys,* but the foliage and habit are very different. It has the appearance of being occasionally shrubby at the base, ex Benth.

Tower Manulea. PL 1 to 2 feet.

* * * ACUTIFLORI (from *acutus,* acute; and ^os, a flower; in reference to the segments of the corolla being acute.) Benth. **1. c.** ***Racemes compound, or almost simple. Segments of the corolla all, or the upper ones are subulately acuminated,*** ex Benth.

21 M. STELLATA (Benth. l. c. p. 384.) stem ascending, pubescent, sparingly branched; leaves petiolate, broad-ovate, deeply serrated, pubescent; raceme elongated, compound, loose, many-flowered; calycine segments linear-subulate; tube of corolla 3 times longer than the calyx. F?. ? G. Native of South Africa, on the mountains of the Cape and South Worcester districts, Ecklon. An elegant species, with slender, orange-coloured flowers, 3 to 7 on each peduncle.

Stellate Manulea. PL 1 to *2* feet. ?

22 M. EXALTATA (Banks, herb. mss. ex Benth. l. c.) stem erect, divaricately branched, pubescent; leaves petiolate, broad-ovate, deeply toothed, pubescent; racemes very slender, few-flowered, interrupted, leafy at the base; segments of calyx linear-subulate, but one half shorter than the tube of the corolla. %. ? G. Native of South Africa, in the Cape and Clanwilliam districts, Olifant's river, Brackfontein, and Berg-valei, Ecklon. Branches slender. Peduncles very short, 1-3-flowered, remote. Flowers half as large as those of *M. stelldta.*

Exalted Manulea. PL *2* to 3 feet ?

23 M. CHEIRANTHUS (Lin. mant. 88. syst. *569.* Benth. l. c.) leaves nearly radical, ovate, obovate, or oblong; peduncles scape-formed, erect, simple; racemes compound; tube of corolla hardly exserted: upper segments *of* the limb very long and subulate, ©.or $. G. Native of South Africa, in various places in the western districts from the Cape to Gariep river in Namaqualand. M. rhynchantha, Link, enum. *2.* p.

142. Nemia cheiranthus, Berg. cap. 160. Lobelia cheiranthus, Lin. spec. 1319. Cheiranthus Africanus, flore luteo, Comm. hort. 2. p. 83. t. 42. Corolla deep yellow. It is the great disproportion in length of the *5* divisions of the corolla of this species that was the origin of the generic name.

Hand-flower Manulea. Fl. June, Aug. Clt. 1795. PL 1 foot.

24 M. PUSILLA (E. Meyer, mss. ex Benth. 1. c.) leaves nearly radical, obovate, or oblong, a little toothed; peduncles numerous, scape-formed, erectish ; racemes nearly simple ; tube of corolla hardly exserted ; segments of the limb scarcely unequal, rather shorter than the tube. £. G. Native of South Africa, at Zilverfontein in Namaqualand. Very nearly allied to *M, cheirdnthus,* but much smaller, and with very much smaller flowers.

Small Manulea. PI. £ to \ foot. ?

25 M. GARIEPI'NA (Benth. 1. c.) leaves nearly radical, ovate, obovate, or oblong; peduncles scape-formed, erect, a little branched; racemes compound, many-flowered ; tube of corolla more than twice the length of the calyx ; segments of the limb unequal. £ . ? G. Native of South Africa, on the plains of the Gariep, in Namaqualand. This species also comes near *M. cheiranthus*^ but differs in the flowers. In both this and the preceding species the lower segments of the corolla are frequently, and sometimes perhaps all of them, obtuse, so as to connect the present section with the two first, ex Benth.

Gariep Manulea. PI. 1 foot. ?

"j~ *Species described by Thunberg, which Mr, Bentham, who has written a monograph on the present tribe9 has not been able to refer to any of the above.*

Connate-leaved Buddlea. Fl. May. Clt. 1826. Shrub 5 to 6 feet.

9 B. SFHJERA'NTHA (Schlecht. et Cham, in Linnaea, 5. p. 104.) branches compressedly tetragonal, clothed with soft velvety tomentum, as well as the leaves; leaves connate at the base, sessile, lanceolate, acuminated, crenated, wrinkled, especially beneath; heads of flowers bibracteate, pedunculate, axillary. J?. G. Native of Mexico, in Llanos de Perote. Leaves like those of sage, *2* or *2*\ inches long. Heads clothed with golden tomentum, as well as outsides of corolla. Corollas glabrous inside.

Round-flowered Buddlea. Shrub.

10 B. POLYCE'PHALA (H. B. et Kunth, 1. c.) stem herbaceous, ? twining, tetragonal, and is, as well as the under sides of the leaves, clothed with rusty tomentum; leaves ovate, lyrate, acuminated, crenated, connate at the base; heads terminal, panicled, globose. %. ? G. Native of Peru, in woody places near Ayavaca, at the altitude of 1400 hexapods. Leaves lyrate and connate at the base, beset with rusty hairs above, *7-8* inches long. Heads size of a cherry. Corolla hardly longer than the calyx, clothed with rusty tomentum. Capsule obovate. Panicle simple. Said to be nearly allied to *B. connata,* Ruiz, et Pav.

Many-headed Buddlea. PL twining.

11 B. PICHINCHE'NSIS (H. B. et Kunth, 1. c. p. 347.) branches terete, glabrous; branchlets tetragonal, and under sides of leaves clothed with rusty tomentum; leaves lanceolate, acuminated, crenated, on short petioles; heads terminal, panicled, globose. I? . G. Native on the eastern declivity of Mount Pichincha, between the cataract of Cantuna and the plains of Verdecuchu, at the altitude of 1780 hexapods. Leaves glabrous above, *2* inches or more long. Heads size of small cherries, disposed in a simple panicle. Corolla campanulate, a little longer than the calyx, with reflexed segments. Very like ***B. globosa.***

Pichincha Buddlea. Shrub.

12 B. DIFFU^XSA (Ruiz. et. Pav. fl. per. 1. p. 52. t. 80. f. A.) subscandent; branches terete, clothed with yellowish tomentum, as well as the under sides of the leaves; leaves sub-petiolate, ovate, and subcordate, acute, pubescent above; peduncles axillary and terminal; flowers capitate, *fy* . G. Native of Peru, on the margins of fields, where it is always in flower. Stems diffuse, much branched, yellowish. Leaves deflexed, quite entire, or furnished with one or two teeth, running into the petioles. Common peduncles solitary, twin, or tern, sessile. Stipulas reniform, reflexed. Corolla yellow, with a villous throat.

Diffuse Buddlea. Shrub diffuse.

13 B. RUGOSA (H. B. et Kunth, 1. c.) branches terete, and are, as well as the leaves, clothed with rusty tomentum, glabrous above, wrinkled, lanceolate, acute, crenated, on short petioles; heads terminal. Tj . G. Native of New Grenada, in rugged, frigid places in Parama de Saraguru, near Ona, at the altitude of 1500 hexapods. Branchlets tetragonal. Leaves 8 inches long, and J an inch broad. Heads size of a sloe, disposed in a branched panicle. Corolla campanulate, a little longer than the calyx; segments roundish, reflexed.

JVrink/^-leaved Buddlea. Shrub.

14 B. INCA^VNA (Ruiz, et Pav. fl. per. 1. p. *52.* t. *80.* f. B.) branches bluntly tetragonal, and are, as well as under sides of leaves, clothed with white tomentum; leaves oblong and lanceolate, crenated, petiolate; peduncles terminal, panicled; flowers capitate. Jj . G. Native of Peru, on the banks of rivers. Peduncles trichotomously divided. Corollas yellow. Stipulas semicircular.

Hoary Buddlea. Tree 30 to 40 feet.

15 B. E'LEGANS (Cham, et Schlecht, in Linnaea, 2. p. 594.) branches terete, tomentose; leaves lanceolate, acute, bluntly

toothed, wrinkled and glabrous above, but tomentose beneath ; panicle terminal, leafy ; heads hemispherical, terminal. *1?* . G. Native of the South of Brazil, Sello. Branches obsoletely and bluntly tetragonal. Leaves running into the short petioles at the base : largest ones 5\ inches long. Panicle simple. Heads loose, about the size of cherries. Tube of corolla equal in height to the calycine segments ; limb obtuse, expanded. Capsule cylindrical. The tomentum of the whole plant is rusty in the dried state.

Elegant Buddlea. Shrub.

§ 3. *Panicle terminal. Flowers spicate, racemose, glomerate, or solitary.*

16 B. INTERRU'PTA (H. B. et Kunth, 1. c. p. 348.) branches terete, and are, as well as the under sides of the leaves, clothed with rusty tomentum, the upper surfaces being hoary ; leaves oblong-lanceolate, acuminated, quite entire; spikes panicled, verticillate, spreading. ^ . G. Native of the Andes of Quito. Leaves 3 inches, or longer. Petioles 2 lines long. Panicle simple, half a foot long, clothed with rusty tomentum. Whorles of flowers globose, distant, size of large peas. Capsule nearly globose, glabrous, equal in length to the calyx.

***Interrupteds'piked* Buddlea. Shrub.**

17 B. BETONIC^FOLIA (Lam. ilL 1. p. 291. no. 1488.) branches obscurely tetragonal ; leaves petiolate, ovate-oblong, crenulated, much wrinkled ; spikes panicled, interrupted, verticillate. T? • G. Native of Peru. Stems tubercled. Leaves tomentose beneath. Branches of panicle opposite ; glomerules verticillate. Flowers sessile, pubescent.

Betony-leaved Buddlea. Shrub.

18 B. BULLATA (H. B. et Kunth, 1. c.) branches tetragonal, smoothish ; leaves lanceolate-oblong, acute, rounded at the base, crenated, wrinkled, glabrous, and shining above, but clothed with hoary tomentum beneath ; panicle terminal, branched; flowers glomerate. J? • G. Native along with the preceding. Leaves 4-5 inches long; petioles J an inch. Panicle trichotomous, sessile, 4 inches long, spreading; flowers glomerate at the tops of the branches, on short pedicels. Corolla a little longer than the calyx; segments roundish, spreading. Nearly allied to *B. incana,* Ruiz, et Pav.

Blistered-leaved Buddlea. Shrub.

19 B. CORDATA (H. B. et Kunth, 1. c. t. 185.) branches quadrangular, smoothish ; branchlets and under surfaces of leaves clothed with rusty tomentum ; leaves ovate, acute, cordate, crenulated, glabrous above ; panicle terminal, spreading; flowers glomerate. T? . G. Native of Mexico, in the valley of Guanaxato, near Marfil, at the altitude of 1050 hexapods. Leaves quite entire at the base, 3-4 inches long; petioles 1 inch long. Panicle sessile, trichotomous. Flowers glomerate at the tops of the branches.

Cordate-leaved Buddlea. Shrub, or small tree.

20 B. LONGIFOLIA (H. B. et Kunth, 1. c. p. 349. t. 186.) branches quadrangular, smoothish; branchlets and under sides of leaves clothed with rusty tomentum ; leaves oblong-lanceolate, acuminated at both ends, serrately crenulated, glabrous above ; panicle terminal; flowers glomerate. >? • G. Native of the Andes of Peru, between Villa Montan and Santa Cruz, at the altitude of 1400 hexapods. Leaves 7-8 inches long, on short petioles, quite entire towards the base and apex. Panicle sessile, trichotomous. Flowers sweet-scented. Corolla a little lonoer than the calyx. Ovarium and stigma pilose.

Eons-leaved Buddlea. Shrub 18 to 20 feet.

21 B. MOLLIS (H. B. et Kunth, 1. c.) branchlets tetragonal, clothed with hoary tomentum ; leaves oblong-lanceolate, acute at both ends, undulately crenulated, glabrous above, but clothed with fuscescent tomentum beneath; panicle terminal, much branched, spreading; flowers glomerate. \ . G. Native? the province of Quito, in exposed places near Hambato, at ii altitude of 1390 hexapods. Leaves 6-7 inches long, on ve i short petioles. Panicle sessile, trichotomously branched; g merules 6-10-flowered, on short peduncles. Corolla yellow, little longer than the calyx.

Soft Buddlea. Tree 12 to 18 feet. ranches

22 B. ACUMINATA (H. B. et Kunth, 1. c. t. 187.) brand* tetragonal, clothed with hoary tomentum ; leaves ovate-ow ^ acuminated, acute at the base, serrated, glabrous clothed with rusty tomentum beneath ; panicle terminal, SP ing; flowers glomerate. T?. G. Native of Mexico, near ban Rosa de la Sierra, at the altitude of 1340 hexapods. L 3-4 inches long, on short petioles. Panicle sessile, trie mous. Flowers on short pedicels. Very nearly allied preceding, and differs from it principally in the leaves shorter, acuminated, and serrated.

***Acuminated-\e&\ed* Buddlea. Shrub. „ \Q5.)**

23 B. DECU'RRENS (Schlecht, et Cham, in Linnsea, *a.* p branches tetragonal, clothed with golden tomentum ; lea liptic, acuminated, running a long way into the petio base, somewhat crenately serrated, glabrous above, bu with golden yellow tomentum beneath ; panicles terminal, p ing; flowers glomerate. ^ . G. Native of it Andres. Allied to *B. acuminata,* and is distinguished in the leaves running into the petioles at the base, m t turn being more loose, and as if it were furfuraceous or yellow in the young state.

Decurrent-leaved Buddlea. Shrub. branches

24 B. INTERMEDIA (H. B. et Kunth, 1. c. p. 35 % ends, tetragonal, pubescent; leaves oblong, acuminated at serrated, rather pilose above, but clothed with rusty t beneath; panicle terminal, branched; branches 5'th{j pre ing ; flowers glomerate. 1?. G. Native along and beset ceding. Leaves narrowed into the petioles, green, sessile, with stellate hairs above, 2 or 2\ inches long, as the 2-3 inches long. Flowers sessile. Corolla twice as K calyx. An intermediate plant between *B. acuminata* ***occidentalis.***

Intermediate Buddlea. Shrub. tetra*

25 B. OCCIDENTALS (Lin. spec. 162.) branches gonal; branchlets and under sides of leaves cescent tomentum ; leaves oblong-lanceolate, both ends, entire; spikes panicled; flowers glomer G. Native of Peru, near Guamcabamba, in Humb. et Bonpl.; about Carthagena, Houston gullies and other sheltered places. Gaertn. fr 49. Ruiz, et Pav. fl. per. fl. p. *53.* t. 82. a. H nov. gen. 2. p. 350. Lam. ill. t. 69. f. 1. Ophioxyion aim. 270. t. 210. f. 1. Branches twiggy. Leaves long. Corolla white, ex Lin. et Bonpl., but to Ruiz, et Pav. ; but the plant of Lin. and most probably the same, notwithstanding the dine colour of the flowers. Spikes disposed in a terminal

***Western* Buddlea. Shrub.** ranches a little

26 B. CALLICARPOIDES (H. B. et Kunth, 1. c. branches compressed ; branches and leaves clothed with leaves ovate-oblong, acuminated, sharply serrated, cled, sub-fastigiate ; flowers glomerate. Mexico, between Xalapa and the river Chachalacas, at the altitude of 700 hexapods. Leaves 3-4 inches long, stellate pili above. Spikes disposed in termina merules opposite, on short peduncles, than the calyx. This species is very nearly allied by *dentalis* and *B. Americana,* but is distinguished i the size of the leaves, thinner, hoary tomentum ,

being 3 times S*lorter, and in tbe spikes being approximate and subfasciculate.

Callicarpa-like Buddlea. Shrub.

27 B. AMERICAVNA (Lin. spec. 162. amcen. 5. p. 394.) branchlets rather ovate, a little compressed, clothed with hoary tomentum; leaves rather [illegible] narrowed at the base, serrately crenated, neath [illegible] above, but clothed with yellowish tomentum beofpen, [illegible] panicled 5 flowers glomerate. Small-flowered Buddlea. Shrub or Tree.

32 B. HETEROPHY'LLA (Lindl. bot. reg. 1259.) branches terete, woolly; leaves woolly beneath: lower ones cordate-oblong, acuminated, denticulated: superior ones ovate-lanceolate, almost quite entire; racemes terminal, panicled, thyrsoid, composed of few-flowered peduncles* J?. G. Native of South America. Flowers yellow. Flowering shoots pendulous.

Variable-leaved Buddlea. Fl. May. Clt. ? Shrub 10 to 12 feet.

33 B. MICROPHY'LLA (H. B. et Kunth, 1. c.) branches terete, glabrous; branchlets and under sides of leaves clothed with rusty tomentum; leaves rather scabrous above, ovate-oblong, acute at both ends, serrated towards the apex; panicles terminal, coarctate; flowers glomerate. T?. G. Native of Mexico, in arid places on the burning mount Jorullo, at the altitude of 430 hexapods. B. parvifolia, Willd. herb. no. 2918. Leaves hardly an inch long, on very short petioles. Glomerules size of peas. Corollas white.

Small-leaved Buddlea. Shrub.

34 B. ABBREVIA'TA (H. B. et Kunth, 1. c.) branches terete, glabrous; branchlets tomentose: floriferous ones short; leaves oblong-lanceolate, acute at both ends, serrated, rather scabrous above, and clothed with rusty tomentum beneath; panicles terminal, spreading; flowers crowded. T?. G. Native of Mexico, in grassy places between Pachuca and Real del Moran, at the altitude of 1340 hexapods; and between San Miguel del Soldado, and La Joya. Cham, et Schlecht, in Linnaea, 8. p. 246. B. brevifolia, Willd. herb. no. 2918. Branchlets downy, or clothed with rusty tomentum. Leaves green above, 1 to 1\ inch long; petioles *2-3* lines long. Panicle sessile, sub-trichotomously branched, oblong, 1\ inch long. Flowers on short pe^dicels, sweet-scented. Corolla white, twice as long as the calyx. Very nearly allied to the preceding.

Short-panicled Buddlea. Shrub 5 to 6 *feet.*

35 B. SUNDA'ICA (Blum, bijdr. p. 743.) leaves petiolate, lanceolate, acuminated at both ends, serrulated: upper ones quite entire, clothed with white tomentum beneath; spikes panicled, interrupted, terminal, elongated; flowers on short pedicels; glomerules generally 3-flowered. ^. G. Native of Java, in woods, on the mountains in the province of Tjanjor. Said to **be allied to *B. occidentalism***

Sunda Buddlea. Shrub.

36 B. ACUMINATÍSSIMA (Blum, bijdr. p. 743.) leaves on short petioles, lanceolate, acuminated, acute at the base, finely denticulated, clothed with white tomentum beneath: upper ones quite entire; spikes terminal, interruptedly glomerate; glomerules approximate, usually 3-flowered; flowers on short pedicels. J?. S. Native *of* Java, on the mountains. Allied to *B. Sundaica,* and only differs from it in the leaves being more acuminated, and in the pedicels being shorter.

***Fery-acuminated-leaved* Buddlea. Shrub.**

37 B. MISSIONIS (Wall. cat. no. 640.5. Benth. scroph.) branches pubescent;, leaves oblong, narrowed at both ends, quite entire, coriaceous, glabrous and smooth above, and pubescent beneath; panicle ovate-pyramidal, many-flowered; racemules opposite; glomerules nearly sessile; corollas slender, glabrous. F?. G. Native of the Peninsula of India, at Wynad.

Mission Buddlea. Shrub.

38 B. PANICULA^TA (Wall, in Roxb. fl. ind. ed. Car. 1. p. 412.) arboreous; branches terete, divaricate, densely tomentose; leaves lanceolate-oblong, quite entire, rounded or cuneated at the base, thick, wrinkled, clothed with rusty tomentum beneath, or on both surfaces while young; racemes short, dense, a little branched; flowers sessile; glomerules dense, sub-pedicellate. *2. G. Native of Nipaul. Leaves 4-5 inches long. Petioles

connected by an elevated line running across the branch. Racemes short and stout, the lowermost ones from the terminal axils, about 2-3 inches long, the others shorter and more simple, until they become a terminal, elongated raceme ; the whole forming an elegant, crowded, attenuated, sessile panicle or thyrse. Flowers fragrant, white, each glomerule furnished with a pair of elongated, subulate bracteas, besides some smaller ones under the exterior calyxes. Tube of corolla 3 times longer than the calyx.

Panicled-flowered Buddlea. Fl. Feb. April. Shrub or Tree.

39 B. ACUMINA'TA (Poir. suppl. 1. p. 745.) branches subquadrangular, downy; leaves ovate, acuminated, loosely toothed, downy beneath ; racemes terminal, very short, tomentose, panicled. J?. G. Native of India, ex herb. Juss. Leaves sub-petiolate : lower ones dilated at the base, glabrous above, almost quite entire. Racemes panicled, clothed with rusty tomentum. Corolla downy, with an elongated tube, and short segments. Capsule small, ovate.

***Acuminated-\e3L\ed* Buddlea. Shrub.**

§ 4. *Racemes or spikes simple, or a little branched at the base, interrupted.*

40 B. THYRSOI'DEA (Lam. ill. 1. p. 291. no. 1489. encyc. bot. 9. p. 744.) branches terete, yellowish, downy at top ; leaves lanceolate-linear, acuminated, serrated, sessile, attenuated at the base, woolly beneath and shining above ; raceme thyrsoid, spicate, terminal, tomentose. I?. G. Native of the South of Brazil; Rio Grande do Sul; Monte Video plentiful. Cham, et Schlecht, in Linnaea, *2.* p. 594. B. salicifdlia, Vahl, symb. 3. p. 14.—A very elegant shrub. Leaves 4-5 inches long. Capsules ovate, pedicellate. Floral leaves quite entire. Corolla twice as long as the calyx. Flowers glomerate, nutant.

Thyrsoid-fiovtered Buddlea. Fl.? Clt. 1823. Shrub 5 to 6 feet.

41 B. SPICA^X^TA (Ruiz. et. Pav. fl. per. 1. p. 53. t. 81. f. A.) leaves ovate, acute at both ends, serrated; spikes very long, simple. *2. G. Native of Peru, in arid places of Munna. Branches bluntly tetragonal, clothed with white tomentum. Leaves petiolate. Flowers verticillate. Bracteas subulate. Corolla yellow, tomentose outside ; throat hispid.

***Spicate-ftow ered* Buddlea. Shrub.**

42 B. GRANDIFLORA (Cham, et Schlecht, in Linnaea, 2. p. 596.) branches bluntly tetragonal, tomentose ; leaves narrow-lanceolate, bluntly toothed, wrinkled and tomentose on both surfaces ; raceme terminal, leafy; peduncles 3-flowered. T2 . G. Native of the South of Brazil, in the provinces of Monte Video and Rio Grande do Sul, in many places, Sello. Habit of *B. ĉlegans.* Leaves 5| inches long, and 9 lines broad. Peduncles rising from the axils of the leaves of the raceme ; flowers sessile on the tops of the peduncles. Corolla tomentose, with lanceolate, obtuse, erect segments ; tube length of calyx.

Great-flowered Buddlea. Shrub.

43 B. STACHYOI'DES (Cham, et Schlecht, in Linnaea, 2. p. *597.)* branches tetragonal: angles a little winged, tomentose ; leaves sessile, cuneated at the base, quite entire, coarsely toothed, tomentose beneath, downy above ; raceme terminal; floral leaves reflexed. J? . G. Native of the South of Brazil, Sello. Leaves 6 inches long, and 2j inches broad, clothed with stellate down above, sessile, and rather connate at the" base. Inflorescence exactly of *Stachys Germdnica,* 2-3 inches long, reflexed. Lower flowers subverticillate. Corolla twice* as long as the calyx; with oval-obtuse segments. Capsule elliptic.

***Stachys-like-racemed* Buddlea. Shrub erect.**

44 B. BRACHIVTA (Cham, et Schlecht, in Linnaea, 2. p. 599.) scandent • branches brachiate, almost terete, smoothish ; leaves ovate, obsoletely and unequally toothed, glabrous above, but clothed with fine tomentum beneath; racemes or spikes slender, terminal and axillary ; glomerules distinct. H. G. Native of tropical Brazil, Sello. Branches compressed at the nodi, weaves *o* inciies iuiig, aim 1 iu ig uiw«v», oles at base, acute or subacuminated. Spikes slenae long, falsely verticillate, sessile; peduncles S-flowered, site, propped by reflexed bracteas. Corolla a littleonfc the calyx, with ovate-acute segments. Tomentum rusty, rium glabrous.

Armed Buddlea. Shrub climbing.

45 B. MACROSTA'CHYA (Benth. in Wall. cat. no. ind. p. 42.) branches acutely tetragonal, rated at apex, glabrous above, but clothed with beneath ; spikes interrupted, simple, tomentose; lower ones glomerate : superior ones scattered, tive of Silhet.

Long-spiked Buddlea. Shrub.

46 B. CUNEA^V^TA (Cham, et Schlecht, in branches obsoletely angular, tomentose, densely leaves opposite, rarely 3 in a whorl, erect, sessile, vate, acutely acuminated, coarsely toothed or rather wrinkled, glabrous and shining above, but white tomentum beneath ; heads of flowers disposed raceme, which is terminal, continuous, and simple at the base ; bracteas equal in length to the heads rolla glabrous. f?. G. Native of Brazil, leaves 2 inches long, and 1 broad. Heads *4-M~* drous, short peduncles, or nearly sessile. Flowers usually but in luxuriant plants pentandrous and hexandrous.

Cuneate-\ea\ed Buddlea. Shrub 2 to 3 feet.

47 B. VE'TULA (Cham, et Schlecht, in branches bluntly tetragonal, loose, densely leafy, to wards ; leaves sessile, loose, lanceolate, narrowed at the base: lower ones of the obovate, very blunt, finely and obsoletely serrate, glabrous, and shining above, and tomentose beneath flowers racemose ; raceme leafy, terminal; limb mentose outside. J? . G. Native of Brazil, dense-flowered, nearly globose. Tube of corolla ceeding the calycine teeth.

Old Buddlea. Shrub.

48 B. CESTRIFLORA (Cham, et Schlecht, in branches tetragonal, tomentose ; leaves dilated in funnel-shaped base, lanceolate-acute, crenated obsoletely wrinkled, tomentose beneath, at length heads racemose; flowers loose, pedicellate ; raceleafy ; teeth of calyx acuminated, elongated ; coro the calyx, tomentose outside and glabrous inside, tive of Brazil, Sello. VOL. IVt

G. Native of the Cape of Good Hope. B. salicifolia, Jacq. hort. schcenbr. 1. p. 12. t. 29. Schultes, obs. bot. p. 23. Leaves on short petioles, sinuately undulated, with scabrous margins. Flowers on short pedicels. Corolla white, with a square red spot at the base, sometimes purplish. Stamens exserted. Scent of plant heavy.

Willowy-haved Buddlea. Shrub.

57 B. VIRGVTA (Thunb. prod. 1. p. 30. fl. cap. 1. p. 542.) leaves linear-oblong, obtuse, entire; racemes terminal. T? . G. Native of the Cape of Good Hope, in Carro, beneath Roggeveld, about river banks. Willd. spec. 1. p. *6SS.* Habit of *Hyssbpus.* Branches filiform, and are, as well as the leaves, clothed with white tomentum. Leaves from a nail to an inch long.

Twiggy Buddlea. Shrub 4 to 6 feet.

58 B. INCÓMPTA (Lin. supp. 123. Thunb. 1. c.) leaves in fascicles, ovate, hoary; racemes terminal; branches flexuous, stiff. *2 • G. Native of the Cape of Good Hope, on the top of Roggeveld. Leaves silky, entire, minute.

Undecked Buddlea. Shrub 1 foot.

f *Species hardly known.*

59 B. TERNA^TA (Lour. coch. p. 72.) leaves ternate, acuminated; peduncles 1-flowered. J? . G. Native of Cochinchina. Poir. suppl. 1. p. 746. Leaves lanceolate, serrated. Flowers white, on axillary, solitary peduncles. Segments of corolla ovate. Stigma bifid. Nectarium pilose. Capsule 2-celled, many-seeded.

7erwate-leaved Buddlea. Shrub 2 feet.

60 B. VOLU'BILIS (Lam. ill. 1. p. 291. no. 1492.) leaves linear, acute, quite entire; cymes axillary, clothed with rusty tomentum; stem twining. Tj . ^\ S. Native of the Island of Bourbon. Poir. suppl. 1. p. 745. Corolla with a very short tube, and deep 4-parted limb. • 4 ^

Twining Buddlea. Shrub twining.

Cult. The species of *Buddlga* are all showy wlien in blossom; they are, therefore, worth cultivating for ornament. The *B. globbsa* and *B. salvifolia* are the only species ascertained to be almost hardy; they requiring only a little protection in severe frosts. A light rich soil answers them best; and cuttings of all strike root readily in mould, under a hand-glass; those of the stove species in heat. All the species are abundant flowerers; and the flowers of all are sweet-scented.

Tribe VIII.

CALCEOLARIE'iE. Calyx 4-parted, valvate in aestivation. Corolla irregular, bilabiate. Stamens 2-4, inserted in the throat. Cells of anthers diverging at the base, and confluent at apex. Stigma undivided, capitate. Capsule membranous; dissepiment constituted from the inflexed margins of the valves; placentas 2, stipitate, or adnate to the dissepiment. Seeds minute, with a mucrone-formed umbilicus; testa membranous. Albumen fleshy. Embryo terete, about half the length of the albumen.—Herbs or subshrubs, natives of South America and the Cape of Good Hope, usually clothed with glandular pubescence. Leaves opposite, generally undivided, but sometimes pinnate and pinnatifid. Flowers terminal, usually corymbosely panicled or racemose, generally yellow, rarely purple. This very natural tribe forms an osculant group between the *Scrophulariiece* and the *Gesneriacece,* in the aestivation of the calyx being valvate; in the valves of the capsule being revolute and placentiferous; in the very minute seeds, furnished with a longer umbilical funicle; in habit, inflorescence, and opposite, usually wrinkled, crenated leaves, and albuminous seeds. The *Calceolaria petio-*

laris, and some others, have sometimes irregular tubular corollas.

LXXXVIII. CALCEOLA^VRIA (from *calceolus,* a little slipper ; in allusion to the form of the corolla.) Feuill. per. 3. p. 12. t. 7\ Lin. syst. p. 61. Schreb. gen. no. 39. Gaertn* fruct. 1. p. 290. t. *62.* Juss. gen. p. 120. ed. Usteri, p. 135. H. B. et Kunth, nov. gen. amer. 2. 378. Lam. ill. t. 15.

LIN. SYST. *Didndria, Monogynia.* Calyx 4-parted, nearly equal; upper segment generally a little broader than the rest. Corolla with a very short tube ; limb bilabiate ; upper lip short, truncately rounded, entire: lower lip large, concave, slipper-shaped. Stamens 2, inserted in the base of the tube, short; cells of anthers divaricate (one of which is sometimes sterile.) Stigma simple. Capsule ovate-conical, propped by the permanent calyx, 2-celled, septicidally 2-valved; valves bifid ; placentas adnate to the dissepiment. Seeds sulcately angular.— Shrubs, subshrubs, or herbs, rarely stemless. Leaves opposite, sometimes 3 in a whorl, rarely alternate. Peduncles 1 or many-flowered, alar, axillary or terminal, corymbose. Corolla generally yellow, rarely purple.

§ 1. *Leaves opposite, pinnate or pinnatifid. Stems leafy. One of the cells of the anthers separated from the transverse connective : the other sterile or wanting. Herbaceous plants.*

1 C. PINNA'TA (Lin. syst. *65.* mant. 171. act. holm. 1770. p. 286. t. 8.) herbaceous, clothed with clammy hairs; leaves pinnate ; leaflets or segments toothed : lower ones pinnatifidly toothed; peduncles twin or tern, panicled. ©. H. Native of Peru, in humid places. Curt. bot. mag. t. 41. Vahl, enum. 1. p. 189. exclusive of the synonymes. Plant much branched. Leaves petiolate. Calycine segments ovate-cordate, much spreading. Corolla sulphur-coloured. Ovarium hairy.

Pinnate-leaved Slipperwort. Fl. July, Sept. Clt. 1773. PI. 2 to 3 feet.

2 C. CUELIDONIOI^NDES (H. B. et Kunth. nov. gen. 2. p. 379.) herbaceous, hairy ; leaves pinnate at base and pinnatifid at top, rather hispid above, and glabrous beneath ; leaflets pinnatifidly cut, sharply serrated, glandularly ciliated ; lateral flowers twin, and terminal ones subumbellate. ©. H. Native at the foot of Mount Javirac, near Quito, at the altitude of 1500 hexapods. C. concinna, Willd. herb. Erect, dichotomously branching; branches tetragonal. Leaves subpetiolate. Corolla yellow, glabrous, size of those of *C. pinnata.* Ovarium glabrous.

Swallow-wort-like Slipperwort. PL 2 to 3 feet.

3 C. GRA'CILIS (H. B. et Kunth. 1. c. p. 379.) herbaceous, clothed with clammy hairs; lower leaves pinnate or ternate: superior ones nearly simple, serrated, hispid above, but beset with white hairs beneath ; lateral flowers axillary, twin: terminal ones subcorymbose. ©. H. Native of Quito, on the banks of the river San Pedro, near Chillo, at the altitude of 1340 hexapods. Herb slender, dichotomously branched; young branches red. Leaves petiolate. Corolla pale yellow. Ovarium glabrous.

Slender Slipperwort. PL 1 foot.

4 C. TRiPARTiTA (Ruiz, et Pav. fl. per. 1. p. 14. t. *22.* f. a.) herbaceous, hairy ; leaves tripartite : lobes ovate, serrated ; peduncles terminal, corymbose ; pedicels *5-6.* ©. H. Native in the groves of Panatahua. Stem terete, branched. Leaves petiolate ; the middle lobe the largest. Corolla pale yellow.

Tripartite-leaved Slipperwort. PL 1 to *2 feet.*

5 C. SCABIOSVEFOLIA (Roem. et Schultes, syst. 1. p. 185.) prostrate; lower leaves pinnate: superior ones pinnatifid, 3-lobed or simple : the terminating segment always the largest ; peduncjes terminal, corymbose. %. F. Native of Peru. Sims, bot. mag. 2405. C. heterophyJla, Willd. enum. 1. p. 29. C. pinnata, Ruiz, et Pav. fl. per. 1. p. 14. t. 19. Calceolaria foliis scabiosse vulgkis, Feuill. per. 3. t. 12. f. 1. C. pi[illegible] Willd. spec. 1. p. 106. Plant rather hairy. Corollas yellow: lower lip large, ventricose. 1822.

Scabious-leaved Slipperwort. Fl. May, Oct. Clt. PL trailing.

§ 2. *Leaves entire or toothed, radical, usually rosulate. P*[illegible]* cles scape-formed. Herbaceous plants.*

6 C. PLANTAGINEA (Smith, icon. ined. 1. t. 2. J a h 1, enuj- 1. p. 172. exclusive of the syn. of Jovellana scapiflora) sterri[illegible] pubescent; leaves radical, ovate, rhomboid, rosulate, ser[illegible] nerved ; scapes generally 2-3-flowered, pilose ; lower lip oi [illegible] rolla large, hemispherical : upper one small, bifid, *ll-* [illegible] tive of the Straits of Magellan ; and of Chili, on the Cord[illegible] &c. Hook. bot. mag. 2805. C. biflora, Lam. ill. p. ^' rollas yellow. pi \

Plantain-like Slipperwort. FL Aug. Clt. 1826. n. foot.

7 C. NANA (Smith, icon. ined. 1. t. 1.) nearly leaves oblong-ovate, almost quite entire ; peduncles formed, 1-flowered; upper lip of corolla large, pendulous. F. Native of the Straits of Magellan. C. uniflora, Lam. 15. f. 3. Plant decumbent. Leaves hardly \ an [illegible] Peduncles solitary or numerous, 2 inches high. Corolla yellow. 2£.

Far. ft ; leaves larger, a little toothed; flowers larger. H. Native along with the species.

Dwarf Slipperwort. PL decumbent.

8 C. FOTHERGI'LLII (Ait. hort. kew. 1. p. *SO.* t. [illegible] spatulate, quite entire, pilose above; peduncles scape- 1-flowered. 1/. F. Native of the Falkland Islands. ill. t. 15. f. 1. Curt. bot. mag. t. 348. Cav. icon. 5. f. 1. Tratt. tab. t. 405. C. Neeana, Spreng. syst. Stem a little divided near the root. Leaves hardly long, connate at the base. Peduncles solitary or clammy. Segments of calyx ovate-acute. Upper lip yellowish : lower lip 4 times the size of the upper coloured, having the margins spotted with red. plant is said to have the leaves crenated.

FothergilVs Slipperwort. FL May, Aug. Clt. *17 n-* to J foot.

9 C. POLYRRHI'ZA (Cav. icon. 5. p. 25. t. 441.) [illegible] stemless; leaves cuneiform, serrated a little, acute ; [illegible] scape-formed ; pedicels umbellate. }/.. F. Native ot n land Islands, in humid places. Under each umbel [illegible] there are 2 small leaves. Segments of the calyx [illegible] furnished with 3 stripes. Corolla yellow, dotted lower lip almost an inch long, incurved at top.

Many-rooted Slipperwort. PL -I to 1 foot.

10 C. MONTANA (Cav. icon. 5. p. 27. t. 443. [illegible] almost stemless ; leaves obovate, unequally toothe [illegible] hoary ; scape dichotomous. %. F. Native of the Chili. Scapes /\ foot high, reddish, twice bifid, [illegible] 1-flowered pedicel in the second, fork ; [illegible] flowered. There are 2 opposite small leaves unae sion. Calycine segments 3-nerved.

Mountain Slipperwort. PL lj foot.

PETIOLARIS (Graham, in edinb. phil. journ. 1827. bot. mag. 2775.) herbaceous; stems numerous, erect, branched; leaves wrinkled, hispid: radical ones cuneate-spatulate, serrated, quite entire V>ehnOi, pet\o\ate, acut\s*. cauYme \eaves cordate, decussate: superior ones smaller, and quite entire; corymbs terminal, many-flowered. 1/. F. Native of Chili, on the Cordilleras. Lindl. bot. reg. 1621. Stems many from the same root, downy. Leaves with a few long scattered hairs on their surfaces. Calyx downy. Corolla rather small, of an uniform reddish violet colour. Habit of *C. corymbosa.* There are several hybrids between this and other species. See Sweet, fl. gard, n. s. t. 244.

Pwr^/e-flowered Slipperwort. Fl. July, Sept. Clt. 1827, PI. 1 foot.

18 C. OBLONGA (Ruiz. et. Pav. fl. per. 1. p. 15. t. 24. f. b.) leaves oblong, serrated, petiolate; peduncles trifid, with *3-6*-flowered branches; stem simple. *Q.* F. Native of the groves of Panatahua. Root fascicled. Radical leaves numerous: cauline ones few, on short petioles. Calyx hairy. Corolla yellow, dotted with red inside; lower lip large, tricrenate at the top.

06/owg-leaved Slipperwort. PL lj foot.

19 C. PUNI'CEA (Ruiz, et Pav. fl. per. 1. p. 15. t. 24. f. a.) hairy; stems creeping; leaves oval, serrated; peduncles, terminal, bifid, 7-8-flowered; pedicels umbellate. 1/. F. Native of the groves of Panatahua. Root fascicled. Leaves glabrous above, on short petioles. Corollas scarlet, glabrous, form of those of *C. oblonga.*

Scdrlet-fiowered Slipperwort. PL 1 to 2 *feet.*

§ 4. *Leaves toothed, crenated, or serrated, petiolate; petioles naked. Stems leafy.*

* *Herbaceous plants. Leaves opposite.*

20 C. SERRA'TA (Lam. ill. 1. p. 51.) erect; branches clothed with tomentose pubescence; leaves petiolate, ovate, acute, acutish at the base, sharply serrated, finely downy, canescent beneath; corymbs terminal, sub-trichotomous; pedicels pubescent. If.. F. Native of Quito, near Chillo, Humb. et Bonpl. Peru in Canta, Ruiz, et Pav. H. B. et Kunth, nov. gen. 2. p. 381. C. inflexa, Ruiz, et Pav. fl. per. 1. p. 16. t. 25. f. a. ? Herb erect, branched. Leaves 1J inch long, and 9 lines broad. Calycine segments ovate, acute. Corolla glabrous, yellow; lower lip reflexed, narrowed at the base.

A Serra/ed-leaved Slipperwort. PL *2* to *3* feet.

21 C. DIVARICA'TA (H. B. et Kunth, nov. gen. *2.* p. 381.) twining; branches divaricate, glabrous; leaves petiolate, ovate, acute, cordate, coarsely and crenately-serrated, ciliated, glabrous, downy on the veins beneath; panicles terminal, leafy; flowers corymbose; pedicels clothed with glandular pili. %. F. Native of Peru, in temperate places near Succhubamba and Ayavaca, at the altitude of 1400 hexapods. Leaves \\ inches. Calyx clothed with glandular hairs, with ovate, acute segments. Corolla yellow. Ovarium clothed with glandular hairs.

Divaricate Slipperwort. PL twining.

22 C. ROTUNDIFOLIA (H. B. et Kunth, 1. c. p. *382.)* stems simple, 1-2-3-flowered, and are, as well as the leaves, pubescent; leaves petiolate, roundish, obtuse, coarsely crenated, convex, thick. ©. H. Native of Peru, in cold places between Chulucana and Guamcabamba. Stems simple, fleshy. Leaves \ inch long. Calyx downy. Corolla yellow; throat hairy.

Round-leaved Slipperwort. PL -J to f foot.

23 C. SIBTHORPIOIDES (H. B. efKunth, 1. c.) stems procumbent; branches hispidly pilose; leaves petiolate, ovate-roundish, acutish, cordate, crenately cut, hairy on both surfaces; flowers terminal, corymbose; peduncles clothed with glandular hairs. %. F. Native of Peru, in icy places on mount Gual-

gayoc, near the mines of Micuipampa, at the altitude of 1840 hexapods. Leaves membranous. Calyx clothed with glandular hairs ; segments ovate-oblong, bluntish. Corolla yellow.

Sibthorpia-like Slipperwort. PI. procumbent.

24 C. SA*A'TILIS (H. B. et Kunth, 1. c.) erect; branches villous ; leaves on short petioles, ovate, bluntish, rounded at the base, subcordate, deeply crenated, hairy above, but clothed with hoary tomentum beneath ; corymbs terminal; pedicels pilose. 1/ . F. Native in stony places on Mount Chimborazo, at the altitude of 1750 hexapods. Leaves 9-10 lines long. Flowers about the size of those of *C. pinndta,* copper-coloured. Calycine segments ovate, acute.

Stone Slipperwort. PI. 1 foot.

25 C. LAMIIFOLIA (H. B. et Kunth, 1. c. p. 383.) stem erectish, and is, as well as the branches, pilose; leaves petiolate, ovate, acute, truncately rounded at the base, coarsely serrate-crenated, beset with adpressed hairs on both surfaces, white beneath ; peduncles terminal, generally twin, pilose. %. F. Native near the town of Quito, at the altitude of 1490 hexapods. Leaves 1 to 1^ inch long. Calyx pilose, with roundish-ovate, acute segments. Corollas large, yellow, glabrous. This species is said hardly to differ from *C. bicolor.*

Dead-nettle-leaved Slipperwort. PI. 1^ to 2 feet.

26 C. OVATA (Smith, icon. ined. 1. t. 3. Vahl, enum. 1. p. 182.) erect, branched, beset with long, white hairs ; leaves ovate, obsoletely crenated, or serrated, on short petioles; peduncles twin, filiform, longer than the leaves. ©. F. Native of Peru. C. integrifdlia, Lin. suppl. 86, but not of his systema. C. dichotoma, Lam. ill. p. 52. C. biflora, Ruiz, et Pav. fl. per. 1. p. 16. t. 20. f. a. Pers. ench. 1. p. 16. Lower branches opposite : superior ones alternate, dichotomous. Leaves 1 inch long, obscurely crenated, or quite entire. Peduncles usually by twos, filiform, longer than the leaves. Corollas small.

Ovate-leaved Slipperwort. PI. \ to 1 foot,

27 C. BICRENATA (Ruiz, et Pav. fl. per. 1. p. 15. t. 23. f. b.) erect, branched ; leaves on short petioles, ovate, doubly serrated, or crenated, tomentose beneath ; peduncles axillary and terminal, furnished with 2 leaves at top ; pedicels umbellate, hairy, unequal. It. ? F. Native of Peru, on the mountains of Cuchero. Leaves wrinkled. Calyx villous. Corolla large. Upper lip inflexed: lower one large, both tricrenate at top.

Twice-crenated-lesLved Calceolaria. PL 2 to 3 feet.

28 C. HETEROPHY'LLA (Ruiz, et Pav. fl. per. 1. p. 16. t. 21. f. b.) very hairy, erect; leaves petiolate, ovate-elliptic and subcordate, serrated ; peduncles very long, dichotomous. %. G. Native of Peru, in groves. Hairs rusty, some of them long and bristle like, and others shorter and glandular. Stems quadrangular ; branches purplish. Leaves roundish, or oblong, often doubly serrated. Peduncles from the superior axils, clammy at top; pedicels 1-flowered, 2 from each fork. Corolla half open: lower lip large, ventricose.

Various-leaved Slipperwort. PI. 1 to 1| foot.

29 C. LOBATA (Cav. icon. 5. p. 26. t. 443. f. 1.) erect; leaves cordate, lobate, serrated, clothed with hoary tomentum beneath ; stem dichotomous, reddish, pilose ; peduncles terminal, 4 in number, 2 centre ones 1-flowered, and the 2 lateral ones 3-flowered. % . F. Native of Peru, in dry places. Leaves petiolate, 5-lobed, villous above; lobes short. Petioles very hairy, a little longer than the leaves. Calycine segments ovate, 3-furrowed. Corolla yellow ; lower lip lined lengthwise, large.

Lobed-lewed Slipperwort. PL 2 feet.

*** * *Shrubby plants. Leaves opposite.***

30 C. LANATA (H. B. et Kunth, nov. gen. 2. p. 383.) suffruticose, densely clothed with white tomentum ; leaves petiolate, ovate-deltoid, acute, cordate, doubly crenated; corymbs terminal, fastigiate. T?. G. Native of Quito, in tenipenite places between Alausi and Pomallacta, at the altitude of *130V* nexpods. Leaves 2-3 inches long. Corolla large, yellow, smootnisii.

Woolly Slipperwort. Shrub. u^.Vihv

31 C. SJCIA (H. B. et Kunth, 1. c. p. 380.) shrubby, branchlets rather clammy, erect; leaves petiolate, anceoi la- oblong, acuminated, narrowed at the base, **denticulatec^g** brous; corymbs terminal, sub-dichotomous; pedicels^ clam^ ^ *h . G.* Native of New Granada, in temperate places Det the river Vinajacu and the city of Loxa, at the aftltu ,^Ot voung. hexapods. Branches smooth, reddish, clammy while , yeu^ Leaves glabrous, paler, and rather clammy beneath, 4 i Ova- long. Calyx rather clammy. Corolla yellow, glabrous, rium glabrous.

Strict Slipperwort. Shrub.

32 C. PADIFOLIA (H. B. et Kunth, 1. c.) shrubby i branchlets rather clammy ; leaves petiolate, oblong, or ovate bblong, acu- minated, acute at the base, toothed, glabrous; rlo«ers terminal, corymbose ; pedicels rather clammy, *h* <J- ^ Peru, Branches near Ayavaca, at the altitude of 1400 hexapods tetragonal, smooth, glabrous. Leaves about 2 ^ beneath. Calycine segments ovate, acute. glabrous. Capsule glabrous.

Bird-cherry-leaved Slipperwort. Shrub.

33 C. DEFLE'XA (Ruiz, et Pav. fl. per.. 1. P- shrubby ; branchlets clammy, purplish; leaveb ceolate? serrated, canescent beneath; terminal ; pedicels umbellate, villous. *2 . O. in Caxatamba, near water falls. Leaves deflexed, petioles, shining above: floral ones quite entire. twin. Corolla of a coppery yellow colour ; lower Up incurved.

Deflexed-lewed Slipperwort. Shrub 3 to 4 teet.

34 C. VISCOSA (Ruiz, et Pav. fl. per. 1. P- the whole plant Linous and ^ ^ 3 ^ 2 * and acute, serrated, canescent benea h ;

Clammy Slipperwort. Shrub « J **« 26. f. a.)

35 C. FLEXUOSA (Ruiz, et Pav. a. per. i F flexuous i shrubby, rough, Jeaves cordate, unequally »^h.ntly rough above; peduncles axillary and

S t t t ^ i Corolla yellow. lower 1*

lar<*e, ventricose.

***Flexuous* Slipperwort. Shrub**

36 C. NIVA^LIS (H. B. et K™th, nov. g flo- ate, ovate, by; branches and leaves g«>hrous, lea- Pher coriaceous, Jute, acutish at the base, crena^J « umbellately fas- yellowish beneath; corymbs terminal cicled ; pedicels hairy, *h* G- ^fgfp at the altitude near Los Paredones, and the ph^n o f hnes long ^S T V ^ $, e ovat acute segen, glabrous. feet.

37 C.SCA'BRA (Ruiz, et Pav. fl. per. 1. p. 19. t. 29. f. a.) shrubby, hispid, of a rusty colour; leaves nearly sessile, oblong, lined, toothed, hispid ; peduncles axillary and terminal, solitary, 1-flowered, length of leaves. h. G. Native of Peru, among broken rocks. Stem rough, gay. Leaves approximate, with revolute edges, Corolla yellow ; both lips incurved: lower one large.

Scabrous Slipperwort. Shrub 3 feet, much branched; leaves oblong, wrinkled, crenated, pubescent, coarctate, same colour on both surfaces; peduncles terminal, lower ones ovate-oblong, obtuse, petiolate: upper ones sessile, inside lower lip of corolla very large. Corolla yellow, spotted. Herbert's Slipperwort. Fl. June, Sept. Clt. ? Shrub ½ to 3 feet.

scabrous Slipperwort. Shrub 3 feet, much branched; branches clothed with rough canescent powder; leaves on short petioles, ovate-lanceolate, dentately serrated; peduncles terminal, generally 4-flowered. *h*. G. Native of Peru, in Canta, among broken rocks.

rorydery Slipperwort. Shrub 6 feet.

40 C. FUSCIFOLIA (Ruiz et Pav. fl. per. 1. p. 18. t. 29. f. b.) shrubby; branches fuscous; leaves ovate-lanceolate, serrated, scabrous above, clammy above, but wrinkled and grey beneath; peduncles axillary and terminal, twin; pedicels 4: middle ones 1-flowered, and two others 3-flowered. *h*. G. Native of Peru, in boggy ground. Branches clammy and resinous. Leaves large, clothed with glandular villi: lower lip crenated at top.

Yellow-leaved Slipperwort. Shrub 6 feet.

41 C. CHRYSOPHYLLA (Ruiz et Pav. fl. per. 1. p. 18. t. 29. f. c.) shrubby; branches scabrous, rusty; leaves approximate, ovate, deeply serrated, lined above, and clothed with golden pubescence beneath; corymbs terminal. *h*. G. Native of Canta, Tarma, &c. Calyx yellowish. By chewing the leaves the saliva becomes yellow.

Sharp-leaved Slipperwort. Shrub 2 feet.

42 C. INVOLUTA (Ruiz et Pav. fl. per. 1. p. 15. t. 23. f. a.) shrubby; leaves on short petioles, ovate, acute, serrated, glabrous; involute; peduncles axillary and terminal, 1-flowered; corolla glabrous. P. G. Native of Panatahua, in forests. Plant glabrous. Leaves 2-3 together from the axils of the superior ones. Calyx reflexed. Corolla yellow, large, covering the calyx.

Tube-flowered Slipperwort. Shrub 3 feet.

Shrubby plants. Leaves opposite, and 3 in a whorl.

43 C. CORDATA (Ruiz et Pav. fl. per. 1. p. 16. t. 25. f. b.) shrubby; branches dichotomous, glabrous; leaves petiolate, opposite, and 3 in a whorl, ovate, cordate, serrated; peduncles axillary and terminal, subdichotomous. *h*. G. Native of Peru, in the valley of Canta. Branches dependent, bluntly tetragonal, of a purple colour. There are *2-3* sessile leaves under the pedicels, which are clothed with glandular hairs. Corolla with a white base, and yellow apex: tube narrowed at the base.

Wood-flowered Slipperwort. Fl. Aug. Sept. Clt. 1829. Shrub 2 feet.

44 C. DIFFUSA (Lindl. bot. reg. 1374.) suffruticose, procumbent; leaves ovate-cordate-ovate, coarsely and doubly serrated, petiolate; terminal and axillary corymbose, *fy*. Native of Peru, at Canta, 1830. Graham, in edinb. phil. journ. oct. rather doubtful whether not Ruiz, et Pav. Branchlets and leaves white with pubescence. Pedicels pilose. Corolla having the lower lip probably paler, with a white base and yellow apex. This differs from the *C. bicolor* of Ruiz, et Pav.

45 C. MUCILAGINOSA (Ruiz et Pav. fl. per. 1. p. 16. t. 20. f. c.) branched; leaves on short petioles, opposite, and 3 in a whorl, ovate, serrated, downy; peduncles axillary, solitary, 1-flowered, each furnished with 2 quite entire leaves in the middle. 1?. G. Native of Peru, in Tarma, at Cura. C. monánthos, Poir. suppl. 1. One side of branches purplish. Leaves generally 3 in a whorl. Flowers small.

One-flowered Slipperwort. Shrub.

46 C. DENTATA (Ruiz, et Pav. fl. per. 1. p. 18. t. 29. f. b.) shrubby; branchlets hairy; leaves opposite, and 3 in a whorl, ovate, sharply and doubly toothed, glabrous in the adult state; peduncles terminal, twin, bifid, with a 1-flowered pedicel in the fork; pedicels racemose, secund. *h*. G. Native of Chili, in woods. Corollas yellow, form of those of C. *scabra.* Shrub much branched, clammy, with the taste of Peruvian bark.

Toothed-leaved Slipperwort. Shrub.

47 C. VIRGATA (Ruiz, et Pav. fl. per. 1. p. 20. t. 31. f. a.) shrubby; branches twiggy, purplish; leaves on short petioles, opposite, and 3 in a whorl, ovate, bluntly serrated, pubescent; peduncles axillary and terminal, many-flowered. ^. Cl. Native of Peru, on the route to Canta. Stem purple. Branches opposite, or 3 in a whorl, twiggy, brittle, purplish. Leaves spreading, obtuse. Corolla small, villous at the base.

Twiggy Slipperwort. Shrub 2 feet.

48 C. ANGUSTIFLORA (Ruiz, et Pav. fl. per. 1. p. 17. t. 28. f. a.) shrubby; leaves on short petioles, opposite, or 3 in a whorl, ovate-lanceolate, sharply-serrated, pubescent; peduncles axillary and terminal, opposite, or 3 in a whorl, generally 4-flowered, shorter than the leaves; upper lip of corolla very narrow at the base, f?. G. Native of Peru, in the valley of Canta, towards Obrasillo. Hook. bot. mag. 3094. Much branched; branches opposite, or 3 in a whorl. Peduncles collected into a terminal panicle. Corolla small, dotted with purple inside.

Narrow-flowered Slipperwort. Fl. July. Clt. 1830. Shrub 1 to 2 feet.

49 C. VERTICILLATA (Ruiz, et Pav. fl. per. 1. p. 17.) shrubby, glabrous; leaves 3 in a whorl, cordate, acute, serrated, on short petioles; peduncles 4-flowered, axillary. I?. G. Native of Peru, among broken rocks in the valley of Canta. Branches chaff-coloured. Peduncles furnished with a single leaf under each twin pedicel.

Jf/iorfecMeaved Slipperwort. Shrub 4 to 6 feet.

50 C. TERNIFLORA (Cav. icon. 5. p. 30. t. 450. f. 2.) shrubby; leaves petiolate, 3 in a whorl, ovate-lanceolate, serrated; peduncles axillary and terminal, 3-flowered. \/. G. Native of Peru. Stem brownish-violet; branches 3 in a whorl. Leaves glaucous: superior ones sessile; 2 at the base of the pedicels. Calyx larger than in the preceding. Lower lip of corolla narrowed to the base Perhaps not distinct from *C.glauca.*

Tern-flowered Slipperwort. Shrub 3 feet.

51 C. GEMELLIFLORA (Cav. icon. 5. p. 30. t. 450. f. 1.) shrubby; leaves petiolate, 3 in a whorl, ovate-serrated, nearly sessile; peduncles axillary and terminal, 2-flowered, shorter than the leaves. P?. G. Native of Peru, among stones. Stem branched. Leaves acute, glaucous, 2 at the base of the pedicels. Lower lip of corolla narrowed towards the throat. Perhaps not distinct from *C. angustiflora.*

Twin-flowered Slipperwort. Shrub 2 feet.

52 C. MULTIFLORA (Cav. icon 5. p. 29. t. 449.) shrubby villous; leaves *3* in a whorl, ovate, serrated, nearly sessile; peduncles branched, terminal, panicled. ^. G. Native of Peru, in dry places towards Lima. Branches obscure, purple. Leaves subcordate. Panicle a foot long. Segments of calyx 3-nerved. Lower lip of corolla narrowed towards the throat.

Many-flowered Slipperwort. Shrub 4 to 6 feet.

53 C. GLAUCA (Ruiz, et Pav. fl. per. 1. p. 17. t. 27. f. c.) shrubby; leaves opposite, and 3 in a whorl, lanceolate, unequally serrated; peduncles 3-4, umbellate, 3-flowered, furnished

with narrow-lanceolate leaves at the base. J?. G. Native of Peru, on the route to Canta. Branches opposite, and 3 in a whorl, purplish. Leaves on short petioles, glaucous above. Corolla yellow, spotted with purple inside. Filaments broad at the base.

Glaucous-leaved Slipperwort. Shrub *2* to 3 feet.

54 C. TRIFIDA (Ruiz, et Pav. fl. per. 1. p. 17. t. *26.* f. b.) shrubby ; leaves cordate-ovate, bluntly serrated, canescent beneath : lower ones opposite, petiolate : upper ones 3 in a whorl, sessile, and beset with glandular villi; peduncles axillary and terminal; 3-8-flowered. T? . G. Native of Peru, in shady places near the waters of Cheuchin. Stem almost glabrous. Petioles connate.

Trifid Slipperwort. Shrub *2* to 3 feet.

§ *5. Leaves serrated^ or toothed, petiolate; petioles membranaceously winged. Stem leafy.*

55 C. PERFOLIATA (Lin. suppl. 86. Smith, icon. ined. 1. p. 4. t. 4.) herbaceous ; branches pilose ; leaves triangularly sagittate, acute, doubly serrated, cut, hairy above, but clothed with tomentose pubescence beneath, and hoary ; petioles membranously winged, connate ; corymbs terminal, sub-dichotomous; pedicels pilose. %. or £ . G. Native of New Granada and Peru. Ruiz, et Pav. fl. per. 1. p. 15. t. 21. f. a. Mutis amer. J. t. *3.* H. B. et Kunth, nov. gen. amer. 2. p. 384. Leaves 1{ to 2 inches long. Corollas yellow, glabrous. Ovarium pilose. The plant of Ruiz, et Pav. is said by them to be clothed with clammy villi; and the leaves are said to be spatulately sagittate.

Perfoliate-leaved* Slipperwort. PL *2 to 3 feet.

56 C. TOMENTOSA (Ruiz, et Pav. fl. per. 1. p. 15. t. 22. f. b.) herbaceous ; branches downy ; leaves spatulately cordate, unequally serrated, tomentose beneath ; petioles membranously winged, connate ; corymbs terminal, downy. %. ? *$* G. Native of Tarma and Cuchero, in Peru. Stem glabrous, branched. Leaves pubescent above. Pedicels umbellate. Corolla large, yellow.

Tomentose Slipperwort. PI. 3 to 4 feet.

57 C. PETIOLA'RIS (Cav. icon. 5. p. 30. t. 445.) plant herbaceous, branched, downy ; lower leaves tapering into the winged petioles, doubly toothed : superior ones ovate, subcordate, sessile, connate, dentately serrated : floral ones quite entire; racemes solitary and axillary, or terminal and twin, or by threes; pedicels, calyxes, and ovarium, clothed with glandular villi; both lips of corolla nearly equal. *$* . or 1/. G. Native of South America, in Guayaquil. C. connata, Hook. bot. mag. 2876. C. floribunda, Lindl. bot. reg. 1214. but not of Kunth, C. paniculata, Herbert. Bee'a al&ta, Pers. ench. 1. p. 15. Plant more downy at top than bottom, clammy. Leaves 7 inches long, and 4 broad, ovate, acutish. Common peduncles bifid below the middle, and each branch is again cleft. Corolla pale yellow, downy.

Petiolar Slipperwort. Fl. July, Aug. Clt. 1824. PI. 2 to 4 feet.

58 C. RUGOSA (Ruiz, et Pav. fl. per. 1. p. 19. t. *28. f.* b.) shrubby; leaves lanceolate, unequally serrated, wrinkled, downy; petioles winged, connate; corymbs terminal. f?. G. Native of Chili. C. scabiosaefdlia, Nee. Plant downy at top. Leaves attenuated at both ends. Corolla yellow. Habit of *Sdlvia qfficinalis.* Lower lip of corolla narrowed at the base.

WrinkledAe^ved Slipperwort. Fl. July, Aug. Clt. 1822. Shrub 2 feet.

59 C. ARACHNoifiEA (Graham, in edind. **pliil.** journ. sept. 1828.) stem herbaceous, branched, spreading, clothed with white cobwebbed wool, as well as the leaves and other parts, except the corolla; leaves lingulately-oblong, a little toothed, narrowing downwards into long winged petioles, which are connate at the base; peduncles terminal, twin, elongated, dichoto. *Ti.* G. Native of Chili. Hook. bot. mag. 2874. £ reg. 1454. C. tinctoria, Gillies, mss. Leaves with the 5 inches long, wrinkled ; the 2 uppermost leaves smaller the others, sessile, cordate-ovate, placed at the origin peduncles. Corolla of a uniform dull purple. There are hybrids between this and other species. See Sweet, n. g s. t. 227.

Cobwebbed Slipperwort. Fl. June, Sept. Clt. 1 foot.

60 C. INTEGRIFOLIA (Lin. in act. holm. 1770. syst. p. 61.) shrubby; leaves ovate-lanceolate, or lanceolate, lated, wrinkled, opaque, rusty beneath ; petioles nate ; stem and calyxes downy ; panicles terminal, *cory* pedunculate. *b . G.* Native of Chili. Corolla yellow.

Far. fa integrifolia (Hook, et Arn. in Beech, voy. pt. 39.) leaves ovate-lanceolate, sharply denticulated. *n.* tive of Chili. C. integrifolia, Lindl. bot. reg. 744. Hook. bot. mag. 2523. exot. bot. 99, but not of Ruiz. C. salvisefolia, Pers. ench. 1. p. 15. Cham, et bcniec Linnaea, 2. p. *565.* Chacaul, Feuill. per. 13. t. 7.

Far. y, *angustifdlia* (Lindl. bot. reg. 1083.) nuated at both ends, coarsely denticulated ; panicles peduncles. T? . G. Native of Chili, about Valparaiso

Far. $, viscosissima (Hook. bot. mag. t. 8214.) plant clothed with viscid pubescence; leaves larger an *2 . G. Native of Chili. C. viscosissima, Lindl. bot. reg.

Entire-leaved Slipperwort. Fl. Aug. Sept. Clt. \w- *2* to 3 *feet.*

61 C. ASCE'NDENS (Lindl. bot. reg. 1215.) suffruticending; leaves ovate, petiolate, wrinkled, denticuia, connate ; cent: lower ones acute at the base; petioles winge corymbs umbellate, few-flowered, branched a Jj Stem peduncles. T?. G. Native of Chili, on the Cordilleras, pilose. Upper leaves sessile. Flowers large, oi yellow colour. Calyxes roundish, tomentose. ©aia **allied to *C. integrifolia* and *C. rugosa.***

Ascending Slipperwort. Fl. June, Sept. Clt. *i*** •

1 ^^CHILOE'NSIS (Lindl. bot. *reg.* 1476.)^shrubbyj calyxes, and bracteas beset with glandular hairs ;j oblong-lanceolate, undulated, sharply toothed, downy surfaces, tapering into the petioles, which are wing nate at the base : superior leaves quite entire, sessile ; inflorescence cymose, many-flowered, axil minal. T?. F. Native of the Island of Chiloe, on coast of Chili. Corollas yellow.

Chiloe Slipperwort. Fl. July, Sept. Clt. 1831. *MTV'*

63 ,C. POLIFOLIA (Hook. bot. mag. 2897.) suffruti with white wool in every part; leaves ovate, or nated, tapering into the petioles, which are peduncles elongated, terminal, dichotomous ; Howe h . G. Native of Chili, on the Cordilleras, ana the same country. Upper lip of corolla small, p under one deep yellow. Calyxes 3-nerved.

Polium-leaved Slipperwort. Fl. July, &P Shrub 1 foot.

§ *6. Leaves sessile. Stems leafy -*

Leaves smoothish, and Flowers small, and pale beneath, and clammy, 2 inches long, °rang(? yellow, sub-secund. Calyx villous. Corolla glabrous, nuile-it Ovarium pilose.

C. Tiny ^^Slipperwort. Shrub.

bot. mag. 9 ? ^LoRA (Graham, in edinb. phil. journ. sept. 1828. linear, attenuated at both ends, lined, shrubby, branched, clammy, glabrous ; leaves thyrse terminal, crowded ? peduncles compound, umbellate. T? . G. Nativef p^ded and obscure Chili about Mendoza. Branches rather rough, broad, disposed, glandular. Leaves 2 inches long, and 2 lines Crowded oil Jaggedly serrate^ ; teeth reflexed. Flowers yellow, n[illegible] glabrous outside, and downy within. Shrub 1 to 2 feet. Slipperwort. Fl. June, Sept. Clt. 1827.

69 *Q* *Leaves entire, or quite entire. Stem leafy.*

(Lam. dict. L P. 356 0 suffruticose ; leaves sessile» connate at the base, linear, [illegible] at apex, with quite entire and revolute edges, rather ceous, glabrous above, and clothed with golden tomentum beneath. 5 flowers Umbellately corymbose, paniculately disposed; pedicels beset with Mutinous hairs. \. G. Native at the foot of Mount Chimborazo, at the altitude of 18°0 hpv. (Z O) near the Lake Ganacoche, at the altitude of 12000 nov 2 S ; and of Chili on the Cordilleras. H. B. et t-4 2. P> *285,* C» ferruginea, Cav. icon. 5. p. *27.* 1- Branches terete, violaceous. Calyx pilose, clammy. [illegible] yellow, glabrous ; lower lip large.

Rosemary-leaved Slipperwort. Shrub 2 to *3 feet.*

11 C. GRAMINIFÒLIA (H. B. et Kunth, nov. gen. 2. p. 386.) suffruticose, [illegible] narrow, erect, branches nearly glabrous; leaves sessile, linear-lanceolate, acuminated, with quite entire and revolute edges, paler beneath, clammy above, but clothed with hoary pubescent hairs at the corymbs terminal, trifidly sub-dichotomous ; [illegible] Native of Quito, in the valley of [illegible] terete, compressed at the nodi. Leaves 4-6 lines long, and 2\ lines broad. Calyx hairy. Corolla glabrous, yellow. Very like the preceding.

Grass-leaved Slipperwort. Shrub 4 to 6 feet.

71 C. LAVANDULAEFÒLIA (H. B. et. Kunth, 1. c.) suffruticose ; branchlets hairy ; leaves sessile, linear, bluntish, with quite entire and revolute Margins, smoothish above, but clothed with hoary tomentum beneath, clammy, [illegible] 5 flowers terminal, corymbose; pedicels v. CJ. Native in hollows or valleys on Mount Pichincha, and Paramo de Assuay, at the altitude of 1560 hexapods. Branches terete. Leaves 9-10 lines long, and 1 to 1£ lines broad. Corolla yellow, glabrous. Only to be distinguished from the preceding by the size of the leaves.

Lavender-leaved Slipperwort. Shrub.

72 C. HYSSOPIFÒLIA (H. B. et Kunth, l. c.) shrubby; branchlets and pedicels beset with clammy hairs; leaves almost sessile, narrow-linear, bluntish, with entire and revolute edges, glabrous on both surfaces, clammy above ; flowers terminal, corymbose, J? . G. Native at the foot of Mount Chimborazo, near Calpi and in the plains of Luisa, at the altitude of 1640 hexapods. Much branched; branches terete. Leaves pale beneath, 9-10 lines long. Distinguished from the preceding by the leaves being glabrous on both surfaces.

Hyssop-leaved Slipperwort. Shrub 4 to 5 feet.

73 C. HELIANTHOI'DES (H. B. et Kunth, 1. c. p. 387.) shrubby; branches and pedicels clothed with canescent down ; leaves nearly sessile, and nearly oblong, acute at both ends, quite entire, glabrous ; flowers terminal, subcorymbose. T? . G. Native of Paramo de Saraguru, in cold places between the river Uduchapa and the city of Loxa. Leaves oblong or lanceolate-oblong, *6-9* lines long, and *2*\ to 4 lines broad, pale beneath. Pedicels puberulous. Corolla yellow, glabrous.

Sunflower-like Slipperwort. Shrub 1 to 1\ foot.

74 C. ERICOI^DÈS (Juss. ex Vahl, enum. 1. p. 190.) shruhby, much branched; branches crowded, and are, as well as the leaves, hairy on both surfaces ; leaves small, sessile, linear, with entire and revolute edges; peduncles axillary and terminal, 1-3-flowered, hairy. Tj . G. Native of Quito, in stony places on Mount Pichincha, at the altitude of 1780 hexapods. Leaves 4-5 lines long. Corollas small, yellow, downy. Ovarium hairy.

Heath-like Slipperwort. Shrub 2 to 3 feet.

75 C. LINEA'RIS (Ruiz, et Pav. fl. per. 1. p. 19.) shrubby, much branched; leaves linear, with quite entire and revolute edges, sessile ; peduncles axillary, 1-flowered, pubescent. f? . G. Native of Peru, on the declivities of the hills of Xauxa. Leaves shining above. Calyx rather tomentose. Corolla yellow.

Linear-leaved Slipperwort. Shrub.

76 C. ARGE'NTEA (H. B. et Kunth, nov. gen. 2. p. 387. t. 170.) shrubby, and clothed with white tomentum ; leaves petiolate, nearly oblong, acute at both ends, quite entire; flowers terminal and axillary, usually solitary. F? . G. Native of Peru, in Paramo de Guamami, between Gualcaquillo and Guamcabamba, in shady places. Branches purple. Leaves 4-6 lines long. Corolla large, yellow, glabrous.

Silvery Slipperwort. Shrub 1 foot.

77 C. LANCEOLA'TA (Cav. icon. *5.* p. 27. t. 444. f. 1.) branched a little; leaves linear-lanceolate, quite entire: radical ones petiolate: cauline ones sessile, acute at both ends; peduncles terminal, solitary, 1-flowered. %. F. Native of the Maclove Islands. Corolla yellow; upper lip very short: lower one long, and narrowed to the base.

Lanceolate-leaved Slipperwort. PI. j foot.

78 C. A'LBA (Ruiz, et Pav. fl. per. 1. p. 19. t. *27.* f. b.) suffruticose, clammy and resinous, simple; leaves linear, remotely serrated; peduncles racemose, dichotomous. ^. G. Native *of* Chili, on arid hiils. Leaves frequently very narrow and sessile, scabrous on the margins, with fascicles of leaves in the axils. Peduncles elongated : partial ones opposite, twice or thrice divided. Pedicels solitary in the first division, twin in the second, and three in the third. Corollas white. Odour of rosemary.

White-Lowered Slipperwort. Shrub.

79 C. ALTERNIFÒLIA (Cav. icon. *5.* p. *28.* t. 445. f. 2.) stem and under sides of leaves "tomentose; leaves linear, alternate,

with entire, revolute edges; peduncles axillary, 3-flowered. 2£. ? G. Native of Peru. Leaves sessile, hardly an inch Jong. Peduncles towards the tops of the branches ; with 2 leaves at the base of the pedicels. Lower lip of corolla gradually narrowing towards the base.

Alternate-leaved Slipper wort. PL 2 feet.

Cult. Calceolaria is a genus of very showy plants, and great favourites at present with gardeners and others. Some of them are annual, others perennial, but the greater mass are shrubby. All of them thrive well in light rich soil, or a mixture of loam, sand, and peat; giving them the treatment of other greenhouse plants. They readily increase by young cuttings, under a hand-glass ; and also by seed, which ripens plentifully in this country. By impregnating the stigma of one sort with the pollen of another, many very beautiful hybrids have been reared in the gardens. The seeds of the annual kinds should be reared in a hot-bed, in spring ; and when the plants are of sufficient size, they should be set separately in pots ; and others may be planted out in the open ground, in a warm, sheltered situation.

LXXXIX. JOVELLA^XNA (named after D. Casparo Melchiori de Jovellanos, a promoter of the Flora Peruviana.) Ruiz, et Pav. fl. per. 1. p. 13. t. 18. f. b.—Bae'a species, Pers. ench. 1. p. 15. Calceolaria species of authors.

LIN. SYST. *Didndria, Monogynia.* Calyx 4-parted. Both lips, of corolla nearly equal : upper one concave : lower one inflated. Stamens 2, inserted at the base of the tube, short; cells of anthers confluent. Stigma capitate, emarginate. Capsule ovate-conical, 2-furrowed, 2-celled, 2-valved at apex; valves bifid ; placentas adnate to the dissepiment. Seeds angular.—Plants with the habit of *Calceolaria.*

1 J. SCAPIFLORA (Ruiz, et Pav. fl. per. 1. p. 13. t. 18. f. b.) leaves ovate, serrated, downy ; scapes downy, unequal, 1-flowered. %. F. Native of the Andes of Peru. Baea plantaginea, Pers. ench. 1. p. 15.? Leaves an inch long. Corolla yellow: lower lip spotted with purple.

Scape-Jlowered Jovellana. Fl. Aug. Clt. 1827. PI. 1 foot.

'2 J. PUNCTA'TA (Ruiz, et Pav. fl. per. 1. p. 13. t. 18. f. a.) shrubby; branches slender, glanduliferous; leaves petiolate, oblong-ovate, biserrated, glabrous ; peduncles axillary and terminal, cymose ; pedicels umbellate. *1?*. G. Native of Peru and Chili, in woods. Calceolaria punctata, Vahl, enum. 1. p. 177. Boe'a punctata, Pers. ench. 1. p. 15.—Feuill. per. 3. p. *21.* t. 16. Leaves white beneath : floral ones quite entire, all dotted with purple on both surfaces. Corolla of a whitish-violet colour, variegated with a pale mark and yellow spots. Stigma emarginate.

Dot ted-flowered Jovellana. Shrub 3 feet.

3 J. VIOLA'CEA ; shrubby ; branches violaceous ; leaves petiolate, ovate, coarsely serrated, white beneath ; peduncles terminal by threes, corymbose ; pedicels 1-2-flowered. T?. G. Native of Talcahuana, on the sea shore ; and of Chili, about Conception. Baea violacea, Pers. ench. 1. p. 15. Calceolaria violacea, Cav. icon. 5. p. 31. t. 452. Leaves length of petioles. Corolla pale violet, spotted with deeper violet beneath. Lips of corolla spreading in a campanulate manner ; limb villous.

Violaceous-flowered Jovellana. Shrub 4 to 6 feet.

4 J. ? TRIA'NDRA (Cav. icon. 5. p. *32.* t. 453.) shrubby; branches, peduncles, and edges of calyx beset with glandular villi; leaves deeply pinnatifid, glaucous beneath, petiolate ; peduncles dichotomous ; flowers triandrous. ^ • &• Native of Peru. Bsea triandra, Pers. ench. 1. p. 15. Bark of branches dark purple. Petioles shorter than the leaves, clasping the stem by a membrane at the base. Filaments 3, very short. Ovarium tomentose. This will probably form a distinct genus, which we would propose calling *Porodittia tridndra, from* the triandrous flowers ; and in the cells of the anthers being confluent, and opening by a pore at the apex.

Triandrous-flowered Jovellana. Shrub 3 to 4 leet.

Cult. Singular and beautiful plants, with the habit oi *ceoldria ;* the culture of them is also similar.

XC. BAE'A (meaning not explained by the author.) ex Lam. diet. 1. p. 401. ill. t. 15. Juss. gen. p. 121. ca. p. 135.

3 A. PROCI/MBENS (Mart. nov. act. bonn. 11. p. 45.) stems weak, procumbent, tetragonal; leaves elliptic, lanceolate, sharply serrated. 2£. S. Native of Brazil, at Villa dos llheos. Physidium procumbens, Schrad. gott. gel. anz. 1821. vol. *72.* p. 714. t. 30. Schelveria arguta, Bot. zeit. 4. jahrj. 1821. p. *299.* and 328. Stems articulated, trichotomous, glabrous; angles winged. Leaves glabrous, spiny-serrated; petioles connate, with the projection ciliated. Flowers axillary, solitary or twin, very like those of a species of *Calceolaria,* on pedicels which are shorter than the leaves. Corolla violaceous: upper lip of corolla short, 3-lobed; lobes crenulated: lower lip large, inflated, entire. Seeds, angular.

Procumbent Angelonia. PI. procumbent.

4 A. INTEGE'RRIMA (Spreng. syst. append, p. *235.)* leaves scattered, lanceolate, quite entire; peduncles racemose; stem erect. %. S. Native of Rio Grande, Sello.

*Quite entire.*leaved Angelonia. PI. erect.

Cult. These are very pretty plants when in blossom, and are, therefore, well worth cultivating. A mixture of light turfy loam and peat is a good soil for them; and cuttings strike root readily in the same kind of mould under a hand glass, but as they are liable to rot, air should be frequently given.

Tribe IX.

EUPHRASIES (this tribe agrees with the genus *Euphrasia* in the characters given below.) D. Don, in edinb. phil. journ. vol. 19. p. 113. July, 1835. Benth. scroph.

Calyx tubular, 5-toothed. Corolla bilabiate. Stamens 4, didynamous. Cells of anthers parallel, usually spurred at the base. Stigma undivided. Capsule crustaceous; dissepiment placentiferous on both sides. Seeds with a membranous testa. Albumen fleshy. Embryo terete, slender, straight, almost the length of the albumen.—Herbs, with opposite leaves, and terminal, subspicate, bracteate flowers.

SUBTRIBE I. BARTSIE\E. Cells of anthers spurred at the base.

XCIV. EUPHRA'SIA (from *ivtypaivu, euphraino,* to delight; from the supposition of the plants curing blindness.) Tourn. inst. *78.* Lin. gen. no. 741. Schreb. no. 998. Juss. gen. 100. edit. Usteri, p. 112. Gaertn. fruct. 1. p. *257. t. 54.* Lam. ill. 518. f. 1. H. B. et Kunth, nov. gen. amer. 2. p. *333.* Benth. scroph. ind. p. 51.

LIN. SYST. *Bidynamia, Angiospermia.* Calyx campanulate, 4-cleft, somewhat bilabiate. Corolla bilabiate; upper lip galeate, emarginate: lower lip large, spreading; segments emarginate, retuse, denticulated, or entire. Stamens 4, fertile; cells of upper anthers usually with longer spurs than the lower ones. Stigma thickened, oblique, emarginate. Capsule ovate or oblong-ovate, compressed, usually emarginate; valves entire. Seeds few, wrapped in a membranous, striated testa.—Dwarf herbs. Leaves opposite or alternate: the upper or floral ones generally the broadest. Flowers sessile, solitary, subspicate at the tops of the branches, white, yellow, or purple.

§ 1. *Species natives of Europe and Asia. Anthers ciliated at the base; cells of the 2 lower anthers elongated into bristly spurs.*

1 E. OFFICINAXLIS (Lin. spec. 841.) glabrous or downy, never scabrous; leaves naarly sessile, ovate: lower ones bluntly serrated; floral leaves ovate or roundish, acutely toothed, equal in length or exceeding the calyxes; calycine teeth acute, about equal in length to the tube of the corolla, which is glabrous;

segments of corolla emarginate ; capsule equal in length or exceeding the calyx. 0. H. Native of Europe, Siberia, Aleutian Islands, on heaths and other dry places, especially on a chalky or sandy soil; plentiful in Britain, in like situations. Curt. lond. 5. t. 42. Fl. dan. 1037. Woodv. med. bot. 2. p. 220. Sabb. hort. rom. 3. t. 9. Blackw. 427. Smith, engl. bot. t, 1416.__Riv. mon. t. 90. f. 1. The plant varies much in size, branched or quite simple. Flowers varying much in colour from white to yellow ; limb tinged with blue or streaked with purple. It seems to have been unnoticed by^the ancients. The Arabians mention it under the name of Adhil. Mathseus Sylvaticus, a physician of Mantua, who lived about the year 1320, recommended this plant in disorders of the eyes. It is still in use, particularly as an ingredient in British herb tobacco ; and Mr. Lightfoot says that the highlanders of Scotland make an infusion of it in milk, and anoint the patient's eyes with a feather dipped in it. It is, however, neglected by the faculty; and even thought by some to be injurious, at least in inflammation of the eyes. It is a weak astringent, but there seems to be no foundation for the old notion of its being useful in disorders of the eyes.
